ABOUT THIS BOOK

The *Encyclopedia of the Modern World* provides a summary of the essential facts of world history during the past two hundred years. It is divided into two parts: a "Basic Chronology," which deals with political, military, and diplomatic history by state, region, and area; and a "Topical Chronology," in which are handled, on a world-wide basis, economic, social, and constitutional history, and the history of science, thought, and culture.

"The Modern World" may be defined in many different ways: as the result of the victory of man over his environment, as the product of a gradual change from communal to individual life styles, as a final coalescing—because of the recent revolutions in communications and technology—of many civilizations into one. However defined, modernity did not come to all areas of the world simultaneously, and today the continents and the great geographic regions within the continents stand at markedly different stages of historical development. Yet in a very broad sense the modern world may be said to have emerged in the half-century following 1750, with its initial impact in the Western world.

In Europe and North America the second half of the eighteenth century saw the culmination of the Enlightenment and the Age of Reason, as well as the beginnings of the Industrial Revolution. The period also witnessed the Era of Democratic Revolutions, notably the American and the French, with their twin impact on the rise of nationalism. The emergence of Russia as a world power may also be said to date from this time.

In other areas the modern world began to emerge in the late eighteenth century and during the early nineteenth. In Latin America, for example, the last years of the eighteenth century saw

the gathering of revolutionary forces which loosened the Spanish and Portuguese hold, although the revolutions themselves did not start until 1810.

The profile of Africa began to change in the early nineteenth century, with the abolition of the (legal) slave trade, the establishment of effective Christian missions, the penetration of the interior of the continent by European explorers and traders, the great Moslem jihads in the Sudan, the founding of modern Egypt under Mohammed Ali, and the spread of white settlement following the French conquest of Algiers (1830) and the Great Trek in South Africa (1836-37).

The same period was marked in Asia by a rapid increase in the volume and value of Asian trade with the West, which signalled the beginning of the extraversion of the Asian economies that was to mark the Age of Imperialism. In China, cracks in the Manchu governmental structure appeared, with peasant revolts starting as early as 1774 and foreign encroachments beginning in earnest with Lord Macartney's mission of 1793. The rise of "modern Japan" may be dated from the late Tokugawa period, which saw increasing maritime contacts with the outside world (despite an official seclusion policy) and the gradual spread of Western learning via translations from the Chinese and Dutch.

The emergence of a Second British Empire, with India rather than America as its main focus, followed the general settlement achieved after the War of the American Revolution. In India, the elimination of the French as rivals for power, the transformation of the East India Company from a trading concern into a territorial power, and the victory over Tipu Sultan of Mysore in 1799 established the British as unchallenged overlords, if not yet proprietors, of the subcontinent. In Southeast Asia, British penetration into Malaya and French into Indochina came with the nineteenth century. In Indonesia, the demise of the Netherlands East India Company (1799), the reduction of the Javanese states to submission by the successor Dutch colonial government, and the inauguration of the highly profitable "Culture System" of agricultural exploitation brought about major changes. Finally, in Australia, first discoveries and colonization along the eastern seaboard coincided with the last years of the American Revolution and the emergence of the Second British Empire.

The present work is a "world" encyclopedia in a special sense. The political and economic domination of the Western over the non-

Western world, which has been so marked a feature of the last century and a half, resulted in ethno-centric attitudes on the part of the West which were reflected in its historiography. Although the decolonization process ushered in by the Second World War is now almost complete, and although there has been a revolution in the writing of the history of the non-Western world during recent decades, much of the former bias still persists, particularly in works of reference. In the present volume, therefore, the attempt has been consciously made to set the record straight, to provide a balanced presentation shorn of the prejudices which accorded to the activities of non-Westerners a very minor role during the era of imperialism and colonialism. This is true not only of the politically-oriented Basic Chronology, but also of the Topical, where non-Western economic, social, and cultural achievements are given their just due.

Throughout the volume events and sequences of events are arranged chronologically. For convenience, however, an entire story has sometimes been told under one key year or group of years. For this reason, among others, an exceptionally full Index has been provided. Reference to it will enable the reader to locate the page or pages on which the major description of an event appears, as well as the pages containing additional or subsidiary entries. In other cases it has been found appropriate to divide a subject into several entries by country and chronological segment. The Congress of Vienna, for example, which is described in the "Nationalism, Liberalism, and Reaction in Europe, 1800-71" section of the Basic Chronology, appears under "The Hapsburg Lands, 1800-15," but also under "The Italian States and the Risorgimento, 1800-15," under "Russia, 1809-14," and "Russia, 1815-25," under "The Unification of Germany, 1807-15," and under "Great Britain and Ireland, 1815-15." Here again, reference to the Index, and also to the Contents, which is comprehensive, will enable the reader to make sure that he has not missed any vital entries.

Because the feature which distinguishes the modern age most sharply from its predecessors is the technological revolution, a major portion of the Topical Chronology is devoted to the section entitled "Economic Development and Technology." Within this section, the subject matter is handled by major time segments for major world areas, the latter arranged according to their relative status on the economic development scale. Headings within subsections follow the same order throughout: agriculture (and animal husbandry), raw materials, labor, energy, manufacturing and industry, transporta-

tion, communications, finance, foreign trade, foreign investment, business organization, government policy, and "other factors." This style of arrangement means that the reader may skip, tracing a particular theme for one country, group of countries, or the whole world from 1760 to the present, or, if he wishes, read straight through to gain a perspective of world-wide economic development and technological change (or lack of it) during a series of particular time spans.

All dates are by reference to the modern Western (Gregorian) calendar. For the Western world itself, this has been simple to achieve, since all the countries of Europe and the Americas, except Russia, had adopted the Gregorian system by 1760, the starting date of the encyclopedia. Russian Old Style dates (to 1917) and dates taken from sources which employed non-Western calendars, eras, and annual reckoning systems have been converted to their Gregorian equivalents.

The work is designed to be read as well as referred to. To this end some repetition has been permitted, in the belief that the reader will not wish to be burdened with a multiplicity of cross-references. In a few cases, where large topics fell naturally under more than one heading, and where duplication would have been unreasonably wasteful of space, cross-references have been supplied.

Foreign personal and place names appear in the text in the forms most likely to be familiar to the general reader. Where these forms, because of the development of modern scientific systems of transliteration, have become obsolete, the more correct versions have been added, where the name first occurs in each case, in parentheses: thus, "Muscat (Masqat)." Both forms, cross-referenced where necessary, appear in the Index.

The editors wish to express their gratitude to Cass Canfield, of Harper & Row, who initiated the project, to the late James Fergus McRee, copyeditor, who detected many errors and inconsistencies, and to Beulah Hagen, who saw the work through the press. Lilli Tanzer drew the maps from the designs of Susan McNamara. John C. Caldwell supplied the information upon which the world demography maps are based. Our thanks are also due to the editorial consultants and to more than fifty contributors and research and editorial assistants. A world encyclopedia of this scope and complexity could not have been produced in four years without their sustained and dedicated labor:

BASIC

CHRONOLOGY

THE DEMOCRATIC REVOLUTION IN THE WESTERN WORLD

1760–1825

The United States and Europe, 1760–99

THE AMERICAN REVOLUTION

THE COLONIAL POWERS IN COLLISION. By the middle of the 18th cent. 3 major European powers appeared solidly entrenched in the Western Hemisphere. The vast Spanish Empire embraced all of South America (save for Portugal's Brazil and the British and Dutch Guianas), all of Central America (save for British Honduras), major islands in the Caribbean, and on the North American continent the Floridas, California, and the Southwest. France held Canada and certain islands in the Caribbean, while the world-wide British Empire numbered some 31 colonies, extending from Hudson Bay to Borneo, from the Honduran logwood coast to the Bay of Bengal, and embracing almost 15 m. people. Some of these colonies, those involving control over non-English peoples (United East India and Royal African Companies) or over vast largely unpopulated domains (Hudson's Bay Co.), were administered by private business companies chartered by the crown. Others were owned and governed by private proprietors (Maryland, Pennsylvania, and Delaware). Two colonies, Connecticut and Rhode Island, managed to hold on to their original self-governing status. However, a clear trend toward the setting up of royal provinces had emerged. The royal colonies, numbering 8 of the original North American 13 (including Georgia after 1732) along with the British West Indian islands, were ruled by gov-

ernors named by the king. Other instruments of British colonial control were the Board of Trade (1696), which after 1748 emerged as a central agency of colonial supervision, such crown officials as the Secretary of State for the Southern Department (special Colonial Secretary created 1768), the Admiralty, the War Office, and the Privy Council, which reviewed colonial laws and acted as the highest court of appeal from the colonies.

The original 13 colonies had long enjoyed a considerable measure of self-government. Their assemblies, like the House of Commons, played an indispensable role in raising colonial revenue, and by 1750 had wrested control over expenditures from the governors, as well as much of the appointing power.

2ND 100 YEARS' WAR. 1689–1763.

During the period, Great Britain and France (along with other European powers) fought 4 wars to maintain that delicate balance of power both in continental Europe and in the colonial world deemed necessary to survival as 1st-rate powers. Allies of the major antagonists switched sides as their own interests dictated. These wars resulted in France being stripped of her empire in America. By the Treaty of Utrecht, 1713, Britain won Newfoundland, Acadia, and Hudson Bay from France, and from Spain the cession of Gibraltar and the island of Minorca. By the Treaty of Paris, 1763,

ending the Seven Years' War, 1756-63, which began in America in 1754 as the French and Indian War, Britain acquired Canada and all of France's territorial claims east of the Mississippi except New Orleans. In exchange for East and West Florida, captured in the war, Britain returned Cuba to Spain; France, to compensate Spain for her substantial losses, gave her New Orleans and the Louisiana Territory, retaining only the two fishing islands of St. Pierre and Miquelon and privileges of fishing off the Grand Banks.

The financial burdens imposed upon Britain both by the war and by the new responsibilities of the peace gave rise to a new issue of taxation in the colonies, while at the same time the expulsion of the French from North America freed the colonists from fear of foreign aggression and the need for protection by the British Empire.

1763

PROCLAMATION OF 7 OCT. In process of formulating a policy for the newly acquired territory in North America, the crown issued a proclamation forbidding settlement west of the Alleghenies, ordering colonists already there to leave, and placing the area under the control of the British military commander in America. The proclamation also established English law and royal governments for the new provinces of Quebec, East Florida, West Florida, and Grenada.

PONTIAC'S REBELLION. 7 May-28 Nov. The British acquisition of the old Northwest posed problems of relations between Indians and white settlers. Numerous grievances, including a British refusal to supply the Indians with ammunition, incited the Ottawa chief Pontiac and his followers to revolt. Beginning in May 1763, the Indians destroyed every British post west of Niagara until Col. Henry Bouquet defeated them at Bushy Run, thereby saving Ft. Pitt. Many tribes signed treaties at Presque Isle, 12 Aug., with Col. John Bradstreet, and in Nov. Pontiac lifted a 5-month siege of Detroit; he finally made peace at Oswego, 24 July,

1766, with the Indian Commissioner Sir William Johnson (1715-74)

1764

AMERICAN REVENUE ACT (SUGAR ACT). 5 Apr. This measure, the first aimed specifically at raising a crown revenue in the colonies, was proposed by the Chancellor of the Exchequer, Lord Grenville, to assure that the Americans would shoulder the heavy fiscal burden of colonial defense. It increased duties on non-British products imported into the colonies, added to the list of "enumerated" goods (sent only to England), and levied a 3d. per gal. tax on foreign molasses. Grenville ensured enforcement by overhauling the inefficient customs service and establishing a vice-admiralty court (no jury) at Halifax.

CURRENCY ACT. This act extended to all the colonies the ban on legal-tender paper money in effect in New England since 1751. Virginia, which had emitted £250,000 in paper, was the main target. Colonial opposition to this deflationary measure and to the Sugar Act forecast trouble for the coming years.

STAMP ACT. 22 Mar. The Stamp Act was the first direct tax imposed by Parliament on America. It sought to raise £60,000 annually for colonial defense by a levy on newspapers, legal documents, ships' papers, licenses, etc. The tax evoked united opposition throughout the colonies.

TAXATION AND REPRESENTATION. Lawyer Daniel Dulany of Maryland argued (*Considerations*) that Parliament could not levy internal revenue taxes like the Stamp Act on colonies which could not feasibly be represented in it. In Virginia the House of Burgesses asserted that only the provincial legislature could tax Virginia.

STAMP ACT CONGRESS. 7-25 Oct. Delegates from 9 colonies met in New York and adopted John Dickinson's (1732-1808) moderate "Declaration of Rights and Grievances," 19 Oct., which asserted that the Stamp Act violated the colonists' right as British subjects to be

taxed only by bodies in which they had representation.

PRESSURES FOR REPEAL. To hasten redress of their grievances, merchants in New York, Philadelphia, and Boston banned the purchase of European goods (nonimportation), and the other colonists ceased transactions requiring stamps or openly violated the law when it became inoperative, 1 Nov. British merchants, whose exports to America plummeted from £2,249,710 worth in 1764 to £1,944,108 worth in 1765, also sought repeal from the Rockingham ministry, which had replaced the Grenville government, 10 July.

1766

REPEAL. 18 Mar. Parliament responded by repealing the offensive legislation, but passed the Declaratory Act, 18 Mar., which asserted its jurisdiction over the colonies "in all cases whatsoever."

TRADE LAWS MODIFIED. 1 Nov. Parliament set a 1d. per gal. duty on all molasses and removed export duties on British West Indian sugar.

NEW YORK AND THE QUARTERING ACT. In Jan. the assembly refused to comply fully with Parliament's Quartering Act, Mar. 1765, which required the colonies to provide barracks and provisions for British troops. A clash, 11 Aug., between redcoats and citizens exacerbated the situation, and Governor Sir Henry Moore prorogued the recalcitrant legislature, 19 Dec. Under threat of parliamentary suspension, the assembly appropriated £3,000, 6 June, 1767.

1767

TOWNSHEND ACTS. 29 June. A number of acts proposed by Charles Townshend, Chancellor of the Exchequer in the Chatham government, levied supposedly acceptable external taxes (import duties on glass, lead, paints, paper, and tea) on America to defray the costs of the military, judiciary, and civil government there. Another measure established new vice-admiralty courts and an American

Board of Customs Commissioners in Boston to assure true compliance.

1768

MASSACHUSETTS CIRCULAR LETTER. 11 Feb. This letter, drawn up by Samuel Adams (1722-1803) and circulated by the assembly, attacked the Townshend Acts as violating the principle of no taxation without representation, and denounced any attempt to make colonial governors and judges independent of the people. Governor Francis Bernard dissolved the legislature, and he also dissolved the next one when it voted 92-17 not to rescind the letter, 30 June. Seven "rescindors" lost their seats in the 1769 election.

BRITISH TROOPS IN BOSTON. 1 Oct. The presence of the frigate *Romney* in Boston Harbor emboldened the harassed customs commissioners to seize, 10 June, the sloop *Liberty* in which John Hancock (1737-93) allegedly was smuggling Madeira wine. Fearing the angry townsmen, the customs officials took refuge next day in Castle William and called for troops. Two infantry regiments landed unopposed, 1 Oct., despite threats of violence by the Sons of Liberty.

PROGRESS OF NONIMPORTATION. Boston merchants, 1 Aug., banned the importation of Townshend-taxed items until repeal, and of most other British goods from 1 Jan., 1769, to 1 Jan., 1770. New York, 28 Aug.; Philadelphia, 10 Mar., 1769; and Baltimore, 30 Mar., merchants also reached nonimportation agreements of varying stringency. By the end of 1769 only New Hampshire remained aloof from nonimportation.

1769

VIRGINIA RESOLVES AND ASSOCIATION. On 16 May the House of Burgesses resolved that only the governor and provincial legislature could tax Virginians, and, 17 May, established the Virginia Association, forbidding the import of dutiable British goods (except paper), slaves, and many European lux-

ury Acts. The spread of the association was rapid, with Maryland, South Carolina, and Georgia endorsing similar programs. Delaware, Connecticut, and Rhode Island residents pledged nonimportation, and the New Jersey assembly, voiced support. British exports to America declined from £2,157,218 in 1768 to £1,336,122 in 1769.

1770

TAX TEA ONLY. 12 Apr. Lord North came to power, 31 Jan., and, pledging that he would levy no new taxes on America, withdrew all the Townshend duties except that on tea. The collapse of non-importation quickly followed. New York's defection, July, from the various associations prompted Philadelphia, Sept.; Boston, Oct.; South Carolina, Dec.; and Virginia, July 1771, also to withdraw.

UNREST IN NEW YORK. Several people were seriously injured in a clash, 16 Jan., between Sons of Liberty and redcoats in New York ("Battle of Golden Hill"). Alexander McDougall, a leader of the Sons, was imprisoned by the assembly for contempt, 13 Dec., 1770–27 Apr., 1771, after he attacked it in a broadside for appropriating £2,000, 15 Dec., 1769, in compliance with the Quartering Act.

BOSTON MASSACRE. 5 Mar. The incident known as the Boston Massacre was the culmination of several clashes between townsmen and redcoats. About 9 P.M. on 5 Mar., at the command of a person never identified, a detachment of soldiers fired into a mob of taunting civilians, killing 5. Charged with murder and defended by patriot lawyers John Adams (1735–1826) and Josiah Quincy (1744–75), 5 redcoats were acquitted and 2, pleading clergy, were burned in the hand for manslaughter.

1772

THREATS TO HOME RULE. After nightfall on 9 June the merchant John Brown led some men in burning the customs schooner *Gaspee*, which was aground near Providence. A commission of inquiry learned nothing from the unco-

operative Rhode Islanders. Announcements that the crown would henceforth pay the Massachusetts governor, 13 June, and judges, Sept., thus rendering them independent of the General Court, aroused concern.

NEW COMMITTEES OF CORRESPONDENCE. Samuel Adams, through the Boston town meeting, set up a standing committee of correspondence, and other towns in the province followed Boston's example, as did every colony except North Carolina and Pennsylvania by Feb. 1774.

1773

TEA ACT. 10 May. Parliament rescued the nearly bankrupt East India Company by allowing it to sell tea directly to consignees in the colonies, and by remitting fully all British duties on the product when exported there. Thus, despite a 3d. per lb. import duty in America, the company could undersell both honest colonial merchants and smugglers. The colonists, who especially feared the monopolistic aspects of the Tea Act, managed by threats and persuasion to procure the resignations of the tea consignees in Philadelphia, Oct., and New York, 1 Dec., but not in Boston.

BOSTON TEA PARTY. 16 Dec. Trouble resulted when Governor Hutchinson refused, 16 Dec., to allow the ship *Dartmouth*, which lay in Boston Harbor, to return to England without paying duty. Bostonians disguised as Mohawk Indians boarded the ship and dumped all the tea (342 chests) overboard. Charleston's consignment was landed without opposition, 22 Dec., and stored until the patriots seized and sold it in July 1776. On 22 Apr., 1773, some New York "Indians" (Sons of Liberty) held a tea party, and Annapolis men burned the *Peggy Stewart* and her tea cargo on 19 Oct.

1774

COERCIVE ACTS. 31 Mar., 20 May. George III and Parliament sought to punish Boston for her tea party. The

Boston Port Bill virtually closed the port until the town compensated the East India Company and the customs. The Administration of Justice Act, 20 May, allowed crown officers indicted in Massachusetts for capital offenses committed in quelling riots or collecting revenue to stand trial in England. The Massachusetts Government Act empowered the king to appoint the Council (previously elected by the Assembly), gave him and the governor control of judicial selections, and required the governor's approval for town-meeting agendas.

QUEBEC ACT. 20 May. This act established a permanent Canadian civil government, with a crown-appointed legislative council, the taxing power reserved to Parliament, and the rights of Catholics guaranteed. The colonists, who inaccurately counted it among the "Intolerable" (Coercive) Acts, disliked these alien features and the extension of the Canadian boundary to encompass lands claimed by Virginia, Connecticut, and Massachusetts.

COLONIAL PROTEST. The Boston town meeting demanded immediate economic sanctions against Britain, but moderates in Philadelphia, 21 May, and New York City, 23 May, suggested instead an intercolonial gathering. The General Court agreed, and during the summer all the colonies except Georgia nominated delegates to a congress to be held in Philadelphia in Sept.

1ST CONTINENTAL CONGRESS. 5 Sept.-26 Oct. Radicals like the Adamses (Mass.) quickly convinced the 56 delegates meeting in Carpenters Hall to endorse the Suffolk Resolves, adopted earlier in Massachusetts. These resolutions advised the populace to disobey the unconstitutional Coercive Acts, form a government to collect and withhold taxes from the crown, raise a militia, and enforce economic sanctions against Britain.

GALLOWAY'S PLAN OF UNION. 28 Sept. The delegates defeated the plan of the Pennsylvania conservative Joseph Galloway (1731-1803) to establish a subordinate American branch of Parliament, composed of a president-general ap-

pointed by the king and a council periodically elected by the assemblies, whose consent as well as Parliament's would be necessary for any law dealing with America.

DECLARATION AND RESOLVES.

14 Oct. The Congress denounced numerous parliamentary acts for violating colonial rights, including the assemblies' exclusive control, subject to royal veto, of taxation and internal policy.

CONTINENTAL ASSOCIATION. 18 Oct. The delegates pledged their colonies to start nonimportation of British goods and of slaves, 1 Dec.; nonconsumption, 1 Mar., 1775, and nonexportation to British areas, 1 Sept., 1775. Extralegal local committees were to enforce the association, a modified version of which even Georgia adopted. After sending an address to Americans, Britons, and the king, the Congress adjourned, 26 Oct., 1775.

WAR PREPARATIONS IN NEW ENGLAND. The Massachusetts House constituted itself a provincial legislature, 7 Oct., and empowered a Committee of Safety under John Hancock to call out the militia. In Portsmouth, N.H., patriots confiscated arms and ammunition, without bloodshed, from Ft. William and Mary.

1775

CONCILIATION PLANS. Feb. The Lords rejected Chatham's suggestion, 1 Feb., that Parliament, in return for a voluntary revenue and acceptance of her supreme legislative authority, should recognize the Continental Congress and pledge not to raise a revenue in America. However, the Commons endorsed, 27 Feb., North's proposal that Parliament "forbear" from levying revenue taxes on colonies whose assemblies voluntarily contributed money.

CRISIS IN NEW ENGLAND. Massachusetts' 2nd Provincial Congress met, 1 Feb., to prepare the colony for hostilities which Patrick Henry (1736-99) prophesied as imminent in his famous "Liberty or Death" speech, 23 Mar. Parliament declared Massachusetts to be in rebellion, 9 Feb., and Lord Dartmouth, Secre-

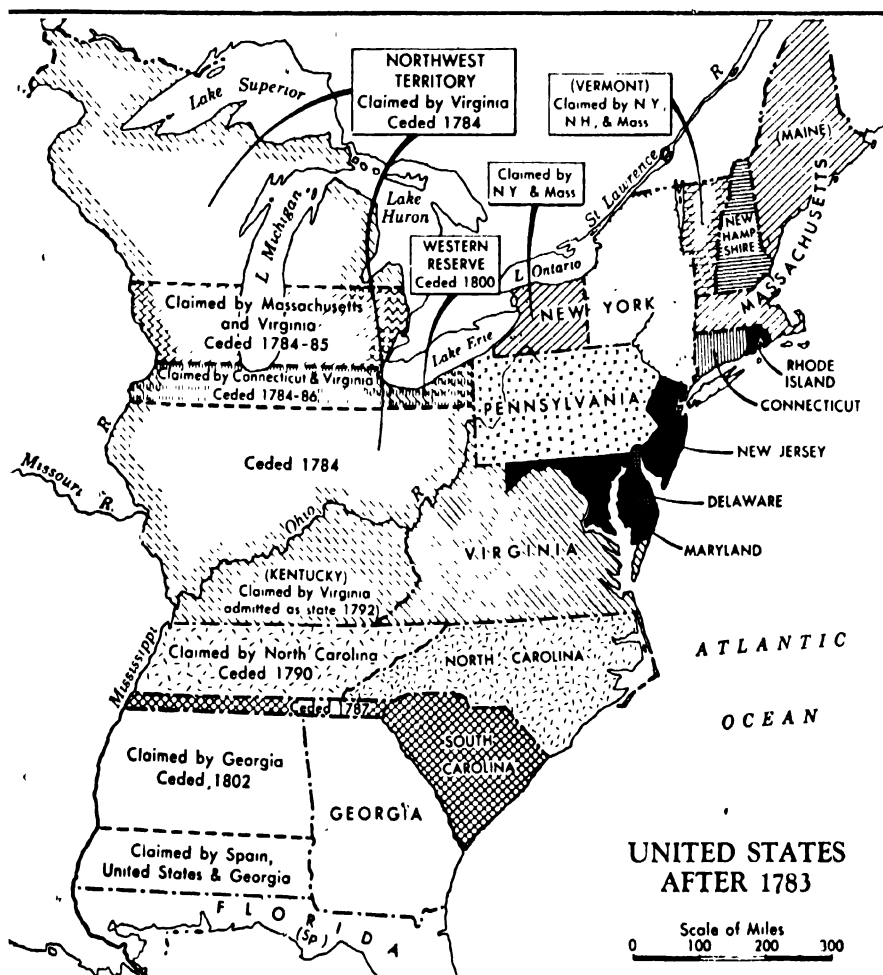

DEMOCRATIC REVOLUTION IN THE WESTERN WORLD

tary of State for the Colonies, authorized General Thomas Gage (governor since May 1774) to use force, if necessary, against the inhabitants.

LEXINGTON AND CONCORD. 19 Apr. Gen. Gage, 18 Apr., detailed Lt. Col. Francis Smith's 700 men to destroy patriot supplies at Concord. Paul Revere, dispatched along with William Dawes by Boston's Committee of Safety to give the alarm, warned Sam Adams and John Hancock at Lexington, where the next morning 70 "Minute Men" confronted the advancing British. The patriots were obeying Maj. John Pitcairn's order to disperse when his men, hearing the report of an unidentified firearm, opened fire

without orders; 8 Americans died in the ensuing skirmish. Smith went on to accomplish his mission at Concord, but paid a heavy price to colonial snipers, who killed 73 and wounded 174 of his men on the road back to Charlestown. The Americans, who had lost 93 killed, wounded, and missing, then began a siege of Boston which lasted until Mar. 1776.

CAPTURE OF FORT TICONDEROGA. 10 May. Ethan Allen's "Green Mountain Boys" captured Ft. Ticonderoga on Lake Champlain by surprise, 10 May. Benedict Arnold (1741-1801), instructed by the Boston Committee of Safety to take Ticonderoga, accompanied Allen. Americans also seized Crown

Point, N.Y., 12 May, and St. John's, Canada, 16 May.

WASHINGTON NAMED COMMANDER. 15 June. Congress accepted the troops besieging Boston as a Continental Army, and arranged to raise money and more men, 10-22 June. On Thomas Johnson's (Md.) motion, which John Adams seconded, Congress unanimously named George Washington (1732-99) commander in chief, 15 June, and appointed Artemas Ward, Charles Lee, Philip Schuyler, and Israel Putnam major generals, 17 June.

BUNKER HILL. 17 June. The Americans, discovering Gen. Gage's plans to occupy Dorchester Heights overlooking Boston on 18 June, countered by fortifying Breed's Hill on the Charlestown peninsula on the night of 16-17 June. Gage decided to send Maj. Gen. William Howe with 2,400 men to dislodge the 1,600 colonists under Col. William Prescott. After 2 unsuccessful frontal assaults, Howe's men, reinforced by troops of Maj. Gen. Henry Clinton, dropped their heavy packs and routed the powderless patriots from Breed's Hill and Bunker Hill with a bayonet charge. British casualties of 1,054 (many of them officers) as opposed to 397 American losses made it a Pyrrhic victory.

OLIVE BRANCH PETITION. 5 July. This petition, written by John Dickinson and adopted by Congress, expressed Americans' devotion to George III and their desire for a peaceful reconciliation. Before adjourning, 2 Aug., Congress also endorsed, 6 July, a "Declaration of the Causes and Necessities of Taking Up Arms" by Thomas Jefferson (1743-1826) and Dickinson, and rejected, 31 July, Lord North's reconciliation plan.

EXPEDITIONS AGAINST QUEBEC. Aug.-Dec. When Gen. Schuyler fell ill at St. John's, Gen. Richard Montgomery became commander of an expedition from New York designed to prevent an attack from Canada. Montgomery drove the British commander, Sir Guy Carleton, back to Quebec, Nov., and there joined Benedict Arnold, 3 Dec., who had arrived, 13 Nov., with troops from Cambridge. They launched a disastrous attack against Quebec, 31 Dec., in which nearly 100

Americans were killed or wounded, including Montgomery (killed) and Arnold (wounded), and over 300 were captured.

CONGRESS RECONVENES. 12 Sept. Learning, 9 Nov., that George III had rejected the Olive Branch Petition and declared the colonies to be in rebellion, 23 Aug., Congress, with Georgia present, disavowed allegiance to Parliament, 6 Dec.

NAVY ESTABLISHED. 13 Oct. Congress authorized a navy of 2 (later 4) ships of 10 guns each; adopted regulations for it, 28 Nov.; and commissioned officers, 22 Dec., naming Esek Hopkins (R.I.) commodore. It also encouraged privateering, issuing letters of marque and reprisal, 23 Mar., 1776.

COMMITTEE OF CORRESPONDENCE. 29 Nov. A Committee of Correspondence was established by Congress to contact friends of America in Europe.

HOSTILITIES IN THE SOUTH. 11 Dec. At Great Bridge angered colonists defeated and drove from Virginia the Loyalist forces of Governor Dunmore, who had offered, 17 Nov., freedom to slaves deserting rebel masters.

1776

MILITARY BALANCE SHEET. When hostilities commenced, each side had certain advantages and certain weaknesses. The patriots, armed with the superior American rifle and fighting on their own soil under George Washington's excellent leadership, lacked training, supplies, and naval support. The professional British army, well-equipped and financed, was tactically inflexible, far from home, and failed adequately to mobilize Loyalist assistance.

"COMMON SENSE." 9 Jan. The appearance of Thomas Paine's (1737-1809) pamphlet, *Common Sense*, which denounced George III and the institution of monarchy, brought many Americans to favor independence.

BRITISH EVACUATION OF BOSTON. 17 Mar. In early Mar., the colonists set up Gen. Henry Knox's artillery on Dorchester Heights, thus making Boston untenable. Gen. Howe, commanding the

British since 10 Oct., 1775, embarked his soldiers and 1,000 Loyalists on troopships, 17 Mar., and sailed to Halifax.

FRENCH AID. Apr.-May. The French foreign minister, Comte de Vergennes, seeking to weaken Britain, persuaded Louis XVI to give the Americans 1 m. livres in munitions, 2 May, through a fictitious company headed by French agent Pierre Caron de Beaumarchais. Meanwhile, the Americans, 6 Apr., opened their ports to all nations except Britain.

RETREAT FROM CANADA. May-July. After unsuccessfully besieging Quebec, Arnold's troops, under Gen. John Thomas, began to retreat, May. Harassed by Carleton's men, they joined Arnold at St. John's and reached Ticonderoga in July. Both sides began to build fleets to control Lake Champlain.

"HOSTILITIES IN THE SOUTH. June. Gen. Henry Clinton's British expeditionary force arrived off the coast of Charleston, S.C., 1 June, where Gen. Charles Lee assumed command, 4 June. Clinton failed to capture the city as Col. William Moultrie's men, inflicting over 200 casualties, smashed an assault by Sir Peter Parker's warships on nearby Sullivan's Island, 28 June.

MOVEMENT TOWARD INDEPENDENCE. June. On 7 June, Richard Henry Lee (Va.) offered a resolution that the United Colonies "are, and of right ought to be, free and independent States," and Congress, postponing a decision, named, 11 June, Jefferson, Benjamin Franklin (1706-90), John Adams, Robert Livingston (1746-1813), and Roger Sherman to draft a Declaration of Independence. Jefferson, drawing upon the "natural rights" political philosophy, drafted the document.

DECLARATION OF INDEPENDENCE. Independence was voted by Congress as 12 colonies approved Lee's resolution of 7 June. The New York delegation, under instructions, 11 June, from the Provincial Congress, abstained. The same colonies voted, 4 July, to endorse an amended version of Jefferson's Declaration. New York's Provincial Con-

gress approved the Declaration, 9 July, and Congress ordered the document engrossed and signed by the delegates, 19 July. Hancock (president) and Thomson (secretary) had signed it on 4 July, and most affixed their signatures on 2 Aug., but some, like Matthew Thornton (N.H.), did so later.

BATTLE OF LONG ISLAND. 27 Aug. Anticipating Gen. Howe's selection of New York City as his base, Washington brought his army there from Boston, 21 Mar.-13 Apr. From July to Aug., Howe landed 32,000 troops on Staten Island and brought 20,000 of them to Long Island, 22-25 Aug. On 27 Aug., Howe captured Gen. Sullivan and inflicted 1,500 casualties on the Americans, who fled to Brooklyn Heights, from where Washington stealthily shipped them by night, 29-30 Aug., to Manhattan.

STATEN ISLAND PEACE CONFERENCE. 11 Sept. This conference, requested by the king's commissioners, Gen. William and Adm. Richard Howe (brothers), was fruitless as Franklin, John Adams, and Edmund Rutledge rejected the British *sine qua non*, withdrawal of the Declaration of Independence.

BRITISH OCCUPATION OF NEW YORK CITY. 15 Sept. Howe landed troops at Kips Bay, and occupied New York City. Washington, fearing that he and his men would be trapped, retreated to Harlem Heights, where he repelled a British assault, 16 Sept.

BATTLE OF VALCOUR BAY. This battle, 11 Oct., and that of Split Rock, 13 Oct., resulted in defeats for Arnold's outgunned Lake Champlain fleet at the hands of Carleton's sailors. Winter's approach forced Carleton to return to Canada, 3 Nov., without attacking Ticonderoga.

RETREAT ACROSS NEW JERSEY. 18 Nov.-20 Dec. Washington withdrew to White Plains, 23 Oct., and, after the British had captured the high ground there, 28 Oct., retreated to North Castle, 1 Nov. In Manhattan, Howe's troops captured 2,818 patriots in Ft. Washington, 16 Nov., and two days later Gen. Cornwallis' approach forced Gen. Greene

to abandon Ft. Lee, N.J. Meeting at Hackensack, Greene and Washington retreated across New Jersey into Pennsylvania, 11 Dec. After giving Washington almost dictatorial powers, Congress prudently removed itself to Baltimore.

COUP AT TRENTON. 26 Dec. Returning to New York, Howe left only a few small garrisons in New Jersey. Washington crossed the Delaware River by night, 25 Dec., and surprised the Trenton detachment, capturing 918 Hessians, while suffering only 5 casualties. He returned to Pennsylvania and then re-occupied Trenton, 30-31 Dec.

1777

COUP AT PRINCETON. 3 Jan. Howe quickly sent troops to Trenton, 1 Jan., and they made light contact with the Americans, 2 Jan. Cornwallis planned to attack the next day, but Washington slipped away by night to Princeton, where he routed, 3 Jan., a British column which had attacked his vanguard, and then led his men to winter quarters in Morristown.

FOREIGN AFFAIRS. Congress reconvened in Philadelphia on 12 Mar. and reconstituted the Committee for Secret Correspondence as the Committee for Foreign Affairs. Also it appointed several commissioners to represent America abroad, sending Arthur Lee, 1 May, to Spain; Ralph Izard, 7 May, to Tuscany; and William Lee, 9 May, to Vienna and Berlin. Foreign officers contributing their talents to the American cause included (date of commission in parentheses) Maj. Gens. the Marquis de Lafayette (31 July) and "Baron" Johann de Kalb (15 Sept.), Col. of Engineers Thaddeus Kosciuszko (18 Oct., 1776), and Inspector Gen. Baron Friedrich Wilhelm von Steuben (5 May, 1778).

FALL OF PHILADELPHIA. 23 July-26 Sept. Leaving New York, 23 July, Howe landed 15,000 men at Head of Elk, 25 Aug. He defeated Washington at Brandywine Creek, 11 Sept., and Gen. Anthony Wayne at Paoli, 21 Sept., and occupied Philadelphia, 26 Sept. Congress

fled to Lancaster, 19 Sept., and then to York, 30 Sept.

BATTLE OF GERMANTOWN. 4 Oct. Washington's army suffered 700 casualties in a futile attack on the main British encampment at Germantown. He withdrew and took up winter quarters at Valley Forge, mid-Dec. Cornwallis forced the evacuation, 20 Nov., of Ft. Mercer, thus clearing the Delaware as far north as Philadelphia for British vessels.

NORTHERN CAMPAIGN. Gen. John Burgoyne put his plan of 28 Feb. into operation. This plan envisaged a 3-pronged attack on New England. Burgoyne himself drove south from Canada, 17 June, and seized Mt. Defiance overlooking Ft. Ticonderoga, 2 July, which Gen. Arthur St. Clair evacuated, 5 July.

Col. Barry St. Leger, leading the 2nd prong east from Oswego, besieged Col. Peter Gansevoort's men in Ft. Stanwix, 3 Aug. Mohawk chief Joseph Brant inflicted heavy casualties on Gen. Nicholas Herkimer's men coming to relieve Stanwix, 6 Aug., but St. Leger retreated to Oswego, 22 Aug., as Arnold approached with 1,000 men.

Burgoyne sent Lt. Col. Baum to capture badly needed supplies stored at Bennington, Vt., but Gen. John Stark's patriots mauled the attackers, 16 Aug. Nevertheless, Burgoyne pressed on to attack Bemis Heights, where the American commander, Gen. Horatio Gates, with 6,000 men repulsed him at Freeman's Farm, 19 Sept. Gens. Daniel Morgan and Ebenezer Learned checked Burgoyne's assault on the American left, 7 Oct., and a daring charge by Benedict Arnold drove the British back on Bemis Heights, from where they retired to Saratoga, 8 Oct.

The attack's 3rd prong, a drive up the Hudson, never materialized, as Howe was in Pennsylvania and Gen. Henry Clinton ventured north only to Esopus. His situation hopeless, Burgoyne asked for terms, 13 Oct., and by the Convention of Saratoga, 17 Oct., his 5,700 men laid down their arms.

ARTICLES OF CONFEDERATION. 15 Nov. A committee led by Dickinson had proposed Articles of Confederation on 12

July 1776. On 15 Nov., 1777, they were adopted by Congress and submitted for ratification. Each state was to have one vote in the Confederation Congress and was to share proportionately the expenses of government.

1778

FRANCO-AMERICAN ALLIANCE. 6 Feb. The French, who feared the possible effect of new British peace proposals offered after the defeat of Burgoyne, finally recognized American independence in two treaties (1) of amity and commerce and (2) of alliance, 6 Feb., the latter setting forth war objectives and a formal agreement not to make a separate peace. Conrad Gérard became French minister to the U.S., Mar., and Congress ratified the treaties, 4 May, naming Franklin minister to France, 14 Sept.

CARLISLE PEACE COMMISSION. 12 Apr. Lord North, hoping to prevent congressional ratification of the Franco-American alliance, pledged, 16 Mar., to repeal the Tea and Coercive Acts and levy no revenue taxes in America. Furthermore, Parliament commissioned, 12 Apr., the Earl of Carlisle, William Eden, George Johnstone, and the Howe brothers as peace emissaries, empowered, if necessary, to promise suspension of all acts passed since 1763. When the negotiators arrived, 6 June, Congress informed them, 17 June, that it would discuss only the withdrawal of British troops and the recognition of American independence. When the commissioners' Manifesto and Proclamation, 3 Oct., appealing directly to the people, also came to nothing, they returned to England, 27 Nov.

JOHN PAUL JONES'S RAIDS. Apr. Privateers were the mainstay of the American naval effort, taking 733 prizes by 1778. The exploits of Capt. John Paul Jones's *Ranger* were especially daring. Roaming the Irish Sea, Jones captured 2 ships, 14–17 Apr., burned another, spiked the guns of the fort at Whitehaven, England, 23 Apr., and defeated the British sloop *Drake* off northern Ireland, 24 Apr.

BATTLE OF MONMOUTH. 28 June. Distressed by rumors of an approaching French fleet, Clinton, who had replaced Howe on 8 May, abandoned Philadelphia, 18 June, and withdrew across New Jersey with Washington pursuing from Valley Forge. The American vanguard caught Clinton at Monmouth Court House, 28 June, but fled in confusion as Gen. Charles Lee's leadership proved inadequate. Washington regrouped the patriots, and they managed to hold off repeated British assaults. That night Clinton slipped his men away to New York.

CAPTURE OF KASKASKIA. 1 July. Encouraged by Governor Patrick Henry (Va.), the Kentucky militia leader George Rogers Clark drove into the Northwest against enemy forces terrorizing the frontier. Clark took numerous posts, including Kaskaskia, 4 July; he also captured Lt. Gov. Henry Hamilton at Vincennes, 25 Feb., 1779.

FRANCO-AMERICAN ATTACK ON NEWPORT. 29 July–29 Aug. Comte d'Estaing's French fleet arrived near Newport, R.I., 29 July, but the appearance of Admiral Howe's ships, 10 Aug., prevented an attack, and a storm scattered both fleets, 11 Aug. Without naval support, Gen. Sullivan's assault on Newport, 29 Aug., was unsuccessful.

1779

WAR IN THE SOUTH. Jan.–June. The British moved their operation south with much success. After taking Savannah, 29 Dec., 1778, Lt. Col. Campbell captured Augusta, 29 Jan. Moultrie's patriots successfully defended Port Royal, S.C., 3 Feb., and Col. Andrew Pickens defeated Loyalists at Kettle Creek, Ga., 14 Feb., but Gen. John Ashe's attempt to recover Augusta ended in disaster at Briar Creek, 3 Mar., and Gen. Augustine Prevost decisively beat Gen. Benjamin Lincoln's Continentals at Stono Ferry, 19 June.

WAR IN THE NORTH. June–Sept. American success continued in the north as Gen. "Mad Anthony" Wayne recaptured, 15 July, and dismantled the fort at

Stony Point, N.Y., taking almost 700 prisoners. Maj. "Light Horse Harry" Lee drove the British from New Jersey by capturing Paulus Hook, 19 Aug. Avenging frontier massacres, especially those at Wyoming, 3 July, 1778, and Cherry, 11 Nov., 1778. Valleys in Pennsylvania, Gens. John Sullivan and James Clinton defeated, 29 Aug., Indians and Loyalists under Sir John Johnson and Joseph Brant at Newtown (Elmira) and ravaged 40 Iroquois villages.

SPANISH DECLARATION OF WAR.

21 June. In accordance with the Convention of Aranjuez, 12 Apr., with France, Spain entered the war, 21 June, after Britain had rejected her demand for Gibraltar and an ultimatum, 3 Apr. However, fearing for her colonies, Spain refused to recognize American independence.

"BONHOMME RICHARD" AND "SERAPIS." Capt. Jones sailed from France, 14 Aug., in a rehabilitated vessel he renamed *Bonhomme Richard* to honor Franklin. Near England, 23 Sept., he defeated Capt. Pierson's *Serapis*, transferred his crew to it from his own sinking ship, and brought it to port, 6 Oct.

FAILURE AT SAVANNAH. Oct. Admiral d'Estaing and Gen. Lincoln joined forces, 23 Sept., but their attack on Savannah, 9 Oct., failed. The British again took the offensive as Clinton withdrew his troops from Rhode Island, 11 Oct., and left New York, 26 Dec., to attack Charleston.

1780

LEAGUE OF ARMED NEUTRALITY.

Catherine II of Russia proposed a League of Armed Neutrality, 28 Feb., declaring that her navy would protect neutral Russian trade. Vergennes encouraged the League, and Denmark, Sweden, the Netherlands, Austria, Portugal, the Kingdom of the Two Sicilies, and Prussia became members.

FALL OF CHARLESTON. 12 May. Clinton besieged Charleston from early Feb. until Lincoln surrendered the city and its 5,400-man garrison, 12 May. Corn-

wallis took command there when Clinton returned to New York, 5 June.

BATTLE OF CAMDEN, 16 Aug. Gen. Gates, who was commissioned by Congress, 13 June, to oust the British from South Carolina and Georgia, decided to strike with his Southern Army at Cornwallis supply depot at Camden, S.C. Gates made contact, 16 Sept., but fled 160 miles back to Hillsboro, N.C., when Col. Banastre Tarleton's cavalry smashed his rear. Gen. Nathanael Greene replaced Gates, 14 Oct., and assumed command of the army in the south. Dec. Cornwallis invaded North Carolina, 8 Sept., but turned back when guerrillas under Cols. Isaac Shelby and William Campbell defeated and captured Maj. Patrick Ferguson's 1,100 Loyalists at King's Mountain, 7 Oct.

TREASON OF ARNOLD. 21 Sept. Benedict Arnold, convicted, 26 Jan., for abusing his powers as commander of Philadelphia, resumed, May, a subversive correspondence which he had carried on with Clinton in 1779. Arnold took command of West Point, 5 Aug., and gave Clinton's adjutant, Maj. John André, plans showing the weaknesses of the post. 2 Sept. André, imprudently wearing civilian clothes, was captured, 23 Sept., and executed as a spy, 30 Sept. Arnold, who fled to the warship *Vulture* in the Hudson River, 25 Sept., became a brig. gen. in the British army and took part in several actions against the patriots.

1781

PENNSYLVANIA MUTINY. 2,400 disgruntled veterans decided to march on Philadelphia, 1 Jan. Joseph Reed, president of the Pennsylvania Executive Council, negotiated with them, 7 Jan., and managed to get almost half to return to service. Executions of several malcontents crushed insurrections by New Jersey, late Jan., and Pennsylvanian, May, troops.

ROBERT MORRIS, SUPERINTENDENT OF FINANCE. During a period of acute financial distress Congress appointed Robert Morris (1734-1806)

superintendent of finance, 20 Feb. By 1780, Congress had issued \$191,500,000 in paper money, which had depreciated drastically. Congress virtually repudiated these "Continental" by allowing, 18 Mar., 1780, states to use them at one-fortieth of their face value to pay their debts to the central government. Morris improved the situation by (1) having Congress approve, 26 May, a national bank, the Bank of North America; (2) supplying the army by contract rather than requisition, June; and (3) obtaining money from France, May, and the Netherlands, 5 Nov.

RATIFICATION OF ARTICLES OF CONFEDERATION. Maryland signed, 27 Feb., after all the states, including Virginia, 2 Jan., had renounced their claims to western lands, thus completing the ratification of the Articles of Confederation.

WAR IN THE CAROLINAS. Gen. Greene's army re-entered South Carolina, where, with few losses, Gen. Morgan and Col. William Washington's cavalry crushed Tarleton at Cowpens, 17 Jan. Retiring to Virginia, Feb., the patriots returned to North Carolina with 4,400 men. Cornwallis won a Pyrrhic victory at Guilford Courthouse, 15 Mar., and retreated to Wilmington for reinforcements. Despite setbacks at Hobkirk's Hill, 19 Apr.; Ninety-Six, 22 May-19 June; and Eutaw Springs, 8 Sept., by autumn Greene had isolated the British in Charleston.

U.S. PEACE NEGOTIATIONS. Congress appointed John Jay (1745-1829), 13 June, Franklin, Henry Laurens, and Jefferson, 14 June, to assist John Adams to negotiate peace. Advised by the French minister, Chevalier de la Luzerne, Congress, 15 June, reduced its essential demands to independence and sovereignty, and instructed the commissioners not to act without French consent.

INVASION OF VIRGINIA. Cornwallis attacked American bases in Virginia, which were undermining British control of the Carolinas. 7,500 redcoats raided extensively until the junction of the forces of Lafayette, reinforced by Wayne, 10 June, and von Steuben, 19 June, led

Cornwallis to retire to Yorktown, 1 Aug., where he could establish sea communications with New York. Washington and Rochambeau, who had reached Newport, 11 July, 1780, with 5,000 French troops, met at Wethersfield, Conn., and decided to attack New York. When Washington learned, 14 Aug., that de Grasse intended to operate in the Chesapeake area instead of supporting the attack, he switched his target to the British positions in Virginia. Feinting toward Staten Island, Washington put the Franco-American army in motion, 21 Aug., south through New Jersey.

YORKTOWN CAMPAIGN. 30 Aug.-19 Oct. Arriving 30 Aug., de Grasse landed his 3,000 troops to join Lafayette near Yorktown. He engaged Adm Thomas Graves's fleet, 5 Aug., which retired to New York, 10 Aug., after Count Barras's squadron reinforced de Grasse, 9 Aug. French ships fetched Washington's and Rochambeau's soldiers, 14-24 Sept., to Williamsburg, from where they approached Yorktown, 28 Sept. The allies pounded British interior positions with artillery, 9 Oct., and took 2 key redoubts, 14 Oct. Cornwallis asked for terms, 17 Oct.; capitulated, 18 Oct.; and had his 8,000 men lay down their arms, 19 Oct. Washington renewed the siege of New York, to which Clinton, after arriving belatedly off Chesapeake Bay, 24 Oct., with 7,000 reinforcements, had returned

1782

FALL OF LORD NORTH'S MINISTRY. 20 Mar. Frustrated by British defeats, the Commons rejected further prosecution of the American war, 27 Feb., and authorized negotiations with the rebels, 5 Mar. Rockingham replaced North, 22 Mar., and Sir Guy Carleton became British commander in New York, 4 Apr., to which all British forces were withdrawn.

EARLY PEACE NEGOTIATIONS. 12 Apr.-27 Sept. Richard Oswald met Franklin in Paris, where negotiations began, 27 Sept., after Shelburne, who had replaced the deceased Rockingham on 1 July, virtually authorized recognition of American independence, 19 Sept. Jay arrived

from Spain, 23 June, and Adams from the Netherlands, 26 Oct., having obtained Dutch recognition of the U.S., 19 Apr. Laurens, released from prison in England, took little part in the discussions, and Jefferson declined serving.

PRELIMINARY ARTICLES OF PEACE. Deciding not to keep the French, whom they distrusted, fully informed, Jay, Adams, and Franklin presented, 5 Nov., to Henry Strachey and Oswald suggestions which became the basis of the preliminary articles, 30 Nov., and of the definitive peace treaty, 3 Sept., 1783. The stipulations included (1) recognition of U.S. independence; (2) generous American boundaries, including the Mississippi in the west; (3) a guarantee of the right of Americans to fish off Newfoundland and Nova Scotia and of their privilege to dry fish in certain areas; (4) validity of debts owed among nationals of the two countries; (5) exhortation of the states to restore Loyalist property and rights; and (6) withdrawal of British troops from America.

1783

PEACE. Britain signed preliminary treaties with France and Spain, 20 Jan., and declared an armistice, 4 Feb.

TREATY OF PARIS. The Preliminary Articles of Peace were ratified by Congress on 15 Apr., and the definitive Treaty of Paris, 3 Sept., on 14 Jan., 1784.

DEPARTURE OF LOYALISTS. Nearly 100,000 harassed Tories fled the American Revolution. Numerous states disfranchised, removed from office, and even exiled those who would not repudiate George III. By 1782 all the states, complying with a congressional recommendation, 27 Nov., 1777, had confiscated Loyalist property, prompting the British to grant £3,292,452 in compensation by 1790.

RESULTS OF THE REVOLUTION. A vast, independent republic was established. Democracy and liberty were promoted directly or indirectly by the overthrow of the royal and proprietary ruling classes, by property confiscation, by the abolition of primogeniture and entail,

and by the disestablishment of the Anglican Church where tax-supported. Massachusetts, New Hampshire, Pennsylvania, Connecticut, and Rhode Island ended slavery, 1780-84, and 11 states prohibited or heavily taxed the slave trade. (*Cont. p.* 202.)

THE FRENCH REVOLUTION

In theory, mid-18th-cent. France was an absolute monarchy. All laws emanated from the king, and the powerful royal intendants administered the provinces. France was the richest and most populous country in Europe. Her population (80% rural) increased from 20 to 25 m. during the 18th cent., which also saw an unprecedented increase in French commerce and industry.

In spite of France's riches, her government was unable to mobilize sufficient resources either to carry out a successful foreign policy or to solve problems of finance. Governmental action was impeded by competition between overlapping ecclesiastical, administrative, and fiscal agencies. Except for a free-trade area in the French heartland, trade was hampered by innumerable tolls. Government revenues were inadequate, due to an inefficient tax-farming system and to exemptions from taxation won in earlier times by the nobility, the church, and various regions and municipalities. The burden of taxation fell mainly on those least able to pay. Moreover, the government's efforts to abolish privilege were usually thwarted by the 13 *parlements* (royal law courts). The judges of the *parlements* bought their offices, and considered themselves guardians of privilege and of the French "constitution." They claimed the right to veto royal legislation, and with popular support successfully nullified attempts to tax privileged groups.

The second half of the 18th cent. was also marked by the emergence of the *philosophes*, of whom the most important were Voltaire (1694-1778), Jean-Jacques Rousseau (1712-78), and Denis Diderot (1713-84). These and other *philosophes* believed in the primacy of reason, and

demanded that the state be just, humane, and rationally organized. They advocated the abolition of privilege and the elimination of clerical influence in government. Their influence was widespread and helped to undermine the position of the privileged orders.

1763

TREATY OF PARIS. The weakness of the French government was demonstrated by the Seven Years' War, 1756-63. In Germany, French armies were stalemated by those of petty princelings, while England (a third the size of France in population) seized practically all the French colonies. By the Treaty of Paris, 10 Feb., 1763, France lost to Great Britain Canada, most of her Indian possessions, and 4 West Indian islands. She earlier had had to cede Louisiana to Spain, 3 Nov., 1762.

1764-70

MINISTRY OF CHOISEUL. The Duc de Choiseul (1719-85) had become secretary of state for foreign affairs in Dec. 1758, and later took over the War and Navy ministries as well. He built France up again after the disasters of the Seven Years' War, and reinvigorated the French army and navy. He failed, however, to effect any financial reforms. He fell, Dec. 1770, when Louis XV (ruled 1715-74) vetoed his policy of defending Spanish claims to the Falkland Islands against those of Britain.

1771-74

MAUPEOU'S REFORMS. René Nicolas de Maupeou (1714-92), who became keeper of the seals in 1763 and chancellor in 1768, and Abbé Joseph Marie Terray (1715-78), *contrôleur-général* from 1769 to 1774, believed that the French state could be rejuvenated only by eliminating the *parlements*, which had previously obstructed all reforms. On their advice, Jan. 1771, Louis XV abolished the *parlements* and established new courts, whose justices he himself nominated and could dismiss. The new system functioned suc-

cessfully up to the death of Louis, 10 May, 1774. Freed from the obstructionism of the *parlements*, Terray was able to invalidate many tax exemptions and privileges.

1774-77

MINISTRY OF TURGOT. Louis XVI (ruled 1774-92) recalled the *parlements* and replaced Terray with Anne Robert Jacques Turgot (1727-81). Turgot cut back pensions and government expenditure, improved the postal services, and allowed limited freedom in the grain trade. In Jan. 1776 he promulgated the Six Edicts, which abolished the guilds and substituted a general tax on land (to finance road building) for the *corvée* (which drafted peasants for work on the roads). Court intrigue and the opposition of the *parlements* caused his fall, May 1776.

1778-83

AMERICAN WAR OF INDEPENDENCE. France joined the American colonists in their struggle for independence from Britain early in 1778. After the British were defeated in North America, peace was made at Versailles, 3 Sept., 1783, France receiving St. Lucia and Tobago in the West Indies and Sénégal and Gorée Island in West Africa.

1783-88

MINISTRY OF CALONNE. The expenses of the American war further weakened French state finances. Charles Alexandre de Calonne (1734-1802), *contrôleur-général* from 1783 to 1787, tried to save the government from bankruptcy by borrowing. When this failed, he proposed a general land tax. In an attempt to bypass the *parlements*, he convoked an Assembly of Notables, Feb. 1787, hoping that this body would approve his proposal. The Assembly, however, came out against a land tax, and Calonne was dismissed, 8 Apr.

MINISTRY OF BRIENNE. Under pressure from the queen, Marie Antoinette (1755-93), Louis XVI then ap-

pointed Loménie de Brienne *contrôleur-général* and *premier ministre*, May 1787. Brienne submitted new tax proposals to the Parlement of Paris, which rejected them. Soon the provincial *parlements* joined in harassing the government, and the tax-collecting system began to break down. The keeper of the seals, Lamoignon, decided to solve the crisis with Maupeou's methods. On 8 May, 1788, he suspended the *parlements* and established new law courts.

The church, whose senior offices were staffed wholly by nobles, and the nobility protested. The provincial *parlements* organized popular uprisings against royal authority. On 8 Aug., Louis capitulated to what had become a nation-wide revolt of the privileged orders by recalling the *parlements* and granting their chief demand: the convocation of the Estates-General by 1 May, 1789. On 25 Aug., 1788, Jacques Necker (1732-1804), a Gepevan banker who had directed the finances of the French government from 1776 to 1781, was reappointed minister of state.

BALANCE OF POWER IN THE ESTATES-GENERAL. The Estates-General had not met since 1614-15. On that occasion the three estates (clergy, nobility, and commons) had met separately, and no bill could become law unless all three ratified it. The Parlement of Paris declared, 25 Sept., 1788, that the Estates-General should function as they had in the 17th cent. It soon became clear to the urban middle classes, who had previously supported the *parlements* as champions of the rights of the people (or of their own rights), that the *parlements* were willing to act only in defense of aristocratic privilege. The middle classes therefore demanded double representation and voting by head, not by order. If granted, this would have allowed the commons (98% of the population) to hold half the seats in a unicameral legislature. After several provincial riots and a deluge of pamphlets, Necker and the royal council granted, 27 Dec., double representation for the Third Estate, but not voting by head.

POPULAR UNREST. Political crisis coincided with economic crisis. A bad

harvest in 1788 sent bread prices up, and widespread suffering was caused. Moreover, from 1787 onward, industry had slumped, due in part to the import of cheap British goods following a lowering of French tariffs in accordance with the Anglo-French Treaty of 1786. In Apr. and May 1789, popular uprisings, provoked by countless grievances both immediate and long-standing, broke out all over France.

1789

MEETING OF THE ESTATES-GENERAL. The Estates-General met at Versailles, 5 May. The clergy and nobility had c. 300 representatives and the commons 600, 65% of whom were lawyers and minor officials. Throughout May, debate centered on whether the Estates-General should vote by head (as advocated by the Third Estate) or by order (as demanded by clergy, nobility, and court). On 10 June, the Third Estate declared that all estates should meet together, and invited the other 2 orders to join it. By 15 June, 12 priests had done so.

NATIONAL ASSEMBLY. On 17 June, the Third Estate renamed itself the National Assembly as an expression of its national rather than class representation. It immediately claimed control over taxation and the right to recast the constitution. Louis XVI retaliated on 20 June by locking the representatives out of the assembly hall. They met in a nearby tennis court, where they swore not to dissolve before writing a constitution (the "Tennis Court Oath"). By 25 June a majority of the clergy (two-thirds of the clerical representatives were priests of humble origin who sympathized with the Third Estate) and 47 nobles had joined the Third Estate. Finally, 27 June, the threat of an uprising in Paris forced the king to order the remaining nobles and churchmen to join the Third Estate.

PARIS COMMUNE AND NATIONAL GUARD. Paris "electors" joined the existing government of that city to form the Commune, 13 July, with Jean Sylvain Bailly (1736-93) as mayor. Marie Joseph, Marquis de Lafayette (1757-1834) became commander of a newly organized militia, later, 10 Aug., sanctioned on a

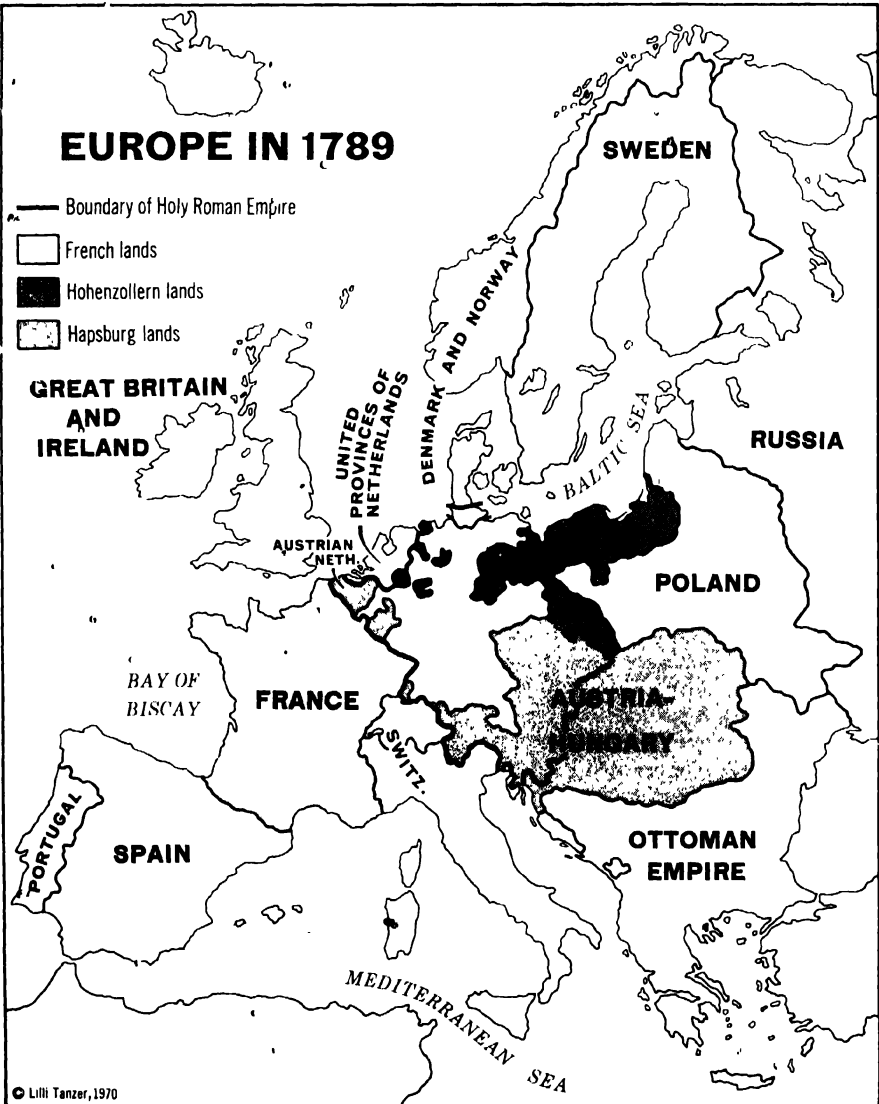

national scale as the National Guard. This "municipal revolution" occurred in similar fashion in all French cities.

STORMING OF THE BASTILLE.

The presence of troops around Paris and the dismissal of the popular minister, Necker, 11 July, led to a general insurrection. The Bastille, an arms depot as well as a prison, was attacked in the search for arms, 14 July, and the prisoners inside were freed. Louis withdrew his troops, recalled Necker, and acknowledged the

revolutionary tricolor. Some nobles began to emigrate.

THE GREAT FEAR. The rural insurrection, of Apr. and May continued sporadically throughout June and July and was intensified by a nation-wide panic in late July and early Aug., the "Great Fear" of imaginary brigands in the service of an aristocratic conspiracy. By this time most peasants were refusing to pay taxes, dues, or tithes. In some regions they attacked châteaux and burned manorial records.

NIGHT OF 4 AUG. On a single dramatic evening, 4 Aug., the Assembly abolished most feudal privileges, although this legislation was modified later, 5-11 Aug. In sum, the Assembly decreed legal and fiscal equality, redemption of seigniorial dues for an indemnity, abolition of labor services and personal dues without compensation, and abolition of tithes and corporate, municipal, and provincial privileges.

DECLARATION OF THE RIGHTS OF MAN. Prior to drafting a constitution, the National Assembly drew up a statement of principle, 26 Aug. It declared as "natural rights" the right to liberty, property, and security, freedom of opinion and the press, and religious toleration, and declared that sovereignty resided in the nation. On 10 Sept. the Assembly decided on a unicameral legislature with a suspensive veto for the king, by which he could delay a measure for 2 successive legislatures. He could not declare war or make treaties without the Assembly's consent.

MARCH ON VERSAILLES. The refusal of the king to sanction the Assembly's decrees, the high price of bread, and the news that royal troops had arrived in Versailles provoked a mass march led by women on Versailles, 5-6 Oct. They broke into the palace and forced the king to sanction the Assembly's legislation, provide grain, and move to Paris. 200 members of the National Assembly resigned; the rest followed the king to Paris.

CONFISCATION OF CHURCH LANDS. To meet the financial crisis the Assembly nationalized all church property, 2 Nov., and used it as security for *assignats*, bonds bearing interest at 5% and redeemable for land.

REORGANIZATION OF LOCAL GOVERNMENT. A decree of 14 Dec. granted communes the right to elect municipal officials. The former provinces were replaced by 83 departments (named on 26 Feb. of the following year) and divided into districts. Each district and department was to have an elective assembly and an elective "directory." A dis-

tinction, based on tax payments, between "active" and "passive" citizens restricted the franchise for local elections to about 4 m. out of 6 m. male French adults. There were, higher property qualifications for electors to the Legislative Assembly.

1790

CIVIL CONSTITUTION OF THE CLERGY. All monastic institutions except those dedicated to education and charity were dissolved, 13 Feb. The state assumed the debts of the church, and undertook to maintain its function and pay clerical salaries. Many church, as well as royal, lands were confiscated and nationalized. On 14 May the Assembly decreed the auction of nationalized lands in large blocks, which benefited the wealthy bourgeois and peasants, thus securing their loyalty to the revolution. Agrarian unrest continued among large numbers of small peasants and day laborers. On 12 July, dioceses were made coterminous with departments and subordinate to 10 metropolitan areas, headed by archbishops who were to assume the functions of the Holy See in the matter of confirming bishops. All clerics having official functions were to be elected. The bishops and many of the lower clergy opposed these decrees and announced that their approval of them would be contingent on that of the pope. On 27 Nov. the Assembly imposed an oath to uphold the Civil Constitution of the Clergy with the object of bringing recalcitrant clerics into line. All except 7 bishops and half the lower clergy refused to swear this oath.

1791

PAPAL BULL "CARITAS." Confirming an earlier pronouncement, 10 Mar., Pope Pius VI condemned the principles of the revolution and the Constitution of the Clergy by the bull *Caritas*, 13 Apr. To reduce religious discord, however, the Assembly permitted, 7 May, nonjuring priests to conduct services. On 24 May the papal nuncio left France.

THE FLIGHT TO VARENNES.

Louis XVI decided on counterrevolution to restore his power and halt the Assembly's attack on the church. He planned to flee France, hoping to enlist the aid of his brother-in-law, the Emperor Leopold II of Austria. He reached Varennes (about 40 miles from the border of the Austrian Netherlands) before being arrested and brought back to Paris, 25 June. There he was suspended, rather than deposed, to prevent foreign intervention; the royal family became virtual prisoners in the Tuileries.

DECLARATION OF PILLNITZ.

Leopold II and Frederick William II of Prussia declared their willingness to protect Louis, provided all other European sovereigns agreed, 27 Aug. It was known that Britain would not join in any guarantee of this kind, so the agreement was a dead letter. Both monarchs were hoping to satisfy the demands for intervention being made on them by French *émigrés* in their lands. The Declaration of Pillnitz aroused public opinion in France against both Austria and Prussia.

CONSTITUTION OF 1791. The Assembly incorporated the legislative decrees of 1789-91 as a constitution, 3 Sept., which the king accepted, 14 Sept. The Civil Constitution of the Clergy was detached from this constitution so that it could be amended (as the constitution could not) and so that nonjuring priests could swear allegiance to the new state. On 30 Sept., after disqualifying themselves in respect of the coming elections to the Legislative Assembly, the members of the National Constituent Assembly voted to dissolve.

CONVENING OF THE LEGISLATIVE ASSEMBLY. The seating arrangements in the Legislative Assembly, convened 1 Oct., gave rise to the custom of relating political opinions to location (Right, Left, Center). Of the 745 deputies elected, 264 belonged to the Feuillants, a moderate political club; they joined the Royalists on the Right side of the Chamber. Led by Bailly and Lafayette, they hoped to establish a 2nd chamber, abolish the Civil Constitution of the Clergy,

reconcile the *émigrés* to the regime, and avoid war with Austria; they kept close contact with the court. The highest seats on the Left (later known as the "Mountain") were occupied by members of the radical Jacobin Club. These were divided into the supporters of Jacques Pierre Brissot (1754-93) and Pierre Victorien Vergniaud (1753-93), who advocated war with Austria, and those of Maximilien Robespierre (1758-94), who recommended consolidating the Revolution before engaging foreign powers. The unorganized Center or "Plain" tended to follow the Feuillants on domestic issues and the Brissotins or Girondists on foreign policy.

1792

OUTBREAK OF WAR. Most *émigrés* had fled to the Rhineland, where they vociferously demanded Austrian and Prussian intervention designed to restore the old order and Louis's powers. French relations with Austria deteriorated throughout Jan., and by 7 Feb. Leopold II had decided that war was probable and made a defensive alliance with Prussia. On 1 Mar., Leopold died, and his more bellicose son, Francis II, ascended the throne. In France a Brissotin ministry was formed, headed by Jean Marie Roland (1734-93) and Charles François Dumouriez (1739-1823). On 20 Apr. the Assembly declared war on Austria, but poor preparation and discipline and a lack of leadership (half the officers had emigrated) turned the first encounter, 29 Apr., into a French defeat. At home the reaction was to tighten security. Two decrees, 27 and 29 May, ordered the deportation of refractory priests denounced by at least 20 "active" citizens and the dismissal of the King's Guard. On 13 June, Louis dismissed the Roland ministry. This angered the Girondins, who, 20 June, incited a crowd to invade the Tuileries.

With the 1st allied entry into France, 11 July, the Assembly proclaimed "the fatherland in danger" and called up all able-bodied Frenchmen for military ser-

vice. Defeat in war and high bread prices had increased radical feeling in Paris. "Passive" citizens were admitted to the sectional assemblies of the 48 electoral and administrative districts of the capital, and the Assembly, 25 July, permitted them to meet daily. On 30 July, "passive" citizens were allowed into the National Guard.

BRUNSWICK MANIFESTO. On 27 July the Duke of Brunswick, commander in chief of the Austro-Prussian forces, threatened Paris with destruction should harm come to the royal family. This action inflamed French public opinion still further. Delegates from the Parisian sections overthrew the municipal government, 9 Aug., and established a more powerful Commune as a rival authority to the Legislative Assembly.

STORMING OF THE TUILERIES. On 10 Aug. a radical crowd invaded the royal palace and killed the Swiss Guards. This marked the beginning of the "2nd French Revolution." The Assembly suspended the king and established a provisional executive council of 6 ministers, headed by Georges Jacques Danton (1759-94). It also summoned a National Convention, to be elected by universal manhood suffrage.

SEPTEMBER MASSACRES. In Paris hysteria mounted as Lafayette defected to the Austrians, 19 Aug.; the frontier fortress of Longwy fell, 23 Aug.; and Verdun capitulated, 2 Sept. The Paris crowd got wind of an imaginary prison plot, attacked the prisons, and slaughtered 1,200 inmates, only 25% of whom were political prisoners. A French victory at Valmy, 20 Sept., halted the allied invasion, and the panic in Paris abated.

CONVENING OF THE NATIONAL CONVENTION. The National Convention met, 20 Sept. The Girondins, led by Roland, had a majority and controlled the ministry. The more radical Mountain, led by Danton and Robespierre, represented the Jacobin Club and drew support from the Parisian sans-culottes (artisans and small tradesmen), so called because they wore long trousers instead of the knee breeches of an aristocrat.

PROCLAMATION OF 'THE' REPUBLIC. On 21 Sept. the Convention abolished the monarchy, and proclaimed a French republic on the 22nd.

FRENCH VICTORIES. In Sept. and Nov. the war began to go better for France. French armies overran Savoy, 22 Sept., and Nice, 29 Sept. General Custine invaded the Rhineland, taking Spëyer, 30 Sept., Mainz, 21 Oct., and Frankfurt. Kellermann recaptured Verdun, 8 Oct., and Longwy, 22 Oct., while the Austrians gave up their siege of Lille, 8 Oct. Dumouriez defeated the Austrians at Jemappes, 6 Nov., and occupied all of the Austrian Netherlands. On 27 Nov., at its own request, Savoy was annexed to France.

1793

EXECUTION OF THE KING. The Convention tried Louis XVI, from 11 Dec., 1792, to 14 Jan., 1793, for treason for summoning the aid of France's enemies. It unanimously adjudged him guilty and by a vote of 361-321 sentenced him to death. He was executed, 21 Jan.

WAR DECLARED ON BRITAIN AND THE NETHERLANDS. Britain and the Netherlands had been affronted by France's opening of the Scheldt Estuary to international trade, 16 Nov., 1792, in violation of the Treaty of Westphalia. Britain mobilized, and the Convention declared war on her and on her Dutch ally, thus beginning the War of the 1st Coalition, 1 Feb., 1793-17 Oct., 1797.

FRENCH ANNEXATIONS. In Jan. France annexed Nice, and in Mar. Belgium, the Rhineland, and the Bishopric of Basel.

FRENCH REVERSES. The allies defeated Dumouriez at Maastricht, 1 Mar.; Neerwinden, 18 Mar.; and Louvain, 21 Mar. After failing to persuade his troops to march on Paris and install a constitutional monarchy there, he defected to the Austrians, 5 Apr. The allies also defeated Custine near Mainz, 14 Apr. On 7 Mar. France declared war on Spain, which had been mobilizing. Also in Mar. a counter-revolutionary rebellion began in the Ven-

dée 'in western' France, provoked by^a the government's decision to call up 300,000 men for the army.

IMPOSITION OF STRICTER GOVERNMENT CONTROLS. On 9 Mar., 80 members of the Convention were endowed with full powers and sent to the provinces to check laxities in administration. On 9 Apr., others were dispatched to the armies to enforce discipline. A Revolutionary Tribunal, a special court which had operated during the first crisis between 17 Aug. and 19 Nov., 1792, was reinstated, 10 Mar. On 28 Mar., the Convention declared *émigrés* "civilly dead," and confiscated their property. The Convention also imposed the death penalty on anyone advocating in print the dissolution of the Convention or the restoration of the monarchy. On 6 Apr., the executive functions of the ineffectual Committee of General Defense, created 1 Jan., 1793, were transferred to a new Committee of Public Safety, which consisted of 9 (later 12) members, elected monthly. The Committee of Public Safety deliberated in secret and at first had limited powers. On 4 May, because of pressure from the Paris sections and from the Commune, the Convention established price controls for grain, based on average market values. On 21 May, the Convention set up a Commission of 12, composed mostly of Girondins, to investigate sectional disorders and sans-culotte agitation, and on 24 May this commission arrested Jacques René Hébert (1755-94), a popular radical journalist, and 3 other sans-culottes. A large crowd of sans-culottes forced the Convention, 31 May, to abolish the Commission of 12, and 2 days later secured the arrest of 31 Girondin deputies, thus leaving the "Montagnards" in control of the Convention.

FEDERALIST REVOLTS. A number of Girondin deputies fled to the provinces, where they encouraged uprisings against the dominance of Paris. By mid-June, 60 departments, especially those in the south and west, were in revolt. The Convention tried to win over the poorer peasants by decreeing, 3-10 July, the sale and rental of *émigré* lands in small lots and the optional division of common

fields. By the end of the year, government forces were in control of the provinces.

CONSTITUTION OF 1793. To ease radical pressure the Jacobins wrote a more democratic constitution, providing for popular referenda of legislation, direct election of the national assembly, and an executive council of 24. Although ratified by 2 m. voters, 24 June, and promulgated, 10 Aug., it was never put into effect.

REORGANIZATION OF THE COMMITTEE OF PUBLIC SAFETY. Absorbing the functions of both the Convention and the Commune, the Committee of Public Safety evolved into a centralized dictatorship, although deputies on mission and local revolutionary committees remained relatively independent. The committee was the first efficient executive of revolutionary France. It suppressed domestic opposition and secured military victory. Danton ceased to be a member, 10 July, and Robespierre became one, 28 July.

ASSASSINATION OF MARAT. 13 July. The murder of Jean Paul Marat (1743-93), a radical publicist, aroused fears of a Girondin resurgence among the Hébertistes and Enragés, who demanded adoption of Marat's programs. To placate them, the government imposed the death penalty on hoarders of food, 26 July, established public granaries, and allocated 100 m. livres for grain purchase, 9 Aug.

LEVÉE EN MASSE. Condé, Mainz, and Valenciennes fell to the allies, 10, 23, 28 July. Troops had to be diverted to the Vendée, 1 Aug., and to Lyons, 4 Aug., to subdue internal revolt, while Toulon fell to the British, 29 Aug.

To meet a growing foreign and internal threat, the government decreed the conscription of single men between 18 and 25, and organized married men, women, and children for the production and transportation of matériel. The victories of the following year were due to the strength and high morale of a new mass army of nearly 1 m. men.

THE TERROR. On 5 Sept. the sans-culottes invaded the Convention and demanded further measures to ward off

famine and tighter security to prevent counterrevolution. The Revolutionary Tribunal, in consequence, was enlarged and reorganized to expedite trials. Thus began the Terror, which lasted until July 1794 and claimed 40,000 victims, mostly royalist and federalist rebels. On 17 Sept. the Convention passed a law defining suspects very broadly and making them liable to arrest by local Watch Committees.

REPUBLICAN CALENDAR. The Gregorian Calendar was replaced, 6 Oct., by a secular calendar which divided the months into 3 *décades* of 10 days each. The first year of the republic was dated from 22 Sept., 1792. The months were renamed after the seasons, 24 Oct., and the days according to their order in the *décade*.

THE REVOLUTIONARY GOVERNMENT. The Convention suspended the Constitution of 1793, and declared, 10 Oct., that the provisional government headed by the Committee of Public Safety would be "revolutionary until peace."

EXECUTION OF THE GIRONDINS. Girondin opposition was broken by the execution of 21 deputies and the arrest of 73, 31 Oct.

CAPITULATION OF LYONS. After a 2-month siege Lyons surrendered to the Republican army, 9 Oct. By Mar. 1794, 1,667 of the Lyons rebels had been executed.

DECHRISTIANIZATION. The religious Terror was sponsored by the Hébertistes rather than by the government. The archbishop of Paris was forced to resign, 7 Nov., and the Cathedral of Notre Dame was converted into a Temple of Reason. A "Festival of Reason" was held there on 10 Nov. On 23 Nov. the Commune closed the churches of Paris.

LAW OF 14 FRIMAIRE, YEAR II. On 4 Dec. the Committee of Public Safety assumed power to appoint and dismiss all local officials, and set up administrative machinery to put France under a revolutionary dictatorship.

FRENCH VICTORIES. With victories at Hondschote, 8 Sept., and Wattignies, 16 Oct., the French halted the allied

invasion. They recaptured Toulon from the British, 19 Dec., and at the end of that month re-entered Germany.

1794

ELIMINATION OF GOVERNMENT OPPOSITION. Concerned about the effect of dechristianization on the loyalty of devout Catholics, Robespierre had Hébert and 17 others arrested, 14 Mar., and executed, 25 Mar., on charges of complicity in a foreign plot. Robespierre then turned on Danton, who had supported him against Hébert. Charged with subversion and financial fraud, Danton and his followers were arrested, 30 Mar., and guillotined, 5 Apr.

CIVIC RELIGION. On 7 May the Convention proclaimed a kind of state deism, recognizing a Supreme Being and the immortality of the soul. Previously, 26 Mar., the Convention had suspended payment of clerical salaries. The new religion was inaugurated, 8 June, by a Festival of the Supreme Being with Robespierre conducting the services, but the new cult never won a mass following.

LAW OF 22 PRAIRIAL. This law destroyed judicial guarantees for accused persons by refusing the appointment of counsel for defendants, and allowing only two judgments, acquittal or death, 10 June. In Paris during June and July there were more executions than during the earlier Terror (Sept. 1793-July 1794). By the new law, deputies could be tried without prior impeachment by the legislature. This frightened some members of the Convention, who began to plot against Robespierre.

9 THERMIDOR. Robespierre's speech of 26 July to the Convention, threatening proscription of unnamed suspects, galvanized the deputies into self-defense. On the next day, 9 Thermidor, they impeached him and his 2 main supporters on the Committee of Public Safety, Saint-Just and Couthon. An abortive insurrection of the Commune to save Robespierre failed. On 28 July he was guillotined with 21 of his supporters, and 86 other adherents met the same fate during the next 3 days.

THERMIDORIAN REACTION. Between the fall of Robespierre and the dissolution of the Convention (26 Oct., 1795) occurred the "Thermidorian Reaction." The Convention persecuted the Jacobins and dismantled the machinery of the Terror. It relaxed economic controls; permitted the revival of Catholic worship; repealed the law of 22 Prairial, 28 July; released many prisoners; and abolished the Paris Commune, 27 July. On 24 Aug. it resumed control over internal affairs from the Committee of Public Safety, but left the committee with power over war and foreign affairs. On 12 Nov. the Jacobin Club in Paris was closed.

PROGRESS OF THE WAR. French victories during the year (the invasion of Catalonia in May and the reconquest of Belgium in July) had helped to make the dictatorship of Robespierre and the Committee of Public Safety seem unnecessary. Successes continued on all fronts. The French captured Fuenterrabia and San Sebastián in Spain, Aug.; took Mannheim, Dec.; and invaded the Netherlands.

1795

TREATY OF LA JAUNAIE. By agreeing to the Treaty of La Jaunaie, 17 Feb., the Convention tried to pacify the Vendée, where bloody guerrilla warfare had succeeded the defeat of a royalist army. The Convention conceded an amnesty for rebels, religious freedom for nonjuring clergy, and indemnities for war damage. These concessions, however, gained only a short truce for the Convention.

FREEDOM OF WORSHIP. Following the unofficial opening of some Catholic churches in Jan., the Convention reaffirmed the separation of church and state (as proclaimed on 18 Sept., 1793) and religious liberty. Ceremonies were to remain private, and the clergy had to swear allegiance to the republic.

UPRISINGS OF GERMINAL. High food prices caused by the severe winter and near famine of 1794-95 and the Convention's trial of former terrorists angered the sans-culottes. On 21 Mar.

they demonstrated, demanding "Bread and the Constitution of '93" and "Liberty for the Patriots." On 1 Apr. they invaded the Convention, but were quickly dispersed by the National Guard. The government deported 4 members of the Committee of Public Safety, executed 16 former officials of the Revolutionary Tribunal, and arrested the deputies who had supported the demonstration.

UPRISING OF PRAIRIAL. On 20 May, a crowd invaded the Convention and killed 1 deputy, but were dispersed by the National Guard. The next day an insurrection broke out in the working-class sections of Paris. It was quelled by troops in 2 days, but furnished a pretext for the "White Terror," conducted against the supporters of the "Red Terror" of 1793-94. A military commission condemned 30 insurgents, including 6 Montagnard deputies. Hundreds more were arrested. In the south and west, vigilante groups like the "Companies of Jehu," in collusion with government agents, massacred suspected Jacobins.

REOPENING OF CHURCHES. The Convention permitted unsold confiscated church buildings to be reopened for worship on citizens' petitions, 30 May.

ABOLITION OF THE REVOLUTIONARY TRIBUNAL. After having ordered 326 post-Thermidorian executions, the Revolutionary Tribunal came to an end, 31 May. Henceforth treason was to be tried in ordinary courts.

DEATH OF "LOUIS XVII." After the death of the Dauphin (1785-95) ("Louis XVII") on 8 June, the Comte de Provence (1755-1824), brother of Louis XVI, took the title of Louis XVIII to maintain continuity of the monarchy. On 24 June he issued a manifesto from Verona declaring his intention to restore the old order and punish the revolutionaries. On 12 June the government had dropped the designation "revolutionary," which it had held since 10 Oct., 1793.

CONSTITUTION OF 1795. A new constitution was ratified, 22 Aug. Resembling the constitution of 1791, it restored indirect elections and property qualifications for voting and officeholding. The legislative branch consisted of a Council

of 500 to propose legislation and a Council of 250 Elders (who had to be over 40 years of age) to adopt or reject it. The executive consisted of 5 directors, nominated by the 500 and selected by the elders. The Directory appointed ministers, officials, and army officers, and could declare war or conclude peace with the legislature's consent. Annual elections were to be held to renew the councils by one-third and to replace one director. The lack, however, of a mechanism to settle disputes between the two branches of government resulted in frequent coups and ultimate dictatorship.

TWO-THIRDS DECREE. Fearing a royalist or Jacobin electoral victory, the Convention decreed the re-election of its own members to two-thirds of the seats in the new legislature, 30 Aug. This action was ratified by the voters by only a small margin.

VENDÉMIARE UPRISING. Angered by the Two-Thirds Decree and by the rearming of the sans-culottes, a crowd of about 25,000, consisting of monarchists, bourgeois, and members of the National Guard, attacked the Convention, 5 Oct. Government troops, led by Barras and Napoleon Bonaparte (1769-1821), crushed the revolt. Bonaparte was then appointed commander in chief of the "Armée de l'Intérieur." The Convention disarmed the National Guard, halted the White Terror, and adjourned, 26 Oct.

THERMIDORIAN DIPLOMACY. By the Treaty of Basel, 5 Apr., France withdrew from the right bank of the Rhine in exchange for Prussian recognition of French claims to the left bank at a general peace, at which time dispossessed German princes would be compensated elsewhere in the empire. By the Treaty of The Hague, 16 May, France withdrew from the Netherlands and the 2 states concluded an offensive and defensive alliance. Spain withdrew from the war, 22 July, ceding her half of Santo Domingo (in the West Indies) to France.

War continued, however, with Britain. The British fleet landed an expedition of *émigrés* at Quiberon Bay in Brittany, 27 June, where they joined the Vendéans in a revolt which the government quickly

suppressed. War also continued with Austria as the French reannexed Belgium, 1 Oct., and Austria retook the Rhineland, Oct. and Nov.

GOVERNMENT OF THE DIRECTORY. During its 4 years of power, 2 Nov., 1795-9 Nov., 1799, the Directory succeeded in creating a measure of order and prosperity out of political and economic chaos. Aiming at moderation, it forestalled coups from the Right and the Left, thus, losing the support of both. Weakened, it increasingly had to rely on military support, and ultimately succumbed to Napoleon's dictatorship.

INAUGURATION OF THE FIRST DIRECTORY. The first directors, La Revellière-Lépeaux, Reubell, Letourneur, Barras, and Carnot, inaugurated, 2 Nov., expressed their conservative republicanism in a manifesto, 5 Nov. The election of 12 Oct. had increased royalist strength in the councils to 158, as against 305 republicans and 228 moderates.

1796

SUPPRESSION OF UPRISINGS. In Mar. General Hoche checked federalist and royalist insurgents in the Vendée, Normandy, and Brittany.

CONSPIRACY OF "EQUALS." A union of former Jacobins and proto-socialists, led by François Émile Babeuf (1760-97), engaged in a conspiracy which ended with Babeuf's arrest, 10 May. His followers tried to free him by attacking the military camp at Grenelle, 9-10 Sept., but failed when the soldiers refused to fraternize as expected. Babeuf and Darthé were executed, 17 May, 1797; Buonarroti and others were deported.

FINANCIAL MEASURES. On 19 Feb. the Directory discontinued printing *assignats*, which had fallen to 1% of face value, stabilized them at 3%, and replaced, 18 Mar., about half of these at a rate of 30 to 1 with *mandats territoriaux*, notes redeemable for public land. Within the year this new paper currency had depreciated to 2% of value.

ITALIAN CAMPAIGN. The Directory planned to drive Austria out of the war by an offensive in Italy and in Germany.

French armies failed to advance in Germany, but Napoleon invaded Piedmont and forced its government to hand over 8 fortresses to France and recognize the annexation of Nice and Savoy. On 10 May, Napoleon defeated the Austrians at Lodi, and took Milan 5 days later. He besieged an Austrian army in the fortress of Mantua for 8 months, beating off all Austrian attempts to relieve it. The rest of the Italian states withdrew from the war against France.

WAR WITH BRITAIN. France wrested Corsica from Britain, Oct., but the British continued to maintain a blockade of French ports. As Anglo-French peace talks held at Lille, Nov. and Dec., foundered, Hoche led an expedition, Dec., to aid an Irish uprising, but was kept from landing by a storm.

1797

FINANCIAL MEASURES. The depreciation of the *mandats territoriaux* to the level of *assignats* led to the repudiation of all paper money, 4 Feb. On 30 Sept. the Directory passed the Law of the Consolidated Third, a virtual repudiation of two-thirds of the internal debt.

The March elections for one-third of the legislature resulted in an overwhelming victory for the Right, but the royalists were too disunited to overthrow the Directory. In the Directory, Barthélemy, a constitutional monarchist, replaced Le-tourneur, 20 May, and the Prince de Talleyrand (1754-1838), a former bishop, became minister of foreign affairs.

PROGRESS OF THE WAR. On 2 Feb. Napoleon took Mantua and advanced on Vienna. Ignoring the Directory's treaty-making prerogatives, he made a preliminary peace with Austria at Leoben, 18 Apr.; the Austrians agreed to cede Belgium and Lombardy, for which Napoleon secretly promised compensation in Venice.

COUP OF 18 FRUCTIDOR. Fearing a monarchist coup, Barras, Reubell, and La Revellière appealed for help to Napoleon. On 4 Sept. Napoleon dispatched General Augereau, who, at the head of the National Guard, forestalled the im-

minent impeachment of the 3 republican directors by invading the Council of 500 and impeaching 177 of its members. Barthélemy, who was deported, and Carnot, who fled, were replaced by Merlin de Douai and François de Neufchâteau. The new Directory assumed dictatorial powers, suppressing 42 newspapers and imposing press censorship for 1 year. It ordered returned *émigrés* to leave France within 10 days or be executed. Both parliamentary government and the counterrevolutionary threat came to an end.

TREATY OF CAMPO FORMIO. By the terms of this treaty, 17 Oct., Austria ceded Belgium to France and received Istria, Dalmatia, and Venetia. Austria also recognized the French annexation of the left bank of the Rhine, less Cologne.

1798

DECISION TO OCCUPY EGYPT.

France remained at war only with Britain. Instead of attempting a direct invasion of the British Isles, Napoleon and Talleyrand decided to wrest Egypt from Turkey, thus cutting Britain's most important route to India.

COUP OF 22 FLORÉAL. In the spring elections, 11 May, of 437 councilors (the normal one-third plus a further 177 to fill vacancies created by the coup of 18 Fructidor), a Jacobin victory gave promise of future conflict between the 2 branches of government. In order to obtain a pliable legislature, the Directory had the outgoing councils annul the election of 106 deputies and return government candidates instead. Teilhard succeeded François de Neufchâteau as director, 15 May. This 2nd violation of the constitution further reduced the popularity of the Directory.

PROGRESS OF THE WAR. On 19 May Napoleon sailed from Toulon with 38,000 men. He took Alexandria, 1 July, defeated the Mamelukés (Mamlūks) in the Battle of the Pyramids, 21 July, and entered Cairo next day. Admiral Horatio Nelson, however, surprised and destroyed the French fleet at Abukir (Aboukir) Bay, thus destroying Napoleon's communications with France.

In Aug. General Humbert led a small expedition to aid the Irish rebels, but Cornwallis captured the French invaders, 8 Sept.

On 9 Sept. Turkey declared war on France and allied herself to Britain and Russia. Czar Paul I feared a French-supported resurrection of Poland and opposed French expansion in the Middle East.

By a decree of 25 Nov. the Directory attempted to tighten its control over the military by re-establishing the office of Commissioners to the Army. This measure, opposed by the generals, was instrumental in turning them against the Directory.

1799

SYRIAN CAMPAIGN. In Feb. Napoleon attempted to prevent a Turkish invasion of Egypt by attacking Syria. After taking Gaza and Jaffa, he began a siege of Acre, 19 Mar. Plague and low supplies and the news that the British fleet was transporting Turkish troops to the Nile forced him to raise the siege, 20 May, and return to Egypt.

CONSCRIPTION LAWS. With the French armies everywhere outnumbered, the Directory passed 2 conscription laws in Apr. and June, designed to increase the number of men under arms by 175,000.

COUP OF 30 PRAIRIAL. In the mid-April elections for the renewal of one-third of the councilors, the Jacobins and democrats triumphed. Sieyès replaced Reubell as director. The new Councils unconstitutionally forced the resignations of Teillard, La Revellière, and Merlin de Douai, 18 June–30 Prairial, and replaced them with Gohier, Ducos, and Moulin. Many former Jacobins joined the administration. The reconstituted Directory restored freedom of the press, and radical newspapers proliferated, re-establishing the mood of 1793, when military defeat and the threat of invasion had led to demands for tighter internal security against counterrevolution.

LAW OF HOSTAGES. A law of 12 July empowered the government to in-

tern relatives of *émigrés* in certain restless departments, and to deport 4 such hostages if a "patriot" was murdered.

On 6 Aug. the Directory decreed a forced loan, but only a third of the expected sum could be collected.

On 5 Aug. a royalist insurrection broke out in southern France. Government troops subdued it within 2 weeks. In Oct. the Chouannerie again rebelled, but was soon quelled.

Still aiming at moderation, the Directory deported the staffs of 50 royalist and Jacobin newspapers. French victories in the autumn, however, removed the threat of foreign invasion, and Jacobin agitation subsided.

PROGRESS OF THE WAR. The transfer of Austrian troops from Switzerland to the Rhineland left the Russians to face the French by themselves. A Russian army under Korsakov was defeated by Masséna in the 2nd Battle of Zurich, 25–27 Sept. French arms were also successful in the Netherlands, where a British invasion force was defeated, and by the Convention of Alkmaar, 18 Oct., the allies agreed to evacuate the Netherlands. Disappointed by defeat and angered by Austria's desertion in Switzerland, Czar Paul I withdrew from the coalition, 22 Oct.

EGYPTIAN CAMPAIGN. Returning from Syria, Napoleon defeated at Abukir, 25 July, a Turkish army which had just landed in Egypt. Napoleon realized, however, that he was fast becoming a prisoner of his own conquests. He was without a fleet and received reports of rising domestic disorder in France. He left Egypt, 24 Aug., and landed at Fréjus, 9 Oct.

COUP OF 18 BRUMAIRE. Arriving in Paris, 16 Oct., Napoleon joined his brother Lucien, president of the Council of 500, Talleyrand, the Directors Sieyès and Ducos, and Minister of Police Fouché in a plot to overthrow the government. On 9 Nov. (18 Brumaire) the Council of Elders (sitting without many unco-operative deputies who had been invited too late for them to attend) voted to move the legislature to St.-Cloud outside Paris on the pretext of an imminent Jacobin uprising. The Directory resigned, though

Gohier and Moulin had to be detained before they agreed to abdicate their power.¹ At St.-Cloud on the following day troops surrounded the councils and, after a stormy scene between Napoleon and the enraged republican deputies, disbanded them. A rump reassembled that evening to legitimize the end of the Directory and establish a provisional executive consulate consisting of Napoleon, Sieyès, and Ducos. (*Cont. p. 131.*)

THE SISTER REPUBLICS

The so-called sister republics owed their existence to French arms and represented the ideological and military expansion of the French Revolution. Their territories served as buffers protecting the frontiers of France, and their human and material resources were indispensable to the French war effort. Yet each of these republics had indigenous revolutionary origins, and foreign exiles in Paris played an important part in convincing the revolutionary government to overcome its initial reluctance to intervene in the domestic affairs of other countries. Unstable mixtures of native initiative and foreign domination, the sister republics were tied to the fortunes of revolutionary France.

The Netherlands

1760-76

SEVEN YEARS' WAR. During the Seven Years' War, 1756-63, the United Provinces of the Netherlands were torn between taking a neutral position, in exchange for commercial commitments from France, and actively siding with Britain in accordance with long-standing treaty obligations. Neutrality was in the end preferred, and when at the Paris peace conference, 1763, the Netherlands tried to act as mediator, it was treated as inconsequential and virtually ignored during the negotiations. Between 1763 and 1776 the Netherlands retained some prosperity as the financial capital of Europe, and Dutch funds underwrote

many British and French commercial enterprises.

1776-84

WAR OF AMERICAN INDEPENDENCE. When the British North American colonies rebelled, Dutch sentiment was with them, for the Dutch saw in the colonists' revolt a similarity to their own in the 16th and 17th cents. against Spain. They also hoped that a colonial victory would open markets that had hitherto been closed to them by the British Navigation Acts. While the Stadholder Willem V (ruled 1751-1806) was deciding what policy to pursue, the Dutch Caribbean islands of Curaçao and St. Eustatius were already being used as centers of illicit trade with the American colonies. Dutch trade, however, was subject to constant British harassment, and in 1778 the States-General authorized war vessels to accompany Dutch merchantmen, thus beginning a policy of armed neutrality. Naval clashes and diplomatic blundering led Britain to declare war on the United Provinces, 20 Dec., 1780, thus ending a century-old friendship. Unable to match the British superiority in men-of-war, the Dutch shipping industry, chief source of the nation's wealth, declined precipitously. At the conclusion of peace, 15 May, 1784, the United Provinces lost several Caribbean and East Indian colonies, and had to cede trade advantages to the British in Asian waters.

1785-91

THE PATRIOT MOVEMENT. In the 1780's proposals for governmental reform stressed the need to expand political privilege within established forms rather than a resort to revolution. Anti-Orangist regents and Patriot burghers joined forces to oppose the stadholder's 2 chief prerogatives: the right to make appointments to town councils and provincial estates and command of the army. In Feb. 1785 the burghers of Utrecht demanded greater participation in the municipal government (conceded in Mar. 1786). The States-General established a "com-

mission of defense" to rival the stadholder's Department of War, May 1785, and in Sept. of that year the Patriots of Holland deprived him of his command of the garrison at The Hague.

BRITISH AND PRUSSIAN INTERVENTION. Fearing that his prerogatives would be further whittled away, the stadholder sought the protection of Britain, and the British ambassador to the United Provinces assumed unofficial direction of a counterrevolution. Frederick William II of Prussia, brother to Princess Wilhelmina of Orange, also offered support. When the princess was detained against her will at Woerden by Patriot elements, both Britain and Prussia, 10 July, 1787, demanded redress. The following Sept., 20,000 troops commanded by the Duke of Brunswick crossed the frontier and occupied Utrecht, The Hague, and Amsterdam. Persecution of Dutch democrats followed, and 40,000 emigrated. Strengthened by a defensive alliance with Britain and Prussia, 15 Apr., 1788, and by an Anglo-Prussian alliance, 13 Aug., for the protection of the Dutch Republic, the Orange regime was able to stifle all opposition.

1792-95

FRENCH INVASIONS. The outbreak of war in 1792 encouraged Dutch exiles in France to seek French aid for a revolution in Holland. A Batavian Legion was formed, July 1792, and, led by Herman Willem Daendels, joined Dumouriez' army in the attack on Belgium. A Batavian Revolutionary Committee was established in Paris, 22 Oct., and made contact with the reactivated political clubs in the United Provinces, preserved since 1787 as reading societies.

On 2 Feb., 1793, the Committee of Public Safety declared war on the United Provinces, and French forces invaded the Netherlands, 16 Feb. After sustaining some reverses, they were able to enter Amsterdam, 19 Jan., 1795. As they did so, the Amsterdam Revolutionary Committee declared the establishment of a "Batavian Republic." The stadholder fled to Britain, where he virtually gave away the Dutch

colonies by ordering, 7 Feb., their governors to admit British ships and troops as allies.

1796-99

THE BATAVIAN REPUBLIC. The next few years witnessed a protracted constitutional crisis. Dutch moderates preferred a federalist, decentralized form of government, while radical democrats, organized in political clubs, pressed for a unitary, centralized state. The issue was resolved by French intervention. With help from Delacroix, the Assembly was purged and a "Pump" devised a new constitution which was ratified, 23 Apr., 1798, by a popular vote of 153,913 to 11,597. The constitution was highly democratic in tone. It provided for universal manhood suffrage and amendment by popular initiative. The former provinces were replaced by 8 departments of equal population, further subdivided into circles and communes. Feudal rights were abolished, as were guilds and other corporations. The Reformed Church was disestablished. Finance was nationalized, and debts and revenues consolidated.

Meanwhile, the war continued. When a British fleet landed in northern Holland, 27 Aug., 1799, a mutiny compelled its commander to surrender the bulk of the Dutch navy to the British. An Anglo-Russian invasion commanded by the Duke of York was thrown back at Bergen, 19 Sept., and Castricum, 6 Oct., and by the Convention of Alkmaar, 18 Oct., foreign troops agreed to evacuate the Netherlands. (*Cont. p. 180.*)

The Italian Peninsula

1760-91

THE PAPAL STATES. In 1760 the Papal States included Umbria, the Romagna, and the Patrimony of St. Peter, around Rome. They were ruled directly by the popes. During the pontificates of Clement XIII (ruled 1758-69) and Clement XIV (ruled 1769-74), a major concern of the papacy was the conflict over the Jesuits, who had in the opinion

of the Catholic monarchs insituated themselves too deeply into secular political affairs. The popes were also deeply troubled by the ecclesiastical reforms introduced by these monarchs to curtail the power of the church within their realms. Preoccupied with external affairs, the popes had little time to devote to the proper administration of their own domains. Poverty was widespread, there was little commerce and less industry, and agriculture was neglected. Pius VI (ruled 1775-99), however, sponsored the draining of the Pontine Marshes and improvements to the Vatican museums.

THE VENETIAN REPUBLIC. The ruling oligarchy of the Venetian Republic was hostile to the new ideas of the Enlightenment. Would-be constitutional reformers were imprisoned. The mainland provinces were poorly administered, and their residents had fewer political rights than did the inhabitants of the city. The structure of Venetian society became increasingly rigid and corrupt. The army and navy decayed, and the Republic's shipping became the helpless prey of Barbary pirates. Commerce and industry declined. Venice had become no more than a resort for wealthy vacationers from other parts of Europe.

GENOA. Although nominally a republic, Genoa was ruled by an aristocracy as defensive against and hostile to reform as the Venetian oligarchy. Political unrest in Genoa's largest province, Corsica, manifested itself in full-scale rebellion from 1735 until 45 May, 1768, when, no longer able to subdue the dissidents led by Pasquale di Paoli, Genoa ceded the island province to France by treaty.

SAVOY AND SARDINIA. Savoy and Sardinia had had reform-minded monarchs in the earlier decades of the century, Victor Amadeus II and Charles Emmanuel III (ruled 1730-73), who had reduced the privileges of the clergy and nobility, established a single legal code, and promoted agriculture, industry, and education. But their successor, Victor Amadeus III (ruled 1773-96), neither continued the reformation of society nor carried out the reforms instituted by his predecessors. Instead, he spent much of his time and money on the army, which

he attempted to mold after the Prussian fashion.

MODENA, REGGIO, AND MILAN. Modena and Reggio were ruled by Francesco III d'Este (ruled 1737-80) and, in the last half of the century, by Ercole Rinaldo IV (ruled 1780-96). Both rulers were lethargic, avaricious, and oblivious of their duties, though Francesco III introduced a Code of Constitutional Laws for Milan. 1771 Milan was under the Hapsburgs.

TUSCANY. The Grand Duchy of Tuscany was ruled by the Hapsburgs, though not as part of the Holy Roman Empire. During the reigns of Francis of Lorraine, husband of Empress Maria Theresa, who ruled until 1765, and his son Peter Leopold (ruled 1765-90), Tuscany enjoyed many of the same reforms that had been introduced in Austria by Maria Theresa: its administration was reorganized, a census was taken periodically to distribute the burden of taxation more equitably, improvements were made in judicial procedure, the death penalty and the Inquisition were abolished, the universities were reformed, and corporations enjoying special or unjust privileges were suppressed. In 1790, on the death of his brother Joseph II, Peter Leopold became emperor and was succeeded in Tuscany by his son Ferdinand III (ruled 1790-1801), who continued his father's reform programs.

NAPLES. Many reforms were introduced in the Kingdom of Naples by its Bourbon rulers. The reforms of Ferdinand IV (1759-1825) were halted, however, when his wife, Maria Caroline (1752-1814), a daughter of Maria Theresa, insisted on a pro-Austrian policy, and had the king dismiss his progressive but pro-Spanish ministers. Programs of civil and ecclesiastical reform were then virtually abandoned.

1792-1800

THE FRENCH INVASIONS. In Sept. 1792, French armies occupied Savoy and Nice, which were subsequently annexed to France. Sardinia then entered into a military alliance with Austria, May 1794, against France, and continued to fight against France until 15 May, 1796

(Treaty of Paris). Genoa and Venice desired to remain neutral and maintain normal relations with both sides. Tuscany was coerced by Britain into joining the allied coalition, Oct. 1794, but chose to make peace with France, 9 Feb., 1795. Despite the seizure of ecclesiastical property in France and the promulgation of the Civil Constitution of the Clergy, Pius VI at first refused to join the anti-French coalition. He did not do so until 1797. Ferdinand IV of Naples hesitated to join the coalition out of fear of an imminent French naval invasion, but concluded a treaty with Britain, July 1793, and fought against France. In June 1797, Genoa, under French pressure, dissolved its ancient republic and established the Bonaparte-inspired Ligurian Republic. In Oct. of the same year Austria and France signed the Treaty of Campo Formio, which created the Cisalpine Republic out of Modena, Reggio, Bologna, Ferrara, Milan, and part of Venetia. The remainder of Venetia, including the city of Venice, was given to Austria. The French military occupation of Rome forced the creation of the Roman Republic, 15 Feb., 1798. Pius VI was deported to France. After the French fleet had been destroyed by the British Admiral Nelson off Egypt, Naples, which had earlier made peace with France, rejoined the coalition and marched on Rome. But the Neapolitan army was again defeated, and French forces subsequently occupied Naples and created the Parthenopean Republic, 24 Jan., 1799. Some part of the populations of all the new republics remained hostile to French-inspired and -controlled governments, and continued to offer armed resistance to them and to the occupation forces. With help from an irate citizenry, the allies were able to embark on the reconquest. In June 1799, Naples was restored by Admiral Nelson and, by 1800, only Genoa remained under French control. (*Cont. p. 147.*)

THE ENLIGHTENED DESPOTS AND REVOLUTION

The United States, France, and certain areas of Western Europe contiguous to France experienced the direct effects of

the Democratic Revolution on their own soil. Other parts of Europe, while not experiencing a violent overturning of their political, legal, and social institutions, nevertheless felt the impact of the 18th-century Enlightenment, and bent to winds of change that blew strongest in America and France.

Germany

GERMANY IN 1760. In 1760 the Germans totaled over 300 independent states and many independent territories. Formally, these diverse polities were united in the Holy Roman Empire of the German Nation, whose Diet met at Regensburg in Bavaria and whose emperor, usually a Hapsburg, was elected by 9 electors. Actually, most of the German states pursued independent courses of action, the majority striving to reproduce the grandeur of the French court at Versailles. Some had direct foreign connections. Hanover was joined in personal union with Great Britain and Saxony with Poland. The 2 strongest powers were Brandenburg-Prussia, the chief Protestant state of Germany, and Austria, the chief Catholic state. Brandenburg-Prussia was ruled by the Hohenzollern line, and Austria by the Hapsburgs. The possessions of the Hohenzollerns included territory in the east (East Prussia), in the center (Brandenburg), and in the west (Cleves, etc.) of Germany. Given the title "King in Prussia" in 1701, the Hohenzollerns preferred it to that of Elector of Brandenburg.

1760-86

REIGN OF FREDERICK II (THE GREAT). In 1760 the king of Prussia was Frederick II (1712-86), who had been on the throne since 1740. Regarding himself as the first servant of the state, he strove to increase its strength, devoting his energies to building up the army, reconstructing areas of his dominions devastated by war, sending Germans to colonize Silesia (recognized as Prussian by the Treaty of Hubertusburg, 15 Feb., 1763, which ended the Seven Years' War), and encouraging industry and commerce.

"Enlightened Despot" of excellence, he had a strong propensity for French models, and regarded Voltaire and other *philosophes* as his mentors and colleagues. The bulk of his reforms were enacted during the period 1746-56, but in 1766 he introduced the French tax-farming system, importing French officials to bring it into operation, and continued to seek greater efficiency in government by the creation of specialized departments of administration.

1ST PARTITION OF POLAND. By agreement with Austria and Russia, Prussia absorbed, 1772, West Prussia (the connecting link between East Prussia and the central Hohenzollern lands), but was denied the cities of Danzig and Thorn.

WAR OF THE BAVARIAN SUCCESSION. With the death of the Elector Maximilian Joseph, 30 Dec., 1777, the Bavarian ruling house of Wittelsbach died out, and Bavaria was inherited by Karl-Theodor of Sulzbach, elector palatine (1724-99). Austria claimed a third of the Bavarian inheritance and, with the consent of Karl-Theodor, Jan. 1778, occupied the territories in dispute. The protests of the next heir, Duke Karl of Zweibrücken-Birkenfeld, supported by Prussia, resulted in the War of the Bavarian Succession between Austria and Prussia, 1778-79.

FÜRSTENBUND. The Hapsburg emperor, Joseph II, planned to exchange Belgium for Bavaria. Fearing an increase of Hapsburg power in western Germany, Prussia organized, July 1785, a League of German Princes (initially Prussia, Saxony, and Hanover but later including many smaller states) and frustrated Joseph's intentions.

1786-99

REIGN OF FREDERICK WILLIAM II.

Frederick II of Prussia died on 17 Aug., 1786. His successor was Frederick William II (1744-97), who proceeded to spend for his personal benefit the funds Frederick II had left in the Prussian treasury, neglected the army, reduced French influence in the Berlin Academy, and called into question Prussian tolerance in reli-

gious matters by opposing freethinkers and seeking the re-establishment of the pure Protestant faith. He died on 16 Nov., 1797, and was succeeded by Frederick William III (1770-1840).

PRUSSIAN INTERVENTION IN THE NETHERLANDS. In 1787 the attempt of the Dutch Patriot Party to oust Stadholder Willem V of Holland provoked Prussian intervention, since the Stadholder's wife was a sister of the Prussian king. In Sept. a Prussian army entered the Netherlands and restored the Stadholder's authority. To secure it, an Anglo-Prussian convention was signed, Oct.; a Prusso-Dutch treaty of alliance, 15 Apr., 1788; and an Anglo-Prussian mutual-defense treaty, 13 Aug., 1788.

CONVENTION OF REICHENBACH.

On 31 Jan., 1790, an agreement was signed between Prussia and Turkey by which Prussia promised to enter the Russo-Turkish War on Turkey's side by the spring of the following year. Faced with this threat, Austria (also engaged in war with Turkey) was obliged to make peace and renounce her territorial gains in the Balkans. In return Prussia recognized Austrian possession of Galicia and promised not to aid the rebellious Low Countries against the Hapsburgs.

2ND PARTITION OF POLAND. By the 2nd Partition of Poland, 23 Jan., 1793, Prussia gained the cities of Danzig and Thorn and the territory between Silesia and West Prussia including Poznań (Posen) and Kalisz.

TREATY OF BASEL. Because of the failure of Prussian arms against France, Prussia was obliged to conclude a separate peace at Basel, 5 Apr., 1795. By this treaty Prussia withdrew her opposition to a French annexation of the left bank of the Rhine.

3RD PARTITION OF POLAND. On 24 Oct., 1795, Prussia, Russia, and Austria agreed to liquidate the Polish state. Prussia's share included the territory around Warsaw.

REIGN OF FREDERICK WILLIAM III.

On the death of Frederick William II, 16 Nov., 1797, Frederick William III succeeded to the Prussian throne. He had begun taking steps to end the financial

abuses characteristic of his father's reign when Prussia, together with other German states, became involved in the wars of Napoleon. (*Cont. p. 185.*)

The Hapsburg Lands

THE HAPSBURG DOMINIONS IN 1760. The area around Vienna, Styria, Carinthia, Carniola, and the Tyrol formed the predominantly German core of an empire whose Hapsburg ruler was German and usually Holy Roman Emperor. At the end of the 17th cent., after a Turkish army had failed to capture Vienna, 1683, and the Austrians had driven the Turks back, the Hapsburgs by the Treaty of Karlowitz, 1699, took possession of Hungary and Transylvania. In 1718 the Hapsburgs extended their rule in the Balkans when Turkey acquiesced in their seizure of parts of Serbia and Wallachia by the Treaty of Passarowitz. In the west the War of the Spanish Succession placed a Bourbon on the Spanish throne, but the Hapsburgs won the Spanish Netherlands (Belgium) and Spanish possessions in Italy (Treaties of Utrecht, 1713, and Rastatt, 1714).

Eighteenth-cent. Hapsburgs were therefore faced with the difficult task of keeping these disparate lands together. For Charles VI (ruled 1711-40) the problem was complicated by the fact that his successor would be a daughter, Maria Theresa (1717-80). His answer, the Pragmatic Sanction (the pledge of most of Europe to acknowledge Maria Theresa's rule), failed to prevent Frederick II of Prussia from seizing Silesia in 1740. Maria Theresa's attempts to recover her lost territory led to the Seven Years' War, 1756-63.

1760-65

CREATION OF THE STAATSRAT. In 1760, a State Council of 6 members was created, and began to function in 1761. It was dominated by Wenzel Anton von Kaunitz (1711-94), who had been given special responsibility for foreign affairs in 1753 and emerged as the most influential of Maria Theresa's advisers.

CREATION OF THE HOFSKANZLEI. In 1761 the Vereinigte Böhmisch-Österreichische Hofskanzlei replaced the Direktorium as the administrative agency for the central German and Czech lands. Other centralizing decrees included (1) the reinstatement of the Hofkammer as the central financial agency, (2) the subjection of the Gubernium (representing the high provincial nobility) to the administration in Vienna, and (3) the appointment of district officials to supervise the execution of the central government's orders.

TREATY OF HUBERTUSBURG. On 15 Feb., 1763, the Treaty of Hubertusburg was signed, ending the Seven Years' War and confirming Frederick of Prussia's seizure of Silesia.

ACCESSION OF JOSEPH II. On 18 Aug., 1765, the Holy Roman Emperor Franz Stefan, husband of Maria Theresa, died. He was succeeded as emperor by his son, Joseph II (1741-90), whom Maria Theresa designated as coruler of her Hapsburg lands.

1766-79

REDUCTION OF PEASANT OBLIGATIONS. The decree *Urbanum*, 1769, gave peasants in Hungary leasehold tenure and freedom to leave the land. Their feudal obligations were reduced and enforcement of their remaining obligations was placed in the hands of officials of the central administration. Burdens on the peasantry were reduced in Austrian Silesia, 1771; Lower Austria, 1772; Bohemia and Moravia, 1775, and Styria, 1778. In 1776 torture as a tool of the law courts was abolished.

CONTROL OF THE CHURCH. In 1767 the church was forbidden to acquire property in the Duchy of Milan, and from 1768 onward clergy could be taxed by the state. In 1769 some monasteries were dissolved and the remainder regulated, 1771.

BAVARIAN SUCCESSION. On 3 Jan., 1778, Karl-Theodor, heir to the Bavarian throne, recognized the Hapsburg claim to a share of his inheritance. The next heir after him, Duke Karl of Zweibrücken-

Biikenfeld, protested, and Prussia readied her army to oppose this proposed increase of Hapsburg power in Germany. After a war without significant fighting, the Hapsburgs received by the Treaty of Teschen, 13 May, 1779, the Innviertel (that part of Bavaria bounded by the rivers Inn, Danube, and Salza).

1780-90

RULE OF JOSEPH II. Maria Theresa died, 29 Nov. 1780. Of strong Catholic faith, she had nevertheless acted against the church when necessary to protect her inheritance. Her son, Joseph, espoused the Enlightenment and bent his attention to the task of strengthening and unifying the diverse territories under his rule.

UNTERTANSPATENT. 1 Sept., 1781. Peasants in the German core lands, Bohemia, and Galicia were permitted to appeal to the Kreisamt, the local office of the central government, in the event of disputes with their lords.

TOLERANZPATENT. 13 Oct., 1781. Full rights of citizenship, including those of buying land and holding government posts, were extended to non-Catholics in the German, Bohemian, and Polish areas. Protestants were permitted to conduct private religious services.

MITIGATION OF SERFDOM. 1 Nov., 1781. Peasants in certain areas were granted the right to marry, learn a craft, and change domicile without the prior permission of their lords. Between 1781 and 1785 these privileges were extended to all Hapsburg lands.

FURTHER RESTRICTIONS ON THE CHURCH. 12 Jan., 1782. The emperor, in an action to be repeated in 1785 and 1786, ordered the closing of more monasteries. His religious program discouraged meditative monasteries but encouraged the pastorate. Monasteries allowed to continue in existence were forbidden to communicate with the headquarters or branches of their orders in other lands. Papal bulls and briefs could not be published in Hapsburg territories without government approval, and all appeals to Rome were forbidden.

PROMOTION OF THE GERMAN LANGUAGE. German was declared the official language of Hungary, 6 Mar., 1784, and all officials there were ordered to master it within 3 years.

PEASANT REVOLT IN TRANSYLVANIA. In Nov. 1784 a peasant revolt broke out in Transylvania. Rumanian peasants slaughtered their lords until halted by imperial troops.

UNIFICATION OF THE LAW. The publication of the *Allgemeines Gesetzbuch* in 1787 provided a unified body of criminal law for the German, Bohemian, and Polish territories of the empire.

REGULATION OF LABOR SERVICES. In 1787 the *Robotpatent* of 1775, which had set for Bohemia a limit on the amount of labor a lord could exact from his peasants, was extended to Hungary and Galicia.

NEW TAX STRUCTURE. 1 Nov., 1789. Peasants were ordered to surrender 30% of their earnings in the proportion of 12 2% to the state and 17 8% to their lords.

DEATH OF JOSEPH II. 20 Feb., 1790. Emperor Joseph II had striven to unify his territorial possessions under 1 central authority, and in so doing had inflamed religious and local opinion. At his death Belgium was in open rebellion, Hungary was restive, Austrian troops were fighting with no great success against the Turks in the Balkans (war declared Feb. 1788), and the French Revolution was threatening the old order in the Hapsburg Empire as elsewhere. He was succeeded by his brother, Leopold II (1747-92).

1790-99

RULE OF LEOPOLD II. Leopold II, ruler of Tuscany since 1765, had used gradualist methods to reform that duchy. He had restricted church ownership of land, forbidden payments to Rome, removed the right of church asylum, abolished the Inquisition, put the clergy under secular law for secular offenses, reduced the number of priests and the power of the nobility, and introduced peasant reforms. He employed similar

gradualist methods in his relations with the territories of the empire, adding to the powers of the regional diets and encouraging them to promulgate reforms of their own.

CONVENTION OF REICHENBACH.

27 July, 1790. By this convention Leopold renounced territorial gains made by Austrian troops in the Balkans in exchange for Prussian promises not to aid rebellious Belgium. In Dec., imperial troops entered Belgium.

WAR WITH TURKEY. An Austro-Turkish armistice was concluded on 19 Sept., 1790, and the Treaty of Sistova, 4 Aug., 1791, finalized the war. The Turks received Belgrade in exchange for agreeing to an adjustment of the northern border of Bosnia in Austria's favor.

LEGAL REFORMS. In 1790-91, Leopold ameliorated the harsh criminal code decreed in 1787, secured passage of a habeas corpus law, Feb. 1791, and reduced the independence of the Ministry of Police.

RULE OF THE EMPEROR FRANCIS. On the death of Leopold II, 1 Mar., 1792, his son, Francis (1768-1835), succeeded him, and was elected Holy Roman Emperor, 5 July. In 1784 Francis had been brought to Vienna to study under the supervision of Joseph II, but few of his uncle's ideals or beliefs in "Enlightened Despotism" impressed him. During a period when Austria was involved almost continuously in war for more than 2 decades, he worked to preserve, not transform, the Hapsburg monarchy.

WAR WITH FRANCE. On 27 Aug., 1791, Leopold II and Frederick William II of Prussia had issued the Declaration of Pillnitz in which they stated that the situation of Louis XVI (virtual prisoner of the French Assembly) and the need to restore order and sound government in France were objects of concern for all European monarchs. France responded by declaring war, 20 Apr., 1792. A Hapsburg-Prussian alliance had been signed on 7 Feb. of that year, and the forces of the 2 powers jointly invaded France during the summer.

TREATY OF CAMPO FORMIO. 17 Oct., 1797. After an initial period of

success, the Hapsburg armies were defeated by the French in France, Belgium, and northern Italy. By the Treaty of Campo Formio, Austria gained the Venetian Republic, Istria, and Dalmatia, but France assumed control over Belgium and the left bank of the Rhine (at Prussia's expense) and won recognition of her client Cisalpine and Ligurian republics in northern Italy. War between Austria and France (War of the 2nd Coalition) broke out again in 1799. (*Copt.* p. 160.)

Russia

RUSSIA IN 1760. From 1741 to 1762, Russia was ruled by Elizabeth (1709-62). The state she governed was largely the creation of her father, Peter the Great (1672-1725), who had built a new capital at St. Petersburg, symbol of the enforced westernization of the country. Peter, whose own son opposed his reforms, had made the crown nonhereditary, giving each successive ruler the right to choose his heir. In practice, the result had been that the Guards regiments in St. Petersburg became the controllers of the succession.

The leading positions in the administration and the army were filled by the gentry, who under Peter had formed a class open to talent and required to give a lifetime of service to the state. Under Peter's successors, the position of the gentry had been strengthened, nongentry being denied the right to own serfs, 1746, 1758, and the term of compulsory service being reduced to 25 years, 1737.

Beneath the gentry there was a small class of free peasants, but the mass of agricultural workers were serfs. A large number of these were state peasants, who paid a fixed rent to the government and could not be separated from the land they worked. The majority, however, were privately owned, owing their masters either rent or service and almost completely subject to their power. Russian serfs could be sold separately from the land they lived on and there were many household serfs.

In foreign affairs Peter had transformed Russia into a major European

power. The policy of the country was determined by its relations with its 3 neighbors, Sweden, Poland, and Turkey. In the north Peter had seized the Baltic coast and part of Finland from Sweden, and it was generally assumed that Russian expansion in that direction would continue. In the center Poland, which held territories to which Russia had historical claims, was a weak country with an elective monarchy and an almost impotent central Diet. In the south the territory of the Ottoman Turks barred Russia from the access she desired to the Black Sea. In the normal state of affairs, these 3 powers were opposed to Austria, and Russia was therefore usually friendly to that state. During the Seven Years' War, 1756-63, Austria and France fought Prussia and Great Britain. Russia entered the war on the Austrian side and inflicted serious defeats on Prussia, occupying East Prussia and raiding Berlin.

1762

RULE OF PETER III. Elizabeth died, 5 Jan., 1762, and was succeeded by her nephew, Peter III (1728-62). Of German birth, Peter seemingly placed greater value on his German duchy of Holstein-Gottorp, which he had inherited from his father, than on his Russian domains. He never accepted Russian ways, and his attempts to alter Orthodox practices to bring the Russian Church closer to Lutheranism created great opposition. On 1 Mar., 1762, he ended compulsory service for gentry. Although welcomed by the gentry, this decree created unrest among the serfs, who expected a 2nd measure abolishing their service to the gentry.

The war with Prussia ended in May 1762. Frederick II of Prussia was saved from the full effects of his defeats by Peter's high regard for him. All territories captured by the Russians were unconditionally restored, and a Russo-Prussian alliance signed. In addition Peter, who as duke of Holstein-Gottorp had claims on the Danish duchy of Schleswig, prepared for war against Denmark.

ACCESSION OF CATHERINE II (THE GREAT). Peter III was killed by government officials and Guards officers who considered him incapable and hostile to Russia's true interests, and his German wife, Catherine (1729-96), was proclaimed empress, 9 July, 1762. Catherine took the throne in her own name and, since she had no claim to it, was dependent throughout her reign on the support of leading elements among the gentry. She ended the threat of war against Denmark, arranging instead for an alliance with that state, and withdrew completely from the Seven Years' War.

1763-74

THE POLISH SUCCESSION. Stanislas Poniatowski was elected king of Poland, 6 Sept., 1764. On the death of the previous king in 1763, Frederick II had agreed to support Poniatowski, who was Catherine's candidate for the throne and her former lover. Russian troops entered the country and forced Poniatowski's election on the Diet, Poland thereby falling under Russian domination.

REIGN OF CATHERINE II. Catherine had been influenced by the works of the French *philosophes* and as empress engaged in correspondence with Voltaire and welcomed Diderot to Russia. For a Legislative Commission she established in Dec. 1766, she prepared a lengthy "Instruction" which showed the influence of the Enlightenment on her, based as it was largely on the works of Montesquieu and Beccaria. She expressed her opposition to torture and capital punishment, favored a division of powers within the government, and stated that all citizens should be subject to the same laws. At the same time, she insisted that the government must be headed by an absolute ruler. In the original draft she had voiced strong feelings against serfdom, but these sections were deleted or much toned down by her advisers.

Serfdom was a problem for Catherine throughout her reign, for though she opposed it and tried to ameliorate its influence by a decree, 1762, the over-all

effect of her period of rule was to strengthen and enlarge the institution. She extended serfdom to the Ukraine, made large gifts of crown lands (converting the state peasants on them into privately owned serfs), gave landlords the right to send serfs to Siberia without trial or right of appeal, 1765, and denied serfs the right of petition against wrongs committed by their masters.

LEGISLATIVE COMMISSION OF 1767-68. The Legislative Commission, intended by Catherine to revise and codify Russian law, met from Aug. 1767 to Dec. 1768. It consisted of 564 delegates, 28 appointed and the rest elected by the various classes of the population (gentry, townsmen, state peasants, Cossacks, nationalities), with the exception of the serfs and the clergy. The delegates brought petitions from their constituencies and there was much debate on them, but the large, unwieldy body could not arrive at any conclusions and was finally prorogued.

INTERVENTION IN POLAND. After making Poniatowski king of Poland, Frederick and Catherine had insisted on religious freedom for Protestants and Orthodox Christians in Poland. The Polish Diet resisted this demand until Mar. 1768, when it was forced to give in. The result was an anti-Russian revolt in the country, which forced the government to request Russian aid in suppressing it, May. Although the Russians had superior military force, the pacification of Poland required several years of campaigning.

RUSO-TURKISH WAR. Fearing Russian expansion, and urged on by their French and Polish allies, the Turks took advantage of the Russian war with Poland to attack southern Russia from the Crimea, Oct. 1768. In 1769-70 the Russians regained the initiative, capturing the Danubian principalities, Moldavia and Wallachia, and pushing the Turks back in the Crimea. At the same time the Russian fleet sailed from the Baltic to the eastern Mediterranean, and destroyed the Turkish fleet in the Bay of Chesme, July 1770.

1ST PARTITION OF POLAND. By the 1st Partition of Poland, 1772, Russia acquired White Russia as far as the Dnieper and Dvina rivers. In Sept. 1773, at Russian insistence, the Polish Diet accepted the partition.

PUGACHEV'S REBELLION. A Don Cossack, Emilian Pugachev, declaring himself to be Peter III, began a revolt among the Ural Cossacks, May 1773. The revolt spread rapidly among the agricultural and industrial serfs of southeastern Russia, who lived in great hardship. At its height it threatened Moscow, and Pugachev established his own court and government and abolished serfdom within the area he controlled. In 1774, however, the government was able to bring greater military force to bear, and in the summer of that year Pugachev's army was scattered and the movement quickly collapsed. Pugachev himself was surrendered by his own forces and executed, Jan. 1775.

TREATY OF KUCHUK KAINARJI. The war with Turkey ended with the signing of the Treaty of Kuchuk Kainarji (Küçük Kaynarca), 16 July, 1774. Russia obtained part of the northern coast of the Black Sea and returned Moldavia and Wallachia to Turkey. The Crimea was made independent and the Russians were given the right to commercial navigation in Turkish waters and the position of protector of Orthodox Christians in Turkey.

1775-96

ADMINISTRATIVE REFORMS. By a decree of 18 Nov., 1775, the huge provinces into which Russia had formerly been divided were replaced by smaller units, numbering 50 by the end of Catherine's reign. They were drawn without reference to historical boundaries. An elaborate bureaucracy was created with a separation of administrative and judicial functions. Power was decentralized and the gentry were allowed a degree of self-government, including the right to elect some officials and deputies to local assemblies.

ANNEXATION OF THE CRIMEA.

The formal annexation of the Crimea, Aug. 1783, followed the effective seizure of the area by troops under Grigori Potemkin (1736-91), another of Catherine's lovers. As governor general and viceroy of southern Russia, he created the port of Sevastopol, 1784, and developed Russian naval power in the Black Sea. Catherine, who had named her grandsons Alexander (1777-1825) and Constantine (1779-1831), dreamed of creating a new Christian empire based on Constantinople and subservient to Russia. To further this goal, an anti-Turkish alliance had been made with Austria, 1781.

CHARTER OF THE NOBILITY.

May 1785. The gentry were given legal status as a class and the right, which no other group had, of presenting mass petitions to the monarch. Members of the gentry could not lose their estates, rank, or lives without trial by their peers, and they were declared exempt from personal taxes, compulsory service, and corporal punishment.

RUSO-TURKISH WAR. Protesting Russian annexation of the Crimea, a protectorate established by Russia over Georgia, and interference in Moldavia and Wallachia, the Turks imprisoned the Russian envoy and attacked the Crimea, Aug. 1787. They were defeated by Gen. Alexander Suvorov (1729-1800), and the Russians, aided by the Austrians, then took the offensive in the Black Sea area and in the Balkans. The allies made some progress, but their advance was slow, and in 1790, after the death of the Austrian emperor, Joseph II, the Austrians withdrew their forces.

WAR WITH SWEDEN. June 1788-Aug. 1790. Taking advantage of Russian involvement with Turkey, Gustavus III of Sweden attacked Russia through Finland. For a time St. Petersburg was threatened, but the Swedish attack was stopped by a Russian naval victory and the entry of Denmark, a Russian ally, into the war. In 1790, peace was made with no territorial changes.

TREATY OF JASSY. 9 Jan., 1792. The Turkish war ended with Russia obtaining

the Black Sea coast between the Bug and Dniester rivers and Turkey recognizing the annexation of the Crimea.

2ND PARTITION OF POLAND. 23 Jan., 1793. By the 2nd Partition of Poland, Russia obtained most of Lithuania and the western Ukraine. In addition the Polish Diet, which had to accept the terms of the partition, Sept. 1793, agreed to Russian control over Polish foreign policy and the Polish army.

3RD PARTITION OF POLAND. Oct. 1795. On 24 Mar., 1794, a revolt broke out in Poland led by Thaddeus Kosciuszko (1746-1817). It achieved momentary success, the Russians being forced out of Warsaw and their subsequent siege of that city being broken. Russian forces under Suvorov, however, recaptured the city in Nov. 1794, and the final partition of the country followed. Austria, Prussia, and Russia participated, the latter obtaining the remainder of Lithuania and the Ukraine and the duchy of Courland.

1796-99

REIGN OF PAUL I. Catherine the Great died 17 Nov., 1796, and was succeeded by her son Paul I (1754-1801). She had felt him incapable of ruling and had kept him from positions of power all his life, even though he was her designated heir. Paul, in turn, had opposed all her policies and was determined to reverse them. On coming to power, he released the prisoners of the Polish revolt of 1794, ordered his father, Peter III, disinterred and buried beside Catherine, and imposed Prussian military regulations on the army. Paul was by nature arbitrary and erratic, and those who worked for him were in constant fear of his absolute power.

NEW SUCCESSION LAW. 16 Apr., 1797. At his coronation Paul proclaimed that the Russian throne would henceforth be inherited by promogeniture in the male line.

LIMITATION OF THE SERVICE OF SERFS. 16 Apr., 1797. The emperor also decreed that those serfs owing an obligation of service should not work

more than 3 days a week for their masters. In the same year he restricted the rights granted the gentry in 1785, taking away their exemption from corporal punishment, Jan., and the corporate right of petition, May. Like Catherine, however, he continued the expansion of serfdom by large gifts of crown lands and peasants and by extending the institution of serfdom to the new lands in southern Russia.

WAR WITH FRANCE. At first Paul remained aloof from the wars of the French Revolution, but in 1798 he reversed this policy, making treaties with Turkey, Aug., and Britain, Dec., and promising Russian troops to Austria, Oct. A joint Russo-Turkish force captured the Ionian Islands, Sept. 1798–Mar. 1799, and an Austro-Russian army under Suvorov won major victories in northern Italy, Apr.–Aug. 1799. Suvorov's victories were accompanied by military and political disputes with the Austrians, who opposed the Russian policy of restoring the *status quo* in Italy. Suvorov was ordered to Switzerland, from which he was forced to retreat by the defeat of other allied armies, and by late 1799 it had been decided to bring him back to Russia. Relations with Britain also worsened with the failure of an Anglo-Russian attack on the Netherlands, Sept.–Oct. 1799, and British refusal to co-operate with Russian forces in the Mediterranean. (*Cont. p. 167.*)

Spain and Portugal

SPAIN

1760–77

REIGN OF CARLOS III. Carlos III (1716–88), formerly duke of Parma and king of Naples, became king of Spain in 1759. He strengthened the authority of the central government, reformed the bureaucracy and the army, and, adopting policies advocated by the economist Pedro Rodríguez de Campomanes, brought new economic prosperity to his country.

FAMILY PACT. When the Seven Years' War began, 1756, Spain remained

neutral, but by the Family Pact, 15 Aug., 1761, Carlos renewed the alliance between the Spanish and French Bourbons. France agreed to support Spain against Britain in return for a Spanish promise to enter the war if peace had not been made by 1 May, 1762.

WAR WITH BRITAIN. On 2 Jan., 1762, Britain declared war on Spain. Portugal, allied to Britain, was invaded, but the Spaniards achieved only minor successes. A Spanish force captured the Portuguese colony of Sacramento (Itapúa), in present Brazil, but lost Havana (Cuba) and other West Indian possessions, together with Manila in the Philippines, to the British.

TREATY OF PARIS. 10 Feb., 1763. Spain ceded Florida to Britain in exchange for Havana and Manila, returned Sacramento to Portugal, allowed the British logwood cutting rights in Honduras, and surrendered her claims to fishing rights in the Newfoundland fisheries. By a separate agreement she received New Orleans and Louisiana west of the Mississippi from France.

MADRID RIOTS. Mar. 1766. The immediate cause of serious rioting in Madrid was a government attempt to prohibit the wearing of the round *chamberg* hat and long cape associated with Hapsburg times. In addition the Bourbons were still considered a foreign dynasty, and Charles's reliance on 2 Italian ministers, the marquises of Grimaldi and Squillace, created resentment. Higher taxes and steadily rising food prices also caused dissatisfaction. The riots forced the dismissal of Squillace, and the count of Aranda (1718–99) became the king's chief adviser.

EXPULSION OF THE JESUITS. The Jesuits were accused of instigating the riots of 1766. In addition, they were charged with being a divisive force both at home and in the colonies. On 27 Feb., 1767, Carlos signed the order for their expulsion. The Spanish government also pursued an anti-Jesuit policy in Rome, and José Moñino (1728–1808) was made count of Floridablanca for his part in obtaining papal suppression of the Society of Jesus in 1773.

1778-83

DÉCRÉE OF FREE TRADE. 12 Oct., 1778. This decree was the last in a series, begun in 1765, that had progressively broken the monopoly of Seville and Cádiz over the colonial trade. Direct trade among almost all major Spanish and colonial ports was now permitted.

WAR WITH BRITAIN. A Spanish declaration of war against Britain, 23 June, 1779, followed a secret alliance between Spain and France made in Apr. 1779. Although Spain refused openly to recognize the independence of the British North American colonies, she gave them secret aid. Spanish forces occupied Florida, the Bahamas, and Minorca, but a planned Franco-Spanish invasion of Britain did not materialize and a siege of Gibraltar had to be raised.

TREATY OF VERSAILLES. 3 Sept., 1783. Spain retained Minorca and Florida, but returned the Bahamas to Britain and renewed British logwood-cutting rights in Honduras. The Spanish economy had suffered from the wartime disruption of colonial trade, but the postwar period was one of great prosperity and economic expansion.

1788-99

REIGN OF CARLOS IV. Carlos IV (1748-1819) became king of Spain in Dec. 1788. A weaker man than his father, he was strongly under the influence of his wife, María Luisa of Parma. The count of Floridablanca, who had been first secretary of state since 1776, was Carlos' chief minister.

RELATIONS WITH FRANCE. Floridablanca attempted to keep the French Revolution out of Spain. He took extreme measures, including the suppression of all newspapers except the official press, to prevent news of events in France from gaining circulation in Spain. So aggressively did he support the rights of Louis XVI against the French Assembly that it was feared his policies were endangering that monarch rather than helping him. In 1792 the count of Aranda

became first secretary. Aranda adopted a more moderate stance toward the French Revolution, a policy that became more difficult to maintain as the Revolution became more extreme.

WAR WITH FRANCE. In Nov. 1792, Manuel Godoy (1767-1815) became first secretary. Godoy was a 25-year-old former Guards officer, and a personal favorite of both the king and queen. He tried to defend Louis XVI while avoiding war with France, but failed in both aims. On 7 Mar., 1793, France declared war on Spain. The war aroused considerable patriotic enthusiasm and Spanish armies invaded France, only to be obliged to retreat in 1794 in the face of a strong counterattack by the French.

TREATY OF BASEL. France evacuated Spain in return for the Spanish (eastern) half of the island of Santo Domingo. For his part in arranging this treaty, 1795, Godoy was given the title Prince of Peace.

TREATY OF SAN ILDEFONSO. 18 Aug., 1796. Spain allied herself to France and placed her fleet in the French service. On 14 Feb., 1797, the main Spanish naval force was defeated by the British off Cape St. Vincent. (*Cont. p. 141.*)

PORTUGAL

1760-76

RULE OF POMBAL. José I (1715-77), of the house of Braganza, became king of Portugal in 1750. His chief minister and the real ruler of the country was Sebastião José de Carvalho e Mello (1699-1782), who in 1770 was made marquis of Pombal. Pombal's power became almost absolute after an attempt on the king's life in 1758 resulted in the imprisonment or execution of many of the higher nobility and the expulsion of the Jesuits, 1759. Corrupt, merciless, and dictatorial, Pombal did much to promote industry, commerce, and education, and was the main force behind the rebuilding of Lisbon after the great earthquake of 1755.

WAR WITH SPAIN. When Spain entered the Seven Years' War on the side of France, she tried to make the Portuguese break their alliance with Britain.

The Portuguese refused, and Spanish troops crossed the frontier, 30 Apr., 1762. With timely British aid, the Portuguese were able to prevent more than minor penetrations of their country.

1777-99

REIGN OF MARIA I. Maria I (1734-1816) became queen of Portugal, 24 Feb., 1777. One of her first acts was the dismissal of Pombal. The nobles he had imprisoned were released and in 1781 he himself was found guilty on criminal charges. Maria was subject to periodic fits of insanity and in Jan. 1792 it became necessary for her son, João (1767-1826), to take control of the government. In 1799 he assumed the title of prince regent.

WAR AGAINST FRANCE. In July 1793, after allying herself with Britain and Spain, Portugal sent troops to support the Spanish invasion of France, Sept. The Spaniards were defeated and made peace with France, July 1795, but the Portuguese persisted in their friendship with the British and their enmity toward the French, thus setting the scene for the Peninsular War. (*Cont. p. 145.*)

Scandinavia

SWEDEN

1760-70

THE "CAPS" AND THE "HATS." In 1760 the king of Sweden was Adolphus Frederick (1710-71) of Holstein-Gottorp (acceded 1751). His realm included Finland, which had been an integral part of Sweden since the 13th cent. The king of Sweden was virtually a figurehead, the country being governed by the Riksdag, an assembly of 4 estates (nobles, clergy, burgesses, and peasants). Within the Riksdag there were 2 parties, the Caps and the Hats, the latter having been in power since 1739. During the Seven Years' War, the Hats followed a pro-French policy and engaged in futile attacks on Prussia, 1757-62, which brought no territorial gains and resulted in a large national debt and a ruinous inflation.

In consequence, the Caps came to

power in 1765. They freed the press and favored economic retrenchment, a lessening of government interference, in the economy, and closer ties with Russia and Britain. Their economic policies, however, created even greater hardship in the country than had those of their predecessors. By their failure to increase the power of the king, they lost the support of the court party and fell from power in 1769.

1771-79

RULE OF GUSTAVUS III. In 1771, Gustavus III¹ (1746-92) came to the throne. He was influenced by the French *philosophes* and believed in an "enlightened," but strong, monarchy. On 19 Aug., 1772, he engineered a coup, as a result of which the members of the council were arrested and the Riksdag dismissed. A new constitution was adopted under which the powers of the Riksdag were reduced to control over taxation and the state bank, the sole right to declare war, and an equal voice with the king's over legislation. Gustavus III reformed the civil service, the law courts, and the army, abolished torture, and increased religious freedom, but his absolutist views were reflected in the press law of 1774 and in his reliance on informal, personal advisers in place of the council set up by the constitution to assist him.

1780-90

LEAGUE OF ARMED NEUTRALITY. In 1780 Sweden joined Denmark and Russia in the League of Armed Neutrality, designed to protect neutral commerce during the War of American Independence.

WAR WITH RUSSIA. In 1788 Gustavus III invaded Russia without securing the prior approval of the Riksdag. Not only did the assault fail but Sweden was in turn attacked by Russia's ally, Denmark. Following British and Prussian intercession, the Danes withdrew, and the Russian war was ended by the Treaty of Värälä, Aug. 1790, which restored the *status quo*.

ACT OF UNION AND SECURITY.

Gustavus' unsuccessful and unconstitutional attack on Russia increased the already existing opposition to him within the nobility. Taking advantage of the Danish attack to arouse patriotic feeling, he allied with 3 lower houses of the Riksdag to force changes in the constitution at the nobility's expense. By the Act of Union and Security, Feb. 1789, he was granted virtually absolute powers, while many offices and privileges that had been reserved to nobles were thrown open to all classes.

1791-99

RULE OF GUSTAVUS IV. In Mar 1792, Gustavus III was assassinated by Jakob Anckarström, a former army officer and a member of a conspiracy of nobles opposed to the new regime. He was succeeded by his son, Gustavus IV (1778-1837), whose uncle, Duke Charles, ruled until 1796.

In 1794 a treaty of neutrality was negotiated with Denmark. The 2 countries agreed to remain neutral in the wars of the French Revolution, and to adopt joint measures for the protection of their commerce. (*Cont. p. 176.*)

DENMARK AND NORWAY**1760-65**

RULE OF FREDERICK V. Frederick V (1723-66), of the House of Oldenburg, had become king of Denmark in 1746. His realms included the Kingdom of Denmark itself, consisting of Jutland and the Danish islands; the Duchy of Schleswig, which had been Danish territory since 811 but was not part of the kingdom; the Duchy of Holstein, a part of the Holy Roman Empire, of which the king of Denmark had been duke since 1460; and the Kingdom of Norway, which had been joined in a personal union with Denmark since 1380. Frederick V was an absolute monarch. His principal ministers were Adam Gottlob Moltke, chief marshal, and John Hartvig Ernst Bernstorff (1712-72), foreign minister.

ALLIANCE WITH RUSSIA. In the 16th cent., the Duchy of Holstein-Gottorp had been created out of parts of Schleswig and Holstein. As a result of the Northern War, 1700-21, the ducal portion of Schleswig had been taken by the king of Denmark. In 1762 the then duke of Holstein-Gottorp became Czar Peter III of Russia, and he immediately began preparations to regain his lost territory. War between Russia and Denmark seemed certain when Peter was deposed by his wife, Catherine II. The czarina was more concerned with the Baltic than with Germany, and desired a Danish alliance against Sweden. Treaties were therefore arranged (the final ones were signed in 1773) providing for an alliance against Sweden and for the surrender of the Holstein-Gottorp claims in Schleswig and Holstein in exchange for Oldenburg and Delmenhorst.

1766-72

RULE OF STRUENSEE. In Jan. 1766, Christian VII (1749-1808) succeeded his father, Frederick V. The new king was subject to fits of insanity, and came under the influence of a German doctor, Johann Friedrich Struensee (1737-72). Between 1770 and 1772, Struensee controlled Denmark. A freethinker, strongly influenced by the French *philosophes*, he instituted a program of extreme reform. The privileges of the nobility were attacked, the administration completely reorganized and centralized, and freedom of the press established. On 17 Jan., 1772, however, Struensee was overthrown by a coup led by the queen dowager, Juliane Marie, on behalf of her son, Frederick (1768-1839).

1772-99

MODERATE REFORM AND NEUTRALITY. From 1772 to 1784 the queen dowager, Crown Prince Frederick, and Minister Ove Høegh-Guldberg imposed a regime of extreme conservatism on Denmark. But when on 14 Apr., 1784, Frederick came of age and took power with his father's consent, he ousted the conservatives and installed a new ministry

led by Andreas Peter Bernstorff (1739-97). A period of reform followed, during which estate owners were deprived of their judicial authority. 1787, the peasants were given freedom to leave their land, 1788; and the slave trade was abolished, 1792.

In Sept. 1788, Denmark invaded Sweden. Sweden had attacked Russia, and the latter invoked the treaty of 1773 to obtain Danish aid. Britain and Prussia intervened and peace was restored. During the wars of the French Revolution, Denmark remained neutral. (*Cont. p. 177.*)

Poland

1760-73

POLAND IN 1760. In 1760 Poland was the largest country in Europe (282,000 sq. mi.) apart from Russia. Its population numbered some 12 m., some 40% of whom were White Russians, Ukrainians, and Lithuanians, while Germans and Jews formed sizable minorities.

The Polish government was practically powerless. The central Diet (*Sejm*), composed of delegates chosen by provincial diets, elected the king who, in order to become eligible for the throne, had to swear to respect the rights of the nobility (*pacta conventa*). Exercise in the central Diet of the *liberum veto*, a single negative vote, could bar the passage of any bill. Moreover, any group dissatisfied with the conduct of affairs by the central government could form its own organization, known as a "confederation," and conduct its own foreign policy. Poland's powerful neighbors, Russia, Austria, and Prussia, financed such factions for their own ends, and all sought to keep Poland weak.

Most of the inhabitants of the country were rural serfs. The towns were insignificant; total urban population was barely half a million, and the towns had no representation of their own in the central Diet. Landed magnates dominated public life.

SUCCESSION CRISIS OF 1763. The death of King Augustus III, 5 Oct., 1763, ended the Saxon line. During the inter-

regnum that followed, the Czartoryski family (known as "The Family") persuaded the Diet to limit the exercise of the *liberum veto*. Russia and Prussia, however, agreed by the Treaty of St. Petersburg, 11 Apr., 1764, to press for an annulment of this limitation and for the election of Stanislas Poniatowski (1732-98), a former lover of Catherine II, and a Czartoryski, to the Polish throne. The Czartoryskis had to abandon their reform plans, and Poniatowski became king of Poland.

CONFEDERATION OF RÁDOM. In 1766, Russian influence again secured the Diet's rejection of a proposal to abolish the *liberum veto* in relation to tax matters. To safeguard the privileges of the nobility, the elective monarchy, and the *liberum veto*, the Confederation of Radom was formed, 23 June, 1767. In 1768 the Diet yielded to the Confederation's demands, thus weakening the central government still further, and also lifted the disabilities on Dissidents. (Dissidents were non-Catholics: Orthodox Ukrainians and White Russians in the East, and Protestant Prussians in the north and west.)

CONFEDERATION OF BAR. 29 Feb., 1768. The Confederation of Bar was formed in Podolia in the Ukraine to defend Polish independence against Russian encroachment and to revoke the rights granted to Dissidents. The Confederation's troops fought spasmodically against the Russians, who were soon preoccupied with the war against Turkey, 1768-74.

1ST PARTITION OF POLAND.

Meanwhile, in 1769, Austrian troops occupied the enclave of Zips (Spisz), which had once belonged to the Kingdom of Hungary. In 1770, on the pretext of protecting it from a cattle plague, Prussia cordoned off West Prussia. When Russia began making gains in her war with Turkey, Austria became nervous over Russian ambitions in the Balkans and demanded compensation. Frederick II of Prussia then suggested that all 3 powers should seek compensation in Poland; he had long coveted West Prussia, which lay between East Prussia and Pomerania.

Russia agreed to Frederick's proposal, 17 Feb., 1772, and Austria followed, 5 Aug. Austria received Galicia (32,000 sq. mi. and 2.7 m. inhabitants), Prussia annexed West Prussia (14,000 sq. mi. and 580,000 inhabitants), and Russia obtained 36,000 sq. mi. of White Russia with 1.3 m. inhabitants. Thus Poland lost 30% of her territory and 35% of her population. Threatened by a Russian army, the Polish Diet ratified the partition, 18 Sept., 1773.

1773-91

INFLUENCE OF THE ENLIGHTENMENT. An educational reform program was instituted, 1773, with the dissolution of the Jesuit order (which had dominated Polish education since the 16th century) and the establishment of an Education Commission (*Komisja Edukacji Narodowej*) which administered and expanded Polish education and was the first ministry of education in Europe. The king encouraged Polish and foreign *philosophes* to join his court and advise him on matters of national policy.

4 YEARS' DIET. A Diet strongly under the influence of reformers opened on 6 Oct., 1788. Russia was engaged in another war with Turkey, 1787-92, and with Sweden, 1788-90, and was unable to interfere decisively in Polish affairs, and Poland gained the benevolent support of Prussia by a defensive alliance signed on 29 Mar., 1790.

On 3 May, 1791, the Diet promulgated a new constitution which was in time approved by both Prussia and Austria. It provided for a hereditary monarchy and for a bicameral legislature chosen by direct elections. Towns were granted self-government and representation in the legislature. Urban dwellers received the right to buy land, hold most offices, and become noble. Catholicism was declared the state religion, but other religions were to be tolerated. Both the *liberum veto* and the confederations were abolished.

1792-99

2ND PARTITION OF POLAND. Catherine II of Russia, however, opposed the Polish reform, movement and organized

the Confederation of Targowica, 14 May, 1792. Russian troops invaded Poland. Frederick William II of Prussia, alarmed at the possibility of Russian control over the whole country, sent troops into Poznań. But, since he wished to avoid a confrontation with Russia while his forces were engaged in France, he renounced the treaty Prussia had made with Poland, 1790.

Russian and Prussian forces soon overwhelmed the small Polish army. On 23 July, 1792, the Polish government yielded to a Russian demand that all reforms should be annulled and the old constitution restored. On 23 Jan., 1793, Prussia and Russia agreed to a further dismemberment of Poland: Prussia annexed Poznań (1 m. inhabitants and 22,000 sq. mi.), while Russia took 97,000 sq. mi. of Lithuania, White Russia, and the Ukraine. Surrounded by Russian troops, the Diet ratified the partition on 23 Sept.

UPRISING OF 1794. In Mar 1794 a rebellion against foreign occupation, led by Thaddeus Kosciuszko (1746-1817), broke out. In Apr. the citizens of Warsaw ejected the Russian garrison, and soon all foreign troops had been cleared from Polish territory. By Nov., however, the allies had succeeded in crushing the uprising.

3RD PARTITION OF POLAND. In Oct. 1795, Prussia, Austria, and Russia agreed to a 3rd partition. Prussia received Warsaw, Austria Cracow and Lublin, and Russia Vilna, Grodno, Brest, the rest of Lithuania, White Russia, and the Ukraine. The king of Poland abdicated on 27 Nov., 1795.

GREAT BRITAIN AND IRELAND

1760

ACCESSION OF GEORGE III. On assuming the throne, 25 Oct., George III (1738-1820) had 2 principal aims: to replace the Whig ministry with a non-partisan one of his own choosing, and to conclude the French phase of the Seven Years' War, for he could not expel the Whigs while they successfully pursued it. He was willing to make sacrifices to end

the German phase of the war, for its indecisiveness, had made it unpopular. George III was advised by Lord Bute (1713-92), who, 25 Mar., 1761, became a secretary of state.

1761-62

DECLARATION OF WAR ON SPAIN.

4 Jan., 1762. Spain objected to British settlements in Yucatán, the condemnation by British courts of captured Spanish ships, and the denial to Spain of Newfoundland fishing rights. The Bourbon Family Compact and the Franco-Spanish Convention of 15 Aug., 1761, pledged Spain to declare war on Britain by 1 May, 1762. On 7 Oct., 1761, William Pitt (1708-78) resigned after the cabinet rejected his proposal for an immediate preventive war. On 2 Nov., Britain heard officially of the Franco-Spanish treaties, Spain refused to clarify them, and Britain declared war.

BUTE MINISTRY. Bute's growing influence drove the Duke of Newcastle (1693-1768), prime minister since July, 1757, to resign, 26 May, 1762. Bute succeeded him, 29 May.

1763-64

TREATY OF PARIS. 10 Feb., 1763.

Signed by Britain, France, and Spain, the Treaty of Paris confirmed Britain's colonial supremacy in North America, in India, and on the seas. (The Treaty of Hubertusburg, 15 Feb., ended the German phase of the Seven Years' War.) France ceded Acadia, Canada, Cape Breton, and the islands of the St. Lawrence to Britain, gained St. Pierre and Miquelon, and retained fishing privileges off Newfoundland. She further yielded all territory east of the Mississippi except New Orleans. In the Caribbean, Britain regained St. Vincent, Dominica, Tobago, and the Grenadilles; France regained St. Lucia, Guadeloupe, Marie Galante, Désirade, and Martinique. Spain granted Britain East and West Florida and logwood-cutting rights in Honduras. Cuba and the Philippines were restored to Spain. In East India, France and Britain mutually restored all post-1749 conquests.

In Europe, France destroyed her fortifications at Dunkirk, reobtained Belle Isle, restored Minorca to Britain, and with Britain withdrew from Germany. In Africa, Britain returned Gorée to France, and France ceded her Senegal.

THE GRENVILLE MINISTRY Bute resigned, 8 Apr., 1763, and George Grenville (1712-70), whom George III disliked, succeeded him, 16 Apr.

THE WILKES CASE. On 30 Apr., 1763, John Wilkes (1729-97) was arrested for seditious libel, by a general warrant for his attack in No. 45 of the *North Briton* on George III's defense of the Treaty of Paris. Wilkes questioned the legality of the general warrant and claimed parliamentary immunity as an M.P. Chief Justice Pratt declared the general warrant illegal in May and discharged Wilkes, who fled to France, 24 Dec., after the Commons took further action against him. On 20 Jan., 1764, the Commons expelled Wilkes; he was convicted of seditious libel, Feb., and outlawed, Nov. His challenge to the government won him a reputation as a libertarian.

1764-66

GRENVILLE'S ECONOMIC MEASURES.

Grenville's Budget Speech of 9 Mar., 1764, proposed no new taxes in Britain, but stressed the need for additional revenues to maintain the empire. Such subsequent legislation as the American Revenue Act and the Stamp Act, the first revenue measures applied to the colonies, aroused American hostility. In 1766, Parliament repealed the Stamp Act, but passed a Declaratory Act that asserted Parliament's full authority to make laws binding the colonists "in all cases whatsoever."

ROCKINGHAM MINISTRY. George, III, anxious to be rid of Grenville, experiencing a crisis over a regency bill, 10 July, disdaining Newcastle, and unable to obtain Pitt, on 13 July, 1765, appointed the Marquis of Rockingham (1730-82) to head a ministry.

CHATHAM MINISTRY. Rockingham's ministry collapsed when Pitt refused to enter it; on 30 July, 1766, Pitt,

now Earl of Chatham, formed a ministry which, because of his ill health, was led by the Duke of Grafton (1735-1811) as first lord of the treasury and Charles Townshend (1725-67) as chancellor of the exchequer.

ROCKINGHAMITE OPPOSITION. Rockingham decided that he could not overthrow the Chatham ministry; his followers then went into opposition, which lasted until 1782. During this period, they formulated such governmental principles as the concept of "party," which Rockingham's private secretary Edmund Burke (1729-97) outlined in his *Thoughts on the Cause of the Present Discontents*, 1770.

1767

GRAFTON MINISTRY: On 13 Oct. Chatham resigned when Grafton considered the dismissal of Shelburne (1737-1805). Grafton became prime minister, with Lord Frederick North (1718-93) as chancellor of the exchequer and ministerial spokesman in the Commons. On 20 Jan., 1768, Lord Hillsborough assumed the new office of secretary of state for the colonies.

1768-69

MIDDLESEX ELECTION DISPUTES. Following John Wilkes's election to Parliament, Mar. 1768, riotous celebrations occurred. In May, troops quelling the Wilkesite demonstrations killed several people, an action Wilkes denounced in the *St. James Chronicle*, 8 Dec. The violence of his attack united his opponents, and the Commons expelled him, 3 Feb., 1769. Wilkes was re-elected on 16 Feb., 16 Mar., and 13 Apr., but on 15 Apr. the Commons declared his opponent elected. A pro-Wilkes petitioning movement ensued.

1770

NORTH MINISTRY. The cabinet was split by the Wilkes case and by the Townshend duties, passed, 1767, to main-

tain British officials in America. On 27 Jan., 1770, Grafton resigned; North replaced him, 31 Jan. North won passage of a bill for the withdrawal of all the Townshend duties except the tea duty, retained as a symbol of British authority; the repeal measure received royal assent, 12 Apr.

1771-72

FREEDOM OF THE PRESS. The post-1767 defiance of prohibitions concerning the publishing of parliamentary debates led Parliament, 15 Mar., 1771, to send a messenger to arrest an offending printer in hopes of ending this practice. The London aldermen arrested the messenger for infringement of privilege of the City. After this incident, with few exceptions, the press freely published parliamentary debates. Meanwhile, the publisher John Almon had led a press campaign against the government, and Lord Mansfield (1705-93) had ruled, 9 Dec., 1769, in connection with the anonymous and virulent *Letters of Junius*, that juries could not judge seditious libel. Chatham's and Rockingham's challenge of this decision on grounds that the administration had abused the libel laws for political purposes met parliamentary defeat, Jan. 1772. It was not until 1792 that a bill awarding libel cases to juries was passed.

1774-76

REACTION TO AMERICAN UNREST. Both Chathamites and Rockinghamites favored conciliating the disaffected colonies, but the 1774 elections returned a parliamentary majority that endorsed George III's wish to punish Massachusetts for the Boston Tea Party and for general intransigence, and that passed the Coercive Acts, 31 Mar., 20 May. The cabinet advocated both economic strangulation and a land war to restore order. Troops were ordered to America in 1775, and the Prohibitory Bill, 22 Nov., established a blockade of the colonies. Treaties of 9 Jan., 15 Jan., and 5 Feb., 1776, hired mercenaries from Bruns-

wick and Hesse-Cassel to supplement the British forces. Rockingham, convinced of the futility of his opposition to the "Intolerable Acts," retired from parliamentary participation, and Charles James Fox (1749-1806) became opposition leader.

1777-79

CONSEQUENCES OF DEFEAT AT SARATOGA. Gen. John Burgoyne's surrender at Saratoga, Oct. 1777, convinced the cabinet of the difficulty of subduing the colonists. North considered resigning and began preparing a series of bills for effecting reconciliation with America; he introduced these in the Commons, 17 Feb., 1778, and they passed, 16 Mar. Also in Mar., Britain learned of the Franco-American alliance, formed 6 Feb., and broke relations with France. One of North's bills created the Carlisle peace commission, which reached Philadelphia on 6 June and requested, 9 June, a conference with the Congress. On 17 June, Congress demanded recognition of U.S. independence and withdrawal of British forces as the basis of negotiation. The peace mission ended in failure.

NAVAL AFFAIRS. Anglo-French naval hostilities began 17 June, 1778. Admiral Keppel blamed his defeat off Ushant, 27 July, on Sir Hugh Palliser, a subordinate officer. A court-martial acquitted both men, but Keppel resented having been tried. Many young officers sympathized with him against the Admiralty under the Earl of Sandwich (1718-92), whom the Rockinghamites, Keppel's backers, wanted removed. As a result of this affair, many officers refused to command the Channel Fleet under Sandwich when a Franco-Spanish fleet threatened to invade England in the summer of 1779. The crisis ended when France abandoned the invasion.

1780

REFORM MOVEMENTS. In Dec. 1779, Burke had initiated his Economical Reform Movement and a Yorkshire freeholders' meeting had resolved to establish

a more representative Parliament and a national Petitioning Movement for reform. On 13 Mar., 1780, the Commons abolished the Board of Trade, but the economical reform movement collapsed, 21 May, when the Commons defeated Burke's attempt to decrease the King's Household. Scarce attendance at the petitioners' national congress in London, 11 Mar., dashed their hopes of creating a national assembly. On 6 Apr. the Commons approved their petitions to diminish royal power, but refused, 24 Apr., to remain sitting until reform was effected. Thereafter the movement declined.

GORDON RIOTS. On 2 June, Lord George Gordon (1751-93), leader of the London Protestant Association, petitioned Parliament to repeal the Roman Catholic Relief Bill of 1778; from then until 7 June, nominally anti-Catholic riots raged in London. Mob violence directed against Catholics and the rich caused many propertied people to support the *status quo*, thereby strengthening North's ministry.

DECLARATION OF WAR ON HOLLAND. Anglo-Dutch relations had become strained because of Holland's trade with Britain's enemies. On 17 Apr., Britain declared Dutch ships subject to search. Fearing that Holland would join Russia's League of Armed Neutrality to protect neutral shipping, the cabinet declared war, 20 Dec.

1782

ROCKINGHAM MINISTRY. The capture of Cornwallis' entire army at Yorktown, 19 Oct., 1781, and defeats by the French in the West Indies dashed British hopes for victory in America. The Commons unrelentingly attacked the North ministry, and on 20 Mar. North resigned. Rockingham succeeded him, 22 Mar., with Fox as foreign secretary and Shelburne as home secretary. Under Burke's influence, this ministry disenfranchised revenue officers, excluded government contractors from the Commons, and secured sinecure reform. Peace talks with the Americans began at Paris, 12 Apr. Rock-

ingham's death, 1 July, led to Fox's resignation and the formation of a ministry under Shelburne in which the younger William Pitt (1759-1806) was chancellor of the exchequer.

IRISH REFORMS. The American Revolution had provided Irish Protestants with a pretext for the formation of the supposedly defensive Ulster Volunteer Corps, which had soon become a powerful political force for free trade and Irish legislative independence. With this group behind him, Henry Grattan (1746-1820) obtained trade concessions and secured the repeal of the Drogheda statutes of 1494 (Poynings' Law), which subjected the actions of the Irish Parliament to the English Privy Council and made all laws passed in England applicable to Ireland. The new Irish Parliament, though independent, was limited to Protestants.

1783

TREATY OF PARIS. The preliminary Anglo-American treaty signed 30 Nov., 1782, was not to become effective until settlement with France had been reached. On 20 Jan., 1783, Britain concluded preliminary treaties with France and Spain. The Anglo-French treaty was an avowal of Britain's loss of power and prestige since 1763, but the only substantive changes in territorial disposition were made in the West Indies and Africa. Spain reacquired Minorca and the Floridas. On 3 Sept., definitive treaties were signed at Paris. An Anglo-Dutch treaty giving Britain Negapatam and free navigation of the Moluccas, and providing for mutual restoration of other conquests, was ratified in 1784.

FOX-NORTH MINISTRY. Shelburne's unpopular peace settlement caused cabinet disaffection. On 17 Feb., Fox and North defeated the preliminary treaty in the Commons, and Shelburne resigned, 24 Feb. George III acquiesced in the Fox-North coalition, 2 Apr., and they became secretaries of state in a ministry nominally headed by the Duke of Portland (1738-1809). The ministry lost sup-

port after agreeing to the same peace terms it had condemned Shelburne for accepting; it fell over Fox's East India Bill, which was considered a patronage scheme and was defeated in the Lords, 17 Dec. On 19 Dec., Pitt became prime minister.

1784-85

PITT MINISTRY. Pitt's administration was strengthened by the long-postponed general election of 1784, in which Fox's supporters lost over 100 seats. An India Bill was passed, 13 Aug. Pitt attempted to apply the ideas of Adam Smith and restore Britain to financial soundness. His Commutation Bill of 1784 reduced the tea duty to end smuggling. The Board of Taxes, created in 1785, centralized the receipt of revenues. The sinking fund, introduced 11 Apr., 1785, utilized the annual surplus to pay the national debt; by 1792 it had restored national credit.

1786

EDEN TREATY. Article 18 of the Treaty of Paris provided for a new Anglo-French commercial treaty, which William Eden negotiated, 26 Sept. It contained provisions for equal navigation, trade, and travel rights between Britain and France, religious freedom for the subjects of each state in the other, and procedures for settling contraband disputes. The treaty, effective 10 May, 1787, was abrogated during the French Revolution.

1788

ANGLO-DUTCH TREATY. After an unsuccessful attempt by France and the Netherlands to rescind the stadholder's powers, Pitt, fearing French encroachments in the Netherlands that would jeopardize British safety and prosperity, guaranteed Dutch territorial integrity by treaty, 15 Apr.

ANGLO-PRUSSIAN TREATY. For protection in case of a war with France, Britain concluded a treaty with Prussia, 13 Aug. It guaranteed mutual aid in a

European defensive war and the territorial integrity of the Netherlands.

1789

REGENCY CRISIS. George III had become violently insane in Nov. 1788. On 5 Feb., 1789, Pitt submitted a Regency Bill to the Commons; it granted the Prince of Wales restricted royal power. The king's recovery stopped debate, 19 Feb., but the bill served as the basis of the Regency Act of 1810, when George III became permanently insane.

1790

NOOTKA INCIDENT. The controversy over Spain's seizure of the Nootka trading post in 1789 was ended by the Nootka Convention, 24 Oct., 1790, whereby Spain recognized Britain's right to settle and trade on the north Pacific coast of North America.

1791

BIRMINGHAM RIOTS. Riots broke out, 15 July, during the Birmingham Nonconformists' celebration of the fall of the Bastille. Three days of disorder testified to the widespread fear that Nonconformists were revolutionaries.

1793

THE FIRST COALITION. On 25 Mar., Lord William Grenville (1759-1834), foreign minister since Apr. 1791, concluded the Anglo-Russian treaty establishing the First Coalition. Russia agreed to supply troops, prevent neutrals from aiding France, and grant Britain a favorable commercial treaty. Prussia, 14 July, and Austria, 30 Aug., joined the coalition, promising troops in exchange for British subsidies. Similar treaties were concluded with Hesse-Cassel, 10 Apr.; Sardinia, 25 Apr.; Spain, 25 May; and Naples, 12 June.

WAR WITH FRANCE. Distrust of France had increased in 1792 when she opened the Scheldt, 16 Nov., and prom-

ised, 19 Nov., support to any revolutionary people. On 4 Jan., 1793, the Commons passed the Aliens Bill to restrict the activities of foreigners, and on 24 Jan. George III expelled the French ambassador. On 1 Feb., France declared war on Britain and the Netherlands. Pitt's intention was to protect the Low Countries; George III's to defend monarchy.

1794

ANTITREASON MEASURES. The Traitorous Correspondence Bill, Apr. 1793, which prohibited intercourse with France, reflected fear that the Revolution might spread. On 17 May, 1794, at Pitt's request, the Commons suspended the Habeas Corpus Act. The suspension passed with the support of the Old Whigs, who defected to Pitt to form a national party of opponents of Jacobinism. On 7 July the Whig Portland became home secretary and William Windham (1750-1810) secretary for war. The suspension supported Pitt's arrest of the leaders of the Society for Constitutional Information and the London Corresponding Society, whom he suspected of plotting a national convention to replace Parliament. Their acquittal in Oct. made Pitt's antitreason measures appear subversive of popular liberty, but on 6 Nov., 1795, the Lords passed his Treasonable Practices Bill, which defined treason to include criticism of the government; and the Commons approved a Seditious Meetings Bill, which restricted public gatherings.

1795

FITZWILLIAM AFFAIR. On 4 Jan., Lord Fitzwilliam (1748-1833) became viceroy of Ireland. His advocacy of seating Catholics in Parliament (they had obtained the vote in 1793) and his opposition to the powerful Irish Protestants led to his replacement, 19 Feb.

TRIPLE ALLIANCE. On 18 Feb., Britain concluded a defensive alliance with Russia; Austria joined on 20 May. With these pacts Britain hoped to defeat

France quickly, but the agreement collapsed with Catherine II's death, 16 Nov., 1796.

1796

ANGLO-SPANISH HOSTILITIES. Since the beginning of the slave revolts in the West Indies, Spain and Britain had contended for France's possessions there; on 5 Oct., Spain declared war.

FINANCIAL CRISIS. The war greatly strained Britain's financial resources. To stave off bankruptcy Pitt, 5 Dec., 1796, took the unusual step of floating a public loan to meet the government's £18 m. deficit, but in Feb. 1797 a run on the bank occurred and the specie in the Bank of England fell to £1,272,000. Thereafter the government curtailed its foreign loans and subsidies, but the crisis continued. Pitt's Financial Bill, Jan. 1798, established increased and graduated assessments, a progressive income tax, and a "patriotic contribution." In addition, he floated a £3 m. loan and converted the land tax into a parish tax.

1797

BATTLES OF CAPE ST. VINCENT AND CAMPERDOWN. On 14 Apr., Sir John Jervis (1735-1823) defeated the Spanish off Cape St. Vincent, revealing Spain's naval weakness and ending the Franco-Spanish invasion threat. The Franco-Dutch threat ended with the de-

feat of the Dutch fleet off Camperdown, 11 Oct.

SEAMEN'S MUTINY. Many of Britain's sailors were pressed into service; their food, pay, and leave time were inadequate. Discontent led to the mutinies of 15 Apr. and 7 May at Spithead and the 10 May mutiny at Sheerness. The Spithead mutinies ended by 17 May after the government promised reform, but the Sheerness mutiny had to be suppressed by force.

1798-99

THE IRISH REBELLION. The League of United Irishmen was organized in 1791 to gain Irish independence. After 1793, France aided the insurgents, most notably with the unsuccessful expedition of Lazare Hoche (1768-97) of Dec. 1796. On 23 May, 1798, a rebellion broke out in Ireland, but it was crushed at Vinegar Hill, 21 June. Smaller uprisings took place throughout the summer.

BATTLE OF ABUKIR BAY. On 1 Aug., 1798, Lord Nelson (1758-1805) defeated the French fleet at Abukir Bay, making Britain supreme in the Mediterranean.

ANGLO-RUSSIAN ALLIANCE. On 29 Dec., 1798, Britain concluded an anti-French agreement with Russia. After their joint expedition against the Dutch coast failed at Bergen, 19 Sept., 1799, Russia withdrew from the failing coalition. (*Cont. p. 193.*)

Latin America and the Caribbean, 1760-1825

THE SPANISH COLONIAL EMPIRE, 1760-1808

1761

SEVEN YEARS' WAR. Carlos III, king of Spain (ruled 1759-88), concluded a defensive alliance, the 2nd Family Compact, with France, 15 Aug., and the following year joined the struggle against Britain. The involvement of Spain and her colonies on the losing side in the

Seven Years' War later stimulated important economic, fiscal, commercial, military, and administrative reforms in Spanish America.

1762

CAPTURE OF HAVANA. Having seized the Philippines and Cuba, Britain immediately opened Havana to all British vessels. Within a year 100 ships entered

Havana, as against only 5 or 6 per annum previously.

1763

TREATY OF PARIS. 10 Feb. Spain recovered Cuba and the Philippines, lost Florida and Minorca to Britain, and gained Louisiana from her ally, France. The acquisition of Louisiana, with its long land frontier, was no boon for Spain, since it merely increased the costs of empire. At the same time, the British capture of Havana had indicated that Spain would have to spend more on defense in the future if she were not to run the risk of losing her empire altogether.

1765

THE GÁLVEZ MISSION. On 1 Mar., Carlos III commissioned José de Gálvez (1729-87) to conduct a general investigation in New Spain and to institute such changes as would (1) increase the royal revenues derived from the mines, the tobacco industry (soon to become a government monopoly), the turnover tax, the customs dues, and other sources; (2) end the contraband trade in Spanish America; (3) strengthen the colonial defenses by establishing a standing army and a militia; and (4) improve the quality of government while reducing its costs. Gálvez reached Veracruz on 18 July. His mission was not completed, however, until 1771.

1767

EXPULSION OF THE JESUITS. The Society of Jesus was the only religious order operating in the colonies that had remained independent of the crown. In Apr. 1767 the king ordered all Jesuits out of Spanish America. The royal order was carried out secretly, swiftly, and without regard for public opinion. Some 10,000 Spanish and Spanish-American Jesuits were deported to Rome. Their removal seriously damaged the educational system, but both Carlos III and his successor, Carlos IV (ruled 1788-1808), promoted

educational reform in the colonies, 'by encouraging the study of the exact sciences; by contributing funds for the setting up of mining schools, schools of fine arts, botanical gardens, etc.; and by sending mining, botanical, and other scientific missions to America. Many of these missions were led by foreigners of such distinction as Alexander von Humboldt and Baron von Nordenflicht.

1768-78

FREEDOM OF TRADE. In 1765 the crown had opened the main West Indian islands to individual sailings, i.e., to ships on private registry. In 1768 this privilege was extended to Louisiana, in 1770 to Yucatán, and in 1776 to New Granada. By 1778 virtual free trade was permitted within the Spanish dominions. By that year 200 Spanish vessels were employed in the trade with Cuba alone.

During the next decade the value of the entire trade between Spain and her colonies increased by 700%. Whereas colonial industries such as textiles, hats, pottery, and glass could not compete with lower-priced European goods, the production of raw materials for overseas consumption was greatly stimulated by the new policy.

1780

THE REVOLT OF TUPAC AMARÚ. In Peru, under the leadership of José Gabriel Condorcanqui Noguera (1742-81), a lineal descendant of the last Inca emperor and known as Tupac Amarú II, thousands of Indians rebelled against the oppressive and rapacious rule of the local Spanish officials (*corregidores*). The revolt lasted 3 years. At least 80,000 Indians perished, and the leaders were brutally put to death. It was at first believed that English *provocateurs* had instigated the rebellion, but after the Treaty of Versailles was signed more rational counsels prevailed, and the need for instituting political reforms on the regional level in Peru and elsewhere was generally recognized. The revolt of Tupac Amarú helped to trigger the adoption of the

intendancy system of local government in Spanish America.

1781

THE COMUNERO REVOLT. While the revolt in Peru was in progress, creoles supported by mestizos and Indians in many towns in the neighboring viceroyalty of New Granada rebelled against increased taxation (especially the anti-contraband tax), increased prices (of tobacco, sealed paper, etc.), corrupt and ruthless royal officials and churchmen, and a discriminatory policy that excluded most native-born Americans from all but minor posts in government. The demands of the commune delegates were accepted by the local authorities, but quickly repudiated once the chief leaders of the revolt had been captured and executed.

1783

THE TREATY OF VERSAILLES. 3 Sept. In June 1779, Spain had entered the War of American Independence on the side of France and against Britain. At the peace treaty Spain regained Minorca and Florida, which had been lost to Britain at the end of the Seven Years' War.

1786

THE INTENDANCY SYSTEM. The French intendant system had been experimentally introduced into Cuba in 1764, and extended to the La Plata region in 1782 and to Peru in 1784. In Dec. 1786 it was adopted throughout the viceroyalty of New Spain and in Chile, and by 1790 had become the rule throughout Spanish America. The chief aim of the new system was the centralizing of the administration for the sake of greater efficiency. Hundreds of provincial officials, the corregidores and *alcaldes mayores*, had previously cheated the crown and oppressed the Indians. These were now replaced by a few dozen intendants. The intendant's most important function was to collect and augment the royal revenues, but he was also the chief military, political, and judicial officer in his district. In addition,

intendants were expected to foster the growth of agriculture, industry, and commerce, improve municipal services, and encourage the arts and sciences. While several intendants appointed after 1786 proved to be good administrators (e.g., Flon and Riaño in New Spain) and greatly increased the economic prosperity of their districts, others were less successful. A serious deficiency of the system, moreover, was that the officials subordinate to the intendants, known as subdelegates, received no fixed salary. As a result, they almost of necessity swindled the poor and trafficked in justice.

1789-1808

DECLINE OF SPANISH POWER. During the Revolutionary and Napoleonic wars, Spain's power to control Latin America was gradually whittled away. Santo Domingo was lost to France, 1795, and Trinidad to Britain, 1797. A large part of the Spanish fleet was destroyed at the battles of Cape St. Vincent, 1797, and Trafalgar, 1805. When the British invaded the viceroyalty of La Plata in 1806-7, it was not royal officialdom but the local residents who resisted and eventually expelled the intruders from Buenos Aires. These events revealed to all, and especially to disaffected Spanish Americans, the almost total impotence of Spain. However, while a legitimate monarch ruled, no scheme for severing the ties between colonies and mother country made any headway in the Americas.

THE MIRANDA EXPEDITION. Francisco Miranda (1750?-1816), a native of Caracas who had traveled widely in the U.S.A. and Europe between 1783 and 1805 seeking support for Spanish-American independence, sailed in Feb. 1806 from New York to Venezuela in command of a filibustering expedition of 200 men, mostly North Americans. Aided by British officials at Barbados, he landed at Coro, Venezuela, in the summer of the same year, but failed to obtain significant local assistance. He was forced to abandon his enterprise, and returned to England to await a more propitious time.

ANNEXATION OF SPAIN BY NAPOLEON. The accession of Napoleon's brother, Joseph, to the throne of Spain, 6 May, 1808, made it possible for Spanish-American patriots to rebel against royal authority with a clear conscience. From now on, they reasoned, the viceroys and other royal officials in the colonies would be taking orders from a French usurper. The annexation of Spain by France thus signaled the beginning of the effective Spanish-American independence movement.

**THE SPANISH-AMERICAN WARS
OF INDEPENDENCE AND THE
CREATION OF NEW STATES,
1808-25**

Mexico

1808-11

MIGUEL HIDALGO. On 15 Sept., 1808, loyalist Spaniards deposed José de Iturrigaray, viceroy of New Spain, because they feared he was plotting with local creole leaders to declare New Spain independent from French-occupied Spain. Two years later, 16 Sept., 1810, Miguel Hidalgo y Costilla (1753-1811), a creole parish priest, raised the banner of revolt in the name of the captive King Fernando VII (ruled 1808; 1814-33). Hidalgo was soon joined by thousands of mestizos and Indians. However, the disorders accompanying his rebellion alienated most creoles, and he found it impossible to organize a disciplined army or orderly government. After suffering several defeats at the hands of royalist forces, led mostly by Spanish officers but made up mainly of Mexican recruits, Hidalgo and his followers were captured, 21 Mar., 1811, as they tried to escape to the U.S.A. He and other leaders of the rebellion were executed on 26 July, but the revolt continued.

1812-15

JOSÉ MARÍA MORELOS. In Nov. 1812 a mestizo priest, José María Morelos y Pavón (1765-1815), captured the provincial capital of Oaxaca. By some he was

hailed as Hidalgo's successor, but other followers of Hidalgo refused to recognize him. He accordingly planned to legalize his claims to leadership by convening a national congress, to meet in Chilpancingo. At Morelos' instigation the Chilpancingo Congress issued a declaration of complete independence from Spain, 2 Nov., 1813. In Dec., however, Morelos was decisively defeated at Valladolid (Morelia) by a creole officer, Agustín de Iturbide (1783-1824).

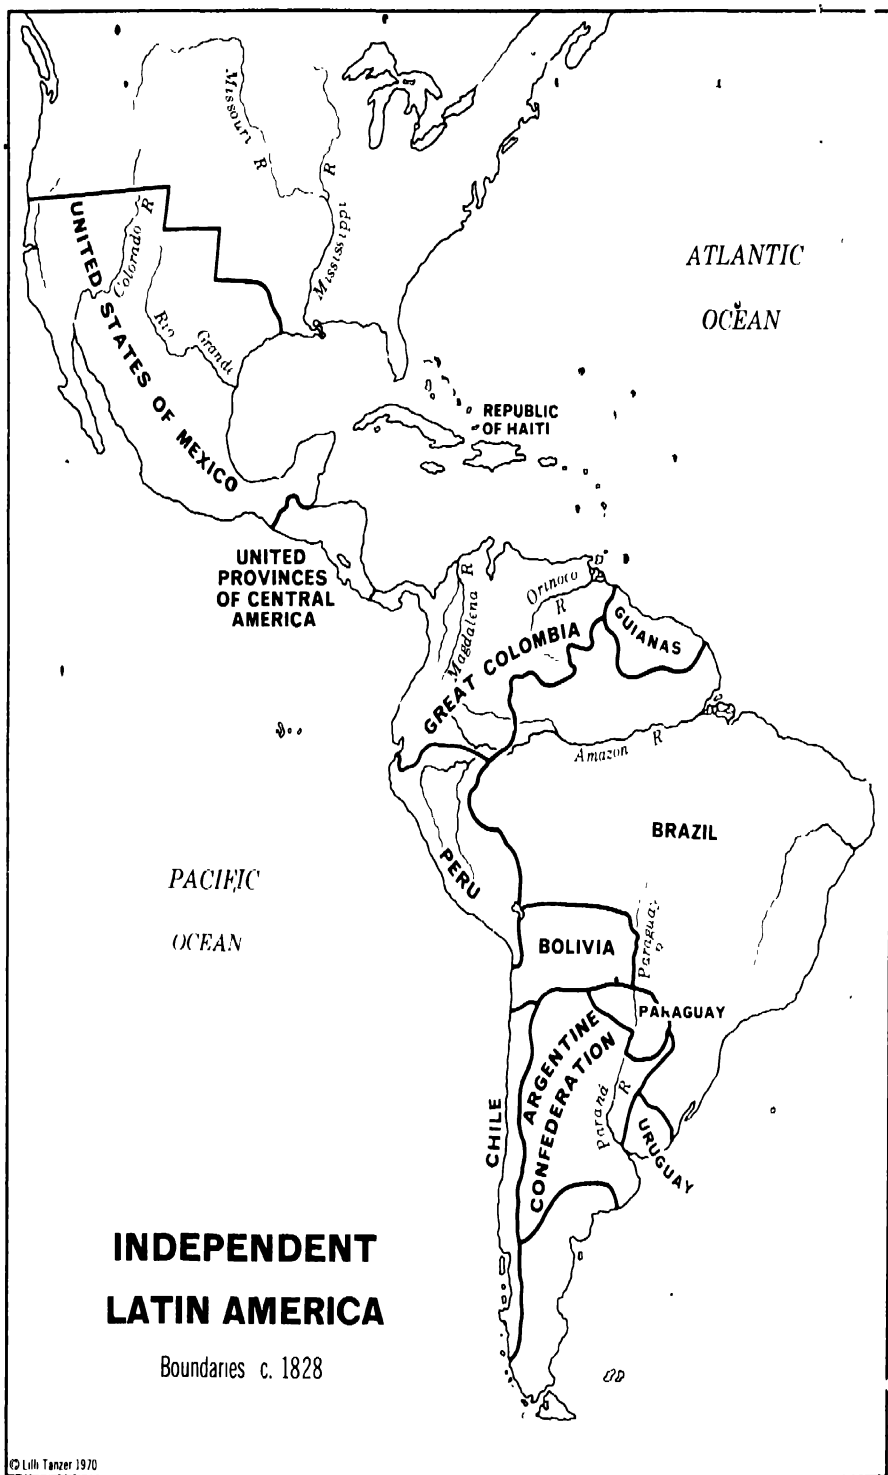

On 22 Oct., 1814, the Congress of Chilpancingo promulgated Mexico's first constitution, based largely on French and Spanish models, in an effort to rally support for the rebellion. But in Nov. 1815, Morelos was captured by the royalists and executed, 22 Dec. The revolution degenerated into petty quarrels among innumerable guerrilla leaders.

1817

XAVIER MINA. Revolutionary ardor had waned in Mexico after the restoration of Fernando VII in May 1814. This was conclusively demonstrated in 1817 by the outcome of the attempt of a Spanish liberal, Xavier Mina (1789-1817), to free Mexico from what he regarded as Fernando's reactionary rule. By most Mexican *guerrilleros* Mina was regarded with suspicion. He was defeated, captured, and finally shot by the royalists on 11 Nov., 1817.

1821-23

AGUSTÍN DE ITURBIDE. The re-establishment of a constitutional monarchy in Spain following a barracks revolt of Jan. 1820 caused many conservative royalist sympathizers in Mexico to change sides and press for independence. Agustín de Iturbide, formerly a determined persecutor of independence leaders, assumed leadership of the new revolt and at the town of Iguala issued a plan for an independent Mexico. This was accepted by the other revolutionary leaders. By the Treaty of Córdoba, 24 Aug., 1821, the last viceroy of New Spain, Juan O'Donojú (1755-1821), aware that all classes of

Mexicans were now united in their desire for independence, accepted Iturbide's Plan of Iguala. The last link with Spain had now been cut.

Iturbide assembled a National Congress at Mexico City. This congress, giving in to the demands of Iturbide's troops, declared him Emperor Agustín I, 24 Feb., 1822, of an independent Mexican empire. As emperor, Iturbide was lavish in his expenditures, but failed to pay his army. On 19 Mar., 1823, he was forced to abdicate and left the country. While plans were being made for the establishment of a republic, he secretly returned to Mexico, but was captured and summarily shot on 19 July, 1824.

1824-25

THE REPUBLIC OF MEXICO. A federal republic, made up of 19 autonomous states, was established in Mexico on 4 Oct., 1824. Two military followers of Morelos, Guadalupe Victoria (1789-1843) and Nicolás Bravo (1787-1854), were elected president and vice-president respectively. Although Victoria managed to serve out his full term (a feat not to be achieved again until after the Mexican War), the years following 1824 were marked by frequent military uprisings, economic dislocation, financial chaos, and political bickering. (*Cont. p. 234.*)

Central America

1823-25

UNITED PROVINCES OF CENTRAL AMERICA. Under the leadership of José Matías Delgado, a lawyer and priest of San Salvador and a proponent of Central American independence from both Spain and Mexico since 1811, a constitutional assembly met in Guatemala City in 1823. By this time Iturbide, who had sought to unite Central America with the Mexican Empire by force, had abdicated. Freed from Mexican domination, Central-American leaders declared their independence, 24 June, and created "The United Provinces of Central America," made up of Guatemala, San Salvador, Honduras, Nicaragua, and Costa Rica.

By Nov. 1824, a constitution had been drawn up, and the first Central American Congress convened and elected Manuel José Arce (1783?-1847), a follower of Delgado, as president of the new confederation, 25 Feb., 1825. The establishment of a new government did not bring peace, however, and military uprisings soon plunged Central America into chaos. (*Cont. p. 250.*)

Colombia, Venezuela, and Ecuador

1811-18

THE RISE OF BOLÍVAR. Led by Caracas patriots, Venezuelan insurgents convened a congress in Mar. 1811, and on 5 July declared Venezuela independent from Spain. On 21 Dec. a Venezuelan Congress promulgated a constitution, the first patriotic group in the Spanish colonies to do so.

A disastrous earthquake occurred in Venezuela on 28 Mar., 1812. It took 20,000 lives, but caused little damage in royalist-controlled areas. This demoralized the insurgent cause, since the masses viewed the disaster as divine chastisement of the rebels.

On 25 July, 1812, Francisco Miranda, leader of the Coro expedition of 1806 and by this time commander of the insurgent armies in Venezuela, was forced to capitulate to the Spanish commander at San Mateo. Miranda was suspected of treason; seized by a group of patriots led by a wealthy creole, Simón Bolívar (1783-1830); and handed over to the Spanish authorities, 31 July. Miranda was confined in dungeons in Puerto Rico and Cádiz, Spain, where he died on 14 July, 1816.

During the latter part of 1812 Bolívar assumed leadership of the faltering independence struggle and moved to the neighboring viceroyalty of New Granada (Colombia), where independence sentiment was strong. Having defeated several royalist armies in New Granada, he returned with his companions to Venezuela and occupied Caracas, 4 Aug., 1813.

In Jan. of the following year he founded the 2nd Venezuelan Republic, and assumed the title of Liberator.

Meanwhile Fernando, VII had been restored to the throne of Spain. This led to a resurgence of counterrevolutionary forces in Venezuela. The royalists were led by the brutal but able José Tomás Boves, whose *llaneros* (plainmen) defeated Bolívar in several engagements, and were able to take Caracas. Once again Bolívar had to flee to Colombia. Counterrevolutionary sentiment was strong everywhere except in Argentina, however, and he was obliged to leave even Colombia. In May 1815 he sought refuge in Jamaica.

It was not until early 1817 that Bolívar was able to return to the mainland. Once there, with the aid of the patriot *llanero* leader, José Antonio Páez (1790-1873), he gradually regained control of the interior of Venezuela. On 24 Nov., 1818, a new congress reaffirmed Venezuelan independence.

1819-25

REPUBLIC OF GRAN COLOMBIA.

Aided by a large army of British soldiers of fortune, Bolívar defeated the royalists at the Battle of Boyacá, 7 Aug., 1819, paving the way for the occupation of Bogotá, Colombia. In the same month the Republic of Colombia was proclaimed. On 17 Dec. a constituent assembly promulgated a constitution for a "United States of Colombia," to include both Colombia and Venezuela, with Bolívar as president. After the Battle of Carabobo in Venezuela, 24 June, 1821, a decisive victory for the patriot forces, the struggle against Spain in the northern part of South America had been won.

Ecuadorian patriots had first risen in 1809, but not until they were helped by Bolívar and San Martín, the Argentinian liberator of Chile, was independence secured in Ecuador. Royalist resistance ended there after the Battle of Pichincha, 24 May, 1822, won by Bolívar's subordinate, Antonio José Sucre (1795-1830).

Bolívar went to Quito and convinced Ecuadorian patriots that they should join with Colombia and Venezuela in the creation of a "Republic of Gran Colombia," 16 June, 1822. From this time until

his death on 17 Dec., 1830, Bolívar strove to keep in being the republic he had created. (*Cont.* p. 237.)

Argentina and Chile

1810

REVOLT IN BUENOS AIRES. In 1810, Argentine creoles, many of whom had taken part in repelling the British attacks on Buenos Aires of 1806-7, demanded that the viceroy of La Plata resign. Led by Manuel Belgrano (1770-1820), the creoles met so little opposition that the viceregal government was overthrown bloodlessly. It was replaced by a junta, or governing council, 25 May, 1810, which ruled in the name of the captive King Fernando. Independence, however, was the ultimate aim, as the junta's appeal for aid from Great Britain showed. From Buenos Aires armed forces were sent to Bolivia, Paraguay, and Uruguay (all parts of the viceroyalty of La Plata), but in each instance either strong royalist opposition (in Bolivia) or unwillingness to remain part of the La Plata viceroyalty (in Uruguay and Paraguay) frustrated the plans of the Buenos Aires patriots to incorporate the other provinces in a united front against Spain.

1816-21

ASCENDANCY OF SAN MARTÍN.

While the creole leaders (*porteños*) in Buenos Aires argued whether they should adopt a monarchical form of government and retain some ties with the mother country or establish a completely independent republic, delegates from 13 interior Argentinian provinces met at Tucumán, organized themselves into the "United Provinces," and declared their independence from Spain, 9 July, 1816. Spain sent no army to reconquer the La Plata region and, in the absence of a common enemy, the port city of Buenos Aires and the provinces of the interior found it impossible to agree on anything except the desirability of independence. The *porteños* insisted on establishing a strong central government with its seat at

Buenos Aires, while the patriots of the interior were equally insistent on a loose confederation. Fighting soon broke out between the 2 factions. Whereas the aristocratic creoles of Buenos Aires sought to establish a prosperous and orderly government on the coast, the interior fell under the sway of regional military chieftains (*caudillos*).

In the midst of this bickering, a Spanish-trained creole officer, José de San Martín (1778–1850), concentrated on the military task of freeing the neighboring territory of Chile from royalist control. Having trained an army for 2 years in the Andean city of Cuyo, he crossed the high Andes into Chile and on 12 Feb., 1817, decisively defeated the royalists at the Battle of Chacabuco. He then unexpectedly refused to assume political leadership in Chile, making way for Bernardo O'Higgins (1778–1842), Chilean patriot whose father had served as viceroy of Peru. O'Higgins completed the liberation of the rest of Chile by winning the Battle of Maipú, 5 Apr., 1818. He ruled Chile as virtual dictator until 28 Jan., 1823, when, discouraged by constant uprisings, he resigned and retired to Peru.

With the assistance of the brilliant British Admiral Thomas Cochrane (1775–1860), San Martín sailed from Chile in Aug. 1820 with a large army. His object was to extend the revolution to Peru, which had remained the center of royalist strength in South America. A year of fruitless negotiations between San Martín and the viceroy of Peru went by. Ultimately San Martín forced his way into Lima, 9 July, 1821, and in Aug. assumed political power as "Protector" of Peru. (*Cont. p. 242.*)

Peru and Bolivia

1822

GUAYAQUIL CONFERENCE. Bolívar, coming from Quito, and San Martín, coming from Lima, met at the coastal city of Guayaquil, Ecuador, to make plans for the final conquest of Peru and Bolivia, which were still largely royalist in sym-

pathy. What precisely transpired at the Guayaquil Conference, 26–27 July, 1822, is not known. It appears, however, from San Martín's subsequent departure (he returned to Buenos Aires and from there embarked for France) that he and Bolívar could not agree on fundamentals and that, to avoid future disputes, San Martín chose to withdraw altogether.

1824

INDEPENDENCE OF PERU AND BOLIVIA. With San Martín out of the way, Bolívar and his follower, Sucre, continued the campaign in Peru. They defeated the royalists at the Battle of Junín, 6 Aug. At Ayacucho, south of Lima, 9 Dec., was enacted the last major confrontation between royalists and patriots in Spanish America. The victory of the patriots ensured the independence of Peru and Bolivia. (*Cont. p. 240.*)

Paraguay and Uruguay

1811–13

PARAGUAYAN CONSTITUTION OF 1813. Paraguayan patriots, having established a governing junta after the overthrow of the royalists on 14 May, 1811, accepted a treaty of alliance with Buenos Aires, 12 Oct. A Congress succeeded the junta, and in 1813 adopted a constitution which gave considerable powers to 2 consuls, who were to alternate in authority every 4 months. This arrangement reflected the commanding positions of 2 junta members, Fulgencio Yegros and José Gaspar Rodríguez Francia (1761?–1840). At the same time, the Congress of Asunción, unwilling to send troops to Argentina, abrogated the military alliance of 1811, and declared Paraguay independent from all countries.

1814–25

DICTATORSHIP OF FRANCIA. In Oct. 1814, Francia prevailed on a newly elected congress to end the 2-man consulship and appoint him sole chief executive

of Paraguay. Thus was initiated the dictatorship which lasted until his death in 1840.

URUGUAYAN INDEPENDENCE.

Uruguay was not to achieve independence as easily or as quickly as Paraguay. Despite the vigorous leadership of a Spanish-trained creole officer, José Gerónimo Artigas (1774-1850), both Argentina and Brazil sought to annex the strategically placed "Banda Oriental," as Uruguay was then called. In 1824 Brazil succeeded in doing so, which led to the outbreak of war between Brazil and Argentina with Uruguay as the prize. (*Cont. p. 246.*)

COLONIAL BRAZIL, 1760-1808

1760-77

ADMINISTRATION OF POMBAL.

Sebastião José de Carvalho e Mello, Marquês de Pombal (1699-1782), minister to King José of Portugal from 1750 until the latter's death in 1777, introduced many changes in Brazil. One of his first acts was to expel the Jesuits as enemies of royal absolutism. This deprived the country of some of its best teachers, and led to a decline of the missions to the Indians. In order to centralize government, Pombal designated Brazil as a viceroyalty, and moved the capital from tropical Bahia to the more temperate Rio de Janeiro, 1763. Before his time there were still 11 private captaincies, but he purchased or confiscated all of them, creating in their place two new crown captaincies (Maranhão and Pará). These were ruled directly from Lisbon until 1774, when they became part of the viceroyalty. Pombal also established a new system of superior courts at Bahia and Rio, and curbed the powers of the military officers in charge of districts. He was equally zealous in promoting fiscal, commercial, and economic reforms. In 1765 the annual commercial fleets were abolished, and from that time onward individual sailings were permitted. Two monopolistic commercial companies were created to operate in the economically backward northern regions, one for Pará and Maranhão and another for

Pernambuco and Paraíba. Until 1771 the rich diamond fields were worked by individuals granted contracts by the crown. In that year, however, Pombal brought all the Brazilian diamond fields under the direct control of royal agents. Crown revenues increased following the introduction of more efficient extractive processes in the gold-mining industry.

1778-1806

ADMINISTRATION IN THE REIGN

OF MARIA I. Pombal lived until 1782, but was removed from office at the accession of Queen Maria I (ruled 1777-1816) because his dictatorial methods had alienated Portuguese and Brazilians alike. His basic policies, however, were continued by the queen's new ministers, as is evidenced by a decree, 1785, prohibiting factories in Brazil as a protection for Portuguese industry. Similarly, the crown continued to guard its financial interests in Brazil by imposing severe penalties on diamond poachers, tax dodgers, and smugglers.

MINAS GERAES CONSPIRACY.

In 1789 resentment against crown policy came to a head in the economically depressed region of Minas Geraes. A small group of Brazilian intellectuals, imbued with the ideas of the French *philosophes* and the Constitution of the U.S.A., began to rally support for a rebellion against Portugal. The plot was soon uncovered by local authorities, the orders for collecting overdue taxes that had inspired the conspiracy were rescinded, and the leading conspirators arrested. One of them, Joaquim José da Silva Xavier, known as Tiradentes ("Tooth Puller") because of his informal practice of dentistry, assumed major responsibility for the revolt. Captured in Rio, 10 Apr., 1789, he was executed, 21 Apr., 1792, after a long trial. In time he came to symbolize the dream of an independent, republican Brazil.

1807-8

TRANSFER OF THE COURT. In 1807 Napoleon decided to conquer Portugal in

retaliation for her continued alliance with Britain. When French forces approached Lisbon, Nov. 1807, British advisers prevailed on Prince Regent João, son of the insane Queen Maria, to embark for Brazil, to escape capture. On 25 Jan., 1808, the regent, his mother the queen, his wife Carlota (daughter of Carlos IV of Spain), and some 15,000 Portuguese notables arrived at Bahia aboard British and Portuguese vessels. The Portuguese court established itself at Rio and remained there for the duration of the French occupation of Portugal.

BRAZILIAN INDEPENDENCE, 1808-25

1808-16

RULE OF JOÃO VI. Having established his court at Rio de Janeiro on 8 Mar., 1808, following his escape from the French in Portugal, the prince regent, João, won the hearts of both the literate creoles and the illiterate masses of Brazil by his enlightened rule and his obvious liking for the country. He opened the ports to unrestricted foreign trade; founded educational institutions; established the first printing press, a central bank, a mint, hospitals, and a national library; and encouraged foreign immigration. On 16 Dec., 1815, he elevated Brazil from the status of colony to that of realm and, on the death of his mother, Queen Maria, 20 Mar., 1816, he assumed the title of King João VI (ruled 1816-26), king of Portugal, Brazil, and Algarves. He resisted, however, all efforts to persuade him to return to Portugal.

1820-25

THE EMPIRE OF BRAZIL. In 1820 the royal, British-dominated government of Portugal was overthrown by a popular revolt. In order to ensure the survival of the Braganza dynasty, João had at last to return home. To act in his stead in Brazil he designated his 21-year-old son, Dom Pedro.

Through their new Parliament, the Portuguese people demanded that Pedro

also return to Portugal, but he, with full support from Brazilian patriots, led by José Bonifácio de Andrada e Silva (1763?-1838), declared that he would remain in Brazil. On 9 Jan., 1822, he reiterated his determination to govern the country without interference from Portugal by assuming the title of Perpetual Defender and Protector of Brazil, and by calling a constituent congress in June. On 7 Sept. the third step toward Brazilian independence was taken when Pedro announced his intention to fight for independence if need be. His cry of "Independence or Death" in answer to yet another summons to return to Lisbon is known as the "cry of Ypiranga." Fortunately, the Portuguese government did not choose to fight, and Brazilian independence was achieved with little bloodshed. On 12 Oct., 1822, Dom Pedro was proclaimed constitutional emperor of Brazil and crowned on 1 Dec. A constitution for the new empire was adopted in 1824. (*Cont. p. 247.*)

THE COLONIES OF THE CARIBBEAN, 1760-1825

1760-83

IMPACT OF EUROPEAN WAR. The islands of the Caribbean, colonized by Spain, Britain, France, and other European powers in the 16th and 17th cents., subsisted in 1760 chiefly by exporting sugar, which was produced on plantations by imported African slave labor. War in Europe led to frequent changes of ownership in the West Indies. In Jan. 1762 Britain declared war on Spain and captured Martinique, St. Lucia, St. Vincent, and Grenada. In Aug. Havana fell to a British fleet, and in Oct. Carlos III of Spain sued for peace. By the Treaty of Paris, 10 Feb., 1763, Britain restored Martinique, Guadeloupe, and St. Lucia, but kept St. Vincent and Dominica. Peace brought greater prosperity to Spanish Cuba and the French islands, but the British islands declined.

The outbreak of the War of American Independence caused near starvation in the British West Indies, many portions of

which were occupied by French and Spanish forces between 1778 and 1782. The Treaty of Versailles, 3 Sept., 1783, restored the *status quo*, except that Florida was ceded to Spain and Tobago to France. Since after 1783 the U.S.A. was a foreign power so far as the British were concerned, American ships could no longer trade in British West Indian ports as they had before the war. Recourse was had to smuggling, but the islands did not recover their prosperity.

1784-1806

DECLINE OF SPANISH POWER. In 1796 Spain was drawn into the European war on the side of France. For Spain's possessions in the West Indies the result was disastrous. Communications with Europe were cut and the Spanish islands laid open to enemy attack. In 1797 Trinidad was seized by the British.

REVOLT OF SAINT-DOMINGUE. The most valuable French possession in the Caribbean was Saint-Domingue (Santo Domingo), the western half of the island of Hispaniola. In 1789, French planters there sent delegates to the Estates-General, as did the planters of Martinique and Guadeloupe. These were the first colonial representatives to sit in a metropolitan legislative body. The delegates' concept of liberty, equality, and fraternity, however, did not extend to the slaves or mulattoes of their islands, and by 1791 the *colons* of the West Indies were being assailed by the French abolitionist society, the Amis des Noirs. On 15 May of that year the vote, previously held only by the planting class, was granted to mulattoes in the French West Indies by the French National Assembly.

Influenced by revolutionary fervor, the huge slave population of Saint-Domingue grew restive. In Aug. 1791 a large-scale slave revolt broke out in the northern part of the island. By the end of Sept. some 10,000 slaves and mulattoes and 2,000 whites had lost their lives. In Paris the Jacobins gained control, and on 4 Apr., 1792, granted the vote to free Negroes as well as mulattoes, sending an

expeditionary force of 6,000 men to enforce their decrees, Sept.

TOUSSAINT L'OUVERTURE. By 1793 both Britain and Spain were at war with France, and both sent expeditionary forces to Saint-Domingue. Port-au-Prince fell to the British, May 1794. Meanwhile, Toussaint L'Ouverture (1743-1808), a former African slave, who had entered the Spanish service in 1793 and built up a force of 4,000 men, deserted the Spaniards and joined the forces of Republican France to prevent the possible restoration of slavery that he believed would result from a British take-over of Saint-Domingue. Beset by Toussaint's troops and suffering from yellow fever, the British were compelled to withdraw from the island. Toussaint also expelled the representatives of France, Aug. 1797. By 1801 he felt secure enough to declare himself governor general over the whole island (the eastern half of which had been ceded by Spain to France by the Treaty of Basel, July 1795). Next year, however, Napoleon dispatched a force of 20,000 men under Gen. Charles Victor Emmanuel Leclerc (1722-1802), who defeated Toussaint in the field, and then kidnapped and deported him to France, where he died, Apr. 1803. The French army began to suffer from yellow fever in its turn, and the resumption of hostilities in Europe following the expiration, 16 May, 1803, of the Truce of Amiens made it difficult for Napoleon to send it reinforcements. The evacuation of Hispaniola was accordingly ordered, and on 8 Oct., 1804, Jean Jacques Dessalines (1758-1806), Toussaint's successor, had himself proclaimed Emperor Jacques I of an independent state. Following the assassination of Jacques I, 17 Oct., 1806, Henri Christophe (1767-1820) assumed control of the northern part of the island and Alexandre Pétion (1770-1818) of the south.

1807-25

POSTWAR SETTLEMENT. At the end of the Napoleonic Wars, Britain retained St. Lucia, Tobago, and Trinidad, and purchased from the Netherlands the

South American territories of Demerara, Essequibo, and Berbice, which became British Guiana. Martinique and Guadeloupe reverted to France and the eastern half of Saint-Domingue to Spain.

REPUBLIC OF HAITI. The emperor

of Saint-Domingue, Henri Christophe (Henri I) died on 8 Oct., 1820, and in 1822 the 2 parts of the island were united as the Republic of Haiti under President Jean Pierre Boyer (1776-1850)*. (*Cont. p. 251.*)

THE ASIAN AND AFRICAN WORLDS,

1760-1870

East Asia

CHINA

CHINA IN 1760. Chung-kuo (meaning "Central Country") is commonly known to the West as China, after the ancient kingdom of Chin which unified the several states into a great empire in 211 B.C. From that year to the end of the Ch'ing ("Clear") dynasty in 1912, China, except for a few lapses (the Three Kingdoms and Western Tsin, A.D. 220-317; the Five Dynasties and Ten States, A.D. 907-960), remained a unitary empire which claimed universality. The Ch'ing dynasty was founded in 1644 through military conquest by the Manchus, an alien people from Manchuria outside the Great Wall. Once in power, the Manchus, while striving to preserve their identity, saw the wisdom of taking over the Chinese form of government, as well as Confucian ideology, virtually intact.

IDEOLOGY. The Chinese political system was largely based upon control through ideas. For 2 millenniums the political and ethical ideas of the Confucian school dominated Chinese politics. Fundamental to the Confucian philosophy was the concept that heaven (e.g., seasons), earth (e.g., resources), and men (e.g., government) formed an eternal trinity; consequently the close affinity of universe, state, family, and man (the ruler as "Son of Heaven" and "king-father," the ministers as "parent-officials," the people as "children-people"). Another important Confucian concept was the idea of the perfectibility of human nature and the corresponding concept of the duty of government to bring it to fruition. Thus, the whole Confucian ideology

was one of order and education (or indoctrination), and government by merit. The recruitment of officialdom was made mainly through civil-service examinations based on Confucian literature (the Four Books and the Five Classics), the cornerstone of scholarship and bureaucracy. Thus, equal opportunities were provided for all qualified persons who would rule by merit.

EMPEROR. Theoretically, the emperor was an absolute monarch vested with all legislative, executive, and judicial powers. He was the source of authority, the defender of orthodoxy, the fountainhead of honor and privilege, the head of armed forces, and the dispenser of tax revenues. In practice, however, imperial power was limited by Confucian ideology, tradition, and established rules of the dynasty, the complexity of state affairs, the dimension of the empire, the admonition of the censors, and, above all, the pressure of public opinion reinforced by the concept of *t'ien ming* ("mandate of heaven"), with its implied right of rebellion against the misuse of power.

CENTRAL GOVERNMENT. The important agencies in the central government were the Grand Secretariat (*Nei-ko*), composed of 6 Grand Secretaries; the Grand Council (*Chün-chi chu*), the most important agency, established in 1730 as a temporary military office with a varying number of councilors; the Censorate (*Tu-ch'a Yuan*), the "eyes and ears" of the emperor. All these agencies had important deliberative and advisory functions. Of the regular administrative agencies, the most important were the 6 ministries or boards: Civil Service, Rites, Revenue,

War, Justice, and Public Works Each was headed by 2 ministers and 4 vice-ministers. The central government was a dyarchy, with roughly equal numbers of Chinese and Manchu high officials. The administration of dependencies (Mongolia, Chinese Turkestan (Sinkiang), Kokoror, Tibet) came under the jurisdiction of the Colonial Office; that of minority groups, under the Ministry of War.

LOCAL GOVERNMENT. China proper (c. 1.5 m. sq. mi.) consisted of 18 provinces: Chihli, Shantung, Shansi, Honan, Shensi, Kansu, Kiangsu, Anhwei, Kiangsi, Fukien, Chekiang, Hupeh, Hunan, Szechwan, Kwantung, Kwangsi, Yunnan, Kweichow. (The number was increased to 22 with the additions of Sinkiang in 1884 and of Fengtien, Kirin, and Heilungkiang in 1907.) They were provided with 8 governors general, 18 governors, 19 finance commissioners, 18 judicial commissioners, 92 circuit intendants, 185 prefects, and 1,545 district magistrates. The chief functions of local government were the collection of revenues and the maintenance of peace. Other functions—settlement of legal disputes, public construction, relief work, maintenance of educational facilities—were rather limited in scope. Because of the vastness of the empire and the small number of officials, local governments enjoyed considerable autonomy within an over-all centralized political system. Many functions were assumed by the village, the family, and the trade association.

MILITARY FORCES. The banner forces of the Manchus were placed under command of Manchu generals in chief. Banner garrisons of c. 4,000 men were established at Peking, in capitals and other strategic spots in the northwestern and southern provinces, and in major Chinese centers of population. The remnants of the Ming system and new recruits were reorganized as a Chinese constabulary known as the Army of the Green Standard which was used to suppress banditry.

WORLD CONCEPT. Influenced by the Confucian philosophy of "one sun in the sky and one sovereign over humanity," the Chinese conducted their foreign

relations on a principle of the inherent inequality of nations. All people beyond the pale of Chinese civilization were considered barbarians; all states other than China were regarded as Chinese tributary states. This claim of universality and cultural superiority remained unchallenged until the mid-19th century, when China began to decline under the impact of western expansion.

1760-92

CONSOLIDATION OF THE EMPIRE.

Under Hung-li (1711-99), the Ch'ien-lung emperor (ruled 1736-95), the Chinese Empire attained its maximum territorial expansion. In 1750 he had re-established political control in Tibet by giving the Dalai Lama full temporal authority under the general supervision of 2 imperial residents at Lhasa. Ch'ien-lung's "10 Great Campaigns" included 2 against the Dzungars (a western Mongol tribe) in the Ili region, 1755, 1756-57, the conquest of Chinese Turkestan (Sinkiang) and its Moslem inhabitants, 1758-59, the subjugation of the Burmese, 1766-70; 2 campaigns against the Chin-ch'uan aborigines in western Szechwan, 1747-49, 1771-88; the subjugation of Annam, 1788-89, and 2 campaigns against the Gurkhas, 1792, to repel an invasion of Tibet and to extend Chinese suzerainty to Nepal. The most important victories were the conquests of Ili and Chinese Turkestan, which greatly increased the size of the empire and eliminated the possibility of invasion by Mongols and Turks. All these campaigns took place on the edges of the empire under the command of Manchu generals, and all required large expenditures which tended to weaken the central government.

1793-1824

RISE AND FALL OF HO-SHEN. In the last few years of his reign, the Ch'ien-lung emperor was preyed upon by Ho-shen (1750-99), who had become his chief minister in the 1780's. Corruption and nepotism spread throughout the government as Ho-shen placed his men in key

positions and exacted large bribes from officials. The disintegration of civil and military administration permanently damaged the foundations of the Ch'ing dynasty. On 15 October, 1795, the Ch'ien-lung emperor abdicated. His son Yung-yen (1760-1820) became the Chia-ch'ing emperor, 9 Feb., 1796, but was not allowed to assume real power. After the Ch'ien-lung emperor died, 7 Feb., 1799, the Chia-ch'ing emperor arrested Ho-shen, 12 Feb., confiscated his property, and forced him to commit suicide.

REBELLION OF THE MIAO TRIBESMEN. 1795-97. Miao tribes living in the Kweichow-Hunan-Szechwan border area seized several cities, 1795. Ho-shen's brother Ho-lin and Fu-k'ang-an were ordered to suppress them. Their halfhearted campaign was a pretext for appropriation of military funds by themselves and Ho-shen. In 1796 both commanders died, probably of malaria, and E-le-teng-pao (1748-1805) succeeded them, pacifying most of the Miao tribes by 1797.

WHITE LOTUS REBELLION. 1796-1804. The White Lotus Society (*Pai-lien chiao*), a religious cult active in the late Yüan and Ming periods which had become a secret society, led peasant disorders in Hupeh, 1796. Under the slogan "the officials have forced the people to rebel," the insurrection, led by Liu Chih-hsieh (d. 1800) and Yao Chih-fu (d. 1798), spread to Honan and Szechwan, becoming violently anti-Manchu. Inefficient imperial forces recovered several cities, but failed to take Hsiang-yang, Hupeh, the rebel headquarters, 1797-98. Costs rose and military supplies became inadequate because of Ho-shen's exactions. After the Chia-ch'ing emperor came to power, the war entered a new phase. Imperial forces and local militia in the rebellious provinces of Szechwan, Shensi, Kansu, Hupeh, and Honan were placed under the command of Le-pao (1740-1819), whose policy of arming the peasants and fortifying the villages enabled him to suppress the rebels in northeast Szechwan. In Sept. 1799, E-le-teng-pao became commander in chief; and in Oct., Te-leng-t'ai (1745-1809) was made assistant commander. They successfully enforced Le-pao's policy

in Shensi and Szechwan. Liu Chih-hsieh was captured and executed, 1800. The rebels gradually lost ground, and the rebellion ended in 1804. However, the Manchu military establishment had shown itself to be weak, which thus encouraged further rebellion.

CRUSHING OF COASTAL PIRATES. 1800-1809. Another symptom of decline was the increase of piracy on China's southeast coast in the late 1700's. The Manchus had no central naval force, and pirates took advantage of the inability of provincial flotillas to cross jurisdictional lines. Chinese pirates joined with Annamese in raids and received rewards from the Annamese government. The 2 leading Chinese bands of Ts'ai Ch'ien (d. 1809) and Chu Fen (d. 1809) continued to plunder after the Annamese pirate fleet was damaged by a typhoon, 11 Aug., 1800, and destroyed by the forces of Chekiang naval commander Li Ch'ang-keng (1750-1808). They finally were suppressed in 1809.

REBELLION OF THE HEAVENLY REASON SOCIETY. 1813. The leaders of the secret organization known as the Heavenly Reason Society (*T'ien-li chiao*), Lin Ch'ing (d. 1873) of Peking and Li Wen-ch'eng (d. 1813) of Hua-hsien, Honan, had acquired wealth through divination and a large following among officials, military officers, and court eunuchs. After their influence had spread to Honan, Shantung, and Chihli, they decided to incite an uprising in Peking. The magistrate of Hua-hsien learned of the plan and arrested Li. While 3,000 rebels attacked the Hua-hsien government office and freed him, partisans seized several cities in Chihli and Shantung. Li proclaimed his intention to restore the Ming dynasty. With the aid of officials and eunuchs, 200 rebels entered the Forbidden City, 8 Oct. The heir to the throne, Min-ning (1782-1850), staved off the rebels until imperial troops arrived. Lin Ch'ing was arrested and executed. The Manchu general Nayan-ch'eng (1764-1833) received command of Chihli, Shantung, and Honan forces and quelled the rebellion by year's end.

A NEW EMPEROR. On 2 Sept., 1820, the Chia-ch'ing emperor died at Jehol,

and on 3 Oct. Min-ping ascended the throne as the Tao-kuang emperor. He embarked on a policy of frugality, reducing palace expenses and admonishing officials to economize.

1825-32

MOSLEM REBELLION IN CHINESE TURKESTAN. Moslem (Muslim) dissatisfaction with the corrupt practices of Ch'ing frontier officials was exploited by Jehangir (d. 1828), a descendant of the ruling Hodjas of Turkestan. After an unsuccessful attempt to seize Kashgar, 1820, in alliance with Bufiat Mongols, he continued to harass border patrols and incite dissension. The Tao-kuang emperor appointed Ch'ang-ling (1758-1838), a general of Mongolian origin, military governor at Ili in 1825. In March 1826, Ch'ang-ling assumed office. Jehangir led his men across the border, July 1826, and took Kashgar, Yarkand, and Khotan. Imperial troops recovered Kashgar, 28 Mar., 1827, but Jehangir escaped. After recovering the other cities, the Ch'ing commanders spread a false rumor of their departure from Kashgar. Jehangir soon crossed the border. He was pursued by Manchu troops, captured, Feb. 1828, and executed in Peking, June.

1833

END OF THE ENGLISH EAST INDIA COMPANY'S MONOPOLY. From the mid-17th cent. to 1834, China's relations with the West and with the British East India Company were essentially identical. Foreign trade had been limited to Canton in 1757, and a group of security merchants at Canton, the Co-hong, had become the sole Sino-foreign trade and communications link. Merchant dissatisfaction with the tariffs and restrictions on the trading system had led the British government to dispatch the Macartney, 1793, and Amherst, 1816, missions to Peking, but they had been regarded as unsatisfactory tribute bearers and their requests had been ignored. The development of the opium trade after 1773

(illegal after 1796) served only to aggravate the situation as addiction increased and China experienced a drain on silver. In 1833 the English East India Company's charter expired, and Parliament chose not to renew it. Thus, the China trade was thrown open to all. To replace the East India Company's chief factor at Canton, Lord Napier (1786-1834) was given a royal commission, 10 Dec., as first superintendent of trade at Canton.

1834-37

THE STRUGGLE FOR DIPLOMATIC EQUALITY. The British government made 2 major attempts to use the Canton superintendency to establish direct communications with Chinese officials on terms of diplomatic equality. In 1834 Lord Napier went to Canton, 25 July, without Chinese permission and attempted to communicate with the governor general by letter rather than by sending a petition through the Co-hong. His violations of Chinese regulations and precedents caused a temporary suspension of trade, threats of military action, and his withdrawal to Macao, 26 Sept. In 1837, Capt Charles Elliot (1801-75) won the right to communicate by sealed document and to come to Canton whenever business required his presence, but made no progress in securing direct communication.

1838

ATTACK ON THE OPIUM TRADE. The shifting of opium traffic to the Kwangtung and Fukien coastal areas—an action necessitated by new anti-opium campaigns—caused a sharp decline in prices. The Tao-kuang emperor approved, Oct., legislation (15 June, 1839) to punish by death both opium smoking and selling. Foreign opium traders would be pardoned upon voluntary surrender before Jan. 1841; thereafter, they would be executed. In Dec. opium belonging to a British merchant was seized, and foreign trade at Canton was suspended. Some British ships bearing opium ignored

Elliot's orders, 18 Oct., to leave the Bogue (Hu-men-chai), forcing him to avoid conflict by petitioning Chinese officials to cooperate with him in suppressing opium smuggling. Trade was resumed on 30 Dec.

1839

LIN TSE-HSU AT CANTON. The imperial commissioner assigned to destroy the opium trade, Lin Tse-hsu (1785-1850), arrived at Canton on 10 Mar. He ordered, 18 Mar., foreign merchants to surrender all opium in their possession within 3 days and to file a bond declaring that they would refrain from importing opium on pain of death. Lin rejected the merchants' compromise proposals, suspended trade, 24 Mar., and blockaded the foreign settlement. On Elliot's orders c. 20,000 chests of opium were surrendered, Apr.-May, and all British subjects left the city. Elliot insisted that the merchants not sign bonds, but a few defied him in the hope of resuming trade.

OUTBREAK OF THE 1ST OPIUM WAR. On 7 July, a party of drunken British sailors killed a villager, Lin Wei-hsi, at Chien-sha-tsui, Kowloon. The Chinese authorities and Elliot soon clashed over the matter of who had criminal jurisdiction. When Elliot failed to surrender the culprits to him for trial, Lin Tse-hsu cut off provisions to the British at Macao, 15 Aug., causing them to withdraw, first to their ships and then to Hong Kong. In Sept. a brief skirmish between Chinese and British ships occurred after Elliot had led a fleet to Kowloon to demand supplies and the Chinese had refused to provide them. As a result of a more serious Sino-British engagement, 3 Nov., at Chuenpi (Ch'uan-pi), in which 15 Chinese were killed and 4 junks damaged, the Chinese authorities declared that trade with Britain would cease permanently.

1840

1ST BRITISH EXPEDITION. In a dispatch of 18 Oct., 1839, Lord Palmerston had informed Elliot of his decision to

send an expeditionary force to blockade Canton with the aim of securing the establishment of satisfactory diplomatic and commercial relations with China. On Apr. 1840, Parliament authorized military expenditures, and an expeditionary force was sent to Canton. It blockaded Canton in June; sailed north along the coast; passed through Amoy, 2 July; reached Chusan Harbor, 4 July; and took Ting-hai, Chekiang, 5 July. By 28 July, it had blockaded Ningpo and the mouth of the Yangtze. The Manchu official Ch'i-shan (d. 1854) was ordered to negotiate with the British. On 11-12 Aug. the British fleet arrived at Taku, and Ch'i-shan met with Elliot. In mid-Sept., Ch'i-shan persuaded the British to return to Canton for negotiations. He was appointed to replace Lin Tse-hsu and to conduct the negotiations. Ch'i-shan reached Canton on 16 Dec.

1841

CHUENPI CONVENTION. The British became impatient with the Canton negotiations and seized the forts at Chuenpi on 7 Jan. On 20 Jan., Elliot and Ch'i-shan signed a convention which provided for the cession of Hong Kong, diplomatic equality, the payment of indemnity, and the reopening of Canton to trade before 1 Feb. However, both the British and the Chinese governments disavowed the settlement. Ch'i-shan was cashiered, and Elliot was soon recalled.

STRUGGLE FOR CANTON. On 26 Feb. the British seized the forts at the Bogue. Sino-British negotiations were reopened, 5 Mar. A large Chinese force reached Canton, 14 Apr., and hostilities resumed, 21 May. By 25 May, the British had seized all forts surrounding Canton. On 27 May, a truce was concluded which provided for the ransoming of Canton and the exchange of prisoners.

2ND BRITISH EXPEDITION. An expeditionary force led by the British plenipotentiary, Sir Henry Pottinger (1789-1856), reached Macao, 10 Aug. Elliot left for England, 24 Aug. The British force seized Amoy, 26 Aug.; Ting-

hai, 1 Oct.; Chinhai, 10 Oct.; and Ningpo, 13 Oct.

1842

TREATY OF NANKING. After reinforcements had arrived from India, the British forces captured Chapu, 18 May; Woosung, 16 June; Shanghai, 19 June; and Chunkiang, 21 July. On 5 Aug. Pottinger arrived at Nanking to open negotiations with the Chinese representatives Ch'i-ying (d. 1858), I-li-pu (d. 1843), and Niu'Chien (d. 1858). He required them to accept his draft treaty without modification. On 29 Aug. the Treaty of Nanking was signed aboard the British warship *Cornwallis*. Its 13 articles (none of which dealt with the opium trade) provided for the cession of Hong Kong, the opening to foreign trade of 5 ports (Canton, Amoy, Foochow, Ningpo, Shanghai), the payment of Mex. \$21 m. as an indemnity, the establishment of diplomatic communication on the basis of equality, and the promise of a "fair and regular tariff." The signing of this treaty marked the end of the tribute system and the crumbling of China's traditional world concept.

1843

TREATY OF THE BOGUE. On 26 June, Ch'i-ying, now governor general of Liang-Kiang and imperial commissioner, and Sir Henry Pottinger exchanged ratifications of the Treaty of Nanking at Hong Kong, that day declared a British crown possession with Pottinger as its governor. In the Supplementary Treaty of the Bogue of 8 Oct., the British introduced the "most favored nation" principle, by which they secured automatically all privileges which might henceforth be granted to any other country. Thereafter, all Sino-western treaties contained this clause.

1844

TREATY OF WANGHIA. Signed by American commissioner Caleb Cushing

(1800-79) and Ch'i-ying on 3 July, this treaty gave the U.S.A. all treaty rights enjoyed by Britain with "2 additional provisions: (1) a clear stipulation that the principle of "extraterritoriality" applied to both civil and criminal cases; (2) the right to revise the treaty after 12 years.

TREATY OF WHAMPOA. This treaty, signed 24 Oct. on board the French corvette *Archimède*, resembled the British and American treaties. These treaties created a new legal structure, a treaty system cemented by most-favored-nation clauses. Because the treaties were forced upon China and gave her no reciprocal concessions, they were termed "unequal" or "semicolonial."

TOLERATION OF CHRISTIANITY. French efforts resulted in an imperial decree, Dec., granting toleration to Roman Catholic missions, proscribed in 1724. Catholic missionary activity had continued on a reduced scale. Protestantism had been brought to Canton by the British missionary Robert Morrison (1782-1834) in 1807 and by such Americans as the educator Elijah Bridgman (1801-61) and the medical missionary Peter Parker (1804-88). Ch'i-ying on 22 Dec. extended the toleration edict to Protestantism. Missions were opened at the 5 treaty ports.

1846

RESTORATION OF CHUSAN. Kulangsu and Chusan, occupied by the British, were to be restored to China on completion of the indemnity payment stipulated by the Treaty of Nanking. Although China paid the last installment on schedule, 22 Jan., Chusan was not restored until 25 July and only after Ch'i-ying had signed, 4 Apr., a convention promising that Chusan would not be given to any other foreign country. This guarantee was known as a "nonalienation agreement."

1847

CANTON CITY QUESTION. Canton had lost its virtual monopoly of foreign

trade with the opening of Amoy, 3 Nov., 1843; Shanghai, 17 Nov., 1843; Ningpo, 1 Jan., 1844; and Foochow, 1 July, 1844, as treaty ports. The Cantonese, already plagued by unemployment, refused to allow the British into their walled city. On 3 Apr. the British captured the principal forts at the Bogue, rendering them useless. The British governor of Hong Kong, Sir John Davis (1795-1890), forced Ch'i-ying to sign an agreement, 6 Apr., that promised entry at the end of 2 years.

1848-50

ADDITIONAL INCIDENTS AND FURTHER POSTPONEMENT.

In June 1848, Davis' successor, Samuel G. Bonham (1803-63), wrote to arrange the 1849 entrance into Canton. After a meeting at the Bogue, Feb. 1849, Ch'i-ying's successor, Hsu Kuang-chin (d. 1858), informed him, 1 Apr., of an imperial rescript declaring the emperor's inability to overcome the unanimous opposition of the Cantonese. Formal protests in 1849 and 1850 had no effect. Bonham's successor, Sir John Bowring (1792-1872), made further requests of Hsu's successor, Yeh Ming-ch'en (1807-69), without success.

1850-56

ONSET OF THE TAIPING REBELLION.

While Chinese officialdom was preoccupied with foreign affairs, uprisings occurred every year between 1841 and 1850 as a result of governmental corruption, natural catastrophes, rapid population growth, overtaxation, the formation of secret societies and local defense units, and ethnic rivalries. In this restive atmosphere there began in Kwangsi a protest movement which in the 1850's attempted to destroy the political and social foundations of Confucian China and replace them with a totalitarian theocracy. The Taiping Rebellion was a near revolution which brought the Ch'ing dynasty to the brink of destruction.

A PROPHET-IDEOLOGUE AND A PROPAGATOR-ORGANIZER.

The rebellion was generated by 2 village schoolmasters, Hung Hsiu-ch'uan (1814-64) and Feng Yun-shan, (1822-52). Hung, who came from a Hakka family in Hua-hsien, Kwangtung, decided after a long illness, 1837, and a reading of Christian tracts, 1843, that he was a son of God, a new messiah called to "destroy demons and to establish the Kingdom of God on earth. His early convert Feng Yun-shan founded the Hakka-dominated God Worshipers Society (*Pai-Shang-ti-hui*), with headquarters at Tzu-chin-shan in Kwangsi. The God Worshipers became known for their militancy as well as for their religious fervor.

PLOT FOR REVOLUTION. By 1850 there were over 10,000 God Worshipers. Their 6 leaders were Hung, Feng, Yang Hsiu-ch'ing (d. 1856), Hsiao Ch'ao-kuei (d. 1852), Wei Chang-hui (d. 1856), and Shih Ta-k'ai (d. 1863). These 6 self-styled Sworn Brothers of the Heavenly Family plotted the establishment of a new dynasty. The real basis of their authority was their home-made Christianity, which caught the imagination of their followers. The God Worshipers were summoned, July, to Chin-t'ien village in Kuei'ping for an organizational meeting. All their belongings were placed in the general treasury, in which they shared equally. Hung and Feng retired to Hua-chou village for safety reasons, but they were besieged by government troops, Dec. A company of God Worshipers rescued them, killing a junior officer, 2 militia leaders, and a number of soldiers.

GOVERNMENT RESPONSE TO UPRISINGS. The Tao-kuang emperor died on 25 Feb., leaving his son I-hsin (1831-61), the Hsien-feng emperor, a legacy of maladministration and discontent. When petitions regarding Kwangsi riots reached Peking that summer, he sent officials and troops to Kwangsi to quell the disturbances. However, neither he nor they understood the dynastic aspirations of the God Worshipers until too late.

OUTBREAK OF HOSTILITIES. On 11 Jan., 1851, Hung Hsiu-ch'uan's 37th birthday, the formal beginning of the Taiping Rebellion was marked by the

declaration of the establishment of the *T'ai-p'ing T'ien-kuo* (Heavenly Kingdom of Great Peace), with Hung as *T'ien Wang* (Heavenly King). The rebels advanced to Ta-huang-chiang, 13 Jan., where they won a battle, 18 Feb., with imperial troops commanded by Hsiang Jung (d. 1856). With the arrival, Apr., of reinforcements commanded by Sai-shang-a (d. 1875), the new imperial commissioner, the rebels were forced to retreat to Tzu-chin-shan, but they escaped to Yung-an in Sept. While the imperial forces were regrouping, the Taipings at Yung-an organized their kingdom. On 17 Dec., Hung conferred the title of *wang* (king) on the 5 other leaders.

FROM YUNG-AN TO CH'ÜAN-CHOU. Early in 1852, imperial forces besieged Yung-an, but the Taipings escaped, 6 Apr., and moved north to attack Kweilin, 18 Apr.-19 May. Having failed to take Kweilin, they proceeded to Hsingan, 22 May, and Ch'üan-chou, 25 May, which they intended to by-pass on their way to Hunan. However, after Feng Yün-shan was wounded by artillery fire, they attacked Ch'üan-chou, captured it, 3 June, and slaughtered its inhabitants.

DEFEAT AT SO-I FERRY. When the Taipings took Ch'üan-chou, Chiang Chung-yüan (1812-54), leader of a local corps known as the Hunan Braves, hastened to So-i Ferry to ambush the rebels before they reached Changsha. The Taipings were taken by surprise, 8 June, 1852, and defeated in a 2-day battle. At least 1,000 well-disciplined officers and soldiers in the Taiping army were killed. Among the casualties was Feng Yun-shan, the only Taiping leader who might have held the leadership together and have checked the religious fanaticism that later proved distasteful to most Chinese. The battle demonstrated the ability of such highly trained local forces as the Hunan Braves to overcome the insurgents, and it gave Changsha much-needed time to prepare its defenses.

SIEGE OF CHANGSHA. The Taipings spent about 2 months at Taochow regrouping. Bandits, secret-society members, and peasants joined them by the

thousands. After capturing Ch'enchow, 16 Aug., Hsiao Ch'ao-kuei led a small detachment against Changsha, 11 Sept. He was fatally wounded on 5 Oct. The main Taiping force besieged Changsha until 30 Nov. without success. The Taipings then crossed the Hsiang River and took Yivang, 3 Dec., and Yochow, 13 Dec. With captured boats and munitions, they sailed down the Yangtze. After taking Hanyang, 19 Dec., and Hankow, 29 Dec., they crossed the river to attack Wuchang, the capital of Hupeh.

FROM WUCHANG TO NANKING.

The Taipings blew up the city walls and took Wuchang, 13 Jan., 1853. Enriched by tributes and the provincial treasury, the rebels, now estimated at 1 m., decided to abandon Wuchang. Moving east along the Yangtze, they took Kiukiang, 18 Feb., and Anking, 24 Feb. They reached the outer defenses of Nanking on 8 Mar. and captured the city on 19 Mar. Having decided to make Nanking the seat of their kingdom, they renamed it *T'ien-ching* (Celestial Capital). Thus the movement was transformed into a stationary organization. In May, expeditions were dispatched north and east, but neither was a real success. The first conquering drive of the Taipings had come to an end, giving the Ch'ing government time for the reorganization of old forces and the gentry time for the creation of new ones.

TSENG KUO-FAN AND THE HUNAN ARMY.

To meet the Taiping threat, the Ch'ing government had decided to establish reliable local forces, under gentry leadership. On 29 Jan., 1853, Tseng Kuo-fan (1811-72) assumed the responsibility of recruiting and drilling a Hunan militia. However, he decided to go beyond the government plan and create a provincial force, trained by him and responsible to him. The Hunan Army (*Hsiang-chun*) included such local units as the "Hunan Braves" of Chiang Chung-yüan. Tseng decided to train his men thoroughly in military tactics and Confucian teachings and to give them experience in battle with local bandits before sending them against the Tai-

pings. His force was more highly paid than the imperial troops and was funded by the gentry. Tseng also began to organize a naval force, Aug., in hopes of driving the Taipings off the Yangtze. Despite reprimands from the emperor, he refused to send his men to the aid of Hupch in 1853, saying that they were not ready.

1ST HUNAN ARMY BATTLES.

Early in 1854, the Hunan Army clashed with the Taiping West Expedition forces and was defeated. However, on 1 May, Tseng's men forced the Taipings at Hsiang-t'an to flee the area. Another victory, at Yueh-chou in July, cost the Taipings more than half their fleet and control of the central Yangtze. On 14 Oct., Tseng's forces entered Hupeh, where they recovered Wuchang (later recaptured by the Taipings) and Hanyang.

TAIPING REFORM PROGRAMS.

The structure of the Taiping political system was set forth in the "Land System of the Celestial Dynasty," promulgated early in 1854. The population was to be organized into a system of military units similar to that set forth in the *Chow-li*, a classical Chinese text. However, the military leaders were also to be responsible for political, social, and religious life in a totalitarian extension of the system. Property, land use, and economic distribution all came within this communal framework. Although this extraordinary law was not put into practice in most Taiping areas, some of its provisions influenced later movements in China.

POWER STRUGGLE IN NANKING.

In 1856, Yang Hsiu-ch'ing attempted to usurp the position of Hung Hsiu-ch'uan. On 2 Sept., Wei Ch'ang-hui, at Hung's instigation, assassinated Yang and slaughtered all of his family and followers at Nanking. Wei then plotted to destroy Shih Ta-k'ai, but Shih learned of the plan and escaped. When Wei assassinated Shih's family and supporters, Shih, who had rejoined his troops, decided to march on Nanking, Nov. Hung Hsiu-ch'uan then ordered the assassination of Wei Ch'ang-hui, his family, and his adherents.

Shih returned to Nanking and served as chief of staff and administrative head of the government, but he later, May 1857, left the capital and the Taiping movement. Of the original leaders, only the increasingly mad Hung Hsiu-ch'uan was left at Nanking, and the Taiping movement soon lost all coherence and direction.

ATTEMPTS AT TREATY REVISION.

Both the American and the French treaties of 1844 called for revision in 12 years. Applying the most-favored-nation principle, the British maintained that the Treaty of Nanking had been subject to revision since 1854 and that other treaties, therefore, should be revised. The Ch'ing government evaded negotiations.

THE "ARROW" AFFAIR. On 8 Oct. the lorcha *Arrow*, a Chinese-owned vessel registered at Hong Kong and captained by an Englishman, was boarded by Chinese police, who arrested 12 Chinese and lowered the British flag. British Consul Harry Parkes (1828-85) and Sir John Bowring demanded redress and apology. Dissatisfied with Yeh Ming-ch'en's response, they sent naval forces upriver to Canton, 23-27 Oct. The attack produced no results, and they withdrew, after which Cantonese destroyed the foreign business ghetto, 14 Dec. The British decided to launch a full-scale expedition, allegedly to protect the treaty system, and the French announced their willingness to co-operate after a French missionary had been killed in Kwangsi.

1857

ANGLO-FRENCH CAPTURE OF CANTON. Rebellion in India made it necessary to divert there troops intended for China. Lord Elgin (1811-63) reached Hong Kong in July. He and Jean Baptiste Louis Gros (1793-1870) were the high commissioners authorized to submit final demands to Yeh Ming-ch'en. Anglo-French forces at Hong Kong declared Canton under blockade, Nov., and final demands were made, Dec.: treaty revision, payment of an indemnity, and access to Canton city. Yeh replied with a promise

to resume trade. On 29 Dec., Canton was seized. Yeh, captured on 5 Jan., 1858, was sent to Calcutta, where he died, 1859. Canton was placed under a Chinese governor and an Anglo-French commission.

1858

LOSS OF TAKU AND THE TREATIES OF TIENTSIN. Their request that the Ch'ing court commission a plenipotentiary to confer with them at Shanghai having been refused, Lord Elgin and Baron Gros sent their fleets north in Apr., accompanied by U.S. envoy William Bradford Reed (1806-76) and Russian envoy Adm. E. V. Putiatin (1803-83). These forces sacked the forts at Taku, 20 May, causing the Ch'ing court to send Kuei-liang (1785-1862) and Hua-sha-nai (1806-59) to arrange a truce at Tientsin. The 56-article Anglo-Chinese treaty, 26 June, gave the British the right to maintain a resident envoy at Peking and to travel in the interior of China. The Yangtze was to be opened to foreign trade; Newchwang, Tengchow, Taiwan, Swatow, and Kiungchow were to be opened as trade ports; and the tariff rates were to be revised. An indemnity was to be paid for losses and military expenses. A similar Sino-French treaty, 27 June, contained provisions for the opening of Nanking as a trade port and the right of missionaries to have access to all of China. Treaties also were signed with Russia, 13 June, and the U.S.A., 18 June.

1859

RESUMPTION OF HOSTILITIES.

With the departure of the western forces, the Ch'ing government decided against permitting foreign envoys in Peking and opening the Yangtze. At Shanghai tariff conferences, Kuei-liang unsuccessfully offered the abolition of tariffs on all foreign goods in return for annulment of these treaty provisions. When British and French representatives arrived off Tientsin on their way to Peking for treaty ratifications, they were refused passage, June. On 25 June, they tried to force passage, but were repulsed.

1860

OCCUPATION OF PEKING. Anglo-French forces landed at Pei-t'ang, 1 Aug.; defeated imperial forces under Seng-kolin-ch'in (d. 1865); and entered Peking, 13 Oct., the emperor having fled to Jehol, 22 Sept. On 18 Oct., Elgin destroyed the Summer Palace (*Yüan Ming Yüan*) in retaliation for the execution of 21 members of a 39-man Anglo-French negotiation party seized 18 Sept. (The survivors had been released on 8 Oct.) On 24 Oct., Elgin and Gros exchanged ratifications of the 1858 treaties and signed new conventions with the emperor's brother I-hsin (1833-98), Prince Kung. The British secured the Kowloon Peninsula, and the French won the right for Catholic missions to hold property in the interior. These conventions opened all of China to the West.

RUSSIAN TERRITORIAL EXPANSION IN MANCHURIA. Beginning in 1854, Russians had founded posts along the northern bank of the Amur to Khabarovsk. The Treaty of Aigun, 16 May, 1858, had ceded to Russia the northern bank of the Amur and given her joint possession of the area between the Ussuri River and the sea, but Peking had rejected it, 1859. The Sino-Russian Treaty of Peking, 14 Nov., 1860, confirmed the Treaty of Aigun and gave Russia the area where Vladivostok had been founded in July 1860.

UNIFICATION OF ANTI-TAIPING COMMAND. In May 1860, after the Taipings destroyed the government forces known as the Great Camp of Kiangnan, Tseng Kuo-fan was made governor general and imperial commissioner for the suppression of the Taipings in south China. He was given full power to deal with all matters relating to the campaign, including the levy of funds.

1861

TSUNGLI YAMEN. On 20 Jan., 1861, Prince Kung received approval for creation of a foreign office, known as the Tsungli Yamen, through which the

Ch'ing government became versed in western diplomacy. It worked to uphold treaties; established the foreign-run Maritime Customs Service, 1861, and a school (the *Tung-wen Kuan*) to train young men in foreign languages, 1862; and generally promoted knowledge of the West.

RECOVERY OF ANKING. Tseng Kuo-ch'uan (1824-90), a brother of Tseng Kuo-fan, had begun the siege of Anking on 17 May, 1860. In early 1861 the Taiping commanders Li Hsiu-ch'eng (d. 1864) and Ch'en Yu-ch'eng (d. 1862) harassed Tseng Kuo-fan at Ch'i-men in southern Anhwei in the hopes of drawing Tseng Kuo-ch'uan away from Anking. When this maneuver failed, Ch'en unsuccessfully attacked Tseng Kuo-ch'uan in Apr., May, and Aug. Tseng finally took Anking, 5 Sept. It became a base for the recovery of Nanking.

TSENG KUO-FAN'S CAMPAIGN STRATEGY. Soon after Anking was captured, Tseng Kuo-fan decided that he should attack the Taipings on 3 fronts in a campaign that would encompass all of central China. Tseng Kuo-ch'uan would move the Hunan Army downriver to Nanking; Tso Tsung-t'ang (1812-85) would retake the important supply areas in Chekiang; and Li Hung-chang (1823-1901) would campaign in the Shanghai-Soochow area.

DEATH OF THE HSIEN-FENG EMPEROR. On 22 Aug., the Hsien-feng emperor died at Jehol, having named his son Tsai-ch'un (1856-75) emperor and appointing an 8-man regency whose actions were subject to approval by Yehonala (1835-1908), known as the Empress Dowager Tz'u-hsi, and Niu-huru (1837-81), the Empress Hsiao-chen. Prince Kung was in charge of affairs at Peking. With Prince Kung's help and that of his brother I-huan (1840-91), Tz'u-hsi overthrew the 8 regents in Nov. and established the reign period known as *T'ung-chih*, meaning "joint rule."

1862

LI HUNG-CHANG AND THE HUAI ARMY. Li Hung-chang, who had left

Tseng Kuo-fan's service early in 1861, was persuaded by Tseng to recruit a force in Anhwei and go to Shanghai as acting governor of Kiangsi. With his new Huai Army, and a detachment of Tseng's veterans, he reached Shanghai in Apr., the trip having been paid for by the western powers. He found foreign forces commanded by British Adm. James Hope (1808-81) and French Adm. Léopold Auguste Protet (1808-62) defending the city against the Taiping Gen. Li Hsiu-ch'eng, and a foreign-officered Chinese brigade helping the imperial forces. After Charles George ("Chinese") Gordon (1833-85) reorganized the latter force, it became known as the Ever-Victorious Army. It spearheaded Li's later campaigns on T'ai-ts'ang, K'un-shan, Chiang-yin, and Soo-chow. The Ever-Victorious Army was disbanded after the capture of Ch'ang-chou, 11 May, 1864. Li Hung-chang's position at Shanghai was particularly important to Tseng's campaign because he could provide customs and tax revenues for the support of Tseng's armies.

1863-64

SIEGE OF NANKING AND COLLAPSE OF THE HEAVENLY KINGDOM.

Tseng Kuo-ch'uan had encamped at Yü-hua-t'ai under the walls of Nanking on 31 May, 1862, and Li Hsiu-ch'eng had attacked him day and night from 12 Oct. to 26 Nov. before giving up the siege of his camp. From 31 May, 1863, to 19 June, 1864, Tseng worked to strengthen his camp and to encircle the city. Li advised Hung Hsiu-ch'uan to march out of Nanking, but Hung, counting on God's help, refused to leave. There was almost nothing to eat in Nanking, and the Taipings became desperate. Hung died in June, perhaps by suicide. His son Hung Fu (1849-64) succeeded him, with Hung Jen-kan (1822-64), a cousin of Hung Hsiu-ch'uan, as regent. On 19 July, Nanking fell. Mass suicide and slaughter ensued, leaving too few Taipings to carry on the movement. The Ch'ing government crushed the Taiping Rebellion, but it lost much power to such regional leaders as Tseng Kuo-fan in the process.

1865-68

THE NIEN REBELLION. Taiping remnant troops gave new impetus to the Nien disturbances on the borders of Kiangsu, Anhwei, Honan, and Shantung. The Nien were secret-society bandit gangs which had worked together after 1853 and had co-operated with the Taipings for a time. Their leader, Chang Lo-hsing (d. 1863) had shaped them into an effective army by mid-1856. In June 1865, Tseng Kuo-fan was ordered to Shantung, where Seng-ko-lin-ch'in had been killed. May 1865, while fighting Nien 'bandits. On 12 Dec., 1866, after an unsuccessful campaign, he recommended that Li Hung-chang succeed him. The Nien split into 2 bands. Under Li Hung-chang's direction, the Huai Army destroyed one band in Jan. 1868 and the other in Aug. 1868.

THE "SELF-STRENGTHENING" MOVEMENT. The western powers' obvious military superiority impelled such Chinese generals as Li Hung-chang and Tseng Kuo-fan to seek the introduction of western technology into China. The "self-strengthening" (*tsu-ch'iang*) movement began the westernization of China with the establishment of arsenals to make guns and ships.

1870

TIENTSIN MASSACRE. Believing rumors that the French Sisters of Charity extracted the eyes and hearts of orphans entrusted to their care, a mob gathered at the Catholic church in Tientsin, 21 June, 1870. The French consul intemperately shot at a Chinese official and wounded his servant. The infuriated mob killed the consul and 20 other foreigners, including 10 nuns. The incident revived Sino-foreign tensions after a decade of comparative calm, and caused a resurgence of hope in China that foreigners might be excluded. Tseng Kuo-fan investigated the case and temporized with the French until France's defeat in the Franco-Prussian War left her powerless to threaten China. (*Cont. p. 306.*)

JAPAN

JAPAN IN 1760. In 1760 the government of Japan had been stable for 160 years. Tokugawa Ieyasu (1542-1616), had won the battle of Sekigahara in 1600 and thereby established himself as the most powerful leader in Japan. He built his capital at Edo, now Tokyo. Like his warrior predecessors, he did not aspire to usurp the imperial throne. Instead, he obtained from the emperor the title of shogun, or generalissimo, which became *de facto* hereditary in the Tokugawa family. In theory the shogun was the emperor's deputy; in fact he ruled in his own name. The emperor was confined to his palace in Kyoto and performed only ceremonial functions.

The shogun's government was called the Bakufu, or Camp Government, alluding to its military origin. The Bakufu ruled directly about a quarter of Japan. The other three-quarters were parceled out among feudal lords called daimyo. Hence, the Tokugawa regime has been described as centralized feudalism. There were 3 types of Tokugawa vassals. The *tozama* (outside lords), whose domains were remote from Edo, had sworn loyalty to Ieyasu only after the Battle of Sekigahara. Satsuma in Kyushu and Choshu in western Japan were powerful *tozama* domains. The *fudai* (hereditary vassals) had sworn loyalty before Sekigahara. Most were quite small landholders, and many of them were enfeoffed around the Tokugawa lands in central Japan. The *shimpan* (related lords) were junior members of the Tokugawa family itself. Kii, Owari, and Mito were the greatest *shimpan* domains.

The domains of the daimyo were called *han*. There were about 250 *han*. They were to a large extent autonomous in their internal affairs, and the Bakufu had no power to levy taxes upon them. The shogun lived off revenue from his own lands, as the other daimyo did. However, the Bakufu had regulations to keep the *han* under control. The most important of these was the *sankin-kotai* (alternate

attendance) system. Each daimyo was required to maintain a mansion in Edo and to spend time there every other year in nominal attendance on the shogun. He was also obliged to leave his wife and his heir in Edo whenever he returned to his han. Heavy sankin-kotai expenses kept many han budgets unbalanced.

The early shoguns ruled personally, but later power passed more and more into the hands of the Roju (elders), the highest administrative-legislative body in the Bakufu. The Roju were usually selected from the most powerful fudai families. The tozama lords had no voice in the Bakufu councils. Shimpan daimyo did not regularly participate in policy decisions, but could be called on for advice. In the 19th cent. rivalry arose between the entrenched fudai bureaucracy and those tozama and shimpan daimyo who desired to have more say in national affairs.

By shogunal edict, Japan was isolated from all contact with foreign countries. The only exception was a small and tightly controlled trade with Holland and China through Nagasaki. When western knowledge began to spread in the late 18th cent., those few who carried it were called "Dutch scholars." By the 19th cent., the seclusion policy, reinforced by Japan's natural insularity, had become almost sacred. Hence its breakdown under western pressure caused great internal stresses.

In the long peace of the Tokugawa period, history moved slowly. The ideal of Tokugawa statesmen, steeped in Confucian thought, was a simple agrarian economy. The whole political structure was based on a land tax calculated in units (koku) of rice. But money and commerce spread, and local industries gradually arose. Thus traditional economic ideas slowly became antiquated. Society was, according to official teaching, divided into 4 classes (excluding the remote emperor and his court): samurai (warriors), farmers, artisans, and merchants. The samurai lived off rice stipends from their lords. But with prices rising steadily, they fell deeper and deeper into debt to the merchants, while some merchants bought samurai status. Farmers suffered from oppressive conditions in the

countryside and died. And the despised merchants, at the bottom of the social hierarchy, became wealthy, although politically powerless.

By the late 18th cent., Japan was ready for over social, economic, and institutional change. Not long after seclusion became a serious issue, direct and all-embracing loyalty to the emperor—rather than the traditional chain of loyalty through the daimyo to the shogun—became a burning issue as well. The latter was summed up in the slogan "sonno" ("Revere the emperor"); the former, in the slogan "joi" ("Expel the barbarians"). The two were often fused as the battle cry of the rebellious in the last years of Tokugawa rule.

1760-86

GOYOKIN. In 1761-62, the Bakufu extracted the first recorded goyokin (a forced loan in lieu of taxation) from the merchants of Japan's commercial center, Osaka. Commercial activity itself was not taxed.

OPPOSITION TO THE BAKUFU. In 1767, Yamagata Daini (b. 1725) was executed in Edo for having expressed opposition to the Bakufu and for having advocated exclusive loyalty to the emperor. Takenouchi Shikibu (1712-67), a man known to hold similar views, was exiled. These two were unique in an age when Tokugawa authority was unquestioned.

RISE OF TANUMA OKITSUGU. In 1769 Tanuma Okitsugu (1749-88) was appointed a provisional Roju and given the title of court chamberlain. Henceforth Tanuma, who had risen from low status in the samurai class, was the most powerful figure in the Bakufu. He became a full Roju in 1772.

TEMMEI FAMINES. The famines of 1783-87 (named for the Temmei year period, 1781-89) devastated much of Japan. Bad weather was compounded by the eruption of Mt. Asama in 1784, when large areas were covered with infertile ash.

"TANUMA PERIOD." The Shogun Ieharu, with whom Tanuma's fortunes were linked, died in 1786 and Tanuma

was deposed shortly thereafter. Tanuma is known in Japanese history for greed and corruption. But in fact he was progressive in that he did not fight the trend toward increased commercial activity and was not prejudiced in favor of an agrarian economy. He had encouraged land reclamation and riparian works; promoted foreign trade through Nagasaki; developed a broad colonization plan for Hokkaido; consolidated existing Bakufu monopolies and created new ones; promoted the licensing by the Bakufu of large merchant associations; taxed trade and transportation, although irregularly; and tried to make the Bakufu and not the Osaka merchants the chief lending agency to the daimyo. There is even some evidence to suggest that he was considering modifying the seclusion policy.

1787-93

KANSEI REFORM. Shogun Ienari (1773-1841) succeeded Ieharu in 1787. Matsudaira Sadanobu (1758-1829), a conservative, replaced Tanuma as the chief bakufu official. His program is known as the Kansei reform (from the Kansei year period, 1789-1801). Matsudaira Sadanobu re-established agriculture as the sole permissible base of Bakufu finances. He enforced reductions in government spending and consumption, set up a famine storehouse system, discouraged foreign trade, and tried to reverse the tide of emigration from the villages to the cities. He also canceled or reduced the debts of Tokugawa vassals below daimyo rank. These highly traditional measures helped for a while to stabilize the Bakufu, but in the end weakened it by preventing it from adapting to the times.

PROHIBITION AGAINST NON-ORTHODOX TEACHINGS. Matsudaira Sadanobu forbade, 1790, the pursuit of nonorthodox studies in Bakufu schools. The prohibition was later extended to the han. Only the official Confucianism taught by the Hayashi family was allowed. Matsudaira Sadanobu was dismissed in 1793.

RUSSIAN VISIT. The Russian Erik Laksman (1737-1796) visited Nemuro in

Hokkaido in 1792 to open trade. He left when told he would have to visit Nagasaki in order to make contact with the Bakufu.

1794-1829

INCREASE IN WESTERN CONTACTS. In 1804, Nikolai Rezanov arrived in Nagasaki as ambassador from Russia. He wished to propose trade, and carried a letter from Alexander I. After lengthy delays he was sent away. The rebuff resulted in a number of Russian raids in Hokkaido and the Kuriles. In 1808, H.M.S. *Phaeton* entered Nagasaki and, with the menace of her guns, forced the authorities to grant her provisions. The governor of Nagasaki committed suicide. In 1811, Vasilii Golovnin (1776-1831) landed with peaceful intent on Kunashiri in the Kuriles, but was captured and held for 2 years.

Reacting to these foreign incursions, the Bakufu published the "No Second Thought" edict, 1825. It required that all foreign vessels approaching Japan's shores be destroyed and their crews killed if they tried to land.

REFORM IN SATSUMA. Zusho Hiro-michi (1776-1848) was appointed, 1827, to carry out a reform program in Satsuma. Satsuma owed huge sums to the merchants of Osaka; Zusho simply canceled the debt. He also enforced very tight control over the han's sugar monopoly, thereby securing for Satsuma a lucrative income source.

REFORM IN MITO. Tokugawa Nari-aki (1800-1860) became daimyo of Mito, north of Edo, 1829. He set about strengthening his domain's defenses and reviving the martial spirit of its samurai.

1830-45

TEMPO FAMINES. After a period of prosperity, the Tempo famines (from the Tempo year period, 1830-44) caused great suffering, 1832-36. Peasant revolts became commonplace.

REVOLT IN OSAKA. Oshio Hei-chiro (1793-1837), a minor Bakufu official, led an abortive uprising in Osaka, Mar. 1837. While it lasted, it glaringly re-

vealed the weakness of the Bakufu's troops.

"MORRISON" EXPEDITION. The U.S. ship *Morrison* entered Edo Bay ostensibly to return castaways, Aug. 1837. Actually, the mercantile interests behind the voyage hoped to obtain a coaling and provisioning agreement, to secure good treatment for shipwrecked U.S. seamen, and to open trade. But the *Morrison* was fired on both at Uraga, in Edo Bay, and at Kagoshima in Kyushu, the Satsuma capital, and was unable to approach the land.

REFORM IN CHOSHU. Murata Seifu (1783-1855) was appointed to carry out a reform program in Choshu, 1838. He brought the han budget under tight control; stressed promotion of men of ability rather than of birth; redeemed the debts of the han and of its samurai at rates close to cancellation; and abolished the han's commercial monopolies (except for a warehousing operation at Shimono-seki) on the grounds that they benefited the merchants and not the han.

IMPACT OF THE OPIUM WAR. When Great Britain defeated China in the Opium War of 1839-42, informed Japanese took the event as a very menacing demonstration of western intentions and of western military might. They feared Japan might have to defend herself against the same menace. In 1841, Takashima Shuhan (1798-1866), an expert in western gunnery, was invited to demonstrate his art in Edo.

THE TEMPO REFORM. Mizuno Tadakuni (1794-1851) became the principal Roju. To retrieve the Bakufu from grave financial trouble, Mizuno undertook the highly conservative Tempo reform, July 1841. He curbed consumption through the usual sumptuary edicts, cut Bakufu expenses, and reduced the debts of the lower-ranking Tokugawa vassals. He abolished merchant associations and tried to enforce price controls. He attempted to redistribute the shogun's lands more evenly around Osaka and Edo, and prohibited peasants from migrating to the cities. But his policies were unrealistic and had little effect. In 1842, Mizuno relaxed the "No Second

Thought" edict out of fear of foreign reprisals. He ordered daimyo to supply foreign ships with requested provisions and to advise them to leave. In Nov. 1843 he was dismissed.

1846-52

WESTERN ARMS. In 1846 western gun-manufacturing techniques were introduced to Satsuma. The western han felt keenly the need for defense preparations.

In Oct 1847, Komei became emperor.

THE BIDDLE EXPEDITION. Two American warships under Commo. James Biddle (1783-1848) entered Edo Bay, June 1846. Biddle's goals were the same as those of the *Morrison* expedition. The Bakufu refused to negotiate and Biddle was sent away.

ARMS PURCHASE BY SATSUMA. In 1848 Satsuma concluded an arms deal with a French ship that called at the Ryukyu Islands. The Bakufu had prohibited the purchase of foreign arms, but was powerless to stop Satsuma.

INCREASE IN DEFENSE MEASURES AGAINST THE WEST. In June 1849 the Bakufu sent a report to the daimyo on recent entries of foreign ships into Japanese waters. The Bakufu wished to have the daimyo increase their military preparedness against the foreign threat, in concert with the Bakufu's own stepped-up defense preparations.

Japan's first successful reverberatory furnace went into operation in Hizen, the han adjacent to Nagasaki, in 1850. It was used to manufacture cannon.

1853-54

PERRY'S 1ST VISIT. On 8 July, 1853, Commo. Matthew Calbraith Perry (1794-1858) anchored off Uraga in Edo Bay with 4 warships. His mission was to secure good treatment for U.S. sailors and to obtain facilities for navigation and trade. His instructions, which he had insisted on writing himself, allowed him to act in whatever manner he deemed most effective to achieve these goals. When the Japanese procrastinated, Perry sent surveying missions close to Edo. Within a

week he obliged the Japanese to receive from him, in a formal ceremony at a place ashore of his own choosing, a letter from President Fillmore to the shogun. The letter contained the U.S. demands. Perry left on 17 July, after informing the Japanese that he would return for an answer the following spring.

THE SUCCESSION DISPUTE.

Shortly after Perry's visit, Ieyoshi (12th shogun, ruled Oct. 1837–July 1853) died. The 13th shogun, Iesada (1824–58), had no heir and was unlikely to have one. Hence a crucial succession dispute arose. Most fudai daimyo and high-ranking Bakufu officials backed Tokugawa Yoshitomi (1846–66), Iesada's first cousin and, like Iesada, a nonentity. The other candidate was Hitotsubashi Yoshinebu (1837–1913), the 7th son of Tokugawa Nariaki. Yoshinebu was a vigorous and promising young man. He was supported by many non-fudai daimyo who believed that the Bakufu should consult all men of ability (especially themselves) and not rely solely on the entrenched bureaucracy. Tokugawa Nariaki was the leader of this faction.

REQUEST FOR OPINIONS ON

PERRY'S DEMANDS. The chief Roju Abe Masahiro (1819–57) had a translation of President Fillmore's letter sent to all daimyo and solicited their opinions, Aug. 1853. The object of this 'unprecedented step was to obtain a national consensus on policy. It has since been interpreted as a sign of weakness and indecision on the part of the Bakufu. Of the most important daimyo, about a third favored trade in some form. One of the most prominent of these was Ii Naosuke (1815–60) of Hikone. Another third wished to avoid war only in order to gain time for further defense preparations. Tokugawa Nariaki was the most prominent member of this group. He saw the crisis as a great chance to rally the martial spirit of the Japanese people. A final third advocated rejecting the U.S. demands outright. The consensus favored rejecting a treaty but avoiding war—an untenable compromise. Shimazu Nariakira (1809–58) of Satsuma stood alone, advocating trade with China and India but not with the U.S. In Oct. the Bakufu lifted its long-standing prohibi-

tion on the building of ocean-going ships, and in Dec. a Bakufu edict admitted the inadequacy of Japan's defenses and called for peace through delaying tactics.

PERRY'S 2ND VISIT. Perry returned with 8 warships, Feb. 1854, and insisted on carrying on the negotiations at Kanagawa, closer to Edo than the Bakufu would have liked. On 8 Mar. he received the shogun's answer to President Fillmore's letter.

TREATY OF KANAGAWA. By the Treaty of Kanagawa, 31 Mar., 1854. (1) coal and provisions were to be made available after 1 year at Hakodate, on Hokkaido, and at Shimoda, on the tip of the Izu Peninsula on Honshu; (2) adequate treatment of distressed seamen was promised; and (3) a consul could be appointed to reside at Shimoda after 18 months. In Oct. Great Britain obtained a treaty allowing her ships to call for supplies at Nagasaki or Hakodate.

1855–58

TREATY OF SHIMODA. The Russian Adm. Evfimii Putiatin (1803–83) concluded the Treaty of Shimoda with the Bakufu, Feb. 1855. Russia obtained coal-ing and refreshment rights at Nagasaki as well as at Hakodate and Shimoda, the boundary between Japan and Russia was drawn through the Kurile Islands, and Russia obtained extraterritorial status for Russians in Japan. In Nov. the Bakufu signed a trade agreement with the Netherlands.

INTERNAL CHANGES. During 1855, a power struggle developed between Tokugawa Nariaki and Abe Masahiro. Nariaki succeeded in forcing the resignation of 2 Roju. For the sake of closer supervision, Hakodate was annexed to the Tokugawa domains from Matsumae han, Apr. In Sept., the Bakufu opened a naval training school in Nagasaki, with Dutch instructors. In Nov., Abe Masahiro was succeeded by Hotta Masayoshi (1810–64).

APPOINTMENT OF TOWNSEND HARRIS. Townsend Harris (1804–78) arrived as U.S. consul in Shimoda, Sept. 1856, with the mission of concluding a commercial treaty. He was not welcomed, for the Japanese text of the Treaty of

Kanagawa required the consent of both countries to the appointment of a consul; the U.S. had followed the English text, which allowed unilateral appointment. In Nov. the Bakufu appointed a commission to study the possibility of trade with the U.S.

HARRIS CONVENTION. A convention proposed by Harris was signed in June 1857. It provided for the opening of Nagasaki as an additional port of call for U.S. ships; extraterritorial status for U.S. residents in Japan; the right for Americans to reside, lease property, and construct buildings; and an equitable discount rate for currency exchange.

TREATIES WITH THE NETHERLANDS AND RUSSIA. A treaty with the Netherlands was signed in Nagasaki, Oct. 1857. The Bakufu approved it after the fact. It permitted unlimited trade at Nagasaki and Hakodate by private merchants under Bakufu supervision. Putiatin signed a similar treaty for Russia a few days later.

HARRIS' AUDIENCE IN EDO. After lengthy procrastination, Harris was received in audience by the shogun in Edo, Dec. 1857. He presented his credentials and a letter from the U.S. president, in accordance with diplomatic practice.

1858-60

U.S. TRADE TREATY. The trade treaty proposed by Harris was ready for signature by Feb. 1858. It provided that a U.S. minister would reside in Edo; that trade would be carried on free of official intervention; that Nagasaki and Kanagawa would be opened to the U.S. in 1859, Niigata in 1860, and Hyogo (the present Kobe) in 1863; and that traders would be permitted to live in Edo in 1862 and in Osaka in 1863. But there was strong opposition to the text, so that signature was postponed until the emperor could be persuaded officially to approve it.

JAPANESE REACTION TO THE TREATIES. Hotta Masayoshi went to Kyoto, Feb. 1858, to obtain the emperor's approval of the Harris treaty. But the emperor felt that Osaka and Hyogo were too close to Kyoto, and also gave consid-

erable weight to the opinions of the daimyo opposed to trade. The emperor refused. A decree, Apr., forced through the imperial council as a compromise, recognized the Bakufu's responsibility for foreign affairs. But Emperor Komei then advertised the fact that he had been coerced, thus rallying antforeign, anti-Bakufu sentiment.

THE REGENCY. Alarmed at the crisis over the treaty and at the strength of the faction behind Hitotsubashi Yoshinobu, Ii Naosuke had himself appointed *tairo* (regent). From this exalted office, which was seldom filled, Ii was able to run the Bakufu firmly. In July 1858, he had the U.S. treaty signed without imperial approval, thus incurring the wrath of the imperial loyalists.

ANSEI PURGE. In Aug. 1858, Ii announced his decision in favor of Tokugawa Yoshitomi, the future Iemochi, as the shogun's heir. Iesada died and Iemochi became shogun. Ii dismissed Hotta and one other Roju. He ordered retirement or house arrest for Tokugawa Nariaki, Tokugawa Yoshikatsu (1824-83) of Owari, Shimazu Nariakira (1809-58) of Satsuma, Yamanouchi Yodo (1827-72) of Tosa and Matsudaira Yoshinaga of Echizen (1828-90). This was the beginning of the Ansei purge. It left Yoshinobu's backers disorganized and made Ii a quasi dictator within the Bakufu.

TREATY RATIFICATION. The Dutch, the Russians, and the British obtained treaties similar to the U.S. treaty, Aug. 1858, and France obtained a similar treaty, Oct. A Bakufu representative again went to Kyoto to obtain approval of the treaties, but the emperor still refused. In Feb. 1859, in a compromise decree, the court promised forbearance and the Bakufu undertook to prevent the opening of Hyogo and Osaka. Both committed themselves to revoke the treaties at some time in the future. Finally, in July, the treaties became effective, and foreign diplomats took up residence in Edo.

EXECUTION OF YOSHIDA SHOIN. Yoshida Shoin (b. 1830) was executed by the Bakufu, Nov. 1859. In later years, Shoin became a national hero. He started out as a military expert, a fervent advo-

case of Japanese self-strengthening, but not an opponent of the Bakufu. But after 1858 he became violently anti-Tokugawa. He was an inspiring teacher and writer. Several of the greatest Meiji-period leaders studied at his school in Choshu.

MISSION TO THE U.S. In 1860 an official Bakufu mission was sent to Washington to exchange ratification of the Harris treaty. The members of the mission were much impressed by Japan's backwardness relative to the U.S.

In Mar. 1860, Ii Naosuke was assassinated by a group of Mito warriors.

1860-63

INTERNAL POWER STRUGGLES AND DETERIORATION OF JAPANESE-WESTERN RELATIONS. In May 1860, the Bakufu proposed that the shogun marry Princess Kazunomiya, the emperor's sister. The court agreed, on the condition that the Bakufu undertake to cancel the treaties or expel the foreigners forcibly within 10 years.

The Bakufu granted monopoly rights for export consignments of many products to certain Edo wholesalers. This attempt at official control of trade was widely evaded.

Harris' secretary, Heusken, was murdered by extremists in Edo, Jan. 1861. Harris offered to ease the Bakufu's difficulties with the court by postponing the opening of Edo, Hyogo, Osaka, and Niigata. These had been due to open at the beginning of 1863.

In Mar. 1861, the Bakufu announced that a mission would visit the countries with which Japan had treaties in order to obtain their agreement to postpone the opening of the ports. The British minister, Sir Rutherford Alcock (1809-97), was gradually won over to support this plan. In July, extremists attacked the British legation, wounding 2 men.

In Jan. 1862, the mission to Europe departed.

THE LONDON AGREEMENT. The Bakufu mission concluded the London Agreement, June 1862. Edo, Osaka, Hyogo, and Niigata were to be opened only on 1 Jan., 1868. Japan promised full compliance with the treaties at the ports

already open. Russia, France, and Holland agreed later in 1862.

Urged by Satsuma and Choshu, the court demanded that Hitotsubashi Yoshinobu and Matsudaira Yoshinaga of Echizen be given high posts, and that the shogun visit Kyoto in order to discuss the expulsion issue.

Extremists attacked the British legation a 2nd time, killing 2 men.

In Aug. Yoshinobu was made the shogun's guardian.

THE RICHARDSON MURDER.

Charles Richardson, a British visitor from China, was murdered by members of a Satsuma contingent at Namamugi, near Yokohama, Sept. 1862. Britain demanded an indemnity.

EXTREMIST CONTROL OF KYOTO. The Satsuma force which killed Richardson returned from Edo to Kyoto. On arrival, it found Kyoto under the control of extremists from Choshu, Satsuma, and Tosa. It therefore returned to Kagoshima, the Satsuma capital, leaving extremists in control of the court.

In Oct. 1862 the time required in Edo under the sankin-kotai system was cut down and the requirement that the wife and heir of each daimyo be left in Edo was abolished.

In Nov. the court appointed Sanjo Sanetomi (1837-91), an extremist court noble, as an envoy to the Bakufu to demand the expulsion of the foreigners.

1863-64

DEMANDS TO EXPEL WESTERN BARBARIANS. Great Britain served the Bakufu with an ultimatum to pay an indemnity of £100,000; to apologize for the Richardson murder; and to make Satsuma pay a £25,000 indemnity and execute the murderers, Mar. 1863.

The shogun went to Kyoto to discuss the right time and method for expelling the foreigners, Apr. Once he was back in Edo, however, the Bakufu announced that it was unable to carry out the emperor's expulsion order. The Bakufu and the han were to put into effect the court's expulsion order on 25 June, 1863, but the Bakufu did nothing. Only Choshu took action, firing on an American steamer in

the Shimonoseki Straits. Subsequent Choshu action rendered the straits impassable to foreign ships by the end of July.

BOMBARDMENT OF KAGOSHIMA.

A British squadron bombarded Kagoshima, Aug. 1863, in order to enforce Britain's demands for justice in the Richardson affair. Much of Kagoshima was destroyed. The demands were eventually settled and Satsuma established close relations with Great Britain.

SATSUMA-AIZU COUP. Satsuma and Aizu troops seized the imperial palace gates and took control of Kyoto away from the Choshu-backed extremists, Sept. Sanjo Sanetomi and other radical nobles took refuge in Choshu. The shogun agreed again to visit Kyoto, this time as an indication of strength. This was the height of the *kobu-gattai* (union of court and Bakufu) movement promoted by Shimazu Hisamitsu (1817-87) of Satsuma and his allies.

In Feb. 1864, Hitotsubashi Yoshinobu, Matsudaira Yoshinaga of Echizen, Matsudaira Katamori (1835-93) of Aizu, Yamanouchi Yodo of Tosa, and Date Munenari (1818-92) of Uwajima formed a council which consulted regularly with the emperor. This was a completely unprecedented phenomenon. The council was dominated by Satsuma.

BREAKUP OF THE COALITION.

The shogun, Iemochi, arrived in Kyoto. Disagreement over the policy he should adopt broke up the daimyo coalition. Feb. 1864 Shimazu wanted him to convince the emperor of the impracticability of expelling the foreigners, while Hitotsubashi Yoshinobu advocated compromise and the closing of Yokohama as evidence of Bakufu sincerity. All the daimyo except Yoshinobu returned to their han by early Apr. Yoshinobu came increasingly to favor the Bakufu, Shimazu to oppose it.

In Aug. a Choshu force of 2,000 men tried to seize control of Kyoto, but was repulsed, and in Aug. Choshu was declared in rebellion by the court.

BOMBARDMENT OF SHIMONOSEKI. A joint naval force of the treaty powers bombarded Shimonoseki, Sept., landed troops, and dismantled the gun batteries. This was in reprisal for Cho-

shu's attacks on foreign shipping. In Oct. a convention was signed, settling the Shimonoseki affair. Japan was given the choice of paying a \$3 m. indemnity or of opening another port in the Inland Sea to trade.

1865-66

DECLINING POWER OF THE BAKUFU.

In Mar. 1865 irregular military units under Kido Takayoshi (1833-77) and Takasugi Shinsaku (1839-67) overthrew the pro-Bakufu government of Choshu and defied the Bakufu. In Feb. the Bakufu had ordered the formation of a 2nd punitive expedition against Choshu, under the shogun's personal command. But most pro-Bakufu daimyo were by this time reluctant to participate.

Increased foreign pressure obliged the Bakufu to extract from the emperor formal approval of the 1858 treaties, Nov. 1865.

SATSUMA-CHOSHU ALLIANCE.

Satsuma and Choshu concluded a formal, but secret, alliance, Mar. 1866. Satsuma agreed to strive to restore Choshu to favor at court and to support Choshu against the impending attack of the Bakufu.

The Bakufu sent an ultimatum to Choshu, demanding a drastic reduction of territory and the retirement of the daimyo. Choshu ignored the ultimatum, and in July a Bakufu force attacked it.

The death of Iemochi, Sept., gave the Bakufu a pretext to call a truce. In fact, the Bakufu force had been defeated. Choshu's troops were better equipped and trained than the Bakufu's. They included many peasants, a radical innovation.

Hitotsubashi Yoshinobu was named shogun.

1867-68

ACCESSION OF THE MEIJI EMPEROR. Komei died, Jan. 1867, and was succeeded by his 15-year-old son, the Emperor Meiji.

FURTHER DECLINE OF BAKUFU PRESTIGE. In Mar. the shogun and the French minister, Léon Roches (1809-

1901), met at Osaka. *Roches* proposed a complete reform program to modernize the Bakufu. „Most of his measures were considered too radical, but those few that were implemented alarmed Satsuma and Choshu with the prospect of a Bakufu resurgence.

In June the shogun and the great daimyo met in Kyoto. They decided to open Hyogo to trade. The shogun pressed for punishment of Choshu, while most of the daimyo objected. A compromise declaration promised "lenient" treatment of Choshu. The ability of the Bakufu to force a compromise greatly disappointed the daimyo.

RESIGNATION OF THE SHOGUN.

In Nov., Yoshinobu submitted to the court his resignation as shogun. Tosa, which stood aside from the Satsuma-Choshu alliance, had feared losing all influence if either the clans opposed to the Bakufu (the "Allies") or the Bakufu won decisively. Hence Goto Shojiro (1838-97) of Tosa had proposed that Yoshinobu should become simply the president of an imperial council of daimyo. Yoshinobu had agreed, but the Allies would not accept him as president of the imperial council, or consent to his retention of the Tokugawa estates. Satsuma and Choshu had already agreed secretly to use force against him. In Dec., Iwakura Tomomi (1825-83), a radical court noble, informed Owari, Tosa, Hiroshima, and Fukui han of the Allies' decision to act. Rather than be left out, the four han joined the Allies.

THE RESTORATION. Troops under Saigo Takamori (1827-77) of Satsuma seized the Imperial Palace gates. A council was convened. It removed Yoshinobu's lands and office and returned administrative responsibility to the emperor, 3 Jan., 1868.

Choshu moved troops to Kyoto while Yoshinobu withdrew to Osaka. Yoshinobu's main supporters, Aizu and Kuwana, were urging him to fight, but Owari and Fukui sought a compromise.

The emperor assumed power over the same social and political structure as before. He had at this time no treasury, no authority to levy taxes, and few experienced administrators in his service.

THE NEW GOVERNMENT. The imperial council appointed new court advisers. Their head was an imperial prince, with Iwakura and Sanjo as deputies. The other councilors were divided into gijo (senior councilors) and san'yo (junior councilors). The gijo consisted of 3 court nobles, 2 imperial princes, and the 5 daimyo whose troops were at the palace gates: Satsuma, Tosa, Hiroshima, Owari, and Fukui. The san'yo consisted of minor court nobles and 3 samurai each from the above 5 han plus Choshu.

CIVIL WAR. Aizu and Kuwana troops marched on Kyoto, 26 Jan. The next day, Satsuma and Choshu troops drove them back to Osaka. Yoshinobu fled to Edo and the court pronounced him a rebel.

SHINTO AS STATE RELIGION. In Feb., 7 administrative departments were created. One of these was the Department of Shinto. At the same time that Shinto was placed under state patronage, Buddhism was partially (and temporarily) disestablished. The department heads were gijo, with san'yo as assistants.

RELATIONS WITH THE OUTSIDE WORLD. In Feb., the new government issued a proclamation in which it declared its determination to hold fast to the decision to open Japan to the world.

SURRENDER OF YOSHINOBU. The imperial troops occupied Edo after an easy march from Kyoto. Saigo Takamori persuaded Yoshinobu to accept the emperor's terms of surrender, Apr.: Yoshinobu was to retire and his successor was to retain only 700,000 koku of estates. (Lands were measured in terms of revenue rather than of area.) In turn, pardon was promised to all Tokugawa adherents who swore allegiance to the new government.

THE "CHARTER OATH." The emperor's "Charter Oath," drafted by Iwakura Tomomi, Kido Takayoshi, and Fukuoka Takachika (1835-1919), was promulgated, 6 Apr. Its 5 articles called for the establishment of an "assembly widely convoked" and for stress on "public discussion," for the abandonment of all "absurd usages," and for a search for knowledge throughout the world in order to strengthen the "foundation of the Imperial Polity." The call for "public

discussion" did not imply democracy, but broad participation for all daimyo and samurai in policy deliberations.

THE "1ST CONSTITUTION." In June the imperial government adopted the Seitaisho, generally known as Japan's first constitution. It recognized in principle the separation of the legislative, executive, and judicial powers. However, these powers were all loosely delegated to the Dajokan (Council of State). They were to be exercised by a bicameral assembly, the Dajokan, and the executive departments, all of which interlocked.

Official posts, especially at the san'yo level, were redistributed. Many court nobles were removed and samurai membership was restricted to fewer han. In Sept. Edo was renamed Tokyo (Eastern Capital) and later became the imperial capital.

1869

SURRENDER OF THE HAN REGISTERS. Satsuma, Choshu, Tosa, and Hizen, the most powerful han in the new government, submitted their han registers to the emperor, Mar. Thus they acknowledged the emperor's sovereignty over their territory and laid the basis for true centralized rule. Kido Takayoshi and Okubo Toshimichi (1830-78) of Satsuma were the main promoters of this move. In July all daimyo were ordered to surrender their han registers to the emperor. The daimyo were at the same time appointed governors in their own territories. The new administrative units thereby created were known as ken (prefectures).

GOVERNMENT REORGANIZATION. In Aug. the government was reorganized and given the form that it would retain until the adoption of a cabinet system in 1885. The Dajokan was headed by Sanjo. Its members supervised 6 executive departments: Civil Affairs, Finance, War, Justice, Imperial Household, and Foreign Affairs. All ministers were given samurai assistants and only samurai were appointed as sangi (councilors) to the Dajokan. Thus power gradually passed into the hands of a small

number of samurai from Satsuma, Choshu, Tosa, and Hizen. (*Cont. p. 313.*)

KOREA

1760-1800

REIGN OF YONGJO. In 1760, Korea was under Chinese suzerainty, though not directly ruled by the Chinese government. The reigning periods of Kings Yongjo (1724-76) and Chongjo (1776-1800) of the Yi dynasty are known in Korean history as the Yongjong Era. The era was marked by efforts to eliminate the power struggle between the traditional factions in the country of which the Noron (Old Doctriners), Soron (Young Doctriners), Namin (Southerners), and Pugin (Northerners) were the most important.

King Yongjo led the Tangyongchack reform movement. He opened government positions to the developing middle class and to illegitimate children of the upper class, who were now allowed to compete in the government examinations. The military tax was applied to all irrespective of class or status, and the land tax was increased. Restrictions on freedom of speech were imposed as a check on factionalism. A government agency, Cheonsa, was established to foster irrigation and reforestation.

REIGN OF CHONGJO. Under Chongjo (ruled 1776-1800), the Kyujanggak (Royal Academy) was established with the duty of ensuring better living conditions for the poor. The arts, particularly literature, showed marked development. There emerged for the first time a literature written in the vulgar script, and a commoner literature written by commoners. Although Chinese Confucianism continued to exert a strong influence, the influence of China herself declined. Trade, manufacturing, and mining increased, encouraged by the Silhak school of learning which advocated social reform and the Swiak (Western Learning) school which introduced European knowledge, particularly Catholic Christian doctrine and the natural sciences.

PERSECUTION OF CHRISTIANS. Catholicism came to Korea without

benefit of missionaries. The first convert was Yi Sunghun. The new religion, however, soon conflicted with indigenous ancestor worship, and from 1785 the Korean government began to discourage the spread of Christianity. In 1791 active persecution began, with the execution of Yun Chijung, the 1st Christian martyr. Other executions followed, Catholic books were burned, and the government refused to allow the import of more books from Peking, the major source of Christian influence. Catholicism was driven underground. In 1792 the pope put the Korean Church under the bishop of Peking, and in 1795 a Chinese priest, Shou Wen-mou, was smuggled into Korea, followed by a number of French missionaries.

1801-59

REIGN OF SUNJO. On the death of Chongjo, King Sunjo (ruled 1801-34) succeeded to the throne. Religious persecutions continued. Severe restrictions were placed on Christian missionaries, and a number of Catholic Namin leaders were executed (Sinju Massacre). During this period a Naron (anti-Catholic) faction took power from the pro-Catholic Namin. A leading Namin, Hwang Sayong, sent a message to the foreign missionaries in Peking requesting that a fleet should be sent to force the government of Korea to grant freedom of religion. His plea was intercepted, and further repressions resulted. In 1831, however, Pope Gregory XVI made Korea a bishopric.

REIGN OF HONGJONG. Sunjo died in 1834 and was succeeded by King Hongjong (ruled 1834-49). In 1837, by which time there were 9,000 Christian converts, 3 French priests entered Korea in disguise. In 1839 the government learned of the presence of the missionaries and, partly to distract attention from the general suffering being caused by a drought, initiated once again a policy of severe repression of Christianity. On 21 Sept., 1839, the 3 French priests were executed (Kihae Massacre). Despite the persecutions, by the end of Hong-

jong's reign the number of converts had risen to 13,000 and there were 12 French priests in the country.

In 1849 Hongjong was succeeded by his nephew, King Choljong (ruled 1849-63).

1860-70

TONGHAK MOVEMENT. In 1860, Choe Cheu founded the nationalistic Tonghak school of learning (the eastern sect). This was a syncretist apocalyptic movement based in the south, and combining Taoist, Buddhist, Neo-Confucian, Catholic, and native Songyo shamanist elements. It seems to have been inspired partly by direct western influences and partly by news of the Taiping Rebellion and of foreign invasions of China. The movement obtained a large following, and in 1862-63 a Tonghak-inspired peasant-based revolt broke out. In 1864 the leader of the revolt was killed and the uprising suppressed.

CONSERVATIVE REFORM UNDER TAEWONGUN. In Jan. 1863, when King Choljong died without male issue, his great-great-grandson, Yongjo, succeeded as King Kojong (ruled 1864-1907). The boy's father, Prince Hungson, known as Taewongun, became regent. Taewongun instituted a conservative reform program, which included an attempt to restore the traditional Korean "three systems" (land tax, grain relief, military service). He tried to wipe out factionalism by closing all private academies (*sowon*), depriving the Censors of their power, and directly taxing the *yangban* (noble) class. Recruiting talent more widely than ever before, he reorganized the central administration and revised the law codes. He also tried to increase Korean military strength. His foreign policy was anti-Catholic and exclusionist.

MOUNTING FOREIGN PRESURES. In Jan. 1866 a Russian gunboat entered Wonsan Harbor and tried to establish trade relations. Korea claimed to be a vassal of China, and referred the Russians to Peking. A Catholic delegation led by Nam Chongsam suggested to the regent that Korea enter into an alliance

with Britain and France against Russia. Taewongun's response was to order a purge of Catholics. Nam Chongsam and 9 French priests, including Bishop Benneux, were beheaded (Pyongin Massacre).

In Sept. 1866 the U.S. merchantman *General Sherman* sailed up the Taedong River to Pyongyang seeking trade. A fight broke out, and the ship was burned and all its crew killed.

Reacting to the Pyongin Massacre, the French dispatched 7 warships under Adm. Roze. The expedition entered the Han River, attacked Chong-jok Fortress on Kangwha Island, Aug.-Oct. 1866, but was driven off.

Between 1866 and 1870 (with a peak in 1868 due to a tomb desecration) c. 8,000 Catholics were put to death in Korea; the total number of persons killed or injured during these years was 30,000. (*Cont. p. 319.*)

MONGOLIA

1760-1850

ISOLATION OF MONGOLIA. Mongolia was brought under the control of the Ch'ing (Manchu) Empire of China between 1736 and 1796. The Manchus followed a policy of nonintervention in Mongolian affairs. They ruled the region indirectly, encouraged Lamaism, forbade their Chinese subjects to colonize, prohibited intermarriage between Mongols and Chinese, and made an effort to protect the Mongols from Chinese traders.

1851-70

MONGOLIAN MILITARY LEVIES. Following the outbreak of the Taiping Rebellion, 1851, Mongol feudal levies were summoned to serve the Manchu emperor. Mongol soldiers also fought against the Nienfu peasant rebels in the northern Chinese provinces in the 1850's and 1860's, against the British and French in 1860, and against the Moslems of the southwest in the 1860's and 1870's.

GROWTH OF RUSSIAN INFLUENCE. By the Russo-Chinese Treaty of

Peking, 14 Nov., 1860, Russia received the right to station consuls at Urga, Ili (Kuldja), Chugachak, and Kashgar, and Russian merchants began to enter Outer Mongolia. By another agreement concluded at Peking, 8 Feb., 1862, Russians were allowed to trade throughout the whole of Mongolia. On 7 Oct., 1864, the Protocol of Chuguchak (Boundary Treaty of Tarbagatai) was concluded, stipulating a Russian-Outer Mongolian boundary running through the Sayan Mts. Finally, by the Treaty of Uliastutai, 1870, the frontier between Russia and Outer Mongolia was more closely delineated. During the 1860's Manchu control over Outer Mongolia became generally weaker, and Russian influence increased.

TIBET

1760-73

TIBET IN 1760. In 1760 Tibet was under Chinese suzerainty, 2 high commissioners having been appointed by the Manchu emperor in 1725 to supervise the country's secular affairs. The religion of the people was Buddhism, and there were 2 principal religious leaders, the Dalai Lama and the Panch'en Lama. Regencies were frequent, since new spiritual heads of Tibetan lamaism were usually "discovered" when the candidates were infants.

The 7th Dalai Lama, Kasang Gyatso had died on 22 Mar., 1757, and Deme Trulku Jampel Delek (High Lama of the Drepung Monastery) had been appointed regent. In 1762 the 8th Dalai Lama (Jampal Gyatso) was discovered in Tsang and the regent brought him to Lhasa, the Tibetan capital.

1774-86

RELATIONS WITH THE ENGLISH EAST INDIA COMPANY. Misunderstanding the intent of a communication sent to India by the Panch'en Lama Warren Hastings, governor of Bengal sent George Bogle to Tibet to obtain permission to initiate trade. Bogle arrived

at Shigatse, Oct. 1774. He reached Tashilhunpo the following year and gained the friendship of the Panch'en Lama, Lobzang Palden Yeshe, but failed to establish a commercial connection between Tibet and India. The Panch'en Lama died on a visit to Peking, 27 Nov., 1780.

On 21 July, 1781, the 8th Dalai Lama assumed power from the regent, Ngawang Tsultrem, who had taken over from Demb Trulku in 1777. In 1782 the British in India learned of the change, and once again Warren Hastings tried to establish trade between Bengal and Tibet, sending Lieut. Samuel Turner to Tashi-Lhunpo in 1783. However, due to Chinese pressure and also to the opposition of the regent in Lhasa, Turner was denied access to the capital.

In 1783 the 4th Panch'en Lama was discovered in Tsang.

1787-93

GURKHA INVASIONS. In 1787 the Gurkhas invaded Tibet from Nepal, claiming trade frauds as justification. The Chinese sent military assistance to the Tibetans, 1788, but their aid was ineffective. The war ended after Chinese mediation had procured a treaty highly unfavorable to Tibet, which was obliged to pay a large indemnity to Nepal. In July 1791 the Gurkhas again invaded Tibet when the Dalai Lama, claiming that he had never approved the treaty, failed to pay the indemnity. Gurkha forces captured and looted Shigatse and the Tashilhunpo Monastery, and the Panch'en Lama fled. At the Battle of Debung, 4 Sept., 1792, the Tibetans, with the help of a Chinese army under Gen. Fu K'ang-an, defeated the Gurkhas and drove them back to Nepal. The ensuing treaty, 1793, was much more favorable to Tibet, and also to China. Chinese control over the country was strengthened, and the Manchus, acting through their officials (ambans) introduced a number of reforms: the selection of a new Dalai Lama when there were a number of candidates, to be by lot; an agreement to exclude foreigners; the fixing of boundaries between Tibet and Nepal, Sikkim, and Bhutan; and the stationing of an imperial resident

and a large Chinese standing army in Tibet.

1794-1854

CHANGES OF GOVERNMENT AND EROSION OF CHINESE INFLUENCE.

The 8th Dalai Lama died on 19 Nov., 1804, and the regent, Tenpai Gonpo Kundeling, took control of the country. Growing external pressures on the Manchus obliged them to reduce their military garrison in Tibet.

Following a dispute, 1807, over the claims of 2 candidates for the position of Dalai Lama, the 9th Dalai Lama, Lungtok Gyatso, was finally enthroned in 1808.

In 1811 the first Englishman to penetrate to Lhasa, Thomas Manning, was granted an audience by the Dalai Lama.

On 6 Mar., 1815, the 9th Dalai Lama died. By 1817, 3 candidates for the office had appeared and it was not until 1822 that the 10th Dalai Lama, Tsultrem Gyatso, was chosen. He died in 1837, and the 11th Dalai Lama, Khedrup Gyatso, was enthroned in 1841.

During the 1840's Chinese influence in Tibet was reduced, due to incompetent and corrupt residents and to the distractions of the Opium War. In 1841 tribesmen from Ladakh invaded Tibet. They were eventually driven out, and a treaty signed at Leh, the capital of Ladakh, by which boundaries were clarified and promises of friendship exchanged. The Chinese were not party to these negotiations.

1855-70

RENEWED GURKHA INCURSIONS.

In 1855 the Gurkhas again invaded Tibet, claiming ill treatment of their nationals and violations of trade agreements. By a treaty of 24 Mar., 1856, the Tibetans agreed to pay an annual tribute to Nepal and also to grant the privileges of extraterritoriality and freedom of trade to Nepalese merchants.

The 11th Dalai Lama was enthroned on 1 Mar., 1855, but died in 1856.

FURTHER DECLINE OF CHINESE INFLUENCE. During the 1850's and

1860's Chinese authority, in Tibet continued to decline. In 1858 the regent, Rating, arranged a lottery, by which the 12th Dalai Lama, Trinley Gyatso, was chosen. But in 1862 Shatra proclaimed himself Desi (prime minister) and took

power. The regent fled to Chitta, where he died. On 25 Sept., 1864, the Desi, Shatra, also died. In 1868 Paldin Dandup assumed effective power in Tibet as lord chamberlain.

South Asia

INDIA

DISINTEGRATION OF THE MUGHAL EMPIRE. With the death of the Emperor Aurangzeb (Aurangzib) (ruled 1658-1707), the power of the Mughal Empire, which had covered almost the entire subcontinent, began to decline. In 1759 the emperor, Alamgir (Ālamgir) II (b. 1699), was put to death, and his son fled to Bihar, where he had himself proclaimed Shah Alam ('Ālam) II (ruled 1759-1806). Local Mughal officials, taking advantage of the collapse of the central government, established personal power over their principalities in Bengal, Oudh, Rohilkhand, and Hyderabad.

Among the indigenous non Moslem factions competing for regional power at this time, the most important were the Sikhs, the Rajputs, the Jats, and the Marathas. South of Delhi was Bharatpur, a kingdom of Jats, a landowning, peasant caste, founded in the early 18th cent. and ruled in 1760 by Suraj Mal. In the Punjab to the northwest were the Sikhs, the descendants of disciples of a 15th-cent. religious leader, Nanak, and, since 1750, under Afghan control. Southwest of the Punjab were the lands of the Rajputs, a warrior caste, whose kingdoms had been allied with the Mughals since the 16th cent.; alienated by the aggressive religious policy of Aurangzeb, the Rajputs had since held aloof from Mughal affairs. To the south, in the area of the Western Ghats, the Maratha peoples had emerged in the 17th cent. as an independent power: in 1758, when for a brief period they held the Punjab, their power stretched from the Himalayas almost to the tip of the peninsula, those areas not under their direct control paying them tribute. In

south India, on the Malabar Coast, was the Hindu kingdom of Mysore. Hyder Ali ('Āli) (1717-82), a Moslem soldier risen to prominence in the army of the raja, succeeded by 1761 in becoming chief minister and de facto ruler of Mysore.

EUROPEAN TRADING COMPANIES. By 1760 the settlements of the Portuguese, Dutch, and Danish trading companies in India were negligible. The 2 major trading companies were those of the British and the French. The English East India Company possessed the 3 independent presidencies of Bombay, Madras, and Bengal. The nawab of Bengal's attack on the British settlement at Calcutta in 1756 had resulted in a British victory at Plassey, 23 June 1757, under Robert Clive (1725-74), and supremacy for the English Company in Bengal.

The French East India Company held the islands of Mauritius and Réunion off Madagascar and in India had factories in Bengal, the Deccan, and on the Malabar Coast. A French army under Gen. Charles Joseph Bussy (1718-85) was maintained at Hyderabad; since 1749 the French had been deeply involved in the internal politics of the Carnatic and of the Hyderabad court.

1760

BATTLE OF WANDIWASH. When news of the Seven Years' War arrived in India in 1756, fighting had broken out between the British and the French, mainly in the Carnatic. Gen. Thomas de Lally (1700-66) was sent from France to defeat the British; Bussy was recalled from Hyderabad to join him. In 1759 the French siege of Madras failed, and Masulipatam in the Deccan was taken by the

British. On 22 Jan., 1763, at the Battle of Wandiwash, the last pitched battle of the war, the French were defeated and Bussy captured. When, after an 8 months' siege, Lally surrendered Pondicherry, 16 Jan., 1761, the war was over.

1761

BATTLE OF PANIPAT. The Maratha capture of Lahore in the Punjab brought renewed invasion by Ahmad Shah Abdali (1724-1773), the Afghan leader, who retook the city. Maratha forces, including the powerful chiefs Holkar and Sindhia, gathered to challenge the Abdali. The Rajputs sent irregular cavalry, and Jat troops from Bharatpur came under Suraj Mal, although both Rajputs and Jats left before the final battle because of quarrels. The peshwa, Balaji Baji Rao (Bālājī Rāo) (ruled 1740-61), appointed his young son Viswas Rao nominal head of the joint army, naming Sadashiv Rao Bhao his adviser and actual leader of the expedition. To oppose the Marathas the Abdali had his own forces, the Rohilla troops, and at least the nominal support of the ruler of Oudh.

The 2 armies were in contact from the late summer of 1760, but the decisive battle occurred on 14 Jan., 1761, at Panipat. The Marathas were besieged in this town, but starvation forced them to abandon it and attack the Afghans. In the fighting, possibly due to a confusion of orders between Sadashiv Bhao and Holkar, a large portion of the Marathas fled the field. Maratha casualties were extremely high. Holkar and Mahadji Sindhia escaped, but both Viswas Rao and Sadashiv Bhao were killed. Although Ahmad Shah Abdali was victorious, a mutiny among his troops forced him to leave India. He turned the rule of Delhi over to an Afghan, who was to rule in the name of Shah Alam ('Ālam) II. The shah was by this time living in Bengal, and now became the Abdali's vassal.

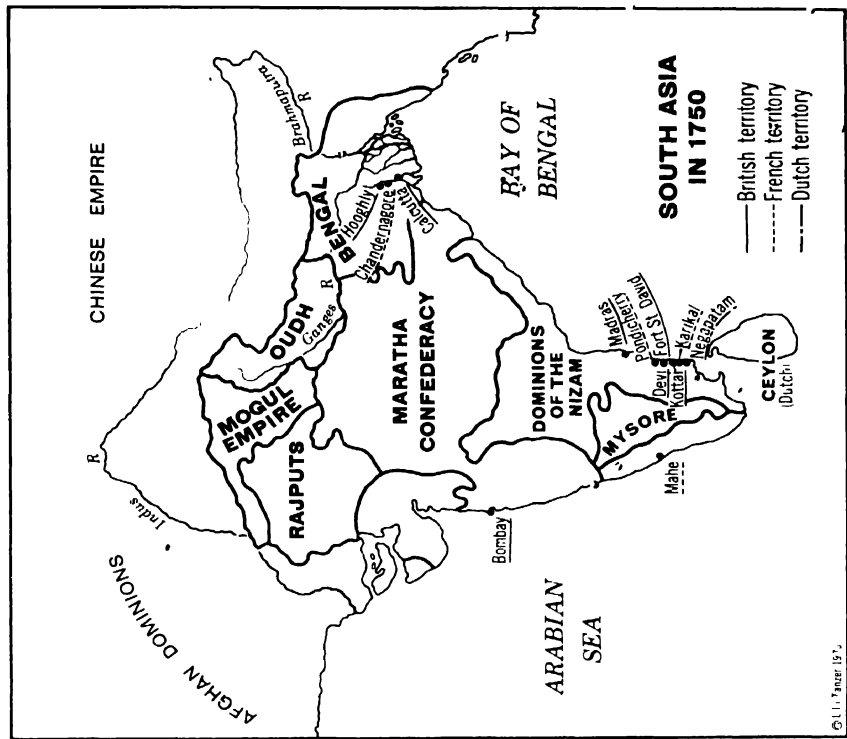

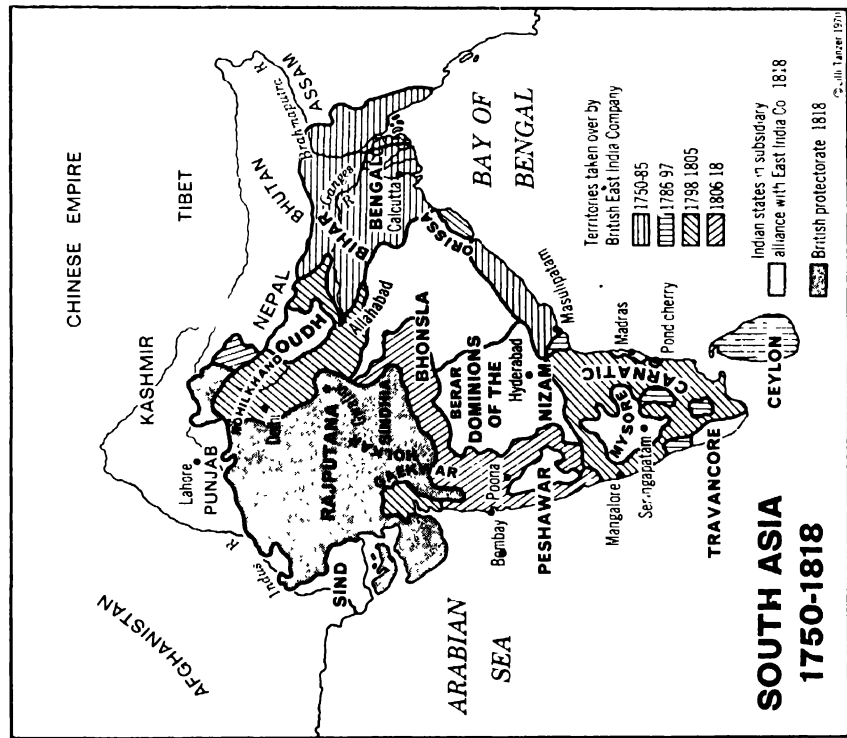

1762-64

DEFEAT OF MIR QASIM, NAWAB OF BENGAL. After Plassey, Mir Jafar (Mir Ja'far) (1691-1765), installed by Clive as

nawab (nawāb) of Bengal, had exempted the private trade of Company servants from transit duties if they had an official pass. But after the deposition of Mir Jafar, the new nawab, Mir Qasim (Mir Qāsim) (ruled 1760-63), objected to this practice. His protests were overruled by the Calcutta Council, and in retaliation Mir Qasim abolished all duties. The result was war. Between 10 June and 5 Sept., 1763, Maj. Adams, the English commander, won 4 pitched battles over the nawab's forces. At Patna, Mir Qasim, after executing 2 Indian bankers, the former ruler of Bihar, and his English prisoners, fled to Oudh. In July 1763, having agreed to the council's demands regarding duties on private trade and having paid over substantial amounts in presents to the council, Mir Jafar was restored as nawab of Bengal. On Oudh, Mir Qasim obtained the support of Shuja-ud-daula (Shujā-ud-daula) (ruled 1754-75), the nawab wazir of Oudh, and of Shah Alam II. Their forces met the Company's at Buxar, 22 Oct., 1764. Mir Qasim was decisively defeated, and fled the battlefield. Shah Alam II submitted to the British. The nawab of Oudh, who retreated to Rohilkhand, submitted only in the following year when British forces overran Oudh.

1765

GRANT OF THE DIWANI OF BENGAL. Clive returned to Bengal in 1765 for his 2nd term as governor. On 16 Aug., 1765, by the Treaty of Allahabad, he came to terms with the losers of Buxar. Shuja-ud-daula and Shah Alam II. Oudh was restored to Shuja-ud-daula on certain conditions, but 2 of its districts were turned over to the shah for use as his personal residence. In exchange the emperor formally granted the diwani (dī-wānī) of Bengal, Bihar, and Orissa to the English East India Company. The Company thus became the official revenue administrator of all 3 territories. In order to continue in this position, the Company had to pay the nawab of Bengal 53 lakhs of rupees per year and the emperor 26 lakhs. Mohammed (Muhammad) Reza Khan was appointed to administer the

diwani, thereby establishing Clive's so-called dual government, in which the power lay formally in the hands of the Company while the actual administration was done by Indians.

1766-69

1ST MYSORE WAR. In extending his rule to the Malabar Coast (completed 1762), Hyder Ali, the ruler of Mysore, came into contact with the British factories there. To the north his expansion was blocked by the Marathas and by the nizam of Hyderabad, and by 1766 these 2 powers had allied with one another against him. In Nov. 1766 the government of the Madras Presidency concluded an agreement with the nizam whereby it obtained control of the northern Sirkars in return for agreeing to aid the nizam against Hyder Ali.

Although it was the Marathas who were the first to attack the Mysore kingdom, Hyder Ali quickly made peace with them. In Apr. 1767 the forces of the British and of the nizam invaded Mysore. Because of an intrigue involving Hyder's agent, the elder brother of the nawab of the Carnatic, the nizam abandoned the British and allied himself with Hyder Ali. In Feb. 1768, after 2 British victories, the nizam switched sides again, reaffirming his original alliance with the British by the Treaty of Masulipatam. British forces briefly held Mangalore, but Hyder retook the city, and by Mar. 1769 had come to within 5 miles of Madras. In Apr. 1769, Hyder Ali dictated peace terms to the British, providing for a mutual restoration of conquests and stipulating a defensive alliance in accordance with which the British promised to aid Mysore if Hyder Ali were attacked.

1770-73

RESTORATION OF SHAH ALAM II TO DELHI. In 1771 the Marathas occupying Delhi proposed to the exiled emperor, Shah Alam II, that they escort him back to his capital in return for certain payments. Although the Company's officials argued against it, Shah

Alam accepted the offer, and in May 1771 left Allahabad. Sindhia, the most powerful Maratha chief in the north, escorted the Shah into Delhi, 6 Jan., 1772. The Company, considering that the emperor had deserted them, discontinued the annual tribute of 26 lakhs of rupees, and restored the districts of Kora and Allahabad to the nawab of Oudh.

EARLY REFORMS OF WARREN HASTINGS. On 13 Apr., 1772, Warren Hastings (1732-1818) was appointed governor general of Bengal (ruled 1772-85). Acting under Company orders, he replaced Clive's system of dual government, and had the Company assume fully the diwani of Bengal, 1772. Thus both civil law and revenue collection came under direct Company control. Hastings also effected a series of commercial reforms: he abolished all but 5 custom houses throughout the territory, freeing passage of trade, Mar. 1773; all tariffs except those on the monopolies of salt, betel nut, and tobacco were reduced to a uniform 2.5 per cent for Indians and Europeans alike; and the Treasury was moved from Murshidabad to Calcutta. In Calcutta, Hastings established 2 courts of appeal, 1 for civil and 1 for criminal cases, 11 Apr., 1780. But, although he attempted to put an end to private trade and to restrict the receiving of presents, both practices continued. A number of land revenue reforms were also tried during Hastings' tenure. The auctioning of revenue was first attempted, and later the employment of Company-appointed collectors. Neither experiment worked satisfactorily, and during Hastings' time no definite revenue policy emerged.

INTERNAL MARATHA STRUGGLES. Four major Maratha powers had been united under the peshwa (peshwā) at Poona: the Gackwar (Gāikwār) family in Gujarat, the Bhonslas (Bhonslās) at Nagpur, and the northern houses of Holkar (Indore) and Sindhia (Sindhiā) (Gwalior). The peshwa's death, 18 Nov., 1772, inaugurated a long period of internal struggle. A conflict developed between the peshwa's brother and successor, Narayan Rao (Nārāyan Rāo), and the peshwa's uncle, Raghunath Rao (Rag-

hoba) (Raghunāth Rāo, or Raghobā). As a result of the latter's machinations, Narayan Rao was murdered, 30 Aug., 1773. But on the birth of a posthumous son to the peshwa, a council headed by the Brahmin minister Nana Fadnavis recognized the son as peshwa and set up a regency with Nana himself as regent.

1774-83

IST MARATHA WAR. Raghunath Rao appealed to the British at Bombay for assistance against Poona. The Bombay Presidency agreed to help in return for the concession of certain maritime territories. Raghunath Rao signed the Treaty of Surat, 7 Mar., 1775, agreeing to these provisions, and with the British army's aid defeated the Poona forces, 18 May, 1775.

The Bombay Presidency, however, had acted without the knowledge of the governor general at Calcutta. Hastings' Council condemned the Presidency's action, repudiated the Treaty of Surat, and ordered negotiations with the Poona government. Although the talks resulted in a treaty signed at Purandhar, 1 Mar., 1776, neither side was farther forward, for the court of directors of the East India Company in London upheld the actions of Bombay and approved the Treaty of Surat. The Bombay Council consequently realigned with Raghunath Rao and reopened the war. In this it was unwise, for it was soon defeated and had to sign the Convention of Wadgaon, 13 Jan., 1779, which restored to the Marathas all territory lost by them since 1773, obliged the British to pay an indemnity, and provided for the handing over of 2 British hostages and the yielding up of part of the Bombay revenues.

The Convention of Wadgaon, however, was repudiated by Hastings, and the war began once again. The British capture of Sindhia's fort at Gwalior, long thought impregnable, 3 Aug., 1780, together with other Company victories, led Sindhia to seek an alliance with the British. Through his aid as intermediary, the Treaty of Salbai was signed by the British

and the Marathas, 17 May, 1782 (ratified 26 Feb., 1783). The British gained the island of Salsette, Madhava Rao Narayan (Mādhava Rāo Nārāyan) was recognized as the rightful peshwa, Raghunath Rao was pensioned off, and Sindhia recovered his territories west of the River Jumna.

2ND MYSORE WAR. Relations between Hyder Ali and the British, strained by the Madras Presidency's failure either to implement the provisions of the 1769 treaty or to negotiate a new treaty, deteriorated further in 1778 when war between France and Britain broke out in Europe. The British seized the French settlement at Mahe, 19 Mar., 1779, which was within Hyder Ali's jurisdiction. Full-scale war began in July 1780, when Hyder Ali invaded the Carnatic. The British there were overwhelmed, and in Oct. Hyder took Arcot and gained control of the whole territory. Hastings was able to detach the raja of Berar, Sindhia, and the nizām of Hyderabad from their alliances with Hyder Ali, but in 1782 the latter received the aid of both a French fleet and a French infantry force. The coming of peace, however, between Britain and France in Europe led to the withdrawal of the French to Mauritius.

After Hyder Ali's death, 7 Dec., 1782, the war was continued by his son and successor, Tipu (Tippoo) Sultan. A British attack on Tipu's capital at Seringapatam was about to be launched when the troops were abruptly recalled. The recall was prompted by the desire of Lord Macartney (1737-1806), governor of Madras, 1781-85, to negotiate peace with Tipu. The result was the Treaty of Mangalore, signed 11 Mar., 1784, which temporarily ended the Anglo-Mysore conflict by providing for a mutual restoration of conquered territory and the liberation of prisoners.

1783-99

THE BLINDING OF SHAH ALAM II. From 1772 onward, Shah Alam II had been dependent on Maratha forces to maintain himself at Delhi. In Oct. 1784 he gave control of Delhi to Sindhia in

order to obtain help against a provincial revolt. Sindhia was then appointed regent of the Mughal Empire.

In 1787 a minister of the emperor, wishing to end Sindhia's control over Delhi, encouraged the ambitions of a local Rohilla noble, Ghulam Qadir. Financial difficulties and military defeats had temporarily weakened Sindhia's power. His unpaid garrison in Delhi rebelled, and his 2 ministers fled the city. On 5 Sept., 1787, Ghulam Qadir entered Delhi and was appointed regent by the emperor.

Ghulam Qadir, however, was not long content with a regency. On 18 July, 1788, after overcoming the weak resistance offered by the emperor's forces, he forced his way into Delhi. On 30 July he deposed Shah Alam II, and on 10 Aug. he had him blinded. But in 1789, with the aid of reinforcements supplied by Poona, Sindhia retook Delhi, disposed of Ghulam Qadir, and resealed the emperor on his throne. This was the beginning of Sindhia's reassertion of his power in the north. With his defeat of the Rajputs in 1790 and his conquest of his rival, Holkar, in 1792, he established his supremacy in northern India.

3RD MYSORE WAR. By 1785, Tipu Sultan, the most ambitious of the rulers of southern India, had become involved in a competition for power with the nizam of Hyderabad and with the Marathas. In 1787 he sent envoys to both France and Constantinople in search of new allies. In 1788 Lord Cornwallis (1738-1805), governor general, 1786-93, abrogated the 1784 treaty by omitting Tipu's name from a list of allies of the Company given to the nizam. Tipu's attack, 29 Dec., 1789, on a long-time British ally, the raja of Travancore, reopened the war. The Madras government at first refused to aid the raja, but Cornwallis reversed this decision. To assist in the prosecution of the war with Mysore, Cornwallis allied the Company with the nizam on 1 June, 1790, and with the Marathas on 4 July.

In the 1st campaign of the war, Tipu completely outmaneuvered the British forces. In Dec. 1790 Cornwallis himself

took command, and came within 9 miles of Tipu's capital at Seringapatam before supply shortages and the onset of the rainy season compelled him to withdraw. In the summer of 1791 an army led by Cornwallis finally reached Seringapatam, and Tipu was obliged to negotiate. By the Treaty of Seringapatam, 19 Mar., 1792, Tipu paid an indemnity of £3 m., and surrendered 2 of his sons to the British as hostages. One half of his territory was annexed and subsequently divided between the British, the nizam, and the Marathas.

THE PERMANENT REVENUE SETTLEMENT. By 1786 the directors of the Company in London had become convinced that the solution to the problem of revenue collection in Bengal lay in a "permanent" revenue settlement designed to give security to landowners by fixing their rents in perpetuity. Under the Mughals the peasants had paid a share of their produce to hereditary tax collectors known as zamindars (zamin-dars), who in turn paid a fixed proportion of what they collected to the government. Cornwallis was now directed to fix the annual revenue rates for a 10-year period. He complied, but in his own view was establishing them in perpetuity. The zamindars were to be regarded as landowners and, through British collectors and subcollectors, were to pay nine-tenths of a fixed rent to government. The Permanent Settlement of Bengal became law on 22 Mar., 1793.

The Settlement did not work well, and was not extended to other parts of India. In Madras and later in Bombay, a system based on direct periodic assessment of the ryots (raiyyat, peasant) was put into effect. Still later, in northern India, revenue was levied by assessments on village units.

THE CORNWALLIS CODE. During his first few months in India, Cornwallis suspended the entire Board of Trade in Calcutta. Most of its members were subsequently dismissed. Under Cornwallis the prohibition on private trade was rigidly enforced. Such strictness was now possible because the Company was at last providing adequate salaries for its employees. Cornwallis also initiated the pol-

icy of employing Indians in subordinate positions only, the more responsible posts being reserved for Englishmen.

Cornwallis' administrative reforms separated the Company's government into commercial, and revenue branches. The administration was headed by a Governor General in Council, a Board of Trade, and a Board of Revenue, each board presided over by a member of council. The commercial branch, headed by the Board of Trade in Calcutta, arranged with commercial residents for the Company's exports. The new arrangements for the revenue branch built on the existing structure of local government, whose basic unit was the district. Officers in charge of districts had 3 duties: to keep the peace, collect the revenue, and administer justice. In Cornwallis' scheme these duties were now divided between a magistrate/collector and a judge. This reformed system of administration, including the Permanent Settlement, was embodied in a series of regulations passed on 1 May, 1793, and known to history as the Cornwallis Code.

4TH MYSORE WAR. Fear of French expansion into India precipitated the 4th Mysore War. In Apr. 1798, as a result of a French-Mysore alliance, a small number of French troops from Mauritius landed at Mangalore.

Lord Wellesley (1760-1842), gov. gen., 1798-1805, at once sought an alliance with the nizam of Hyderabad and with the Marathas. Whereas the peshwa refused to commit himself and remained neutral, the nizam in Sept. 1798 agreed to a "subsidiary" alliance. Wellesley then demanded that Tipu repudiate the French treaty. Tipu's refusal signaled the outbreak of war. Under Wellesley's command, an attack against Mysore was launched, 22 Feb., 1799, from both Bombay and Madras. On 5 Mar. and 27 Mar., Tipu was defeated by British troops, and retreated to Seringapatam. The siege of the capital began, 17 Apr., 1799. After Tipu had refused British terms, the city was seized and plundered, 4 May, 1799. Tipu himself was killed during the fighting. The members of his family were sent

to Vellore. In recognition of help granted, the nizam received territory lying on the northeastern border of his state. The Company annexed the lands encircling Mysore, concluded a subsidiary alliance with that state, and restored the 5-year-old heir of the former Hindu ruling dynasty as ruler.

1800-1805

BRITISH EXPANSION UNDER WELLESLEY. The governor generalship of Marquis Wellesley saw the expansion of the Company's power in India by means of "subsidiary" alliances or treaties. By this type of agreement the British undertook to provide a state with Company troops for its protection; in return the ruler agreed to pay for the maintenance of these troops. The state was thus protected against external enemies, but came under British control.

On 1 Sept., 1798, Wellesley concluded a subsidiary treaty with the nizam of Hyderabad. Similar treaties were negotiated with Tanjore, Surat, the Carnatic, and Oudh. By 1801 the rulers of all these states, except Oudh, had been pensioned off and their territories brought under direct Company administration.

On the death of Nana Fadnavis, 1800, the Peshwa Baji Rao (Baji Rao) accepted the protection of the Company by the Treaty of Basen, 31 Dec., 1802. British troops installed him at Poona. The peshwa's subsequent actions offended the Marathas, however, and Wellesley found it necessary to declare war on the houses of Sindhia and Bhonsla, defeating both and concluding subsidiary alliances with them: the Bhonslas on 17 Dec., 1803, and Sindhia on 27 Feb., 1804. A 3rd Maratha house, the Gaekwars, was already under British protection. The last Maratha chief, Holkar, refused to come to terms, and in Apr. 1804 Wellesley declared war on him also. In the ensuing struggle the British suffered a series of reverses, and the home government, deciding that Wellesley's policies had become both expensive and unsuccessful, ordered him recalled.

1806-14

TREATY OF AMRITSAR. The annexation by the Company of the Delhi territory had brought it into contact with the Sikh leader Ranjit (Ranjit) Singh (1780-1839). From 1792, when he succeeded to the headship of a small Sikh tribe, Ranjit Singh's power had been steadily growing, until in 1805 he was the strongest Sikh leader in the Punjab. To Lahore in that year Holkar came seeking refuge, but Ranjit Singh refused to ally himself with Holkar against the Company. The Treaty of Lahore, 1 Jan., 1806, won the Sikhs the friendship of the British, and excluded the Marathas from the Punjab.

Between Ranjit Singh's lands and the Company's lay the so-called Cis-Sutlej States, ruled by Sikh chiefs. Quarrels among these chiefs became the occasion for intervention by Ranjit Singh in their affairs. In 1806 he took Ludhiana. Charles Metcalfe (1785-1846) was sent by Lord Minto (1751-1814), gov. gen., 1807-13, to negotiate an offensive and defensive alliance with Ranjit. The resulting Treaty of Amritsar, 25 Apr., 1809, guaranteed Ranjit Singh against interference in his activities north of the Sutlej, but he abandoned his claims to the Cis-Sutlej States, which came, unofficially, under British protection.

1815-18

THE PINDARI WAR. The Pindaris were marauding tribes made up of landless, casteless men, who frequently were used in war by Maratha chiefs such as Holkar and Sindhia. They roamed through central India in search of plunder. Their main leaders were Chithu, Wasil Khan, and Karim Khan. By 1812, when they raided 2 districts in Bihar, the Pindaris had become a danger to the British. In 1815-16 they raided the nizams of Hyderabad's lands twice and looted the northern Sirkars, netting £100,000 worth of booty. In 1817 Lord Hastings (1754-1826), gov. gen., 1813-23, decided on a large-scale campaign to destroy the Pindaris. An army of over 100,000, di-

vided into a northern division under Hastings himself and a Deccan division under Thomas Hislop (1764-1843), was sent into the field. Hastings' plan to encircle the Pindaris was successful, and by Jan. 1818 they were almost all exterminated, their chiefs dead or in flight, and the remaining tribesmen scattered.

THE LAST MARATHA WAR. Although the Maratha Confederacy had been dissolved in 1802, the peshwa at Poona tried to organize them against the British. Pressure was accordingly brought to bear on him, and on 13 June, 1817, the British envoy, Mountstuart Elphinstone (1779-1859) induced him to sign the Treaty of Poona, by which he renounced the headship of the Maratha Confederacy. On 5 Nov., 1817, however, a party of the peshwa's men sacked the British Residency at Poona. In this last struggle of the Marathas against the British, Sindhia, Holkar, and the Bhonsla house were involved on the peshwa's side, but the Gaekwar house abided by its earlier agreements with the Company. After 3 defeats in battle, the peshwa surrendered, 3 June, 1818. The peshwaship was abolished, and Baji Rao II received a pension from the Company. The Bhonsla house and Holkar were both defeated in battle. Sindhia capitulated without fighting.

Except for the principality of Satara, which was given to the descendants of Shivaji, the peshwa's lands went to the Company and became part of the Presidency of Bombay. Treaties were signed with the chiefs of Rajputana who accepted British paramountcy. The result of these conflicts was the establishment of British power throughout India as far as the Sutlej River. The Company's frontiers were now Assam and the Himalayas to the north, and the border of Ranjit Singh's Sikh kingdom in the Punjab to the northwest.

1819-35

FOUNDATION OF THE BRAHMO SAMAJ. The founder of the Brahmo Samaj was Rammohan Roy (1772-1833), a Bengali Brahman. Roy was an accomplished linguist, knowing Sanskrit, Per-

sian, Arabic, English, Greek, and Hebrew. He had studied Islam and Christianity and was influenced in his religious beliefs by the English Unitarians. He re-examined the ancient Hindu texts, and found in them a theism which in his belief had been overlaid and corrupted by modern Hindu practice. In 1828 he founded the Brahma Sabha, later Brahma Samaj, as a Hindu society for those who wished to return to this earlier theism. Roy wanted to abolish certain Hindu practices such as idolatry, suttee (sati), and polygamy, and he favored the spread of English education. The Brahma Samaj and Roy himself were factors in bringing about the reforms of Lord Bentinck. In the mid-19th cent. the reformist aims of the Brahma Samaj were furthered by its later leaders, Devendranath Tagore and Keshub Chander Sen.

THE BENTINCK REFORMS. Lord William Cavendish-Bentinck (1774-1839) became governor general in July 1828. During his administration an attack was launched on 2 long-standing Indian customs, the practices of thuggee (thagi) and suttee. The thugs were groups of men bound together by vows to the goddess Kali. They engaged in ritual murder and robbery. In 1829 Bentinck had a special department organized to campaign against thuggee. During the first 6 years of operations over 1500 thugs were caught. In 1836 an act ordering life imprisonment for all thugs was passed and strictly enforced thereafter.

Suttee was the practice by which widows burned themselves on their husbands' funeral pyres. From 1820 legislation against it was urged by reform-minded Hindus like Rammohan Roy. Earlier the Bengal government had legalized voluntary burnings. But in 1828 the directors ordered Bentinck to deal firmly with the problem, and in 1829 suttee was made illegal in all 3 presidencies. Indian reaction was minimal. The only protest took the form of an appeal against the law to the Privy Council in Britain, which was considered and dismissed. This was the 1st instance of deliberate, legal interference on the part of the Company with the established customs of the country it was governing.

MACAULAY'S MINUTE ON EDUCATION. In 1813 a provision had been written into the East India Company's Charter Act authorizing 1 lakh of rupees to be set aside for educational purposes in India. No further action was taken until 1823, when a Committee of Public Instruction was formed. A division appeared within the committee between what came to be called the "Orientalists," who wanted classical subjects of the country, like Sanskrit, to be taught, and the "Anglicists," who favored an emphasis on the teaching of English subjects and the English language. In 1834, Thomas Babington Macaulay (1800-59) was appointed legal member of the governor general's Council and president of the Committee of Public Instruction. In 1835 he presented his "Minute on Education," 2 Feb., which argued for the teaching of western literature and science through the medium of the English language on the grounds that such education would be of greater use to students than a study of Indian subjects. Macaulay's minute carried the day. On 7 Mar., 1835, the Council decided that the available funds should be spent on English-type education.

1836-47

1ST AFGHAN WAR. Fearing an Afghan alliance with Russia, Lord Auckland (1784-1849), gov. gen., 1836-42, arranged a Tripartite Treaty, June 26, 1838, between the British, Ranjit Singh, and Shah Shuja (Shujā) (1780?-1842), a former ruler of Afghanistan. Under this treaty Shah Shuja was to be restored to his throne, replacing Dost Mohammed (Muhammad) (1793-1863), who had seized the region in 1826.

Initially the resultant war went well for the British. In Aug. 1839, Shah Shuja entered the city of Kabul, and Dost Mohammed withdrew, surrendering in 1840. But Shah Shuja proved unpopular among the Afghans, and only stayed in power because of the presence of a British garrison in his city. In Nov. 1841 a revolt broke out in Kabul. Under pressure the British agreed to withdraw, and

on 6 Jan., 1842, their 16,000 troops left the city. On their way south they were decimated by Afghan attacks and bitter weather. Only 1 man in the main column, Dr. Bryden, survived to reach the city of Jalalabad, 13 Jan., 1842.

Shah Shuja was murdered, Apr. 1842, and Lord Ellenborough (1790-1871), gov. gen., 1842-44, abandoned Auckland's plans to conquer Afghanistan. Ellenborough ordered the British in the area to withdraw. In an attempt to preserve their military reputation, the British retook Kabul, Sept., and withdrew from Afghanistan in Oct., leaving a son of Shah Shuja in power. But in 1843 Dost Mohammed regained the throne of Afghanistan. He maintained friendly relations with the British until his death in 1863.

ANNEXATION OF SIND. Although a treaty of 20 Apr., 1832, between the Company and the Amirs, the rulers of Sind, provided for the preservation of Sind's independence, this treaty was set aside when the British discovered a need for Sind to provide access to Afghanistan. The Amirs were ordered to pay arrears of tribute to Shah Shuja, despite their earlier release from these obligations by the shah himself in 1833. On 11 Mar., 1839, a new treaty was forced on the Amirs. It ordered them to pay 3 lakhs a year and to enter into a subsidiary alliance with the Company.

After the Afghan War, during which, in the British view, the Amirs had taken up an unfriendly attitude, Ellenborough decided to annex part of their territory. Sir Charles Napier (1782-1853) was given the task of effecting this policy, 1 Sept., 1842. Napier offered the Amirs treaty terms, but proceeded as though these had been rejected. He seized the lands that had been demanded, and in Jan. 1843 destroyed a fortress at Imamgarh. The final defeat of the Amirs took place at Miani, 17 Feb., 1843, and they were exiled. Sind was declared annexed, 12 Mar., and Napier was appointed governor.

1ST SIKH WAR. After the death of Ranjit Singh in 1839, succession disputes raged among the Sikh chiefs. Dalip (Dalip) Singh (1837-93), a minor, was recog-

nized as paramount ruler, but the real power lay with the Khalsa army. Fear of what this army might do led the supporters of Dalip Singh to urge a war against the British. On 11 Dec., 1845, the Khalsa army crossed the Sutlej into Company territory, and on 13 Dec. Sir Henry Hardinge (1785-1856), gov. gen., 1844-48, declared war. At the Battle of Sabraon, 10 Feb., 1846, the Sikh forces were defeated.

On 9 Mar., 1846, the Treaty of Lahore was signed. By this treaty the Sikh army was limited to a specified size; Kashmir, its dependencies, and the Jallandar Doab were ceded to the British (who promptly sold Kashmir to Gulab Singh, a neutral, for a million pounds), and the Sikhs had to pay an indemnity of £500,000. Dalip Singh was recognized as maharaja, with his mother as regent. A British resident, Sir Henry Lawrence (1806-57), was sent to Lahore, and it was agreed that a British army would be stationed there until the end of 1846 to provide protection for the young maharaja.

In Dec. 1846, at the request of the Sikhs, the treaty was revised. A Council of Regency, consisting of 8 sirdars (sardars) with Lawrence as president, was to rule the Punjab, and the British forces were to remain at Lahore and be paid for by the Lahore government. The agreement was to remain in effect until the maharaja attained his majority in 1854.

1848-49

2ND SIKH WAR AND ANNEXATION OF THE PUNJAB. In 1848 several Sikh chiefs rebelled against the Lahore government. On 10 Dec. of that year Governor General Lord Dalhousie (1812-60), gov. gen., 1848-56, declared war against them. British forces crushed the Sikh army in the Battle of Gujarat, 21 Feb., 1849, and on 30 Mar. Dalhousie proclaimed the annexation of the Punjab. Dalip Singh and his mother received pensions, and were sent to England. For the next 4 years the Punjab was governed by a board consisting of Henry Lawrence as president; his brother, John Lawrence (1811-79); and Charles G. Mansel (1806-

86). In 1853 the board was abolished, and John Lawrence became chief commissioner for the Punjab.

1850-56

ADMINISTRATION OF LORD DALHOUSIE. By employing the doctrines of "paramountcy" and "lapse," Dalhousie greatly extended British administrative power in India. The doctrine of paramountcy stated that the paramount power (the Company) might interfere in the internal affairs of subordinate states if they were being misgoverned. On this pretext Mysore had been brought under direct Company administration in 1831. Now in 1856 Oudh was annexed.

The doctrine of lapse declared that, if the direct ruling line of a subordinate state failed, that state lapsed to the paramount power; the device of adopting a son so that the line might be continued could be regarded as valid only if the paramount power approved. Under this doctrine the Maratha states of Satara, Jhansi, and Nagpur and several smaller states fell to the Company. Dalhousie also abolished the "titular sovereignties" he considered obsolete; thus the titles of nawab of the Carnatic, raja of Tanjore, and peshwa were abolished on the death of their holders.

In 1854 Dalhousie had inaugurated a Public Works Department. During 1855 and 1856 there was a sharp rise in the construction of roads and irrigation channels. The postal system was reformed, and a beginning made in the construction of the Indian telegraph and railroad networks. A new general-education policy was adopted, promoting elementary education in the vernacular and higher education in English.

1857-58

THE SEPOY MUTINY. The Sepoy Mutiny, which began in 1857, mainly involved the army of the Bengal Presidency, the armies of Madras and Bombay being hardly affected. The Bengal army consisted of 151,000 men, of whom only

23,000 were Europeans. The Indian soldiers were mainly of high caste, Brahmans and Rajputs. Discipline was lax. There had been 4 mutinies within the previous 13 years. The sepoys, moreover, were nervous about possible assaults on the rules of their castes. In 1857 the army issued cartridges which had been greased with the fat of cows and pigs; such cartridges were offensive to both Hindus and Moslems, since the ends of the cartridges had to be bitten off before they could be used. At first it was denied that animal fats had been used. Later the cartridges were withdrawn.

Barrackpore, near Calcutta, was the first scene of unrest. At Meerut a group of sepoys refused to use the cartridges and were jailed. On 10 May, 1857, other sepoys at Meerut mutinied, shot their officers, released their imprisoned comrades, and set off for Delhi. At Delhi the Indian forces joined the mutineers. The city was seized, and the 82-year-old emperor, Bahadur Shah II, was restored to the dignity of sovereign ruler.

Troops in Rajputana, Gwalior, Lucknow, Cawnpore, and the United Provinces then mutinied. European officers and civilians were killed. Effective British authority ceased throughout an area from Rajputana to Bihar.

On the death of the peshwa in 1853, the Company had refused to transfer his pension to his adopted son, the Nana Sahib (1820?-1859?). In 1857, therefore, the Nana Sahib emerged as the natural leader of the mutinous troops at Cawnpore. In June the British in Cawnpore, commanded by Sir Hugh Wheeler (1789-1857), were besieged. On 26 June, Wheeler accepted the offer of a safe conduct from the Nana Sahib for his soldiers and for the British women and children in the town. The offer was then rescinded. The soldiers were murdered, and the women and children, after being held prisoner for a time, were killed.

At Lucknow, after the June mutiny, Henry Lawrence and the British forces under him had taken refuge in the Residency buildings. Early in July, Lawrence died of wounds. The remaining forces

were relieved in Nov. by a column commanded by Sir Colin Campbell (1792-1863).

In the Punjab the neutrality of the Afghans and the loyalty of the Sikhs enabled John Lawrence and his staff to crush the mutiny by disarming the rebellious regiments. Lawrence organized a column and sent it to Delhi. In Sept. Delhi was recaptured. The emperor was taken prisoner, and some 30,000 mutineers fled the city, which was then sacked and its inhabitants massacred by the victorious British troops.

On 3 Apr., 1858, Jhansi was retaken, and on 20 June Gwalior fell. The mutiny was now almost at an end. Campbell drove the remaining rebels, including the Nana Sahib, into the Nepalese borderlands. Tantia Topi, leader of the Gwalior forces, was captured and subsequently hanged. The Mughals lost their royal status, Bahadur Shah II being exiled to Burma. On 8 July, 1858, Lord Canning (1812-62), gov. gen., 1856-62, proclaimed peace, and by refusing to allow uncontrolled vengeance earned the title, at first derogatory, of "Clemency" Canning.

GOVERNMENT OF INDIA ACT. On 2 Aug., 1858, the British Parliament passed an Act for the Better Government of India. As a result of the mutiny, public opinion in Britain came to view the East India Company's rule in India as an anachronism. By the Act of 1858, the authority of the directors and of the Board of Control was transferred to a secretary of state, a member of the cabinet, responsible to Parliament. The governor general received the additional title of viceroy. To advise the secretary, a Council of India was established, consisting of 15 members, 8 appointed by the crown and 7 at first by the directors and later by the Council itself.

1859-70

INDIAN COUNCILS ACT. The 1853 Charter Act had constituted a Legislative Council for the Government of India. Before this, all legislation had been promulgated by the governor general and his Executive Council. By the Indian

Councils Act of 1 Aug., 1861, this Executive Council was reformed: a fifth member was added; the "portfolio" system, whereby members were given charge of specific departments, was introduced; and experts might be appointed to departments requiring their specialized knowledge.

Provision was made for the nomination by the governor general of from 6 to 12 additional members to the Legislative Council for 2-year terms, not less than half of them as "nonofficials." Provincial Legislative Councils were also created. Although no rule was established that the additional members of the Legislative Councils had to be Indians, the measure taken stemmed from an attempt to secure Indian representation in some form within the government. Indians were appointed to Legislative Councils at both the central and provincial levels. (*Cont. p. 329.*)

CEYLON

1760-95

THE ESTABLISHMENT OF DUTCH CONTROL. In the 16th cent. there were 3 indigenous centers of political power in Ceylon: Kotte, Kandy (Kandi), and Jaffna. Kotte in the south and southwest was the major seat of Sinhalese power. The Kotte kingdom claimed supremacy over Kandy, also a Sinhalese kingdom, but its claim was only nominal. Jaffna, the third kingdom, was a Tamil power independent of the other 2.

In 1505 the Portuguese landed at Colombo and negotiated a trade agreement with the king of Kotte. The internal struggles of Kotte brought about the political involvement of the Portuguese in the affairs of the island, and resulted in their ascendancy and the resultant disintegration of the Kotte kingdom. Portuguese power then expanded into the Jaffna kingdom, which was annexed in 1619. This left only Kandy in the central highlands and eastern coast independent of and coexisting with the Portuguese.

The ambition of the Kandyan king to expel the Portuguese led him to conclude

a trade agreement with the Dutch, and resulted in the eventual ousting of the Portuguese from the island and the conclusion of a formal treaty between the Dutch and Kandy. By the middle of the 18th cent. the Portuguese had only a few trading stations on the coast, and the Dutch had established their control over both the island's trade and its political affairs. They continued to exercise this power until 1796.

1796-1801

THE ESTABLISHMENT OF BRITISH CONTROL. The need to protect British interests in India against the French led to British involvement in Ceylonese affairs. In 1782 the British had briefly occupied the port of Trincomali, but had been driven away by a French-Dutch coalition. On 16 Feb., 1796, however, British forces expelled the Dutch from the island for good. A treaty with the king of Kandy, 12 Feb., 1796, established the British as the protectors of the Ceylonese coast, and granted them the trading privileges formerly held by the Dutch, but was not ratified in the end by Kandy.

Initially Ceylon was made a part of the Madras Presidency, but when the policies pursued by a representative of Madras provoked a general rebellion, East India Company rule was abolished and the island became a crown colony. The first governor, Frederick North (1766-1827), landed in Oct. 1798. North abolished the taxes proclaimed by his predecessor, Robert Andrews, and temporarily re-established the Dutch system of revenue collection on instructions from the Company issued 5 May.

1802-18

THE CONSOLIDATION OF BRITISH RULE. In 1802, as a result of the machinations of a court minister, a breach in relations occurred between the British and the king of Kandy. British troops seized the capital of Kandy, 20 Feb., 1803, and then withdrew, leaving a small force to protect a newly appointed

puppet king. The successful reassertion of the minister's power led to the death of the king and the massacre of the British troops, 23-24 June. In 1804 and again in 1812 the British were involved in unsuccessful attempts to overthrow the Kandyan kingdom.

In 1815 an attack by the king of Kandy, Vikrama, on a party of British merchants prompted the governor, Sir Robert Brownrigg (1759-1833), to send a retaliatory force into the interior. In the ensuing struggle Vikrama was obliged to abandon his capital, and on 14 Feb., 1815, the British took possession. The king was later captured and sent to Vellore in India, where he died in Jan. 1832.

On 2 Mar., 1815, the Kandyan Convention, by which all chiefs in the island made formal submission to the British, was signed. The governor of Ceylon now ruled Kandy through a resident at the royal court. The chiefs, however, were to retain their traditional offices and privileges. The preservation of the Buddhist religion was guaranteed, and the country was to continue to be governed according to tradition. In 1818 a final rebellion was put down by the British. Chiefly powers and privileges were curtailed, the provinces were brought more firmly under control, and British agents were appointed to the various provincial centers.

1819-70

THE COLEBROOKE REPORT. A commission headed by W. M. G. Colebrooke was appointed to report on conditions in Ceylon and make recommendation for their improvement. The Colebrooke Report of 1831-32 was the result.

The report recommended a redivision of the colony. The old racial and cultural divisions were to be abandoned, and a new and uniform political and judicial administration set up. Ceylon was to be divided into 5 provinces. The governor's advisory council was to be replaced by an Executive Council.

In Mar. 1833 a Legislative Council was established, consisting of the members of the Executive Council, plus 9 official and 6 nonofficial members; 3 of the nonoffi-

cia's were Ceylonese, nominated by the governor on a communal basis from the Sinhalese, Sinhalese-Kandyan, and Tamil populations.

ECONOMIC CHANGE. As a result of the Colebrooke Report, the traditional Rajakariya system was finally destroyed. Under this system all tenants on crown lands had had to perform compulsory services for the state. More plantation

land, too, was being opened up. In 1848, however, the sale of jungle land previously used by peasants and the imposition of new taxes led to rioting.

In the 1860's there was an increase in road construction and government-sponsored irrigation schemes, and the benefits of public works began to extend to the hitherto neglected northern and eastern parts of the island. (*Cont. p. 329.*)

Southeast Asia

BURMA

1760-94

WARS WITH SIAM AND CHINA.

Under Alaungpaya (d. 1760), Naungdawgyi (ruled 1760-63), and Hsinbyushin (ruled 1763-76), the Burmese waged successful struggles against the Siamese, besieging Ayut'ia in 1760 and in 1767. Between 1766 and 1769, they also repulsed a series of Chinese expeditions in Kengtung and across the Yunnan frontier. The victories over the Chinese, resulting in the Kaungton Treaty of 1770, restored trade and cordial Sino-Burmese relations. The wars with Siam, however, brought only defeat. Hsinbyushin died in 1776 and was succeeded by his son Singu, who was deposed by one of his uncles, Bodawpaya (ruled 1782-1819). Wars against the Siamese continued under him, and, though retaining their independence during the invasions of the 1780's, the Siamese lost Arakan in 1784-85. The 1794 revolt in Arakan brought the Burmese in contact with the British, owing to the flight of refugees north from Arakan toward Bengal.

1795-1819

SYMES MISSION. In 1795 the British sent Capt. Michael Symes (1753?-1809) on a mission to Burma to discuss the problem of the Arakanese refugees, which led to a worsening of British relations with the Burmese. The raids of refugees against the Burmese were thought to be

aided by the British, and the inactivity of the British in the Chittagong region gave the Burmese an exaggerated sense of their own strength.

1819-26

1ST BURMA WAR. Bodawpaya's successor, Bagyidaw (ruled 1819-37), sent an army to occupy Assam and Manipur, and made preparations for an attack on Chittagong and Bengal. This resulted in the 1st Burma War of 1824-26. The British attacked the weakest part of the kingdom by sea and were victorious. The Company acquired by the Treaty of Yandabo, 24 Feb., 1826, Arakan, Assam, Manipur, and the Tenasserim provinces, while the Burmese kept upper and central Burma, Pegu, and the mouths of the Irrawaddy River.

1826-39

BURMESE ISOLATIONISM. Defeat by the British dealt a tremendous blow to the pride of the dynasty and encouraged resentment of and isolation from the changing world around it. Placing a resident at the court, the British hoped, would give the Burmese a chance to restore good relations with the outside world, but the opposite resulted. Until Maj. Henry Burney (1792-1845) arrived in 1830, there were no firm negotiations. Burney achieved some success, but his health was bad, and he left Burma in 1834. In 1837, Bagyidaw was deposed by

his brother, Tharrawaddy (ruled 1836-46), who repudiated the Treaty of Yandabo. Burney's last replacement, Capt. William McLeod, left the court at Ava in 1839.

1839-53

2ND BURMA WAR. Tharrawaddy died in 1846, and the atrocities of his successor, Pagan Min (ruled 1846-53), caused an almost complete breakdown in central authority. The attitude of the court was reflected in the actions of the local officials who dealt with British traders in Rangoon. In judging these activities, Governor General Dalhousie's concern was to maintain British prestige. This led to the 2nd Burma War in 1852, and the annexation of Pegu and a year later of 'Toungoo. The new Burmese king, Mindon Min (ruled 1853-78), refused to recognize these acquisitions, since they meant the loss to Burma of its entire coastline, of a province disputed for centuries, and of considerable face. The king of Burma would never willingly sign away territory to a foreign power.

1853-70

BURMESE-BRITISH RELATIONS. Pegu was administered by a commissioner appointed by the governor general. The other administrators came primarily from the Indian service, and so the Indian model tended to be followed. In 1862, Arakan, Tenasserim, and Pegu were consolidated into British Burma, with Rangoon as the capital. Mindon Min created a new capital at Mandalay, and sought better relations with the British even during the Sepoy Mutiny of 1857. He agreed to commercial treaties in 1862 and 1867 to implement British trade with China up the Irrawaddy River. Relations with the British deteriorated in the latter part of his reign because (1) royal monopolies hindered traders in Rangoon, and (2) the king tried to assert his independence by developing relations with other European powers. (*Cont. p. 347.*)

INDOCHINA

1760-73

RELATIONS WITH SIAM. With the death of King Alaungpaya of Burma, 1760, Vietnamese expansion reached a turning point. In 1767, Mac Thieu Tu unwisely supported a pretender to the Siamese throne. The wrath of P'ya Taksin of Siam destroyed Ha-tien, and Taksin was soon supporting his own claimant at Phnom Penh. The Vietnamese retaliated by invading Cambodia and reinstalling Ang Tong on the Cambodian throne. In 1773, however, Ang Tong abdicated in favor of the Siamese choice, Ang Mon. Mac Thieu Tu made peace with Taksin and both withdrew from Cambodia to prepare for another round.

1773-77

TAY-SON REVOLT. In 1773, however, a rebellion began in the Tay-son district led by Nguyen Van Nhac, Nguyen Van-Lu, and Nguyen Van-Hué, 3 brothers unrelated to the ruling dynasty, who were incensed at the greed of the regent, Truong-Phuc-Loan. In 1774, the Trinh invaded from Tongking, and the following year seized Hué. Trinh Sum's avowed intention was to help the Nguyen, but he did little beyond occupying Hué. Van-Nhac attempted to seize Hué, but failed. In 1776, Van-Lu had captured and then lost Saigon to Mac Thieu Tu who was aiding the Nguyen cause. By 1777, the Tay-son rebels had killed all but one of the Nguyen. The survivor, Nguyen Phuc-Anh (1762-1820), was aided in his escape by a French priest.

1777-87

RISE OF NGUYEN ANH. After the main part of the Tay-son army had left Saigon, Nguyen Anh returned to the city and with his supporters gained possession. In 1779, Do Thanh-Nhon, a supporter of Anh, successfully aided the Cambodians in replacing Ang Mon with

Ang Eng on the Cambodia throne. The next year Siam predictably invaded Phnom Penh, but the armies were withdrawn in 1781. By senselessly having Do Thanh-Nhon killed, Nguyen Anh lost many supporters, as well as Saigon once again to the Tay-son rebels. The brothers then divided Annam, Tongking, and Cochin China among themselves.

1787-1820

THE EMPIRE OF VIETNAM. In 1787, Nguyen Anh asked for French aid, which helped him retain Saigon the next year. Not until 1801 did the Nguyen forces finally capture the northern province of Annam. By July 1802, Anh had regained Tongking, assuming the title Gia-Long, emperor of Vietnam (ruled 1802-20). He then turned his attention to internal reconstruction.

1820-41

REIGN OF MINH-MANG. Minh-Mang (ruled 1820-40) succeeded Gia-Long. He refused in 1825, 1827, and 1831 to enter into commercial treaties with France, and in 1826 broke off diplomatic relations. He also began persecuting Christians, reversing his father's policy. In the late 1830's, he seems to have become aware that British and French activities in Southeast Asia made his isolationism very dangerous. However, he died in Jan. 1841, and Thieu-Tri (ruled 1841-47) followed Minh-Mang's earlier policies.

1841-48

FRENCH ATTACK ON TOURANE. In Feb. 1843, a French ship secured the release of 5 condemned missionaries in Hué. This happened again later in that year and in 1845. In 1847, the French sent 2 ships to Tourane to demand extraterritorial privileges for French nationals. Thieu-Tri attempted to trick the French captains, kill them, and burn their ships, but the plot failed and many Vietnamese vessels were burned in the fight before the French left.

1848-62

FRENCH ANNEXATION OF COCHIN CHINA. The Emperor Tu-Duc (ruled 1848-83) was more isolationist than his 2 predecessors. He ordered the violent destruction of all Christian settlements, and the banishment of all converts. Thousands of people died, victims of mistreatment. In 1851-52, 2 French missionaries were killed. The ignoring of a French protest led to a more violent assault on Tourane than before. Another French missionary was killed in 1856, as was the Spanish bishop of Tongking in the following year, providing pretexts for French and Spanish annexation attempts. After a British and French force took Canton early in 1858, a combined Spanish and French fleet reached Tourane, 31 Aug., 1858, and landed an occupation force. The fleeing Annamese had taken all food and supplies, however, and Tourane had to be abandoned. Saigon was captured in Feb. 1859, but nothing further was done until Peking was taken in Oct. 1860. By Nov. 1861, the French controlled the whole of lower Cochin China. The following May, Tu-Duc asked for terms. On 5 June, 1862, a treaty was signed by which (1) the 3 eastern provinces of Cochin China were ceded to France, (2) Tu-Duc was to pay an indemnity over 10 years, (3) the Catholic religion was to be tolerated, and (4) the ports of Tourane, Balat, and Kuang-An were to be opened to French trade. In Dec. 1862 a series of revolts erupted after Vietnamese mandarins had replaced French residents in the administration. Because of this, Tu-Duc refused ratification of the treaty, and had to be pressured by threats of aid to the Tongking rebels.

1863-70

STRUGGLE FOR CAMBODIA. The French governor, Adm. Pierre de La-grandière (1807-76), decided to extend French influence in Cambodia, and King Norodom placed his kingdom under French protection, 17 Apr., 1864. Siamese

influence was retained somewhat when Mongkut insisted that Norodom be crowned by both Siam and France. But in 1867 Siam gave up all claims to Cambodian suzerainty in exchange for the provinces of Battambang and Angkor. (*Cont. p. 349.*)

SIAM (THAILAND)

1760-82

REIGN OF P'YA TAKSIN. From 1768 to Sept. 1776, P'ya Taksin was the leader of the Siamese forces struggling against a series of invading Burmese armies, and had to deal with revolts within his kingdom. The strain of these campaigns obliged him to transfer much of his power to a subordinate, Gen. Chakri. In 1781, a rebellion in favor of Chakri deposed Taksin, and in 1782, Taksin was killed, Chakri becoming King Rama I (ruled 1782-1809).

1782-1809

REIGN OF RAMA I. Rama I succeeded in maintaining Siam's independence against the incursions of the new Burmese ruler, Bodawpaya. He did not reply in kind when the Burmese king invaded in 1785, but concentrated on internal affairs. He founded modern Bangkok, and so strengthened his hold on Menam, the central part of the kingdom, that he was not beset by the rebellions and civil wars that plagued his neighbors. In fact, domestic strife in Burma and Indochina gave him a chance to extend Siam's area of control. The Tay-son rebellion in Vietnam strengthened Siam in Cambodia because the young king Ang Eng was a refugee in Bangkok. Rama restored him to his throne with Siamese influence as the price. In 1802, however, with the creation by Gia-Long of a Vietnamese empire, Cambodia sent tribute to both Bangkok and Hué, and Rama I forbore to interfere.

1809-21

REIGN OF RAMA II. In 1812, Rama II (ruled 1809-24) unsuccessfully supported

a brother of the Cambodian king Ang Chan, and Siamese influence waned. Two years later, however, a Siamese army occupied a large slice of territory in northern Cambodia, and in 1828 absorbed the kingdom of Vientiane.

The other major foreign problem of Rama II's reign concerned the sultan of Kedah, whom the Siamese had not forgiven for ceding Penang, 1786, and Province Wellesley, 1800, to the British. In 1821, a Siamese invasion forced the sultan to flee to Penang.

1821-50

THE BRITISH AND SIAM'S EXTERNAL TRADE. By the efforts of her leaders, Siam had remained independent, and British policies had supported these efforts. In the early 19th cent., Britain was unwilling to extend her commitments to the mainland of Southeast Asia, particularly since a number of the states involved were vassals of China, the source of the East India Company's tea. The British were hesitant about sending missions to Bangkok, fearing that Siamese suspicion of the Company's intentions might produce not the hoped-for commercial advantages but an incident leading to violence. The mission of John Crawford (1783-1868) in 1822 produced neither concessions nor incidents.

Rama III (ruled 1824-51) was also highly suspicious of British intentions. He refused to join Britain in the war with Burma, but did sign a commercial treaty, 20 June, 1826, with Capt. Henry Burney (1792-1845).

Altered conditions in the 1840's, especially Siam's re-establishment of state commercial monopolies and the end of the East India Company's monopoly of trade with China, resulted in a change in British policy. In 1819, Sir James Brooke (1803-68) was rebuffed in his attempt to negotiate a new commercial treaty. He recommended a decisive move to secure British influence by deposing Rama III and replacing him with Prince Mongkut. However, desiring peace with Siam, the British government decided against these moves.

1851-70

THE BOWRING TREATY. In 1851, Rama III died and Mongkut became Rama IV. On 18 Apr., 1855, Sir John Bowring (1792-1872) was able to negotiate for the British a Treaty of Friendship and Commerce which (1) established 3% customs duties, (2) permitted the import of opium, (3) allowed British subjects to purchase or rent land near the capital, (4) established a system of extra-territoriality, and (5) permitted a British consul to exercise civil and criminal jurisdiction over British subjects in Siam. Soon treaties were made with France, the U.S., Denmark, Portugal, Holland, and Prussia, inaugurating substantial commercial involvement in, and development of, Siam by Europeans. Siam's independence was, however, maintained. Mongkut died in 1868. His son, Chulalongkorn, became Rama V (ruled 1873-1910), but the country was ruled by a regency until he attained his majority in 1873. (*Cont. p. 354.*)

THE MALAY PENINSULA

1760-1819

EXPANSION OF JOHORE. In 1760 the power of the Sultanate of Johore began to revive. Its ruler demanded and received homage from the sultan of Perak, but the sultan of Kedah refused the same demand, and was deposed and exiled. In 1771, the English East India Company declined to guarantee the independence of Kedah, when it learned that this meant military aid. Raja Haji of Johore and his brother, the sultan of Selangor, thus gained control of Kedah and its trade. Johore at this time was strongly under the influence of Bugis seafarers from Celebes.

DUTCH-JOHORE RELATIONS. Johore maintained good relations with the Dutch until 1782, when Bugis pirates began to raid in the Malacca Straits. In 1783, Raja Haji besieged Malacca at a time of Dutch weakness, but the Dutch broke the siege in June 1784. In Aug. the Dutch expelled the Bugis from Selangor,

and in Oct. from Riau, where a resident was established in June 1785. By 1787, however, the Bugis had recovered Selangor. When Dutch power in the East Indies declined following the outbreak of war in Europe, the Bugis were able to regain control of Riau, Raja Ali displacing the rightful ruler, Tengku Hussein.

PENANG AND SINGAPORE. In 1784, Capt. Francis Light (1740-94) suggested that the English East India Company acquire the island of Penang as a naval base. Penang was accordingly occupied, 11 Aug., 1786, by agreement with the sultan of Kedah, and on 7 July, 1800, a stretch of territory on the mainland (Province Wellesley) was also obtained. On 28 Jan. 1819, Thomas Stamford Raffles (1781-1826) and R. J. Farquhar landed on the island of Singapore. Raffles acquired the island for the East India Company by recognizing Tengku Hussein as sultan of Johore and having him sign a treaty, 6 Feb., 1819.

1820-70

TREATY OF 1824. Singapore grew at a rapid rate and by 1820 was paying its own way. On 2 Aug., 1824, Sultan Hussein allowed it to be alienated permanently in return for a large sum immediately and a pension for life. On 17 Mar. of that year, the British and the Dutch had signed an agreement (Treaty of London) which defined their separate spheres of influence in the Malay Archipelago. Commercial clauses bound the 2 countries to respect each other's trade in India, Ceylon, and the East Indies, and both countries agreed to work to suppress piracy. Malacca became British. In essence, the British now held the Peninsula, and the Dutch the Archipelago. Penang in the north and Singapore in the south grew rapidly in commercial importance, while the Malay mainland remained undeveloped. On 1 Aug., 1826, the administration of Malacca and Singapore was combined with that of Penang and Province Wellesley to form the Straits Settlements. In 1832 Singapore became their capital.

SIAM AND THE MALAY STATES. During this period Britain did not interfere in the internal affairs of the Malay

states, but" there was considerable commercial penetration, by both Chinese and European merchants, from the Straits Settlements. Siam also, having recovered from her 18th-cent. wars, began to assert her ancient claims to the Peninsula. In 1821, the sultan of Kedah was forced to flee to Penang when his refusal to go to Bangkok resulted in Siamese devastation of his land. John Crawfurd was sent by the British to Bangkok to negotiate about Kedah because food from that state was necessary to Penang's survival, but his mission failed, 1822. On 31 July, 1825, Capt. Henry Burney negotiated a treaty with the raja of Ligor to prevent him from attacking the sultans of Perak and Selangor. In return the British promised not to interfere in Kedah. Burney was then sent to Siam, where he negotiated a treaty, 20 June, 1826, preserving the *status quo*, except that Britain gained somewhat favorable trade conditions, and the sultan of Kedah was removed to Malacca. When Siam disregarded the treaty and threatened Perak, Capt. James Low made a treaty with the sultan of Perak, 18 Oct., 1826, guaranteeing British protection, and though the government of India never ratified it, its provisions were honored in 1844, 1853, and 1874. Siam then put pressure on Trengganu and Kelantan, but was finally rebuffed in her efforts to gain control.

On 1 Apr., 1867, the Straits Settlements were transferred from the India Office to the Colonial Office. This pleased many who favored a policy of direct intervention in the Malay states. (*Cont. p. 346.*)

NETHERLANDS EAST INDIES

1760-1811

DECLINE OF THE NETHERLANDS, EAST INDIA COMPANY. In 1760 the Netherlands East India Company ruled Java and dominated the seaways and coastlines of the Indonesian Archipelago. The Company's monopoly policies were causing poverty and retarding economic progress, and it had ceased to make annual profits. Made bankrupt by the disruption of trade caused by the Anglo-

Dutch War of 1780-84, it was allowed to expire on 31 Dec., 1799.

RULE OF H. W. DAENDELS. By this time the status of Dutch possessions in the East Indies had changed. On the establishment of the Batavian Republic in 1795, Stadholder Willem V, the nominal sovereign of Dutch possessions overseas, escaped from the Netherlands to England and ordered officials of the Company to surrender its possessions to his ally, the British, on demand. This led to the transfer of Malacca, Amboina, Banda, and forts on the west coast of Sumatra to the English East India Company. After the setting up of the Kingdom of Holland under Louis Bonaparte, 1806, Herman Willem Daendels (1762-1818) was sent out to Java to prevent that island too from falling to a British attack. Daendels' reorganization of the administration did much to improve efficiency and he was able to reduce corruption, but his authoritarian handling of the Javanese earned him their dislike. When the expected British assault came, 4 Aug., 1811, therefore, the Javanese did not rise to the defense of their Franco-Dutch masters. The island surrendered on 17 Sept., and Thomas Stamford Raffles became its lieutenant gov.

1811-16

THE BRITISH INTERREGNUM. Raffles established British authority and then proceeded to effect administrative reforms. By making the government the owner of the soil and then imposing a general tax on land, he hoped to abolish forced labor. For lack of revenue, however, compulsory services continued to be exacted, particularly in coffee-producing areas, and Raffles' innovations did not bring the desired results. Some of his liberalizing measures nevertheless continued in force when Java was restored to the new Kingdom of the Netherlands on 19 Aug., 1816.

1817-70

THE CULTURE SYSTEM. For a decade the Dutch sought by a variety of means to

make the Netherlands East Indies profitable again. They were hindered by their own indecision about which policy to pursue and by the ravages of the Java War, 1825-30. It was not until the appointment of Johannes van den Bosch (1780-1844) gov. gen., 1830-33, that the tide turned. Van den Bosch instituted the Culture (Cultivation) System, by which the peasants of Java were required to grow export crops (sugar, coffee, indigo, tea, cotton, pepper, cinnamon, and cochineal) as directed by, and for the benefit of, the government. The system was a huge financial success, but resulted in great hardship for the Javanese. During the 1850's and 1860's it was gradually abandoned in favor of export agriculture organized on the basis of free capitalist enterprise. (*Cont. p. 344.*)

PHILIPPINES

1760-1806

BRITISH OCCUPATION OF MANILA.

The Philippine Islands had been ruled by Spain since the 16th cent., though the whole archipelago had not been brought under Spanish control. On 6 Oct., 1762, a British force captured and occupied Manila. At the same time, a serious Filipino rising occurred in the Ilokano section of Luzon, posing a considerable threat to the Spanish government. The British occupation lasted until June 1764, without extension of British influence far outside Manila. The Treaty of Paris, 10 Feb., 1763, provided for a British withdrawal.

CLERICAL REFORMS. On the accession of King Carlos III, a series of reforms were instituted for the Philippines. The first of these involved restrictions on the clergy, beginning with the expulsion of the Jesuits in 1768. In 1770, the privileged position of friars was attacked by Simón de Anda, (1709-76), gov., 1770-76, with the support of the archbishop of Manila. Their objects were (1) to secularize the properties of the religious orders and (2) to reassert the powers of visitation over parishes by the archbishop. Royal sanction was given for these re-

forms in 1774, but the attempt was abandoned when Anda died in 1776.

ECONOMIC REFORMS. To make the Philippines economically self-sufficient, José Basco y Vargas (gov., 1778-87) proposed in 1778 measures to improve agriculture, industry, and trade. In 1781 he set up the Economic Society of Friends of the Country, which later established an agricultural school in Manila. In 1785 the Royal Company of the Philippines was formed to direct trade away from overburdened Acapulco (Mexico) and toward Spain by encouraging the use of the route west around Africa. In 1789, Manila became an open port for Asian goods.

1807-50

EARLY 19TH-CENT. DECLINE. After the disintegration of Spain's empire in America, Manila had to direct its trade toward Europe. In 1811, the last Spanish galleon left Manila for Acapulco and 4 years later the last ship from Acapulco arrived in Manila. Soon British and American ships outnumbered Spanish and Chinese. Peninsular Spaniards arrived to engage in private trade, bringing with them new ideas. By 1840, a number of Spanish commercial companies had been formed in Manila. But in 1842, the Treaty of Nanking between Britain and China opened 5 new ports on the South China coast. By 1850 Manila was nearly bankrupt. Economic deterioration was accompanied by social and moral decline as well. The large numbers of regular clergy who entered the Philippines in the 1820's and 1830's had a profound impact on this decadent society. Some of these clergy were Jesuits returning to their former endeavors on the Mindanao frontier; others were refugees from the suppression of certain monasteries in Spain, 1835. The rivalries of Spanish and Filipino clergy flared up again.

COMPETITION FOR THE SOUTHERN ISLANDS. Spanish influence in the southern islands, which were mainly Moslem, had never been strong. The French became interested in the Sulu Archipelago in 1844. This obliged the Philippine gov-

ernment to conduct an expensive holding operation there until 1878, when the sultan of Sulu acknowledged Spanish overlordship, 22 July.

CLERGY-INSPIRED REBELLIONS.

The 1st of a series of Filipino clergy-led rebellions occurred in 1843, resulting from resentment against over-all Spanish discriminatory practices and the lack of educational and professional opportunities for Filipinos. The clerical establishment was attacked on moral, racial, economic, and social grounds by the Filipino clergy; by 2 newspapers, *El Diario de Manila* and *El Comercio* (founded in 1848 and 1850, respectively); and by Father Peláez and Father Opolinario de la Cruz. The latter formed his own order

in 1841, the *Colorum*, which denied membership to both Spaniards and mestizos. Though not originally or primarily political, the *Colorum* became so, and Father Opolinario was its first martyr. This led other rebels to use its name.

1851-70

RISE OF NATIONALISM. Nationalist sentiment and unrest built up during the period between 1850 and 1870, but gained real momentum after the opening of the Suez Canal, 1869, which brought the Philippines much closer to the rest of the world, and after the revolution of the same year, which exiled Queen Isabella II of Spain. (*Cont. p. 350*)

Central Asia

AFGHANISTAN

1760-1808

AFGHANISTAN IN 1760. Following centuries of dominance by Persia and India, an independent Afghan state was established under Ahmad Shah (ruled 1747-73), founder of the Durrani (Dur-rānī) dynasty. Between 1748 and 1767 the Afghans invaded India 9 times, defeating Mughal, Maratha, and Sikh armies, and gaining temporary control over the Punjab and Kashmir. At the Battle of Panipat, 14 Jan., 1761, which marks the high point of Afghan power in India, they permanently checked Maratha ambitions to rule the subcontinent.

AFGHAN PRESSURE ON INDIA. On the death of Ahmad Shah, his son Timur (Timūr) Mirza (Timur Shah, ruled 1773-93) succeeded to the throne, and moved the capital from Kandahar to Kabul. In 1774, 1779, 1780, 1785, and 1788, Timur invaded India in reaction against military challenge from the Sikhs.

Zaman (Zamān) Shah (ruled 1793-99), son of Timur Shah, tried to centralize all power in his own hands. His efforts led to constant domestic discord.

Mahmud (Mahmūd) Shah (ruled 1799-

1803, 1809-19) overthrew his half-brother, Zaman Shah; quelled a Ghulzai tribal uprising, 1801; and made successful war on the Uzbeks, 1802.

On 29 Dec., 1800, the British signed a treaty with Persia containing a clause requiring Persia to discourage Afghan incursions into India. In 1803 a revolt dethroned Mahmud Shah, and he was succeeded, amidst dynastic struggles, by Shah Shuja (Shujā) (ruled 1803-9)

1809-34

TREATY WITH BRITISH. The first official mission to Afghanistan sent by a European power was led by Mountstuart Elphinstone (English East India Company). A treaty was negotiated, 12 Mar., 1809, providing for Afghan aid to the British in case of an invasion of India by the French. In the same year Mahmud Shah returned to power after overthrowing Shah Shuja, who in turn made numerous efforts to regain his throne, only abandoning them in 1813.

AFGHAN CIVIL WAR. In 1813, Mahmud Shah turned over real power to Fath Khan, who in 1818 was blinded on Mahmud's orders. This act touched off a

civil war between the ruling Durrani dynasty (Saddozais) and the supporters of Fath 'Khar' (Mohammedzais). The war lasted from 1819 to 1835 and ended with the fall of the Durrani dynasty.

In 1819, the Sikhs conquered Kashmir, and in Mar. 1823 defeated the Afghans in the Battle of Nowshera. Between 1824 and 1826, Dost Mohammed (Muhammad) Khan, the youngest of the Barakzai (Barakzāi) brothers (Mohammedzais), gained control of Kabul and Ghazni. In 1833 the Persians unsuccessfully attacked Herat, and Shah Shuja, with British aid, invaded Afghanistan from India. He laid siege to Kandahar in 1834; where on 29 Jan. Dost Mohammed, aided by a British assurance of noninterference, defeated Shah Shuja. Meanwhile the Sikhs occupied Peshawar, and extended their rule to the mouth of the Khyber Pass. By 1835, Dost Mohammed was strong enough to establish the Mohammedzai dynasty.

1835-55

DOST MOHAMMED AND THE BRITISH. Dost Mohammed Khan (ruled 1835-39, 1842-63) was crowned Commander of the Faithful (Amir al-Mu'minin) in 1837. He defeated the Sikhs at the Battle of Jamrud, but failed to regain Peshawar. With British approval, a Russian commercial agent, Capt. Vitkevich, settled at Kabul. Also at this time, the Persians demanded control of Herat.

On 26 June, 1838, the British, Sikhs, and Shah Shuja signed the "Tripartite Treaty." By this agreement Shah Shuja relinquished Afghan claims to Sikh-held territory, and, in return, the Sikhs and British promised to provide military support for Shah Shuja's efforts to regain the Afghan throne. On 1 Oct., Lord Auckland, viceroy of India, issued the Simla Manifesto, in which he justified the use of British military forces under the command of Sir Willoughby Cotton (1783-1860) in the struggle between Shah Shuja and Dost Mohammed Khan.

1ST ANGLO-AFGHAN WAR. On 24 Apr., 1839, Kandahar was captured by the British. On 6 Aug., Shah Shuja

entered Kabul and mounted the throne as a British puppet. During his reign the British controlled foreign, military, and tribal affairs. Dost Mohammed Khan surrendered on 12 Nov., 1840, and went into exile in India. On 2 Nov., 1841, a British agent, Alexander Burns, was killed by the Afghans during an insurrection in Kabul. On 25 Nov. negotiations began for a British withdrawal, and on 11 Dec. a treaty between the British and the insurgent Afghan chiefs was signed, by which the British agreed to leave Afghanistan.

The British evacuated Kabul, 6 Jan., 1842, but during their march south were repeatedly attacked. This led Lord Ellenborough, viceroy of India, to decide to take retaliatory action, 15 May. On 5 Apr., Shah Shuja was killed. On 16 Sept., the British destroyed Kabul and massacred the refugees from there who had fled to Istalif. The British army finally departed from Afghanistan beginning 12 Oct., demolishing Jalalabad on its way out, but before it reached India it was decimated in the Khyber Pass. Only 1 Englishman of the main column survived. The Anglo-Afghan War caused long-term Afghan xenophobia and deep anti-Christian sentiment. In Jan. 1843, Dost Mohammed Khan returned to Afghanistan and regained his throne at Kabul.

IMPROVEMENT IN ANGLO-AFGHAN RELATIONS. In 1848, war having broken out between the British and the Sikhs, the Sikhs ceded Peshawar to the Afghans in return for Afghanistan's aid against the British. On 21 Feb., 1849, the British defeated both Afghans and Sikhs at the Battle of Gujarat, and took over Peshawar. Beginning in 1850, Dost Mohammed Khan reconquered Balkh, Khulm, Kunduz, Badakhshan, and in 1855 regained control of Kandahar. On 30 Mar., 1855, he signed a 3-point treaty with the British providing mutual guarantees of territorial integrity.

1856-70

REPULSE OF PERSIAN THREAT. In Oct. 1856, the Persians seized Herat,

and on 26 Jan., 1857, Dost Mohammed signed a 2nd Anglo-Afghan treaty, confirming the treaty of 1855. The new treaty included a British promise of aid in case of attack on Afghanistan, and the Afghans in turn agreed to allow British officers into their territory for the duration of the Anglo-Persian War. For the rest of his reign Dost Mohammed maintained amicable relations with the British.

DYNASTIC STRUGGLES. Shortly before his death in May 1863, Dost Mohammed had entered Herat and re-established the boundaries of his kingdom. When he died, Shere Ali (Shēr 'Alī) Khan (ruled 1863-67, 1869-79) ascended the throne. Between 1864 and 1865, he had to deal with serious revolts by his brothers. In July 1865, Abd-ar-Rahman ('Abd-ar-Rahmān) Khan led a further revolt; by 24 Feb., 1866, he had occupied Kabul, and on 9 May he defeated the army of Shere Ali Khan at the Battle of Sheikhabad. This loss was followed by another defeat, Jan. 1867, at the Battle of Kalat-i-Ghilzai, and yet another one in Sept. Following these losses, Atzal Khan (ruled 1867-68) became amir, only to die soon afterward. He was succeeded by Azim Khan (ruled 1868-69). In 1869, however, Shere Ali Khan regained the throne, and Abd-ar-Rahman Khan fled from Afghanistan to seek refuge in Russia.

SINKIANG

1760-1824

ESTABLISHMENT OF CHINESE RULE. By 1760 the Ch'ing Empire of China had smashed the power of the western Mongols in the Ili Valley. From this conquest a new province called Sinkiang (New Dominion) was created by uniting Dzungaria and the Tarim Basin. Criminals and political dissenters were exiled to this area. In 1759-60 the Khaja rulers were driven out of the oases of Yarkand and Kashgar as the conquest of the region was consolidated. In 1776 an imperial edict promised a subsidy to Chinese peasants who would settle in Sinkiang.

1825-59

MOSLEM REVOLTS. The 2nd quarter of the 19th cent. was marked by a series of Moslem rebellions in Sinkiang. In 1826-27 Khokand aided one of the Khojas (Jehangir) to launch a holy war against the Ch'ing, who responded by invading Kashgaria. In 1830 another rebellion broke out, but was quickly suppressed. In 1851 the Ch'ing and Russians signed the Kuldja Convention, which gave the Russians greater freedom of trade at Kuldja, in the upper Ili Valley, and also at Tarbagatai, and awarded them the right to station a consul at Kuldja. Another abortive Moslem uprising took place in 1857. In the same year the Russians, Valikhanov, and Semanov, explored Kashgar and the T'ien Shan area.

1860-70

TREATY OF PEKING. On 2 Nov., 1860, the Treaty of Peking was signed, the 1st of a series of agreements by which China and Russia delimited the frontier between Sinkiang and Russian Turkestan. The treaty also gave Russia the right to place a consul at Kashgar.

REVOLT OF YAKUB BEG. In 1864 the warrior-leader, Yakub Beg (1820-77), appeared in Sinkiang as chief of staff of an army recruited by a descendant of the former Khoja ruling house of Kashgar who wished to re-establish Khoja power. The following year this army captured Kashgar and Yarkand. Yakub Beg soon replaced the Khoja leader and reconquered eastern Turkestan by seizing Aksu, Khotan, and Urumchi. In 1866, Ili tribesmen set up an independent Moslem state. This was followed by a rising by Dzungari tribes who gained control of Sinkiang, overran Kansu province, and penetrated into Shensi and Hopei provinces in China proper. By the late 1860's Beg had gained political and military control of the whole of Sinkiang. His territory became the prize of Chinese, Russian, Turkish, and British rivalries, but he was eventually conquered by a Chinese army in 1877.

СТЕПЕ AND DESERT LANDS

1760-1820

TURKESTAN IN 1760. By the mid-18th cent. the lands of the Central Asian nomads had been divided from those of Russia by a line of forts running from the mouth of the Or to the upper Irtysh, and controlled from Orenburg. The Russians felt the need to protect their territories against possible movements of population resulting from the Chinese advance into Sinkiang. The largest states of the area were Khiva, Bokhara, and Khokand.

EDUCATIONAL POLICY. The charter of religious toleration issued by Catherine II in 1785 led to the opening of schools for the Kirghiz peoples and to the publication of books in the vernacular. Islam advanced in the region at the expense of shamanism.

1820-70

RELATIONS WITH KHIVA. In 1824, attempts were made to protect trade caravans from the attacks of Khivan marauders. The policy failed, however, and in 1839 a military expedition, commanded by Gen. Count Perovski (1794-1857), gov. gen. of Orenburg, was sent against Khiva. By a treaty signed in 1842 the Khivans agreed to refrain from attacks on Russians and to stop selling prisoners of war into slavery.

CONTROL OF THE ARAL SEA. In

1847 a Russian force penetrated to the Syr Darya River close to where it empties into the Aral Sea. The fortress of Aralsk was built at this place, and Russian gunboats began patrolling the waters. Incursions by Khokandians led to a 2nd military expedition under Perovski and to the capture of the fort of Ak Masjid (later, Petrovsk) in 1853. The occupation of the Lake Balkash basin followed, and the line of frontier forts was extended from the Irtysh to Semirechie.

CONQUEST OF TURKESTAN. Turkestan was valuable to Russia as a consumer of manufactured goods and as a producer of raw cotton for the Russian textile industry. It was of strategic importance, since the Ili Valley in the east provided access to and from the Gobi Desert and China. Trade in the region could not flourish until the nomads of the desert had been brought under control. For these reasons Czar Alexander II authorized the conquest of Turkestan.

Military operations began in 1860. Tashkent was taken on 26 June, 1865, and the amir of Bokhara declared holy war. He was defeated after heavy fighting and had to surrender his main stronghold of Khodjent. In 1866 the governor-generalship of Turkestan was created. Failure by Bokhara to pay an agreed indemnity led to renewed hostilities and the capture of Samarkand. By treaty, 5 July, 1868, the amir recognized the czar as his suzerain and Bokhara and Khokand were added to the Russian Empire. The submission of Khiva followed, 24 Aug., 1873.

Middle East and North Africa

PERSIA

1760-1801

PERSIA IN 1760. Between A.D. 636 and 651, Arab invaders ended the Sassanian Empire of Persia (226-651), and Islam soon replaced Zoroastrianism as the dominant Persian religion. The country was subsequently ruled by the Arab caliphates of Medina, Damascus, and Baghdad, various regional dynasties, Turkish, Mongol,

and Turcoman dynasties from the 11th to the 15th cents. In c. 1500 the Safavi dynasty was established, the first national dynasty to rule all Persia in nearly 8 centuries. Although only a minority of Persians adhered to the heterodox Shiite (Shi'a) doctrines of Islam, the Safavis made Shia Islam the official state religion. The foremost Safavi emperor, Shah Abbas ('Abbās) the Great (1587-1629), reunited the ancient domains of

Sassanian Persia, including Christian Georgia and Armenia. When the Safavi dynasty ended in 1722, its territories were largely dismembered. The Persia of Shah Abbas was reunited, however, under Nadir (Nâdir) Shah, a former Safavi officer, who ruled the country from 1736 to 1747.

ESTABLISHMENT OF THE ZAND DYNASTY. From 1747, when Nadir Shah died, Persia underwent a period of anarchy. Princes and ex-officers fought for supreme authority from their various bases of power. Karim (Karīm) Khan (ruled 1751-79), of the Zand tribe, defeated all other contenders, and reunited almost all of Persia under one rule. His capital was Shiraz, where he had been governor.

ENGLISH EAST INDIA COMPANY AT BUSHIRE. The East India Company had been trading in Persia since 1616, but the privileges it had gained lapsed after the fall of the Safavi dynasty. On 2 July, 1763, however, Karim Khan, hoping to stimulate commerce in his domains, re-awarded the Company its former privileges and extended them. He also authorized it to build and fortify a factory at Bushire. During the 19th cent. this port became the headquarters of Britain's political and commercial activity in the Persian Gulf area.

ESTABLISHMENT OF THE QAJAR DYNASTY. In 1779 Karim Khan died. Civil war again ensued, regional governors vying for supreme power. In 1785, Aga Mohammed (Āghā Muhammad), head of a Turcoman tribe, the Qajars (Qājars), which held sway in the Caspian area, emerged as the ruler of Persia. He made Teheran his capital.

TREATY WITH BRITAIN. In 1798, Napoleon revealed his intention of striking at Britain in India, and invaded Egypt as a first step. Persia thus became an area of strategic interest to Britain (1) because Napoleon might send an expedition into India via Persia, and (2) because Afghanistan was threatening to attack the Punjab. The dispatch of Capt. John Malcolm (1769-1833) to Teheran led to an Anglo-Persian treaty of alliance, 28 Jan., 1801 (never ratified), by which Persia promised to exclude any French military or diplomatic presence from her

territory and to restrain Afghanistan from attacking India. Britain undertook to supply arms and military advisers in the event of Afghan or French attacks on Persia. This treaty marked the beginning of British political interest in Persia.

1802-20

WAR WITH RUSSIA. In 1801, Russia annexed the predominantly Christian Georgia under an agreement with its titular monarch and began occupying the independent khanates. Georgia, with short interruptions, had been a tributary of Persia since the 16th cent. In 1801, when a Russian force entered Georgia to take control, an 8-year Russo-Persian war broke out.*

TREATY OF FINKENSTEIN. Persia requested aid in her war with Russia from Britain, but the British, unwilling to antagonize Russia, their natural ally against Napoleon, refused. Fath Ali ('Alī) Shah (ruled 1797-1834) therefore turned to France, which had been seeking an understanding with him since 1802. He sent an envoy to Finkenstein, Poland (Napoleon's temporary headquarters), and a treaty of alliance was signed there, 4 May, 1807. Napoleon recognized Georgia as Persia's possession, and undertook to supply arms and engineers, infantry, and artillery officers to the Persian army. Persia agreed to declare war on Britain and attack India. Although a French military mission was immediately dispatched, the Treaty of Finkenstein was short-lived, because France contracted an alliance with Russia, at Tilsit, 7 July, 1807.

TREATY OF GULISTAN. In 1812 the Russo-Persian war ended in Russia's favor. The Treaty of Gulistan, 30 Sept.-12 Oct., 1813, awarded Georgia, and 9 other provinces tributary to Persia, to Russia. Russia also received the exclusive right to maintain ships-of-war on the Caspian Sea. This treaty served as a lever for later Russian expansion* at Persia's expense.

ALLIANCE WITH BRITAIN. When Persia's treaty with France became a dead letter, Britain attempted to re-establish her previous position in Persia by sending military training missions to replace the

French mission. A defensive alliance was concluded, 25 Nov., 1814, by which Persia could request either British military aid or a subsidy if she were attacked. In return she undertook to prevent armies hostile to Britain from marching through Persia to India.

BRITISH PREDOMINANCE IN THE PERSIAN GULF. After punitive actions, from 1806 onward, to end piracy in the Persian Gulf, Britain imposed the Treaty for Suppressing Piracy and the Slave Trade, 8 Jan., 1820, on the Arab tribes of the area. She thereby assumed exclusive responsibility for the security of the Gulf, and gained a position of great power in relation to Persia.

1821-70

TREATIES OF TURKMANCHAY. Mutual dissatisfaction with the Treaty of Gulistan caused another war between Persia and Russia, 1826-28. Persia hoped to regain Georgia, and Russia wanted to extend her territory to the Aras River, a natural boundary. By Oct. 1827, the Russians had reached Tabriz, and the war was halted. By the treaty of peace, signed at Turkmanchay village, 10-22 Feb., 1828, Russia received all of Persia's territory north of the Aras River, and reaffirmed her exclusive right to maintain a navy on the Caspian Sea. Simultaneously she was awarded commercial and extraterritorial privileges. Britain gained comparable privileges by agreements dated 5 May, 1836, 28 Oct., 1841, and 4 Mar., 1857 (Treaty of Paris).

ANGLO-PERSIAN WAR. During the period 1826-56 Persian relations with Russia were good. This intimacy was especially apparent when Persia twice besieged the Afghan city, Herat, 1837 and 1856, at Russian instigation. The Russians were themselves expanding in Central Asia. Britain, fearing Russian designs on India, forced the Persians out of Herat, 1837, with a warning. In 1856, however, the warning went unheeded, and a British force attacked Persia. The shah, Nasr-ed-Din (Nāsir al-Dīn) (ruled 1848-96), now sued for peace, and an envoy to Paris signed a treaty, 4 Mar., 1857, with the Brit-

ish ambassador. Persia relinquished her claims on Afghan territory, and accorded Britain most-favored-nation status. Britain thus gained in Persia an equal status with Russia in extraterritorial and consular matters.

TELEGRAPHIC CONVENTION.

The Sepoy Mutiny of 1857-58 convinced Great Britain that telegraphic communication with India was imperative for effective control. On 17 Dec., 1862, and 23 Nov., 1865, the British reached agreements with Persia for the construction of telegraph wires from the Ottoman border down to Bushire, from where an underwater cable was laid to India. With the execution of this agreement, Britain acquired a "telegraphic interest" in Persia, in addition to her commercial, political, and strategic interests. Rapid communication with India, as well as with the Australasian colonies, depended on these wires as well as on those running through Constantinople, Baghdad, and Basra. (*Cont. p. 358.*)

CAUCASIAN LANDS

1760-1828

CAUCASIA IN 1760. Caucasia, inhabited by a great variety of tribes, both Christian and Moslem, had been under Persian political and cultural domination for nearly 2,000 years. During the 18th cent., however, the impact of Ottoman power was increasingly felt, especially in the northern and western regions. More significantly, the expanding Russian Empire became involved in Caucasian affairs, initially as the protector of the area's Christians against the 2 Moslem powers.

RUSSIA AND TURKEY. An active phase of the struggle between Turkey and Russia for influence in Caucasia began in 1769. In 1770 the Russians, for the first time, crossed over the Caucasian mountain ranges. The Turko-Russian Treaty of Kuchuk Kainarja, 21 July, 1774, assured Russian control over Kabarda. In 1783 the Georgian kingdoms of Kartli and Kakheti invited Russian protection against Turkey. The Ottomans' renewed challenge of 1787-91 to Russian predomi-

nance in the northern Caucasus proved abortive. In 1801, Kartli and Kakheti were absorbed as Russian provinces. Establishing their hold over Osseti in 1803, the Russians proceeded to dominate Imerti in 1810, and Mingrelia.

RUSSIA AND PERSIA. Aga Mohammed Khan, the founder of the Qajar Dynasty in Persia, wished to re-establish his country's hegemony in Caucasia. Thus, in 1795, he occupied Tiflis and most of Kakheti and Kartli. Within a year, however, troops dispatched by Catherine the Great succeeded in bringing the whole of eastern Transcaucasia under Russian control. After Catherine's death, 1797, Czar Paul withdrew these troops, but the Russians held Georgia for a time. In 1804, Aga Mohammed Khan's successor renewed the war with Russia, in order to regain control of Georgia. To that end he entered into alliance with Napoleon, 4 May, 1807, who promised Persia French military equipment and advisers. The war was terminated by the Treaty of Gulistan, 12 Oct., 1813, which was negotiated through the good offices of Britain. Persia formally acknowledged Russian sovereignty over Georgia and Karabagh, as well as other districts in eastern Caucasia between Lankaran and Derbent. The fighting was resumed 13 years later. According to the new peace treaty (signed in Turkmanchay, Feb. 1828), Persia ceded to Russia the additional territories of Erivan, Nakhichevan, and Talyche.

1829-70

RESISTANCE TO RUSSIAN RULE. By the Treaty of Adrianople, 14 Sept., 1829, which terminated a year-long war with Russia, Turkey abandoned all claims to sovereignty in Circassia. Russian efforts, 1832-39, to subjugate the independence-seeking Moslem Cherkess tribes of the area, however, were hampered by the intensification of a resistance movement initially centered in Daghestan. There, in 1829, Kazi Mullah, the murshid (leader) of the Murids, a military Moslem order with puritan and egalitarian beliefs, had declared a holy war against the Russians. After Kazi Mullah was killed, 1832, his

son and the 3rd murshid, Shamyl, led the Murids. Recruiting his supporters from the tribes of the Daghestan and Chechnia regions, Shamyl distinguished himself as one of the greatest guerrilla commanders in the history of war. Only by capturing Shamyl, 6 Sept., 1859, could the Russians put an end to the Murids' resistance. During the next 5 years, under Russian pressure some 200,000 Circassians emigrated to Turkey, preferring Ottoman rule to Russian.

OTTOMAN EMPIRE

1760-1807

THE OTTOMAN EMPIRE IN 1760. In the 11th and 12th cents., Moslem Turkish tribes from Central Asia swept through the Middle East and into Asia Minor, settling and eventually establishing empires. The Seljuk (Seljûq) Sultanate of Rum (Rûm, c. 1077-1300) was limited to Anatolia. The successors of the Seljuks, the Ottomans ('Uthmānīs), extended their power into Europe, Asia, and Africa, and by 1600 governed the largest empire in the world. Nearly all the Arab lands from Iraq to Algiers, as well as the Christian lands of the Balkans and Danube Valley, owed allegiance to the Ottoman government in Istanbul. By 1700, however, Ottoman power had begun to decline, and during the 18th cent. both internal administrative inefficiency and the threat of external encroachment increased. Beginning with Peter the Great (1672-1725), the czars of Russia sought a warm-water port on the Ottoman-controlled Black Sea.

TREATY OF KUCHUK KAINARJA. A 6-year war between the Ottoman Empire and Russia ended in a Turkish defeat in July 1774. By the Treaty of Kuchuk Kainarja, 21 July, 1774, Russia gained a territorial outlet on to the Black Sea and the right to send ships through the Dardanelles Straits. From this time onward, Russian policy aimed at weakening the Ottoman Empire and at gaining outright control of the Dardanelles. Russian ambitions, on the one hand, and the efforts of other European powers to check

them, on the other, produced the diplomatic problem known as "the Eastern Question."

1808-49

RULE OF MAHMUD II. The Ottoman Empire was in a turbulent state when the 20-year-old Mahmud (Mahmūd) II became sultan, 1808, following the assassinations of his 2 immediate predecessors, Selim (Selīm) III. (ruled 1789-1807) and Mustafa (Mustafā) IV (ruled 1807-08). The young sultan was convinced that the conservatism of the military and religious establishments was weakening the empire relative to the increasing strength of Europe. Consequently, he abolished the powerful Janissary Corps, an elite military caste, 1826, and reorganized the army along European lines. In the religious domain he disbanded the influential Bektashi dervish order, and built Turkey's 1st medical school based on European rather than Moslem learning. Although Mahmud's modernization measures proved superficial and many Moslems considered him an infidel, he removed important institutional barriers to reform and opened the door to further westernization.

GREEK INDEPENDENCE. In Apr. 1821 a revolt broke out in the Morea (Peloponnese) against Turkish rule. The Powers, dedicated to maintaining the *status quo*, at first refrained from entering the conflict. However, the serious losses which an Egyptian army under Ibrahim (Ibrāhīm) Pasha (1789-1848) inflicted on the Greeks, 1825-27, aroused European public opinion and compelled the Powers to act. The Tripartite Treaty of London, 6 July, 1827, provided for the dispatch of British, Russian, and French warships to the eastern Mediterranean, and at the Battle of Navarino, 20 Oct., 1827, the Turko-Egyptian fleet was destroyed.

Russia then attacked Turkey, Apr. 1828, achieved rapid victory, and by the Treaty of Adrianople, 14 Sept., 1829, extracted from Turkey autonomy for Serbia though not for Greece. Western European opinion, however, favored Greek

independence, and both Russia and the Ottomans concurred in the acceptance of the throne of Greece, May 1832, by the king of Bavaria on behalf of his son, Otto (1815-67).

EGYPTIAN INDEPENDENCE. Ottoman military disasters and political weakness in the 1820's encouraged rebellions in other parts of the empire. Mohammed Ali (Muhammad 'Alī) (1769-1849), the governor of Egypt, who had long wished to acquire Syria, sent a force led by his son Ibrahim (Ibrāhīm) Pasha, 1831, against Acre. By July 1833, Ibrahim's army had penetrated Asia Minor as far as Kutahya, a town just west of present-day Ankara. Sultan Mahmud sought desperately for allies, but found Britain indifferent and France supporting Egypt. Russia then made an offer of aid which led to a Russo-Turkish treaty of defense, signed at Unkiar-Skelessi (Hunkiâr Iskelesi), 8 July, 1833.

Mohammed Ali's increasing disregard of the wishes of his nominal master, the Ottoman sultan, provoked an attack by Turkish forces on Syria, Apr. 1839, then being ruled by Ibrahim Pasha. The sultan's army was routed at the Battle of Nezib, June, and in July the Ottoman fleet deserted, preferring to side with Mohammed Ali. The Powers then presented a note, 27 July, 1839, to the Ottoman government at Istanbul, and by the Quadruple Agreement of 15 July, 1840, Mohammed Ali was constrained to withdraw from his Asian conquests, but obtained the promise that he and his descendants would be recognized as hereditary rulers of Egypt. This arrangement was accepted by the Ottoman government, 13 Feb., 1841.

TANZIMAT REFORMS. Sultan Abdul Mejid ('Abd al-Majid) II (ruled 1839-61) was 16 years old at his succession, and the government passed into the hands of the reforming minister, Mustafa Rashid (Mustafā Rashid) (1802-58), formerly Ottoman ambassador in London. Mustafa Rashid knew that the Powers would only guarantee the Ottoman Empire's continued existence if it reformed itself. Accordingly, in 1839 he drew up a plan of reorganization (Tanzimat) which

envisaged a more efficient administration and reformed the legal code. Like the reforms of Maḥmūd II, those of Mustafa Rashid did not result in basic changes, but showed the Ottoman government's willingness, at least, to modernize.

1850-70

CRIMEAN WAR. A quarrel between Catholic and Eastern Orthodox monks over the guardianship of the holy places in Palestine precipitated the Crimean War, fought by Britain, France, and the Ottoman Empire against Russia. Napoleon III and Czar Nicholas made representations to the sultan on behalf of the respective disputants, and the Ottoman government devised certain compromise concessions, Feb. 1852. But Russia remained dissatisfied, and raised her demand to a protectorate for herself over all of the empire's Orthodox Christians (about 40 % of the Ottoman population). The Russian case was based on an article in the Treaty of Kuchuk Kainarja of 1774 giving them a right of protection over one Orthodox church in Istanbul. When the Ottomans rejected the demand, Russia withdrew her diplomatic staff from Istanbul and sent an army into the Turkish Danubian provinces. The sultan demanded their removal, which was not forthcoming, and the war began, 23 Oct., 1853.

The British and French, fearing the collapse of the Ottoman Empire, declared war on Russia, 28 Mar., 1854. Hostilities lasted until the armistice of 25 Feb., 1856, and resulted in a Russian defeat. By the Treaty of Paris, 30 Mar., 1856, the Ottoman Empire was formally admitted into the Concert of Nations, the signatories pledged themselves to guarantee the empire's independence and integrity, wars were forbidden in the Black Sea, and the Ottomans recovered territory in southern Bessarabia and in the Danube estuary.

HATT-I-HUMAYUN REFORMS.

During the Crimean War the Powers brought pressure to bear on the Ottoman Empire to modernize its legal and ad-

ministrative systems. They also demanded complete equality for non-Moslem sections of the population. On 28 Feb., 1856, on the eve of the Paris Peace Conference, Sultan Abdul Mejid issued the Hatt-i-Humayun (Imperial Rescript) Reforms, which guaranteed security of life and property to his Christian subjects. As in the past, these changes were resented by the conservative Moslem element and tension increased throughout the empire, finally erupting in the slaughter of thousands of Christians in Syria and Lebanon, 1860. The Powers again intervened, and secured a large measure of autonomy for the Christian population of Lebanon; 1861. (*Cont. p. 355.*)

ARABIA

ARABIA IN 1760. After terminating the Mameluke Empire, 1517, and conquering Iraq, 1639, the Ottoman Turks had established their rule over nearly all of the Arabic-speaking world. Their control was, however, especially tenuous in Arabia. The rulers of the Hejaz (Ḥijāz) acknowledged Turkish suzerainty, but Yemen (Yaman) re-established its independence, 1635, and the Bedouins of the hinterland never really lost theirs. (*Cont. p. 360.*)

The Saudi Empires

1760-1823

RULE OF MOHAMMED IBN SAUD.

Originally a petty chief, ruling Dariya (Dar'īya) in Wadi Hanifa, ibn Saud (Su'ūd) became the disciple and protector of Mohammed ibn Abdul-Wahab (Muḥammad ibn 'Abd al-Wahhāb) (1703-92). The latter, a well-traveled jurist from Najd, was the founder of a rigid, puritan religious revival movement, the Wahabis (Wahhābis). Highly critical of contemporary beliefs and rituals of Islam, and inspired by the teachings of ibn Hanbal (Ḥanbal) (the founder of one of the 4 orthodox schools of Islamic law), ibn Abdul-Wahab was determined to restore Islam to its primitive strictness. Ibn Saud, crusading for the new movement, suc-

ceded before his death in 1765 in bringing all of eastern and central Arabia under his rule.

WAHABI EXPANSION. While ibn Abdul-Wahab remained the guiding religious spirit of the realm, ibn Saud's son and successor Abdul-Aziz ('Abd al-Aziz) I expanded the empire, with notable assistance from his own son, the future Saud II.

The aggressiveness of the Wahabis, and especially their attacks on pilgrim caravans, alarmed the Ottoman sultan. Turkish troops invaded al Hasa (Hasā) in 1798. But in 1801 the Wahabis captured Karbala in Iraq and, in a demonstration of their zeal, sacked that Shi'ite holy city. In revenge a Shi'ite assassin took the life of Abdul-Aziz I in 1803.

EGYPTIAN INVASION. Saud II captured Mecca in 1803 and again in 1806, and Medina in 1804. The Ottoman sultan assigned the viceroy of Egypt, Mohammed Ali (Muhammad 'Alī) Pasha, to the task of crushing the Wahabis. Thus in 1811 Saud, by now engaged in a military campaign aimed at Baghdad, had to alter his plans and face an Egyptian expeditionary force led by Mohammed Ali's son, Tusun (Tūsūn). In his first battle with Saud, Tusun was severely defeated, but after receiving reinforcements captured Mecca and Medina, 1812-13. In 1813 Mohammed Ali assumed personal command of the invasion. The following year Saud once more inflicted a serious defeat on the Egyptian troops led by Tusun in the vicinity of al Taif (Tāif). Soon thereafter Saud died in Dariya.

DESTRUCTION OF THE 1ST SAUDI EMPIRE. Abdullah ('Abdullāh) I (ruled 1814-18), Saud's son and successor, made a truce with Tusun, 1815, whereby he acknowledged Ottoman suzerainty and the Egyptians withdrew from Nejd (Najd). But Mohammed Ali denounced this truce, and in 1816 Ibrahim Pasha, another of Mohammed Ali's sons, led a new Egyptian invasion into Arabia. Ibrahim skillfully obtained the support of many local tribes. A 4-month siege of al Raas proved abortive, but he captured al Qasim's 2 major cities, Unaiza ('Unaiza) and Buraida, as well as al Shariga

(Shāriqa). In Apr. 1818, supported by several major tribes, he began a siege of Dariya. Six months later, Abdullah was taken prisoner and sent to Istanbul, where he was executed. Many prominent Saudis were put to death. A few escaped, but the rest were sent to Egypt as prisoners. Having terminated the Wahabi empire, the Egyptians became the new rulers of Arabia.

1824-70

RESISTANCE TO EGYPTIAN RULE.

In 1821, Turki (ruled 1820-34), a grandson of Mohammed ibn Saud, succeeded in driving the Egyptians out of Riyadh (Riyād). By consenting to pay yearly tribute to Egypt, whose nominal suzerainty he acknowledged, Turki gained time to build a new Wahabi regime based at Riyadh. He was murdered in 1834 by his cousin, Mishari (Mishārī), who was in turn toppled and killed by Turki's son, Faisal (Faisal). When Faisal refused to continue the payment of tribute to Cairo, the Egyptians forcibly replaced him with his brother, Khalid (Khālīd), 1838. Faisal was sent to Egypt as a prisoner. The increasing unpopularity of Khalid's subservience to Egypt enabled his cousin, Abdullah ibn Thunaiyan ('Abdullah ibn Thunaiyān), to stage a successful revolt and become the new ruler of Najd, 1841.

2ND SAUDI EMPIRE. Faisal escaped from Egyptian captivity and, deposing Abdullah, 1843, regained the throne and ruled until 1865. Posing as the protector of the Wahabi faith, he expanded his empire. His authority reached to Buraimi and the Omani ('Umāni) hinterland. His influence was felt as far as the frontiers of Yaman and Hadhramaut (Hadhramaut). Northern Arabia, ruled by the house of Rashid, although virtually independent, acknowledged Faisal's suzerainty. Even the British at the Persian Gulf felt the impact of Faisal's extended influence. Following a British naval action, provoked by the plunder of property at the port of Sur (Sūr) by tribes allied with the Wahabis, 21 Apr., 1866, Abdullah ('Abdullāh) (ruled 1865-71, 1874-84), Faisal's

son and successor, promised that he would refrain from harming British interests. (*Cont. p. 360.*)

Muscat

On 12 Oct., 1798, the English East India Company concluded an agreement with the Imam of Muscat (Masqat) by which the French were excluded from his territory. This agreement, designed to counter Napoleon's Egyptian campaign and threat against India, was the first of a series that eventually placed most of the principalities on the southern and eastern shores of Arabia under varying degrees of dependence on Britain. In 1798, Persia leased, to the sheik (shaykh) of Muscat, Bandar Abbas ('Abbas) and the islands of Hurmuz and Qishm—all previously important sites for European trade. The lease remained valid until 1868. A British base was established at Qishm and became the headquarters of the British forces assigned to suppress piracy and the slave trade and to oversee the maritime truce in the Persian Gulf. On 31 May, 1839, Muscat entered into a series of agreements with Britain. But through other such agreements with the U.S.A., 21 Sept., 1833, and France, 17 Nov., 1844, the ruler of Muscat demonstrated that he was not as dependent on the British as were his neighboring sheiks. (*Cont. p. 360.*)

The Omani Coast and Bahrain

SUPPRESSION OF PIRACY AND THE SLAVE TRADE. During the period 1806-20, forces under the command of the English East India Company took punitive measures against Arab pirates harassing British ships in the Persian Gulf. The rulers of the Omani coast and Bahrain (Bahrayn, Bahrein) signed agreements with Britain, 1820, pledging themselves against piracy and slave trading. For Britain this was the beginning of a formal responsibility for security in the Gulf. On 4 May, 1853, the sheiks of the Omani coast entered into an agreement with Britain never to engage in naval warfare in the Persian Gulf. Thus was made permanent a promise made in a

series of temporary agreements, dating back to 1835, designed to halt armed disputes over rights to the 'Gulf' pearl fisheries—war among the signatories not having been prohibited by the 1820 treaty for the suppression of piracy.

CLARENDON NOTE. In response to a Persian protest against increasing British association with the sheiks of Bahrain, which Persia considered as its domain, the British foreign secretary, Lord Clarendon, clarified the British position on the question, 29 Apr., 1869. The Clarendon Note, however, was later to be subject to differing interpretations by Britain and Persia. (*Cont. p. 360.*)

Aden

Britain established political relations with the rulers of the Aden area in 1799 as a precautionary measure against French moves in the Indian Ocean. On 6 Sept., 1802, a commercial treaty was signed between the East India Company and the ruler of the port of Aden, the sultan of Lahij. Britain forcibly occupied Aden, 19 Jan., 1839, after failing to persuade the sultan to sell it. Possession of the port was desired to facilitate a British steam service between India and Egypt, as well as for strategic reasons against the presence of Egyptian troops in Arabia. On 11 Feb., 1843, the sultan, having been unsuccessful in attempts to recapture the port, formally recognized British control in Aden. (*Cont. p. 360.*)

EGYPT AND THE SUDAN

1760-97

EGYPT IN 1760. The Ottoman Turks conquered Egypt in 1517 but retained the old ruling class, the Mameluke beys, as governors of districts under an Ottoman pasha. The beys' power steadily increased, however, and by the 18th cent. the pasha had become no more than a figurehead.

REVOLT OF ALI BEY. Ali ('Ali) Bey (1728-73), who had held the office of *Shaykh al-balad* (the highest Mameluke office under the Ottoman rule) since 1760, had by 1769 overcome all his rivals in Egypt, and deposed the pasha. Interven-

ing, at the Ottoman sultan's request, in a dynastic quarrel in the Hejaz, he sent an expeditionary force under his retainer, Abu al-Dhahab (Abū al-Dhahab), which took Mecca in 1770. Abu al-Dhahab was then sent into Syria in 1771 to co-operate with the ruler of Acre, Dahir al-Umar (Zāhir al-Umar) against the Ottoman governor at Damascus. Subsequently Abu al-Dhahab entered into an alliance with the Ottomans against Ali. When Ismail (Ismā'il) Bey, who was dispatched by Ali to halt the advance of Abu al-Dhahab toward Cairo, also defected and joined Abu al-Dhahab, Ali took refuge in Acre, Apr. 1772. There he received arms and men from Russia and returned to fight Abu al-Dhahab. Defeated in battle on 1 May, 1773, he was captured and died soon afterward.

RULE OF IBRAHIM AND MURAD.

Egypt was again a dependency of the Ottoman Empire, and Abu al-Dhahab launched a campaign against Dahir al-Umar during which he died, 1776. Ismail took over as *shaykh al-balad*, but he was opposed by Ibrahim (Ibrāhīm) Bey and Murad (Murād) Bey, former lieutenants of Abu al-Dhahab, who proceeded to rule conjointly. In 1786 the Ottoman government dispatched a force against these renegade Mamelukes, and succeeded in installing a new Ottoman pasha and reinstating Ismail Bey as *shaykh al-balad*. However, after the Ottoman withdrawal, 1787, and the death of Ismail, Jan. 1791, Ibrahim and Murad resumed their joint rule.

1798-1802

FRENCH OCCUPATION. In July 1798, Napoleon Bonaparte landed at Alexandria with an expeditionary force to conquer Egypt. This he regarded as the principal step toward undermining British influence in Asia. He tried to maintain cordial relations with the Ottomans, and appealed to the Egyptian people to help him replace the corrupt and exploitative rule of the beys with a truly Islamic and egalitarian regime. He defeated the forces of Murad and Ibrahim, and obtained Egyptian acquiescence in his rule. But on

1 Aug., 1798, Adm. Horatio Nelson destroyed the French fleet at the battle of Abukir Bay. The French also failed in a campaign to capture Murad Bey. On 22 Oct., 1798, dissatisfaction with the taxes and innovations imposed by Napoleon produced a popular revolt in Cairo which was led from the Mosque-University of al-Azhar. The revolt was promptly suppressed, but its causes persisted. In early 1799 Napoleon made an abortive expedition to Syria, and in July of that year the Ottomans, with British naval support, landed an army at Abukir, but suffered a serious defeat at Napoleon's hands. Appointing Gen. Jean Baptiste Kléber (1753-1800) governor of Egypt, Napoleon left for France Aug. 1799.

Ottoman military pressure forced Kléber to agree, 24 Jan., 1800, to evacuate Egypt. But when the British demanded that the French soldiers be treated as prisoners, Kléber resolved to fight on. In June he was assassinated by an al-Azhar student. The new French commander, Gen. Jacques François de Menou (1750-1810), had gained some popularity in Egypt for having professed Islam, but in Mar. 1801 the British landed at Abukir and began advancing toward Alexandria. The French were forced to agree to evacuate Cairo, 30 May, 1801, and Alexandria, 30 Aug., and their army embarked for France in Sept. Napoleon's Egyptian expedition awakened Europe to the area's strategic value in time of war.

1803-48

ACCESSION OF MOHAMMED ALI.

After the French departed, the Ottomans took measures to eradicate the power of the Mamelukes. But the British, who did not leave Alexandria till Mar. 1803, provided protection for many of the beys. In May 1803, a revolt of the Albanian soldiers against the Turkish pasha, Mohammed (Muhammad) Khosrev, forced the pasha to flee Cairo. In the ensuing struggle with the Turks, the commander of the Albanians, Mohammed Ali (Muhammad 'Ali) (1769-1849), made an alliance with the Mameluke beys. The allies

defeated Khosrev Pasha at Damietta and Ali ('Ali) Pasha Jazairli (the new Ottoman governor of Egypt) at Rosetta. In the struggle for power between Mohammed Bey al-Alfi and Osman ('Uthmān) Bey al-Bardisi, the Albanians sided with the latter, while yet a third Ottoman governor, Khurshid (Khūrshīd) Pasha, endeavored to enforce his authority. Although the Mamelukes now closed ranks, they were unable to overcome the forces of the pashas, and retreated to Upper Egypt. On 12 May, 1805, a delegation of ulema complained to the judge against the misconduct of Khurshid and his troops, and on 14 May another delegation invested Mohammed Ali with vice-regal powers, which he accepted.

DECLINE OF MAMELUKE POWER. Khurshid opposed Mohammed Ali's rule and asked the beys for support. Fighting in Cairo did not cease until the Ottoman government confirmed Mohammed Ali as governor of Egypt. Outside Cairo, Mohammed Ali's authority continued to be challenged by the beys, by the forces that had fought under Khurshid, and by many Albanians who deserted Mohammed Ali to join his rivals. On 17 Aug., 1805, Mohammed Ali caused the slaughter of many beys whom he had tricked into coming to Cairo by false promises of safety. The Ottoman government's support of the Mamelukes became less firm when Mohammed Ali sent large tribute payments to Istanbul.

BRITISH INVASION. On 17 Mar., 1807, the British landed 5,000 men in Alexandria, expecting to join forces with a leading Mameluke, al-Alfi, against Mohammed Ali. Learning that al-Alfi had died on 30 Jan., they sought the co-operation of the other beys. Most beys, however, chose to side with Mohammed Ali against the invaders. The British suffered a serious defeat at Rosetta, and after costly battles at Hamad and Alexandria evacuated Egypt on 14 Sept., 1807.

CAMPAIGN AGAINST THE MAMELUKES. Despite Mohammed Ali's concessions to the Mameluke beys, they continued to resist him. On 2 occasions in 1811 he caused the massacre of a number

of prominent beys whom he had received into coming to Cairo as his guests. He then ordered the indiscriminate killing of Mamelukes throughout the country. Some fled south to Nubia, only to be attacked by forces sent after them, 1812. The survivors retreated farther south to Dongola.

INVASIONS OF ARABIA. In 1811 Mohammed Ali, following the order of his sovereign, the Ottoman sultan, sent an expeditionary force to subdue the Wahabis in Arabia. His troops occupied the Hejaz, and in 1813 he himself visited Mecca, and deposed the newly restored Sherif (sharīf). In 1815 a truce with the Wahabis suspended hostilities. In 1816 he sent a new expedition to Arabia led by his son Ibrahim (Ibrāhim). In 1818 Ibrahim defeated and captured the Wahabi ruler, and suppressed opposition to Egypt's supremacy in Arabia.

INVASION OF THE SUDAN. In 1820 Mohammed Ali decided to conquer the Sudan to obtain control of the lucrative caravan trade passing through the area, and to exploit the reputed gold mines of the Funj Sultanate of Sennar (Sennār). He also saw in this campaign an opportunity to employ his dissatisfied troops and to obtain slaves to build a new army. He conquered Nubia, Sennar, and Kordofan, founded Khartoum, and temporarily gained control of the ports of Suakin and Massawa.

AGRARIAN REVOLT. Peasant reaction to Mohammed Ali's rule was demonstrated by risings in Upper Egypt, 1820-24, as well as by flight to other villages, to the towns, and even across the frontier to Syria.

CAMPAIGN IN GREECE. To suppress the Greek revolution for independence, the Ottoman government sought Mohammed Ali's assistance. In Mar. 1825, Egyptian troops led by Ibrahim landed in the Morea. The Egyptian navy wrested control of the sea from the Greeks, and on land the Greeks were overwhelmed by the Egyptian army. On 20 Oct., 1827, a combined British-French-Russian naval force destroyed the Turko-Egyptian fleet at Navarino. In Aug. 1828 Britain sent a fleet to Alexandria and induced Moham-

med Ali to withdraw his army from Greece.

OCCUPATION OF SYRIA: In return for Mohammed Ali's support against the Greeks, the Ottoman government had promised him the government of Syria and the Morea. When this promise was not fulfilled, Mohammed Ali's forces invaded Syria, 1831. On 27 May, 1832, Acre was captured and on 21 Dec. the Ottoman forces under the grand vezir were defeated at Konya in Asia Minor. Active intervention by the Powers produced the Agreement of 14 May, 1833, between Mohammed Ali and the sultan. This agreement conferred on Mohammed Ali the governorship of Syria. An Ottoman attempt to regain control of Syria in the spring of 1839 was frustrated by the Egyptians. Egyptian successes were threatening the very survival of the Ottoman Empire, and the Powers again decided to intervene. On 13 Feb., 1841, the sultan appointed Mohammed Ali, who agreed to withdraw from Syria, governor of Egypt and the Sudan for life. Another royal decree, 1 June, 1841, made the government of Egypt hereditary in Mohammed Ali's family.

Old age incapacitated Mohammed Ali before his death on 2 Aug., 1849; his son, Ibrahim, assumed the government, Sept. 1848. Chief among the accomplishments of Mohammed Ali was the creation, by 1823, of a European-style military force, with the aid of French advisers. To sustain his army and navy, and to enrich himself, Mohammed Ali launched an impressive program of economic development and industrialization. He promoted, beginning in 1822, the cultivation of cotton in the Delta. He made major contributions to the introduction of a European system of education in Egypt.

1848-70

RULE OF ABBAS I. Ibrahim Pasha died in Nov. 1848, and was succeeded by Abbas ('Abbās) I (ruled 1848-54). Disliking European ways, the new ruler tried to halt, and even reverse, the process of modernization. Yet in 1851 Abbas was induced by Britain to grant George

Stephenson a contract to build Egypt's first railway, between Cairo and Alexandria. In July 1854, Abbas was murdered by his guards.

RULE OF SAID. Abbas' successor was Mohammed Ali's son, Said (Sa'id) Pasha (ruled 1854-63). In 1854 Said gave permission for the opening of the British Bank of Egypt, and in 1856 he granted a Frenchman, Ferdinand de Lesseps (1805-94), a concession to build a Suez canal. Said's borrowing from European financiers started Egypt's national debt. He died Jan. 1863.

RULE OF ISMAIL. Ibrahim Pasha's son, Ismail (Ismā'il) (ruled 1863-79), succeeded Said. By increasing his tribute to the Ottoman government, in 1866 Ismail obtained the right of primogeniture for his family. In 1867, as a sign of further independence, he received from the Ottoman sultan the title of khedive of Egypt. Ismail had been educated in Europe and made strenuous efforts to modernize his country with the help of European and American advisers. Many construction projects were given to European contractors. On 17 Nov., 1869, the Suez Canal was opened. The modernization program, and the heavy costs of ruling and garrisoning the Sudan and of opposing Ethiopia to the south, rapidly exhausted the country's resources, forcing it into more and more borrowing from Europe. (*Cont. p. 360.*)

NORTH AFRICA

1760-1829

NORTH AFRICA IN 1760. In the 18th cent., North Africa (less Morocco) was nominally part of the Ottoman Empire, but in fact almost entirely independent of Turkish control. Tripoli was ruled by the Qaramanli family, Tunis by the beys of the Husainid dynasty, and Algiers by a dey. During the 18th cent. there was a decline in prosperity. Privateering became more difficult and less rewarding, and the rulers pressed more heavily on the population. Distress was increased by plague and famine.

From 1666 Morocco had an indigenous ruling dynasty, the Alawite. Of the Arab-

Berber indigenous population of the Maghrib (North Africa), the Moroccans were perhaps the most resistant to foreign rule. The Alawite dynasty, over the years, established commercial relations with Britain, France, and Spain, thus enhancing the international status of Morocco as a sovereign state.

FOREIGN RELATIONS. The Maghrib offered commercial attractions to the countries of Europe and, after 1786, to the U.S. The region, particularly Morocco, also increased in strategic importance. The rulers of the Maghrib similarly found relations with Europe beneficial. Sidi Mohammed ibn Abd Allah (Sidi Muhammad ibn 'Abd Allāh) (ruled 1757-89) of Morocco signed a treaty with Spain, 28 Mar., 1767, and Ali ('Ali) Pasha of Tripoli a treaty with France, 12 Dec., 1774. Morocco was the 1st country in the Maghrib to recognize the U.S. in a treaty of amity signed 28 June, 1786. By 1817, European diplomatic agents were established at Tangier, Morocco. Algiers also had diplomatic relations with Britain, Portugal, France, and the U.S. by the beginning of the 19th cent.

BARBARY CORSAIRS. European commercial relations with the Maghrib were complicated by the presence of the Barbary corsairs. From the days of the Barbarossa brothers in the 16th cent., the Mediterranean Sea had been infested by pirates. Many were European renegades. Their activities extended as far as the North Sea and even Iceland, and so serious was the menace they posed that the subjects of European states ventured into the Mediterranean only after meeting the demands made by the rulers of the Maghrib for substantial annual tributes. The 1st serious attempt to subdue the pirates was in Aug. 1775, when a Spanish fleet, under Count Alexander O'Reilly (1722-94), an Irish soldier of fortune, stormed Algiers. The U.S. began a policy that broke the tradition of paying tributes by going to war with Tripoli, 1801-5, and with Algiers, 1815. In Aug. 1816 British and Dutch ships, under Lord Exmouth (1757-1833) and

Baron van der Capellen, bombarded Algiers, Tunis, and Tripoli, releasing over 3,000 European slaves.

1830-70

FRENCH CONQUEST OF ALGIERS.

The French invasion of Algeria¹ was undertaken by Charles X as a safety valve for political discontent in France. The immediate causes were a financial dispute with the dey of Algiers, and an alleged insult to the French consul, Pierre Deval. After blockading Algiers for over 2 years, a French expedition under Gen. Louis Bourmont (1773-1846) landed at Sidi Ferruch, 14 June, 1830. The dey capitulated 5 July, 1830. On 22 July, 1834, King Louis Philippe declared Algiers a French possession.

ABD AL-QADIR. The indigenous Arab-Berber population of Algeria resisted the French invasion, particularly resenting the expropriation of the land by European settlers. Under Abd al-Qadir ('Abd al-Qādir) (b. 1808), a resistance movement developed. He was proclaimed sultan by his followers, 22 Nov., 1832, and was recognized by the French as an independent sovereign, 26 Feb., 1834. By this time more than two-thirds of Algeria was under his control. He established a kind of federal government, based on tribal equality, and divided the country into eight *khalifaliks* (provinces) with a hierarchy of administrative officers. From 1835 on, he launched a full-scale war against the French, formally proclaiming the jihad (jihād, holy war) in Nov. 1839. In Oct. 1847, however, he was obliged to surrender and was exiled to France. He failed because of the superiority of the French military forces led by Gen. Thomas Robert Bugeaud, and because his centralizing policies caused resentment and suspicion. Few Algerians shared his vision of a unified state. Resistance against the French continued after 1847, especially among the Kabyles.

ALGÉRIE FRANÇAISE. The French invasion of Algeria was followed by formal colonization, beginning in 1840 with the appointment of Thomas Robert

Bugeaud (1784-1849) as gov. gen. Bugeaud began the policy of "l'Algérie Française." Central to this policy was the granting of Algerian land to European settlers (*colons*). European immigration was encouraged, free grants of land were made, and the army helped in building roads and in planting settlements. By 1847 there were 110,000 *colons*, made up of French, Spanish, Italian, Maltese, German, and Swiss elements. A decree of 4 Mar., 1848, made Algeria an integral part of France, and colonization increased rapidly after that date. Although Algerian indigenous inhabitants were, in 1863, recognized as the rightful owners of the land, and some attempts were made to safeguard their communal and individual rights, their hostility to the encroachments of the Europeans steadily increased. A decree of Oct. 1870 put the administration of Algeria directly under 3 departments of the French Ministry of the Interior.

MAINTENANCE OF MOROCCAN INDEPENDENCE. The French occupation of Algeria had repercussions elsewhere in the Maghrib. Support given to Abd al-Qadir by Morocco led to war with France, 1844, and the Moroccans sustained defeat at the Battle of Isly, 14 Aug. Spain, concerned for the safety of her Moroccan fortresses, also declared war, inflicting a heavy defeat on the Moroccans, and exacted an indemnity of some £4 m. Britain's concern for Moroccan integrity and her commercial interests

there made it possible for the Moroccan government to raise loans in London to pay off the Spaniards. The defeats suffered by Morocco led to some efforts at military and administrative reforms under Sultan Mohammed Abd al-Rahman (Muhammad 'Abd al-Rahmān) (ruled 1859-73).

TUNIS PUBLIC DEBT. France supported internal liberal reforms in Tunis, 1857 and 1861, although these remained largely on paper. Increasing demands for taxes to meet the bey's deteriorating financial situation led to revolts, 1864-67. Loans were raised in Europe, and as the financial position of the Tunis government worsened, France, Britain, and Italy established an International Commission, 1869, to take charge of the bey's finances.

THE SANUSIYYA. In Mar. 1835, Turkey reasserted her control over Tripoli. The Qaramanli dynasty was removed and a new governor appointed, directly responsible to the Ottoman sultan at Istanbul. This 2nd Turkish regime did not succeed any better than the 1st in exercising control over the interior. The Sanusiyya (Sanūsiyya) brotherhood, established in 1843 in Cyrenaica by al-Sayyid Mohammed ibn Ali al-Sanusi (Muhammad ibn 'Alī al-Sanūsi) (1791-1859), galvanized tribal life. The brotherhood established over 100 *zawiyas* (lodges) throughout Cyrenaica, Tripolitania, and the Fezzan, which served as centers of learning, culture, and commerce. (*Cont.* p. 333.)

Tropical Africa

WESTERN SUDAN

1760-1825

ASCENDANCY OF THE FULBE. The late 18th and early 19th cents. saw the creation of Moslem theocratic states throughout the western Sudan. Leadership for the jihads (jihāds, holy wars) that produced these states was drawn mostly from the clerical caste of the Fulbe

(Fulani, Peul) people, who had been migrating eastward from their area of origin in the basin of the Sénégal to the Niger Bend, into Hausaland and Bornu, and as far as Adamawa (Adamāwa). By the 18th cent. the Fulbe consisted of 2 distinct groups: town dwellers (predominantly Moslem) who provided the political and economic leadership, and pastoral nomads (not yet Islamized) who supplied,

when it was required, most of the Fulbe cavalry.

RISE OF GÖBIR. In Hausaland there were many independent states, the strongest being Kano and Gobir. Wars among them were frequent and indecisive, but Gobir's conquest of Zamfara, 1764, increased its power and made it a threat to its neighbors.

JIHAD IN FUTA JALON. Toward the end of the 18th cent., the Fulbe of Futa Jalon (northern Guinea) attained dominance over the local peoples due to the efforts of the cleric, Ibrahim Musa (Ibrāhīm Mūsā), and the war leader, Ibrahim Sori (Ibrāhīm Sōri) (d. c. 1784). The followers of these men formed 2 competing parties which fought a series of civil wars in Futa Jalon to determine who should hold office as patriarch (al-māmi). In 1837 a compromise was agreed on: patriarchs elected by each party were to exercise power turn and turn about. Continuing dissensions, however, weakened Futa Jalon later in the 19th cent.

JIHAD IN FUTA TORO. A theocratic state was founded in Futa Toro (Sénégal) by clerics led by Tyerno Sulaiman Bal (Tyērno Sulaimān Bal) (d. 1776). Bal's successor, Abd al-Qādir ('Abd al-Qādir) (c. 1728-1806), defeated the Tarza Moors of Mauritania, 1786-87, and established Futa Toro rule along the left bank of the River Sénégal.

JIHAD OF UTHMAN DAN FODIO. A Fulbe cleric in Gobir, Uthman ('Uthmān) dan Fodio (1754-1817), accused the kings of Hausaland of laxity in their Islamic observances. Attacked by the *sarki* (king) of Gobir, he escaped, 21 Feb., 1804, and proclaimed the jihad, issuing flags to all who were willing to strike down the infidels and bring about a Moslem reformation movement. Kebbi and Zaria fell to Uthman's flag bearers in 1805, Katsina in 1807, Daura and Gobir in 1808, and Kano in 1809. By 1810 the Fulbe and their allies controlled the whole of Hausaland.

RULE OF AL-KANEMI. When the Fulbe attempted to conquer Bornu and succeeded in taking the capital, N'gazargamu, 1808, and driving out the *mai*

(king), Bornu's independence was maintained by the Kanembu cleric, Mohammed al Amin (Muhammad 'al Amin), known as al-Kanemi (al-Kānemi) (d. 1835), who became its de facto ruler. He built his own capital at Kukawa (Kūkawa), 1814, and defended Bornu against further attacks by the Fulbe and by Wadai, 1824.

THE EMPIRE OF SOKOTO. Uthman dan Fodio's conquests were ruled by his son, Sultan Mohammed (Muhammad) Belo (d. 1837), from Sokoto (founded 1809) and by his brother, Abd Allah ('Abd Allāh) (1766-1829), from Gwandu. Together the 2 regions constituted the Sokoto Empire. Under Sokoto's control trade flourished and the influence of Islam spread widely.

KINGDOM OF MASINA. The Fulbe leader Seku Ahmadu (Shaikh Hamad, 1775-1844) declared jihad against both Gurari Dyalo (Dyālo), king of Masina, and Da Dyara (Dyāra), king of Segu, defeated them, and established the Fulbe theocratic state of Masina, with its capital at Hamdullahi (Ḥamdullāhi, founded 1815).

1826-70

TUKOLOR EMPIRE OF AL-HAJJ UMAR. Umar ibn Saïd Tal ('Umar ibn Sa'ïd Tal) (c. 1797-1864), a Tukolor cleric born in Futa Toro, after a prolonged visit to the Holy Places of Islam, 1826-34, and residence in Sokoto, 1835, and Masina, 1838, established a military base at Dingiray in northern Guinea in 1845. He recruited followers and bought arms and ammunition with funds obtained from exploiting the gold mines of the area and from trading in religious objects. In 1853 he felt strong enough to declare the jihad. He captured Nyoro in Karta (Kārtā) in 1854, Segu in 1861, and Masina in 1862. Much of his support came from the Tijaniyya (Tijāniyya) religious brotherhood, of which he was khalifa for the western Sudan. The struggle against Masina, however, overtaxed his resources. He was besieged in Hamdullahi and managed to escape south to

Bandjagara (Bandjagara), but died there in 1864. His son, Amadu Seku, succeeded to the Tukolor Empire. (*Cont.* p. 335)

ETHIOPIA

1760-1840

ETHIOPIA IN 1760. The 18th cent saw the collapse of the Ethiopian monarchy and the division of the empire into a number of independent provinces. Of these the most important were Tigre (Tigrē) in the north; Wag-Lasta, Simen (Simēn), Begemdir (Bēgēmdir), Gojam, and some smaller provinces in the center; and Shewa in the south. In the past outside support had helped to bolster the dynasty (which claimed descent from King Solomon and the Queen of Sheba) against intrusions from the Moslem kingdoms of Somalia and from the Funj Sultanate of Sennar. But from the expulsion of the Jesuits in 1632 onward, the rulers of Ethiopia discouraged contact with outsiders.

ZEMENE MESAFINT. The "age of princes" (*Zemene Mesafint*) in Ethiopian history began in 1769 when Ras Michael (Mika'el) Sihul of Tigre murdered 2 kings of the royal line within 6 months and became the most powerful man in the kingdom. He ruled from the capital, Gonder, and was visited there, 15 Feb., 1770, by the Scottish explorer, James Bruce. Ras Michael never succeeded in establishing a centrally organized state, and was continuously involved in political and military struggles with other provincial governors. The enthronement and deposition of rival puppets drawn from the Solomonic line continued for 100 years. One of these, Tekle Giyorgis (Giyorgis) Fiqr Segid, for example, was put on the throne and removed from it 6 times during the period 1779-1800.

1841-70

RISE OF KASA. A minor Kwara chief, *lij* Kasa (b. c. 1820), unified Ethiopia after many decades of confusion and civil war. In Oct. 1846 he invaded and pillaged Dembiya and in Jan. 1847 occupied Gon-

der, the capital. At the battle of Iloha, 18 June, 1847, he defeated the forces of Menen, queen mother of Gonder, and on 27 Nov., 1852, those of *dejazmach* Goshu of Gojam. On 12 Apr., 1853, he overcame the combined armies of Ras Ali of Gonder and *dejazmach* Wibe (Wibē) Hayle Maryam of Simen, burned Ali's capital in May, and on 29 June defeated Ali again at the Battle of Ayshal. When on 9 Feb., 1855, he once again beat Wibe at the Battle of Deresge (Deresgē), he became master of the whole country. Two days later, 11 Feb., he was crowned King of Kings of Ethiopia as Theodore (Tēwodros) II.

RULE OF THEODORE II. Theodore was a brave war leader and a fanatical supporter of the Ethiopian Church. He began the process of Ethiopian modernization, outlawing many antiquated practices and breaking up independent provinces into smaller units of administration ruled by his own nominees. But his government rested entirely on force. Toward the end of his reign (1855-68) he became increasingly authoritarian and arbitrary.

BRITISH INVASION. A series of diplomatic blunders led to the imprisonment of a number of Englishmen at Magdala (Meqdela), Theodore's capital. Sir Robert Napier (1810-90) commanded a British rescue expedition. After a march of great difficulty, Napier's army of 2,000 men met 4,000 Ethiopians on the plain of Aroge (Arogē) below Magdala fortress. The Ethiopians faced modern weapons with great bravery, but were defeated, 10 Apr., 1868. Theodore withdrew into the fortress and, when the British entered it, shot himself. Napier made no attempt to settle the succession, freed the prisoners, and withdrew from Ethiopia at the end of May.

STATES OF THE WESTERN FORESTS AND COASTS

1760-1870

WEST AFRICA IN 1760. In the 18th cent. the peoples of the West African coasts and forests were closely involved in

the slave trade. Profits were so great that competition among them was intense. This was particularly true in the forest states, which were dependent on middlemen for export of slaves and import of European goods. European knowledge of the interior of West Africa was limited to the Senegambia region, where the French had been active since the 17th cent.

Senegambia to the Ivory Coast

COLONY OF SENEGAMBIA. Commercial rivalry in the Senegambia region between the French and the British was always strong and, in time of war, violent. At stake were the profits from the export of slaves, gum, and wax, and both contestants hoped eventually to control the gold mines of the interior. After the outbreak of the Seven Years' War (1756-63), the British navy conquered the most important French posts in the region, 1758, and on 19 Apr., 1764, the British Company of Merchants Trading to Africa was given permission to govern them. In 1765, mismanagement caused Parliament to institute a government based on that of the Crown Colonies of America. French traders undermined the colony, however, because those responsible on the British side failed to integrate the hinterlands with the coast. During the American Revolutionary War, the French navy recaptured the former French posts, and by the Treaty of Versailles, 20 Jan., 1783, Britain ceded them to France.

PROVINCE OF FREEDOM. When the Mansfield Decision, 1772, freed slaves in Britain, the proposal was made that, since the large numbers of unemployed former slaves were a threat to law and order, they should be transported. Under the auspices of a committee led by Granville Sharp (1735-1813), 400 settlers established the "Province of Freedom" at St. George's Bay, 15 May, 1787. Plagued by disease, crop failure, and the hostility of the local Temne, the experiment was terminated in 1790.

COLONY OF SIERRA LEONE. Granville Sharp, together with other abolitionists, such as Thornton, Wilberforce, and Clarkson, then formed the Sierra

Leone Company. In Feb.-Mar. 1792, 1,100 former slaves and 100 whites were settled at Freetown. The company attempted to correct many of the mistakes of 1787, but friction continued between colonists and Temne. A French naval attack of 28 Sept.-13 Oct., 1794, destroyed much of Freetown. In 1800 the colonists were in open rebellion against the Company, and in 1801-2 a war was fought with the Temne. When Britain prohibited the slave trade for British subjects, 25 Mar., 1807, it became desirable for the British navy to have a harbor and refreshment station on which an antislave-trade naval squadron could be based. On 1 Jan., 1808, therefore, Sierra Leone, with its excellent harbor at Freetown, became a British crown colony. The population of Sierra Leone Colony was augmented by (1) the "Nova Scotians" (loyalist ex-slaves freed after the American Revolutionary War); (2) the "Maroons," former runaway slaves from Jamaica, and (3) slaves freed by the British navy from captured slave ships and taken to Freetown.

FOUNDATION OF LIBERIA. The example of Sierra Leone appealed to a number of American opponents of slavery. In Feb. 1816, Capt. Paul Cuffee landed 34 black settlers from the U.S. at Freetown. An American Colonization Society was formed, 28 Dec., 1816, and, in Mar. 1820, 80 colonists attempted to settle at Sherbro Island. The land, however, was found unsuitable for cultivation, many settlers died from disease, and the remainder were driven away by the indigenous inhabitants. A further 33 settlers arrived at Freetown, Apr. 1821. Through determination and the use of force, the American Colonization Society secured a treaty, 15 Dec., 1821, from local chiefs, and the 1st effective colonization of what was to become Liberia took place at Cape Mesurado early in 1822. The settler population of Liberia grew from 150 in 1824 to 2,000 in 1834.

REPUBLIC OF LIBERIA. During the 1830's, separate and competing settlements were being formed in Liberia. Despite British rejection of the American Colonization Society's claim to possess sovereign rights over a portion of the

West African coast, the U.S. government refused to annex Liberia as a colony, and the Society was finally forced to abandon its responsibility for the settlers, who proclaimed their independence, 25 July, 1847. American diplomatic recognition was withheld until 21 Oct., 1862. Meanwhile, Liberia gradually enlarged itself by purchase and conquest of territory from surrounding tribes.

FRENCH ACTIVITIES. In 1817 the French regained the control of the trading posts in the Sénégal which they had lost during the Revolutionary and Napoleonic wars, and extended their commercial activities southward during the 1830's and 1840's. Édouard Bouet secured rights of occupation for France from chiefs on the Ivory Coast and in Gabon. In Dahomey, the Marseille firm of Régis reopened commercial ties at Whydah.

FAIDHERBE IN SÉNÉGAL. Louis Léon César Faidherbe (1818-89) was appointed governor of Sénégal in 1854. He saw the need to free the trade routes to the interior from imposts and tolls if French mercantile activity was to prosper. By 1861, through persuasion and force, he had come to terms with al-Hajj Umar (al-Hajj 'Umar), deposed some unco-operative rulers of coastal states, secured various trade routes, and constructed a number of forts in the interior. The French thrust into the western Sudan dates from his 2nd term of office, 1863-65.

Gold Coast to the Oil Rivers

ASHANTI AND THE BRITISH. In the mid-18th cent. the Ashanti of the Gold Coast, like other forest dwellers of West Africa, competed for the profits of the slave trade. The Fon kingdom of Dahomey, the Yoruba kingdom of Oyo, and the city-states of the Oil Rivers were all engaged in a continuing economic and political rivalry. Under the *asantehe* (king of Ashanti) Osei Kojó (ruled 1764-77), the Ashanti won a number of battles against states to their south, but failed to clear the routes to the coast of toll collectors. The Ashanti were able, however, to secure a steady supply of arms and am-

munition. Between 1807 and 1816, under the *asantehe* Osei Bonsu (ruled c. 1801-24), they won decisive victories over the coastal Fanti and over the Akim, Akwapim, and Wasa. In 1817 a British mission to Kumasi, the Ashanti capital, secured a treaty of friendship, 7 Sept. A second treaty was negotiated, 23 Mar., 1820, but was not ratified.

On 3 July, 1821, the British crown assumed control over the Gold Coast forts from the Committee of Merchants. War broke out between the British and Ashanti in June 1823, due mainly to jurisdictional conflicts and to a misunderstanding of Gold Coast affairs by the new British governor, Sir Charles MacCarthy. In 1824, MacCarthy took the field in person against the Ashanti army and was defeated and killed at the Battle of Bonsaso, 21 Jan. On 7 Aug., 1826, the British avenged this loss by overwhelming the Ashanti at the Battle of Katamanso. In 1828, responsibility for the administration of Gold Coast forts was returned by the crown to the Committee of Merchants.

GEORGE MACLEAN AND THE BOND OF 1844. George Maclean (1801-47), appointed president of the Council of Merchants on the Gold Coast, 8 Jan., 1830, saw the need for a just treaty with the Ashanti, and on 27 Apr., 1831, arbitrated an agreement which ensured an extended period of peace. His forceful and persuasive personality aided him in creating an informal protectorate over the coastal areas, and some Fanti chiefs acknowledged the extension of British jurisdiction into the interior. By 1840, Maclean's influence had helped to treble the trade of the Gold Coast. Maclean had his detractors, however, in both Britain and the Gold Coast, and on 24 Aug., 1843, the crown resumed responsibility for the area. A bond signed, 6 Mar., 1844, between Britain and the Fanti chiefs provided legal justification for British sovereignty.

DECLINE OF OYO AND THE YORUBA WARS. The Empire of Oyo (western Nigeria) declined during the late 18th and early 19th cents. The revolt

of Afonja, 1824, led to Fulbe (Fulani) control over Iforin and the imperial capital, Old Oyo, was abandoned c. 1835. The Fulbe were, however, thrown back by the Yoruba at the Battle of Oshogbo, c. 1840. Meanwhile Oyo's former Yoruba vassal states had begun fighting among themselves. The Owu War, c. 1820-26, and the Ijaye War, 1860-62, were the main engagements, the latter being fought between the Ibadans and the Egba of Abeokuta.

DAHOMEY UNDER GEZO. At the death of King Abandozan (ruled 1797-1818), Gezo (ruled 1818-58) attained power in Dahomey, helped by the Portuguese mulatto slave dealer, Francisco de Souza. Gezo participated in the illegal slave trade and intervened in the Yoruba civil wars, attacking Abeokuta in 1851.

OIL RIVERS OF NIGERIA. Following the prohibition of the British slave trade in 1807, British commercial interests in the Oil Rivers (Niger Delta) encouraged the transition from the slave to the "legitimate" trade. Palm oil, the main product of the region, was in heavy demand in Britain. Attempts were made to restrain the illegal slave trade by inducing local rulers, such as King William Dappa Pepple (1817-66) of Bonny, to sign treaties, but with little effect. The appointment of John Beecroft as British consul for the Bights of Benin and Biafra, 30 June, 1849, however, signaled increasing official British concern, and in 1852 the British government agreed to subsidize steamers plying regularly between West Africa and Liverpool.

COLONY OF LAGOS. Beecroft and others were convinced that Dahomey could be prevented from trading in slaves if support were given to the Egba of Abeokuta in their struggle against King Gezo. The position of British missionaries and merchants, moreover, would be strengthened if a port on the coast of Yorubaland were under British control. Accordingly, a British force landed at Lagos, Dec. 1851, deposed the *oba* (king) Kosoko, and replaced him with the more pliable Akitoye, who signed a treaty accepting British protection, 1 Jan., 1852. Trade

between the Lagos coast and Yorubaland, however, did not flourish. To enforce more favorable commercial conditions, the British annexed Lagos, 6 Aug., 1861, and made it a crown colony.

PARLIAMENTARY SELECT COMMITTEE, 1865. Despite the many increases in British influence on the West African coast during the first half of the 19th cent., the British Parliament remained reluctant to add to these responsibilities. The Colonial Office refused to accept territories newly acquired by the government of Sierra Leone. On the Gold Coast, officials temporized with the Ashanti problem, violating the spirit of Maclean's treaty of 1831, and in 1863 their inept diplomacy provoked another war in which the Ashanti defeated the British government's allies. A parliamentary select committee recommended, 26 June, 1865, that Britain should gradually withdraw from her West African possessions, except Sierra Leone. No action was taken, however, and both Britain and West Africa were soon to become involved in the "Scramble for Africa" (*Cont. p. 335.*)

STATES OF THE EAST AND CENTER

East Coast

1760-1826

THE EAST COAST IN 1760. During the 18th cent. the Arabs of Oman in the Persian Gulf established control over the ancient commercial city-states of the East Coast of Africa. Toward the end of the century, however, many local governors were able to make themselves virtually independent, and the traditional authorities of the area found Omani rule to be oppressive. The sultan of Kilwa appealed to Goa and Mozambique for protection, but the Portuguese were not strong enough to dominate the northern East African Coast.

FRENCH TREATY WITH KILWA. The French needed additional labor for their sugar, coffee, and cotton plantations

on Réunion and Île de France. By an agreement of 14 Oct., 1776, the sultan of Kilwa agreed to provide a French trader, Morice, with 1,000 slaves per year.

IMMIGRATION FROM INDIA. Indian traders, on the coast since c. 1500, began to settle in ever-increasing numbers, particularly at Zanzibar. By 1811 the Indians were such an important sector of the commercial community that Capt. Smee protested their taxation, as they were British citizens.

SAYYID SAID. In 1806 Sayyid Said (Sa'id) ibn Sultan (ruled 1806-56) succeeded to the throne of Oman. His East African domain, over which his predecessors had exercised only indirect control, was secure only at Zanzibar, Pemba, Mafia, and Kilwa. In 1814, the Mazrui rulers of Mombasa, a dynasty which had first asserted its independence from Oman in 1741, defied Sayyid Said, and appealed for protection to the British at Bombay. By 1822 the sultan's forces had secured the coastal islands of Pate, Brava, and Lamu.

OWEN'S PROTECTORATE. On 22 Sept., 1822, Said agreed to a treaty making illegal the sale of slaves in his dominions to the subjects of Christian powers. The treaty also provided for a British agent to be posted at Zanzibar and implied British recognition of Said's East African domain. On 7 Feb., 1824, Capt. William Owen (1774-1857) arrived off Mombasa while Said's fleet was bombarding the Mazrui stronghold of Fort Jesus. Hoping to aid in halting the slave trade, Owen intervened and established a protectorate, 9 Feb., 1824. The Mazrui only wanted British protection of their slaving activities, however, and the British could not afford disruption of their relations with Said in the Persian Gulf. After prolonged negotiations, the British forces withdrew, Oct. 1826.

1827-70

DEFEAT OF THE MAZRUI. Soon after the British withdrawal, Sultan Said sent a fleet to Mombasa, but secured only the temporary submission of the Mazrui. An-

other attempt in 1829 also failed. The next visit of the sultan, in 1832-33, included a futile plea to Madagascar for troops. Finally, in 1837, he secured the downfall of the Mazrui at Mombasa by fraud rather than force and had the family deported to the Persian Gulf. Said was now master of the coast. In 1841 he settled permanently at Zanzibar.

RELATIONS WITH FOREIGN POWERS. On 21 Sept., 1833, Said signed a treaty of friendship and commerce with the U.S.A. and on 17 Nov., 1844, a similar agreement with France. In 1841 a British consul was stationed at Zanzibar.

TRADE WITH THE INTERIOR. Arab trading caravans had begun moving inland from the coast c. 1780. By the 1830's, Sultan Said was sending regular trading expeditions hundreds of miles into the interior. Independent traders joined the caravans for protection. In 1844 contact was made with the capital of Buganda, and by 1851 the caravans were moving west of the Great Lakes. The trade was largely financed by the Indian moneylenders at Zanzibar, who were encouraged by Said. Between 1840 and 1860, the Indian population of the island increased from 1,000 to 6,000.

CHRISTIAN MISSIONS. Johann Ludwig Krapf (1810-81) of the Church Missionary Society arrived in East Africa in 1844 and was welcomed by Sultan Said. His activities were restricted mainly to Mombasa, but he and his associate, Johann Rebmann (1820-76), became the first Europeans to sight Mts. Kenya and Kilimanjaro. In 1860 a French Catholic mission, which included 2 Holy Ghost fathers, arrived. This was followed by a party of the United Methodist Free Churches in 1862 and by the Universities' Mission to Central Africa in 1864.

RULE OF MAJID. In 1856 Sultan Said died and his son, Majid (1835-70), succeeded to a throne that was now separate from that of Muscat and Oman. Zanzibar's importance as a commercial center at this time is shown by the fact that total revenues exceeded £50,000 by 1859. They had steadily increased during Said's reign: 1828, £10,000; 1834, £20,000. The primary

exports were ivory, cloves, gum copal, cowries, and sesame; imports included cottons, rice, beads, brass wire, gunpowder, muskets, and provisions. During Majid's reign, British influence in Zanzibar increased considerably.

The Interior

THE STATE OF BUGANDA. The most powerful state in the interior of East Africa was Buganda, lying to the north of Lake Victoria. *Kabaka* (King) Semakokiro (ruled 1797-1814), according to tradition, became extremely wealthy through the ivory trade. Buganda had expanded considerably by his time, and was moving from a feudal to a bureaucratic state system. Semakokiro's royal monopoly over the ivory trade produced greater centralization, as the monarch could reward loyal supporters with goods as well as land. Although the *kabaka's* rule was autocratic, Buganda's society was fluid, allowing commoners to advance in wealth, power, and prestige. The Baganda were thus receptive to Moslem and Christian influences in the 19th cent., and conditions were favorable for material and social change.

TRADE IN THE INTERIOR. The 1st direct contact between Buganda and the coastal Arabs took place in 1844 during the reign of *Kabaka* Suna (ruled 1836-56). The main exports were ivory and slaves, and the main imports were cloth and guns. Other tribes of the interior were involved in commercial ties to the coast in the early 19th cent. Primary among them were the Nyamwezi, who controlled the route east from Lake Tanganyika. Ivory and slaves were their main exports, but some copper found its way to the coast from Katanga. By the mid-19th cent., however, the Zanzibaris controlled most of the trade, for they had guns and access to credit.

MUTESA OF BUGANDA. Mutesa (ruled 1856-84) made the role of *kabaka* of Buganda almost completely secure through sophisticated political maneuvering. His kingdom's expansion was virtually complete at this date; he sought only

internal prosperity and political influence over his neighbors.

KABAREGA OF BUNYORO. One of Buganda's rivals, situated to the north, was Bunyoro. By 1869, the date of the accession of Kabarega to the throne of Bunyoro, that kingdom had largely recovered from earlier economic and political impoverishment. Trade contacts with "Khartoumers" (merchants from the basin of the Upper Nile) began a period of intense rivalry with Buganda and involvement with foreign intruders of all kinds.

Bantu Migrations

MFECANE. About 1816, the Zulu chief, Chaka (1773-1828), began a war of conquest against other Nguni peoples living in coastal southeast Africa. The resulting disturbances (*mfecane*) caused large-scale migrations of Bantu peoples.

SWAZI. The Ndwandwe, led by Sobhuza (d. c. 1840), moved north and established the Swazi kingdom, named for Sobhuza's successor, Mswati.

GAZA. Another Nguni migration, led by Soshangane, penetrated southern Mozambique and resulted in the Gaza state, founded c. 1830.

NGONI KINGDOMS. The Jere, under Chief Zwangendaba, passed through Mozambique, and destroyed the kingdom of the Mwane Mtapu, c. 1833. Picking up recruits on the way and now known as the Ngoni, Zwangendaba's following crossed the Zambezi River, 19 Mar., 1835, and moved north of Lake Malawi to the vicinity of Mapupo. After Zwangendaba's death, c. 1848, the Ngoni split up and established 5 separate kingdoms located in various parts of East and Central Africa between Lake Victoria and the Zambezi.

KOLOLO. A group of Sotho, driven out by invasions from Nguniland, migrated north under Chief Sebetwane into Barotseland. There they conquered the Lozi kingdom, but after Sebetwane's death, 1851, the state they formed lost coherence and, following a rebellion of the indigenous Lozi, 1860, and the death

of Sebetwane's successor, 1864, a period of anarchy ensued. Order was restored by the great Lozi king, Lewanika.

NDEBELE. An Nguni group, led by Chief Mzilikazi, crossed the Drakensberg Mts.; devastated the central Transvaal,

1824-34; and were defeated by Boers at the Battle of Mosega, Jan. 1857. Determined to seek his fortune farther north, Mzilikazi established the Ndebele state in Matabeleland. At his death, 1868, he was succeeded by Lobengula. (*Cont. p. 335.*)

THE AGE OF WESTERN NATIONALISM, 1789–1914

Nationalism, Liberalism, and Reaction in Europe, 1800–1871

FRANCE FROM NAPOLEON TO NAPOLEON III

1800–1802

INTERNAL CONSOLIDATION. After dissolving the legislative councils in the coup of 9–10 Nov., 1799, Napoleon became First Consul at the head of a provisional government, which drew up a constitution, known as the Constitution of the Year VIII. It was promulgated on 25 Dec. and ratified in a national plebiscite in Feb. 1800. The new constitution provided for 3 consuls appointed for 10-year terms (Napoleon remained First Consul), 7 ministries, and a Council of State (all appointed by Napoleon). The legislative branch consisted of a Senate, Tribunate, and Legislative Body; the Senate was ornamental, the Tribunate discussed proposed legislation without voting, and the Legislative Body could only accept or reject proposed measures without debate. All departmental and local administration was run by the Ministry of Interior through prefects.

Napoleon permitted most *émigrés* to return, pacified the Vendée, stabilized the currency, and made a concordat with Pope Pius VII, 15 July, 1801. The concordat stipulated that the French government would pay clerical salaries and nominate bishops, who would then be consecrated by the pope. The pope recognized the sale of church lands, and Catholicism was declared the religion of

most Frenchmen. By a plebiscite, 2 Aug., 1802, Napoleon was elected Consul for life.

COLLAPSE OF THE 2ND COALITION. After the French reverses of 1799, Napoleon invaded Italy and defeated the Austrians at Marengo, 14 June, 1800. Following a short armistice, Moreau defeated the Austrians at Hohenlinden, 3 Dec., forcing Austria to sign the Treaty of Lunéville, 9 Feb., 1801, by which she agreed that France should have a free hand in Italy west of Venetia; Austria also had to recognize the French "Sister Republics."

Abandoned by all her allies, Britain signed the Treaty of Amiens, 27 Mar., 1802, which gave tacit recognition to France's conquests in Europe and permitted Britain to retain Ceylon and Trinidad, though obliging her to yield Malta, Elba, Minorca, and the Cape Colony.

1803–5

THE EMPIRE. Napoleon proclaimed the French Empire and crowned himself emperor, 2 Dec., 1804. The legislative bodies became ornamental, while the real power of administration remained in the hands of the Council of State, the ministries, and the prefects. Napoleon promulgated a series of codes, which unified the legal structure of the country and abolished the patchwork of laws left over

from the Old Regime. The codes consisted of the Civil Code, 1804, known as the 'Code Napoléon'; the Commercial Code, 1807; the Penal Code, 1810; and codes for civil and criminal procedure. Under these codes all citizens received legal equality and property rights were guaranteed. The Napoleonic codes were widely imitated in parts of Europe and in the rest of the world.

WAR OF THE 3RD COALITION.

France and Britain renewed the war in May 1803, because of a British refusal to evacuate Malta. By 1805, Napoleon had assembled a large army, at Boulogne to invade Britain. Britain, however, succeeded in gaining Russia, 11 Apr., 1805, and Austria, 9 Aug., as allies, forcing Napoleon to send his invasion force to the east in late Aug. to meet this new coalition. However, Adm. Horatio Nelson ended Napoleon's invasion plans by destroying two-thirds of a combined French-Spanish fleet at Trafalgar, 21 Oct.

The French armies, however, surrounded and captured a large Austrian force at Ulm, 15-20 Oct.; occupied Vienna, 13 Nov.; and smashed an Austro-Russian army at Austerlitz in Moravia, 2 Dec. Francis I, the Austrian emperor, by the Treaty of Pressburg, 26 Dec., yielded Venetia, Istria, and Dalmatia to France, and Tirol and Vorarlberg to Bavaria, while receiving the archbishopric of Salzburg.

1806-9

DEFEAT OF PRUSSIA. Napoleon induced most of the newly enlarged German states to withdraw from the Holy Roman Empire and form the Confederation of the Rhine, 1806, under his protection, thus eliminating Prussian influence from western and southern Germany. Franco-Prussian relations deteriorated. The Prussian army advanced into Thuringia, 13 Sept. (War of the 4th Coalition). The French mobilized, routed the Prussians at Jena and Auerstadt, 19 Oct., and rapidly captured all important Prussian fortresses west of the Oder and Neisse rivers.

Napoleon arrived in Berlin, 27 Oct.,

and issued a proclamation, 21 Nov., excluding all British trade and all British subjects from the Continent, thus inaugurating the Continental System. Meanwhile, Frederick William III and the remainder of the Prussian army fled to East Prussia. A combined Russian-Prussian force stalemated the French at Eylau, 7-8 Feb., 1807, but new French levies arrived in the spring, enabling Napoleon to defeat the Russians at Friedland, 14 June.

TREATY OF TILSIT. 7-9 July, 1807.

Prussia ceded all her west-Elbeian possessions to France's German satellites and yielded the Polish territories of the 2nd and 3rd Partitions to the newly constituted Grand Duchy of Warsaw. Prussia joined the Continental System, and French garrisons remained in Prussia until Napoleon's defeat in 1813. Czar Alexander recognized all French conquests and satellites and joined the Continental System.

FRENCH INVASION OF SPAIN. Napoleon was determined to control Spain to round out the Continental System. He forced King Carlos IV and his son, Fernando, to abdicate, May, and sent an army into Spain, while proclaiming his brother, Joseph (1768-1844), king of Spain. French troops occupied Madrid, 20 July, 1808, but Spanish forces rallied and drove the French from the city. Napoleon led a new army of 200,000 into Spain, Nov., and retook Madrid, Dec. French troops managed to occupy most of Spain and Portugal, but guerrilla resistance developed and a British expeditionary force tied down a considerable part of the French army. When Napoleon diverted men from Spain to Germany in 1813, the Spanish and British were able to take the offensive, cleared Spain of French troops, and invaded southern France.

1809-10

AUSTRIAN WAR OF LIBERATION.

Encouraged by French difficulties in Spain, Francis I of Austria embarked on a war of liberation to free Germany from French domination, Apr. 1809 (War of the 5th Coalition). The Austrians invaded

Bavaria, a French ally, but Napoleon mobilized French troops rapidly and defeated the Austrians in East Bavaria, 19-23 Apr., entering Vienna on 13 May. Nevertheless, the Austrian army arrived on the opposite side of the Danube and drove back the French at Aspern and Essling, 21-22 May. After receiving reinforcements, Napoleon crossed the Danube and defeated the Austrians at Wagram, 5-6 July, forcing Francis to sue for peace. By the Treaty of Schonbrunn, 14 Oct., Austria ceded territory to Bavaria, the Duchy of Warsaw, and the French-administered Illyrian provinces. Austria also made an alliance with France, sealed by the marriage of Marie Louise (1791-1847), daughter of Francis I, to Napoleon, 11 Mar., 1810. Napoleon had divorced his 1st wife, Joséphine de Beauharnais, the previous year.

1811-12

RUSSIAN CAMPAIGN. The Franco-Russian alliance of Tilsit, reaffirmed at a meeting in Erfurt, Sept.-Oct. 1808, disintegrated when Alexander withdrew from the Continental System, 31 Dec., 1810, and when Napoleon dispossessed the czar's uncle by annexing Oldenburg. Napoleon assembled a Grand Army of approximately 500,000 men and invaded Russia, 24 June, 1812. The Russian army avoided his enveloping maneuvers, but offered battle at Borodino, 75 mi. west of Moscow, where it was decisively defeated, 7 Sept. The French entered Moscow 1 week later, and the city was soon destroyed by fire. Napoleon spent 5 weeks in Moscow waiting for peace overtures which never came, then ordered a retreat, 19 Oct. Lack of supplies, harassment by Cossacks, and the winter cold nearly destroyed the Grand Army.

1813-14

WAR OF LIBERATION. Encouraged by the destruction of the Grand Army, Frederick William of Prussia made an alliance with Russia and declared war on France, Mar. 1813. Napoleon, however, raised an army of 200,000 in France and marched

into Germany in mid-Apr. He drove the Prusso-Russian army out of Saxony by victories at Lutzen (Gross-Görschen), 2 May, and Bautzen, 20-21 May. Heavy losses, however, induced him to agree to an armistice, 4 June, during which both sides wooed Austria. Metternich, the Austrian foreign minister, agreed to join the allies, 27 June, if Napoleon would not accept his conditions for peace: the frontiers of France to be fixed at the Rhine, the Alps, and the Pyrenees. Napoleon refused, and Britain assured all 3 allies of subsidies. The armistice expired, 10 Aug., and Austria immediately declared war (War of the 6th Coalition). For the first time, Napoleon faced all the four Great Powers at once. After 2 months of indecisive campaigning, the allies succeeded in concentrating their numerically superior forces around the French at Leipzig, where they decisively defeated Napoleon in the *Völkerschlacht* (Battle of the Nations), 14-19 Oct. The remnants of Napoleon's army retreated across the Rhine 2 weeks later.

ALLIED INVASION OF FRANCE.

The allies began an invasion of France in Dec. 1813. Napoleon's opposing strategy was masterly, but the allies, possessing numerical superiority, were able to occupy Paris 31 Mar., 1814.

BOURBON RESTORATION. With allied troops on French soil, the French armies near defeat, and the French people anxious for peace, the Imperial Senate, 2 Apr., proclaimed the fall of Napoleon. Napoleon abdicated unconditionally, 6 Apr., and the same day the Imperial Senate called Louis XVIII (1755-1824), younger brother of Louis XVI, to govern France. The allies and the French fixed the terms of Napoleon's exile to Elba in the Treaty of Fontainebleau, 11 Apr., and on 23 Apr. signed an armistice.

On 24 Apr., King Louis XVIII entered France. Proceeding to Paris, he set forth in the Declaration of Saint-Ouen, 2 May, the bases of a constitution.

1ST TREATY OF PARIS. 30 May. Intent upon making France a force for international stability, the allies negotiated a moderate settlement that imposed

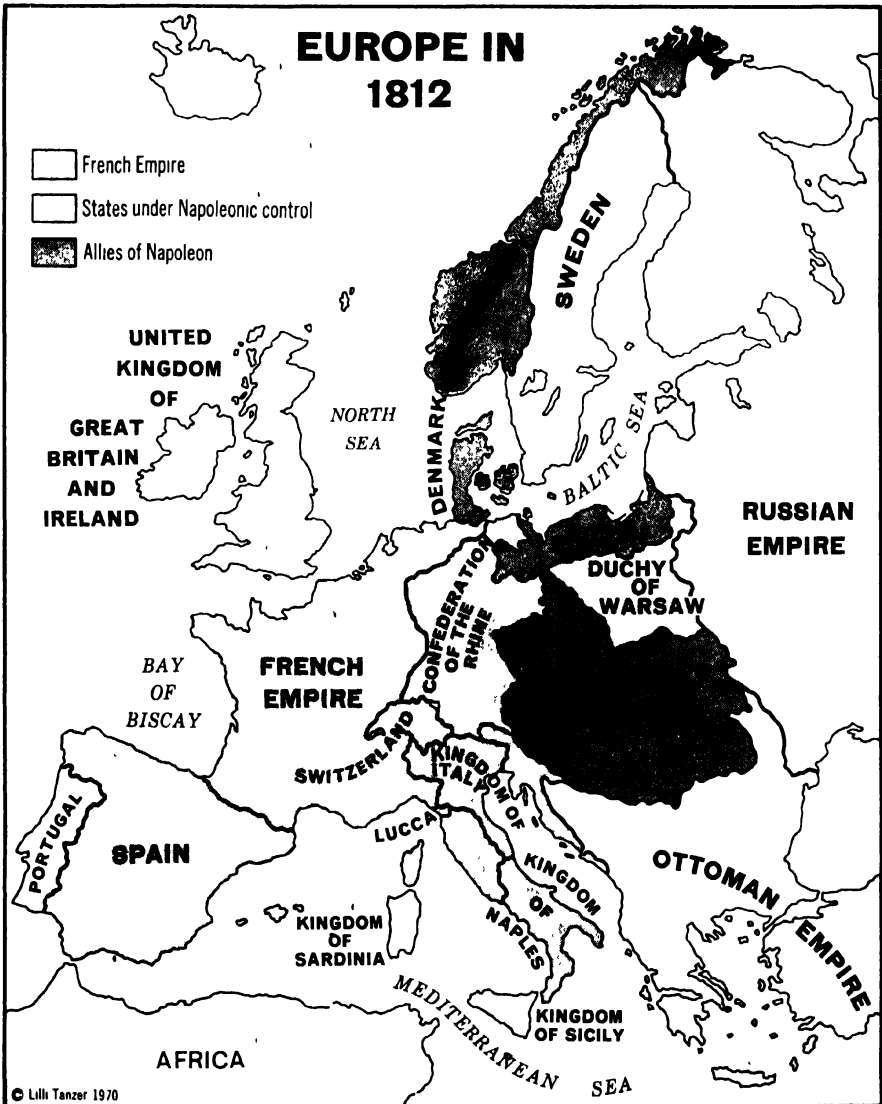

no indemnity, gave France roughly the boundaries of 1792, and restored some former colonies.

CHARTER OF 1814. 4 June. Granted by Louis XVIII, the charter represented a compromise between divine-right monarchy and the Revolution. It promised freedom of religion and the press, guaranteed legal equality, secured the land settlement of the Revolution, and maintained in substance the Napoleonic Code Civil. Rejecting the principle of popular

sovereignty, the charter established a system of shared powers subordinating the bicameral legislature (Chamber of Deputies, Chamber of Peers) to the crown.

1815

100 DAYS. Napoleon escaped from Elba, 27 Feb., landed in France, 1 Mar., and rapidly pushed northward. With the defection of Marshal Ney and his army, 13 Mar., any effective opposition dissolved.

As Louis fled to Ghent, 20 Mar., Napoleon entered Paris, issued the *Acte Additionnel*, a constitution modeled on the charter, then marched into Belgium to fight the allies. Defeated at the Battle of Waterloo, 18 June, Napoleon abdicated, 22 June. Louis XVIII re-entered Paris, 8 July, and appointed, 9 July, Talleyrand and Joseph Fouché (1759-1820) heads of the newly unified cabinet, thus initiating the Second Restoration.

TALLEYRAND-FOUCHÉ MINISTRY. The 100 Days left France isolated diplomatically and deeply divided internally. The White Terror, a violent royalist repression of Bonapartists and former revolutionaries, erupted in the south. The election, 14-22 Aug., of an ultraroyalist-dominated Chamber of Deputies, dubbed the *Chambre introuvable*, climaxed the royalist reaction. The cabinet resigned, 21 Sept., before the Chamber met.

RICHELIEU MINISTRY. The duc de Richelieu (1766-1822) followed, 24 Sept., Talleyrand and Fouché, heading a moderate cabinet. The reactionary *Chambre introuvable*, intent on repression, suspended individual liberties, passed stiff sedition legislation, and established extraordinary courts.

2ND TREATY OF PARIS. 20 Nov. The allies, determined to punish France, imposed a harsh peace: the loss of some border territory, 3 years of occupation, payment of 700 m. francs indemnity.

1816

DISSOLUTION OF THE CHAMBRE INTROUVABLE. 5 Sept. The moderate cabinet battled the increasingly ungovernable ultraroyalist parliamentary majority until Louis, prodded by the allies, dissolved the Chamber, 5 Sept. New elections, Oct., returned a more manageable moderate royalist majority.

1817

ELECTORAL SYSTEM ESTABLISHED. 5 Feb. Tax qualifications reduced the electorate to some 90,000 out of a population of 26 m., giving wealthy landowners and the urban middle class

political supremacy. Voters met annually to elect one-fifth of the deputies.

The ultraroyalists on the extreme right opposed compromise with the Revolution and favored a strong monarchy closely allied with the Catholic Church. At the center, the constitutional or moderate royalists supported the charter compromise. The doctrinaires, a clique of left-tending constitutionals, provided the philosophical justification of the charter system. The independents or liberals, anticlerical champions of limited popular sovereignty and individual liberties, constituted the extreme left. These political groupings lasted until 1830.

1818

END OF FOREIGN OCCUPATION. Through foreign and domestic loans, the government collected sufficient funds to pay the indemnity. At the Congress of Aix-la-Chapelle, the allies agreed, 9 Oct., to withdraw all troops and invited France to rejoin the Concert of Europe.

RESIGNATION OF RICHELIEU. 26 Dec. The gains of the left in the elections of Nov. 1818 divided the cabinet, some seeking alliance with the ultraroyalists, others with the left center. Unable to impose a solution, Richelieu resigned, 26 Dec.

1819

DESSOLLES-DECAZES MINISTRY. 20 Dec. With the government of Gen. Jean Dessolles (1767-1828) (Council President, Foreign Affairs) and the Duc Decazes (1780-1860) (Interior, Police), power shifted from the right center to the left center. Louis packed, 4 Mar., the ultraroyalist Chamber of Peers with moderate appointments and on 4 May the government lifted censorship. But liberal gains in the legislative elections prompted Decazes (Council President since Nov.) to renounce efforts to reconcile the left.

1820

2ND RICHELIEU MINISTRY. 21 Feb. The murder of Louis XVIII's

nephew, the duc de Berry (1778-1820), 13 Feb., by a fanatic, Louvel (1783-1820), provoked an ultraroyalist reaction that forced the king to abandon his favorite, Decazes, and recall Richelieu, 21 Feb.

RESURGENCE OF THE ULTRA-ROYALISTS. In the heat of reaction, the moderates abandoned the center, reducing the Chamber to 2 warring factions. The right prevailed, suspending individual liberties, Mar.; imposing press censorship, 31 Mar.; and passing a reactionary electoral law, 19 June, the Law of the Double Vote, which gave the richest electors the right to vote twice. The legislative elections, 4 and 13 Nov., crushed the left, consummating ultraroyalist control.

VILLÈLE MINISTRY. Unable to maintain a moderate royalist right-center position against the ultraroyalists, Richelieu resigned, 12 Dec., 1820, to be replaced, 15 Dec., by the comte de Villèle (1773-1854), parliamentary leader of the ultras.

1822

THE LEFT SILENCED. After its electoral defeat in 1820, the left regrouped in secret societies, notably the Carbonari, and abandoned legality for insurrection, 1821, 1822. But repeatedly abortive coups, repressive legislation, and infighting gradually reduced the left to silence.

1823

MILITARY INTERVENTION IN SPAIN. At the Congress of Verona, Oct. 1822, the allies authorized France to suppress revolt in Spain. French forces invaded, Apr., quickly defeated the liberals, 31 July (Battle of Trocadero), and restored the legitimate monarch, Fernando VII. Intervention secured French status as a guarantor of the Vienna settlement.

1824

ULTRAROYALIST CABINET, CHAMBER, AND KING. Profiting from the success of the Spanish campaign, the

government dissolved the Chamber, 24 Dec., 1823. New elections, 25 Feb., 6 Mar., produced an overwhelmingly rightist Chamber that promptly secured a 7-year mandate by substituting integral renewal every 7 years for partial annual renewal (Law of the Septennat, 8 June).

On 16 Sept. Louis XVIII died. The ultraroyalist comte d'Artois (1757-1836) succeeded his brother as Charles X.

1825

REGIME OF REACTION. The Chambers voted, 27 Mar., to indemnify the *émigrés*, thus finalizing the Revolutionary land settlement. As a protestation of faith, they voted the death penalty for theft of holy vessels (Law of Sacrilege, 20 Apr.), a measure that only stimulated mounting popular anticlericalism.

1826-27

CONSOLIDATION OF OPPOSITION. Freed from censorship, Sept. 1824, a virulent liberal press aroused public opinion. The moderate peers defeated government legislation (laws of succession, press censorship) judged dangerously reactionary. The government's dissolution of the National Guard after a display of antigovernment sentiment, 30 Apr., 1827, and the reimposition of censorship, 24 June, compounded public hostility. Hoping to solidify his majorities, Villèle announced, 6 Nov., the addition of 76 peers and dissolved the Chamber. But new elections, 17, 24 Nov., registered significant gains for the liberals and nascent counteropposition, forcing Villèle to withdraw, 3 Jan., 1828.

1828

MARTIGNAC MINISTRY. 4 Jan. The next cabinet, unofficially headed by the vicomte de Martignac (1778-1832), attempted unsuccessfully through concessions to the liberals (abolition of censorship, 18 July) to reforge a moderate royalist center majority.

INTERVENTION IN GREECE. To counterbalance the Russian invasion of

the Balkans (spring), the French government abandoned Villèle's noninterventionism and invaded, Sept., the Greek peninsula, forcing the Egyptians and Turks to evacuate, Dec. Military victory and diplomatic success inaugurated a period of French activism in foreign affairs.

1829

POLIGNAC MINISTRY. 9 Aug. Unsupported by the king and repeatedly defeated by the combined extreme-right and liberal oppositions, the Martignac government was dissolved, 8 Aug. Determined to defy the left and to rally the divided right, Charles X formed, 9 Aug., an ultra-royalist-dominated government headed by the unpopular prince de Polignac (1780-1847).

1830

ADDRESS OF THE 221. 16 Mar. After months of inactivity, the government convoked the Chamber of Deputies, 2 Mar. The address to the throne (Address of the 221), claiming the nation's right to influence the choice of ministers, requested dismissal of the Polignac cabinet. Charles X riposted, dissolving the Chamber, 18 May.

CAPTURE OF ALGIERS. 5 July. Hoping for public support, Polignac, 25 May, dispatched an expedition to capture Algiers, 5 July. He did not save his regime, but secured a French foothold in North Africa.

REVOLUTION OF 1830. The elections (23 June; 3, 13, 19 July) returned a clearly antigovernment majority. Refusing to yield, Charles X, invoking emergency powers, published the July Ordinances, which imposed press censorship, dissolved the newly elected Chamber, and ordered new elections under a more restricted suffrage. Opposition exploded into popular insurrection, 28 July, as rioters, led by republicans, gained control of Paris, 29 July (the July Days).

A group of liberal deputies, overriding the republicans, extended the lieutenant generalship to the duc d'Orléans (1773-

1850) on 31 July, and on 2 Aug. Charles X abdicated. The July Revolution, defeating republic and legitimate monarchy alike, secured a quasi-legitimate parliamentary monarchy controlled by the propertied middle class, the former liberal opposition.

LOUIS PHILIPPE, KING OF THE FRENCH. The deputies called, 7 Aug., the duc d'Orléans, head of the younger, Orleanist branch of the Bourbon line, to the throne as Louis Philippe I (ruled 1830-48). He swore, 9 Aug., to uphold the Charter of 1814, revised, 7 Aug., to increase parliamentary prerogatives and to prevent royal abuse of power.

1831-35

RESISTANCE VS. MOVEMENT. Although Orleanists shared bourgeois, anti-legitimist, and anticlerical attitudes, they disagreed on the significance of the July Revolution. The forces of "resistance," viewing the Revolution as a dynastic change only, defended the domestic and international *status quo*. For the partisans of "movement," the Revolution inaugurated a regime dedicated to political democratization and hostile to the international settlement of 1815. These forces dominated parliamentary politics until 1848.

TRIUMPH OF RESISTANCE. Neither the appointment of a liberal banker, Jacques Laffitte (1767-1844) as council president, 2 Nov., 1830, nor the trial and condemnation of Charles X's ministers, 15-21 Dec., ended popular unrest. The forces of movement failed to translate reforming aspirations into a legislative program, and the initiative passed to the forces of order under Casimir Périer (1777-1832) on 13 Mar. The legislative elections, 5 July, gave the conservatives a power monopoly they held until 1848.

BOURGEOIS MONARCHY DEFINED. Under Périer, 13 Mar., 1831-16 May, 1832, minimum reforms guaranteed power to the propertied middle classes. In 1831 the deputies sanctioned election of town councils, 21 Mar.; authorized a bourgeois-dominated national guard to

protect the regime, 22 Mar.; gave more propertied bourgeois the vote, 19 Apr.; and abolished the hereditary peerage, 29 Dec.

The subsequent ministry, under Marshal Nicolas Soult (1769-1851), organized colonial government, 24 Apr., 1833, and reformed education, requiring public authorities to maintain schools and establishing standards for teachers, 28 June.

INSURRECTION AND REPRESENTATION. The government checked serious industrial disturbances in Lyons, Nov. 1831, and political insurrection in Paris, June 1832. A royalist revolt in the South, May-June 1832, collapsed, weakening the legitimist cause.

With conservatives in power, the republicans intensified pressure for social and political reform (1832-34). Striking at the political clubs, centers of republican activity, the government restricted associations, 10 Apr., 1834. The army bloodily repressed ensuing insurrections in Lyons and Paris, 12 Apr.

A prolonged cabinet crisis, Apr. 1834-Mar. 1835, weakened the government and enabled Louis Philippe to gain domination. But the duc de Broglie (1785-1870) restored strong conservative leadership, 12 Mar., 1835.

After an attempt on Louis Philippe's life, 28 July, 1835, the government passed the "September Laws," repressive measures including juridical short cuts and press restrictions, which silenced the republican left.

The monarchy successfully defended, the conservative majority disintegrated. De Broglie withdrew, 5 Feb., 1836, and Adolphe Thiers (1797-1877) formed a government, 22 Feb., without a fixed majority or a specific program.

FOREIGN POLICY. With the exception of military action to secure Belgian independence, Aug. 1831, the French government followed pacific, noninterventionist policies. In this period France generally supported Britain against the legitimate monarchs.

1836 •

REGIME OF PERSONAL POWER. Breaking with Thiers, Louis Philippe

called on the more pliable duc de Molé (1781-1855). The weak Molé cabinet, 6 Sept., and a fluid Chamber majority permitted Louis Philippe to govern. In an atmosphere of political apathy, an abortive coup by Louis Napoleon (1803-73), nephew of Napoleon I, at Strasbourg, 30 Oct., stirred little response.

1837-40

AGITATION FOR REFORM. Relative calm, domestically and internationally, fostered prosperity in France. Molé dissolved the deputies, 3 Oct., 1837, to strengthen the government majority. But an antiministerial coalition was formed to challenge Louis Philippe's regime of personal power. Popular demands for political democratization and electoral reform increased, 1838-40, and, as France became industrialized, Utopian Socialism spurred proletarian class consciousness.

Parliamentary elections, following dissolution, 2 Feb., 1839, forced Molé out of office, 8 Mar. Popular unrest in Paris (Société des Sansons revolt, 12 May) forced a solution to a prolonged cabinet crisis, 8 Mar.-12 May.

Thiers replaced Soult, 1 Mar., 1840. He granted minor concessions to the left, but rejected electoral reform. Louis Napoleon's second attempted coup, at Boulogne, 5-6 Aug., 1840, failed.

MIDDLE EAST CRISIS. The Treaty of London, 15 July, 1840, directed against France and its Egyptian ally, broke the Anglo-French entente and outraged public opinion. Thiers threatened war, but Louis Philippe, intent on peace, secured acceptance of the treaty, 8 Oct. Thiers' clash with the king precipitated his withdrawal, 29 Oct. The incoming cabinet headed by Soult but dominated by François Guizot (1787-1874) governed with minor changes until 1848.

1840-47

GOVERNMENT OF GUIZOT. With Guizot's co-operation, Louis Philippe again achieved a regime of personal power dedicated to the maintenance of the *status quo*. The left center under Thiers and the left under Odilon Barrot

(1791-1873) joined to attack government corruption and demand parliamentary and electoral reform, 1840-42. Elections, 9 July, 1842, following dissolution returned a favorable conservative majority which Guizot maintained by intrigue and favors. Guizot pledged, 1842, state subsidies for railroad construction, stimulating industrial expansion, 1842-46.

Divided since July 1842; Thiers and Barrot reunited to attack government immobility. Guizot dissolved the Chamber, 6 July, 1846, and, despite the solidarity of the left, the conservatives gained in the ensuing elections.

FOREIGN POLICY. To end France's diplomatic isolation, Guizot engineered an entente with England, 1841, confirmed by the exchange of royal state visits, 1843, 1844. Although shaken by the Pritchard affair (ejection of a British missionary from Tahiti), 1843, and by French military activity in Morocco, 1844, the alliance held Anglo-French rivalry in Spain (the Affair of the Spanish Marriages) broke the alliance, 1846.

DESTABILIZING CONDITIONS. As bad harvests and an industrial depression, 1845-47, exacerbated popular discontent, the dynastic left organized political banquets to mobilize public opinion for reform.

1848

THE FEBRUARY REVOLUTION. Cancellation of a political banquet touched off mass demonstrations in Paris, 22 Feb. As barricades went up, Louis Philippe dismissed Guizot, 23 Feb.; summoned Thiers, 24 Feb.; and then, failing to rally even the bourgeois National Guard, abdicated, 24 Feb.

Moderate and social republicans joined forces in a provisional government, 24 Feb., which proclaimed the Republic, 25 Feb.; created National Workshops to reduce unemployment, 26 Feb.; adopted universal manhood suffrage, 2 Mar.; and opened the National Guard to workers. The moderate republicans, opponents of fundamental social change, won control of the newly elected Constituent Assembly, 23 Apr. An Executive Commission

replaced the provisional government and managed to restore order.

THE JUNE DAYS. The National Workshops, conceived but not directed by Louis Blanc (1811-82), deteriorated into mere charity. But when the government, alarmed by renewed social unrest, 15 May, abolished them, 21 June, workers took to the barricades, 23-26 June. General Louis Eugène Cavaignac (1802-57) smashed the uprising, turning the working class against the bourgeoisie.

GOVERNMENT OF CAVAIGNAC. A grateful assembly made Cavaignac president of the Commission. Blaming the socialists for the June Days, the Assembly banned political meetings and tightened press laws.

PRESIDENT BONAPARTE. The Constituent Assembly promulgated, 20 Nov., a constitution that divided power between a unicameral legislature and a president elected by universal suffrage. Backed by the forces of order, Louis Napoleon Bonaparte became president, 10 Dec. Louis Napoleon sought to reconcile popular government and order. He embraced the Republic, 20 Dec., but appointed an Orleanist cabinet headed by Odilon Barrot.

1849-50

INTERVENTION IN ITALY. Courting Catholic support, Louis Napoleon sent an expeditionary force to destroy the Roman Republic and restore the pope to Rome, 25 Apr. This force remained in Rome until 1870.

REPUBLICAN DECLINE. Although the forces of order (mainly monarchists) won control of the new Legislative Assembly, 13 May, 1849, the radical left, the "Mountain," also gained. An abortive insurrection in Paris, 13 June, 1849, caused 33 leftist members to be expelled from the Assembly, 8 Feb., 1850, but the Mountain regained all but 10 seats, 10 May. Alarmed, the majority imposed new curbs on political freedom: a 3-year residence requirement for voters, 31 May, which affected mainly the workers, and a restrictive press law. As a further guarantee of order, the Assembly allowed church

representation on school governing councils and permitted the establishment of private schools (Loi Falloux, 15 Mar., 1850).

1851

COUP D'ÉTAT OF LOUIS NAPOLEON. Unsuccessful in his attempt to extend his term of office legally, 15 July, Louis Napoleon planned a coup d'état. On 2 Dec., the anniversary of the Battle of Austerlitz, he imposed military control on Paris; dissolved the Assembly, restored universal suffrage, and called for a plebiscite on a new constitution.

Resistance was short-lived in Paris, 3-4 Dec. In the provinces, the government countered resistance with mass arrests (c. 27,000). Nevertheless, "yes" votes outnumbered "noes" in the plebiscite: 7½ m. to 600,000, 21 Dec.

1852-57

IMPERIAL CONSTITUTION. Louis's constitution, 15 Jan., 1852, divided limited legislative authority among an appointive Council of State and Senate and a popularly elected Legislative Body, but reserved virtually all power to the president, elected for 10 years. Government management assured "official" candidates' control of the Legislative Body. The people approved by plebiscite, 21 Nov., the transformation of republic to empire, and on 2 Dec. the president took the title Napoleon III.

ALLIANCE WITH BRITAIN. Seeking an alliance with the British, Napoleon III joined Britain (Entente of 24 May, 1853) in resisting Russian intervention in the Ottoman Empire. When hostilities broke out between the Russians and the Turks, 4 Oct., 1853, France and Britain declared war on Russia, 28 Mar., 1854, and concluded a formal alliance, 10 Apr.

CRIMEAN WAR. Popular opposition increased as French troops (80,000 strong) suffered heavy casualties (siege of Sevastopol, Sept. 1854-Sept. 1855). Following allied military success, the emperor pre-

sided over the peace conference. The war increased French prestige, but the Treaty of Paris, 30 Mar., 1856, brought France no concrete gains.

ECONOMIC EXPANSION. The political stability of the empire nurtured speculative financial ventures, which found backing in newly established joint-stock banks: the Crédit Foncier, Feb. 1852, for real estate, and the Crédit Mobilier, Nov. 1852, for commerce and industry.

For its part, the government encouraged corporate organization (limited-liability law, 1863), subsidized railroad and steamship companies, and accelerated public construction, especially in Paris. There the emperor, together with Baron Georges Haussmann (1809-91), prefect of the Seine, directed sweeping alterations. In addition, the government sponsored efforts to improve workers' conditions.

Although the Paris Exhibition of 1855 revealed French progress in industrialization, bad harvests, 1853-55; outbreaks of cholera, 1853, 1854, 1855; and the depression of 1857 postponed real prosperity. Political life stagnated as the government harassed newspapers, prevented political demonstrations, and intervened in elections.

1858-59

ORSINI ASSASSINATION ATTEMPT. An unsuccessful attempt to assassinate the emperor, 14 Jan., 1858, traced to an Italian patriot, Felice Orsini (1819-58), pushed Napoleon III toward intervention in Italy.

LIBERATION OF LOMBARDY. At a secret meeting with Cavour at Plombières, 20 July, 1858, Napoleon agreed to help Sardinia drive Austria from Lombardy. Cavour provoked Austria into aggression; France declared war, 3 May, 1859; and won Lombardy (Battle of Solferino, 24 June). Discouraged by heavy casualties and afraid that Prussia might invade France, the emperor signed an armistice at Villafranca, 11 July, later ratified as the Treaty of Zurich, 10 Nov. To compensate

the French, Sardinia authorized, 24 Mar., 1860, plebiscites in Nice and Savoy; both approved annexation to France.

MOUNTING OPPOSITION. Already in trouble with conservatives over the Italian war, the emperor alienated Catholics by suggesting, 22 Dec., 1859, that the pope's temporal domain could be reduced without jeopardizing his spiritual position.

1860-70

COBDEN TREATY. An advocate of free trade, Napoleon concluded a tariff-lowering treaty with England, 23 Jan., 1860, which pleased liberals but antagonized French industrialists, threatened by British competition.

LIBERALIZATION MEASURES. To appease liberal opinion in the country at large, Napoleon conceded to the Legislative Body the rights to debate imperial addresses, 24 Nov., 1860, and pass on the budget, 31 Dec., 1861. The emperor also approved modification of the Combination Act, 1864, granting workers the right to strike.

INTERVENTION IN MEXICO. France with Britain and Spain intervened to force Mexico to honor its debts, 1861. Then, Napoleon, courting the favor of the church, launched a 2nd expedition, 1862, overthrew the Mexican Republic, June 1863, and installed Archduke Ferdinand Joseph Maximilian (1832-67) as emperor. However, the costs of occupation and diplomatic pressure from the U.S. forced Napoleon to withdraw support. Napoleon's prestige reached a low point when Maximilian was captured and executed, 19 June, 1867.

CONSTITUTION OF 1870. The failure of the Mexican venture and the Prussian defeat of Austria, July 1866, weakened the emperor's resistance to the demands of the moderate opposition, the Third Party, for further liberalization. He granted Parliament the right to interpellate the ministers, 19 Jan., 1867, and augmented the power of the Senate, 14 Mar., 1867. Liberalization of press and public-meeting laws, 1868, gave the opposition new forums.

In the elections of 1869, the opposition (Monarchists, Republicans, and the Third Party) won a potential majority. Succumbing to Third Party pressure, the emperor accorded additional powers to the Legislative Body, 6 Sept., 1869, and named Émile Ollivier (1825-1913), Third Party leader, to head a responsible ministry, 2 Jan., 1870.

A new constitution, 20 Apr., created a parliamentary empire. Appealing to the people by plebiscite, 8 May, Napoleon won overwhelming support for liberalization and the new constitution. (*Cont. b.* 282.)

SPAIN AND PORTUGAL

Spain

1800-1815

TREATY OF SAN ILDEFONSO. 1 Oct., 1800. Spain gave France Louisiana and the services of 6 warships on the condition that Napoleon enlarge the Duchy of Parma, ruled by Italian Bourbons. The condition was met in 1801 by the creation of the Kingdom of Etruria, and further agreements early the same year provided for Spain to bring pressure on Portugal to break its British alliance.

EFFECTS OF THE EUROPEAN WAR ON SPAIN. During the War of the Oranges, May-June 1801, France and Spain invaded Portugal and forced it to close its ports to the British. At the Truce of Amiens, Mar. 1802, Spain ceded Trinidad to Britain but regained Minorca. In Oct. 1803 Spain was forced to pay a monthly tribute to France; this was in response to Napoleon's demand for aid in his renewed war with Britain. The Spaniards were later forced to open their ports to French warships. In Dec. 1804 Spain declared war on Britain; considering Spain no longer neutral, the British had attacked Spanish treasure ships in Oct., prompting Spanish action. At the Battle of Trafalgar, 21 Oct., 1805, a French and Spanish fleet was virtually destroyed by a British force under Adm. Nelson.

TREATY OF FONTAINEBLEAU. 27 Oct., 1807. This treaty provided for the invasion of Portugal by France and

Spain; Portugal was to be divided into several smaller kingdoms.

"ESCORIAL AFFAIR." Oct.–Nov. 1807. The "Escorial Affair" was part of a struggle between the heir to the throne, Fernando (1784–1833), and the royal favorite, Manuel de Godoy (1767–1851). Fernando had been in communication with Napoleon, and an anonymous letter accused him of plotting against Godoy and the queen. The king ordered his son arrested for treason, but the charge was quickly dropped and Fernando's popularity with the people, who detested Godoy, increased.

FRENCH INVASION OF SPAIN. Oct. 1807–Mar. 1808. Supposedly part of the invasion force for Portugal, French troops in Spain totaled over 100,000 by Mar. 1808. In Feb. 1808 Joachim Murat (1767–1815) was placed in command of them and in Mar. he entered Madrid. Napo-

leon then demanded the cession to him of Spain's northern provinces. Godoy advised the royal family to leave Madrid in order to escape the French, and the monarchs moved to Aranjuez in preparation for a longer move to the south of Spain.

ABDICATION OF CARLOS IV. 19 Mar., 1808. Believing that the move south was part of a plot by Godoy, and that the French were coming to put Fernando on the throne, the latter's supporters rioted, 17 Mar., in Aranjuez and forced the dismissal of Godoy. Rumors that Godoy would escape trial brought further riots, and Carlos was forced to abdicate in favor of his son.

THE BAYONNE ABDICATIONS. May 1808. Fernando, expecting Napoleon's support, was enticed to meet him at Bayonne. There he was forced to restore the throne to his father, who in

turn surrendered his rights to Napoleon. Joseph (1768-1844), Napoleon's brother and former king of Naples, was proclaimed the new king of Spain on 6 June, 1808. Fernando was held at Valençay in France.

UPRISING IN MADRID. 2 May, 1808. An anti-French uprising was caused by attempts by the French to remove Fernando's brother to Bayonne. It was put down easily and Murat took savage measures of reprisal, but *Los Dos de Mayo* (the 2nd of May) became the symbol of Spanish revolt against French dominion.

REVOLTS AGAINST THE FRENCH. As news of the Madrid uprising and the Bayonne abdications spread, revolts broke out in unoccupied Spain, May-June 1808, and provincial juntas were established which declared war on France and made alliances with Britain. Fernando was proclaimed king, and to the Spanish people he became known as *El Deseado* (the Desired One). In July 1808 the French were defeated at Bailén. A general French retreat resulted and Madrid was evacuated. On 25 Sept., 1808, a Central Junta was organized. Meeting at Aranjuez, it took control of the country in the name of Fernando, and on 14 Nov., 1808, declared war on France.

RESTORATION OF FRENCH CONTROL. Nov. 1808-Jan. 1809. Napoleon took command and, employing heavily reinforced armies, quickly reversed the trend of the war and reoccupied Madrid, Dec. 1808. In Jan. 1809 he defeated a British army under Sir John Moore (1761-1809) at La Coruña (Corunna) and forced it to evacuate Spain. The French then occupied the greater part of the country and the Spanish government retreated to the besieged port of Cadiz.

A fierce guerrilla war continued, however, and was a constant drain on French strength, 1809-11.

CONSTITUTION OF 1812. The Cortes of Cadiz, which had convened on 24 Sept., 1810, promulgated, 19 Mar., 1812, a constitution which provided for a liberal constitutional monarchy, with a unicameral annual assembly to which ministers of the government would be responsible.

WAR WITH FRANCE. Wellington won the Battle of Salamanca, 22 July, 1812. As a result, the entire French position in Spain was threatened and Madrid had to be temporarily evacuated. Later in the year the French managed to restore their position, but Wellington resumed the offensive in 1813. He defeated Joseph at Vittoria, 21 June, 1813, and in Oct. the allied armies invaded France.

RESTORATION OF FERNANDO VII. On 2 Feb., 1814, Fernando was informed that he would only be recognized as king if he accepted the constitution of 1812. On 7 Mar., 1814, Napoleon freed Fernando VII, and on 22 Mar. he entered Spain after 6 years' captivity in France. On 4 May Fernando repudiated the constitution. The Cortes was dissolved, its acts declared null and void, and the liberal members arrested. Absolute monarchy was thus re-established. In order to prevent any opposition, Fernando created a police state. There were sporadic revolts, but these were easily put down.

1816-43

REVOLUTION OF 1820. Units of an army that had been concentrated around Cadiz for transport to South America rebelled. Under the leadership of Colonel Rafael Riego (1785-1823), the troops demanded restoration of the constitution of 1812. Riego was defeated, but the revolt spread to other army units and to Madrid, and in Mar. Fernando agreed to the rebel demands. The constitution was re-established and a Cortes convened in July.

FRENCH INTERVENTION. Apr.-Sept. 1823. At the Congress of Verona, 20 Oct.-14 Dec., 1822, all the powers, except Britain, gave approval to action by France against the revolutionary government. An army commanded by the duc d'Angoulême (1775-1844) overthrew the Cortes and restored Fernando to full power. Ignoring French pleas for moderation, Fernando reinstituted the police state.

SUCCESSION CRISIS. A daughter, Isabella (1830-1904), was born to Fernando on 10 Oct., 1830. Fernando's

brother, Don Carlós (1788–1855), disputed her right to the succession, claiming that the Salic Law applied in Spain and a female could not rule. Fernando supported his daughter's claim, and to cover just such a case had issued a pragmatic sanction the previous Mar., setting aside the Salic Law. Isabella was also supported by the moderates and liberals, who feared Don Carlos as an extreme absolutist. In Sept. 1832 the king was thought to be on his deathbed, and Don Carlos nearly succeeded in having the pragmatic sanction of 1830 set aside. Fernando recovered, however, but to safeguard Isabella's claim was forced to accept a more moderate ministry and to purge the army of its Carlist elements. On 29 Sept., 1833, Fernando VII died. By his will his wife, María Cristina de Borbón (1806–78), was appointed regent for their daughter.

CARLIST WARS. On the death of the king the supporters of Don Carlos rose in rebellion. The Carlist movement had its greatest strength in the Basque provinces, Navarre, Aragon, and Catalonia. It reached its high point in 1837, when Carlist armies threatened Madrid. From then on, however, it declined, and in Aug. 1839, by the Convention of Vergara, the chief Carlist army surrendered. Gen. Baldomero Espartero (1792–1879) was made Duke of Victory for his conduct of the final campaign.

ROYAL STATUTE OF 1834. In order to gain support, the government granted, Apr. 1834, a constitution patterned after the French Charter of 1814. The liberals split between the Moderados who accepted the constitution and the Progresistas who demanded the constitution of 1812.

QUADRUPLE ALLIANCE. Britain, France, Spain, and Portugal formed an alliance, Apr. 1834, to support the claims to the throne of Isabella in Spain and Maria da Glória in Portugal against the pretensions of their uncles, Don Carlos and Dom Miguel (1802–66), respectively.

SERGEANTS' MUTINY. Sergeants of the Royal Guard forced María Cristina, Aug. 1836, to restore the constitution of 1812, and to summon a constituent Cortes, Oct.

CONSTITUTION OF 1837. Although written by the Progresistas, the constitution of June 1837 was not as radical as the 1812 constitution. It provided for a bicameral legislature, but left much power in the hands of the monarch.

RULE OF ESPARTERO. A Moderado-controlled Cortes passed a municipal government bill which decreased democratic control of town and city government. Despite rioting against the bill, María Cristina signed it. Gen. Espartero, who was a Progresista, then forced her to resign as regent, 12 Oct., 1840, and assumed power himself. For the next 3 years Espartero ruled as virtual dictator of Spain, but in 1843 the army overthrew him. Isabella, then 13 years old, was declared to be of age and began to rule in her own right.

1844–70

RULE OF NARVÁEZ. From 1844 to 1851 Gen. Ramón Narváez (1800–1868), a Moderado, governed Spain with an iron hand, his power being interrupted only in 1846–47.

THE SPANISH MARRIAGES. In Oct. 1846 Queen Isabella II married Francisco de Asís, duke of Cadiz (1822–1902), and her sister, the Infanta Luisa (1832–97), married the duc de Montpensier (1824–90), a son of Louis Philippe of France. A diplomatic crisis was created because France and Britain had previously agreed that the Infanta would not marry a French prince until the queen had herself married and borne an heir to the throne.

RULE OF O'DONNELL. In June–July 1854, Gen. Leopoldo O'Donnell (1809–67) led a revolt. The ministry was forced to resign and O'Donnell, a Moderado, entered a coalition government with Gen. Espartero. A new, more liberal, constitution was adopted in 1856 but never promulgated, as the queen forced Espartero out of the government, July 1856. In Oct. 1856 O'Donnell was forced out, in turn, and Narváez instituted a more conservative and repressive government. But in June 1858 O'Donnell organized a government based on Moderado and Progresista support. This government enjoyed the longest continuous term of

office of any during Isabella's reign. O'Donnell engaged in various foreign ventures, conducting a victorious war against Morocco, 1859-60, temporarily reannexing Santo Domingo, 1861-65; and joining France and Britain in their Mexican venture, 1861-62. Under the strain of domestic, economic, and religious issues, however, the coalition supporting him disintegrated and he was forced to resign, 27 Feb., 1863. Convinced that the queen would never give them political power, the Progresistas decided to boycott all political activities. O'Donnell attempted, 1865, to bring the Progresistas back into politics, but they refused. With this failure, followed by his death in 1867, the queen lost the one loyal supporter who might have created a government with popular appeal.

DICTATORSHIP OF NARVÁEZ.

Narváez returned to power, 1866, and, supported by Luis González Bravo (1811-71), instituted a military dictatorship that attempted to save the faltering monarchy. Growing opposition to the queen was increased by her scandalous personal behavior. In Apr. 1868 Narváez died. Bravo, who replaced him, had no influence over the army.

REVOLUTION OF 1868. On 18 Sept., 1868, a revolution was organized by Adm. Juan Topete (1821-85) at Cadiz. The royal army was defeated by the rebels at Alcolea, 28 Sept., and Isabella fled Spain.

CONSTITUTION OF 1869. A constitution promulgated in June 1869 provided for a continued monarchy, but excluded Isabella. Gen. Francisco Serrano (1810-85) was made regent and Gen. Juan Prim (1814-70) prime minister. On 16 Nov., 1870, Amadeo (1845-90), son of King Victor Emmanuel of Italy, was elected king of Spain. The assassination of Gen. Prim, however, 27 Dec., 1870, foreshadowed the failure of Amadeo to establish himself on the throne. (*Cont. p.* 297.)

Portugal

1800-1815

WAR WITH FRANCE. Spain and France invaded Portugal, May-June 1801. They forced the Portuguese to close their

ports to the British, grant commercial concessions to France, and pay an indemnity. By an ultimatum of 12 Aug., 1807, the 2 powers demanded that Portugal should declare war on Britain, arrest all Englishmen in Portugal and confiscate their goods, and close Portuguese ports to British ships. All demands were refused. By the Treaty of Fontainebleau, 27 Oct., 1807, France and Spain agreed on the invasion and partition of Portugal. The invasion began in Nov., and an army commanded by the French Gen. Andoche Junot (1771-1813) took Lisbon with little opposition. The Portuguese royal family established a Council of Regency and fled to Brazil. In June, 1808, simultaneously with the revolts in Spain, there were uprisings in Portugal and a provisional junta was established in Oporto. Central Portugal threw off French rule.

CONVENTION OF SINTRA. 30

Aug., 1808. In early Aug. 1808, British troops under Sir Arthur Wellesley landed in Portugal and defeated the French. By the Convention of Sintra (Cintra), Junot's army was returned to France on British ships.

PENINSULAR WAR. In 1809 the French invaded Portugal a 2nd time and Marshal Nicolas Soult (1769-1851) captured Oporto. Wellesley again landed with British troops and forced the French to retreat to Spain. In July he defeated them at Talavera. French concentrations then forced him to withdraw to Portugal. In July 1810 a French force under Marshal André Masséna (1758-1817) invaded Portugal and forced Wellesley, now the Duke of Wellington, to retreat to prepared positions at Torres Vedras. From 9 Oct. to 14 Nov. the French attacked, but they failed to take the British positions and were forced to retreat because of lack of supplies. Wellington pursued and by May 1811 the French had been driven out of Portugal.

1816-34

ACCESSION OF JOÃO VI. In Mar. 1816, Maria I died, and the prince regent became king as João VI (ruled 1816-26). Despite the defeat of the French, the court remained in Brazil, where it was

welcomed by the Brazilians, who gained many advantages from being at the center of the Portuguese Empire.

REVOLTS IN OPORTO AND LISBON. A revolt in Oporto, 24 Aug., 1820, led to a rebel demand for a Cortes and for the return of João VI. On 15 Sept. a revolt in Lisbon ousted the Council of Regency. On receiving the news of the uprisings, João sanctioned a Cortes and pardoned the rebels. The Cortes convened in Lisbon on 24 Jan., 1821.

RETURN OF THE COURT FROM BRAZIL. In July 1821, João VI returned to Portugal. He had to accept the work of the Cortes. He left his elder son, Pedro (1798-1834), as regent in Brazil, but his younger son, Miguel (1802-66), returned to Spain.

CONSTITUTION OF 1822. João VI accepted a new constitution in Sept. 1822. It provided for a unicameral Cortes which the crown could not dissolve. After the Spanish Cortes had been overthrown by French intervention, conservative uprisings broke out in Portugal, 1823, and João forced the Cortes to dissolve and held the constitution in abeyance. Miguel had played a major part in the uprisings and in Apr. 1824 attempted a coup, but was defeated and sent out of the country.

INDEPENDENCE OF BRAZIL. In Sept.-Oct. 1822, Brazil declared its independence, and Pedro was proclaimed its constitutional emperor. In 1825 João accepted the independence of Brazil, partly to safeguard Pedro's claim to the Portuguese throne.

João VI died, 10 Mar., 1826. Pedro IV was proclaimed king without dispute, his sister Maria Isabel (1797-1827) serving as regent.

CONSTITUTION OF 1826. On 29 Apr., 1826, Pedro IV granted a new constitution. Known as the "Charter," it provided for a Cortes with the upper house appointed by the king for life and the lower house indirectly elected. Pedro also declared that he would abdicate in favor of his daughter, Maria da Gloria (1819-53), if Miguel were betrothed to her and agreed to support the constitution.

THE MIGUELITE WARS. In Feb. 1826 Miguel returned to Portugal. Appointed lieut.-gen., he used his power to

put his own supporters in office and call a new Cortes, which declared him the legitimate heir of João VI. In May an uprising in behalf of Pedro in Oporto was easily quelled, and on 11 July, 1828, Miguel was crowned king of Portugal. In Apr. 1831 Pedro returned to Europe from Brazil to safeguard his throne. He left Brazil to his son, Pedro II of Brazil, and declared his intention of securing the throne of Portugal for his daughter.

In July 1832 Pedro captured Oporto, but was besieged there by the Miguelites. The stalemate was broken in June-July 1833, when Pedro's fleet defeated Miguel's at Cape St. Vincent and he took Lisbon. Miguel still controlled the countryside, but his cause became hopeless when Spain withdrew its support from him and gave it to Pedro by the Quadruple Alliance, 22 Apr., 1834, between France, Britain, Spain, and Portugal. On 26 May, 1834, Miguel surrendered at Évora-Monte and accepted exile.

1835-70

SEPTEMBER REVOLUTION. Liberals, demanding a return to the constitution of 1822, won elections in Oporto and forced the dismissal of the ministry, Sept. 1836. Taking control of the government, they adopted the constitution of 1838, which democratized the governmental system to some degree, and made the upper house of the Cortes elective.

RULE OF DA COSTA CABRAL. Following elections in Jan. 1842, which revealed a conservative trend in Oporto, the minister of finance, Antônio Bernardo da Costa Cabral (1803-89), put himself at the head of a conservative movement which overthrew the government and the constitution of 1838. The Charter of 1826 was restored, 10 Feb. In 1846-47 the Septembrists attempted to regain power, but were defeated by the intervention of the Quadruple Alliance powers.

ADDITIONAL ACT. 5 July, 1852. By this act the charter was liberalized. The Additional Act and a new electoral law were part of the "regeneration" program of João Carlos, duke of Saldanha (1791-1876). Supporters of the amended charter

became known as the Regenerators, while their more liberal political opponents were known as the Historicals.

RULE OF PEDRO V. 1853-61. Pedro V (1837-61) succeeded Maria II on the throne. Her eldest son, he was 16 at her death and his father, Ferdinand of Saxe-Coburg-Gotha (1816-85), acted as regent until 1855. During Pedro's reign, power alternated between the Regenerators (1851-56, 1859-60) and the Historicals (1856-59, 1860-65).

RULE OF LUIS I. When Pedro V died of typhoid fever, 11 Dec., 1861, Luis I (1838-89) came to the throne. From 1865-71 the country was ruled by a succession of coalition governments. (*Cont. p. 298*)

THE ITALIAN STATES AND THE RISORGIMENTO

1800-1815

TREATY OF LUNÉVILLE. In early 1800, Austrian troops occupied all of Italy except Genoa. Napoleon, however, defeated the Austrians at Marengo, 14 June, 1800, and the Austrian forces abandoned Italy west of the Adige to the French armies. By the Treaty of Lunéville, 9 Feb., 1801, after protracted negotiations, Austria recognized the Ligurian and Cisalpine republics while retaining Venetia. Napoleon concurred in the restoration of Pope Pius VII (reigned 1800-23) to Rome and Ferdinand IV (1751-1825) to Naples. Lucca, Piedmont, and Parma remained under French military occupation. The Bourbon Prince of Parma, Louis, was granted Tuscany, renamed the Kingdom of Etruria.

EXTENSION OF NAPOLEON'S INFLUENCE. Napoleon continued to strengthen his hold on the Italian peninsula. By the Treaty of Florence, 28 Mar., 1801, he forced Ferdinand IV to allow French garrisons in the Kingdom of the Two Sicilies and to close his ports to British ships. On 26 Jan., 1802, delegates of the Cisalpine Republic chose Napoleon as president, and renamed their state the Italian Republic. In Sept. 1802 Napoleon annexed Piedmont to France.

In 1805 Napoleon changed the Italian Republic to a kingdom with himself as

king. After his coronation on 26 May, he appointed his stepson, Eugène de Beauharnais (1781-1824), as vicéroy. One month later Napoleon annexed the Ligurian Republic to the French Empire. By the Treaty of Pressburg, 26 Dec., 1805, which followed his victory over Austria, he gave Venetia to the Italian Kingdom. Because of Ferdinand's intrigues with Austria in 1805, Napoleon declared him deposed, and dispatched his brother Joseph (1768-1844) to Naples, where the latter was crowned king on 30 Mar., 1806. Ferdinand IV fled to Sicily, which he was able to retain with help from the British.

In 1808 Napoleon subdued the sole remaining independent power in Italy, the papacy. Even though the French emperor had cultivated good relations with Pius VII and had negotiated the important Concordat of 15 July, 1801, with him, he was angered by the pope's refusal to grant his brother Jérôme (1784-1860) a divorce, and wanted to perfect the Continental System by the acquisition of central Italy. In Feb. 1808, French troops occupied Rome and exiled Pius. The province of Latium was incorporated into the French Empire. In Mar. 1808 Napoleon annexed Tuscany, which 1 year later was turned into a principality for his sister, Maria Anna Elisa Bonaparte (1777-1820). Parma was then annexed, while the Papal Marches on the Adriatic coast were incorporated into the Italian Kingdom. In 1808, when Joseph Bonaparte became king of Spain, he was succeeded in Naples by Joachim Murat (1767-1815), husband of Napoleon's sister, Carolina. In 1810 the Italian Kingdom acquired South Tirol, after Napoleon's forces had subdued the Tirolese uprising of the preceding year.

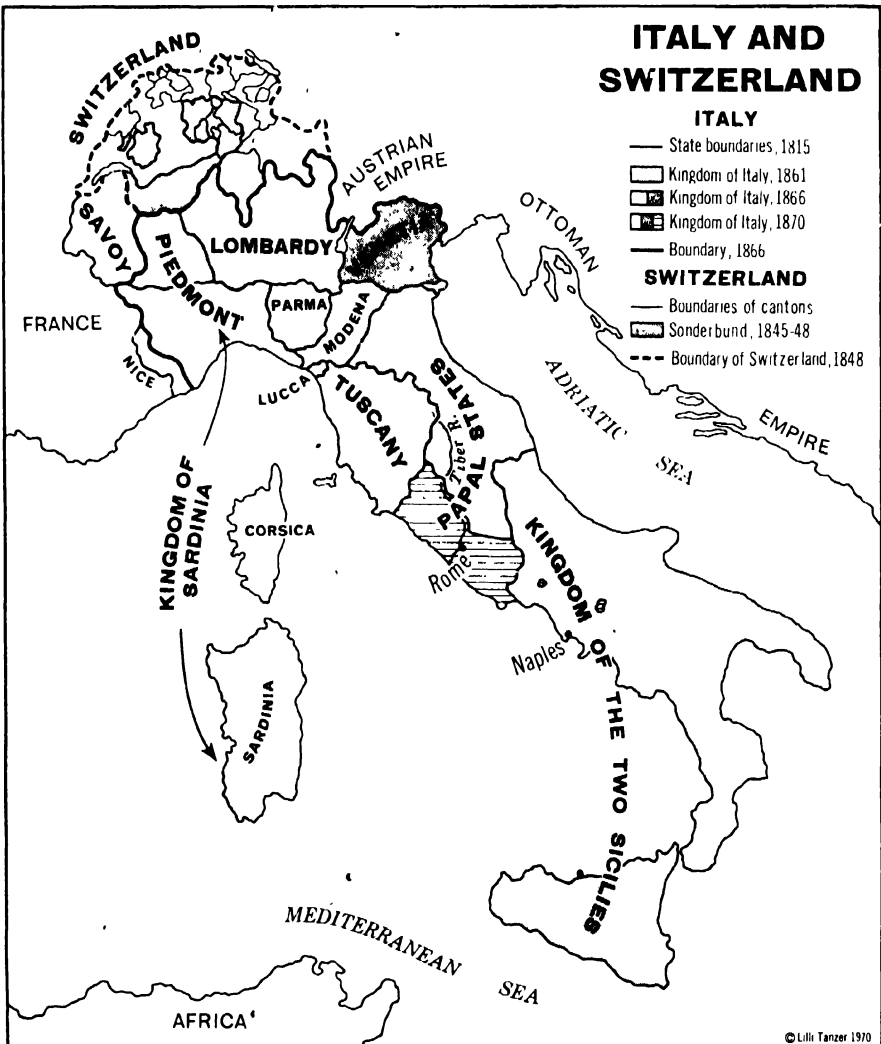

NAPOLEON'S IMPACT ON ITALY. Napoleon governed the territory incorporated into the French Empire directly. No representative institutions were permitted, only Assemblies of Notables whose power was consultative. The emperor did apply to Italy some of the reforms associated with the French Revolution. The Civil and Criminal Codes were promulgated; all feudal dues, services, restrictions, and privileges were abolished; and some of the church lands

and latifundia (large estates) were confiscated and sold. Napoleonic officials also engaged in road-building and other public-works projects in order to stimulate commerce. Generally speaking, the reforms were more lasting in the north of Italy than in the south.

In the long run, however, the French alienated even the most Francophile Italian liberals by treating Italy as a conquered province. To finance his wars Napoleon increased taxes and conscripted an estimated 120,000 Italians, half of whom were killed. Moreover, the French

opened Italian markets to French goods, thus hurting local industries, while the Continental System ruined the considerable Italian sea trade.

Throughout the Napoleonic period the peasantry remained largely passive. Many urban liberals, who had originally supported the French Empire, turned against Napoleon when they realized that he was using Italy for his own and France's benefit. Especially after Napoleon's defeat in Russia in 1812, they formed anti-French secret societies such as the *Adelfi*, *Gueffi*, and *Carbonari* (charcoal burners).

These societies demanded independence from France. They were not militarily dangerous, but they helped to undermine the French regime.

FALL OF THE FRENCH EMPIRE.

After Austria joined the 6th Coalition against Napoleon, 12 Aug., 1813, an Austrian army of 70,000 immediately invaded the Italian Kingdom. Eugène de Beauharnais's small army slowly retreated as the Austrians advanced. Meanwhile, on 14 Nov. Joachim Murat defected to the allies, and agreed to supply 30,000 troops to be deployed against Eugène if his throne could be guaranteed. When Eugène received word of Napoleon's surrender, 6 Apr., 1814, he agreed to an armistice (the Convention of Schiarino-Rizzino, 16 Apr.). On 20 Apr. a revolt against the government of the Italian Kingdom broke out in Milan, and Austrian troops quickly occupied the city and the rest of Lombardy.

SETTLEMENT OF VIENNA. Before Austria joined the 6th Coalition, the allies had agreed to grant Austria Venetia (Treaty of Reichenbach, 27 June, 1813). In late Apr. 1814 the allies in Paris awarded Lombardy to Austria as well, thus disappointing the hopes of the Italian liberals for an independent constitutional northern Italian state. The settlement of Vienna, 1815, restored Victor Emmanuel I (1759-1824) to Piedmont-Sardinia and awarded him Genoa. Pius VII returned to the Papal States, and Ferdinand III (1769-1824) and Francis IV (1779-1846) (both Hapsburg arch-dukes) to Tuscany and Modena, respectively. Marie Louise (1791-1847), Napoleon's 2nd wife and a Hapsburg princess, received Parma and Piacenza, while Maria Luisa (1782-1824), a Spanish Bourbon princess, received Lucca.

THE DOWNFALL OF MURAT.

When it became clear that Austria was becoming dominant in the peninsula, Murat, still king of Naples, plotted to expel the Austrians and become king of a united Italy himself. After Napoleon's return to France in Mar. 1815, he marched north and issued a manifesto proclaiming Italian independence and unity, 30 Mar. But Austrian troops de-

feated his army in May, and he was deposed, Oct. 1815, and eventually shot. Ferdinand IV, changing his title to Ferdinand I, returned to Naples.

THE RESTORATION GOVERNMENTS. Generally speaking, the restored rulers except Pius VII and Victor Emmanuel retained most of the administrative and judicial reforms of Napoleon. The pope did, however, restore the Jesuit order, 1814, which had been dissolved in 1773. All rulers imposed a political absolutism, and refused to allow any representative institutions in their dominions. All imposed strict censorship except Ferdinand III of Tuscany, which became a resort of Italian liberals.

1816-47

BEGINNING OF THE STRUGGLE AGAINST AUSTRIA.

The *Risorgimento* (resurgence) was the name given to the 19th-cent. Italian movement toward national unification and constitutional government. The ideals of the movement were held by only a portion of the educated urban upper and middle classes. The peasantry remained bound to old traditions and customs and was hardly influenced by the new ideology. Since Austria under Metternich and Austria's satellite Italian states were all opposed to unification and constitutional government, the goals of the *Risorgimento* could be reached only by defeating Austria and overthrowing her conservative allies.

THE UPRISING OF 1817. The first attack on Hapsburg power in Italy came from the secret societies which had originally been organized to fight against Napoleon. In June 1817 the Guelfs rose at Macerata in the Papal States, but were easily suppressed.

CARBONARI UPRISING OF 1820.

Inspired by the Spanish revolution of early 1820, the *Carbonari*, who had infiltrated the Neapolitan army, staged a successful coup in July against Ferdinand I. Under the leadership of General Guglielmo Pepe (1783-1855), they forced Ferdinand to swear loyalty to a democratic constitution. Ferdinand then left for the Congress of Laibach, 16 Jan.-12

May, 1821, where he pleaded for Austrian intervention against Pepe's liberal regime. Austrian troops marched south and annihilated Pepe's untrained militia at Rieti, 7 Mar., 1821, and for the 4th time Ferdinand returned to his throne.

PIEDMONT UPRISING OF 1821.

Three days after the debacle at Rieti, a group of Piedmontese officers led by the *Carbonaro* General Santarosa (1783-1825) rebelled, demanding a constitution and war against Austria. Victor Emmanuel abdicated in favor of his younger brother, Charles Felix (1756-1831), who was in Tuscany at that time. Victor Emmanuel's son, Charles Albert (1798-1849), became regent, and agreed to Santarosa's demands. Charles Felix, however, annulled the regent's actions, and asked Austria to crush the revolt, which was done. Charles Felix took the throne and ruled for 10 more years.

CARBONARI REVOLT OF 1831.

After the establishment of the ideologically liberal July Monarchy, the *Carbonari* attempted a revolt in the northern cities of the Papal States, 2 Feb., 1831, hoping that France would prevent Austria from intervening. By 26 Mar., however, the Hapsburg armies had crushed the rebels. This was the last of the *Carbonari* revolts.

ATTITUDE OF THE ITALIAN

RULERS. Italian liberals were discouraged not only by the failure of the *Carbonari* but also by the refusal of the 4 major powers in Italy (Austria, Piedmont, Naples, and the papacy) to allow any constitutional reforms during the period 1815-46. Metternich (1809-48), the Piedmontese kings, including Charles Albert (1831-49), Naples under Ferdinand I (1788-1825, with interruptions), Francis I (1825-30), and Ferdinand II "Bomba" (1830-59) all opposed unification of the peninsula and all liberal reform. Ferdinand II from 1836 and Charles Albert, however, did pursue a foreign policy independent of Austria.

The popes, Pius VII (1800-1823), Leo XII (1823-1829), Pius VIII (1829-30), and Gregory XVI (1831-46), were likewise generally conservative. Gregory is remembered for his famous encyclical,

Mirari vos, 1832, which condemned the liberal Catholic movement in France.

MAZZINI. Giuseppe Mazzini (1805-72), renowned as a political thinker, saw all Italian rulers as hopelessly reactionary, and advocated a unitary democratic and republican Italy. He sought to achieve this goal by direct popular revolution, and organized the conspiratorial Young Italy group, Oct. 1831, to begin a revolution. His attempt to overthrow Charles Albert in 1834, however, failed miserably, and a later uprising by Young Italy enthusiasts in Sicily in 1844 was likewise suppressed. Revolts in the Papal States in 1843 and 1845 and in Sicily in 1837 and 1841, unconnected with Young Italy, all similarly failed. They demonstrated that, although many were discontented with the established order, no revolution could succeed in Italy unless the Hapsburg armies were first expelled from the Peninsula.

NEO-GUELFISM. The failure of Young Italy and other popular revolts led some politically minded Italians to propose unification by a confederation of Italian states under the leadership of the papacy. Vincenzo Gioberti (1801-52) in *Il Primato* (On the Moral and Civil Primacy of the Italians) in 1843 and Cesare Balbo (1789-1853) in *Le Speranze d'Italia* (Italy's Hopes) in 1844 advocated this policy, which became known as "Neo-Guelfism." The authors of it did not explain how Austria could be persuaded or forced to accept their proposals. With the election of the liberal Giovanni Maria Mastai-Ferretti (1792-1878) to the papacy as Pius IX (reigned 1846-78) in June 1846, the Neo-Guelfs expected the fulfillment of their hopes.

THE REFORMS OF 1846-47. Pius IX immediately promulgated a series of reforms: a political amnesty, provincial and communal administrative reforms, relaxation of press restrictions, plans for railroad construction, the formation of a civil guard. These reforms reverberated throughout Italy. Florence obtained a free press, May 1847, as did Piedmont, Oct. Charles Albert also allowed communal elections and abolished the extraordinary courts.

1848-49

THE REVOLUTION. The agitation throughout Italy against the Old Regime and Austrian dominance culminated in violence at the beginning of 1848. On 12 Jan. Palermo rebelled. A Sicilian provisional government declared Sicily independent. On 29 Jan. Ferdinand II proclaimed a constitution in Naples to forestall a revolution. On 8 Feb. Charles Albert promised a constitution, and on 4 Mar. it was promulgated as *Il Statuto*, similar in content to that of the July Monarchy and providing for 2 chambers, 1 nominated by the king, the other elected by a restricted franchise. Tuscany proclaimed a constitution, 11 Feb., and the pope promised one 1 day later. When the Milanese heard of Metternich's flight from Vienna, they drove the Austrian garrison under Josef Wenzel Radetzky (1766-1858) out of the city in the 5 Days' Revolt, 18-22 Mar. Likewise, Daniele Manin (1804-57) in Venice began an insurrection on 17 Mar. which expelled the Austrian troops. Francis V (1819-75), who had succeeded his father Francis IV in 1846, and Prince Charles fled from Modena and Parma respectively.

WAR WITH AUSTRIA. Charles Albert immediately put himself at the head of the revolutionary movement by declaring war against Austria and by invading Lombardy. Radetzky retreated to the Quadrilateral, four fortresses in western Venetia, and awaited reinforcements from the Austrian government, which had also been rocked by revolution. The Piedmontese army, swelled by volunteers from all over Italy, advanced to the Quadrilateral and captured 1 fortress, Peschiera, in late May, but otherwise failed to dislodge Radetzky. Meanwhile, Pius IX had removed himself from the leadership of the liberation movement by declaring, 29 Apr., that he could not take sides in a war of Catholics against Catholics. This killed Neo-Guelfism, and papal units withdrew from the Piedmontese army. Ferdinand of Naples, moreover, soon discovered that the majority of his people, apart from the

Liberals and Sicilians, was loyal to him. He used a riot on 15 May as an excuse to disregard the constitution, and withdrew his army from northern Italy.

In a series of plebiscites held between late May and July, all the northern Italian states except Tuscany voted for union with Piedmont. Radetzky, however, received reinforcements, and attacked the Piedmontese army, which had been weakened by the removal of the papal and Neapolitan troops. The Piedmontese, after a 5-day battle around Custoza, 23-27 July, were forced to disengage. Charles Albert agreed to an armistice, 9 Aug., which restored the *status quo*.

THE RADICALS IN ROME AND TUSCANY. Owing to the increasing republican agitation stimulated by the presence of Mazzini, Pius IX left Rome on 24 Nov. for Gaeta, a town in the Kingdom of Naples near the border of the Papal States. By 9 Feb., 1849, an elected Chamber in Rome had declared the pope dispossessed and established a republic. In Tuscany, too, Grand Duke Leopold II (1797-1870), who had succeeded his father, Ferdinand II, in 1824, departed for Gaeta, 30 Jan., 1849, leaving power in the hands of the Radical, Francesco Guerrazzi (1804-73), who soon proclaimed a republic.

2ND WAR AGAINST AUSTRIA. Public opinion pushed Charles Albert into another war against the Hapsburgs, which began on 20 Mar., shortly after the expiration of the 9 Aug., 1848, armistice. Radetzky invaded Piedmont, and won decisively at Novara on 23 Mar., 1849. The same night Charles Albert abdicated in favor of his son, Victor Emmanuel (1820-78), and left the kingdom. He died 4 months later in Lisbon. Peace was signed, 6 Aug., in Milan, and the *status quo* was once again restored. Victor Emmanuel paid an indemnity, and was allowed to retain *Il Statuto*.

REPUBLICAN DEFEAT AT FLORENCE. The Sardinian-Piedmontese defeat at Novara also sealed the fate of the republicans of central Italy. On 12 Apr., 1849, a moderate faction seized power in Florence, and asked Leopold to return. On 1 May Leopold appointed the moder-

at., Luigi Serristori (1793-1857), to restore order. Later in the same month, Austrian troops occupied Florence, and Leopold returned himself in July.

THE FALL OF ROME. Pius IX asked the Catholic powers to restore him to his throne. Louis Napoleon, president of the 2nd French Republic, dispatched a force under Gen. Nicolas Oudinot (1791-1863) to occupy Rome and, perhaps, reconcile the pope and the republicans. After much negotiation and bitter fighting, Oudinot took Rome, 2 July. Pius returned shortly thereafter, and re-established his old government.

By 15 May, Neapolitan forces had subdued all of Sicily, and the sole remaining republican outpost was Venice. This city surrendered on 22 Aug. Thus by Aug. 1849 the Hapsburgs had crushed the Italian independence movement.

1850-61

THE RISE OF CAVOUR. Camillo Benso di Cavour (1810-61), a scion of a Piedmontese noble family, had proved himself an excellent manager of his family's estates and a promoter of scientific farming, railroads, and steamboats. Elected to the Piedmontese parliament in 1849, he became minister of agriculture, commerce, and the marine in Oct. 1850 in the cabinet of the liberal Massimo d'Azeglio (1798-1866). He lowered tariffs by agreement with England and France, while also securing a large loan from London. In Nov. 1852 he replaced d'Azeglio as premier.

CAVOUR'S POLITICS. Cavour's goal was Italian unification under Victor Emmanuel. He realized that this could be achieved only through the expulsion of Austria from the Italian peninsula. Charles Albert had believed: *Italia farà da sé* ("Italy will do it herself"). Cavour, on the other hand, sought French and British support in the task of driving Austria from Italy. He hoped to establish sound and progressive government in Piedmont (thus providing a contrast with retrograde Austria), and during the first 2 years of his ministry concentrated on building railroads and improving trans-

portation generally in order to establish a firm commercial base for a new war against Austria.

SICCARDI LAWS. In Mar. 1850 the Siccardi Laws (named after the then minister of justice) abolished ecclesiastical courts and mortmain, and prohibited the church from acquiring land by wills without state approval. In 1855, Cavour sponsored a law dissolving 55% of the monasteries in Piedmont, while making the state responsible for priests' salaries. These laws were designed to modernize Piedmont and remove traditionalist influences. Pius IX refused to recognize them. In 1854 he promulgated, without conciliar approval, the dogma of the Immaculate Conception of the Blessed Virgin. This action was interpreted by contemporaries as a step toward papal absolutism.

CRIMEAN EPISODE. In Jan. 1855 the French and British, engaged in the Crimean War against Russia, accepted Cavour's offer of 18,000 Piedmontese soldiers. By these means Cavour hoped to gain the good will of France and Britain, and perhaps receive Parma as compensation. At the Paris Peace Conference in the spring of 1856, Austria vetoed a Piedmontese acquisition of Parma, but Cavour nevertheless had the opportunity to state Piedmont's case, and received a sympathetic hearing from the French and British.

AGREEMENT OF PLOMBIÈRES. For 2 years Cavour negotiated with Louis Napoleon to secure French aid in a war against Austria. The French cabinet and French clerical opinion decidedly opposed any such undertaking. Nonetheless, Louis Napoleon wanted to continue the Napoleonic tradition by securing another victory for French arms. He also wanted to replace Austrian influence in Italy with French. Finally, Cavour and the emperor met secretly at Plombières in the Vosges Mountains in July 1858, and came to the following understanding: (1) Cavour would find a nonrevolutionary *casus belli* with Austria the next spring, and Austria would appear the aggressor; (2) France would supply 200,000 troops, and would receive Savoy and perhaps Nice; (3) Pied-

mont would receive Lombardy, Venetia, Parma, and Romagna, and Tuscany, Umbria, and the 'Papal Marches would be offered to the duchess of Parma, while the pope would retain Latinum and Ferdinand II Naples; (4) Napoleon's cousin would marry Victor Emmanuel's 15-year-old daughter, Clothilde. Piedmont and France signed a formal treaty of alliance on 19 Jan., 1859.

WAR OF 1859. All 3 powers began to mobilize early in 1859. Despite British pressure for a congress, tension mounted, and on 23 Apr. Austria sent an ultimatum to Piedmont, demanding her disarmament within 3 days. On 26 Apr. Cavour refused, and 3 days later Austrian troops crossed the Piedmont frontier. France dispatched troops to Piedmont on 3 May.

The combined Franco-Piedmont army defeated the Austrians at Magenta, 4 June, forcing the Hapsburgs out of Lombardy. The allies won a bloody victory at Solferino 20 days later, but the Austrian armies were still intact and still in possession of the fortresses of the Quadrilateral.

ARMISTICE OF VILLAGRANCA. On 24 June Prussia mobilized on the Rhine. Because of his exposed position Napoleon III could not risk continuing the war. Without Cavour's knowledge he negotiated an armistice agreement with the Austrian emperor, Francis Joseph, at Villafranca, 6-12 July. It was provided that Piedmont would annex Lombardy, but otherwise no change was envisaged.

PIEDMONTESE ANNEXATION OF CENTRAL ITALY. Cavour's reaction to Louis Napoleon's betrayal was to resign. Nevertheless, even though the terms of Villafranca were confirmed in the Treaty of Zurich, 10 Nov., 1859, the Old Regime in Italy was crumbling fast. By June all the princes of central Italy had fled. Bettino Ricasoli (1809-80), a supporter of Cavour, took over the provincial government of Tuscany, while Luigi Farini (1812-66), another Cavour agent, seized control of Modena, Romagna, and Parma, which he united into a province that was called Emilia.

On 16 Jan., 1860, Cavour returned to the premiership. He gained Louis Napo-

leon's approval for the annexation of Tuscany and Emilia, which annexation was ratified by a plebiscite, 13-15 Mar. In return, on 24 Mar., Cavour allowed Savoy and Nice, after a plebiscite, to be annexed by France.

GARIBALDI AND THE 1,000. Popular opinion insisted on the unification of the whole of Italy. Cavour, however, could not openly attack the Kingdom of Naples without provoking an Austrian reaction, nor could he attack Rome without clashing with the French troops there. He therefore acquiesced when Giuseppe Garibaldi (1807-82), the hero of the Roman Republic of 1848-49, set out on an unofficial expedition to Sicily. Garibaldi left with his 1,000 volunteers on 5 May. The British navy protected him, since the British believed that a united Italy would be less susceptible to French influence than a small kingdom of central and northern Italy under Victor Emmanuel. By the beginning of Aug. Garibaldi had secured Sicily. On 7 Sept. he was in Naples. Cavour now feared that Garibaldi might not turn his conquests over to Victor Emmanuel or that he would march on Rome, thus provoking a war with France. With Napoleon's consent Cavour sent an army through the Papal States to head off Garibaldi before he reached Rome. The remnants of the Neapolitan army delayed Garibaldi's advance, and Victor Emmanuel met him at Teano, 26 Oct. There he handed over all his conquests to his sovereign. Plebiscites in southern Italy, the Marches, and Umbria ratified the annexation of these areas by Victor Emmanuel's kingdom. Now all Italy save Latinum and Venetia had been unified.

1861-71

CONSOLIDATION OF THE ITALIAN KINGDOM. Elections for an all-Italian parliament took place during Jan. 1861. The suffrage was limited to 500,000 voters, who returned a majority favorable to Cavour. Subsequently the constitutional kingdom was proclaimed. Cavour died, 6 June.

The parliament of the new Italian

Kingdom decided on a prefectural administrative system with little local autonomy. By a series of measures the legal code, the railroads, the currency system, and weights and measures were unified.

ROME AND THE CONVENTION OF SEPT. 1864. Italian nationalists were unreconciled to the exclusion of Latinum and Venetia from the new Italian state, while Pope Pius IX refused to accept his territorial losses and bitterly opposed Italian unification. In order to retain Catholic support in France, Louis Napoleon could not abandon Rome to the Italian nationalists. The Italian government hoped to obtain Latinum and Venetia eventually, but did not wish to provoke either France or Austria. Consequently, when Garibaldi attempted another march on Rome, the Italian army captured his small force at Aspromonte, 29 Aug., 1862, in southern Italy. Public outcry against so "unpatriotic" a government forced Premier Rattazzi to resign.

At last, in Sept. 1864, the Italian government under Premier Marco Minghetti (1818-86) agreed with Louis Napoleon that it would guarantee Rome against attack if France would withdraw within 2 years.

CHURCH AND STATE. The intransigence of Pius IX was demonstrated by his famous encyclical of 1865, *Quanta Cura*, with its appended *Syllabus Errorum*. The pope condemned nationalism, parliamentary government, civil liberties, and other modern institutions. Moreover, the Vatican Council of 1870 declared the infallibility of the pope when speaking *ex cathedra*. The Italian government, on the other hand, continued its anticlerical policies by dissolving 2,400 monasteries in 1866 and by making civil marriage legal.

WAR OF 1866. As tension between Austria and Prussia increased, early 1866, the Italian government under Gen. Alfonso La Marmora (1804-78) agreed to declare war on Austria if hostilities should break out between Austria and Prussia. In return Italy would receive Venetia.

Prussia declared war on Austria, 16 June, and Italy followed 4 days later. On 24 June, Austrian forces defeated a larger

Italian army at Custoza. After the Prussian triumph at Sadowa, 3 July, the Hapsburg forces in Venetia withdrew northward, and the Italians were able to occupy Venetia. On 20 July the Italian fleet suffered a disaster at Lissa. Prussia made peace 6 days later. In spite of her 2 serious defeats, Italy received Venetia in the final settlement.

ACQUISITION OF ROME. In Oct. 1867 an attempt by Garibaldi and a few volunteers to capture Rome was foiled when Napoleon III sent a French army there. Garibaldi was defeated by papal and French troops at the Battle of Mentana, 3 Nov. The Italian government, under the conservative Gen. Luigi Menabrea (1809-96), remained passive.

On 2 Aug., 1870, because of the war with Prussia, the French contingent was withdrawn from Rome, and Louis Napoleon and the Italian premier, Giovanni Lanza (1810?-1882), agreed to reinstate the Convention of September. But by 2 Sept., Louis Napoleon had surrendered, and 2 days later the 3rd French Republic was proclaimed; the Convention of September thus became a dead letter. Lanza then circulated a statement among the Powers promising to respect the spiritual independence of the pope. Italian troops entered the Holy City, 20 Sept., and no Catholic power protested.

FINAL SETTLEMENT. A plebiscite ratified the annexation of Rome and Latinum, but Pius IX still refused to recognize the loss of his temporal power. In May 1871 the Italian government granted him the tax-free ownership of certain buildings in Rome, a sum for expenses, and complete freedom in spiritual matters and in making ecclesiastical appointments. The papacy, however, remained unreconciled to the new conditions until the Concordat of 1929. (*Cont. p. 298.*)

THE BALKANS

1800-1815

CONCESSIONS BY TURKEY TO RUSSIA. With Turkey and Russia allied against France in the Mediterranean, the czar obtained an agreement, 23 Oct., 1802,

from the Ottoman sultan that the Greek hospodars (princes) of the principalities would be appointed for 7-year terms and would not be removed without Russian approval.

REVOLT IN SERBIA. Feb. 1804. In 1801 the moderate governor of the Pashalik of Belgrade (northern Serbia) was killed by Janissaries, who then began a reign of terror against the native population. Led by George Petrovich (1766?-1817, known as Kara George), the Serbs revolted and quickly confined the Turks to control of a few fortresses. Negotiations with the sultan broke down on the question of guarantees and because of the insistence of the Serbians on retaining their arms. An appeal for Russian aid failed, but in 1805-6 the Serbs were able to repel Turkish invasions and establish virtual independence.

RUSO-TURKISH WAR. 1806-12. The French, who were now allied with the Turks, persuaded the sultan to dismiss the hospodars of the principalities without Russian approval. The czar answered by occupying the principalities and in Dec. 1806 Turkey declared war. The sultan offered conciliatory terms to the Serbs, but they preferred an alliance with Russia, and by agreement, 10 July, 1807, a Russian protectorate over Serbia was established. The war was not pursued with great vigor by either side for many years, but in 1811 the Russians gained victories on the Danube and peace was made by the Treaty of Bucharest, 28 May, 1812. The Russians were preparing for a French invasion, and did not make great demands on Turkey, annexing only Bessarabia. The treaty also provided for an amnesty and autonomy in Serbia, with the Turks regarrisoning the fortresses, but the provisions were vague and the Russians had all but abandoned the Serbs. There were many disputes over the implementation of the treaty of Bucharest, and in 1813 the Turks again invaded Serbia, this time successfully. In Oct. Kara George fled the country and Turkish rule was re-established, accompanied by massacres and great destruction.

2ND SERBIAN REVOLT. 1815. A new leader emerged in Milosh Obrenovich (1780-1860, ruled 1817-39, 1858-60),

who raised the standard of revolt on Palm Sunday, 1815. He won 4 quick victories over the Turks, and the sultan, fearing Russian intervention now that the Napoleonic wars were over, agreed to a settlement. By a decree of Dec. 1815 Milosh was recognized as the leader of Serbia and the Serbs were allowed to retain their arms and hold a national assembly. In Nov. 1817 the Serbs made Milosh's status as chief hereditary, and the sultan granted Serbia limited autonomy.

UNITED STATES OF THE IONIAN ISLANDS. By agreement of the Great Powers, 5 Nov., 1815, the Ionian Islands, which had been Venetian during the 18th cent., were made an independent state under a British protectorate.

1816-30

REVOLT IN THE PRINCIPALITIES. Mar.-June 1821. The secret *Philike Hetairia* (Society of Friends) had been organized in 1814 to promote a Greek revolt, and in 1820 Alexander Ypsilanti (1792-1828), a Greek who had become a general in the Russian army, became its head. On 6 Mar., 1821, he led a revolt in Moldavia, apparently having decided to begin operations there in order to be near Russian aid. His action, however, was repudiated by the Russian czar, and he aroused little support from the people of the principalities, who considered themselves oppressed by the Greek hospodars who ruled them. Ypsilanti's forces were defeated by the Turks in Wallachia and by June the revolt was over. The major result was a decision by the sultan, June 1822, to appoint native Rumanians as hospodars.

REVOLT IN GREECE. Mar. 1821. A war between the sultan and Ali Pasha (Ali Pasha), his vassal in southern Albania and northern Greece, which began in 1820, offered the Greeks an opportunity for revolt. Sporadic uprisings in the Morea (Peloponnesus), in Mar. 1821, quickly spread and became a general revolution. While the Turks were able to suppress the revolt in Macedonia and Thessaly, the Greeks, by 1822, were able to win the Morea, many of the islands,

and part of continental Greece south of Thessaly. In Jan. 1822 a constitution was promulgated and a national Greek government created. It was, however, plagued by factionalism and, on occasion, civil war, and was never able fully to assert its authority.

EGYPTIAN INVASION OF THE MOREA. Feb. 1825. Despite the disunity among the Greeks, the Turks were unable to recover the Morea and only partially recovered continental Greece. The sultan was obliged to make an agreement with Mohammed Ali (Muhammad 'Ali), the pasha of Egypt, promising him Crete for himself and the Morea for his son, Ibrahim (Ibrāhim), in return for aid. Ibrahim suppressed the revolt in Crete and then invaded the Morea, defeating the Greek army there. He combined with the Ottoman Gen. Reshid Pasha (1802-58) to capture Missolonghi, Apr. 1826, and then returned to the Morea while Reshid Pasha completed the conquest of continental Greece by taking the Acropolis in Athens, 5 June, 1827.

CONVENTION OF AKKERMANN. 7 Oct., 1826. A Russian ultimatum forced the Turks to agree to Russian demands in the principalities and Serbia. The hospodars were to be elected for 7 years by boyar (noble) assemblies, and their election could not be vetoed, nor could they abdicate or be deposed without Russian approval. In addition, a settlement of outstanding questions with Serbia, including a grant of autonomy, was to be made.

MEETING OF GREEK NATIONAL ASSEMBLY. Mar.-May 1827. Facing defeat, the various Greek factions united and elected Count John Capodistrias (1779-1831), formerly Russian foreign minister, president of Greece. Despite Ibrahim's victories, he could only control the area his army actually occupied, and the Greeks continued their struggle for independence.

TREATY OF LONDON. 6 July, 1827. At first the great powers had taken little interest in the Greek revolt, but they had been forced to change their policies by public support for the Greek cause and by the severe measures of reprisal taken

by the Turks. On 4 April, 1826, Britain and Russia agreed on representations to the sultan favoring the creation of an autonomous Greek state. They then joined with France in the Treaty of London, 6 July, 1827, made an offer of mediation, and demanded an immediate armistice. If this was not accepted by Turkey, the 3 powers were to establish consular relations with Greece and prevent, as far as possible, further hostilities. The latter provision resulted, when the Turks refused the armistice, in the blockading of a Turko-Egyptian fleet in Navarino Bay by a combined allied fleet. On 20 Oct. the allied fleet entered the bay and the Turkish fleet was destroyed.

RUSSO-TURKISH WAR. 1828-29. As a result of the Battle of Navarino, the sultan voided the Convention of Akkerman, Dec. 1827, and Russia used this action as an occasion for war (declared 26 Apr., 1828). The principalities were occupied, but Turkish resistance on the Danube was greater than had been expected and the Russians made no major advance until 1829, when they crossed the Balkan mountains and captured Adrianople, Aug. By the Treaty of Adrianople, 14 Sept., 1829, Russia acquired the mouths of the Danube and was to occupy the principalities until an indemnity had been paid. In addition, the principalities were given internal autonomy, with the hospodars elected for life, and Serbia was again promised autonomy. The Turks were forced to accept the Treaty of London and the terms of a 3-power protocol, dated 22 Mar., 1829, establishing the frontiers of an autonomous Greek state.

GREEK INDEPENDENCE. By an agreement between Great Britain, France, and Russia, 19 July, 1828, the French were to occupy the Morea. The Egyptians agreed to a peaceful evacuation, which was completed by Oct., and on 16 Nov. the Morea and the Cyclades Islands were put under the protection of the 3 powers. The withdrawal of Turkish troops, caused by the war with Russia, permitted the Greeks to reoccupy part of the mainland, and on 22 Mar., 1829, the powers extended the frontiers of Greece to in-

clude the island of Euboea and continental Greece south of a line running from the Gulf of Arta to the Gulf of Volo. However, after the acceptance by the Turks of these terms, in the Treaty of Adrianople, the British began to fear that an autonomous Greece would become dependent on Russia for the protection of its rights. On 3 Feb., 1830, therefore, the 3 powers declared for the creation of an independent Greece, with its northern frontier reduced by the exclusion of Aetolia and Acarnania. Prince Leopold of Saxe-Coburg was selected as its ruler, but Capodistrias persuaded him to reject the crown on the grounds that the proposed frontiers were unacceptable to the Greeks.

SERBIAN AUTONOMY. Oct. 1830. In accordance with the Treaty of Adrianople, the sultan issued a firman (imperial rescript) to Serbia, granting internal autonomy and making Milosh the hereditary prince.

1831-43

ASSASSINATION OF CAPODISTRIAS.

9 Oct., 1831. A patriotic and energetic leader, Capodistrias had nevertheless aroused opposition by his autocratic manner, his arbitrariness, and his attempts to strengthen the central authority. He was killed by members of a family whose head he had imprisoned, and his death was followed by anarchy in Greece.

ORGANIC STATUTES FOR THE PRINCIPALITIES. 1831-32. Adopted in July 1831 in Wallachia and in Jan. 1832 in Moldavia, the Organic Statutes were written by the Russians and provided for a division of power between the hospodars and the boyar assemblies. In addition, the boyars were made, for the 1st time, the legal owners of the land and peasant landholdings were decreased by more than 50%, while the services they owed were increased.

THE "BAVARIAN PROTECTORATE." 1833-43. After Leopold's refusal of the Greek throne, the powers offered it to Prince Otho (1815-67, ruled 1832-62), 2nd son of the king of Bavaria. By treaty

dated 7 May, 1832, Otho accepted the offer and the northern frontier of Greece was restored to the Arta-Volo line of the protocol of 22 Mar., 1829. From Feb. 1833 to June 1835, Greece was ruled by 3 Bavarian regents in Otho's name. A strongly centralized system was established, as opposed to the traditional municipal freedom of Greece. Both the regents and Otho, when he reached his majority, tended to ignore native Greek institutions and native Greek leaders, thereby creating much opposition.

ABDICATION OF OBRENOVICH. 13 June, 1839. Milosh Obrenovich's autocratic rule led to opposition and the demand for a constitution. In 1835 he granted Serbia a constitution, but abrogated it almost at once. In Dec. 1838 the sultan, with Russian support, created a 17-member senate, with extensive powers and appointed for life. Milosh attempted to fight this dilution of his power and, when he was defeated, abdicated. He was succeeded by his younger son, Michael (1825-68, ruled 1839-42), because of the death of his eldest son, Milan (1819-39), shortly after his abdication.

ACCESSION OF ALEXANDER

KARAGEORGEVICH. Sept. 1842. Michael was unable to create a stable government, and in Aug. 1842 was overthrown. A national assembly elected Alexander (1806-85, ruled 1842-58), the son of Kara George, to succeed him as Prince of Serbia.

REVOLUTION IN GREECE. Sept. 1843. An uprising by the Athens garrison on the night of 14-15 Sept., 1843, forced Otho to accept a constitution and dismiss most of the foreigners in his service. A national assembly was called, meeting 20 Nov., and a constitution adopted which provided for a bicameral legislature with the lower house elected by manhood suffrage and the upper house appointed for life by the king.

1844-52

REVOLTS IN THE PRINCIPALITIES.

1848. Responding to the revolutionary atmosphere of 1848, liberal revolts occurred in both principalities. The revolt

in Moldavia in Apr. was quickly put down, but in Wallachia the hospodar was forced to accept a constitution on 23 June, after which he fled, leaving a provisional government in control. The revolutionaries were strongly anti-Russian, and the Russians, after occupying Moldavia in July, demanded that the Turks overthrow the provisional government in Wallachia. A joint Russo-Turkish occupation resulted in the Convention of Balta Liman, 1 May, 1849, between the 2 powers by which the hospodars were to be again appointed for a 7-year term by the sultan, with Russian approval, and the elected boyar assemblies were replaced by appointed councils.

REFORM CONSTITUTION IN THE IONIAN ISLANDS. 26 Apr., 1849. Granted by the British, the constitution provided for a biennial legislature with a directly elected lower house and an upper house chosen by the high commissioner from the lower house. It had limited powers, but became a vehicle for the expression of Ionian public opinion, in particular the desire for union with Greece.

ABOLITION OF MONTENEGRIN THEOCRACY. 1852. A new prince-bishop, Danilo II (1826-60, ruled 1859-60), converted Montenegro into a hereditary, temporal principality by transferring his religious functions to an archbishop. The Turks attempted to prevent the change, but were stopped by threats of Austrian intervention.

1853-56

CRIMEAN WAR. Disputes between Catholic and Orthodox Christians over control of the Holy Places in Jerusalem led to a Russian demand for a protectorate over all Orthodox Christians in the Ottoman Empire. Backed by Britain and France, the Turks refused to comply and, in July 1853, the Russians occupied the principalities. Efforts at mediation failed, and in Oct. war between Russia and Turkey broke out. The destruction of a Turkish fleet at Sinope, 30 Nov., aroused British public opinion, which already had a strong anti-Russian bias,

and the British fleet was ordered to patrol the Black Sea and protect Ottoman territory. In Mar. 1854 Britain and France declared war when the Russians did not respond to their demand for evacuation of the principalities. However, a combination of Turkish victories and Austrian demands forced the Russians to withdraw from the principalities, Aug. 1854, after which they were occupied for the duration of the war by the Austrians, in accordance with an Austro-Turkish agreement of 14 June, 1854. The focus of the war then shifted to the Crimea, where the allies landed, Sept. 1854, taking Sevastopol, after a long and difficult siege, Sept. 1855. The threat of Austrian intervention then brought Russian agreement on the basic terms of peace and a peace conference opened in Paris, Feb. 1856.

TREATY OF PARIS. 30 Mar., 1856. All war gains were canceled, and Russia ceded southern Bessarabia and the mouth of the Danube to Moldavia. The Danubian principalities were placed under the control of an international commission and the Black Sea was neutralized, both fleets and fortifications on it being prohibited. Turkey was admitted to the Concert of Europe and the special relationship between Russia and the autonomous areas of the Balkans was eliminated, the independence and territorial integrity of the Ottoman Empire and the rights of Serbia and the principalities being placed under the joint guarantee of all the powers. In the principalities, elected assemblies were to meet to express their views on their future organization. A Turkish firman, 18 Feb., 1856, granting liberty of worship and civil equality to all, was noted and approved of, but the powers expressly rejected the right to interfere in the internal affairs of the Ottoman Empire.

1857-64

UNION OF THE PRINCIPALITIES. 1857-61. The assemblies provided for in the Treaty of Paris met in Oct. 1857, and both declared in favor of a 4-point program of union, autonomy, a foreign prince, and representative government.

By the Paris Convention, 19 Aug., 1858, the powers treated the "United Principalities of Moldavia and Wallachia," but provided that they were to have different princes and separate assemblies, with a central commission to propose laws in areas of common concern. The principalities responded by electing the same man, Col. Alexander Cuza (1820-73, ruled 1859-66), as prince of both (17 Jan., 1859, in Moldavia; 5 Feb. in Wallachia). In Sept. the powers and the sultan accepted his election on condition that the other provisions of the Paris Convention would remain in force and that no precedent would be established. There was continued agitation for union, however, and in Dec. 1861 the sultan gave permission for the union of the ministries and assemblies of the principalities for the period of Cuza's reign only.

ABDICATION OF ALEXANDER KARAGEORGEVICH. 3 Jan., 1859. Alexander Karageorgevich had aroused opposition by his failure to support a revolt, 1848, of the Slavs in the Hapsburg lands and by his neutrality during the Crimean War. A struggle between Alexander and the senate resulted in the convening of a national assembly, elected by taxpayer suffrage, which demanded his abdication, and Milosh Obrenovich was recalled to the throne.

DEATH OF MILOSH OBRENOVICH. 26 Sept., 1860. Milosh was succeeded by his son Michael, who promised a rule of law and did much to modernize the country. He ended the last vestiges of Ottoman control by obtaining the evacuation of the Turkish quarter of Belgrade, Sept. 1862, and the removal of the remaining Turkish garrisons, 3 Mar., 1867.

REVOLUTION IN GREECE. 1862. Otho's popularity had increased during the Crimean War, when the western powers had to intervene to enforce neutrality on Greece. But it had again declined during the Austro-Italian War (1859), when he had favored Austria while the people sympathized with Italy. His hold on the throne was further weakened by the fact that he had no heir and other Bavarian princes were disinclined to convert to Orthodox Chris-

tianity, as required by the constitution. Military uprisings in Feb. 1862 were put down, but the king unwisely decided to make a tour of the provinces. In Oct. revolts erupted again, and before he could return to Athens that city was under the control of the revolutionaries and he was forced to abdicate. Prince William George (1815-1913), the 2nd son of the heir to the Danish throne, was offered the crown, and by a treaty, 13 July, 1863, between Denmark and the 3 protecting powers (Britain, France, and Russia) he became George I, king of the Greeks (ruled 1863-1913). In 1864 a new constitution was adopted providing for a constitutional monarchy, with a unicameral legislature elected for 4 years by universal suffrage.

TURKISH ATTACK ON MONTE-NEGRO. 1862. In 1861 an anti-Turkish revolt occurred in Herzegovina, and although Montenegro remained neutral the Turks invaded that country as soon as they had put down the rebellion. The Turkish army cut Montenegro in half and forced the Montenegrins to accept the terms of an ultimatum issued at Scutari, 31 Aug., 1862, by which they promised not to support further revolts in the Ottoman Empire and were prohibited from erecting frontier fortresses.

CESSION OF THE IONIAN ISLANDS TO GREECE. 29 Mar., 1864. The treaty of 29 Mar., 1864, carried out an agreement made by the British that they would cede the islands in return for a promise that Greece would not promote revolts in the Ottoman Empire. The formal transfer took place on 2 June.

COUP BY ALEXANDER CUZA. 14 May, 1864. The assembly of the United Principalities, controlled by the boyars, had refused to pass an agrarian reform law and Cuza dissolved it on 14 May, 1864, clearing the chamber with the use of troops. At the same time he called for a plebiscite on a new electoral law and constitution. Under the new system, which was approved by a large majority, the prince was to have the sole right of legislative initiative and the legislature was to consist of an upper chamber appointed by him and a lower chamber

elected on a greatly increased suffrage. In Aug. 1864 Cuza promulgated, on his own authority; an agrarian reform law that abolished forced labor, the tithe, and all other feudal dues and gave land to the peasants, in return for an annual payment for 15 years. Other major accomplishments of Cuza's reign were the secularization of the property of the "dedicated monasteries," Dec. 1863, which had owned a large part of the arable land in the principalities, and the establishment, at least in theory, of free and compulsory public education, 1864.

1865-70

ABDICATION OF CUZA. 23 Feb., 1866. The desire of the principalities for a foreign prince, expressed in 1857, continued, and formed a basis for opposition to Cuza. In addition, his arbitrary measures and the increasing corruption and inefficiency of his government united liberals and conservatives against him. On the night of 22-23 Feb., 1866, army officers staged a palace revolt and forced his abdication. Prince Charles of Hohenzollern-Sigmaringen (1839-1914) was chosen to succeed him and on 10 May was proclaimed hereditary prince of Rumania. The sultan was brought to accept the change of ruler and his hereditary status, Oct. 1866, but still refused to accept the name Rumania (Romania). A new constitution, based on the Charter for Belgium of 1831, established civil liberties and an indirectly elected, bicameral legislature, with the prince retaining an absolute veto on legislation.

ASSASSINATION OF MICHAEL OBRENOVICH. 10 June, 1868. Despite the many accomplishments of his reign Michael Obrenovich was killed, and many believed that the Karageorgevich family was responsible. A provisional government was formed and acted quickly to prevent a coup, choosing Milan Obrenovich (1854-1901), Michael's 14-year-old cousin, as prince. A 3-man regency was established, which in July 1869 put a new constitution into effect. A single chamber legislature was created, with $\frac{3}{4}$ of its

members elected and $\frac{1}{4}$ appointed by the prince. Its powers were extremely limited, since it was able only to accept or reject bills proposed to it, and the prince could convene or dissolve it at will.

EXARCHATE OF BULGARIA. 11 Mar., 1870. The creation of a national Bulgarian church (exarchate) by a Turkish decree, was the 1st great victory of Bulgarian nationalism. It came despite long opposition from the Greek Orthodox Church, mainly on the question of jurisdiction, especially in Macedonia. As constituted the Bulgarian church could expand to any area in which it was supported by a vote of $\frac{2}{3}$ of the population. The Turks had probably created it in the hope of dividing the Balkan Christians, and they succeeded when the Greek patriarch declared the Bulgarian Church heretical, Feb. 1872. (*Cont. p. 299.*)

THE HAPSBURG LANDS

1800-15

FRENCH INVASION. In May 1801, continuing the expansion of the French Empire, Napoleon invaded the northern Italian provinces of the Hapsburg lands. French victories allowed Bonaparte to dictate severe terms in the Treaty of Lunéville, 9 Feb., 1801; the Hapsburg ruler, Francis (1768-1835), gave up sections of Italy and the left bank of the Rhine to French domination.

CREATION OF THE AUSTRIAN EMPIRE. In May 1804 Napoleon assumed the title "Emperor of the French"; in response, Francis declared himself Francis I, emperor of Austria (ruled 1804-35). This action strengthened his position by making the Hapsburgs hereditary Austrian emperors as well as elected Holy Roman emperors.

3RD COALITION. Austria joined Russia and Britain in a Third Coalition to oppose France. Napoleon responded by an invasion of Austria, which ended in French victory at Austerlitz, 2 Dec., 1805. By the Treaty of Pressburg, 26 Dec., Austria ceded Venetia and Dalmatia to France and Tirol to Bavaria, recognized

Napoleon as king of Italy, and granted sovereignty to Bavaria and Wurttemberg, which had aided France in the war.

END OF THE HOLY ROMAN EMPIRE. Napoleon organized Bavaria, Wurttemberg, and several other German states into a Confederation of the Rhine under French protection, thus bringing all the Germanies except Prussia and Austria into the French system. In recognition of his loss of influence, Francis dissolved the Holy Roman Empire, Aug. 1806.

WAR OF 1809. After the defeat of 1805, the Archduke Karl Ludwig (1771-1847) worked to refashion the Austrian army, while sentiment grew in Austria for a war of revenge against France. The minister of foreign affairs, Johann Philipp von Stadion (1763-1824), was one of the supporters of war. In June 1808, Austria began to train a citizen militia of all men between 18 and 45. On 12 Apr., 1809, the Austrians invaded Bavaria and followed this attack with offensives in northern Italy. But Napoleon moved quickly to break the center of the Austrian forces, and the French army entered Vienna, 13 May. The reunited Austrian divisions took a position opposite Vienna and repulsed the French attack at Aspern, 21-22 May, with heavy losses on both sides. On 5-6 July, Napoleon attacked again, with superior numbers, and gained victory at Wagram. Stadion resigned, to be replaced by Klemens Metternich (1773-1859); Archduke Charles retired and Francis agreed by the Peace of Schonbrunn, 14 Oct., 1809, to give up Salzburg, the Innviertel, and western Galicia, as well as the south Slav lands, from which Napoleon created Illyria. Five months later, on 11 Mar., 1810, the emperor of the French married Marie Louise (1791-1847), daughter of Francis I.

DEFEAT OF NAPOLEON. As France and Russia drifted toward war, Austria on 14 Mar., 1812, was obliged by her alliance with France to agree to supply troops for Napoleon's forthcoming Russian campaign. Metternich privately assured the Russians that at most only 30,000 Austrian soldiers would march

with Napoleon, and they would avoid serious fighting. As the French retreated from Russia after their defeat, the Austrian government approved, Jan. 1813, a truce with Russia, in defiance of treaty obligations to France. In May, Austria attempted to arrange peace between France and Russia. When the Congress of Prague failed to produce a peace treaty, Austria joined Russia and Prussia in the war against France, 10 Aug. By the Treaty of Teplitz, 9 Sept., the allies declared their intention to restore a balance of power in Europe. The allies pressed forward against Napoleon, inflicting a crushing defeat on him at Leipzig, 16-19 Oct., and advanced into France. On 1 Mar., 1814, Austria, Prussia, and Britain by the Treaty of Chaumont pledged to agree to peace with France only when a balance of power had been established in Europe. On 31 Mar., allied troops entered Paris. Napoleon abdicated on 4 Apr. The 1st Treaty of Paris, 30 May, formally declared peace between France and the victorious powers, including Austria. The powers decided to hold a congress in Vienna to round out a general peace settlement.

CONGRESS OF VIENNA. The peace conference at Vienna opened formally on 2 Nov., 1814, and closed on 11 June, 1815. In the distribution of territory, Francis I gave up those Hapsburg possessions which were separated territorially from the principal domain: these included Belgium and the Swabian lands in southwest Germany. Austria received Galicia (except Cracow, which became an independent city-state), Dalmatia, and the Italian provinces of Lombardy and Venetia. In addition, Hapsburg monarchs ruled in Tuscany and Modena, giving Austria a predominant influence in Italy. The Vienna Congress also created, 8 June, 1815, the *Deutscher Bund*, a loose union of 39 German states constructed to replace the Holy Roman Empire; Austria was by statute the presiding power in its Diet. A final result of the Congress was the Holy Alliance, which took shape during the Vienna deliberations and was declared on 26 Sept., 1815, with the Rus-

sign, Prussian, and Austrian monarchs as its principal signatories.

QUADRUPLE ALLIANCE. The return and final defeat of Napoleon resulted in a harsher 2nd Treaty of Paris, 20 Nov., 1815. On the same day, Austria joined with Britain, Russia, and Prussia in a Quadruple Alliance to perpetuate by armed force for 20 years the terms established by the treaties of Chaumont, Vienna, and Paris. The alliance provided

that representatives of the 4 powers would meet periodically to consider measures to maintain peace; these measures formed part of a conservative and repressive policy maintained by the rulers over the next several years.

1816-47

RISE OF NATIONALISM. The Napoleonic Wars stimulated nationalism in the

Hapsburg lands. Political ideas were reinforced by the influence of German romanticism with its emphasis on folk culture, and a corresponding interest in vernacular languages. In 1814 Stefanović Vuk Karadžić (1787-1864) began to lay the foundations of the modern Serbian literary language; over several years he published a Serbian grammar and dictionary and collections of Serbian folk tales, songs, and poetry. Between 1816 and 1819 Václav Hanka (1791-1861) publicized his "old" Czech texts in the hope of creating a Czech national epic. The Austrian dramatist Franz Grillparzer (1791-1872) wrote, 1822, his 1st historical drama, *König Ottokars Glück und Ende*, a realistic tragedy about the 1st Hapsburg emperor. In 1824 the Slovak poet and scholar, Ján Kollár (1793-1852), published *Slávy dcera*, a cycle of sonnets glorifying the Slavic past and future. Kollár became the leader of romantic Pan-Slavism, publishing collections of Slavic folk songs, works on Slavic archaeology, and, in 1837, a treatise on improving cultural relations among the Slavs. In 1825 a Rumanian dictionary appeared. In the same year Josef Jungmann (1773-1847) published his *Historie literatury české*; he later assembled a 5-vol. Czech dictionary, 1834-39, and translated many works into Czech. In Hungary, Count István Széchenyi (1791-1860) offered a year's income toward the founding of a Hungarian academy; in 1833 he published demands for reforms in the backward Hungarian part of the Hapsburg monarchy. He was also a leading influence in the establishment in 1837 of a National Theater in Pest.

The Slovak scholar Josef Pavel Šafařík (1795-1861) published his *Geschichte der slawischen Sprache und Literatur nach allen Mundarten*, 1826. In 1831 *Matice česká*, a Czech organization, was founded. The Czech historian František Palacký (1798-1876) began, 1836, his *Geschichte von Böhmen*; after 1848, he wrote a Czech version of this history of Bohemia. In Hungary, the Diet declared Magyar to be the language of the schools, law courts, and legislation, 1843. In 1845 L'udovít Štúr (1815-56) published an

article in a new Slovak language which he had created using a middle Slovak dialect. Jozef Miloslav Hurban (1817-88) and Michal Miloslav Hodža (1811-70) supported Štúr in his campaign to create a Slovak literary language.

REPRESSION OF NATIONALISM.

Metternich acted as far as it was in his power to suppress liberal movements wherever they occurred. In 1819, in reaction to student demonstrations, the *Deutscher Bund*, at Metternich's urging, approved the Karlsbad (Carlsbad) decrees which regulated the German press and universities. In July 1820, revolution in the Kingdom of the Two Sicilies forced King Fernando to grant a liberal constitution, but in Oct. the monarchs of Austria, Prussia, and Russia met at Troppau in a conference dominated by Metternich, and agreed on the right of the powers to intervene in states which had undergone a change of government due to revolution which threatened other states. In Jan. 1821 the conference, which now included the Italian princes as well, met at Laibach and decided that Austria should send an army to suppress the Italian rebels. The Austrians entered Naples in Mar. 1821, bringing the revolution to an abrupt end. The army then turned north to put down the rebellion which had meanwhile broken out in Piedmont; the revolutionaries there were defeated in Apr. and Austria emerged more powerful than ever.

During the Italian campaign, Metternich had called for recruits from Hungary and had attempted to reform the system of taxation there. The rising Magyar nationalism took the form of resistance to the Austrian demands, until finally the national Diet was convened, 1825, for the 1st time since 1812. Széchenyi addressed the assembly in Magyar instead of the conventional Latin. This Diet of 1825 forced the Hapsburg emperor to agree to observe Hungarian rights and to call the Diet at least once every 3 years. Revolutions again broke out in Italy, 1830-31. Metternich assured himself of the backing of Russia and Prussia in order to forestall French intervention on behalf of the rebels. Then, in 1831, Austrian troops re-

stored order in Parma, Modena, and the Papal States.

ACCESSION OF FERDINAND I. Ferdinand I (1793–1875, ruled 1835–48) became emperor of Austria upon the death of his father Francis I. Ferdinand's ability to rule was questioned, since he suffered from periods of insanity. He therefore permitted a state conference of the ministers Metternich and Franz Kolowrat-Liebsteinsky (1778–1861) and the Archdukes Ludwig (1784–1864) and Franz Karl (1802–78), to act as the governing body of the empire. The members of the conference disagreed, however, and little was accomplished.

NATIONALIST RESURGENCE IN HUNGARY. József Eötvös (1813–71), journalist and member of the Diet, published articles, 1839–40, revealing the shortcomings of the traditional county administration and advocated a general demand for ministerial responsibility, equality before the law, and universal taxation (which would include the previously exempt nobility). Liberal members of the Diet, led by Ferencz Deák (1803–76), also called for the release of political prisoners, including Lajos Kossuth (1802–94). Kossuth, who had earned the wrath of the government by publishing accounts of parliamentary activities during the 1830's, was freed in 1840. Between 1841 and 1844, Kossuth edited the journal *Pesti Hírlap*. He demanded the abolition of entail and other feudal remnants and the taxation of the nobility. He stressed Magyar superiority over other nationalities in the Hungarian part of the empire, and in 1844 founded the National League to oppose the government in Vienna.

The Polish and Ukrainian peasants in Galicia rose in rebellion against the Polish nobility, 1846. In Nov. 1846 Austria put down the revolt and annexed Cracow.

1848

REVOLTS OF 1848. On 11 Mar. students in Vienna demonstrated for the freedom to speak, learn, teach, believe, and publish according to their own desires, and for the right of representation. In Prague, a mass petition demanded the

abolition of the *Robot* (peasant labor due the lord under feudal law), liberal reforms, and the union of Bohemia, Moravia, and Silesia. On 13 Mar. a crowd formed in Vienna and forced Metternich to resign and flee from Vienna. Students armed, and a national guard was formed. On 15 Mar. the Hapsburg court promised the Austrian people a constitution. On 17 Mar. Daniele Manin (1804–57) led an uprising in Venice; he became president of the new Republic of Venice 5 days later. On 18 Mar. street fighting erupted in Milan, ending Austrian occupation there. On 25 Mar. a Croatian Diet convened at Agram under Josip Jelačić (1801–59), who was *Ban* (governor) of the Kingdom of Croatia, Slavonia, and Dalmatia. The representatives put forward national and liberal demands. On 29 Mar. a 2nd petition in Prague emphasized Czech national demands.

Apr. On 10 Apr. a new Hungarian constitution became law, abolishing feudal relationships and establishing a national guard. The Hapsburg emperor recognized the independent government and agreed that in his royal dignity he constituted the major link between the government of Austria and the new government of Hungary. The president of the first Hungarian ministry was Lajos Batthyány (1806–49), who favored maintaining ties with Austria. Other members included Deák as minister of justice, Eötvös as minister of education, Széchenyi as minister of ways and communication, and Kossuth as minister of finance. On 17 Apr. Governor Stadion of Galicia abolished the *Robot* in his province, with compensation by the state to the lords.

May. Transylvanian Rumanians held a meeting at Blaj and agreed on the need for an autonomous Rumanian territory. Serbs gathered at Karlowitz to demand Serbian autonomy. The Magyar reaction led to brutal struggles with both these nationalities. On 28 May, the Hungarian-dominated Transylvanian Diet voted to unite Transylvania with Hungary. In Prague, František Palacký presided over a Slavic Congress.

June. Czech radicals engaged in street fighting in Prague. The Austrian army, under General Alfred Windischgrätz

(1787-1862), restored order in the city, 16 June.

July. As a result of the new constitution, an Austrian parliament was elected by universal suffrage. This Reichstag met in Vienna, 22 July, with a Slavic majority. On 25 July, at Custozza, General Josef Radetzky (1766-1858) led the Austrians to victory over the Piedmontese army, which had come to the aid of other Italian insurrectionists.

Sept. On 7 Sept. the emperor gave his consent to parliamentary legislation abolishing feudal remnants with compensation to the lords for services due them under the old order. The leading parliamentary sponsor of this bill had been Hans Kudlich (1823-1917). At the end of the month, Austrian troops crossed into Hungary; they were supported against the Magyars by the national minorities, notably Croatian forces under Jelačić. The Hungarians formed a Committee of National Defense with Kossuth as president.

Oct. On 6 Oct. a city crowd rose in Vienna and murdered the minister of war, Latour. On 7 Oct. the emperor fled Vienna for Olomouc, and the Austrian parliament soon followed to the nearby town of Kremsier, 22 Oct. On 19 Oct., Felix zu Schwarzenberg (1800-1852) was empowered to form a government. On 28 Oct. Windischgrätz attacked Vienna, and captured the city, 31 Oct.

Nov. On 21 Nov. Schwarzenberg became prime minister. He formed a ministry, retaining for himself the direction of foreign affairs.

Dec. Emperor Ferdinand abdicated in favor of his nephew Francis (1830-1916), who ruled as Francis Joseph I.

Mar. 1849. On 4 Mar. Francis Joseph approved the Kremsier constitution, which established autonomy for the various parts of the empire and equality for its nationalities. On 7 Mar. he dissolved parliament.

1849

RESTORATION OF HAPSBURG POWER. On 23 Mar., 1849, Radetzky's victory over Piedmont at Novara ended Italian hopes of immediate unity. In

January, the Austrian troops under Windischgrätz had occupied Budapest. The Hungarian Diet withdrew to Debrecen, where, 13 Apr., it declared Hungary an independent republic with Kossuth as president. General Arthur Gorgey (1818-1916) led the Hungarian army, supported by the Polish general Józef Bem (1795-1850); together they achieved substantial success in resisting Austria. But they were forced to surrender at Világos, 13 Aug., to a Russian army which came to aid the Austrians. Gorgey was captured but his life was spared at Russian insistence. Kossuth escaped to Turkey and from there to the West.

1850

NEW DEUTSCHER BUND. In Nov. 1850 at Olomouc, Prussia agreed to acknowledge the authority of a reconstituted *Deutscher Bund* under Austrian leadership. Schwarzenberg demanded the inclusion of the entire Austrian Empire, not just the German and Bohemian lands, in the *Bund* and in the German *Zollverein* (customs union). To facilitate this project he abolished the customs barriers between Hungary and the rest of the empire. Under Schwarzenberg's vigorous leadership, Austria now held a dominant position in Germany and in Italy, though she was not admitted to the *Zollverein*.

1851

ANNULMENT OF THE KREMSIER CONSTITUTION. On 31 Dec., 1851, encouraged by its own strength and by the return of absolutist regimes in other parts of Europe, the Austrian monarchy declared null and void the Kremsier constitution, which had never actually been put into force.

1852

THE BACH SYSTEM. Schwarzenberg died suddenly on 5 Apr., 1852. Francis Joseph appointed no one in his place, instead assuming a more personal control of government himself. But since the emperor was interested primarily in for-

sign policy, the direction of internal affairs fell to Alexander von Bach (1813-93), minister of the interior since 1849. Bach was faced with the necessity of instilling a sense of Hapsburg citizenship in all the residents of the empire, including the newly freed serfs. The system which he developed during the 1850's involved complete centralization of government through a bureaucracy which extended downward from Vienna to small primary administrative districts, in which the district officials combined administrative and judicial functions. The empire was ruled as one indivisible state, through an army of officials loyal to the bureaucracy rather than to the often hostile residents of the districts to which they were sent.

1853-60

CRIMEAN WAR. Austria attempted to maintain a policy of neutrality, but actually leaned toward the West. She demanded that Russia withdraw from the Rumanian principalities of Moldavia and Wallachia and occupied them, Dec. 1854. Austria further antagonized Russia by supporting, Dec. 1855, British and French demands for a peace treaty.

WAR IN ITALY. War broke out in Apr. 1859 between Austria and Piedmont. Under the terms of a secret treaty of 1858, France came to the aid of the Italians. Despite Austrian defeats at Magenta, 4 June, and Solferino, 24 June, the Armistice of Villafranca, 11 July, would have allowed Austria to retain membership and power in a new Italian Confederation. Italian nationalists therefore rebelled again. By the Peace of Zurich, 10 Nov., Austria ceded Lombardy to France, which gave it to Italy.

OKTOBER-DIPLOM. At the end of 1859 Agenor Goluchowski (1812-75) replaced Bach as minister of the interior. The Bach system had aroused discontent throughout the empire, and a meeting of the enlarged administrative Reichsrat from Mar. to Sept. 1860 attempted to reconstruct the system of government. The resulting *Oktober-Diplom* represented a compromise between centralists and fed-

eralists, providing for a division of power between the central Reichsrat and the various provincial diets, thus pleasing no one.

1861-62

FEBRUARPATENT. In Jan. 1861. Anton von Schmerling (1805-93) succeeded Goluchowski; in Feb., the *Februarpatent* superseded the *Oktober-Diplom*. The patent permitted each province to send delegates to the central Reichsrat, where real power resided. This satisfied the Germans, but the Hungarians refused to participate. Under Deák's leadership, they continued to insist on the individuality of Hungarian rights and interests.

1863

CONGRESS OF GERMAN PRINCES. In order to counteract Prussia's increasingly independent policies, Francis Joseph called for a congress of princes to discuss extension of the functions of the *Deutscher Bund*. On 17 Aug., 1863, all the German princes met at Frankfurt except the Prussian king, who refused to attend. Although the princes did agree on a federal constitution for a new Germany, they were reluctant to enforce it against Prussian opposition.

1864-65

SCHLESWIG-HOLSTEIN QUESTION. After the failure at Frankfurt, Austrian policy shifted to an attempt at co-operation with Prussia. Austria joined Prussia in a short war with Denmark over the duchies of Schleswig and Holstein. On 30 Oct., 1864, Denmark ceded the duchies to Austria and Prussia in common; on 14 July, 1865, after several disagreements, the 2 victors signed the Treaty of Gastein, which settled the administration of Schleswig and Holstein.

1866

WAR WITH PRUSSIA. On 8 Apr., 1866, Bismarck concluded a secret offensive

alliance with Italy against Austria. As tension increased, the *Bund* on 14 June adopted an Austrian motion to mobilize the confederate army against Prussia. Prussia seceded, declared the *Bund* dissolved, and war began. Although Austria defeated the Italians at Custoza, 24 June, the Prussian victory at Sadowa, 3 July, decided the outcome of the war. By the Peace of Prague, 23 Aug., Austria was excluded from Germany; by the Peace of Vienna, 3 Oct., Austria ceded Venetia to France, which gave it to Italy.

1867-70

DUAL MONARCHY. More or less secret discussions had been going on between the Hapsburg court and the Hungarians since 1864. After the Austrian defeat in 1866, negotiations began in earnest between Count Gyula Andr ssy (1823-90) of Hungary and Count Friedrich Ferdinand Beust (1809-86), the new foreign minister of Austria. Under the *Ausgleich* (Compromise) of 1867, Francis Joseph, Feb., bowed to the Hungarian demands as outlined by De k. The 2 parts of Austria-Hungary were each to have their own parliament and ministry, which would govern all matters except military and foreign affairs and the financing of common expenses. Delegations from the legislative bodies of the 2 parts were to meet on matters of joint concern, and a customs union was arranged under a compromise which had to be renegotiated every 10 years. Francis Joseph was crowned king of Hungary on 8 June. Within Hungary, Andr ssy headed a government which consolidated Magyar power. In Nov. 1868, Hungary reached a compromise with Croatia which permitted a Croatian Diet but required appointment of a governor by the Hungarian ministry. In Austria, the Slavic proposal for a federal state was overriden by German opposition and by the objections of the Magyars, who feared that federalism in Austria would undermine the integrity of Hungary. But the Austrian constitution which was finally adopted, 31 Dec., 1867, was more liberal

than its Hungarian counterpart; it provided for equality of nationalities, preservation of national languages, and a bill of rights. (*Cont. p. 299.*)

RUSSIA

1800-1801

LEAGUE OF ARMED NEUTRALITY.

This agreement between Russia, Sweden, Denmark, and Prussia, 1780, renewed in Dec 1800, was intended to protect the rights of neutral commerce against the British navy. It was part of the growing anti-British policy of the Russian czar, Paul I (1754-1801, ruled 1796-1801). Relations between Russia and its former ally had almost reached the breaking point in the fall of 1800, when the Russians placed an embargo on British shipping, froze British funds, and imprisoned British sailors in response to British seizure of Danish ships and refusal to permit Russian participation in the occupation of Malta.

ASSASSINATION OF PAUL I. 23

Mar., 1801. The coup was the result of a plot between high court officials and guards officers who considered Paul mad and lived in terror of his use of the absolute power he possessed. Paul's son, who succeeded as Czar Alexander I (1777-1825, ruled 1801-25), was aware of the plot and consented on condition that his father not be killed. On taking the throne, however, he took no action to punish the small group of conspirators who had killed his father.

RULE OF ALEXANDER I. Alexander released from prison and recalled from exile large numbers of men, restored the rights of the gentry which had been taken away by his father, lifted restrictions on foreign travel, ended the use of torture, and relaxed the censorship. He had been educated by the Swiss liberal, Fr d ric C sar de La Harpe (1754-1838), and with the advice of an "unofficial committee" of liberal friends hoped to institute a period of major reform in Russia. However, Alexander proved to be hesitant about putting his theories into practice and the

committee existed for only a short time and produced little.

CONVENTION OF ST. PETERSBURG. 17 June, 1801. In response to the League of Armed Neutrality the British bombarded Copenhagen, 2 Apr., 1801, and forced Danish withdrawal from the League. Anglo-Russian talks resulted in the Convention of St. Petersburg by which friendly relations were restored and the issues involved in the rights of neutral commerce settled on a compromise basis.

PEACE WITH FRANCE. 8 Oct., 1801. Continuing the negotiations his father had begun, Alexander made peace with Napoleon and established Russian neutrality in the European conflict.

1802-9

MINISTERIAL SYSTEM. 20 Sept., 1802. Replacing the colleges established by Peter the Great, which had been headed by committees, 8 ministries were set up, headed by individual ministers who combined to form a committee of ministers on matters of interdepartmental concern.

VOLUNTARY EMANCIPATION OF SERFS. 4 Mar., 1803. Alexander I was opposed to serfdom and stopped the practice of his predecessors of making large gifts of state land and peasants to private landowners. He hesitated, however, to take direct action against serfdom and hoped that it would be gradually eliminated by a program of voluntary emancipation. This did not happen, as relatively few serfs were freed under the provisions of the decree.

WAR WITH PERSIA. The Persians declared war, 1804, as a result of the Russian annexation of Georgia, 1801. The Russians were victorious and by the Treaty of Gulistan, 12 Oct., 1813, Russian annexation of Georgia was recognized and Russia received territories in the Caucasus.

3RD COALITION AGAINST FRANCE. In 1804 diplomatic relations between France and Russia were broken as the result of incidents growing out of Napoleon's seizure of the duc d'Enghien and his assumption of the title of em-

peror. In 1805 Alexander made treaties of alliance with Britain, Apr.; Sweden, June; and Austria, Aug. In Sept. hostilities began between France and Austria, and Russian troops were sent to the aid of the latter. Napoleon invaded Austria and at Austerlitz, 2 Dec., 1805, defeated a combined Austro-Russian army and forced Austria to make peace. Prussia had joined the coalition in Nov., but had given no aid to its allies, and after the defeat of Austria allied with France. Napoleon's German policy, however, forced Prussia into opposition to him again, and in July 1806 a secret treaty of alliance was made between Russia and Prussia. In Oct. Prussia declared war on France and the Prussian army was defeated before the Russians could come to their aid. A series of inconclusive battles between the French and the Russians followed, the major one being a bloody draw fought at Preussisch-Eylau, 8 Feb., 1807. The 2 armies finally fought a decisive battle at Friedland, 14 June, 1807, where the Russians were defeated and agreed to an armistice.

TREATIES OF TILSIT. After the meeting of Napoleon and Alexander on a raft in the middle of the Niemen River, 25 June, 1807, the treaties of Tilsit were signed, ending the war between France and Russia, 7 July, and France and Prussia, 9 July. At the insistence of Alexander, Prussia was not destroyed, but was greatly reduced, the Grand Duchy of Warsaw, under French domination, being created out of Prussian Poland. Alexander recognized all the changes Napoleon had made in the map of Europe and agreed to support his Continental System against Britain in return for acceptance of Russian expansion at the expense of Sweden and the Ottoman Empire. The agreements were reaffirmed at Erfurt, Oct. 1808, at which time Alexander also agreed to aid Napoleon against Austria.

WAR WITH TURKEY. The French, taking advantage of a dispute between Russia and Turkey over the rights of the principalities of Moldavia and Wallachia, used their influence to induce the Ottoman sultan to declare war on Russia, Dec. 1806. The Russians occupied the principalities, but neither side pursued the war with vigor for many years. In 1811, how-

ever, General Michael Kutuzov (1745-1813) defeated the Turks on the Danube and captured Bucharest, Dec. The Russians, who were preparing for war with France, proposed moderate peace terms and by the Treaty of Bucharest, 28 May, 1812, Russia obtained Bessarabia, the autonomy of Serbia was recognized, and the rights and privileges of Moldavia and Wallachia were reaffirmed.

WAR WITH SWEDEN. In Feb. 1808 the Russians invaded Swedish Finland and by the end of the year had completely occupied it. In 1809 Sweden proper was invaded and, after a domestic revolution in which the Swedish king was overthrown, the war ended. By the Treaty of Fredrikshamn, 17 Sept., 1809, Russia received Finland, the Åland Islands, and a northeastern strip of Sweden. Even before the conclusion of the war, Finland had been established as an autonomous grand duchy, with the czar as grand duke; and a Diet elected by the estates of Finland, Mar. 1809, had pledged loyalty to the czar in return for his promise to respect the existing fundamental laws of the country.

1809-14

ADMINISTRATIVE REFORMS. Alexander's major adviser during this period was Michael Speransky (1772-1839), the son of a rural cleric. By a decree of 18 Aug., 1809, a university degree or the passing of an examination was required for the holding of the higher civil positions. By decrees of 6 Aug., 1810, and 7 July, 1811, the ministries were reorganized with a more careful delimitation of their functions, administrative functions were separated from judicial, and precise and comprehensive rules for administration formulated. These latter decrees remained the basis of the Russian bureaucracy until 1917.

ESTABLISHMENT OF THE COUNCIL OF STATE. 13 Jan., 1810. With its members appointed by the czar, the Council of State was established to examine all proposed laws and make recommendations to the czar before he took action on them. It did not have the right to initiate legislation, however, and its function was purely advisory.

FRENCH INVASION. 24 June, 1812. Relations between France and Russia were increasingly characterized by suspicion and fear. Russian aid to France during a war with Austria, 1809, had been purely nominal and trade decrees of 1810 virtually withdrew Russia from the Continental System while excluding luxury French imports. Russian fears of a Polish revival were increased by the transfer of West Galicia to the Duchy of Warsaw (Treaty of Schonbrunn, Oct. 1809), and Alexander was greatly offended by Napoleon's annexation of the Duchy of Oldenburg, whose royal house was closely related to the Romanovs. At the beginning of 1812 France made alliances with Prussia and Austria, while Russia allied with Sweden in order to protect its northern frontier. On 24 June Napoleon, who had assembled an international Grand Army drawn from almost every nation of Europe, crossed the Niemen River with approximately 420,000 men and forced the much smaller Russian force to retreat.

BATTLE OF BORODINO. 7 Sept., 1812. Russian armies under Prince Michael Barclay de Tolly (1761-1818) and Prince Peter Bagration (1765-1812) had retreated before Napoleon without fighting a major battle. They united near Smolensk, where a series of rear-guard engagements were fought, 17-18 Aug., and the Russians again retreated. The combined army was now placed under the command of General Kutuzov and it was decided to make a stand at Borodino in order to protect Moscow. There, after a bloody battle in which the Russians suffered over 50% casualties, it was again decided to retreat, although the Russians were in control of the field at the end of the day.

FRENCH RETREAT FROM MOSCOW. After his victory at Borodino, Napoleon entered Moscow and made peace offers to Alexander. The latter, to Napoleon's surprise, refused all proposals for negotiations and declared he would continue the fight to the end. The destruction of Moscow by fire deprived the French of supplies and winter quarters, and Napoleon was forced to order a retreat, 19 Oct., 1812. At Maloyaroslavetz,

24 Oct., French forces suffered a defeat that forced them to retreat along the same routes they had used on the advance to Moscow. Crossing country that had already been stripped of all supplies, harassed by both the Russian army and guerrilla forces, with their supply system collapsing and winter setting in, the French retreat quickly turned into a rout. The Grand Army was almost totally destroyed, with only 30,000 to 50,000 men surviving the Russian campaign.

COALITION AGAINST FRANCE.

Although some of his generals were satisfied with having driven the French from Russian soil, Alexander insisted that the retreating army be pursued beyond Russia's borders and Napoleon totally defeated. In 1813 treaties of alliance were made with Prussia, Feb.; Britain, June; and Austria, June. On 16-19 Oct. the allies won a major victory at Leipzig. After allied peace offerings were refused, France was invaded, Paris fell, 31 Mar., 1814, and Napoleon was forced to abdicate, 4 Apr.

CONGRESS OF VIENNA. Sept. 1814-June 1815. By the 1st Treaty of Paris, 30 May, 1814, France had been substantially limited to her borders of 1792. The Congress of Vienna was called by the powers to consider the disposition of the other European territories that Napoleon had controlled. Alexander desired the conversion of the Duchy of Warsaw into a Kingdom of Poland, united in personal union with Russia. He was supported by Prussia, which would receive Saxony in compensation, but opposed by Britain, Austria, and the restored French Bourbons. A serious conflict between the powers was imminent when Napoleon's escape from Elba, Mar. 1815, reunited them. The final treaty, signed 9 June, 1815, provided for a smaller Kingdom of Poland under the czar, with Posen returned to Prussia and West Galicia to Austria.

1815-25

HOLY ALLIANCE. In Sept. 1815 Alexander sponsored the Holy Alliance. This agreement, which was eventually acceded to by all of the rulers of Europe except

the pope, the sultan, and the king of England, provided for the conduct of international relations on Christian principles and in peaceful ways.

THE CONGRESS SYSTEM. Alexander believed that alliances should form the basis for a system of international co-operation which would ensure peace. At the Congress of Aix-la-Chapelle, Sept. 1818, to which France was admitted on a basis of equality with the other powers, he proposed the creation of an international army, but this was not given serious consideration. At Troppau, 1820, the alliance was converted into a system for the internal control of the nations of Europe when Austria, Prussia, and Russia, with Britain opposed and France neutral, declared that they would take joint action against revolutions anywhere. At Laibach, 1821, and Verona, 1822, Russia supported action against revolutions in Italy and Spain, but with the division among the powers, the Congress system had become meaningless.

POLISH CONSTITUTION. 27 Nov., 1815. This constitution provided for a Diet with an upper house appointed for life by the czar and a lower house elected partly by the landed nobility and partly by the burghers. The constitution was considered a liberal document, providing for freedom of worship, of the press, and of the person, and granting Poland its own army, an independent administration run by Poles, and the use of the Polish language in the government. Alexander did not completely abide by it, however, the real power in the country being held by his brother, the Grand Duke Constantine (1779-1831), who was commander in chief of the Polish army, and Nicholas Novosiltsev (1761-1836), the imperial representative in Warsaw. In addition, censorship was imposed, 1819, and meetings of the Diet were delayed.

BALTIC SERF EMANCIPATION. The Baltic provinces were more subject to western influence than the rest of Russia, and in 1804-5 the status of the serfs in Estonia and Livonia had been regulated at the request of the landowners. These regulations proved unsatisfactory to all parties and, again at the

request of the gentry, the serfs were freed, without receiving land, in Estonia, 1816; Courland, 1817; and Livonia, 1819. It was hoped that these provinces would provide the example for emancipation throughout Russia, but, both because of their isolation and the pitiful condition into which the landless peasants sank, this did not happen.

REVOLT IN THE SEMENOVSKY REGIMENT. Oct. 1820. Although directed solely against a dictatorial colonel, this revolt in Alexander's favorite regiment of the Guard, combined with liberal revolts in Italy and Spain in the same year, turned him against reform in the final years of his reign. Gen. Alexis Arakcheev (1769-1834), the minister of war, was Alexander's chief adviser and the dominant figure of the period, during which censorship was made harsher and greater government control over schools and universities was imposed.

SUCCESSION CRISIS OF 1825. On 1 Dec., 1825, Alexander I died. His brother Constantine, who was next in line to the throne, had renounced the succession in 1822. In Aug. 1823 Alexander prepared a manifesto declaring his next older brother, Nicholas (1796-1855), the heir, but kept its existence a secret. The result was great confusion on his death, with Nicholas taking the oath of loyalty to Constantine and refusing to assume the throne himself unless Constantine officially renounced it again. Constantine, who was in Warsaw, considered his action of 1822 sufficient and refused to repeat it. Nicholas finally decided that he had no choice but to assume the throne and ordered the St. Petersburg garrison and the government to take the oath of loyalty to him, 26 Dec.

DECEMBRIST UPRISING. 26 Dec., 1825. There were in the Russian army many officers who had been influenced by liberal thought while in western Europe during the campaigns against Napoleon. They had organized groups to promote liberal thought, and in 1825 2 secret army societies existed, one in the St. Petersburg garrison and the other in the army headquarters at Tulchin in southern Russia. The views of these officers varied greatly—

there were both republicans and constitutional monarchists among them—but they agreed on the need for action by the military to bring about a liberalization of Russian institutions. When Nicholas ordered the taking of the oath to him, the northern group decided to refuse and demanded the appointment of a provisional government which would convene a constitutional assembly. The troops controlled by the rebel officers gathered on the Senate Square, where they were quickly surrounded by larger numbers of loyal troops and, after a day-long stalemate, dispersed by artillery fire. An uprising by the southern group was also defeated, Jan. 1826. The leaders of both groups were tried and in the summer of 1826 5 were executed, 102 sent to Siberia for varying terms, and 13 demoted to the rank of private.

1826-35

CODIFICATION OF THE LAWS. The last codification of Russian law had been done in 1649 and the system was, therefore, chaotic. Nicholas restored Michael Speransky to a position of authority, and Speransky was responsible for the compilation, beginning 1826, of a 45-vol. collection of all Russian laws issued between 1649 and 1825 and a 15-vol. code of active laws which was put into effect in Jan. 1835.

CREATION OF THE "3RD SECTION." Nicholas made great use of "His Imperial Majesty's Own Chancery," which he had expanded from the czar's private secretariat to a major organ for the development and implementation of policy. The 2nd Section of the chancery had been created to codify the laws and the famous 3rd Section was formed to control a corps of gendarmes (political police) established at the same time. Nicholas, who sought to regulate the smallest details of Russian life, gave this section, July 1826, power to inquire into "all happenings without exception," and it probed every aspect of the public and private lives of the people.

WAR WITH PERSIA. The Persians renounced the Treaty of Gulistan, de-

clared war on Russia. June 1826, and were again defeated. By the Treaty of Turkmanchay, 22 Feb., 1828, the Russians received the Armenian provinces of Bri-var and Nakhichevan and the exclusive right to maintain a navy on the Caspian Sea.

WAR WITH TURKEY. Russian ships participated with British and French in the naval defeat inflicted on Turkey at Navarino, 20 Oct., 1827, and on 26 Apr., 1828, Russia officially declared war. Moldavia and Wallachia were occupied, May 1828. The Russian campaign during the remainder of that year did not gain any major success, but in 1829 their forces crossed the Balkan mountains and captured Adrianople, Aug. By the Treaty of Adrianople, 14 Sept., 1829, the Russians received the mouth of the Danube and territories in the Caucasus, including the eastern Black Sea Coast. The autonomy of Moldavia, Wallachia, and Serbia was reaffirmed, under the sovereignty of the sultan and the protection of the Russians, and Greece was established as a virtually independent state. Russian merchant ships were also given the right of free navigation in Turkish waters.

REVOLT IN POLAND. The Poles were dissatisfied with the treaty arrangements of 1815, desiring the re-creation of an independent Poland with its 1772 boundaries. Reacting to the revolutionary atmosphere of 1830, a group of conspirators attempted to assassinate Constantine on the night of 29 Nov., forcing him to withdraw from Warsaw with the troops loyal to him. A provisional government, supported by the Polish army, was established and, 25 Jan., 1831, deposed Nicholas and declared Polish independence. Russian forces invaded Poland and, though at first unsuccessful, defeated the Poles at Ostroleka, May, and retook Warsaw, Sept., restoring Russian authority throughout the country by the end of Oct. The constitution of 1815 was revoked and replaced by the Organic Statute of Feb. 1832. The Polish Diet and army were abolished, but the Poles were to retain their special criminal codes, local self-government, and the use of the Polish language in their courts and administration. The statute, however, re-

mained a dead letter. Nicholas imposed martial law and put into effect a program of extreme Russification.

TREATY OF UNKIAR-SKELESSI. 8 July, 1833. Mohammed Ali (Muhammad 'Ali), the governor of Egypt, had rebelled against the Ottoman sultan and had defeated the Turkish army, Dec. 1832. It was Russian policy at this time to maintain the Ottoman Empire in existence, and when the Turks requested aid, a naval squadron was sent to Constantinople, Feb. 1833, followed by troops. The other European powers were alarmed at the appearance of Russian forces at the Straits and intervened to settle the Turko-Egyptian war. The Russian forces were withdrawn, but not before an 8-year treaty of alliance had been made with Turkey which provided for Russian aid to Turkey in return for a Turkish promise to close the Straits to foreign warships when Russia was at war.

CONVENTION OF BERLIN. 15 Oct., 1833. Signed by Austria, Prussia, and Russia, the Convention was part of a conservative alliance of the 3 eastern courts designed to prevent further revolutions in Europe. It had been preceded by an Austro-Russian agreement at Münchengratz, 18 Sept., 1833, by which Austria and Russia agreed on support for the continued existence of the Ottoman Empire and for mutual action against a Polish revolution. At Berlin the 3 powers declared that every sovereign had the right to call on other sovereigns for aid, and that the 3 courts would regard as an act hostile to all of them any attempt by another nation to prevent one of them from providing such aid.

1836-49

PEASANT REGULATIONS. New regulations dealing with the status of state peasants were promulgated, 12 May, 1838. In May 1836, Gen. Count Paul Kiselev (1788-1872), who was responsible for them, had been appointed to head the newly created 5th Section of His Imperial Majesty's Own Chancery, concerned with the status of state peasants, and had ordered a detailed survey of peasant conditions. In Dec. 1837 control of the

peasants had been transferred to the Ministry of State Domains, also headed by Kiselev. Under the regulations of 1838, the peasants were given a degree of self-government on the village and town level, and government officials were appointed to aid them in establishing schools, providing medical care, procuring food in time of crop failure, improving local communications, and generally improving the state of the peasant economy. Nicholas was opposed to serfdom in theory, but hesitated to take any positive action because rumors of emancipation might lead to peasant unrest. He made minor efforts to ameliorate the effects of the institution, but in general they were not enforced.

STRAITS CONVENTION. 13 July, 1841. In 1839 the war between Egypt and Turkey had been renewed, again bringing the intervention of the powers. By the Treaty of London, 15 July, 1840, Austria, Prussia, Russia, and Britain had agreed with Turkey on terms to be offered Egypt. In return for their undertaking to force Egypt to accept these terms, the Turks agreed to close the Straits to all foreign warships as long as Turkey was at peace, in effect internationalizing the Treaty of Unkiar-Skelessi, which was about to expire. After the Turko-Egyptian War had been settled, France, which had supported Egypt, joined the other powers in a restatement of the principle of the closure of the Straits which became known as the Straits Convention.

INTERVENTION AGAINST THE REVOLUTIONS OF 1848-49. The revolutions of 1848 left Nicholas as one of the few rulers of Europe with undiminished power, and Russian troops were used, in co-operation with the Turks, to put down a revolt in Moldavia and Wallachia, 1848, and to suppress the Hungarian Revolution, 1849. Within Russia Nicholas adopted more repressive measures, tightened censorship, stepped up political arrests, virtually shut down the universities, and forbade travel abroad.

1850-62

WAR WITH TURKEY. There were continuous disputes between Catholic

and Orthodox Christians in Jerusalem over control of the Holy Places. In 1850 France reasserted her position as the protector of Catholic interests, and in 1852 the sultan decided in favor of the French and Catholic claims. The czar responded with an ultimatum to Turkey; and whereas the issues of the Holy Places were settled by talks, Feb.-May 1853, the sultan, with the backing of France and Britain, refused to recognize the czar's claim to be the protector of all Orthodox Christians in the Ottoman Empire. As a result, the Russians broke off talks and occupied Moldavia and Wallachia, July. In Oct. the Turks declared war and permitted a Franco-British fleet to enter the Straits. The defeat of the Turkish fleet at Sinope, 30 Nov., aroused public indignation in Britain and an allied fleet entered the Black Sea, Jan. 1854.

WAR IN THE CRIMEA. In Mar 1854 Britain and France declared war on Russia, Sardinia joining them in Jan. 1855. Austria remained neutral, but demanded the withdrawal of Russian troops from Moldavia and Wallachia, June 1854, and occupied them herself by agreement with Turkey. This action removed the one area where the land forces of the opposing sides were in contact and left it up to the western powers, with their naval superiority, to choose the field of action. In Sept. 1854 they landed at Eupatoria in the Crimea and, after defeating the Russians at the Alma River, laid siege to Sevastopol, Oct. The Russians attacked the allies at Balaclava, 25 Oct., and Inkerman, 5 Nov., but failed to dislodge them. In Sept. 1855 Sevastopol fell, after a siege, marked by great suffering, which revealed the inefficiencies of both armies. The Russian defeat was partially offset by their capture of the Turkish fortress of Kars in the Caucasus, 28 Nov., 1855.

ACCESSION OF ALEXANDER II. On the death of Nicholas I, 2 Mar., 1855, his son, Alexander II (1818-81), became czar. Alexander lifted the severer restrictions on the universities, the press, and travel that his father had imposed. Nicholas had agreed to negotiations on the basis of allied proposals which involved the surrendering of Russia's protectorate over Orthodox Christians in Turkey and

over the principalities and Serbia, free navigation of the Danube, and the limitation of Russian strength in the Black Sea. Alexander carried out this agreement, but talks in Vienna, Mar.-June 1855, broke down on the question of the Black Sea.

TREATY OF PARIS. 30 Mar., 1856. In Dec. 1855 the Austrians threatened to declare war if the Russians did not agree to reopen negotiations on the original allied conditions plus the cession of part of Bessarabia. Talks were resumed, Feb. 1856, and the Treaty of Paris ended the war. The Crimea was returned to Russia in exchange for Kars, the mouth of the Danube and southern Bessarabia being given to Turkey. Navigation of the Danube was opened equally to all nations, and coastal fortifications and fleets were prohibited on the Black Sea. The special relationship between Russia and the Ottoman Empire was ended, the czar giving up his claim to a protectorate over Orthodox interests. The rights of Moldavia, Wallachia, and Serbia were placed under the joint guarantee of all the powers, and Turkey was admitted as an equal partner with the other powers, with her independence and integrity guaranteed by all of them.

1863-70

EMANCIPATION OF THE SERFS. In Apr. 1856 Alexander II announced to the gentry of Moscow that serfdom would have to be ended, and at the close of the year he appointed a committee to consider the question. No action resulted, and it seemed that the usual pattern would be repeated, until the gentry of Lithuania, in 1857, requested that serfdom be ended in their area without the serfs receiving land. By a decree dated 2 Dec., 1857, Alexander ordered the Lithuanian gentry to develop a plan for emancipation based on giving land to the serfs and organizing them into peasant communes. This decree was sent to the provincial governors with the suggestion that all provincial gentry assemblies take similar action. In 1859 the various proposals were sent to an editing commission for study and codification, and the co-

mission produced, Oct. 1860, a draft that became the basis for the emancipation decrees. The decrees were signed on 3 Mar., 1861, and provided for the liberation of the serfs by 3 stages. The serfs were freed immediately from their personal dependence on the landowners. By 3 Mar., 1863, plans were to be completed, under the supervision of government-appointed arbitrators, for the allotment to the peasants of that portion of the land that they were working as their own, with maximum and minimum allotments established for the various regions of the country. Then would begin the period of "temporary obligation," during which the peasants would pay a fixed amount in rent or services for the use of the land. This would be followed by the redemption period, which would begin at no set time but depended on the acceptance by the landowner of a redemption agreement. The state would pay the landowners for the land in treasury bonds and in turn be recompensed by the peasants over a period of 49 years. The peasants could, on agreement with the landowner, take $\frac{1}{4}$ of the maximum land allotment and pay nothing for it. The landowners were not compensated for the freed serfs, but generally received inflated prices for the land. The land was not given to the peasants directly but to the communes, which were responsible for collecting the payments due and, depending on local practice, either divided it permanently or allocated its use among members of the commune. Although free from personal obligation to the landowner, the peasant was still not the equal of other citizens, since he was controlled by the commune, which he could not leave without permission. He was also subject to a special system of customary law. In addition, emancipation did not improve his economic condition, since he was left with a heavy burden of debt and inadequate resources.

REVOLT IN POLAND. In 1861-62 Alexander restored a certain degree of Polish autonomy, in effect putting the Organic Statute of 1832 into practice. However, unrest continued in Poland, stirred up by various patriotic and religious demonstrations. In the hope of

removing an unruly element from the cities, a levy of conscripts was ordered, Jan. 1863, but it became instead the signal for revolt. As there was no standing Polish army, the revolt took the form of guerrilla warfare, which spread to Lithuania and White Russia. It took the Russians until May 1864 to suppress it. During this period the only power that supported Russia was Prussia, which by the Alvensleben Convention, 8 Feb., 1863, promised any aid needed. Britain, France, and Austria attempted, unsuccessfully, to force the Russians to bring the issue of the revolution to a European congress. After the revolt was put down, the Kingdom of Poland was liquidated, its provinces becoming the Vistula region within the Russian empire, with Russian administration and an intensive Russification program. The peasants, who had not joined the revolt, were rewarded by being given land on much more favorable terms than in Russia proper.

CONVENING OF THE FINNISH DIET. Alexander II had attempted to amend the laws of Finland in order to introduce reforms there. The Finns protested, however, that according to their constitution, which had been accepted by the czar in 1809, the laws could not be changed without the approval of the Diet. Alexander gave in, and the Finnish Diet met, Sept. 1863, for the 1st time since 1809. After this it was called regularly, and in 1869 Alexander accepted a law establishing its power over legislation and obliging him to convene it at least every 5 years.

ADOPTION OF ZEMSTVO SYSTEM. 13 Jan., 1864. The zemstvo system provided for local self-government on the provincial and district level. The zemstvo district assembly delegates were elected by the landowners, towns, and peasant communes, and in turn elected delegates to the provincial assemblies. The zemstvo assemblies also elected executive boards to carry out their policies. They were given control over health, education, insurance, roads, and emergency food reserves. The zemstvo system was handicapped by lack of funds and the fact that the assemblies had to rely on the ordinary

police to enforce their measures. The system was put into effect slowly, being instituted in 19 of the provinces of European Russia in 1864, in 9 more in 1866, and in a further 6 in 1867-75.

REFORM OF THE JUDICIAL SYSTEM. 2 Dec., 1864. The legal structure of Russia was antiquated, chaotic, and corrupt, but in 1864 a group of decrees created an entirely new system. Trial by jury was introduced, with an open court and legal representation for both sides. The judiciary was separated from the rest of the administration and made independent of outside control. The new court system was to apply equally to all, the only exceptions being the retention of military, clerical, and township courts, the latter to handle petty cases involving the peasants. In practice, however, the system was limited by the continued use of extrajudicial administrative penalties, especially in political cases. The decrees were put into effect slowly, being introduced at first, 1866, only in the judicial districts that included Moscow and St. Petersburg and never being fully applied throughout the country.

ATTEMPT ON THE CZAR'S LIFE. 16 Apr., 1866. Despite the program of reform, unrest continued. The terms of the peasant emancipation were generally disappointing to intellectuals and there was some demand, notably from the St. Petersburg zemstvo, for national zemstvo institutions. The period 1861-62 was particularly noted for unrest, with student demonstrations, a series of unexplained fires in St. Petersburg, and a large circulation of illegal pamphlets. In 1866 this reaction reached its extreme point when a student, Dmitri Karakozov, attempted to assassinate Alexander. The result was a slowing down of reform and an increase in conservative influence in the government, most notably in the case of Count Dmitri Tolstoy (1823-89), who became minister of public education and imposed extremely repressive measures on the schools.

GRANT OF LAND TO STATE PEASANTS. 6 Dec., 1866. The state peasants were given permanent use of the land they were working, in return for a

fixed rent. In general they received larger allotments at lower rates than the private serfs.

MUNICIPAL GOVERNMENT ACT.

28 June, 1870. Town councils and town boards were created with powers similar to the *zemstvo* institutions. The councils were elected on a 3-class voting system, with the ballot weighted in relation to taxes paid, and in turn elected the town mayors and boards. They were given control over local administration, public works, municipal services, and public health.

ABROGATION OF THE BLACK SEA CLAUSES. Taking advantage of the preoccupation of the other powers with the Franco-Prussian War, Russia unilaterally announced, 31 Oct., 1870, the abrogation of the clauses in the Treaty of Paris which forbade coastal fortifications or fleets in the Black Sea. Faced with a *fait accompli*, the other powers accepted the abrogation by the Treaty of London, 13 Mar., 1871. (*Cont. p. 291.*)

SCANDINAVIA

Sweden

1800-1815

WARS WITH FRANCE AND RUSSIA.

The renewal of the League of Armed Neutrality, Dec. 1800, designed to protect the commerce of the northern states during the Napoleonic Wars, broke down because of British naval reprisals against Denmark and the death of Czar Paul I of Russia. In 1805 Sweden joined in an alliance with Britain and Russia, and entered the war against France because of her dislike of Napoleon, which was greatly heightened by the execution of the duc d'Enghien. Gustavus IV (ruled 1792-1809) persisted in the war despite French occupation of Swedish Pomerania, 1807, and Napoleon's alliances with Russia, July 1807, and Denmark, Oct. 1807. In Feb. 1808 Russia attacked Finland. In Mar. Denmark also declared war. By Nov. the Russians had captured Finland and in 1809 they attacked Sweden proper.

ACCESSION OF CHARLES XIII. On 13 Mar., 1809, Gustavus was overthrown

by a coup. Duke Charles (1748-1818), his uncle, became regent and the Riksdag was convened. A new constitution, similar to the one of 1772, provided for a strong monarch with a Riksdag that had veto powers over legislation and the right to impeach the king's ministers. Duke Charles became king as Charles XIII (ruled 1809-18). As he had no heir, Christian August of Denmark (1768-1810) was chosen as crown prince.

TREATY OF FREDRIKSHAMN.

Sept. 1809. Russia received Finland, the Åland Islands, and a northeastern strip of Sweden. Sweden joined the French alliance system, making peace with Denmark, Dec. 1809, and with France, Jan. 1810, on condition that she break off trade with Britain in return for the restoration of Swedish Pomerania.

RULE OF PRINCE BERNADOTTE.

In Aug. 1810 Jean Baptiste Bernadotte (1763-1844) was chosen crown prince. Christian August of Denmark having died, it became necessary to choose a new heir to the throne. There were several candidates, but it was suggested that the choice of a French marshal would guarantee Napoleon's good will, and Bernadotte was selected. He arrived in Sweden, Oct. 1810, and, as Crown Prince Charles John, became the effective head of the government. From the first he was independent of French control, permitting secret trade with Britain which brought French reprisal in the form of the occupation of Swedish Pomerania.

RUSSIAN ALLIANCE. In Apr. 1812 Sweden allied itself with Russia. Giving up hope of recovering Finland, Charles John secured a promise, Aug. 1812, of Russian aid in an invasion of Norway. Britain and Prussia later approved of the Swedish claim on Norway, but refused to permit the diversion of forces against Denmark. Charles John was placed in command of the northern army attacking the French in Germany. After the battle of Leipzig, Oct. 1813, he detached his Swedish army and attacked Denmark through Holstein.

TREATY OF KIEL. Jan. 1814. Norway was ceded to Sweden, but without its dependencies, Iceland, Greenland, and

the Faroe Islands; Denmark received Swedish Pomerania and joined the anti-French coalition.

NORWEGIAN CONSTITUTION. Objecting to the Swedish union, a Norwegian assembly met at Eidsvold, Apr.-May 1814, adopted a liberal constitution, and chose Christian Frederick of Denmark (1786-1848) as king. Charles John put down the revolt, but granted easy terms to the Norwegians; the new constitution provided for an indirectly elected Storting which would choose an upper house from among its own members. The Act of Union, Aug. 1815, provided for Norwegian independence in everything but foreign policy, with the king exercising only a suspensive veto on legislation.

1816-54

RULE OF CHARLES XIV. When Charles XIII died, 1818, Charles John became king as Charles XIV (ruled 1818-44). As time passed, he became more conservative and absolutist, and a liberal middle-class opposition developed which demanded a parliamentary form of government. In the 1840-41 Riksdag, the liberals had sufficient strength to force changes in the government.

RULE OF OSCAR I. Oscar I (ruled 1844-59) was not as conservative as his father, Charles XIV. He admitted liberals to the government; did away with restrictions on freedom of the press, 1844; passed new poor-relief laws, 1847 and 1853; and made humanitarian changes in the penal code. At the end of his reign, he became more conservative and dismissed the liberals from the government.

1855-70

ALLIANCE WITH BRITAIN AND FRANCE. Nov. 1855. Moving away from the Russian alliance, Oscar I made a treaty by which Britain and France guaranteed Sweden against Russian attack. The treaty was seen as a prelude to Swedish entry into the Crimean War, but peace was made before any action could be taken.

REFORMS OF DE GEER. When

Charles XV (ruled 1859-72) became king, he appointed a new council with Louis de Geer (1818-96) as minister of justice. De Geer became the leader of the government and instituted a large number of reforms, including the abolition of corporal punishment of servants; freedom of religion; the democratization of local government, 1862; a new penal code, 1864; and internal free trade, 1864.

REFORM OF THE RIKSDAG. One of the principal liberal demands had been for a change in the basis of representation in the Riksdag. In 1823, 1828, 1844, and 1858, minor reforms had been made, but the 4-estate system remained. Now, under de Geer's leadership, this was changed and a 2-house legislature, the upper indirectly elected, the lower directly, was created, 1865. A property qualification existed for voting and under the new laws about 1/4 of adult males could vote.

COMMERCIAL TREATY WITH FRANCE. 1865. Similar to the Anglo-French Cobden Treaty, this agreement embodied the principle of free trade and was part of the victory of liberal economic doctrines.

RISE OF THE AGRARIAN PARTY. The first Riksdag elected under the new constitution, 1866, was dominated by a newly formed Agrarian Party, led by Count Arvid Posse (1820-1901), which was supported by the peasants in the lower house and by the landowners in the upper. They demanded an end to the old system of land taxes and to the military system by which the army was quartered on the land. Opposing de Geer's policies, they prevented the enactment of further reforms (*Cont. p. 297.*)

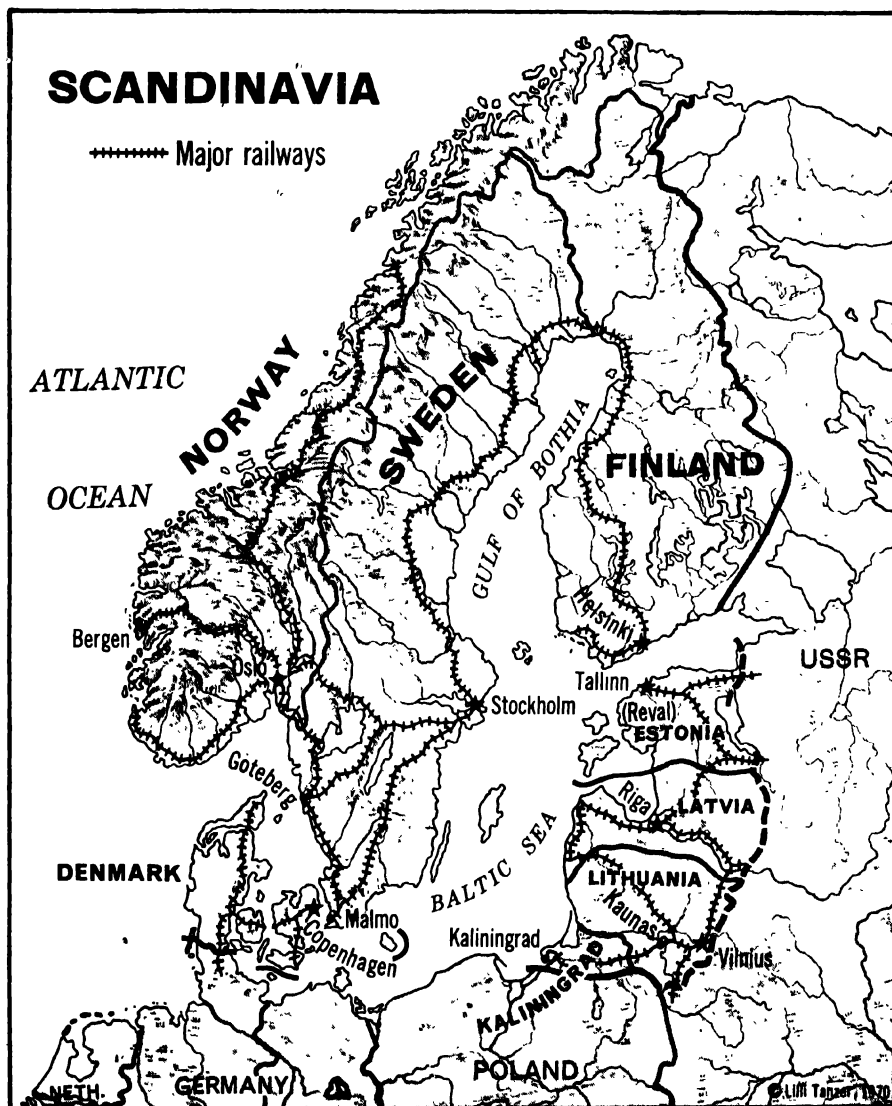

Denmark

1800-1820

WAR WITH BRITAIN. The British regarded the renewal of the League of Armed Neutrality, Dec. 1800, by Denmark, Sweden, Prussia, and Russia as a hostile act. On 2 Apr., 1801, a fleet commanded by Sir Hyde Parker bombarded Copenhagen. Denmark was forced out of the league, which collapsed after the

assassination of Czar Paul I, 23 Mar., 1801. As the Napoleonic Wars continued, Danish neutrality became more difficult to maintain. After the Franco-Russian Treaty of Tilsit, July 1807, Britain, fearing that the Danes were about to join the French alliance, seized Danish ships, July 1809, and captured Copenhagen and the Danish fleet, 7 Sept. The Danes responded by signing the Treaty of Fontainebleau with France, 31 Oct., and declaring war on Britain.

TREATY OF KIEL. 14 Jan., 1814. On 12 July, 1813, by a treaty of mutual assistance with France, the Danes renewed their French alliance despite Napoleon's setbacks. Sweden, meanwhile, had joined the anti-French coalition, and after the Battle of Leipzig, Oct. 1813, the Swedish army detached itself from the allied army and invaded Holstein. Peace was eventually made with Sweden and Britain by the Treaty of Kiel. The British retained Heligoland; Sweden received Norway

without its dependencies, Iceland, Greenland, and the Faroe Islands; Denmark was given Swedish Pomerania, which it later, June 1815, exchanged with Prussia for the Duchy of Lauenburg. Denmark also joined the coalition against France

1821-47

ESTABLISHMENT OF PROVINCIAL ASSEMBLIES. 15 May, 1834. Carrying out a policy announced in 1831, separate assemblies were established for the islands, Jutland, Schleswig, and Holstein. They were purely advisory and there was a landed-property qualification for voting.

RULE OF CHRISTIAN VIII. 1839-48. Christian resisted growing demands for a national constitution and assembly, but did reform the army, 1842, institute a regular budget, establish parish and county self-government, 1841, and re-establish the Icelandic assembly, 1843. At the end of his reign he had a constitution drafted, but died before he could take action.

1848-50

SCHLESWIG-HOLSTEIN REVOLT. In Jan. 1848 Frederick VII (ruled 1848-63) became king. One of his first acts was to proclaim a draft constitution that was to be submitted to a constituent assembly. It provided for a single assembly for Denmark proper (Jutland and the islands), Schleswig, and Holstein. A ministry with a liberal majority took office. In Mar., however, a revolt broke out in Schleswig and Holstein. The large German population in the duchies objected to incorporation into Denmark, and demanded instead a common constitution and the admission of Schleswig to the German Confederation, to which Holstein already belonged. A provisional government was established and an appeal made to the German Confederation for aid.

German troops responded to this appeal, and in the war that followed (broken by Truce of Malmö, Aug. 1848-Apr. 1849) they drove the Danish forces from Schleswig and Holstein. The Danes won the Battle of Fredericia in Jutland, 6 July, 1849, after which an armistice was

concluded. By the Treaty of Berlin, 2 July, 1850, the war ended with all the parties retaining their prior rights. The German powers remained in possession of Holstein, but withdrew their support from the provisional government in Schleswig, which was then overthrown by the Danes.

CONSTITUTION OF 1849. The work of a constituent assembly which had been meeting since the prior Oct., the constitution adopted in June 1849 did not apply to the duchies. It was a liberal document that established freedom of the press, abolished the privileges of the nobility, and created an annual, bicameral assembly (the *Rigsdag*). All male heads of household were given the vote, the lower house (*Folketing*) being elected directly and the upper house (*Landsting*) indirectly.

1851-62

MANIFESTO OF 1852. Frederick VII announced, 28 Jan., 1852, his intention of proposing a new constitution providing for joint control over foreign affairs, finance, and defense by Denmark and the duchies while establishing separate ministries and assemblies for Schleswig and Holstein-Lauenburg to handle all other matters. This was accepted by the German powers and Holstein was evacuated.

LONDON PROTOCOL. 8 May, 1852. Signed by Britain, France, Russia, Sweden, Austria, Prussia, and Denmark, the protocol provided that Prince Christian of Glücksburg (1818-1906) should be the heir to all of the domains of the Danish monarchy, Frederick VII having no heir. The claims of Duke Christian of Augustenborg (1798-1869), who had been a leader in the revolt in the duchies, had been settled for a money payment.

JOINT CONSTITUTION. 2 Oct., 1855. The Constitution of 1855 applied to both Denmark and the duchies and provided for a royal council which was to be partly elected and partly appointed by the king. The constitution and the manifesto of 1852 represented the policy of conservative Danes favoring a tripartite state in which Holstein, Schleswig, and the kingdom would remain separate under a joint government. The duchies protested that

the constitution had not been submitted to their assemblies for approval and, after a German ultimatum, Mar. 1857, the Holstein assembly was convened. That body rejected the constitution on the ground that it did not give the duchies equal powers with the kingdom in the government. In Nov. 1858 the constitution was rejected in Holstein. The situation was still not acceptable to the duchies, which feared that Denmark was adopting the policy of isolating Holstein while bringing Schleswig within the kingdom. The duchies insisted that they had been made inseparable by the act of 1460 by which the king of Denmark became duke of Holstein. In addition, language ordinances designed to strengthen Danish influence in Schleswig were protested and made the justification for German involvement in that duchy.

1863-70

MANIFESTO OF 1863. Relying on the diplomatic isolation of Prussia resulting from the Polish revolution, the Danish government announced, Mar. 1863, that a new constitution would be drafted and would apply to the kingdom and Schleswig but not to Holstein. Believing, incorrectly, that they would be supported by the other powers, the Danes persisted in their course despite vigorous German protests, and the new constitution was adopted by the Rigsdag 13 Nov., 1863.

ACCESSION OF CHRISTIAN IX. On 15 Nov., 1863, Frederick VII died, and, in accordance with the London Protocol, Prince Christian became king as Christian IX. On 18 Nov. he signed the new constitution. At the same time the son of the Duke of Augustenborg, Frederick of Nör (1829-80), claimed the title of duke of Schleswig-Holstein on the basis of rights given him by his father.

WAR WITH PRUSSIA AND AUSTRIA. In Dec. 1863 federal German troops occupied Holstein, and Prussia and Austria demanded, 16 Jan., 1864, the immediate withdrawal of the constitution of 1863. War followed in which the Danes were quickly forced back to Jutland. A conference in London arranged an armis-

tice, 12 May, 1864, and agreement was reached on the division of Schleswig. A precise dividing line could not be agreed on, however, and the war was renewed, 26 June. Continued Austro-Prussian victories forced Denmark to accept the Treaty of Vienna, 30 Oct., 1864, by which all of Schleswig, Holstein, and Lauenburg were ceded to Austria and Prussia, the claims of Frederick of Augustenborg being brushed aside.

CONSTITUTION OF 1866. As a result of the war the National Liberal government fell, and was replaced by an Agrarian government, led by Count Christian Frijs (1817-96). The constitution of July 1866 was similar to that of 1849 except that part of the *Landsting* was to be appointed by the king. Danish politics now entered a period of instability, with shifting alliances between peasants, landowners, and liberals until the formation of a stable conservative government in 1875. (*Cont. p. 297.*)

THE LOW COUNTRIES AND SWITZERLAND

The Netherlands

1800-1812

THE NAPOLEONIC KINGDOM. On 27 Mar., 1802, peace with Britain was concluded at Amiens, by which the Netherlands East Indies, except for Ceylon, were returned to the Batavian Republic, and the former Stadholder, Willem V (1748-1806), was permitted to rule over secularized church lands on the southern border of the Netherlands. When in 1803 war against Britain was resumed, the republic had to furnish France with troops and a fleet. In 1805 Napoleon, now emperor of the French, had the executive power of the republic conferred on a single person, Rutger Jan Schimmelpenninck (1765-1825), with the title of council-pensionary. Soon after his appointment, Schimmelpenninck's physical health deteriorated, and Napoleon used this as a pretext to establish a Kingdom of Holland, June 1806, with his brother Louis (1778-1846), as 1st king (ruled 1806-10). The number of political

subdivisions was expanded from 8 to 11, with the department of Vlissingen (Flushing) being ceded to France. Although he was endowed with almost absolute power in the Netherlands, Louis was in fact a vassal of the French emperor.

Louis determined to improve the condition of his adopted country. He introduced a variation of the Code Napoléon, uniting in 1 instrument numerous local laws and customs, he had many damaged dykes and waterways reconstructed; and he created, 4 May, 1808, the Royal Netherland Institute for Science, Letters, and Fine Arts. In 1810, after French accusations of Dutch violations of the trade embargo against Britain, Louis was forced, as a penalty, to cede Brabant and Zeeland to France. A few months later, 9 July, the Netherlands were deemed within the natural frontiers of France and, as such, were annexed. Police spies, press censorship, and military and naval conscription were introduced.

1813-47

RESTORATION OF THE HOUSE OF ORANGE. Local uprisings and Bonaparte's defeats in 1813 made possible the restoration, 2 Dec., 1813, of Willem V's son, Willem of Orange (1772-1843). He was proclaimed sovereign-prince of the Netherlands, 30 Mar., 1814. On 16 Mar., 1815, he assumed the title of king as Willem I (ruled 1815-40). The Congress of Vienna awarded the Austrian Netherlands to the new kingdom, to be united in a "perfect amalgamation." Luxembourg, which had been a province of the Austrian Netherlands, was now constituted as a separate grand duchy, with Willem as first grand duke.

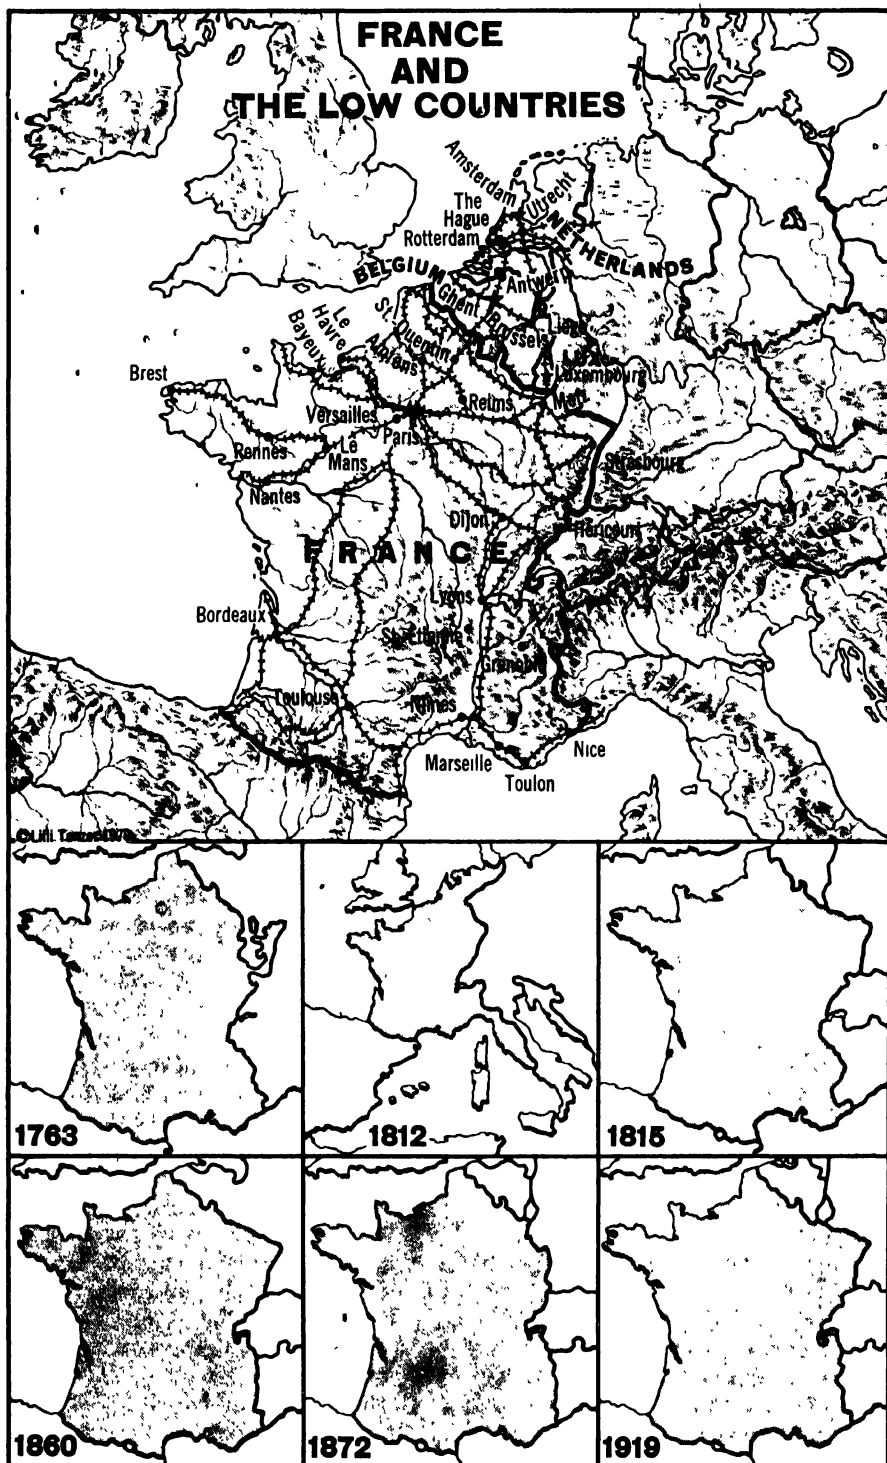

REVOLUTION OF 1830. Friction soon developed between the Dutch-Flemish and French-speaking areas of the united kingdom, based primarily on the fear of religious persecution of Catholics by a Calvinist king and government. All ministries were located in The Hague, the promise to convene the legislature in Brussels in alternate years was not kept, and all military establishments were located in the north. Although the Walloon

population was numerically superior, civil, and military appointments were distributed on a 10-to-1 basis in favor of the Dutch. The imposition of Dutch as the single official language of the kingdom, and Willem's desire to control the education of Catholic priests, prepared the way for the Belgian revolution. The revolt began on 25 Aug., 1830. The king appealed to the powers to help to restore order in the southern provinces, but Dutch excesses in attempting to suppress the rebellion made peaceful reconciliation impossible. The powers, meeting in London, 20 Jan., 1831, authorized the independence of Belgium, placing on the throne Leopold of Saxe-Coburg-Saalfeld (1790-1865), a member of a minor branch of the Prussian royal house.

1848-70

CONSTITUTIONAL REVISION OF 1848. In 1840 Willem I replied to public pressure for liberalization of the constitution with several reforms, including acceptance of the principle of ministerial responsibility. Rather than reign under the new system, however, he abdicated in favor of his son, Willem II (ruled 1840-49). Willem II (1792-1849) prevented the spread of the revolutionary fervor of 1848 to the Netherlands by yielding some of his authority to the States-General by the Constitutional Revision of 1848.

REIGN OF WILLEM III. Willem III (1817-90, ruled 1849-90) reluctantly applied the principle of ministerial responsibility and allowed Jan Rudolf Thorbecke (1798-1872), leader of the Liberal majority in the States-General, to form a government. During Thorbecke's first ministry, 1849-53, the Netherlands reached an agreement with the Vatican, 1852, permitting a native hierarchy for Dutch Catholics; and government subsidies were provided for Catholic as well as Calvinist schools. Papal attempts to advance Catholic interests still further brought an outcry from Dutch Protestants, with whom Willem associated himself, April 1853. In the face of hostile public opinion, Thorbecke resigned, to be followed by conservative coalition

FRANCE

ministries. In 1861, with a Liberal majority controlling the States-General, funds were voted for the construction of an extensive railway system. From 1862 to 1866 Thorbecke again served as premier, during 1863 free secondary and technical education was authorized, and slavery abolished in the West Indian colonies. Early in 1867 Willem, as personal sovereign of Luxembourg, negotiated with Napoleon III to sell the grand duchy to France; but Prussia, which maintained a garrison in Luxembourg, saw the need for a buffer fortress against France and opposed the sale. On 11 May, 1867, a conference of European powers produced the Treaty of London, by which Prussia withdrew her troops and the independent neutrality of Luxembourg was guaranteed by the powers. The conservative government of the Netherlands fell because of this diplomatic embarrassment; and after 2 years, 1868-70, of government by a group of younger Liberals, Thorbecke returned, Jan. 1871, as premier for the third time, to deal with the emergency created by the Franco-Prussian War. (*Cont. p. 297.*)

Belgium

1800-1813

NAPOLEONIC RULE. In 1800 Belgium (then known as the Austrian Netherlands) formed part of the French Empire. Belgian Catholics supported the Napoleonic regime after the Concordat of 1802 between France and the papacy, and Belgians of all classes appreciated the economic prosperity which derived from war profits and from access to the European market. Out of Belgium's already advanced agricultural and industrial sectors grew a new social class composed of wealthy burghers, large capitalists, nobles, and landed proprietors, who would later provide the leadership for an independent nation. Support for France began to dissipate in 1809. Napoleon's break with the pope in that year caused the disaffection of the Catholic hierarchy; continued military conscription and increasingly arbitrary police control deepened Belgian

alienation. Allied troops entered Belgium without resistance in Dec. 1813.

1814-30

THE KINGDOM OF THE NETHERLANDS. In 1814 the Congress of Vienna agreed that Belgium should be joined in "perfect amalgamation" with Holland to form the Kingdom of the Netherlands. Belgian economic interests favored the union, which offered Dutch colonies as a replacement for the lost European market for Belgian metal and textile production; and King Willem I encouraged industrial development, notably by the establishment of the industrial bank, the *Société Générale des Pays Bas*, 1822. Catholics, however, opposed the constitutional provisions for freedom of religion, and during the 1820's the Catholic clergy came under increasing persecution as they continued religious teaching in defiance of Willem's attempts to establish state schools. In addition, the Belgian provinces, whose population exceeded that of the Dutch, opposed the granting of equal representation for the 2 groups in the States-General and the disproportionately large number of Dutch civil servants. Willem's declaration in 1819 that after 1823 Dutch was to become the administrative language throughout the Netherlands was viewed as another attempt to exclude Belgians from political and cultural life.

REVOLUTION OF 1830. The direct impetus for the revolution came from political agitation of young people influenced by French radical thought, acting on a laboring class which was caught in a trap of fixed low wages, rising prices, and increasing unemployment resulting from mechanization. A proletarian uprising in Brussels, 25 Aug., 1830, grew to full-scale revolt against the hated Dutch and ended with a declaration of Belgian independence, 18 Nov., 1830.

1831-70

REIGN OF LEOPOLD I. On 31 July, 1831, with the approval of the European powers, the Belgian congress installed

Leopold of Saxe-Coburg-Saalfeld as King Leopold I (ruled 1831-65). The monarch's power was limited under the new constitution; all his actions required approval by a bicameral parliament elected by the people. But Leopold, as head of the army, was able to exercise authority against various political groups; and his close dynastic ties to major European royal houses enabled him to control Belgian foreign relations personally and effectively.

From 1830-35 the new nation faced an economic depression caused by the loss of Dutch markets and of water routeways to Germany. A public program of railway construction provided new access to European markets and increased industrial and commercial activity by 1840. The laboring class, however, failed to share in the prosperity. Between 1835-50 wages fell to 75% of the 1830 level, while the cost of living rose continuously. Dissatisfied workers, forbidden to strike, struck illegally in 1846 but were quickly suppressed and sentenced to prison.

The elections of 1847 returned the first all-Liberal government, whose effective leader was Hubert Joseph Walther Frère-Orban (1812-96). During the revolutionary uprisings of 1848, he maintained order in Belgium by extending the suffrage. He initiated a policy of free trade which reduced tariffs and the cost of living. His government fell, 1852, because of Catholic opposition to his attempt to establish public schools. Succeding governments continued the free-trade policies, and in 1857 the Liberals returned to pass a series of laws limiting the power of the Catholic Church. Frère-Orban's government refused, however, to extend the franchise to the working class. The Catholic Center Party, representing workers' interests, achieved power in 1863 and began to reduce taxation and military expenditures.

ACCESSION OF LEOPOLD II. At the accession of Leopold II (1835-1909, ruled 1865-1909), the Belgian working classes were feeling the full effects of industrial expansion: prices fell and wages rose slowly; bread and wool were easily accessible. The new king was convinced

that such good conditions could continue only if Belgian industry had easy access to raw materials. He therefore began planning for an overseas colonial empire. (*Cont. p. 296.*)

Switzerland

1800-1829

HELVETIC REPUBLIC. The massacre of the royal Swiss Guards in Paris, Aug. 1792, had angered the Swiss people, as also had the subsequent seizure, 1793, by the French Revolutionary government of episcopal lands in Basel. No war ensued between the Swiss Confederation and France, however, although the allies were permitted to recruit mercenaries within the Confederation's territories. In Oct. 1797 Napoleon annexed 3 cantons to the Cisalpine Republic. In Feb. 1798 a Helvetic Republic was proclaimed: the number of cantons was increased from 13 to 23; the government centralized; a bicameral legislature established, to be elected by manhood suffrage; and an executive body of 5 directors created. In Apr., Geneva, the only part of the Confederation which had accepted and practiced the doctrines of the French Revolution, was annexed to France.

PERIOD OF FRENCH DOMINATION. As a French satellite, Switzerland was invaded by an Austro-Prussian army which unsuccessfully confronted French forces at Zürich, June 1799. Stubborn resistance to French domination, and general dissatisfaction with the constitution, moved Napoleon to impose another, 30 Sept., 1802. The number of cantons was reduced to 19, and the ancient powers of the cantons over education, ecclesiastical property, the coinage of money, and the postal systems were restored to them. The Swiss, however, had to supply 16,000 troops to the French armies, and were subjected to the Continental System, which greatly reduced the volume of trade and of industrial production.

ASSERTION OF NEUTRAL STATUS. When the Napoleonic Empire began to crumble, 1813, Switzerland de-

clared its neutrality for the remainder of the war. The Congress of Vienna affirmed and guaranteed Swiss neutrality, 1815. Using Napoleon's last revision as a basis, the Swiss modified their constitution to end the subordination of smaller cantons to large ones, and the army was accepted as the only federal institution and charged with the defense of federal borders. The inviolability of the Swiss frontier led many advocates of ideas that were unpopular in other European countries to seek asylum in Switzerland. Two notable examples were Giuseppe Mazzini (1805-72) and the future Napoleon III of France. Both used Switzerland as a base for their respective revolutionary activities.

1830-70

INFLUENCE OF FRENCH REVOLUTIONARY IDEAS. Revolutionary enthusiasm in France, July 1830, inspired Swiss intellectuals to demand greater democratization of their society. Agitation resulted in the passage of laws protecting female and child labor and creating teacher training schools and new universities in Berne and Zürich in order to provide easier access to educational opportunities. By Nov. 1830 the traditional patrician regimes in the cantons, which had been restored in 1815, were undermined by constant factional bickering and reformist agitation. Twelve Cantons adopted liberal constitutions, but 7 preserved the old order.

WAR OF THE SONDERBUND. In 1845 the 7 conservative cantons, which were predominantly Catholic in religion, seceded from the Confederation and formed the Sonderbund, 11 Dec. In Nov. 1847 the federal Diet declared the Sonderbund dissolved. The Jesuits, who were considered by liberals the instigators of the secession, were permanently expelled from Switzerland by decree of the Diet. The Sonderbund did not accept the dissolution, however, and resisted by force. Within a year the Federal army, led by Gen. Guillaume Dufour (1787-1875), suppressed the rebellion. After the war the Diet granted generous peace terms, and

Protestant cantons helped to pay the war debts of the losers. The tragedy of war, and the influence of nationalist ideas in neighboring states, resulted in the erection of stronger central authority.

CONSTITUTION OF 1848. A new constitution, promulgated 12 Sept., 1848, provided the federal government with new or increased powers over the army, the budget, the judicial system, and popular welfare. A tradition of civic responsibility, cantonal autonomy, and a reluctance to apply all the revolutionary ideas of 1848 at once permitted the new Swiss Republic to remain exceptionally stable. As a result of this stability, Switzerland became the seat of numerous international banking and humanitarian organizations, and continued to serve as a refuge for advocates of revolutionary and unorthodox political behavior. (*Cont. p. 297.*)

THE UNIFICATION OF GERMANY

1800-1807

THE NAPOLEONIC REORGANIZATION. In 1800 the Holy Roman Empire contained over 300 separate sovereignties. The south German states supported Austria against France, but Prussia under Frederick William III (ruled 1797-1840) remained at peace. The Austrians and their allies suffered severe defeats at Marengo, 14 June, 1800, and Hohenlinden, 3 Dec., 1800, before accepting a peace at Lunéville, 9 Feb., 1801. France obtained the left bank of the Rhine, and Austria had to surrender her power in Italy beyond the River Adige. Moreover, Napoleon pressed for a congress to secularize ecclesiastical territory within Germany. As guardian of sovereign rights within the empire, Austria tried to avoid this, but met opposition from other German states, especially in the south, which stood to gain from a rearrangement of lands. The accession of Czar Alexander I brought peace between France and Russia, Oct. 1801, rendering further Austrian resistance impossible. Finally, a plan for secularization was accepted by Austria and by the Federal Diet (*Reichsdeputa-*

tionshauptschuss), Apr. 1803. As a result some 112 states were dissolved, and numerous cities and towns absorbed into neighboring areas, 1803.

During 1803-6 Germany attempted to work the new system, redistributing the Reichstag votes and revising defense quotas. West of the Rhine, French legal codes and administrative techniques were introduced. The European war, which reopened 16 May, 1803, underlined German impotence. The French made sallies into Hanover and kidnapped the duc d'Enghien from German soil. Prussia pledged neutrality while Bavaria and Baden accepted a French alliance.

CONFEDERATION OF THE RHINE. With the defeat of the Allied Coalition at Austerlitz, 2 Dec., 1805, Napoleon completed his reorganization of Germany. The lands of the Imperial Knights were granted to the rulers of Bavaria, Wurttemberg, Baden, and Hesse-Darmstadt, and these states were linked together in a Confederation of the Rhine, 12 July, 1806. This replaced the old Confederation, and was calculated to provide Napoleon with troops and money and act as a pro-French buffer against the Hapsburgs. Soon afterward, Emperor Francis I of Austria acknowledged the situation with a proclamation dissolving the Holy Roman Empire, 6 Aug., 1806.

DEFEAT OF PRUSSIA AND PEACE OF TILSIT. The Prussian king had avoided military engagements from 1795 to 1806. He had eventually sided with the Coalition, but never actively involved the Prussian army. Napoleon, for his part, was ready to use Hanover as a pawn for bargaining with Britain. An economic recession intensified the opposition felt by Prussians to their king's passivity over Hanover, and by Oct. 1806 war had broken out. Prussia, without allies, was rapidly and decisively defeated at Jena, 14 Oct., 1806. Frederick William continued the war, but Austria could offer no assistance, and after a short alliance Russia was forced to withdraw her forces beyond the Niemen. Prussia and Russia were then compelled to accept a peace at Tilsit, 7-9 July, 1807.

The peace maintained Prussia between

the French and Russian empires as a concession to the czar. Prussia lost her possessions west of the Elbe, including Magdeburg and Altmark. Napoleon created in the west a Kingdom of Westphalia, to be ruled by his brother, Jérôme (1784-1860). In addition, Prussian Poland was incorporated into the Grand Duchy of Warsaw, and an indemnity levied on the remaining Prussian territory. French troops remained in occupation until the end of 1808.

1807-15

PRUSSIAN REFORM MOVEMENT.

There had been signs of reform in Prussia before 1806. A financial commission and a statistical bureau had been set up. Internal tariffs and the salt monopoly were modified, while on crown lands peasants were granted greater freedom. But only after the disaster of Jena was there a widespread recognition of the need for far-reaching changes. The reforms of 1807-13 were largely associated with 2 men: Baron Heinrich von Stein (1757-1831) and Baron Karl August von Hardenburg (1750-1822), who controlled Prussian policy during these years.

LAND EMANCIPATION EDICT. 9 Oct., 1807. This edict ended most personal services connected with land, and granted peasants freedom to marry and to leave a domain without the prior consent of their lords. Land could henceforth be bought and sold like any other commodity, and prohibitions against peasant or middle-class acquisition of noble land ended. Initially, efforts were made to prevent the continued growth of large estates and the dispossession of peasants. But modifications of the edict, especially in 1816, resulted by the 1820's in the creation of a large landless proletariat. The nobility remained exempt from land tax until 1861 and retained their manorial police powers until 1872.

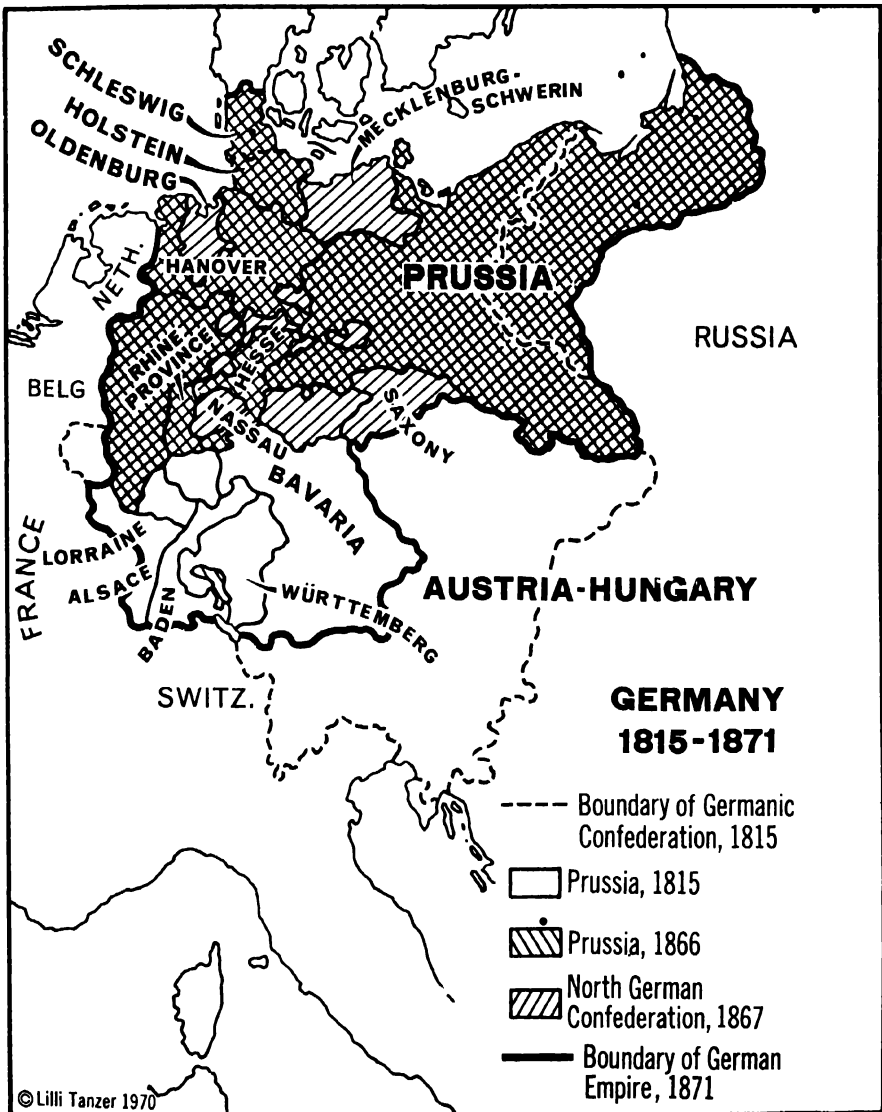

REFORM OF TRADE AND INDUSTRY. In Dec. 1808 provincial governments were directed to free food and textile industries from guild restrictions. By an edict, Nov. 1810, and an Industrial Law, Sept. 1811, Hardenburg extended

this policy, trying to stimulate trade at a time of great economic difficulty and dislocation.

ARMY REFORMS. The Military Organization Commission was dominated by Gens. Gerhard von Scharnhorst (1775-1813) and August von Gneisenau (1760-1831). It urged the introduction of a national service system without any exemptions. Army commissions were to be awarded on merit and by examinations. Discipline was made less brutal and living

conditions for soldiers improved. Officer schools were set up and tactics revised. To circumvent Napoleon's restriction of the Prussian forces to 42,000 men, a short-service system was instituted, eventually resulting in a trained reserve of 150,000 men. By 1814, with Hermann von Boyen (1771-1848) as war minister, the Prussian army had become one of the most efficient in Europe.

ADMINISTRATIVE REFORMS. In Dec. 1808 Stein established 5 ministries to

handle finance, foreign affairs, domestic affairs, war, and justice. The ministries were co-ordinated by a Council of State. A prior edict, Nov. 1808, had extended the rights of towns to self-government, and had made their administration more uniform. Later, 1812, Hardenburg set up elected councils for rural communities.

EDUCATIONAL REFORMS. Wilhelm von Humboldt (1767-1835) transformed the Prussian educational system, 1809-10. He was strongly influenced by Johann Pestalozzi (1746-1827) and the example of the newly created educational system in France.

Johann Gottlieb Fichte (1762-1814), in his *Addresses to the German Nation*, 1807-8, had emphasized the role of schools in creating national spirit, and von Humboldt brought all education under state authority. Elementary schooling was made compulsory, and secondary schools were founded both for the humanities (*Gymnasien*) and for a more practical training (*Realschulen*). In 1810 a university was established in Berlin, and by 1812 school-leaving examinations (necessary for university entrance) had been created. These measures helped to produce a marked revival of German universities after 1815.

REFORMS OUTSIDE PRUSSIA.

French influence and the Prussian example encouraged reform in the south German states. A Bavarian constitution was published, May 1808, replacing the old Estates with a single-chamber legislature. Press laws were liberalized, and the independence of the courts safeguarded. Attempts were also made to modify serf obligations and decrease ecclesiastical powers over education. In Baden the Napoleonic legal code was adopted and, as in Württemberg and Hesse-Darmstadt, various financial and administrative reforms were undertaken. Whereas most of Germany suffered reaction after 1815, these south German states were to retain, for a time, constitutions modeled on the Bourbon Charter of 1814.

GERMANY AND THE VIENNA SETTLEMENT. The Continental System and repeated exactions of men and

money fanned a growing nationalist movement in Germany, and intensified resentment against French rule. In 1809 alone there were 5 attempts to overthrow the government of Westphalia. When Napoleon invaded Russia, June 1812, he received aid from many German states. In the War of German Liberation following the French retreat from Moscow, Prussia took the lead. In Oct. 1813 Napoleon was defeated at Leipzig, and on 30 May, 1814, the 1st Treaty of Paris was signed. By this treaty France retained some of her war-time conquests in Germany, but the problem of the future of Saxony was postponed. At the Congress of Vienna, Nov. 1814-June 1815, Austria and Britain successfully thwarted Prussia's attempt to retain the area. Prussia gained $\frac{2}{3}$ of Saxony (instead of the whole) and received compensation in the Rhineland and Westphalia, also retaining Posen. After Napoleon's return from Elba, 1 Mar., 1815, and defeat at Waterloo, 18 June, 1815, the Prussians hoped for Alsace and Lorraine, but received only the Saar region (2nd Treaty of Paris, 20 Nov., 1815).

PREDOMINANCE OF PRUSSIA. In June 1815 the old Federal Diet was re-established under Austrian presidency, and the Confederation of the Rhine dissolved. Germany now contained less than 40 states and Prussian power had been considerably enhanced. Gains in the Rhineland made her the main buffer against further French encroachments, and these same lands were soon to be of great economic value.

1816-47

KARLSBAD DECREES. During 1814 and 1815 many monarchs in South Germany and the King of Prussia promised their subjects more representative institutions, and after the Vienna settlement new constitutions were enacted in south Germany. There was a considerable liberal-nationalist movement, especially in the universities, which manifested itself in societies (*Burschenschaften*), founded first at Jena and then elsewhere. These

groups held a general meeting at Wartburg, 1817, and soon afterward a General German Students' Union was established as a nationwide body.

Dissent was increased by economic difficulties and bad harvests. To meet it a conservative reaction spread throughout Western Europe. In 1818 the Prussian king refused to implement previous promises of constitutional reform. In July 1819 the Karlsbad Decrees were pushed through the Federal Diet by Metternich after August von Kotzebue, a reactionary journalist, had been murdered by a student. The decrees provided for (1) more stringent press censorship, (2) officials to investigate the universities, and (3) a Central Investigation Committee at Mainz to co-ordinate the repression of liberal and ultranationalist sentiment. The Vienna Act, 1820, further deterred individual states from adopting constitutions. The Germanies thus became rigidly controlled police states.

6 ARTICLES. 28 June, 1832. In 1830 liberal-nationalist revolutionary movements erupted in France, Belgium, Poland, and Italy. Metternich, with Prussian co-operation, was successful in suppressing revolt within Germany. The 6 Articles gave the Federal Diet more control over the internal affairs of the states, and tightened restrictions on the press and public assembly. Wurttemberg and Baden alone retained a semblance of liberalism. On 18 Sept., 1833, Russia, Austria, and Prussia signed the Treaty of Munchengrätz, guaranteeing the *status quo* in Poland and cementing their general alliance against political change.

ZOLLVEREIN. Economic conditions varied in the different German states, but most people were engaged in agriculture. The first half of the 19th cent. saw modifications in the serf system in many areas and a shift to a more capitalistic utilization of the soil. Farms were smaller in the west, especially in those areas which had experienced direct French rule. A crucial economic problem was caused by rapid population growth: 23 to 35 m. between 1800 and 1850.

After the Vienna settlement Prussia,

under Hardenburg's ministry, embarked on financial and tax reforms. In 1818 the Maassen Tariff was introduced to rationalize the multitudinous existing duties on imports and exports. It laid down uniform duties on the import of foreign manufactured goods and agricultural products, while raw materials entered free of charge. There were no export duties. Heavy tariffs on goods imported for consumption outside Prussia encouraged other German states to join a Prussian customs union. Other groups of states banded together in the late 1820's, but could not compete. By Jan. 1834 most of the German states (but not Austria) belonged to the *Zollverein*, a Prussian customs union which created an internal free-trade area of 163,000 sq. mi. The exchange of goods and development of industry were further facilitated by railway construction which began in the 1840's.

ACCESSION OF ERNST AUGUSTUS OF HANOVER. The accession of Victoria to the British throne, 1837, brought Ernst Augustus (1771-1851, ruled 1837-51) to the throne of Hanover, since Salic Law prevailed there. Ernst Augustus abolished the constitution and dismissed 7 University of Göttingen professors who protested this action.

GERMAN LIBERALISM. During the 1840's there were some signs of a revival of liberal and nationalist ideas. In their *Staatslexikon*, 1834-49, Karl von Rotteck (1775-1840) and Karl Welcker (1790-1869) tried to synthesize Kantian philosophy and the political ideals of the French Revolution. In 1841 Friedrich List (1789-1846) in his *National System of Political Economy* called for a national economy and a climate of freedom in which ideas and innovations could gain swift recognition. The accession of Frederick William IV of Prussia (ruled 1840-61) also revived nationalist hopes. In 1841 he planned a National Diet for Prussia, but was persuaded to shelve the scheme. It was only in 1847, when money was needed to construct a railway to East Prussia, that a United Diet was finally called. During the 1840's Prussian influence over German defense and trade increased. By 1847,

when economic recession and bad harvests multiplied demands for reform of the Federal Diet, many looked to Prussia for leadership.

1848-49

OUTBREAK OF THE REVOLUTIONS OF 1848. When the United Diet was summoned in Prussia in 1847, German liberals and radicals held conferences questioning the existing structure of the German Confederation. The Prussian Diet was soon dissolved, but revolution in Paris, Feb. 1848, touched off unrest throughout Europe. Popular discontent and palace intrigue brought Metternich's downfall, 13 Mar., which was followed by revolution in Hungary and Italy. With Austria preoccupied elsewhere, the fate of Germany lay in the hands of Frederick William IV of Prussia. When rioting occurred in Berlin, he decided to withdraw his troops, appoint a liberal ministry, and pledge himself to constitutionalism and the cause of national Germany, 18 Mar. Elsewhere German princes hastened to appease their subjects by granting constitutions.

The economic causes of the revolution were a severe slump in trade and industrial production, together with disastrous harvests and a potato blight. Mass misery in the towns and countryside endowed the middle-class political movement with real strength. Widespread rural riots against manorial dues and rents occurred during the spring. Peasants were starving while landlords exported their excess produce at vastly inflated prices. Craftsmen in the towns—factory workers were small in number and played no real part in the unrest—centered their demands around the necessity of returning to a guild system with guaranteed prices, wages, and employment. But the middle class, which led the revolution, did not heed mass demands, and adhered firmly to its belief in property rights and economic liberalism.

NATIONAL ASSEMBLY AT FRANKFURT. On 31 Mar. the German governments allowed a preparliament (*Vorparlament*) to meet at Frankfurt to

prepare for elections to a National Assembly. Eventually it was decided to elect delegates according to the franchises of their individual states instead of by universal manhood suffrage. This effectively excluded workers and peasants from the National Assembly, which convened at Frankfurt, 18 May. Its 330 delegates were of the middle class except for 4 master artisans and 1 peasant. The Assembly concentrated on constitutional and legal issues and made no real effort to come to grips with urban and rural distress. It found its power challenged by the separate state governments and was itself deeply divided. Having no machinery for raising taxes and no army, it was forced to rely on Prussian and Austrian troops to quell minority movements among the Czechs and Poles. When the Danes threatened to annex Schleswig, which, together with Holstein, was under Danish rule but mainly German-speaking, the Assembly encouraged Prussian intervention.

FAILURE OF THE REVOLUTION.

By June 1848 the revolutionary impetus had begun to wane in France and in central Europe. Prince Alfred Windischgratz (1787-1862) suppressed the Pan-Slav movement in Prague and then occupied Vienna with the imperial army. By Nov. Prince Felix zu Schwarzenberg (1800-52) controlled Austria, while in Prussia Frederick William IV brought his army back to Berlin and appointed a conservative ministry under Friedrich von Brandenburg (1792-1850) and Otto von Manteuffel (1805-82). In Dec. 1848 a very limited constitution was granted in Prussia as a sop to the middle classes (and in May 1849 the "3-Class System" of voting further increased the power of the Prussian nobility). By the end of 1848, therefore, power had returned to the regional centers and the Frankfurt Assembly was soon to be deserted by all but the extreme left. But first, 28 Mar., 1849, it was decided to offer the crown of a united Germany, excluding the Hapsburg lands, to the king of Prussia. Frederick William refused a crown proffered by the people, but for a time toyed with his own schemes for unity, inviting the German

princes to meet at Erfurt. But Austria, having recovered her position in Italy and, with Russian aid, in Hungary, was now able to press for a return to the old Confederation. Further risings in May 1849, largely in the south, were repressed by Prussian forces. Tension and rivalry between Austria and Prussia mounted, but finally Prussia declined a confrontation and at Olmütz, 29 Nov., accepted a restoration of the 1815 Diet.

The handicraftsmen, unrepresented at Frankfurt, held their own congresses. In Prussia and Austria, governments enacted manorial reforms to appease rural dissatisfaction, and this was rapidly copied elsewhere. In the towns also, the new conservative governments established public works schemes and new guilds to win over working-class support.

By 1848 the liberal solution for German unity had failed. Individual governments and princes had shown no willingness to subordinate themselves to a central authority. The middle-class revolt stepped into a vacuum of power: Austria was distracted elsewhere and Frederick William IV had chosen to join the movement. But the forces of reaction were not defeated, and by Nov. 1848 had reasserted themselves without difficulty. The revolution had, however, re-emphasized the predominant role Prussia would have to play in future efforts toward German unification.

1850-60

ECLIPSE OF AUSTRIAN INFLUENCE. After 1850 Austria tried to recover her economic and political power in Germany. Olmütz was followed by the attempt of Schwarzenberg and Karl von Bruck (1798-1860), the Austrian finance minister, to push the whole Hapsburg Empire into the *Zollverein*. Prussian resistance and the death of Schwarzenberg in 1852 defeated these aims in 1853 and again in 1862.

ECONOMIC ADVANCE IN GERMANY. A marked revival of prosperity in the 1850's set the seal of success on economic liberalism, and most of the restored guilds were dissolved. Joint-stock

companies proliferated and long-term industrial investment by banks, e.g., Schaafhausen and Darmstadt, supplied capital for interstate railway lines and a rapid acceleration of industrial output. A severe economic crisis in 1857, however, temporarily checked this growth, and provided the social conditions for an enlargement of the liberal opposition in Prussia and other states.

ITALIAN WAR. In 1859 France, allied to Sardinia, declared war on Austria. The Hapsburgs were defeated, and in the subsequent peace were forced to give up Lombardy. The war divided German opinion and acted as a catalyst for liberalism and nationalism. The Italian success led to the foundation of a German National Association by Rudolf von Bennigsen (1824-1902) and other liberals. But while some saw Austria as the common enemy of Italian and German unification, others, desiring a large Germany, including Austria, called for a demonstration of unity against France. The Prussian leader, Otto von Bismarck (1815-98), wanted to use the occasion to extract gains for Prussia in north Germany, but Austria hastened to sign an armistice with the French to avoid the necessity of such concessions.

CONSTITUTIONAL CRISIS OF 1860. The insanity of Frederick William IV of Prussia led to the regency of his brother, William (1797-1888), who appointed, Nov. 1858, a liberal cabinet under Prince Karl Anton of Hohenzollern (1811-85). But the country was soon in crisis over the Army Bill of 1860. The inefficiency of the Prussian mobilization in 1859 led Albrecht von Roon (1803-79), the war minister, to propose drastic reorganization. The standing army was to be increased from 200,000 to 370,000 men, and the service period extended from 2 to 3 years. The strength and importance of the militia (of great sentimental importance to Prussians) were greatly decreased in favor of a larger and more professional army, which was to cost an extra 9.5 m. thalers annually. Prussian liberals, fearing an increase in the power of the king and the military class, tried to gain concessions. But William, who became king in

1861, was inflexible. A Progressive Party was formed to oppose the army budget, and the liberals were victorious in the elections of Dec. 1861. They demanded an itemized budget and restriction of military service to 2 years, but parliament was again dissolved. A further liberal electoral victory, May 1862, only strengthened the king's resolve. On Roon's advice he now appointed Bismarck minister-president, Sept. 1862. Bismarck ruled and raised necessary revenue in spite of parliament.

1861-71

FURTHER DIMINUTION OF AUSTRIAN INFLUENCE IN GERMANY.

Austria, after the Italian War, began to work for a revision of the federal structure. In 1859 she failed to extract aid from the German states and now, under Anton von Schmerling (1805-93), an attempt was made to push the Hapsburgs back into German affairs politically and via the *Zollverein*. The Austrian emperor summoned a meeting of the German princes at Frankfurt, Aug. 1863. At Bismarck's insistence the Prussian king did not attend. Moreover, in 1862 Bismarck had used the signature of a trade agreement between Austria and France to block Austrian efforts to enter the *Zollverein*.

SCHLESWIG-HOLSTEIN. Christian IX of Denmark promulgated, Nov. 1863, a new constitution incorporating Schleswig into the Danish state. Ties with Holstein, the duchy belonging to the German confederation, were to remain purely personal. This action was a breach of the London Protocol of 8 May, 1852, which had patched up Danish-German relations by guaranteeing the *status quo*. The new constitution threatened to end all hope of bringing Schleswig into the German Confederation. To the latter end the Diet supported the Duke of Augustenborg's claims to rule the duchies.

Bismarck used this situation to acquire the duchies for Prussia. He persuaded Austria to accept an alliance and oppose the Danish constitution on the grounds of

the London Protocol, thus circumventing the Federal Diet, which supported Augustenborg. The Danes resisted, and war broke out in which, without assistance, Denmark was quickly overrun. By Oct. 1864, after the failure of a London Conference of the Powers, the duchies were ceded to Austria and Prussia.

AUSTRO-PRUSSIAN WAR. Bismarck was determined to build up Prussian political power in central Europe to match her rapidly growing economic strength. Immediately after the peace with Denmark, he began to Prussianize the duchies. Austrian policy wavered, but after considerable tension it was agreed by the Treaty of Gastein, Aug. 1865, that Austria should rule Holstein and Prussia Schleswig. Soon, however, Bismarck accused Austria of furthering the claims of Augustenborg, and the threat of war grew. Bismarck made the necessary diplomatic preparations for such a conflict by talks with Napoleon III at Biarritz, Oct. 1865, and by making a political alliance with Italy, Apr. 1866. He even made contact with Hungarian separatists and was ready to foment revolution in the Hapsburg lands. Hatred of Austria among Prussian liberals eased his position within Prussia, where the military were prepared if the need for war arose. Within the Confederation, Bismarck tried to gain support by proposing a national parliament elected by universal manhood suffrage. In view of Bismarck's unconstitutional rule in Prussia, German liberals treated this with skepticism. Austria decided to place the fate of the duchies before the Frankfurt Diet. Prussia regarded this as a violation of the Treaty of Gastein, and invaded Holstein. Austria then called for federal action against Prussia, June 1866.

Most German states supported Austria, despite their membership in the *Zollverein*, while Prussia gained aid from Italy and from a few minor states in north Germany. The 7 Weeks' War displayed the military efficiency of Prussia, culminating in the victory of Sadowa, 3 July, 1866. The swiftness of the action prevented French interference, and the

peace granted at Prague, 23 Aug., 1866, was moderate. Prussia gained both duchies but made no other territorial demands on Austria. There was a small indemnity, and Bismarck agreed to the continued existence of Saxony and the southern states. But north Germany was reorganized into a confederation under Prussia, which annexed Hanover, Hesse-Cassel, Nassau, and Frankfurt.

The victory greatly enhanced Bismarck's position in Prussia. Elections, held the day after Sadowa, increased conservative representation, and parliament accepted a bill of indemnity for the illegal collection of taxes since 1862. By Nov. 1866 the liberals were deeply divided. A National Liberal Party was formed to support Bismarck and his foreign policy.

NORTH GERMAN CONFEDERATION. The North German Confederation possessed both a Reichstag, elected by universal manhood suffrage, and a 2nd chamber representing the state governments. But real power lay with Prussia, and the Reichstag had little influence. After 1871 the Confederation constitution was extended to fit all Germany.

FRANCO-PRUSSIAN WAR. After Sadowa only France acted as a bulwark against further German unification. Napoleon III's failure to intervene in 1866 diminished his support at home, while fear of Prussia led to a series of army reforms and a conviction that further unification in Central Europe could not be tolerated. For the moment Napoleon made unsuccessful and politically damaging efforts to gain compensation in the Rhineland and Luxembourg. This merely facilitated Bismarck's negotiations with the south German states for military alliances.

In July 1870 Franco-Prussian relations were suddenly inflamed because of the offer of the vacant Spanish throne to Prince Leopold of Hohenzollern (1835-1905). Bismarck, hoping for political gain, pressed for acceptance. France, fearing encirclement, threatened war, and Leopold decided to decline the Spanish crown. But the French badly needed a diplo-

matic victory and demanded guarantees from the Prussian king that there would be no renewal of the candidature. King William, who was staying at Ems, telegraphed these demands to Bismarck, who proceeded to print his own version (the Ems Telegram). Prussia was ready for war, and the public version of the telegram was calculated to push an insulted French nation into conflict with Prussia. Militarily and diplomatically, the French were unprepared. Russia was unlikely to intervene, and the Austrian government was preoccupied with running a reconstructed empire, the Dual Monarchy having been set up in 1867. War was declared in July 1870. A Prussian victory at Sedan, 2 Sept., was followed by a long siege of Paris, 19 Sept., 1870-28 Jan., 1871, before the war ended, 10 May, 1871.

UNIFICATION OF GERMANY. On 18 Jan., 1871, at Versailles the ruling princes offered William of Prussia the crown of a united Germany. The North German Confederation, enlarged to include south Germany, became a Prussian-dominated federation with only a façade of representative government. Added to Germany were the regions of Alsace and most of Lorraine, taken from a defeated France. A united Germany had been created, without Austria, and as a result of the exercise of Prussian military superiority. (*Cont. p. 286.*)

GREAT BRITAIN AND IRELAND

1801

UNION OF GREAT BRITAIN AND IRELAND. On 21 April, 1800, the House of Commons approved the Act of Union (effective 1 Jan., 1801), which created the United Kingdom. At Westminster the Irish gained representation with 4 spiritual and 28 temporal lords and 100 members of the Commons. The established churches of the 2 countries were united into a single Protestant Episcopal Church. This union was the cause of considerable discontent among the Irish, who increasingly favored national independence.

PITT'S RESIGNATION. William Pitt (1759–1806) resigned on 3 Feb. over Catholic disabilities. On 5 Feb. Henry Addington (1757–1844) formed a weak ministry; the ensuing period of ministerial instability lasted until 1812.

BRITISH NAVAL VICTORIES. British naval supremacy was established by Aberdeen's capture of the French fleets at Cairo, 22 June, and Alexandria, 27 Aug., and by Nelson's destruction of the Danish fleet at Copenhagen, 2 Apr.

1802

HEALTH AND MORALS OF APPRENTICES ACT. The movement toward government supervision of labor conditions began with the Health and Morals of Apprentices Act, 22 June. It forbade the employment of pauper children in cotton mills until age 9, limited their workday to 12 hours, and prohibited their employment at night.

TREATY OF AMIENS. On 27 Mar. Britain and France signed the Treaty of Amiens, which was born of the 2 countries' mutual exhaustion. Except for Trinidad and Ceylon, Britain agreed to return all conquests to France and her allies.

1803

OUTBREAK OF WAR OF THE 3RD COALITION. The Treaty of Amiens did not guarantee the independence of the countries surrounding France. By an ultimatum of 4 Apr., Britain agreed to recognize France's reorganization of Italy if France withdrew from Holland and Switzerland and recognized Britain's retention of Malta, a strategic island in terms of naval power. France refused, and on 16 May war resumed.

1804

WAR WITH SPAIN. To hinder Spain from joining France, Britain captured Spain's South American treasure fleet, 5 Oct., leading Spain to declare war, 12 Dec.

PITT'S RETURN TO POWER. Pitt succeeded Addington on 16 May. Factionalism within the cabinet reached a crisis when Pitt's friend Viscount Melville (1771–1851), first lord of the Admiralty, was impeached. Addingtonians bitterly attacked Melville during his trial (9 Apr., 1804–12 June, 1806). Pitt's subsequent hostility toward the Addingtonians led to the resignations of Addington (now Lord Sidmouth) and the Earl of Buckinghamshire (1760–1816) on 7 July, 1807.

1805

FORMATION OF THE 3RD COALITION. Fear of France drove Russia to conclude a compact with Britain on 28 June. Britain promised Russia and Austria £1,250,000 as a subsidy for 1,000 troops per year.

BATTLE OF TRAFALGAR. On 21 Oct., Adm. Pierre de Villeneuve (1763–1806), blockaded at Cadiz since Mar., slipped out of the harbor, but met Nelson off Trafalgar, 21 Oct. The Franco-Spanish fleet lost 19 ships in the battle, and the British lost none, although Nelson was killed.

1806–9

MINISTRY OF ALL THE TALENTS. Pitt's death on 23 Jan., 1806, led to the formation of the Ministry of All the Talents under William Grenville (1759–1834). Its major accomplishment was the abolition of the slave trade, 25 Mar., 1807. On 24 Mar., 1807, the ministry resigned over a dispute with George III about Catholic disabilities.

ORDERS IN COUNCIL. Britain responded to the Continental System with the orders in council of 11 and 21 Nov., 1807, which blockaded the ports of France and her allies and restricted neutral trade.

THE PORTLAND AND PERCEVAL MINISTRIES. The Duke of Portland (1738–1809) replaced Grenville as prime minister in 1807, but the initial setbacks in the Peninsular campaign and the failure of the Walcheren campaign brought

about the fall of this ministry. In Oct. 1809 Lord Spencer Perceval (1762–1812) replaced Portland, with Hawkesbury (1770–1828, later Lord Liverpool) as minister for war.

1810

THE REGENCY. In the autumn of 1810 George III became permanently insane and the Prince of Wales (1762–1830) became regent according to the provisions of the 1787 Regency Bill, which prevented him from assuming full power until 18 Feb., 1812. Whig hopes of gaining office were thwarted because the regent supported the Perceval ministry.

1812

THE LIVERPOOL MINISTRY. The assassination of Perceval, 11 May, made Liverpool prime minister. His ministry, which lasted 15 years, ended instability by attracting to itself factions that had competed for power. George Canning (1770–1827) joined it in 1814, the Duke of Wellington (1769–1852) in 1818, and Marquis Wellesley (1760–1842) and the Grenvilles in 1821. Liverpool also attracted young talents like Lord Palmerston (1784–1865), Robert Peel (1788–1850), and William Huskisson (1770–1830).

1813

THE FINAL COALITION. Lord Castlereagh (1769–1822), the foreign secretary, was the principal architect of the 1812–14 coalition. On 15 June, 1813, Britain signed the Treaty of Reichenbach with Russia and Prussia, binding them not to conclude a separate peace. Austria's adhesion to the treaty, 24 June, marked the 1st time since 1789 that all 4 major powers had united against France.

1814–15

CONGRESS OF VIENNA. The First Treaty of Paris, 30 May, 1814, gave

Britain Malta, the Ionian Islands, and Heligoland in Europe; St. Lucia, Tobago, and Trinidad in the West Indies; the Cape of Good Hope in Africa; and Ceylon, the Deccan, and the upper Ganges Valley in South Asia. The Congress of Vienna tacitly recognized Britain's mastery of the seas by not debating the question.

CORN LAW. To rescue British agriculture from depression, the Corn Law was passed, 11 Mar., 1815. It imposed a duty on foreign grain.

1816

ABOLITION OF INCOME TAX. The Commons abolished the wartime income tax, 18 Mar., exacerbating the government's financial difficulties and placing the burden of the national debt on the poor.

1819–20

FACTORY ACT. The ineffective Factory Act of 14 June, 1819, restricted child labor to 12 hours per day, but applied only to the cotton industry and did not provide for inspectors.

PETERLOO, THE 6 ACTS, AND THE CATO STREET CONSPIRACY. In Dec. 1818 economic conditions deteriorated and disturbances, accompanied by demands for political reform, ensued. On 16 Aug., 1819, the local magistrates dispersed a peaceful rally at St. Peter's Field, Manchester, with troops. The "Peterloo Massacre" ended with 11 dead and over 400 wounded. Between 23 Nov. and 29 Dec. the government carried the 6 Acts, which further curtailed public meetings, prohibited training in the use of firearms, empowered magistrates to search out and seize firearms, placed a stamp duty on all political literature, increased the penalties for seditious libel, and provided for speedy trial in cases of misdemeanor. The resultant government unpopularity abated with the improved economic conditions of 1820 and the abortive Cato Street Conspiracy, an at-

tempt by 20 extremists to murder the cabinet and establish a republic, 23 Feb., 1820. The plot renewed fears of radicalism and revolution and hindered the cause of moderate reform.

ROYAL DIVORCE CRISIS. On 29 Jan., 1820, the prince regent succeeded his father, becoming George IV (ruled 1820-30). On 5 July he forced the cabinet to introduce a bill to obtain for him a divorce from his estranged wife, Caroline (1768-1821). On 10 Nov. the cabinet dropped the bill in the face of its certain defeat in the Commons, and Caroline accepted a settlement, Jan. 1821.

BRITISH RESPONSE TO CONGRESS OF TROPPAU. At the Congress of Troppau, Castlereagh in his state papers of 5 May and 16 Dec., 1820, illustrated the growing divergence between Britain and the eastern monarchies by asserting that the Alliance powers were not entitled to interfere in the internal affairs of other states solely to maintain the monarchical *status quo*.

1821-22

CABINET RECONSTRUCTION. Because of George IV's hostility toward him, Liverpool reorganized his cabinet between 5 and 9 Dec., 1821, replacing Sidmouth with Peel as home secretary. From this time until his suicide on 12 Aug., 1822, Castlereagh's influence was dominant in the cabinet. On 11 Sept., 1822, Canning became foreign secretary and leader of the Commons. He combined Castlereagh's policy of active interest in continental affairs with popular demagoguery. He gained the support of the commercial class through such measures as the remission or reduction of many assessed taxes, tariff reduction, abolition of the tariff barrier between Great Britain and Ireland, 5 July, 1825, and the conclusion of numerous commercial reciprocity treaties, thereby giving the ministry a "liberal Tory" outlook.

CONGRESS OF VERONA. Canning was unsympathetic toward the alliance system, and on 20 Nov., 1822, at the Congress of Verona Wellington refused British support for the allies' plan to

intervene in Spain. On 30 Nov. Wellington withdrew from the congress.

1824

COMBINATION ACTS. Repeal of the Combination Acts of 1800 on 21 June, 1824, resulted in the rapid growth of unionism. Strikes and violence led to the passage of a new Combination Act, 6 July, 1825, which specifically forbade such actions.

1827

CANNING MINISTRY. On 17 Feb. Liverpool was stricken with apoplexy; Canning replaced him on 12 Apr. Peel and Wellington resigned, and Canning effected an alliance between the liberal Tories and the Whigs, paving the way for Catholic emancipation and the reforms of the 1830's.

1828

WELLINGTON MINISTRY. Canning's death on 8 Aug., 1827, led to the creation of the short-lived Goderich ministry, which was dismissed on 8 Jan., 1828, and succeeded by Wellington's ministry. Though Wellington's political ineptitude and penchant for reaction caused the liberal Tories to resign, the beginnings of reform occurred under his ministry.

CORN LAW. The 1st reform measure was the new Corn Law, passed on 15 July; it provided for a sliding scale of grain duties.

EAST RETFORD DISPUTE. Wellington's 1st political dispute as prime minister occurred over the boroughs of Penvryn and East Retford, which were found to be steeped in corruption. Huskisson and the Canningites wanted their franchises transferred to Leeds and Manchester. The Lords refused to enfranchise Manchester, and Huskisson and his allies resigned in May.

1829

CATHOLIC EMANCIPATION. On 9 May, 1828, the Test and Corporation

Acts, which denied Nonconformists public office, were repealed. The election of Daniel O'Connell (1775-1847) to Parliament in 1828 brought the issue of Catholic emancipation to a head, he could not take his seat in Parliament as a Catholic, but to deny it to him would court revolution in Ireland. In Mar. 1829 the government backed emancipation, which was passed, 13 Apr., enabling Catholics to vote, sit in Parliament, and hold any office except lord chancellor of England and lord lieutenant of Ireland.

1830

WILLIAM IV AND THE GREY CABINET. The elections of 1830, marking the accession of William IV (1765-1837) to the throne on 26 June, were fought over the reform issue. Wellington's opposition to it forced his resignation on 16 Nov., ending a half-century of almost uninterrupted Tory rule and bringing the Whigs to power under Lord Grey (1764-1845).

1832-33

THE GREAT REFORM ACT. In 1830 no more than $\frac{1}{3}$ of the members of the Commons were freely chosen. Ancient provisions and population shifts due to the Industrial Revolution had resulted in gross electoral inequalities. The Grey ministry's 1st reform bill, though popular outside Parliament, was defeated in the Commons, 19 Apr., 1831; on 22 Apr. William IV prorogued Parliament. The ministry gained a sweeping victory in the May elections. In Oct. the Lords defeated the 2nd reform bill, and Parliament was prorogued, 20 Oct. Under threat of the creation of new peers, the 3rd reform bill finally passed the Lords, 4 June, 1832. The Reform Act revolutionized the British electoral system, disenfranchising 56 rotten boroughs and pocket boroughs. It reduced to 1 representative apiece 32 small boroughs and redistributed the 143 vacant seats among growing towns, underrepresented counties, and Scotland and Ireland. The franchise was confirmed for £10 householders in the boroughs and in the counties for 40s. freeholders, £10

copyholders, freeholders, and leaseholders for 60 years, and for £50 tenants at will and leaseholders for less than 60 years. Between July and Sept., 1832, similar legislation was extended to Scotland and Ireland. The Reform Act gave the industrial and commercial classes electoral dominance.

REBELLION AND REFORM IN IRELAND. Irish resentment of the Episcopal Church sparked the Tithe War of 1831. To restore order, the Commons passed the Coercion Bill on 1 Apr., 1833, giving the lord lieutenant unlimited power to suppress public meetings and impose martial law. Reforms also were granted; the Irish Church Temporalities Bill, enacted 2 Aug., 1833, abolished 10 of the 22 Protestant bishoprics in Ireland and taxed clerical incomes.

ABOLITION OF SLAVERY IN THE COLONIES. On 23 Aug., 1833, the campaign against slavery, begun in the 1790's, was completed with the abolition of slavery in the colonies. The bill provided for the immediate emancipation of children under 6 and for apprenticeship for those over 6.

FACTORY ACT. The inadequacies of earlier legislation led to the passage, 29 Aug., 1833, of a more stringent Factory Act. It prohibited the employment of children under 9, restricted the workweek of those between 9 and 13 to 48 hours, demanded 2 hours' daily schooling for children under 13, and provided for a system of paid inspectors.

1834

NEW POOR LAW. According to the New Poor Law of 14 Aug., relief was to be administered by a general Board of Commissioners; the dole was to be limited to the sick and the aged; able-bodied paupers were to be employed in workhouses.

1ST MELBOURNE MINISTRY. A divided cabinet forced Grey's resignation, 9 July. Lord Melbourne (1779-1848) replaced him, but William IV's disappointment in Melbourne resulted in the latter's resignation, 15 Nov. Whig strength, steadily declining since 1832,

was dissipated under Melbourne. There followed a period of political instability, during which the old party designations of Whig and Tory were replaced by those of Liberal and Conservative.

1835-36

THE 1ST PEEL AND 2ND MELBOURNE MINISTRIES. Peel replaced Melbourne and set out his program in the Tamworth Manifesto, 17 Dec., 1834, proposing that the new Conservatives accept the Reform Act and follow it with a program of "judicious reform." Peel thus gained the support of both Whig and Tory moderates, but his ministry fell, 7 Apr., 1835, over the Irish question. Melbourne replaced him.

REFORMS OF THE MELBOURNE ADMINISTRATION. The Municipal Corporations Act, 9 Sept., 1835, reformed the corrupt municipal governments by establishing uniform administration for all boroughs and cities—except London and 67 small boroughs—creating town councils, consisting of a mayor (chosen annually), councilors (elected triennially), and aldermen (chosen sexennially). The Marriage Act, 28 June, 1836, legalized civil marriages; provided for local registration of births, marriages, and deaths; and permitted dissenters to marry in their own chapels. The Ecclesiastical Commission forbade plural benefices over 2 mi. apart, augmented stipends for parish priests, and reduced large episcopal incomes.

1837

ACCESSION OF QUEEN VICTORIA. William IV died, 20 June. He was succeeded by his 18-year-old niece, Victoria (1819-1901), whose reign marked the entrenchment of responsible parliamentary government in England.

1839

JAMAICA CRISIS AND THE 3RD MELBOURNE MINISTRY. Economic conditions in Jamaica worsened after emancipation, and the planters attempted to subvert the government's reforms. The

Commons approved, 9 Apr., by only 5 votes the suspension of the Jamaican constitution. The closeness of the vote caused Melbourne to resign, 7 May. When Victoria asked Peel to form a new ministry, he insisted that she dismiss some of her Whig bedchamber attendants. The "Bedchamber Question" infuriated Victoria, who recalled Melbourne on 10 May.

CHARTIST MOVEMENT. Dissatisfied with the limited reforms of the Whigs and the failure of the union movement, the laboring classes had founded the London Working Men's Association in 1836. They composed a charter—hence their designation as Chartists—which demanded manhood suffrage, vote by ballot, abolition of property qualifications for membership in Parliament, salaries for members of Parliament, equal electoral districts, and annual Parliaments. They presented the charter to Parliament on 13 May, during their national convention in London. After its rejection, the convention retired to Birmingham, and activists under Feargus O'Connor (1794-1855) gained predominance, instigating riots in July. After the suppression of the 4 Nov. riot in Newport, Wales, the Chartists resumed a more moderate course. In July 1840 O'Connor founded the National Charter Association. It drafted the 2nd charter, which Parliament rejected, 3 May. Chartism, undermined by factionalism, the growth of trade unions, and the Anti-Corn Law League, languished until 1848.

1840

MARRIAGE OF VICTORIA AND ALBERT. On 10 Feb. Victoria married her cousin Albert of Saxe-Coburg-Gotha (1819-61). The marriage was unpopular, and not until 1857 was Albert named prince consort, though Victoria's devotion to him already had made him *de facto* coruler.

1841

2ND PEEL MINISTRY. Melbourne's resignation, 28 Aug., brought in the 2nd Peel ministry, which included William

Gladstone (1809-98). Peel's budget of 1842 began the era of liberal budgets in England; and his 2nd Free Trade Budget, 1845, eliminated export duties.

1842-44

LABOR LEGISLATION. The Coal Mines Act, 5 July, 1842, prohibited women and boys under 10 from working underground, and the Factory Act, 22 Mar., 1844, fixed 6½ hours as the maximum workday for children, and 12 hours the maximum for women.

1846

ABOLITION OF THE CORN LAW. The National Anti-Corn Law League, founded 20 Mar., 1839, gained nationwide importance in 1841, when it began contesting elections. The struggle over the Corn Law split the Conservatives, with Peel supporting free trade and Benjamin Disraeli (1804-81) opposing it. Wellington induced the Lords to accept repeal of the laws, and on 26 June repeal was enacted. The Customs Law, passed at the same time, abolished livestock duties and duties on many manufactured goods.

FALL OF THE PEEL MINISTRY. Peel resigned, 29 June, and Lord Russell (1792-1878) replaced him, with Palmerston as foreign secretary.

1847-48

THE TEN HOURS' BILL. Passed on 17 May, 1847, this bill limited the workday for women and young persons aged 13-18 to 10 hours.

YOUNG IRELAND INSURRECTIONS. The Young Ireland Party, founded in 1840 by William O'Brien (1803-64), had become the principal Irish nationalist organization by 1847. The potato famine of the 1840's increased Irish discontent and culminated in the agrarian crimes of the autumn of 1847 and the unsuccessful Tipperary Insurrection, 29 July, 1848.

"KENNINGTON COMMON FIASCO." This abortive demonstration accompanied the presentation of the 3rd charter to Parliament in 1848. The 10

Apr. outbreak marked the end of Chartism.

1850

DON PACIFICO AFFAIR. Dissatisfaction with Palmerston's bellicose foreign policy came to a head with the Don Pacifico affair. Don Pacifico, a Portuguese Jew with British citizenship, pressed claims he had against the Greek government until, Dec. 1849, a mob attacked his house in Athens. Palmerston supported him by seizing Greek vessels at Piraeus, Jan. 1850, thus compelling Greece to recognize Don Pacifico's claims. Palmerston defended his actions before Parliament, 29 June, but he promised Victoria, 14 Aug., that henceforth he would not act without informing her.

1851-52

GREAT EXHIBITION. Held in Hyde Park, 1 May-15 Oct., 1851, and organized by Prince Albert, the Great Exhibition demonstrated Britain's technological achievements and industrial strength.

FALL OF PALMERSTON AND RUSSELL. Palmerston's precipitate approval of Louis Napoleon's coup d'état of 2 Dec., 1851, led Russell, who had long disapproved of Palmerston's foreign policy, to instruct the ambassador in Paris, 5 Dec., to withhold recognition of the new regime, thereby preparing the way for Palmerston's dismissal, 9 Dec. On 20 Feb., 1852, however, Palmerston brought about Russell's fall. Lord Stanley (later Lord Derby, 1799-1869) replaced him with a short-lived Conservative ministry that included Disraeli.

ABERDEEN MINISTRY. On 28 Dec., 1852, Lord Aberdeen (1784-1860) formed a coalition ministry that included Palmerston, Russell, and Gladstone.

1854-57

CRIMEAN WAR AND 1ST PALMERSTON MINISTRY. Britain entered the Crimean War on 28 Mar., 1854. Public dissatisfaction forced Aberdeen's resignation and Palmerston's accession to the prime ministership, 5 Feb., 1855. He soon

faced the Sepoy Mutiny in India, 1857, and the war in China, 1856-57.

1858

2ND DERBY MINISTRY. After the Orsini bomb plot, which was planned in England, Palmerston introduced a bill increasing the penalty for conspiracy to murder. Its defeat brought about his resignation, 22 Feb., and the return of the Derby-Disraeli ministry, 25 Feb.

PARLIAMENTARY QUALIFICATIONS. Parliament discontinued property qualifications for its members, 15 June, and removed Jewish disabilities, 23 July.

1859

2ND PALMERSTON MINISTRY. On 18 June Palmerston replaced Derby with a Liberal ministry which included Gladstone. Political factionalism now stabilized into 2 camps, the Conservatives under Derby and Disraeli and the Liberals in alliance with the Radicals.

1860

COBDEN-CHEVALIER TREATY. Signed between Britain and France on 23 Jan., the treaty provided for mutual tariff reductions to encourage commerce and appeared to herald an era of free trade.

1861

THE "TRENT" AFFAIR. On 8 Nov., 2 Confederate envoys on the British steamer *Trent* were abducted by a Union naval vessel. Prince Albert modified Palmerston's strident ultimatum to the Union, thereby averting a crisis.

DEATH OF PRINCE ALBERT. On 14 Dec. Prince Albert died, and the bereaved Victoria withdrew from public life.

1865-66

2ND RUSSELL MINISTRY. Palmerston died, 18 Oct., 1865, and Russell, his successor, was beset with urgent demands for electoral reform. The Reform Act of 1832 notwithstanding, only 1 man in 6 could

vote and electoral anomalies remained. On 26 June, 1866, Russell resigned after the defeat of his reform bill.

1867

2ND REFORM ACT. The 3rd Derby-Disraeli ministry took office, 6 July, 1866. It passed the 2nd Reform Act, 15 Aug., 1867, which doubled the electorate to 2 m. by extending the franchise to all householders paying the poor rate, to £10 lodgers in the boroughs, and to £5 landowners and £12 occupying tenants in the counties. Boroughs of less than 10,000 received only 1 representative; Manchester, Birmingham, Leeds, and Liverpool were given 3; 9 new boroughs and 25 new county seats were created. The Scottish Reform Act, 13 July, 1868, extended similar reforms to Scotland, but the Irish Reform Act of that date merely reduced the borough franchise.

1868

1ST DISRAELI MINISTRY. On 29 Feb. Disraeli replaced Derby as prime minister, but on 9 Dec. Gladstone succeeded Disraeli after a Liberal victory in the Nov. elections.

1869-70

IRISH REFORMS. Gladstone attempted to pacify Ireland, where the Fenian Brotherhood, founded 1858, was fomenting revolution. The Disestablishment Act, 26 July, 1868, affected the Episcopal Church in Ireland as of 1 Jan., 1871. The Irish Land Act, 1 Aug., 1870, entitled tenants to compensation for unjust eviction and provided government loans to encourage peasant proprietorship, but failed to curb the landlords' rights to unimpeded disposal of their property, rent increases, and sudden eviction.

EDUCATION ACT. Passed on 9 Aug., 1870, this act attempted to end the chaos in English education. It continued the voluntary schools that were in good standing, but denied them funds from local rates. Board schools, controlled by locally elected school boards, were established. They obtained funds from govern-

ment grants, parents' fees, and local rates. The most controversial feature of the act was the provision permitting religious education in voluntary schools only.

CIVIL SERVICE REFORM. An order

in council, 4 June, 1870, directed the use of competitive examinations, at the discretion of department heads, to fill posts in the government bureaucracy. (*Cont. p.* 277.)

The Growth of the United States, 1784–1877

THE BUILDING OF THE AMERICAN NATION

1784–85

TREASURY BOARD. On 28 May, 1784, a Treasury Board was established. Samuel Osgood, Walter Livingston, and Arthur Lee became commissioners. A Dutch loan enabled Robert Morris to resign, 1 Nov., leaving a \$21,000 surplus despite the inefficient requisition system that had operated through much of the war.

MT. VERNON CONFERENCE. Commissioners from Virginia and Maryland met at Washington's home, settled certain mutual navigation problems, and advised their legislatures to adopt uniform imposts, currency, and commercial regulations, and to join with Pennsylvania in establishing water communications between the Chesapeake and the Ohio. Delegate Madison had Virginia request, 21 Jan., 1786, an interstate commercial convention at Annapolis, Sept.

JAY-GARDOQUI NEGOTIATIONS. Congress authorized Jay, 20 July, 1785, to negotiate with Spanish Minister Don Diego de Gardoqui on his country's rejection, 1784, of America's right to free navigation of the Mississippi. Both nations were adamant until Congress, 29 Aug., 1786, voted to defer pressing navigation rights in return for a favorable commercial treaty. Lacking the 9 votes necessary for treaty ratification, however, the talks broke down.

1786

RELIGIOUS FREEDOM. The Virginia Statute for Religious Freedom, based on Jefferson's draft of 1779, was adopted on 16 Jan. It ended compulsory church

support and attendance and discrimination based on religion.

TREATY WITH MOROCCO.

Thomas Barclay gave \$10,000 in gifts to the sultan of Morocco in exchange for a treaty, 28 June, protecting American shipping from the Barbary pirates. The U.S. made similar agreements with Algiers, 1795; Tripoli, 1796; and Tunis, 1797.

PROPOSALS TO REVISE THE ARTICLES. 7 Aug. Prodded by Charles Pinckney's (S.C.) motion, 3 May, Congress considered reorganizing the government. A committee advised, 7 Aug., congressional control of foreign and domestic commerce and improvement of the requisition system, but Congress never ventured to submit these recommendations for ratification.

ANNAPOLIS CONVENTION. 11–14 Sept. Called by Virginia, 21 Jan., this convention was attended by only 12 delegates from Delaware, New Jersey, New York, Pennsylvania, and Virginia. The other states failed to act or their representatives arrived too late. The delegates, led by John Dickinson (Del.), adopted, 14 Sept., Hamilton's call for another convention to render the Constitution adequate to the Union's needs. Congress cautiously approved, 21 Feb., 1787, a convention "for the sole and express purpose of revising the Articles."

SHAYS' REBELLION. Aug. 1786–Feb. 1787. Faced with foreclosures, debt-ridden Hampshire County (Mass.) farmers convened, 22–25 Aug., to denounce the government for their plight, and armed men closed the courts at Northampton, 31 Aug., and Worcester, 5 Sept. Daniel Shays' (1747–1825) band closed the Supreme Court at Springfield, 26 Sept.,

despite the presence of Gen. William Shepherd's militia sent there by Gov. James Bowdoin. After the capture of Job Shattuck, 30 Nov., ended the insurrection in the east, Shays still menaced the government in western Massachusetts. On 26 Dec. he marched to join Luke Day and attack Springfield's federal arsenal, but was routed by Shepherd's artillery, 25 Jan. Dispatched by the governor, Gen. Lincoln arrived in Springfield, 27 Jan., and pursued the insurgents. Day fled to New Hampshire, and Shays to Vermont after Lincoln had defeated him at Petersham, 4 Feb. The legislature eased taxes, made reforms, and pardoned all except Shays, Day, and 2 others. Shays was pardoned later, 13 June, 1788.

1787

OPENING OF CONSTITUTIONAL CONVENTION. The Constitutional Convention began 11 days late, with a quorum of 7 states. Only New Hampshire and Rhode Island had not appointed representatives; New Hampshire did so in June, but Rhode Island boycotted the convention. James Madison (1751-1836), who kept notes of the proceedings, and Mason (Va.), Gouverneur Morris and James Wilson (Pa.), Roger Sherman (Conn.), and Elbridge Gerry (Mass.) were the most active of the 55 delegates. Washington was president and William Jackson secretary of the convention, whose proceedings were secret.

VIRGINIA PLAN. 29 May. Edmund Randolph's (1753-1813) Virginia Plan envisioned a strong national government. Randolph desired that a popularly elected lower house select an upper house from nominees proposed by the state legislatures. Both houses would choose the executive, who, together with some judges, could veto legislation.

NEW JERSEY PLAN. William Paterson's New Jersey Plan, 15 June, reflected small states' opposition to Randolph's plan for apportioning both houses by population. He offered Congress the right to tax and regulate foreign and interstate commerce. The convention voted 7 to 3

basically to follow the nationalist Randolph, 19 June.

NORTHWEST ORDINANCE. 13 July. Based on a Jefferson plan, 23 Apr., 1784, and a committee report, 19 Sept., 1786, the Northwest Ordinance was adopted by Congress on 13 July. It affected the territory north of the Ohio. Congress would appoint a governor, secretary, and 3 judges; a legislature would be elected when there were 5,000 free adult male residents. Congress was eventually to create 3 to 5 states equal to the original 13. Slavery was outlawed and individual rights protected.

CONNECTICUT COMPROMISE. 16 July. Working from a proposal of 13 June by Roger Sherman (Conn.), the convention decided that each state would be represented in proportion to its population in the lower house, 12 July, and would have an equal vote in the Senate, 16 July.

FINAL STAGES. 6 Aug.-28 Sept. The convention debated a preliminary draft of the Constitution presented by a Committee of Detail, 6 Aug.-10 Sept., and appointed, 8 Sept., a Committee on Style and Arrangement (Hamilton, William Johnson, Rufus King, Madison, and Gouverneur Morris). Morris wrote the final draft presented on 12 Sept. It was approved by 12 states, 17 Sept., but Gerry (Mass.), Randolph (Va.), and Mason (Va.) refused to sign the document. Congress received the Constitution, 20 Sept., and submitted it for ratification by state conventions, 28 Sept.

"FEDERALIST PAPERS." 27 Oct. 1787-2 Apr. 1788. The "Federalist Papers," by Hamilton (1755-1804), Madison, and Jay, appeared in New York newspapers. These 77 essays, which supported ratification of the Constitution, appeared with 8 more in *The Federalist*, Mar.-May 1788.

1788

RATIFICATION OF THE CONSTITUTION. Delaware, 7 Dec.; Pennsylvania, 12 Dec.; and New Jersey, 18 Dec., had already ratified the Constitution the previous year. Georgia ratified on 2 Jan.,

and was followed by Connecticut, 9 Jan., and Massachusetts, 6 Feb. With Federalist (pro-Constitution) acquiescence, 30 Jan., Massachusetts proposed 9 amendments, including reserving to the states all powers not explicitly granted to the federal government.

Over Federalist objections, rural opponents of the Constitution submitted it to a popular referendum in Rhode Island, 24 Mar. Rhode Island decisively rejected it, but finally ratified on 29 May, 1790.

Maryland ratified on 28 Apr. and South Carolina on 23 May. New Hampshire, proposing 12 amendments, cast the 9th and deciding vote for ratification, 21 June.

Madison obtained Virginia's ratification on 25 June. Hamilton and Jay used New Hampshire's and Virginia's decisions to wrest control of the Poughkeepsie Convention from Governor Clinton's Antifederalists, and New York ratified on 26 July.

North Carolina withheld ratification until Congress' submission of a bill of rights, 25 Sept., 1789, prompted her to approve the Constitution on 21 Nov.

THE NEW GOVERNMENT. Congress made New York the capital on 13 Sept., and set dates for the appointment of presidential electors, 7 Jan., 1789; their balloting, 4 Feb.; and the 1st Congress, 4 Mar.

1789

GOVERNMENT IN OPERATION.

Jan.-Apr. 69 Presidential electors, popularly chosen or appointed by the legislatures, 7 Jan., voted on 4 Feb. Lacking a quorum, Congress delayed opening; the House organized, 1 Apr., and the Senate counted the electoral ballots, 6 Apr. Washington was unanimously elected President, and John Adams (1735-1826) Vice-President. Adams having taken his seat, 21 Apr., New York Chancellor Robert R. Livingston (1746-1813) administered the oath of office to Washington at Federal Hall on 30 Apr.

BILL OF RIGHTS. 25 Sept. Federalist leaders and Washington were willing to

add the constitutional amendments proposed by 5 state ratifying conventions. Prompted by Madison, 9 Sept., Congress submitted 12 of them for ratification, 25 Sept. The states ratified 10, which became the Bill of Rights of the Constitution, 15 Dec., 1791.

EXECUTIVE DEPARTMENTS. Congress appointed Henry Knox (1750-1806), 7 Aug.; Hamilton, 11 Sept.; and Jefferson, 26 Sept., as secretaries of war, the treasury, and state respectively. Samuel Osgood became postmaster general, 26 Sept., and Congress organized the Post Office, 8 May, 1795. Having established courts by the Federal Judiciary Act, 24 Sept., Congress, 26 Sept., made Jay chief justice and Randolph attorney general.

1790

HAMILTON'S FISCAL PROGRAM. A factor in the rise of parties, the financial proposals of Hamilton were announced in 3 messages to Congress. The Report on the Public Credit, 14 Jan., concerning the national and state debts, recommended funding the foreign (\$11,710,378) and domestic (\$44,414,085) debt at par, and assuming \$21,500,000 of the states' \$25,000,000 Revolutionary debt. These measures would revive the public credit and confidence in the government at home and abroad, and bind the creditor class to the federal government. Debtor and agrarian groups that had sold depreciated securities to speculators opposed funding the domestic debt. States, especially Virginia, which had paid their debts and feared an increase of federal power, had the House reject, 12 Apr., the assumption of state debts.

SECTIONAL COMPROMISE. Hamilton agreed with Jefferson and Madison, c. 20 June, to have Congress situate the national capital in the South in return for southern votes for assumption. Congress located the permanent capital along the Potomac, 10 July, and passed assumption, 26 July. Funding became law on 4 Aug. Southern fears were expressed by Patrick Henry when he attacked assumption, 16 Dec., as establishing a money

interest, as inimical to agrarianism and republicanism, and beyond Congress' constitutional powers.

1791

BANK OF THE UNITED STATES. As requested by Hamilton in his report on banking, 13 Dec., 1790, the Bank of the U.S. was chartered on 25 Feb. Before signing the bill, Washington asked his cabinet's opinion on the constitutionality of a national bank. Jefferson argued against, 15 Feb., Hamilton, 23 Feb., asserted the bank's constitutionality on the basis of the "implied powers" of the Constitution.

EMERGING POLITICAL ALIGNMENTS. Jefferson and Madison toured New York and New England, May-June, seeking aid, especially from the Clinton-Livingston-Burr faction, in establishing an Antifederalist coalition against Hamilton's fiscal program. Jefferson and his Democratic-Republicans believed in a democratic, agrarian society of broadly diffused wealth under popular, representative, decentralized government. Hamilton and his Federalists desired strong government by the elite which would produce a balanced, diversified economy by aiding manufacture and commerce. Jefferson's principles were expressed in Philip Freneau's antiadministration newspaper, the *National Gazette*, est. 31 Oct., and Hamilton's in John Fenno's *Gazette of the United States*, est. 15 Apr., 1789.

1792

RESISTANCE TO THE WHISKY TAX. 21 Aug.-29 Sept. As Hamilton requested, 13 Dec., 1790, Congress passed a revenue tax on distilled liquors, 3 Mar., 1791. At Pittsburgh, 21 Aug., Albert Gallatin (1761-1849) and incensed farmers who disposed of their surplus grain by distilling threatened legally to obstruct collection, but Washington pledged, 29 Sept., to enforce the excise.

JEFFERSON-HAMILTON FEUD. Attacked in the *National Gazette*, Hamilton

anonymously asserted in Fenno's newspaper, July-Dec., that Jefferson was an Antifederalist intriguing against the administration's programs. Washington wrote to Jefferson, who was contemplating retirement, 23 Aug., and Hamilton, 26 Aug., but their replies, 9 Sept., revealed his failure to heal the rift.

1793

FRENCH REVOLUTION AND NEUTRALITY. 22 Apr. The French Revolution proved a divisive political issue. Jefferson and Hamilton, favoring France and Britain respectively, both desired neutrality, but the latter also wanted to repeal the 1778 treaties with France. Instead, Washington's Neutrality Proclamation, 22 Apr., declared Americans at peace with both Britain and France.

GENÉT AFFAIR. "Citizen" Edmond Charles Genêt (1763-1834), French Girondist minister to the U.S., arrived in Charleston, 8 Apr., and began commissioning privateers to prey on British vessels. Washington received him coolly, 18 May, and, through Jefferson, advised him, 5 June, that he had violated U.S. sovereignty, and ordered his ships to leave American waters. Instead, Genêt threatened to appeal directly to the people, and sent to sea the privateer *La Petite Démocrate*. Jefferson and Madison agreed that Genêt harmed the Antifederalists, and the cabinet decided, 2 Aug., to demand his recall. His Jacobin successor, Joseph Fauchet, sought to arrest Genêt, 1794, but Washington let him stay in the U.S.

JEFFERSON'S RESIGNATION. 31 Dec. Anglophobic Republicans sympathized with France, but Federalists feared her alleged atheism and anarchism. When Washington turned more toward Hamilton and his cohorts, Jefferson resigned, 31 July, effective 31 Dec. Edmund Randolph became secretary of state, 2 Jan., 1794.

1794

WHISKY INSURRECTION. The "Whisky Insurrection" resulted from en-

forcement of the excise. When western Pennsylvania farmers ignored his order, 7 Aug., to disperse, Washington dispatched, 24 Sept., Henry Lee, accompanied by Hamilton, with 15,000 militia. The rebellion was easily suppressed.

JAY'S TREATY. 19 Nov. Britain's retention of the Northwest posts, allowing her to control the fur trade and impede western settlement, and her orders in Council, 8 June, 6 Nov., 1793, authorizing seizure of U.S. vessels and impressment of their crews, upset the Americans. Yet tariffs on British goods were vital to Hamilton's fiscal program, and so Washington, with Senate approval, 19 Apr., sent Jay to England to ameliorate the situation. By Jay's Treaty, 19 Nov., the British promised to leave the Northwest by 1 June, 1796, ended discrimination against American vessels in the British East Indies, and, provided Americans ceased carrying certain staples, opened the West Indies to American ships not exceeding 70 tons. The U.S. granted Britain most-favored-nation trade status, and the questions of illegal seizures and (to the distress of many, especially Virginians) pre-Revolutionary debts were referred to joint commissions. Articles written by "Camillus" (Hamilton) defended the treaty from attacks by Republicans, Southerners, and northern mercantile interests, and the Senate, dropping the West Indies provision (Art. XII), ratified it on 24 June, 1795.

1795

CABINET TAKE-OVER BY FEDERALISTS. Timothy Pickering became secretary of war, 2 Jan., and Oliver Wolcott, Jr., replaced Hamilton, who resigned, 31 Jan. Suspected of collaboration with the French against the Jay Treaty, Randolph resigned, 19 Aug., and Pickering succeeded him as secretary of state, James McHenry becoming secretary of war, 27 Jan., 1796.

TREATY OF SAN LORENZO (PINCKNEY TREATY) 27 Oct. After negotiating with Thomas Pinckney at Madrid, Spain recognized the U.S. boundaries established by the Treaty of Paris,

1783, and granted Americans free navigation of the Mississippi.

1796

WASHINGTON'S FAREWELL ADDRESS. 17 Sept. Written with the aid of Madison, 1792, and Hamilton, 1796, Washington's Farewell Address explained the President's refusal of a 3rd term; warned against parties, especially sectional ones; and advocated avoiding permanent foreign alliances.

PRESIDENTIAL ELECTION. 7 Dec. John Adams (Federalist) was elected President, and Thomas Jefferson (Democratic-Republican) Vice-President.

1797-99

XYZ AFFAIR. 18 Oct., 1797. Adams dispatched, 31 May, Charles Cotesworth Pinckney (1746-1825), John Marshall (1755-1835), and Elbridge Gerry (1744-1814) to improve deteriorating relations with France. In Paris, 3 agents (later called X, Y, and Z) of Talleyrand, the French foreign minister, demanded a loan to France and a \$240,000 bribe, 18 Oct. Marshall rebuked them, 17 Jan., 1798, and Adams announced, 19 Mar., to outraged Americans the collapse of negotiations.

QUASI-WAR WITH FRANCE. 1798-1800. Opposing the prowar Federalist faction, Adams sought peace while having Congress act, 27 Mar.-17 July, 1798, to bolster American defenses. He appointed Benjamin Stoddert, 21 May, secretary of the new, 3 May, Navy Department and made Washington, 2 July, army commander. A 2-year undeclared naval war followed Congress' abrogation of the alliance treaties with France, 7 July, 1798.

ALIEN AND SEDITION ACTS. As relations with France worsened, the Alien and Sedition Acts were passed by the Federalists. The Naturalization Act, 18 June, 1798, raised the residency requirement to 14 years (repealed in 1802). The Alien Act, 25 June, authorized deportation of aliens suspected of treasonous activities (expired in 1802). The Alien Enemies Act, 6 July, authorized the banishment in

wartime of subjects of enemy powers. The Sedition Act, 14 July, prohibited unlawful combinations to prevent execution of federal laws and false and malicious publications about the government (expired 3 Mar., 1801). All 10 persons convicted under the Sedition Act were Republican publicists, including James Thomas Callender and Matthew Lyon. Republican President Jefferson subsequently pardoned all, and Congress repaid their fines with interest.

KENTUCKY AND VIRGINIA RESOLUTIONS. These resolutions advocated the compact theory of government and denounced the Alien and Sedition Acts as unconstitutional. The Kentucky legislature's resolves, framed by Jefferson, claimed, 16 Nov., 1798, that each state could identify and redress federal usurpations of undelegated powers. Madison's Virginia declaration urged, 24 Dec., states to resist unconstitutional measures. When Northerners proclaimed the Supreme Court as arbiter of constitutionality, further Kentucky resolutions, 22 Nov., 1799, advocated state nullification of unconstitutional enactments.

FRIES' REBELLION. Feb. 1799. John Fries, opponent of the direct federal tax on property, raised a rebellion in Pennsylvania and was sentenced to death for treason, but pardoned by Adams.

On 14 Dec., 1799, George Washington died at Mt. Vernon.

1800-1801

CONVENTION OF 1800. When Talleyrand promised to receive respectfully a U.S. minister, Adams nominated, 18 Feb., 1799, William Vans Murray, who, with Oliver Ellsworth and William R. Davie, negotiated the Convention of 1800 (Treaty of Morfontaine, 30 Sept., 1800) releasing America from its French alliance. Discovering intrigue, Adams ousted prowar Hamiltonians from the cabinet. He requested McHenry's resignation, 6 May, 1800, and appointed John Marshall, 13 May, to replace the dismissed, 12 May, Pickering.

PRESIDENTIAL ELECTION. Federalists Adams and Charles C. Pinckney

(S.C.) and Republicans Jefferson and Aaron Burr (1756-1836) (N.Y.) ran for President and Vice-President, 3 Dec., 1800. The Alien and Sedition Acts and British impressment tactics were key issues. Jefferson and Burr each obtained 73 electoral votes. The House, influenced by Hamilton, elected Jefferson President, 17 Feb., 1801. The 12th amendment (ratified 25 Sept., 1804) separated the balloting for President and Vice-President. Jefferson's conciliatory inaugural address, 4 Mar., 1801, stressed the need for limited government, states' rights, civil liberties, and peace. Innovating, he wrote his annual message (8 Dec.) instead of addressing Congress.

1802

JUDICIARY ACT. On 8 Mar. the Judiciary Act of 27 Feb., 1801, was repealed, and a Republican Judiciary Act, 29 Apr., 1802, again reorganized the courts.

FINANCIAL POLICY. Jefferson's policy of cutting taxes and spending reduced the national debt from \$83 m. to \$57 m. between 1802 and 1809.

1803

MARBURY v. MADISON. 24 Feb. Refusing William Marbury's request for a writ of mandamus against Madison, Chief Justice John Marshall (appointed 20 Jan., 1801), establishing a precedent, declared unconstitutional Congress's empowering, 1789, of the Supreme Court to issue such writs.

LOUISIANA PURCHASE. Napoleon's secret acquisition of Louisiana from Spain by the Treaty of San Ildefonso, 1 Oct., 1800, threatened American security and commerce. When Spain temporarily suspended, 16 Oct., 1802-19 Apr., 1803, the right of deposit at New Orleans, Jefferson sent James Monroe (1758-1831) 12 Jan., 1803, to Paris to help Robert R. Livingston negotiate an agreement on the use of the Mississippi. Napoleon, seeking funds for an impending war with Britain, had Talleyrand offer, 11 Apr., all Louisiana to the American negotiators, who, although authorized only to pay \$10 m.

for New Orleans and West Florida, purchased the 820,000 sq. mi. between the Mississippi and the Rockies for \$15 m., 2 May. For once Jefferson broadly interpreted the Constitution, which did not explicitly authorize acquiring foreign territory, and the Senate approved, 20 Oct.

LEWIS AND CLARK EXPEDITION. Meriwether Lewis (1774–1809) and William Clark (1770–1838) stimulated western settlement and commerce by their overland trek to the Pacific, 31 Aug., 1803–7 Nov., 1805, and return to St. Louis, 23 Sept., 1806.

1804

BURR-HAMILTON DUEL. Burr killed Hamilton in a duel, 11 July, after the latter's comments, 16 Feb., helped defeat him in the New York gubernatorial election, 25 Apr.

PRESIDENTIAL ELECTION. 5 Dec. Jefferson won re-election over Charles Cotesworth Pinckney, and Republican George Clinton defeated Rufus King for Vice-President.

1805–6

COMMERCE AND NEUTRAL RIGHTS. Britain's sea power enabled her to impress American seamen and seize neutral shipping trading with her enemy France. British Justice William Scott's "continuous voyage" decision in the *Essex* case, 23 July, 1805, reversed the "broken voyage" doctrine of the *Polly* case, 1800, which permitted American vessels to carry goods from the French West Indies to France provided they 1st passed through U.S. customs. Congress retaliated with the Nicholson Non-Importation Act, 18 Apr., 1806 (effective 15 Nov.), which Jefferson suspended from 19 Dec., 1806, to 22 Dec., 1808. Britain, 16 May, and France, (Berlin Decree) 21 Nov., declared each other's European dominions blockaded.

MONROE-PINKNEY TREATY. 31 Dec., 1806. Monroe and William Pinkney, in London negotiations with Lord Holland, 27 Aug., obtained such an unfavorable agreement from the British on

maritime policies that Jefferson dared not submit it for ratification.

ECONOMIC WARFARE. Britain forbade European coastal trade with France, 7 Jan., and required ships trading with the Continent to pass 1st through a British port, 11 Nov. Napoleon's Milan Decree, 17 Dec., ordered seizure of any ships complying with Britain's orders.

BURR'S "CONSPIRACY." 19 Feb.–1 Sept. Burr's "conspiracy" either to separate treasonously the western states from the U.S. or to conquer Spanish territory was betrayed by his associate Gen. James Wilkinson (1757–1825) to Jefferson, who forbade anti-Spanish actions, 27 Nov., 1806. Burr, leading an expedition southwest from his accomplice Harman Blennerhassett's island in the Ohio, then fled. Captured in Alabama, 19 Feb., 1807, and indicted for treason, 24 June, Burr was acquitted in Richmond's Circuit Court by Marshall, who clarified America's treason law.

1807–9

"CHESAPEAKE"-"LEOPARD" AFFAIR. 22 June, 1807. Relations with Britain deteriorated sharply when fire from the *Leopard* caused 21 American casualties on the *Chesapeake*, whose commander had refused to surrender 4 alleged British deserters.

EMBARGO. Hoping to influence the belligerents by economic measures, Jefferson obtained an imprudent Embargo Act, 22 Dec., 1807, forbidding American vessels to leave for foreign ports. Britain received necessary supplies from South America and profited from the decline of the American carrying trade, while France, under the Bayonne Decree, 17 Apr., 1808, seized \$10 m. in U.S. goods and ships. The Enforcement Act, 9 Jan., 1809, intended to counter increased smuggling, intensified the opposition of New England Federalists, eastern Republicans, and John Randolph's (Va.) dissident "Quids." Men like Governor Jonathan Trumbull (Conn., 23 Feb., 1809) and Timothy Pickering advocated nullification, but Federalist Massachusetts Dis-

strict Judge Davis upheld the embargo. Jefferson's Non-Intercourse Act, 1 Mar., reopened trade with all nations except England and France. Madison rescinded, 9 Aug., an order of 19 Apr. resuming trade with Britain when Foreign Secretary Canning disavowed British Minister Erskine's promise of repeal of the orders in council of 1807 which applied to the U.S.

SLAVE-TRADE PROHIBITION. The African slave trade was prohibited by Congress, 2 Mar., 1807, effective 1 Jan., 1808.

ELECTION. 7 Dec., 1808. James Madison defeated Federalist Charles Cotesworth Pinckney and anti-embargo eastern Republican George Clinton for the Presidency. Clinton defeated Rufus King for the Vice-Presidency.

1810

MACON'S BILL NO. 2. 1 May. This bill authorized a resumption of trade with England and France, stipulating that if either belligerent ameliorated its maritime policy before 3 Mar., 1811, the President could institute nonintercourse against the recalcitrant nation.

FRENCH ATTACKS ON U.S. TRADE. Napoleon decided, 5 Aug., to offer revocation of the Berlin and Milan decrees provided the U.S. declare nonintercourse with Britain. Foreign Minister Duc de Cadore informed the American Minister John Armstrong that the decrees had been suspended. Madison reopened trade with France, 2 Nov., and Congress sanctioned nonintercourse against Britain, 2 Mar., 1811. America's next minister to France, Joel Barlow, discovered that Napoleon had in fact not ceased his attacks on American commerce.

ANNEXATION OF WEST FLORIDA. 27 Oct. The annexation was announced by Madison after southern expansionists established an independent state, 26 Sept. Congress incorporated the region into the Mississippi Territory, 14 May, 1812, and the Peace of Ghent confirmed U.S. possession, 1814.

FLETCHER v. PECK. Marshall voided as a contract violation the Georgia legisla-

ture's rescinding, 1796, of its predecessor's fraudulent \$500,000 sale to legislators and others of 35 m. acres in the Yazoo River area of Mississippi and Alabama.

1811

END OF 1ST BANK OF U.S. 4 Mar. Despite Treasury Secretary Gallatin's pleas, conservative "Old Republicans," Anglophobes upset by heavy English investment in the bank, and supporters of state banks defeated the rechartering of the U.S. Bank. In the House, 24 Jan., Clinton cast the deciding Senate vote against recharter, 20 Feb.

TECUMSEH. 31 July-8 Nov. Shawnee Chief Tecumseh's (1768?-1813) attempts to organize the Indians against white encroachment prompted fearful frontiersmen to request protection, 31 July. Leaving Vincennes, 26 Sept., Indiana Territorial Governor Gen. William H. Harrison (1773-1841) earned a costly victory at the Battle of Tippecanoe, 7 Nov., and razed the Indian capital, 8 Nov. British assistance to Tecumseh heightened animosity toward Britain.

"WAR HAWKS." 4 Nov. Americans elected several bellicose Republicans to the 12th Congress. Mostly Southerners and Westerners, they included Speaker Henry Clay (1777-1852) (Ky.) and Foreign Relations Committeemen John C. Calhoun (1782-1850) (S.C.), Felix Grundy (Tenn.), and Peter Porter (N.Y.). Dubbed "war hawks" by John Randolph, they were extremely conscious of the national honor and desired expansion toward Canada and the West. No "war hawk" himself, President Madison eventually supported their program.

1812

OUTBREAK OF THE WAR OF 1812. A 90-day general embargo became law, 4 Apr., and Congress authorized the President, 10 Apr., to call up 100,000 militia. When Foreign Secretary Lord Castlereagh reasserted Britain's refusal to withdraw her orders in council, Madison, claiming France had canceled the Berlin and Milan Decrees, drafted a war message.

Too late, 16 June, Britain terminated the orders. On 18 June Congress declared war on Britain, with maritime New England, New York, New Jersey, and Delaware dissenting. Madison's message, 4 June, mentioned impressment and violations of neutral rights as causes.

A 3-pronged drive against Canada, the main U.S. objective, fared badly. Gen. William Hull entered Canada, 12 July, but returned to Detroit, 8 Aug., and, fearing an Indian massacre of noncombatants, surrendered it to Gen. Brock, 16 Aug. Gen. Stephen Van Rensselaer's men occupying Queenstown Heights, 13 Oct., were crushed when New York militia refused to enter Canada to reinforce them. Gen. Henry Dearborn's attack from Plattsburg also collapsed, 19 Nov., when militiamen refused co-operation. The victories at sea, however, of the *Constitution*, 19 Aug., and *United States*, 25 Oct., over the *Guerrière* and *Macedonian* bolstered American morale.

ELECTION. 2 Dec. Madison was re-elected President over the Federalist candidate, antiwar Republican De Witt Clinton (N.Y.). Elbridge Gerry became Vice-President.

1813

BRITISH BLOCKADE. The British navy closed American ports by 1814 and harassed the seaboard. Although domestic manufacturing increased, the nation suffered severe economic hardships. The capture of 825 vessels by American privateers, 1814, had little retaliatory effect. On 1 June, Capt. P. V. B. Broke's *Shannon* captured Capt. James Lawrence's U.S. frigate *Chesapeake* near Boston.

LAKE ERIE. Gen. Harrison was commissioned, 17 Sept., 1812, to free Detroit, but British control of Lake Erie frustrated his efforts, 1813. In a bloody battle, 10 Sept., Capt. Oliver Perry's 10 vessels (55 guns) defeated Capt. Robert H. Barclay's 65-gun squadron, clearing the British from Lake Erie. His flagship *Lawrence* destroyed, Perry reported, "We have met the enemy and they are ours."

BATTLE OF THE THAMES. 5 Oct. Harrison defeated Gen. Henry A. Proc-

tor's men, who had fled Detroit. Tecumseh's death in this engagement ended the Indian menace.

ATTACK ON CANADA. Dearborn's troops raided, 27 Apr., York (Toronto), burned public buildings, and returned to Niagara, 8 May. Col. Winfield Scott (1786-1866) forced the British to abandon Fort George, 27 May, but Gen. Vincent defeated him at Stony Creek, 6 June.

Although War Secretary John Armstrong ordered him to assist Gen. Wilkinson in an attack on Montreal, Gen. Wade Hampton returned to Plattsburg after nearing Canada, 19 Sept. Learning this, Wilkinson, defeated near Chrysler's Farm, 11 Nov., established winter quarters, 13 Nov. Capturing Fts. George and Niagara, 18 Dec., the British burned Buffalo and Black Rock, 29-30 Dec.

PEACE PROPOSALS. 4 Nov. Castlereagh, rejecting Russian mediation, suggested direct peace talks. The Senate authorized J. Q. Adams, J. A. Bayard, Jonathan Russell, Clay, 18 Jan., 1814, and Gallatin, 8 Feb., to negotiate with Lord Gambier, Goulburn, and W. Adams.

1814

WAR EMBARGO. Madison obtained a war embargo, 17 Dec., 1813, to interdict New York and New England trade with the enemy. Recognizing their small value, Madison, 14 Apr., ended commercial restrictions.

CREEK WAR. War against the Creek Indians began with the Fort Mims (Ala.) massacre, 30 Aug., 1813. At Horseshoe Bend, 27 Mar., 1814, Gen. Andrew Jackson (1767-1845) subdued the Creeks, who signed the Treaty of Fort Jackson, 9 Aug. Harrison's Treaty of Greenville, 22 July, pacified the northwestern Indians.

NORTHERN CAMPAIGN. Following a military reorganization, Jan.-Feb., Gens. Jacob Brown and Winfield Scott, responsible for the Niagara sector, seized Fort Erie, 3 July. Scott crushed Gen. Sir Phineas Riall at Chippewa Plain, 5 July, and Brown fought Riall and Gen. Gordon Drummond to a draw at Lundy's Lane, 25 July. Lacking naval support from Commodore Chauncey, U.S. troops

returned to Fort Erie and drove off Drummond's besiegers, 21 Sept. Erie's evacuation, 5 Nov., ended the drive on Canada.

Sir George Prevost drove south from Canada and halted below Plattsburg, 6 Sept., to await Capt. George Downie's supporting vessels. Capt. Thomas Macdonough destroyed Downie's fleet, 11 Sept., in the Battle of Lake Champlain, forcing Prevost to withdraw to Canada.

WASHINGTON AND BALTIMORE.

19-22 Aug. Sir Alexander Cochrane landed, 19 Aug., Gen. Robert Ross's 4,000 British veterans at Benedict on the Patuxent River. Ross routed Gen William Winder at Bladensburg, 24 Aug., and proceeded to Washington, where the White House, Capitol, and other buildings were burned, 24-25 Aug., to avenge York. Madison, replacing Secretary of War Armstrong with Monroe, re-entered Washington, 27 Aug., after the British had embarked for Baltimore. There stout defenses stood off British attacks, 12-14 Sept., and the British sailed for Jamaica, 14 Oct.

NEW ORLEANS. When the British fleet with Sir Edward Pakenham's troops approached New Orleans from Jamaica, Jackson hastened, 15 Dec., there from Baton Rouge. Fighting, 8 Jan., 1815, 2 weeks after the peace treaty, Jackson's men, suffering 21 casualties, inflicted 2,036 on the enemy, who re-embarked, 27 Jan.

PEACE OF GHENT. 24 Dec. The treaty ending the War of 1812 provided for a return to the *status quo* except that the U.S. retained West Florida taken from Spain. The numerous maritime issues which generated the conflict were not mentioned. The Senate ratified the treaty on 15 Feb., 1815.

NATIONALISM, SECTIONALISM, AND EXPANSIONISM

1815

MILITARY ESTABLISHMENT. On 27 Feb. Congress ordered the navy's gunboats sold and Great Lakes vessels decommissioned. The House, 3 Mar., limited the army to 10,000 men.

NORTH AFRICA TREATIES. 3

Mar.-5 Aug. Stephen Decatur's (1779-1820) fleet, commissioned by Congress, 3 Mar., to stop the Barbary pirates' seizures of American ships and seamen, successfully exacted treaties from Algiers, 30 June; Tunis, 26 July; and Tripoli, 5 Aug.

1816

2ND BANK OF U.S. 10 Apr. Wartime monetary chaos prompted Treasury Secretary Alexander Dallas to request a national bank with a \$50 m. capitalization under which the President could suspend specie payments. Madison, who approved such a bank in his annual message, 5 Dec., 1815, vetoed an unsatisfactory congressional version, 20 Jan. Calhoun, with the support of Clay, who saw the bank as a fiscal necessity, proposed, 8 Jan., an institution like that desired by Dallas. Although Daniel Webster (1782-1852) (Mass.) opposed it, the national bank was established, 10 Apr., and opened 1 Jan., 1817. The government subscribed 1/5 of its \$35 m. capitalization and appointed 5 of its 25 directors. Langdon Cheves, 1819, and Nicholas Biddle (1786-1844), 1822, succeeded in turn the incompetent 1st president, William Jones.

PRESIDENTIAL ELECTION. 4 Dec. Republican James Monroe (Va., 183 votes) crushed Federalist Rufus King (N.Y., 34 votes). Republican Daniel D. Tompkins (N.Y.) became Vice-President.

1817

BONUS BILL VETO. 3 Mar. Arguing from the Constitution's "general welfare" clause, Calhoun proposed, 4 Feb., that the government devote the \$1.5 m. bonus paid by the 2nd U.S. Bank for its charter privileges and any dividends from the institution's stock to internal improvements to promote unity and security. Madison advocated such measures in his annual message, 3 Dec., 1816, but felt they required a constitutional amendment and therefore vetoed the bill, 3 Mar.

"ERA OF GOOD FEELINGS." This phrase, coined by Boston's *Columbian*

Centinel, 12 July, has inaccurately described Monroe's presidency, which was really a period of sharp factional politics and social change.

RUSH-BAGOT AGREEMENT. 28-29 Apr. Acting Secretary of State Richard Rush and British Minister to America Charles Bagot completed an agreement conceived by Madison and Castlereagh to limit the naval force their nations could deploy on waterways between the U.S. and Canada.

1818

SEMINOLE WAR. When conflict ensued with Indians and runaway Negroes after Americans had destroyed their refuge at Fort Apalachicola, Spanish Florida, on 27 July, 1816, Andrew Jackson proposed seizing Florida to Monroe ("Rhea Letter," 6 Jan.). Without administration authorization, he captured St. Marks, 7 Apr., and Pensacola, 24 May, and executed Arbuthnot and Ambrister, Englishmen accused of aiding the enemy. The popular general escaped punishment despite denunciations by the House, 12 Jan., 1819; Senate, 24 Feb., 1819; and cabinet, except for Secretary of State John Quincy Adams (1767-1848). Asserting that the U.S. acted in self-defense, Adams advised Spain to control Florida or cede it to America.

CONVENTION OF 1818. 20 Oct. This agreement established the 49th parallel as the northern U.S. boundary from Lake of the Woods to the Rockies, leaving unsettled the demarcation line west of the mountains.

1819

PANIC OF 1819. Financial panic, caused by inflation, speculation, and credit contraction due to Congress' demand, 1817, for specie payment resumption, resulted in debtor relief legislation and aroused resentment against the mismanaged National Bank.

ADAMSONIS TREATY. Adams concluded a treaty (ratified 24 Feb.) with Spanish Minister Luis de Onís by which the U.S. surrendered its Texas claims,

and Spain East Florida and its claims to the Pacific Northwest. Final exchange of ratifications occurred 22 Feb., 1821.

DARTMOUTH COLLEGE CASE. 2 Feb. When the state court upheld the New Hampshire legislature's alteration, 1816, of Dartmouth College's 1769 charter, the trustees, with Webster as counsel, appealed to the Supreme Court. Marshall found for Dartmouth, stating that a private institution's charter was an inviolable contract under the Constitution.

M'CULLOCH v. MARYLAND. 6 Mar. Marshall upheld the constitutionality of the Bank of the U.S. and declared unconstitutional any state taxes on the bank.

1820

MISSOURI COMPROMISE. 3 Mar. The populous 11 free states controlled the House while the 11 southern slave states protected their interests with their equal Senate vote. The question of the admission of Missouri to the Union threatened this balance. The Senate rejected, 27 Feb., 1819, Representative James Tallmadge's (N.Y.) proposal, 13 Feb., prohibiting the introduction of more slaves into Missouri and providing that the children born of slaves in the state after its admission should become free at age 25. When Congress next met, the Senate accepted, 17 Feb., 1820, Jesse B. Thomas' (Ill.) amendment to admit Missouri with slavery while banning the institution in the Louisiana Purchase north of Arkansas's northern boundary (36° 30'), and agreed to admit Maine as a free state, 18 Feb. Although it balked at first, the House enacted, 3 Mar., the compromise's provisions. Maine achieved statehood 15 Mar.

Antislavery congressmen disliked the Missouri Constitution's banning of free Negroes and mulattoes, 19 July. Clay's "2nd Missouri Compromise," 2 Mar., 1821, forbade Missouri's admission until its legislature guaranteed individual rights. Missouri agreed, 26 June, and became a state, 10 Aug.

SLAVE TRADE. On 15 May engaging in the African slave trade was declared

piracy, and Americans importing slaves became subject to the death penalty.

1821

NEW YORK'S CONSTITUTIONAL CONVENTION. 28 Aug.-10 Nov. Despite objections by conservatives like Chancellor James Kent, the New York Constitutional Convention abolished property requirements for voting.

1822

CUMBERLAND ROAD BILL. This bill, which authorized road repairs and tolls, was vetoed by Monroe, 4 May, who believed an internal-improvement program required constitutional reform.

LATIN AMERICA. The House readily supported, 28 Mar., Monroe's proposal, 8 Mar., to recognize newly independent Spanish American republics, as Clay had proposed, 1818 and 1821. Recognition was quickly granted to Colombia, 19 June; Mexico, 12 Dec.; and other nations.

1823

RUSSIAN TERRITORIAL CLAIMS. After Adams had stated, 17 July, that the continent was closed to further European colonization, Russia, which claimed, 4 Sept., 1821, American territory south to 51°, agreed, 17 Apr., 1824, to a 54° 40' boundary.

MONROE DOCTRINE. 2 Dec. When France, a member of the Quadruple Alliance, which had promised to restore Fernando VII of Spain to full authority (Congress of Verona, Nov. 1822), refused to renounce territorial ambitions in Latin America, Britain felt concern for her commercial interests. Foreign Secretary Canning proposed joint Anglo-U.S. opposition to any allied intervention in Spanish America to the American Minister Richard Rush, who informed Washington. Jefferson and Madison advised Monroe to co-operate with Britain, but Adams, skeptical of British motives, preferred that the U.S. act alone. British interest waned when France renounced

(Polignac Agreement, 9 Oct.) all intentions to conquer or annex Spanish-American colonies, and Monroe^a followed Adams' advice. In his annual message, 2 Dec., Monroe declared that while the U.S. would not interfere with existing European colonies in America, it would view any further colonization attempts as a threat. Lacking the force of international law, the Monroe Doctrine received little contemporary attention, but later played a central role in shaping U.S. policy.

1824

"THE AMERICAN SYSTEM." 30-31 Mar. Clay proposed protective tariffs and internal improvements (the "American System") to make the U.S. more self-sufficient. Congress passed the General Survey Bill, 30 Apr., making possible surveys and estimates of roads and canals necessary for the national interest.

PRESIDENTIAL CAMPAIGN. The Tennessee legislature, 20 July, 1822, nominated Andrew Jackson; Kentucky named Clay, 18 Nov., 1822; and a Boston meeting selected J. Q. Adams, 15 Feb. Crawford, nominated by a congressional caucus of only 66 of 216 Republicans, was eliminated by a heart attack. "King Caucus" and the "American System" were important issues.

ELECTION. 1 Dec. Calhoun became Vice-President, but the House had to elect the President as Jackson received only a plurality (99) of the electoral votes. Supported by Clay, Adams won, 25 Feb., 1825. Jacksonian charges of a "corrupt bargain" gained credence when Clay became secretary of state.

1825

CIVIL SERVICE. Adams' refusal to oust incumbents from patronage jobs decreased his political leverage. Furthermore, these appointees often opposed his policies.

OPPOSITION. Adams' annual message, 6 Dec., supporting an extensive American System outraged states'-righters. Calhoun filled important Senate posts with anti-administration men, but Adams' New

England-West coalition retained the initiative over the divided Southerners.

1826

PANAMA DEBATE. When Adams nominated 2 delegates, 26 Dec., 1825, to attend a Panama Congress of Latin American nations in 1826 as consultants, Calhoun and Sen. Martin Van Buren (1782-1862) of New York attacked him for accepting the invitation from Colombia and Mexico without Senate approval, and argued that attendance would compromise U.S. sovereignty. The Senate nevertheless sanctioned the mission, but delegate Richard C. Anderson died en route, 24 July, and John Sargeant failed to arrive in time.

1827

CHANGES IN THE FRANCHISE. Democracy expanded as property, taxpaying, and religious qualifications for voting disappeared. The number of elective offices increased, and by 1828 the people rather than the legislatures chose presidential electors in all states except South Carolina and Delaware.

TARIFF DISPUTE. Calhoun's vote in the Senate defeated a bill (introduced 10 Jan.) seeking prohibitive duties on woolen goods to protect northeastern textile interests. The agricultural South opposed tariffs which raised the cost of manufactured items.

1828-29

TARIFF OF ABOMINATIONS. 19 May, 1828. Jacksonians, confident of southern loyalty to their leader, proposed, 31 Jan., a tariff which levied high duties on iron, hemp, and raw materials while neglecting woolsens. They hoped New England, Adams' power base, would defeat the measure and alienate the vital Middle States. However, the bill, which accepted the protective principle, passed with New England support. Jacksonians of the western and Middle States voted for the tariff, thus depriving Adams of a party issue. South Carolina protested the tariff, 19 Dec., and Calhoun, now a sectionalist,

anonymously issued his *South Carolina Exposition and Protest* advocating nullification.

ELECTION OF JACKSON. Andrew Jackson, the frontier military hero, and Calhoun became the "democratic" candidates in a bitter personal contest against Adams and Richard Rush (Pa.), nominees of the "National Republicans." On 3 Dec. Jackson (178 votes) defeated Adams (83). Van Buren's "Albany Regency" won New York for Jackson. Calhoun remained Vice-President. Jackson's inaugural address, 4 Mar., 1829, pledged economy and states' rights. A group of his political friends (the "Kitchen Cabinet") advised Jackson until he organized a regular cabinet in 1831. Jackson increased significantly the use of patronage for party purposes (the "Spoils System"), but did not make wholesale political removals.

1830

WEBSTER-HAYNE DEBATE. 19-27 Jan. When Sen. Robert Y. Hayne (S.C.) attacked federal power, 19 Jan., Daniel Webster denounced southern indifference toward the Union. Hayne advocated nullification, 21, 25 Jan., but Webster defended the sovereignty of the national government and of the Constitution as interpreted by the courts, eloquently praising "Liberty and Union, now and forever, one and inseparable," 26, 27 Jan. Webster denied, 27 Jan., Hayne's contention that the Constitution was a compact between the states.

MAYSVILLE ROAD VETO. 27 May. Jackson, who doubted the constitutionality of federal internal improvements, vetoed a bill subscribing \$150,000 to build the 60-mi. Maysville Road, lying entirely within the borders of Kentucky.

1831

JACKSONIAN DIPLOMACY. Jackson announced, 5 Oct., 1830, that the U.S. and Britain had agreed to reopen the West Indian trade (closed, 1826-1827). William C. Rives negotiated a treaty, 4 July, whereby France agreed to pay 25 m. francs in compensation for Napoleonic

naval depredations, and the U.S. 1.5 m. francs for commercial violations of the Louisiana Treaty. After some difficulties, France began payments by May 1836.

ANTI-MASONIC PARTY. America's first 3rd party, the Anti-Masonic Party, emerged after revelations, 1827-31, that almost all New York officeholders and Jackson belonged to the secret Order of Freemasons.

ABOLITIONISM. William Lloyd Garrison (1805-79) began publishing *The Liberator*, 1 Jan., and founded the New England Antislavery Society, 1831, and the American Antislavery Society, 1833. He opposed political action and desired to end the union with the slaveholding states. Theodore Weld of Oberlin College (Ohio) and philanthropists Arthur and Lewis Tappan established the American and Foreign Antislavery Society, which broke with Garrison, 1840.

1832

INDIAN POLICY. Jackson refused to enforce Marshall's decision (*Worcester v. Georgia*, 3 Mar.) voiding a Georgia law requiring whites who settled land reserved by treaties for the Cherokee to swear allegiance to the state. He preferred to move Indians to areas west of the Mississippi. The Creeks, Choctaw, and Chickasaw moved, and the Cherokee submitted, 29 Dec., 1835. The Black Hawk, Apr.-Aug., and 2nd Seminole, Nov. 1835-Aug. 1843, wars resulted when some tribes balked.

NULLIFICATION. The protective nature of the lower 1832 tariff enabled a convention of South Carolina extremists, 24 Nov., to nullify the act. Jackson's "Proclamation to the People of South Carolina," 10 Dec., drafted by Secretary of State Livingston, asserted federal sovereignty and denounced the state's threatened secession as treason. Jackson requested, 16 Jan., 1833, authorization to use force to collect the revenue, and Calhoun, who resigned as Vice-President, 28 Dec., to enter the Senate, opposed it unsuccessfully. Jackson signed the Force Bill, 3 Mar., and a compromise tariff introduced by Clay, 13 Feb. South Caro-

lina ended the controversy by rescinding its nullification order, 15 Mar., but nullified the Force Bill, 18 Mar., to save face.

BANK VETO. 10 July. The effective U.S. Bank was disliked by debtors, state bankers, and states' rightsers. When Jacksonian Sen. Thomas Hart Benton (Mo.) attacked the Bank, Feb. 1831, Clay advised President Biddle immediately to request a renewal of the charter due to expire in 1836. Arguing that the Supreme Court's position on the Bank's constitutionality did not bind the President, Jackson acted to strike against monopoly by vetoing recharter, 10 July.

PRESIDENTIAL ELECTION. The Anti-Masons nominated, 26 Sept., 1831, William Wirt (Md.) and Amos Ellmaker (Pa.); the National Republicans, 12 Dec., 1831, Clay and John Sergeant (Pa.); and the Democrats, 21-22 May, Jackson and Van Buren. The Bank was the overriding issue. On 5 Dec., 1832, Jackson was re-elected (219 votes) over Clay (149) and Wirt (7). Van Buren became Vice-President.

JACKSON'S ATTACK ON THE BANK. Removal of the Bank's deposits became Jackson's goal. He appointed Attorney General Roger B. Taney secretary of the treasury, 23 Sept., replacing William Duane, who opposed removal. Taney announced, 26 Sept., that the government would cease deposits 1 Oct., and began placing the public funds in "pet" state banks. Jackson defended himself, 3 Dec., claiming that the Bank engaged in politics. Biddle had actively supported Clay in 1832 and was tightening credit to bring the administration to terms. The Senate adopted, 28 Mar., 1834, Clay's resolution of 26 Dec., 1833, censuring Jackson, and Benton's efforts to expunge it were unavailing until 16 Jan., 1837.

The Deposit Act, 23 June, 1836, required that a deposit bank be designated in each state, and distributed the \$5 m. surplus among the states.

1834

WHIG PARTY. Led by Clay and Webster, the Whigs were an anti-Jackson

coalition of National Republicans, pro-Bank former Democrats, and Anti-Mascns. Many of Calhoun's nullifiers also joined.

1835

ABOLITIONIST MOVEMENT. Abolitionist propaganda prompted southern states to expel antislavery editors. Postmaster General Kendall condoned southern interception of antislavery propaganda, and Jackson advocated, 2 Dec., banning it from the mails. The Senate rejected Calhoun's bill authorizing postmasters to seize publications illegal in their states.

LOCO-FOCOS. 29 Oct. Successors of the New York Workingman's Party, the Loco-Focos nominated a primary slate. These radical urban Jacksonians opposed monopoly and privilege, and favored hard money, popular elections, free trade, and strict construction.

1836

TEXAS. Stephen F. Austin (1793-1836), carrying out his father Moses' plan, began American settlement in Texas, Aug. 1821. The Federal Republic of Mexico, which incorporated Texas as a state, 7 May, 1824, encouraged colonization, 24 Mar., 1825, but later outlawed slavery and further American settlement, 8 Apr., 1830. Relations worsened with Santa Anna's Centralist Party, and conventions of Texans renounced Mexican sovereignty, Oct.-Nov. 1835, and declared independence, 2 Mar. Santa Anna slaughtered 187 Texans under William B. Travis at the Alamo in San Antonio, 23 Feb.-6 Mar. Sam Houston (1793-1863) defeated and captured Santa Anna at San Jacinto, 21 Apr., and became president of the Texas Republic, 22 Oct. Congress rejected, 25 Aug., 1837, Texas' annexation request, 4 Aug., 1837.

SPECIE CIRCULAR. 11 July. On Jackson's order the Specie Circular was issued to arrest the inflation and land speculation sparked by excessive use of paper money. Requiring that gold or

silver be used for purchasing public lands, it strained the pet depositories and undermined confidence in the state banks. Jackson pocket-vetoed, Mar. 1837, a measure rescinding the Circular, but repeal came by joint resolution, 21 May, 1838.

PRESIDENTIAL ELECTION. The Democrats nominated, 20 May, 1835, Van Buren and Richard M. Johnson (Ky.). Hoping to throw the election into the House, the opposition ran sectional favorites Webster, Harrison (Ohio), and Hugh L. White (Tenn.). On 7 Dec. Van Buren was elected (170 votes). No vice-presidential candidate having a majority, the Senate elected Johnson, 8 Feb., 1837.

1837

PANIC OF 1837. Reckless speculation caused New York banks and others to cease specie payments, 10 May. Cotton prices and land sales fell precipitously. Van Buren advocated, 5 Sept., specie currency and Treasury depositories independent of state banks.

ABOLITIONIST CONTROVERSY. Abolitionist petitions, 1836, against slavery in the District of Columbia inflamed southern congressmen. The Senate received the petitions, but automatically rejected them. The right of petition was ardently defended by former President J. Q. Adams, now a representative from Massachusetts. Henry L. Pinckney's (S.C.) special House committee recommended a "gag rule" (adopted 26 May, 1836) ordering antislavery memorials tabled. The House resolved it lacked jurisdiction over slavery in the states and declared interference with it in the capital inexpedient. The next session adopted, 19 Dec., a stricter gag rule after Representative William Slade (Vt.) presented more abolitionist petitions. Calhoun responded to Sen. Benjamin Swift's (Vt.) arguments against slavery extension, 19 Dec., by proposing, 27 Dec., 6 resolutions, several of which were adopted, including a confirmation of the compact theory of the Union and an attack on abolitionist efforts in Washington. Clay, seeking to

dissociate the Whigs from the extremists, denounced abolitionism, 7 Feb., 1839. When Sen. Preston (S.C.) advised Clay that he might have antagonized northern Whigs, the Kentuckian retorted: "I had rather be right than President."

1838

U.S.-CANADIAN RELATIONS. Already existing tension between the U.S. and Canadian governments was aggravated by neutrality and border disputes. Canadians burned, 29 Dec., 1837, the *Caroline*, which American Anglophobes used to supply rebel William Lyon Mackenzie's post on the Niagara River's Navy Island, and both sides called up their militias. Gen. Winfield Scott arranged a truce, Mar. 1839, and no blood was shed in this "Aroostook War."

1840

INDEPENDENT TREASURY. 4 July. Clay and Webster opposed Van Buren's independent treasury plan, 5 Sept., 1837. The Senate approved it, 4 Oct., 1837, but the House rejected it, 25 June, 1838. Calhoun's supporters, opposing the Whigs' nationalism, rejoined the Democrats, and the subtreasury bill, requiring the government to take care of its own funds, passed the 26th Congress, 1840.

PRESIDENTIAL ELECTION. Rejecting the controversial Clay, the Whigs' Harrisburg Convention, 4 Dec., 1839, nominated William H. Harrison (Ohio), a popular military hero without political qualifications or enemies, for President and states' rights adherent John Tyler (1790-1862) for Vice-President. The Democrats renominated Van Buren, 5 May. In its use of slogans, emblems, and rallies, the 1840 campaign set the style of later presidential campaigns. The Whigs exploited a derisive remark in the Democrats' Baltimore *Republican*, 23 Mar., associating Harrison with log cabins and hard cider, to portray their candidate as a man of the people. On 2 Dec. Harrison was elected (234 votes) over Van Buren (60). Tyler became Vice-President. On 4

Apr., 1841, Harrison died of pneumonia, and the "old Republican" Tyler became the first Vice-President to succeed to the presidency.

1841

INDEPENDENT TREASURY ACT. On 13 Aug. the Whigs repealed the Independent Treasury Act, as Clay requested, 7 June, preliminary to establishing another national bank.

BANK VETOES. 16 Aug., 9 Sept. Tyler vetoed, 16 Aug., a Whig bill to establish a "Fiscal Bank of the U.S.," and also rejected, 9 Sept., a modified version which omitted his stipulation that the bank obtain permission from a state before establishing a branch there.

CABINET RESIGNATIONS. 11 Sept. Every cabinet member except Webster resigned to protest Tyler's bank vetoes. Frequent cabinet changes characterized Tyler's presidency. Calhoun's appointment as secretary of state, 6 Mar., 1844, replacing the deceased Abel Upshur, marked the ascendancy of the South in the Democratic Party.

1842

WEBSTER-ASHBURTON TREATY. 9 Aug. Negotiated by Webster and Sir Robert Peel's envoy, Alexander Baring, Lord Ashburton, this treaty gave the U.S. 7,000 of the 12,000-sq.-mi. disputed region between Maine and New Brunswick, navigation of the St. John's River, other boundary concessions, and an informal apology for the *Caroline* incident. The Senate ratified on 20 Aug.

DORR'S REBELLION. Rhode Island severely restricted the suffrage. Dissidents framed, Oct. 1841, a People's Constitution providing white manhood suffrage, and elected, 18 Apr., Thomas W. Dorr (1805-54) their governor. Having unsuccessfully attacked the state arsenal, 18 May, Dorr was sentenced to life imprisonment by Samuel W. King's legal government, 25 June, 1844, but received a pardon in 1845. A new constitution, Apr. 1843, liberalized the suffrage.

1843

NATIVISM. Anti-Catholicism and heavy Irish immigration prompted formation of the American Republican Party in New York, June, and Philadelphia, Apr. 1845, and a national Native American Party, July 1845. Often supporting Whigs, they opposed voting and office-holding privileges for Catholics and foreigners.

1844

OREGON DISPUTE. The Convention of 1818, renewed 6 Aug., 1827, provided for joint occupation west of the Rockies between 42° and 54° 40' N. The U.S. based its claims partially on Capt. Robert Gray's discovery of the Columbia River, 1792, and the presence of American settlers in the Willamette Valley; Britain on voyages by Cook, 1778, Vancouver, 1792, and Mackenzie, 1793. Desiring the Columbia River area, Britain rejected U.S. offers to fix the boundary at 49°. Tension mounted as American settlers adopted a provisional government, 5 July, 1843, and petitioned Congress for territorial status.

TEXAS. When abolitionist forces prevented U.S. annexation of slaveholding Texas, President Mirabeau B. Lamar (1798-1859) led the republic along an independent course. The U.S., upset by Texas' close relations with Britain and France, told Texan Minister Isaac Van Zandt, 16 Oct., 1843, that it desired to reopen annexation discussions despite Santa Anna's bellicose warnings, 23 Aug., 1843. Sam Houston, president since Dec. 1841, fearing the loss of British support, held off until Secretary of State Upshur gave assurances, 16 Jan., of Senate acceptance of annexation. Houston accepted annexation provided the U.S. defend Texas against Mexican attack, and Secretary of State Calhoun signed the agreement, 12 Apr. Calhoun's note, 18 Apr., defending slavery and Tyler's remark, 22 Apr., that annexation would protect the institution impelled northern senators to reject the treaty, 8 June.

PRESIDENTIAL CAMPAIGN. Denouncing any extension of slavery, the Liberty Party nominated, 30 Aug., 1843, James G. Birney and Thomas Morris (Ohio). Silent on Texas, the Whigs selected Clay and Theodore Freylinghuysen (N.J.) on 1 May. The Democrats chose, 29 May, James K. Polk (1795-1849) (Tenn.), whom Jackson supported over Van Buren for President. George M. Dallas (Pa.) received the vice-presidential designation after antislavery Van Burenite Silas Wright declined it. Robert J. Walker (Miss.) formulated the platform, which demanded reoccupation of Oregon and reannexation of Texas. On 4 Dec. Polk was elected. Birney's incursions cost Clay New York and the election.

1845

ANNEXATION OF TEXAS. 1 Mar. Tyler requested, 2 Dec., 1844, the annexation of Texas by a joint resolution, which, unlike a treaty, required only a majority in both houses and the President's signature. The Senate, 27 Feb., and House, 28 Feb., complied, extending the 36° 30' compromise line to include Texas, and offering her admission. Texans ratified, 13 Oct., a convention's acceptance, 4 July, and entered the Union, 29 Dec.

ANTIRENT WAR. 1839-46. Agrarian uprisings in New York like the "Helderberg War," 1839-40, resulted from dissatisfaction with perpetual leases. The introduction of fee simple tenure under the 1846 constitution ameliorated the situation.

POLK DOCTRINE. 2 Dec. Reinforcing the Monroe Doctrine, the Polk Doctrine forbade European interference in the American continent's affairs, including U.S. annexations.

"MANIFEST DESTINY." This rallying cry for U.S. continental domination 1st appeared in John L. O'Sullivan's *United States Magazine and Democratic Review*, July-Aug.

BREAK WITH MEXICO. Mexico suspended relations with the U.S., 28 Mar., and prepared to resist annexation. Gen.

Zachary Taylor (1784-1850) was ordered into Texas, 15 June, and established a defensive position at the Nueces, 31 July, which the Mexicans claimed was the Texas boundary. Ordered forward by Washington, 13 Jan., 1846, Taylor arrived at the Rio Grande, 24 Mar., claimed by Texans as their border. Taylor rejected Gen. Pedro de Ampudia's demand, 12 Apr., that he withdraw to the Nueces.

SLIDELL MISSION. When Foreign Minister Manuel de Peña y Peña said, 15 Oct., that Mexico would negotiate the Texas boundary, Polk dispatched John Slidell with instructions, 10 Nov., to offer \$5 m. for New Mexico and \$25 m. for California in return for a Rio Grande settlement. Unfavorable public opinion forced President José J. Herrera to decline to receive Slidell, 16 Dec. Learning this, Washington ordered Taylor to the Rio Grande, 13 Jan., 1846. Gen. Mariano Paredes, who overthrew Herrera, 31 Dec., pledged to defend Mexican territory and refused to receive Slidell, 12 Mar., who then returned home.

1846

OREGON SETTLEMENT. 15 June. On 21 May, Polk gave the British the 1-year notice of termination of joint occupation of Oregon required by the renewed Convention of 1818. The U.S. refused to repeat its 49th-parallel compromise offer, but promised to resume negotiations if Britain took the initiative. When Lord Aberdeen, foreign secretary in the conciliatory Lord Russell ministry, submitted a draft treaty locating the border at 49°, Polk presented it to the Senate, 10 June, which ratified it, 15 June.

INDEPENDENT TREASURY ACT. This act, repealed in 1841, was repassed by the Democratic Congress on 6 Aug.

OUTBREAK OF MEXICAN WAR. Gen. Mariano Arista informed Taylor, 24 Apr., that he considered hostilities as having begun. When Mexican cavalry crossed the Rio Grande and attacked an American reconnaissance unit, 25 Apr., Taylor reported, 26 Apr., the start of hostilities.

Polk requested, 11th May, a declaration of war against Mexico, which he charged had "shed American blood on the American soil," and Congress complied, 13 May. Whig opposition to a military appropriation bill foreshadowed their increasing hostility to the administration.

COURSE OF THE WAR. While suffering very light losses, Taylor's 2,300 troops inflicted some 350 casualties on Arista's 6,000-man force at Palo Alto, 8 May, and over 700 at Resaca de la Palma, 9 May. The 36,000-man Mexican army was poorly equipped and commanded. Inadequate communications and sanitation hindered the 100,000 American soldiers, whose generals, could not work harmoniously together or with the administration. Many future Civil War commanders, however (e.g., Grant and Lee), saw action. Stephen W. Kearny was ordered to occupy New Mexico and California, and Winfield Scott to attack Veracruz and seize Mexico City.

Santa Anna became president of Mexico on 6 Dec.

CALIFORNIA. Polk ordered, 17 Oct., 1845, American Consul Thomas O. Larkin secretly to encourage Californians to enter the Union. When American settlers under William B. Ide declared their independence, 14 June, Capt. John C. Frémont (1813-90), who received still mysterious instructions, 9 May, supported this "Bear Flag Revolt" and became leader of the California Republic, 5 July. Commodore Robert F. Stockton, replacing the ill John D. Sloat, who raised the flag at Monterey, 7 July, seized Los Angeles, annexed California, 17 Aug., and declared himself governor. However, José María Flores recaptured California south of San Luis Obispo, 22-30 Sept.

Reaching Las Vegas, 15 Aug., Kearny annexed New Mexico. He took Santa Fe, 18 Aug., and defeated, 6 Dec., Mexicans at San Pascual, Calif. Stockton and Kearny took Los Angeles, 10 Jan., 1847, and the remaining Mexicans capitulated by the Treaty of Cahuenga, 13 Jan., 1847.

WILMOT PROVISIO. 8 Aug. David Wilmot (Pa.) proposed banning slavery from territory acquired from Mexico. The

House added, 15 Feb., 1847, the proviso to the "\$3 m. Bill" appropriating money for negotiations with Mexico, but the Senate rejected it, 1 Mar., 1847. Attacking the Proviso, Calhoun asserted, 19 Feb., 1847, that Congress, the agent of the states, could not interfere with slavery or prevent slave states from sharing in U.S. territorial acquisitions.

MONTERREY. 25 Sept. Taylor began ascending the Rio Grande, 6 July, and proceeded to Monterrey. While Gen. William North captured, 21–22 Sept., Federation and Independence Hills, the western approaches, Taylor entered the city, 21 Sept. The Mexicans, who suffered 367 casualties against the Americans' 488, surrendered, 25 Sept.

1847

DONIPHAN'S EXPEDITION. Col. Alexander W. Doniphan left Santa Fe, Oct. 1846, and entered Chihuahua, 1 Mar., having lost 1 man while killing 300 at the Battle of the Sacramento, 28 Feb.

BATTLE OF BUENA VISTA. 22–23 Feb. Violating Scott's order, 3 Jan., to remain on the defensive, Taylor advanced to a position near Buena Vista, 21 Feb. His defeat of Santa Anna's 15,000 troops, who suffered 1,500 casualties, ended hostilities in northern Mexico.

VERACRUZ. 22–27 Mar. Gen. Scott arrived at Tampico, 18 Feb., to prepare the U.S. expedition against Veracruz. His 10,000 troops and Commo. Conner's fleet bombarded the city, 22 Mar., forcing the Mexicans to surrender, 27 Mar. American losses totaled 82; Mexican, c. 180.

INLAND CAMPAIGN. 18 Apr.–6 Sept. Driving inland, Scott's 9,000 troops defeated Santa Anna's 13,000 at Cerro Gordo, 18 Apr., capturing 204 officers and 2,837 men. Reinforced by Gen. Franklin Pierce (1804–69) at Puebla, 6 Aug., Scott inflicted over 7,000 Mexican casualties at Contreras and Churubusco, 19–20 Aug., and then granted an armistice, 24 Aug., to allow peace discussions. Chief State Department Clerk Nicholas P. Trist, dispatched by Polk, 15 Apr., negotiated unsuccessfully with a Mexican peace com-

mission headed by ex-President Herrera, 27 Aug.–6 Sept.

MEXICO CITY. 8–14 Sept. Gen. Worth killed or wounded c. 2,000 Mexicans at the Battle of Molina del Rey, 8 Sept., and Gens. John A. Quitman and Gideon J. Pillow routed 5,000 at Chapultepec, 13 Sept. Scott entered the capital by night, 13–14 Sept. President Pedro Maria Anaya requested negotiations, 22 Nov., with Trist despite the fact that Polk had recalled him, 16 Nov.

1848

DISCOVERY OF GOLD. 24 Jan. James W. Marshall's gold find on Johann Augustus Sutter's land in the lower Sacramento Valley started the California gold rush.

TREATY OF GUADALUPE HIDALGO. 2 Feb. The U.S. obtained Texas with the Rio Grande as boundary, New Mexico, and California, a total of 1,193,061 sq. mi. The Senate, over the objections of those who wanted to annex Mexico, ratified it, 10 Mar., after rejecting a motion to add the Wilmot Proviso. Mexico ratified 25 May. 1,721 Americans had died of wounds and 11,155 of disease.

OREGON TERRITORIAL ORGANIZATION. 14 Aug. When Sen. Jesse Bright (Ind.) proposed extending the 36° 30' Compromise to the Pacific, Calhoun denied, 27 June, congressional jurisdiction over slavery in the territories. The House tabled, 28 July, Sen. John M. Clayton's (Md.) Compromise, which validated Oregon's provisional law against slavery and forbade New Mexico and California to legislate on the institution, and organized Oregon without slavery, 2 Aug. The Senate concurred, 13 Aug., and Polk signed, 14 Aug.

PRESIDENTIAL ELECTION. When Polk declined renomination, the Democrats selected, 22 May, Lewis Cass (Mich.), who supported local determination of the status of slavery ("squatter sovereignty"), and Gen. William O. Butler (Ky.), and expressed opposition to congressional interference with slavery in the states. The Whigs chose the Mexican War hero

Gen. Zachary Taylor and Millard Fillmore (1800-74), 7 June. New York's Barnburners bolted the Democratic convention and, joining with the Liberty Party and New England's "Conscience Whigs," nominated, 9 Aug., Martin Van Buren and Charles Francis Adams (1807-86) (Mass.) as candidates of the Free-Soil Party. Supporting the Wilmot Proviso, the party advocated "Free soil, free speech, free labor, and free men." On 7 Nov. Taylor was elected (163 votes) over Cass (123). Van Buren's large vote in New York contributed much to Cass's defeat.

1849

"ADDRESS OF THE SOUTHERN DELEGATES." 22 Jan. Issued by Calhoun on behalf of southern congressmen, the address denounced northern enactments against slavery expansion.

CALIFORNIA AND NEW MEXICO. The slavery issue prevented Polk from getting California and New Mexico organized. A California convention, 1 Sept.-13 Oct., adopted an antislavery constitution which the citizens ratified, 13 Nov. With Taylor's support California applied for admission, 12 Mar., 1850. Its petition threatened the existing balance of 15 free and 15 slave states.

1850

COMPROMISE OF 1850. 29 Jan.-20 Sept. To ease sectional animosities, Clay urged, 29 Jan., California's admission as a free state and New Mexico's organization without restrictions on slavery. He pleaded for mutual concessions by North and South, 5-6 Feb., but the dying Calhoun, speaking through James M. Mason (Va.), demanded, 4 Mar., an equal share of the territories for the South and an amendment restoring the equilibrium between the sections. Daniel Webster spoke eloquently, 7 Mar., for the Union, arguing that the geography of the territories made congressional legislation to preclude slavery unnecessary. William H. Seward (1801-72, N.Y.) condemned, 11 Mar., any compromise with slavery.

With the support of Fillmore, who succeeded to the presidency upon Taylor's death, 9 July, Clay and Stephen A. Douglas (1813-61, Ill.) pushed through Congress a bill ending the slave trade in the District of Columbia, 20 Sept., and an "Omnibus Bill" on the territories. California was admitted as a free state, 9 Sept., and New Mexico and Utah, carved from the rest of the acquired Mexican territory, were authorized, 9 Sept., to establish their own positions on slavery ("popular sovereignty"). A Fugitive Slave Act was passed, 18 Sept., authorizing special U.S. commissioners, after a summary hearing at which the claimant's affidavit was adequate proof of ownership, to issue certificates returning runaway slaves. A commissioner received \$10 if he issued a warrant, but only \$5 if he refused. Those who aided fugitive slaves were made liable to imprisonment and a \$1,000 fine.

CLAYTON-BULWER TREATY. 19 Apr. British establishment of a protectorate over Central America's Mosquito Coast and seizure from Nicaragua, Jan. 1848, of the San Juan River area threatened U.S. plans for an isthmian canal. Tensions eased when Secretary of State John M. Clayton and British minister Henry Lytton Bulwer negotiated a treaty providing that any isthmian canal would be neutral, not exclusively controlled, and open equally to citizens of both nations.

NASHVILLE CONVENTION. 10 June. Rejecting extremist Robert Barnwell Rhett's (S.C.) secessionist views, 9 slave states convening at Nashville requested only the extension of the Missouri Compromise line to the Pacific.

GEORGIA PLATFORM. 13-14 Sept. Georgia's state convention expressed southern Unionists' acceptance of the 1850 Compromise but threatened secession if Congress interfered with the interstate slave trade or fugitive-slave legislation.

HÜLSEMANN LETTER. 21 Dec. When Austria protested the Taylor administration's sympathetic assurances to Hungarian rebels, Secretary Webster

wrote to Austrian chargé Chevalier Hulsemann defending U.S. interest in European revolutions based on the principles of the American Revolution.

1851

LÓPEZ FILIBUSTERING EXPEDITIONS. Southern annexationists aided refugee Gen. Narciso López' attempts to overthrow Cuba's Spanish government. Cuban authorities executed, 13 Aug., López and 50 Southerners at Havana after his 3rd filibustering venture failed to spark a popular revolution.

1852

"UNCLE TOM'S CABIN." Harriet Beecher Stowe's novel, a devastating and emotional attack on slavery, was published, 20 Mar.

PRESIDENTIAL ELECTION. The Democrats nominated, 1 June, Franklin Pierce (N.H.) and William R. King (Ala.), and the Whigs, 16 June, Winfield Scott and William A. Graham (N.C.). Both parties praised the 1850 Compromise, but the Free-Soilers, who selected, 11 Aug., John P. Hale (N.H.) and George W. Julian (Ind.), condemned it. Pierce was elected, 2 Nov., by 254 votes over the candidates of the declining Whig (42) and Free-Soil parties.

1853

GADSDEN PURCHASE. 30 Dec. James Gadsden obtained Mexican cession of 29,640 sq. mi. in present-day southern New Mexico and Arizona.

1854

KANSAS-NEBRASKA ACT. 30 May. Proposed by Sen. Stephen A. •Douglas (Ill.), the act organized these territories on the basis of popular sovereignty, thus voiding the 1820 Compromise. Several factors may have influenced Douglas: belief in self-government and that geography prohibited slavery's expansion, desire for southern support for his presiden-

tial ambitions, and the need to stimulate western settlement to promote the building of a transcontinental railroad west from Chicago.

MASSACHUSETTS' EMIGRANT AID SOCIETY. 26 Apr. Founded by Eli Thayer, the society brought 2,000 anti-slavery settlers to Kansas by 1857 to guarantee that it would become a free state. Its methods were imitated by proslavery groups from Missouri.

FOUNDING OF THE REPUBLICAN PARTY. The Republican Party was founded at a Ripon, Wis., convention, 28 Feb., of Whigs, Free-Soilers, and Democrats opposed to the Kansas-Nebraska Act. Throughout the North and West, men demanded the repeal of the Kansas-Nebraska and Fugitive Slave Acts.

KNOW-NOTHING PARTY. The Know-Nothing, or American, Party, feeding on anti-Catholic and anti-immigrant sentiment, achieved its peak in 1854-55. The members split over slavery and many became Republicans.

OSTEND MANIFESTO. 18 Oct. Advocating the acquisition of Cuba by purchase or force as necessary for the protection of slavery, the Ostend Manifesto resulted from a meeting of Pierre Soulé, John Y. Mason, and James Buchanan, U.S. ministers to Spain, France, and Britain respectively. Although Secretary of State Marcy disowned the manifesto, the Republicans used it to show that the administration supported slavery extension.

1855

"KANSAS QUESTION." Proslavery and antislavery groups battled to control Kansas' territorial government. Intimidation by armed Missouri "Border Ruffians" resulted in the election of a proslavery territorial delegate, John W. Whitfield, 29 Nov., 1854, and legislature, 30 Mar. Proslavery forces replaced Gov. Andrew H. Reeder, appointed June 1854, with Wilson Shannon, 31 July. Antislavery Kansans formed, Sept.-Oct., a Free State Party; elected Reeder territorial delegate, 9 Oct.; framed the Topeka Constitution excluding Negroes from the territory, 23

Oct.-2 Nov.; and elected a separate governor and legislature, 15 Jan., 1856.

NICARAGUA FILIBUSTERING EXPEDITION. American adventurer William Walker, supported by the Accessory Transit Co., which had interests in the isthmus, seized control of Nicaragua during a civil war, June-Oct. 1855. Walker opened the area to slavery, but neighboring republics, encouraged by Cornelius Vanderbilt, who took over Accessory Transit, ousted him, 1857.

1856

"BLEEDING KANSAS." President Pierce's denunciation, 24 Jan., of the Topeka government disclosed his support of the proslavery forces. Civil war flared in the spring as proslavery Kansans and Border Ruffians outraged northern opinion by pillaging the Free State town of Lawrence. The fanatical John Brown (1800-1859), in an act disowned by antislavery Kansans, retaliated by executing 5 proslavery Kansans in a midnight raid near Pottawatomie Creek, 24-25 May. Peace temporarily returned when Gov. John W. Geary (Pa.) prevented an attack on Lawrence by 2,500 Border Ruffians.

Congress failed to act before adjournment on Kansas' application for statehood, 4 Mar. The House never considered Sen. Robert Toombs's (Ga.) measure, 2 July, requesting free elections for a Kansas constitutional convention. The Senate rejected a House proposal, 3 July, to admit Kansas under the Topeka constitution. Southerners praised and Northerners decried Rep. Preston S. Brooks's (S.C.) assault, 22 May, on Sen. Charles Sumner (1811-74, Mass.) for remarks the latter made about his uncle, Sen. Andrew P. Butler (S.C.), in an antislavery speech on Kansas, 19-20 May. Sumner was disabled until Dec. 1859.

PRESIDENTIAL ELECTION. The nativist American (Know-Nothing) Party, 22 Feb., and the Whigs, 17 Sept., nominated Millard Fillmore (N.Y.) and Andrew J. Donelson (Tenn.). The Democrats selected, 2 June, James Buchanan (1791-1868) (Pa.) and John C. Breckinridge (Ky.), and the Republicans John C.

Frémont (Calif.) and William L. Dayton (N.J.). "Bleeding Kansas" was the chief issue. On 4 Nov. Buchanan was elected (174 votes) over Frémont (114) and Fillmore (8).

1857

DRED SCOTT DECISION. 6 Mar. Negro slave Dred Scott began suit for his freedom in 1846, basing his claim on his residence between 1834 and 1838 in areas where the Missouri Compromise prohibited involuntary servitude. When the case reached the Supreme Court, Chief Justice Roger B. Taney (1777-1864) and the majority found (*Dred Scott v. Sandford*) that (1) slaves were not citizens and could not sue in federal courts; (2) Scott's status was his legal one in the state wherein he resided when he brought suit (Mo.); and (3) the Missouri Compromise unconstitutionally deprived people of their property. This was the first time since *Marbury v. Madison* (1803) that the Court declared a congressional act unconstitutional. Northern reaction was highly unfavorable.

LECOMPTON CONSTITUTION. 19 Oct.-21 Dec. The proslavery legislature meeting at Lecompton, Jan.-Feb., called a 15 June election for a constitutional convention. The Free State victory in the election for the legislature, 5 Oct., demonstrated that a proslavery constitution would not be ratified, so the convention, 19 Oct.-8 Nov., limited the people's choice either to vote for slavery or to forbid the further introduction of slaves into Kansas. The constitution was ratified, 21 Dec., because its opponents boycotted the voting. Northerners denounced the document, and the Democratic Party began to crumble as Douglas broke with Buchanan when the President supported it. The antislavery legislature held another election, 4 Jan., 1858, which almost unanimously rejected the entire Lecompton Constitution.

1858

DOUGLAS AND LECOMPTON. Douglas attacked the Lecompton Constitution

as a violation of popular sovereignty. Over his objections Congress accepted, 30 Apr., administration Democrat William H. English's (Ind.) compromise proposal that the whole Lecompton Constitution be popularly ratified, with rejection delaying Kansas' admission until it had achieved a population of approximately 90,000.

"A HOUSE DIVIDED AGAINST ITSELF CANNOT STAND." 16 June. Senatorial nominee Abraham Lincoln (1809–65) predicted at the Illinois Republican Convention at Springfield that slavery would eventually exist in every state or in none. Republican presidential hopeful William H. Seward's (N.Y.) "Irrepressible Conflict" speech, 25 Oct., shared Lincoln's view.

LINCOLN-DOUGLAS DEBATES. 21 Aug.–15 Oct. Lincoln won national prominence during 7 campaign debates with Douglas. The latter alienated southern supporters with his "Freeport doctrine" that, despite the Dred Scott decision, slavery could not exist unless local legislatures enacted necessary police regulations. Lincoln, who declared slavery immoral, gained more popular votes than Douglas, who evaded the moral issue, but the legislature elected the Democrat.

Campaigning against the Lecompton Constitution, Republicans won every northern state election except in Illinois and Indiana, and took 18 additional congressional seats.

1859

JOHN BROWN. 16–18 Oct. Brown's raid against Harper's Ferry, Va., was intended to spark slave revolts throughout the South. Captured by Col. Robert E. Lee (1807–70), Brown was hanged, 2 Dec., for treason against Virginia. Conservative Northerners denounced the attack, which Southerners attributed to abolitionists and Republicans.

AFRICAN SLAVE TRADE. The Southern Commercial Convention at Vicksburg, Miss., 9–19 May, advocated reopening the African slave trade. President Buchanan opposed it, and promised, 19 Dec., to use all legal means to prevent slave importations.

1860

DAVIS RESOLUTIONS. 2 Feb. Sen. Jefferson Davis (1808–89, Miss.) successfully proposed several proslavery resolutions. One denounced states' attempts to thwart the Fugitive Slave Law and another stated that Congress had to protect slavery in the territories.

SECESSION THREATS. Several state legislatures in the Lower South advocated secession if a Republican became President. The Upper South had more faith in the benefits of the Union.

PRESIDENTIAL CAMPAIGN. The Democrats met at Baltimore, 18 June, and chose Douglas (Ill.) and Herschel V. Johnson (Ga.). When the party refused to advocate slavery in the territories, southern delegates seceded and nominated, 28 June, John C. Breckinridge (Ky.) and Joseph Lane (Ore.). Former Whig and American party members selected, 9 May, John Bell (Tenn.) and Edward Everett (Mass.) as candidates for their compromising Constitutional Union Party. The Republicans nominated, 16 May, Lincoln (Ill.) and Hannibal Hamlin (Me.), and supported internal improvements and homesteads, while opposing slavery in the territories.

ELECTION OF LINCOLN. 6 Nov. Lincoln received 180 votes (18 free states) over Breckinridge (72, 11 slave states), Bell (39), and Douglas (12). Douglas closely followed Lincoln's 1,866,352 popular votes with 1,375,157.

CIVIL WAR AND RECONSTRUCTION

1861–77

SECESSION CRISIS. 20 Dec., 1860–1 Feb., 1861. Denouncing the election of the sectional Republican Party's anti-slavery presidential candidate, South Carolina's state convention voted unanimously, 20 Dec., to secede from the Union. Mississippi, 9 Jan.; Florida, 10 Jan.; Alabama, 11 Jan.; Ga., 19 Jan.; Louisiana, 26 Jan.; and Texas, 1 Feb., quickly followed. In the Upper South, Arkansas, North Carolina, Tennessee,

and Virginia remained loyal, but threatened secession if the federal government resorted to force. Buchanan accepted Attorney General Jeremiah S. Black's position that the government could not use force to prevent secession.

ESTABLISHMENT OF THE CONFEDERACY. 4 Feb. The Montgomery (Ala.) Convention of the seceding states established a provisional government. The Confederate Constitution resembled the U.S. one, but stressed states' sovereignty and outlawed slave importations. Jefferson Davis (Miss.) and Alexander H. Stephens (Ga.) were elected, 9 Feb., provisional President and Vice-President of the Confederacy.

Federal forts and arsenals were then seized throughout the South. Buchanan refused, 31 Dec., to surrender federal forts, but South Carolina seized, 30 Dec., the U.S. arsenal at Charleston. That city's batteries drove off, 9 Jan., an unarmed ship bringing provisions and reinforcements for Maj. Robert Anderson's men in Fort Sumter.

OUTBREAK OF CIVIL WAR. Lincoln's announcement, 6 Apr., that he would provision Fort Sumter prompted South Carolina to demand, 11 Apr., its immediate surrender. Maj. Anderson complied, 13 Apr., only after Gen. Pierre G. T. Beauregard's batteries bombarded, 12 Apr., the installation. Lincoln called for 75,000 volunteers to put down the "insurrection," 15 Apr.

BORDER STATE CRISIS. Claiming Lincoln's call for volunteers presaged an invasion of the South, Virginia seceded, 17 Apr., and Richmond became, 21 May, the Confederate capital. Arkansas, 6 May; Tennessee, 7 May; and North Carolina, 20 May, followed suit. Virginia's mountainous western sector balked and organized, 11 June, a Union government under Francis H. Pierpont. West Virginia became a state, 20 June, 1863. Slaveholding Delaware unanimously rejected secession, 3 Jan. In Maryland, Gov. Thomas Hicks and a majority of the populace were Unionists, but the legislature was willing to accept southern independence. The federal government secured Maryland in mid-1861 by suspending habeas corpus and imprisoning numerous offi-

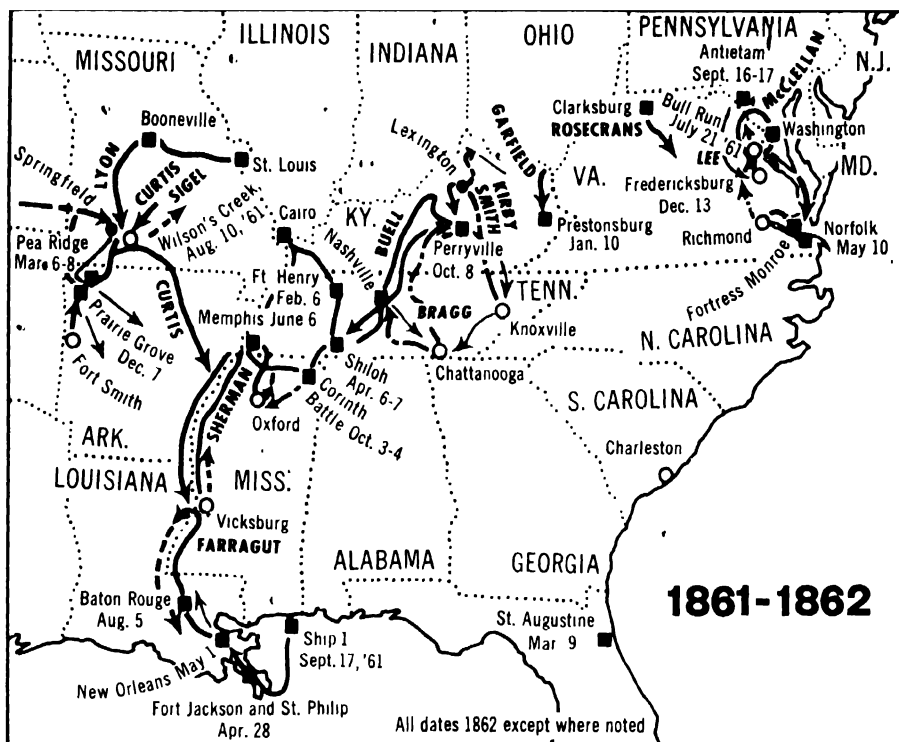

cials. Kentucky's legislature proclaimed, 20 May, neutrality, and Lincoln promised not to send in troops. However, when Confederates occupied Hickman and Columbus, Gen. Ulysses S. Grant (1822-85) took, 6 Sept., Paducah, and the legislature, 11 Sept., called for the Confederates' ouster. Kentucky contributed 75,000 men to the Union army. Civil war raged in Missouri, where the defeat of secession-minded Gov. Claiborne F. Jackson at Pea Ridge, Ark., 6-8 Mar., 1862, guaranteed Union control of the state.

OPPOSING FORCES. The 23 Union states, with a population of 22 m. and a balanced economy supported by an extensive railroad system and merchant marine, had numerical and material superiority. The 11 Confederate states had a population of 9 m., including 3 m. slaves, and a staple agricultural economy which lacked industry, banking, and railroads. Despite these disadvantages the South chose secession believing that the North would not fight and that Britain, dependent on southern products, would give the Confederacy material aid. Southerners also viewed as advantages their control of the mouth of the Mississippi, defensive role, and excellent officer corps.

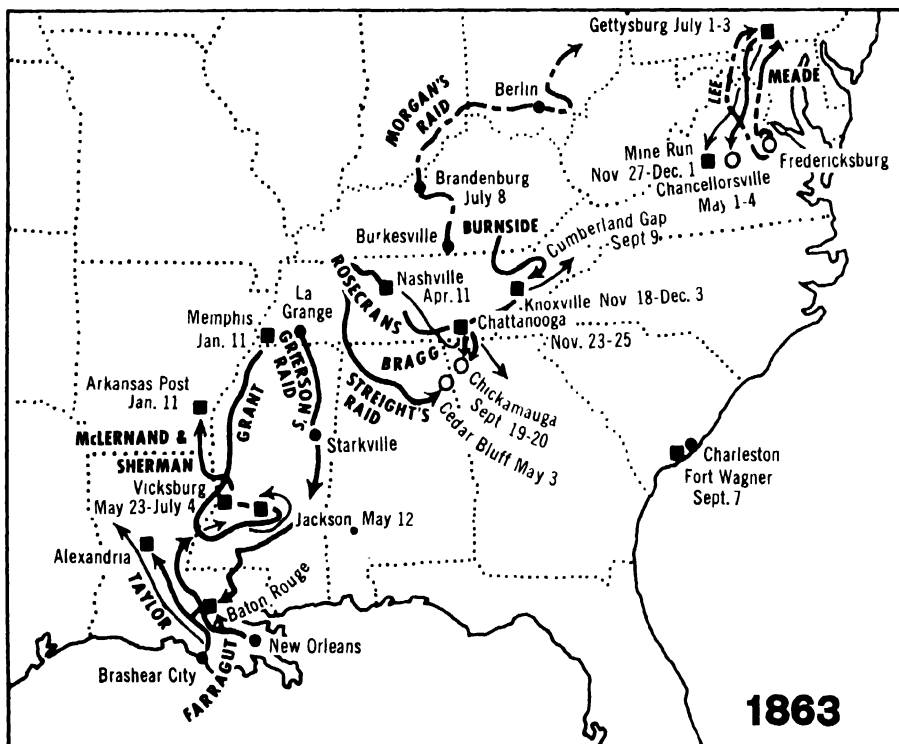

The Union and Confederate armies enlisted 1,556,678 and 1,082,119 men respectively. The North fought to restore the Union and, after 1862, to free the slaves; the South for the independence and sovereignty of the Confederacy.

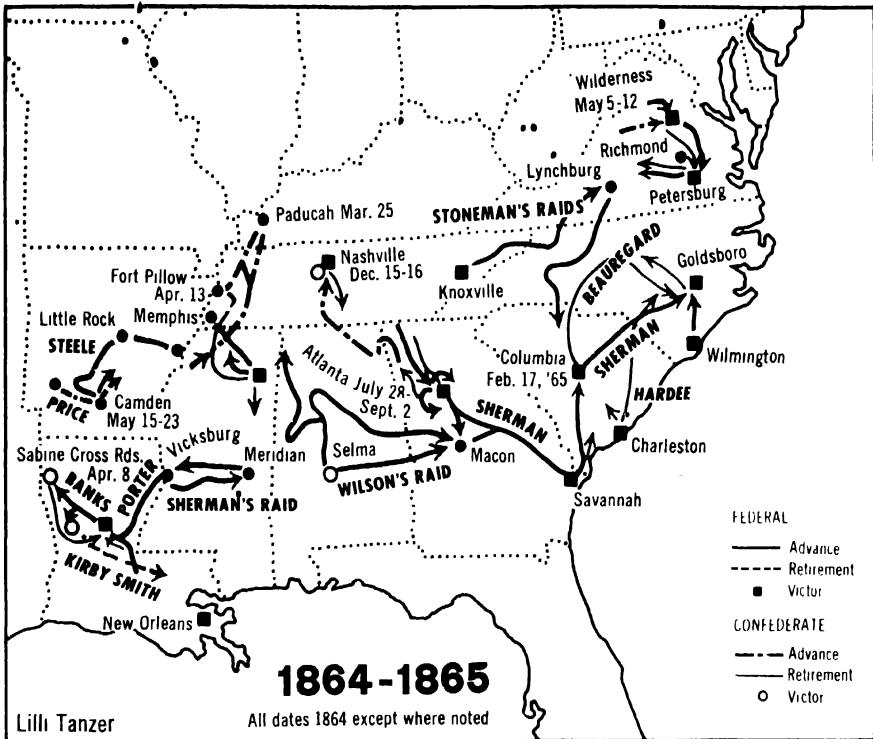

STRATEGY. The North planned to use 1 army to capture Richmond and another to capture the Mississippi and Tennessee rivers. These forces would then join to crush the Confederacy. The South hoped to capture Washington and invade Pennsylvania to force a divided North to request peace.

1ST BULL RUN. 21 July. Popular demands for action prompted the dispatch of Gen. Irvin McDowell's unseasoned troops to attack Beauregard at Manassas Junction, Va. McDowell's attack, 21 July, seemed successful until reinforcements and Gen. Thomas J. "Stonewall" Jackson's stand enabled Beauregard to drive the Northerners back to Washington in disorder.

THE CIVIL WAR

ASSUMPTION OF COMMAND BY McCLELLAN. 24 July. Maj. Gen. George B. McClellan, whose victory at Philippi, 3 June, cleared the Confederates from the Valley of the Kanawha in western Virginia, replaced McDowell. McClellan became general in chief, 1 Nov., when Gen. Winfield Scott retired.

NAVAL BLOCKADE. Lincoln ordered, 19 Apr., the 3,500-mi. southern coast blockaded to starve the Confederacy. Relying heavily on Nassau in the Bahamas for supplies, the rebels cleared approximately 600 ships during the first year of the blockade instead of the usual 6,000. Federal capture of Forts Clark and Hatteras, N.C., 28-29 Aug., Port Royal, S.C., 7 Nov.; Roanoke Island, 8 Feb., 1862; New Orleans, 29 Apr., 1862; and other coastal locations significantly increased the blockade's effectiveness.

ANGLO-U.S. RELATIONS. Britain's upper class and commercial interests supported the Confederacy, while the lower class favored the Union. Her declaration of neutrality, 18 May, angered the Union

by mentioning the South's belligerent status, but Lord John Russell promised American Minister Charles Francis Adams that Britain would not deal with Confederate agents.

TRENT AFFAIR. Capt. Charles Wilkes of the *San Jacinto* removed, 8 Nov., Confederate commissioners James M. Mason and John Slidell from the British steamer *Trent*, but Secretary of State Seward eased the situation by releasing them.

JOINT COMMITTEE. 20 Dec. A joint committee on the conduct of the war was established by a Congress displeased with Lincoln's vast powers. Radical Republicans like Thaddeus Stevens (1792-1868, Pa.) dominated it.

1862

WAR IN THE WEST. Gen. U. S. Grant and Commodore A. H. Foote captured Fort Henry on the Tennessee, 6 Feb. Grant took 14,000 prisoners at Fort Donelson on the Cumberland 16 Feb.

forcing Confederate Gen. Albert S. Johnston to abandon Nashville, which fell 25 Feb.

SHILOH. 6-7 Apr. Grant moved to Pittsburg Landing, Tenn., to prepare an attack on Confederates under Johnston, Beauregard, and Polk at nearby Corinth, Miss. The rebels smashed into Grant's inadequately defended position, 6 Apr., but Grant, reinforced by Gens. Buell and Wallace, emerged victorious, 7 Apr. The 63,000 Northerners suffered 13,000 losses and the 40,000 Southerners 11,000.

On 26 Apr. New Orleans was occupied by Gen. Benjamin F. Butler.

PENINSULA CAMPAIGN. Lincoln removed, 11 Mar., McClellan, who had ignored his 22 Feb. command to launch an offensive, as gen. in chief, and ordered the Army of the Potomac, minus McDowell's corps, against Richmond.

"MONITOR" AND "MERRIMAC." 9 Mar. In the first battle of ironclads, the U.S.S. *Monitor* fought the *Virginia* (formerly *Merrimac*) to a draw. The *Virginia* withdrew for repairs to Norfolk, where she was scuttled when the city fell, 10 May.

MCCLELLAN'S ADVANCE. 17 Mar.-31 May. Having occupied Yorktown, 4 May, McClellan, despite his overwhelming strength, stopped 20 mi. from Richmond at White House to await McDowell's corps.

JACKSON'S VALLEY CAMPAIGN. 23 Mar.-9 June. Stonewall Jackson's 18,000 troops kept 2½ times as many Union soldiers engaged in the Shenandoah Valley. He routed Gen. Banks at Winchester, 24 May, driving the Northerners across the Potomac.

SEVEN PINES (FAIR OAKS). 31 May-1 June. Gen. Joseph E. Johnston attacked 2 of McClellan's corps isolated on the south bank of the Chickahominy River, but another corps rescued them. Union losses totaled 6,000, Confederate 8,000.

7 DAYS' BATTLE. 26 June-2 July. Robert E. Lee, commander of the Army of Northern Virginia, engaged McClellan's forces for 7 successive days starting 26-27 June at Mechanicsville. McClellan

battered the Confederates until Lee withdrew to Richmond, 2 July, after unsuccessfully attacking at Malvern Hill, 1 July. Union losses in the Peninsula Campaign reached 15,849, Confederate, 20,614.

2ND BULL RUN. 29-30 Aug. When Gen. Pope, under orders from Gen. in Chief Halleck, prepared to attack Richmond, Lee reacted quickly. Jackson destroyed Pope's base at Manassas Junction, 26 Aug., and the Confederates trapped counterattacking Union forces. Maj. Gen. James Longstreet drove Pope back toward Bull Run.

INVASION OF MARYLAND. When Lee invaded Maryland, 14-15 Sept., McClellan defeated him at South Mountain and Crampton's Gap, 14 Sept., but Jackson captured, 15 Sept., 11,000 men and the supply depot at Harper's Ferry.

ANTIETAM. 17 Sept. The war's bloodiest day produced 11,657 Union and 11,729 Confederate casualties. McClellan won a technical victory as Lee withdrew to Virginia, 18 Sept. The Union's success deterred France and Britain from recognizing the Confederacy, and enabled Lincoln to issue, 22 Sept., his Preliminary Emancipation Proclamation freeing as of 1 Jan., 1863, slaves in rebellious areas.

WESTERN THEATER. Gen Braxton Bragg advanced from the Confederate base at Chattanooga into central Tennessee, but withdrew after a bitter battle with Rosecrans at Murfreesboro, 31 Dec.-3 Jan., 1863, which produced 9,220 Union and 9,239 Confederate losses.

FREDERICKSBURG. 13 Dec. Lincoln replaced, 7 Nov., the frustratingly cautious McClellan with Ambrose E. Burnside. At Fredericksburg, Burnside's 113,000 troops lost 1,284 in attacking 75,000 rebels who only lost 595. Joseph Hooker replaced Burnside, 25 Jan., 1863.

1863

EMANCIPATION PROCLAMATION.

1 Jan. Congress freed, 17 July, 1862, the slaves of traitors and of those supporting the rebellion, and abolished slavery in the Capital, 16 Apr., 1862, and the territories, 19 June, 1862. Lincoln, who had not

requested abolition lest the border states revolt, saw that European and popular opinion was becoming more radical and issued his Emancipation Proclamation, 1 Jan. This statement, which declared slaves in rebellious areas free, went no farther than previous legislation and applied only to places where the federal government exercised no control.

MILITARY DRAFT. Under Congress' 1st Conscription Act, 3 Mar., males 18-35 were liable to the draft but could escape by paying \$300 or finding a substitute. This inequitable system provoked the New York City Draft Riots, 13-16 July, in working-class districts. Four drafts raised only a small part of the Union army. The Confederacy drafted, 16 Apr., 1862, white men 18-35 for 3 years. Some Southerners questioned the constitutionality of this corruptly administered act, which exempted many occupations and allowed substitution. Desertions on both sides reached approximately 10%.

FINANCING THE WAR. Congress's National Banking System, 25 Feb., required national banks to invest $\frac{1}{4}$ of their capital in U.S. securities and authorized them to issue notes based on these bonds. The Confederacy issued over \$1 billion in paper, which depreciated to \$1 = £1.6 by the end of the war.

HOME FRONT. Northern prices (117%), production, and profits rose significantly, while wages (43%) lagged. Immigration, c. 800,000, and increased mechanization of industry and farming replaced the man power lost to the military. In the South women filled supervisory positions and most slaves remained loyal.

FOREIGN AFFAIRS. Seward rejected, 6 Feb., Napoleon III's offer of mediation and Congress denounced, 3 Mar., such "foreign intervention."

CONFEDERATE RAIDERS. 4 Apr. British-built Confederate raiders like the *Alabama* dealt severely with Union shipping, destroying 257 vessels. Upon U.S. Minister Charles Francis Adams' protest, the British government seized, 5 Apr., the newly constructed *Alexandra*, but the courts released her.

CHANCELLORSVILLE. 2-4 May. Lee's 60,000 troops won a costly victory over Hooker's 130,000. Jackson, who lost his life, surprised and routed the Union right. Hooker retreated, 5 May, across the Rappahannock. Union deaths totaled 1,575, Confederate 1,665.

VICKSBURG CAMPAIGN. Leaving Memphis, 29 Mar., Grant crossed the Mississippi and proceeded down the Louisiana coast to a point south of the strategic citadel of Vicksburg. He ferried across, 30 Apr., and approached the city with 20,000 men. Grant besieged Vicksburg, 22 May-4 July, and Gen. John C. Pemberton surrendered its 40,000-man garrison, 4 July, giving the Union control of the Mississippi. Union casualties reached 9,000, Confederate 10,000.

GETTYSBURG CAMPAIGN. 27 June-4 July. Lee moved his army up the Shenandoah, and by 23 June Gen. Richard S. Ewell's cavalry had approached Chambersburg, Pa. Undetected, Hooker pursued Lee and established headquarters at Frederick, 27 June. Maj. Gen. George G. Meade replaced Hooker, who resigned, 28 June, after disputes with Halleck.

Confederate Gen. Ambrose P. Hill's fortuitous clash with John Bedford, 30 June, at Gettysburg prompted a showdown. The Southerners drove the Northerners, 1 July, back upon Cemetery and Culp's hills. Gens. Jubal A. Early, Longstreet, and Ewell failed, 2 July, to take Cemetery Ridge, Little Round Top, and Culp's Hill respectively. Lee had Longstreet send, 3 July, 15,000 men under Pickett, Pettigrew, and Trimble against the main federal positions, but the superior fire power of the more numerous Northerners mauled them. The flooded Potomac blocked Lee's retreat, 4 July, but bad weather prevented pursuit and he reached Virginia, 13 July. Union losses totaled 3,155 killed, c. 20,000 wounded or missing, Confederate 3,903 killed, c. 24,000 wounded or missing. Lincoln's most memorable speech helped dedicate, 19 Nov., a cemetery at Gettysburg.

Gettysburg ended southern hopes for European aid. When Adams threatened

war, Britain seized Confederate iron-clads ("Laird rams") under construction. Napoleon halted ship sales to the South.

CHICKAMAUGA. 19-20 Sept. Reinforced by Longstreet, Bragg, whom Rosecrans maneuvered out of Chattanooga, 9 Sept., smashed the Northerners at Chickamauga. The stand of Gen. Thomas, the "Rock of Chickamauga," saved the Union forces, which retired into Chattanooga. Union dead totaled 1,657, Confederate 2,312.

CHATTANOOGA. 23-25 Nov. Thomas replaced Rosecrans and, reinforced by Hooker, took the offensive. He drove Bragg off Lookout Mountain, 23 Nov., and routed his forces from Missionary Ridge, 25 Nov. Union dead totaled 753, Confederate 361. The Northerners could now march through Georgia to the sea.

PRESIDENTIAL RECONSTRUCTION. 8 Dec. Lincoln announced his plan to grant amnesty to Southerners who swore loyalty and to recognize state governments where 10% of the 1860 electorate took the oath and which agreed to emancipation.

1864

THE WILDERNESS. 5-6 May. Grant, now supreme military commander, utilized his 100,000-man Army of the Potomac to batter Lee. Crossing the Rapidan, 4 May, he entered the Wilderness. Attacking his flank, Lee's 60,000 troops, suffering 10,000 casualties, inflicted 18,000.

SPOTSYLVANIA. 8-12 May. Lee inflicted some 12,000 more Union casualties when Grant's maneuvers failed at Spotsylvania Court House.

COLD HARBOR. 1-3 June. Engagements on 3 June cost Grant 12,000 casualties. In the month ending 12 June, Confederate losses totaled c. 30,000, an unbearable blow despite the Union's almost 60,000 casualties.

PETERSBURG. 15-18 June. Grant moved to Petersburg, 20 mi. below Richmond, to isolate the Confederate capital. Losing 8,000 men, 15-18 June, he began siege operations.

EARLY'S RAIDS. 2-13 July. Confederate Gen. Early, raiding in Maryland, neared Washington, D.C., but was repulsed, 13 July. Gen. Philip H. Sheridan defeated him at Winchester, 19 Sept.; Fisher's Hill, 22 Sept.; and Cedar Creek, 19 Oct., and devastated the Shenandoah Valley.

INVASION OF GEORGIA. 7 May-2 Sept. Gen. William T. Sherman's 100,000 troops left Chattanooga, May. Joseph E. Johnston harassed him, inflicting 2,000 casualties at Kenesaw Mountain, 27 June, while suffering only 270. Unsatisfied with his defensive strategy, Davis replaced Johnston with John Bell Hood. Sherman entered Georgia, inflicting heavy losses on Hood, 20, 22 July, and took Atlanta, 1 Sept.

MARCH TO THE SEA. 14 Nov.-22 Dec. With 60,000 men, Sherman drove 300 mi. across Georgia, capturing Savannah, 22 Dec. Living off the land, the Northerners devastated an area 60 mi. wide along their route.

NASHVILLE. 15-16 Dec. Hood's strategy was to cut Sherman's long communication lines, but Gens. Thomas and John M. Schofield destroyed his army at Nashville.

PRESIDENTIAL ELECTION. The Republicans nominated, 7 June, Lincoln and War Democrat Andrew Johnson (1808-75, Tenn.). The Democrats selected, 29 Aug., Gen. McClellan and George H. Pendleton (Ohio). War frustrations and Radical denunciations for his veto of the stringent Wade-Davis Reconstruction Bill hurt Lincoln's chances, but Sherman's successes reunited the party and boosted the nation's morale. Lincoln was re-elected by 212 votes to 21, but with a narrow popular margin.

1865

WEAKENING OF THE CONFEDERACY. Transportation disruptions, devastation, federal occupation, and the blockade produced hunger in the South and lowered morale. Disunionist tendencies appeared, protest riots shook southern cities, and $\frac{2}{3}$ of the soldiers left the

ranks. Davis desperately authorized arming the slaves, 7 Nov., 1864, and the Congress belatedly agreed, 20 Mar., 1865.

SHERMAN IN THE CAROLINAS.

16 Jan.-21 Mar. Sherman's men ravaged South Carolina, taking the capital, Columbia, 17 Feb., and Charleston, 18 Feb. In North Carolina, Johnston, restored to command by Lee, who was now leader of all Confederate forces, slowed Sherman's progress.

PETERSBURG AND RICHMOND. 2

Apr. Battered by Grant's 115,000 troops, Lee attacked at Five Forks, 1 Apr., but Sheridan repulsed him. Lee evacuated Petersburg and Richmond to join Johnston in North Carolina.

APPOMATTOX COURTHOUSE. 9

Apr. Having surrounded Lee, Grant asked him to surrender, 7 Apr., and they reached terms, 9 Apr., at Appomattox Courthouse, Va. Lee's approximately 30,000 soldiers were paroled to return home with their private horses and mules.

LINCOLN'S ASSASSINATION. 14

Apr. John Wilkes Booth shot, 14 Apr., Lincoln at a performance of *Our American Cousin* at Ford's Theater, Washington. Lincoln died the next morning and Andrew Johnson became President. Booth died trapped in a barn near Bowling Green, Va.; 4 other conspirators were executed, 4 imprisoned, and 1 man, John H. Surratt, was acquitted.

FINAL CAPITULATION. 26 Apr.-26

May. Johnston surrendered, 18 Apr., to Sherman, and agreed to terms, 26 Apr. Gen. Kirby Smith surrendered to Gen. Canby at New Orleans, 26 May, ending Confederate resistance. Jefferson Davis was captured, 10 May, in Georgia.

CASUALTIES. Union losses totaled 359,528 dead and 275,175 wounded. Confederate, 258,000 dead and at least 100,000 wounded.

RECONSTRUCTION UNDER JOHNSON. Johnson recognized loyal governments in Arkansas, Louisiana, Tennessee, and Virginia. He established provisional governments for the other 7 states, and announced, 6 Dec., restoration of the Union when they abolished slavery and repudiated their state war debts.

RADICAL REACTION. The Radical Republicans refused to endorse Johnson's actions and claimed Congress alone could reconstruct the conquered provinces or seceding states. They established a Joint Committee of 15, dominated by Radical Thaddeus Stevens (Pa.), to study Reconstruction problems.

ABOLITION OF SLAVERY. 18 Dec. Slavery was abolished by the 13th Amendment to the Constitution.

1866

NEW FREEDMEN'S BUREAU BILL.

19 Feb. To counteract repressive Southern Black Codes, Congress, over Johnson's veto, authorized the Freedmen's Bureau (est. 3 Mar., 1865) to try by military commission persons accused of violating freedmen's civil rights.

CIVIL RIGHTS ACT. 9 Apr. Passed over Johnson's veto, the act granted Negroes citizenship and equal rights.

14TH AMENDMENT. 16 June. Proposed because of doubts about the constitutionality of the Civil Rights Act, the 14th Amendment established Negro citizenship and guaranteed constitutional rights against infringement by the states. Ratification, a congressional condition for restoration to the Union, came 28 July, 1868.

CONGRESSIONAL REPRESENTATION AND ELECTIONS. A joint committee denied, 20 June, that the South merited representation. Congress restored Tennessee, 24 July, when it ratified the 14th Amendment. The Republicans campaigned as the party of the Union, while identifying Johnson with ex-rebels and Copperheads (pro-southern Democrats). Radical Reconstruction became inevitable when the Republicans won $\frac{2}{3}$ of each house.

1867-68

1ST RECONSTRUCTION ACT. 2 Mar., 1867. The South was divided into 5 military districts. Constitutional conventions were to ratify the 14th Amendment and grant Negro suffrage. Supplementary Re-

construction Acts, 23 Mar., 19 July, 1867; 11 Mar., 1868, expedited enforcement of the first.

MILITARY RECONSTRUCTION. Johnson unenthusiastically enforced these laws. 20,000 troops oversaw the establishment of Radical southern governments by southern "scalawag" whites, northern "carpetbaggers," and southern Negroes.

ALASKA. 9 Apr., 1867. The Senate ratified Secretary Seward's treaty acquiring Alaska from Russia for \$7.2 m.

FOUNDATION OF GRANGER MOVEMENT. 4 Dec., 1867. The Patrons of Husbandry ("Grangers") and numerous independent farmers' parties opposed monopolies and sought regulation of certain public utilities. Illinois passed the 1st Granger legislation, 7 Apr., 1871, establishing a railroad and warehouse commission to fix maximum rates.

OMNIBUS ACT. 22-25 June, 1868. Arkansas, Alabama, Florida, Georgia, Louisiana, North Carolina, and South Carolina were restored to the Union after they had framed acceptable constitutions. Mississippi, Texas, and Virginia ratified the 15th Amendment (proposed 26 Feb., 1869) guaranteeing Negro voting rights, and gained readmission by 1870. Congress ousted Georgia for expelling, Sept., Negroes from the legislature, but readmitted her when she restored them and ratified the 15th Amendment, 15 July, 1870.

IMPEACHMENT OF JOHNSON. 24 Feb.-26 May, 1868. Congress, in special session, passed, 2 Mar., 1867, the Tenure of Office Act forbidding the President to remove, without Senate consent, appointees confirmed by that body. When Johnson removed, 21 Feb., 1868, Secretary of War Edwin M. Stanton, the House's Covode Resolution, 24 Feb., impeached him. Chief Justice Salmon P. Chase presided at the Senate trial, 30 Mar.-16 May, which acquitted Johnson. 35 Senators, 1 short of the necessary $\frac{2}{3}$, voted, 16 May, finding Johnson guilty of high misdemeanor.

PRESIDENTIAL ELECTION. The Republicans nominated, 20-21 May, 1868, U. S. Grant and Schuyler Colfax (Ind.). The Democrats selected, 9 July, Horatio

Seymour (N.Y.) and Francis P. Blair (Mo.). The Republican campaign centered on waving "the bloody shirt of the rebellion." On 3 Nov. Grant was elected, 214-80. 500,000 Negro votes decided the contest.

SUPREME COURT AND RECONSTRUCTION. Fearing that the justices would invalidate Reconstruction legislation, the Radicals denied, 27 Mar., 1868, the Court jurisdiction in *ex parte McCordle*. The Court, however, upheld Congress' right to reconstruct the South (*Texas v. White*, 1869).

1869

PUBLIC CREDIT ACT. 18 Mar. This act provided for the payment of government obligations in gold.

"BLACK FRIDAY." 24 Sept. The government's sale of \$4 m. in gold stymied Jay Gould's and James Fisk's attempt to corner that metal.

1870-71

SANTO DOMINGO. The Senate defeated, 30 June, 1870, a Grant-supported treaty to annex Santo Domingo.

KU KLUX KLAN ACTS. 31 May, 1870, and 20 Apr., 1871. These acts, which were declared partially unconstitutional, 1876 and 1883, sought to enforce the 15th and 14th Amendments respectively against the terrorist activities of the white supremacist Ku Klux Klan organization.

TWEED RING. 8 July, 1871. George Jones's revelations in *The New York Times* of the Tammany machine's corrupt practices led to the conviction of William Marcy ("Boss") Tweed, 5 Nov., 1872.

1872

"ALABAMA" CLAIMS. An international arbitration tribunal established by the Treaty of Washington, 8 May, 1871, ordered Britain to pay, 25 Aug., 1872, the U.S. \$15.5 m. for damages done by British-built Confederate raiders.

CRÉDIT MOBILIER EXPOSÉ. Vice-President Schuyler Colfax and other important politicians were accused of cor-

rupt practices in relation to the Union Pacific Railroad's construction.

PRESIDENTIAL ELECTION. The Liberal Republicans nominated, 1 May, Horace Greeley (1811-72) and B. Gratz Brown (Mo.) on a reform platform, and the Democrats followed suit, 9 July. The Republicans nominated, 5 June, Grant and Henry Wilson (Mass.). Grant was re-elected, 286-66.

1873

"THE CRIME OF '73." 12 Feb. Labeled by its detractors as a crime, the Coinage Act demonetized silver.

PANIC OF 1873. 18 Sept. When Jay Cooke's banking firm collapsed, a financial panic ensued. The government issued \$26 m. in greenbacks to offset its effects.

1875

SPECIE RESUMPTION ACT. 14 Jan. The panic weathered, Congress ordered specie payments resumed by 1 Jan., 1879, and greenbacks in circulation reduced to \$300 m.

CIVIL RIGHTS ACT. 1 Mar. The Act of 1875 forbade discrimination in public accommodations.

WHISKY RING. Formed by revenue officers and distillers to defraud the government, a whisky ring was uncovered, 1 May, and Grant's private secretary, O. E. Babcock, implicated.

1876

BELKNAP'S IMPEACHMENT. War Secretary William W. Belknap resigned when impeached for receiving bribes in the sale of Indian Territory trading posts.

PRESIDENTIAL ELECTION. The Republicans nominated, 16 June, Rutherford B. Hayes (1822-93, Ohio) and William A. Wheeler (N.Y.). James G.

Blaine (1830-93), a leading contender, was eliminated when accused, 31 May, before the House of unethical dealings with the Union Pacific Railroad.¹ The Democrats selected, 27-29 June, Samuel J. Tilden (1814-86, N.Y.) and Thomas A. Hendricks (Ind.). In the election, 7 Nov., Tilden won the popular and apparently the electoral vote. However, Florida, Louisiana, South Carolina, and Oregon, where Republicans disputed Tilden's victory, reported, 6 Dec., 2 sets of election returns.

1877

ELECTORAL COMMISSION. 29 Jan. An Electoral Commission of 5 Democratic and 5 Republican congressmen and 5 Supreme Court justices, including 2 Democrats and 2 Republicans, was established to resolve the dispute. Independent David Davis (Ill.) was supposed to be the fifth justice, but Republican Justice Bradley was chosen when Davis became U.S. senator. Voting straight party lines, the commission awarded, 9, 16, 23, 28 Feb., Hayes all the doubtful votes.

ELECTION OF HAYES. 2 Mar. Hayes was declared elected, 185-184. Southerners adopted the commission's decision, and in return Hayes withdrew, Apr., federal occupying forces; appointed, 5 Mar., David M. Key (Tenn.) postmaster general, and promised to support southern internal improvements.

END OF "BLACK RECONSTRUCTION." Extravagance and malfeasance plagued Radical governments in the South. However, the need to rebuild that devastated area and to provide hitherto neglected services like schools and hospitals justified many expenditures. Georgia, North Carolina, Tennessee, and Virginia, 1869-71; Alabama, Arkansas, Mississippi, and Texas, 1874-75; and Florida, Louisiana, and South Carolina, 1877, ousted the Radicals. (*Cont. p. 300.*)

Latin America and the Caribbean, 1825–1914

MEXICO

1825–34

ERA OF SANTA ANNA. President Guadalupe Victoria, 1824–28, who represented the Liberals and Federalists, was a soldier rather than an administrator. He suppressed an uprising led by his Conservative vice-president, Nicolás Bravo. Victoria should have been followed by Manuel Gómez Pedráza, a moderate backed by the Conservatives, who won a narrow victory in the elections of 1828. But the results were challenged by Antonio López de Santa Anna (1795?–1876), whose domination of the political scene for the next 2 decades nearly destroyed Mexico. Liberal Vicente Guerrero, the defeated candidate, became president, 1829, but his term was soon interrupted by an army revolt, led by Santa Anna, fresh from an easy victory over a Spanish force at Tampico. Guerrero was replaced by his Conservative vice-president, Anastasio Bustamante, 1829–32, who was in turn under the thumb of the foreign minister, Lucas Alamán. Although an economic reformer, Alamán was a fervent Conservative in politics and religion. Sensing a reaction against Alamán's dictatorial policies, Santa Anna overthrew Bustamante and permitted Gómez Pedráza to complete his term. Santa Anna then became president himself, 1833–35, but he left the government to the vice-president, Valentín Gómez Farías, the leader of Mexican liberalism during this period. Gómez Farías curtailed the privileges of the church and the army. When a cholera epidemic touched off widespread discontent with the oligarchy, however, Santa Anna returned to office and repealed Gómez Farías' progressive measures.

1835–45

CONSERVATISM AND REGIONAL REVOLTS. Unable to control his hand-

picked Conservative congress, Santa Anna again retired from the government. The Congress then drew up a new centralist constitution, 1836, which established a 5-member council as a counterweight to the power of the Presidency. Meanwhile, the Texans, discouraged by Gómez Farías' refusal to give them self-government and antagonized by Santa Anna's plan to enforce centralization, declared themselves independent, 2 Mar., 1836. Santa Anna sought to revive his waning popularity by subduing Texas, but he was defeated at the battle of San Jacinto, 21 Apr. Bustamante again became president, 1837–39, but his power was threatened by regional revolts, directed against the political and economic hegemony of central Mexico. Santa Anna finally atoned for the Texas fiasco by defeating a small French invasion at Veracruz, the "Pastry War," and embarked on a new presidential term, 1839–40. The peace was soon disturbed, however, by an attempted Liberal uprising in Mexico City, led by Gómez Farías. As a compromise, Bustamante became president, 1840–41, but not for long. His government was overthrown by a trio of generals: Mariano Paredes, Gabriel Valencia, and Santa Anna. Under a new Conservative constitution, Santa Anna returned to power, 1841–44, but, lacking money to pay his followers, could not maintain order. Paredes revolted and Congress named the moderate José Joaquín Herrera, president (1844–45).

1846–54

WAR WITH THE U.S. President Polk's annexation of Texas and Slidell's offer to buy the Southwest were exploited by Paredes to overthrow Herrera. Following an attack on U.S. troops in disputed territory, war was declared, May 1846. U.S. victories in the north and Paredes' incapacity provoked a revolt, which restored Gómez Farías and the federalist Constitution of 1824. Lack of anyone better

qualified forced Gómez Farias to give Santa Anna command of the army. When Gómez Farias made himself unpopular by taxing the church to finance the war, he was easily unseated by Santa Anna, returning from what he claimed was victory at Buena Vista, 22-23 Feb., 1847. Despite an 11th-hour co-operation between the political factions, U.S. forces occupied Mexico City. The Maya Caste War in Yucatán and new threats of secession from the north prompted the moderates to conclude a quick peace. The Treaty of Guadalupe Hidalgo, 2 Feb., 1848, gave the U.S. nearly half of Mexico: California, New Mexico, Nevada, Utah, Ari-

zona, part of Colorado, and, of course, Texas. This huge loss of territory intensified the desire of the reformers to reorganize the country. The postwar moderate Conservative presidents, Herrera, 1848-50, and Mariano Arista, 1851-53, were conscientious but were confronted by overwhelming problems of finance and the maintenance of order. Alarmed by the growing liberal movement, the Conservatives under Alamán once more put Santa Anna in the presidency, 1853-54, hoping to re-establish a centralized, and ultimately monarchical, government. Alamán's death, however, gave Santa Anna a free hand. Mexican politics reached a

new low level with his sale of the Mesilla Valley to the U.S. (Gadsden Purchase, 30 Dec., 1853).

1854-61

THE REFORMA. The Indian leader Juan Álvarez and a group of distinguished Liberal intellectuals proclaimed the Plan of Ayutla, 1 Mar., 1854, calling for a constitutional convention, and led a revolt against Santa Anna. Santa Anna fled, leaving the government to the Liberals. Álvarez became provisional president, 1855, but, lacking political skill, he was unable to ride the tide of criticism provoked by the *Ley Juárez*, which abolished church and army courts. A moderate, Ignacio Comonfort, 1855-58, became president under the theoretically federalist and congressionalist Constitution of 1857. Although the *Ley Lerdo*, which forced the church and other corporate bodies to sell their property, was passed during Comonfort's term, his vacillations displeased both Liberals and Conservatives. An uprising under Felix Zuloaga and Miguel Miramón brought the Conservatives to power in Mexico City. Comonfort's vice-president, the Indian lawyer Benito Juárez (1806-72), proclaimed himself president and a civil war, 1858-61, ensued. A final wedge was driven between the 2 sides by Juárez' Laws of Reform, 1859. All church property became liable to confiscation without compensation, and church and state were separated. A Liberal victory kept Juárez in the presidency for a while, 1861-63, but Liberal opposition in Congress, rebellious Conservative army detachments, and a French invasion drove him out again.

1862-67

FRENCH IMPERIAL ADVENTURE. Suspension of service on foreign debts led to the arrival of a British, Spanish, and French expeditionary force to obtain financial satisfaction. French plans also included conquest, and Prince Maximilian and his wife Charlotte (Carlota), who it was hoped would found a new French dynasty, were installed in Mexico City, 1864-67. Maximilian re-established a cen-

tralized government and an imperial court, but his efforts to conciliate the Liberals and his taxation of the church angered the Conservatives, who had originally invited him. Napoleon III soon had to withdraw the French forces, leaving Maximilian to face the Liberals alone. Defeated, he was executed by Juárez, 19 June, 1867.

1867-76

LIBERAL RULE. Juárez returned to the presidency, 1867-71, now a popular symbol of nationalism and liberalism. He sought to unify the country, but years of fighting had brought the habit of violence and had produced economic stagnation. Juárez tried to normalize political life, but his increasingly highhanded rule and his reduction of the army earned him many Liberal as well as Conservative enemies. He died shortly after his re-election, 1872, which had been the occasion for a revolt by one of the defeated candidates, the Liberal General Porfirio Díaz (1830-1915). Vice-President Sebastián Lerdo de Tejada finished Juárez' term, 1872-76. He followed Juárez' policies, incorporating the Laws of Reform into the constitution, but he lacked political skill and appeal. When he was re-elected, Díaz harnessed the diverse opposition factions and with army support overthrew him. The *Reforma* had provided a Liberal program for Mexico, but its leaders had not been able to implement it.

1876-1910

ERA OF PORFÍRIO DÍAZ. From 1876 to 1910 Díaz was president, except for a brief period, 1880-84, when the office was held by Gen. Manuel González. Without changing the Constitution of 1857, Díaz imposed a centralized, 1-party regime, permitted the church to regain its former position, gave the military special benefits, and helped the already wealthy landowners to increase their holdings. Order and material progress were achieved, but at the price of complete domination of the economy by foreign interests and the lack of educational and other reforms benefitting the lower classes. Govern-

mental oppression gradually provoked a violent reaction, ushering in the 1st of the 20th-cent. social revolutions.

1910-14

REVOLUTION. The elections of 1910 saw the appearance of an opposition candidate, the idealistic Liberal, Francisco Madero (1873-1913). Díaz' willingness to share power with a vice-president had stimulated hopes of political change, but these were dashed when Díaz was re-elected. Issuing the Plan of San Luis Potosí, 5 Oct., 1910, Madero then called for Díaz' resignation and joined the popular revolts which broke out under Pancho Villa (1877-1923) and Emiliano Zapata (1879?-1919). The Díaz political machine, old and weakened by years of internal feuding, was incapable of meeting the challenge. Riots in Mexico City forced Díaz' resignation, 1911. Madero was elected 1st revolutionary president, Nov. 1911-Feb. 1913. Well-intentioned but too weak for such violent times, Madero could not control the opportunists and his program of political reform did not satisfy the popular leaders, who wanted, above all, land redistribution. Madero was murdered by Victoriano Huerta, who succeeded him, Feb. 1913-July 1914. Huerta was a corrupt counter-revolutionary dictator, with no program which could win him popular support. Thus, Zapata and Villa continued their campaigns, now joined by Venustiano Carranza and Álvaro Obregón, who called for constitutional government. Aided by the U.S. occupation of Veracruz, the insurgent forces seized power, Aug. 1914, and called a convention at Aguascalientes to organize a government. The revolutionaries were divided, however, Villa and Zapata remaining in Mexico City while Carranza and Obregón retired to Veracruz. The struggle among the victors had begun. (*Cont. p. 450.*)

COLOMBIA AND VENEZUELA

1825-30

DISSOLUTION OF GRAN COLOMBIA. President Simón Bolívar (1783-

1830) of Gran Colombia was at odds with Francisco de Paula Santander (1792-1840), his vice-president and the leader of those who opposed Bolívar's centralist, authoritarian, somewhat anticlerical regime. The Santander group also disliked Bolívar's use of Colombian men and money in "foreign" wars. The Constitutional Convention of Ocaña, Mar. 1828, called to heal this rift, failed to do so, and Bolívar became dictator. Santander, accused of complicity in an attempt on Bolívar's life, was exiled. Meanwhile, Bolívar's plan for Pan-American co-operation, the Congress of Panama, 22 June-15 July, 1826, had also failed. Regional uprisings in Venezuela, Colombia, Ecuador, and Peru led to another unsuccessful convention, Jan. 1830, and to the resignation of Bolívar. Joaquín Mosquera (1787-1877) was elected president of Gran Colombia, May, but at that moment Venezuela and Ecuador seceded. Overwhelmed by these difficulties, Bolívar died, 17 Dec.

1831-49

SANTANDER AND THE CREATION OF COLOMBIA. Santander, the "Man of Laws," became president, 1832-37, under a new centralist, conservative constitution. Personally a moderate, Santander appeased the Liberals by curbing the power of the church to some degree and by emphasizing education. His successor, José Márquez, continued Santander's policies, 1837-41, but was more anticlerical, provoking a civil war, 1839-41, in which the Conservatives defeated the federalist Liberals.

PÁEZ AND THE BIRTH OF VENEZUELA. Conservative José Antonio Páez, president, 1830-34, under the 1st Venezuelan constitution, typified the backlands leaders whom the Wars of Independence had brought to power in many Latin American countries. He was, however, more successful than most. A moderate centralist, Páez maintained order and fostered economic progress; he continued state support of the church, but curtailed some of its privileges and made concessions to the Liberals in education and civil liberties. When his successor,

José Vargas, 1835, was overthrown by the army, Páez intervened and had a civilian, Carlos Soublette, finish Vargas' term. Páez was then re-elected, 1839-43. At this point his power was challenged by a new Liberal Party, but Soublette succeeded in returning to the presidency, 1843-46.

CONSERVATIVE RULE IN COLOMBIA. Pedro Alcántara Herrán and his minister, Mariano Ospina Rodríguez, presided, 1842-45, over a prosperous but repressive regime. By the Constitution of 1843 the church was restored to its former powerful position. The election of the opportunistic Tomás Cipriano de Mosquera meant the continuation of this program for a while, but growing Liberal opposition pushed Mosquera into a more tolerant, anticlerical position. During his administration, 1845-49, the Bidlack Treaty was signed with the U.S., 1846, guaranteeing Colombian sovereignty over the Panama Isthmus.

1849-80

THE RULE OF THE LIBERALS. In Colombia the Liberals were strong enough to elect José Hilario López to the presidency, 1849-53, and to promulgate the extremely anticlerical, democratic, and federalist Constitution of 1853. José María Obando, 1853-54, and Manuel María Mallarino, 1855-57, tried to give effect to these reforms, but constant disorder and a deteriorating economic situation enabled the Conservatives to come to power for a brief period. Ospina Rodríguez, 1857-60, seemed willing to compromise on federalism; the new Constitution of 1858 was even more decentralized, but the Conservatives maintained their determination to curb the states. This provoked another civil war in which Mosquera, now a declared Liberal, returned to power. In 1863, a truly radical constitution was passed which, repeating previous federal and anticlerical provisions, stressed civil liberties and provided for a 2-year presidential term. Mosquera, 1861-64, 1866-67, became increasingly repressive, however, and was finally overthrown. Between 1867 and 1880 the congress and the states ruled Colombia, a

period punctuated, however, by continuous Conservative revolts.

In Venezuela, José Tadeo Monagas was elected president as a Conservative, but turned into a self-styled Liberal once in power, and defeated 2 revolts against him led by Páez. Little was done during his rule, 1846-51, 1855-58, and that of his brother José Gregorio, 1851-55, apart from the establishment of a dictatorship, whose severity finally led to its overthrow. A civil war broke out between Liberals and Conservatives and Páez returned to the presidency, 1861-63. This time he imposed an authoritarian, clerical regime, but could not crush the Liberals. Páez was unseated by Juan Falcón, 1863-68, who promulgated a democratic, federalist constitution, 1864. Disorder continued, however, allowing José Tadeo Monagas, and then his son, Ruperto, to return to office—this time as Conservatives, 1868-70.

1880-1914

"REGENERATION" AND DICTATORSHIP. Although elected as a Liberal, 1880-82, Rafael Núñez of Colombia turned into a dictatorial Conservative during his 2nd term, 1884-94. Exploiting the centralist constitution adopted in 1886, a concordat, 1887, and the power of his National Party, a coalition of moderate Liberals and Conservatives, Núñez restored both the church and the presidency to their former powerful positions, but with enough concessions to the Liberals to unify the country, at least during his lifetime. Under his successors, Miguel Caro, 1894-98, Manuel Sanclemente, 1898-1900, and José Manuel Marroquín, 1900-3, the Conservatives managed to stay in power. The party was badly shaken, however, by a protracted Liberal revolt, 1899-1903, which culminated in the humiliating loss of Panama. The Conservative Rafael Reyes ruled as a dictator, 1904-9, but by fostering economic development and by giving the Liberals some representation in the government, he reached a party settlement which lasted 20 years. Opposition finally led to his resignation. Carlos Restrepo continued his predecessor's compromise policy, 1910-14, though with

greater emphasis on civil liberties and a weak presidency.

In Venezuela, "Regeneration" began earlier than in Colombia. Seizing power as a Liberal, Antonio Guzmán Blanco imposed on Venezuela a repressive, centralized regime, liberal only in its strong anticlericalism. Despite corruption at all levels, the economy prospered and a sense of national unity, based partly on official glorification of Guzmán Blanco, was created. Sometimes ruling in person, 1870-77, 1879-84, sometimes from Paris through puppet presidents, Guzmán Blanco finally lost popularity and was overthrown. Out of the ensuing civil war, one of Guzmán Blanco's puppets, Joaquín Crespo, emerged as victor. Also theoretically a Liberal, Crespo, 1892-98, was preoccupied with a boundary dispute with British Guiana, which was settled somewhat favorably for Venezuela. Crespo's successor was overthrown by a Conservative provincial cattleman, Cipriano Castro, who instituted a corrupt and oppressive dictatorship, 1899-1908. Having no domestic program, Castro concentrated on nationalism. When Britain, Germany, and Italy blockaded Venezuela to enforce the repayment of her debts, 1902-3, Castro gained popularity by resisting "the Powers." His actions were eventually sanctioned by the International Court. Juan Vicente Gómez, Castro's vice-president, seized power in 1908. Political skill and money, derived initially from coffee and cattle, and after 1918 from oil, enabled Gómez to impose a harsh and efficient dictatorship. With the support of a modernized army and foreign investors, Gómez repressed political opponents and successfully ignored demands for social reform (*Cont p 451*.)

ECUADOR

1825-30

INDEPENDENCE. Ecuador formed part of Bolívar's Gran Colombia, but the continuing presence of Colombian soldiers, bureaucrats, and tax collectors, plus the example of opposition to Bolívar pro-

vided by Venezuela and Colombia, fed a nationalist reaction. A war between Gran Colombia and Peru, 1828-29, increased instability. Finally, Juan José Flores (1800-69), one of Bolívar's generals, threw his military support to the separatists, and Ecuador declared itself independent, 13 May, 1830.

1830-45

RULE OF FLORES. Flores, a Venezuelan, became president, and imposed his own dictatorial rule. Nationalist and civilist resentment against him led to a revolt under Vicente Recafuerte, but the outcome was merely an arrangement whereby the 2 leaders agreed to alternate in the presidency. Recafuerte promulgated an anticlerical, somewhat liberal constitution, but, due partly to the influence of Flores, few reforms were realized. Upon Flores' return to office, 1839-45, a new constitution was drafted, and Flores had himself re-elected for an 8-year term. He was finally overthrown by a group of nationalists and antimilitarists from Guayaquil.

1845-60

RULE OF THE LIBERAL GENERALS. Despite the civil aims of those who had ousted Flores, Ecuador continued to be ruled by a series of nationalistic, anticlerical generals, of whom Vicente Roca, 1845-49, José Urbina, 1851-56; and Francisco Robles, 1856-59, were the most important. The domestic confusion, aggravated by interference from other countries, was epitomized by the cession of Guayaquil to Peru by the provincial boss, Guillermo Franco. At this point Gabriel García Moreno (1821-75) seized power.

1860-75

DICTATORSHIP OF GARCÍA MORENO. García Moreno, 1860-65, believed that only Catholicism could unite Ecuador. By the constitutions of 1861 and 1869 and the Concordat of 1863 he imposed a Conservative, centralist gov-

ernment, which gave the church great power and even deprived non-Catholics of citizenship. Moreno was followed in the presidency by 2 puppets, Jerónimo Carrión, 1865-67, and Javier Espinosa, 1868-69, returning to power himself in 1869. Despite material progress, Liberal opposition grew, culminating in García Moreno's assassination, 5 Aug., 1875.

1875-1914

OLIGARCHS VS. REFORMERS. Ignacio Veintimilla overthrew the moderate but weak Antonio Borrero, and imposed a corrupt military dictatorship. Presidents José Caamaño, 1884-88; Antonio Flores Jijón, 1888-92; and Luis Cordero, 1892-95, attempted to return the country to a clerical, authoritarian, civilian regime, but with limited success. Eloy Alfaro seized the presidency, 1895-1901. He and especially Leonidas Plaza Gutiérrez, 1901-5, introduced educational and anti-clerical reforms. The Liberal program was embodied in the Constitution of 1907, passed during Alfaro's 2nd term, 1906-12, but rule by the oligarchy continued. Alfaro's attempt to stay in power touched off a civil war in which he was killed. Plaza returned to office, 1912-16. Meanwhile, Ecuador had lost territory to Brazil, 1904. (*Cont. p. 454.*)

PERU

1825-35

RULE OF BOLÍVAR'S GENERALS. Bolívar's departure from Peru, 1826, was followed by a struggle for power among the "Marshals of Ayacucho." Andrés Santa Cruz, Bolívar's appointed successor, was a capable president, but soon suffered electoral defeat at the hands of the Liberal, José de Lamar, 1827-28, who launched attacks against Bolívar's troops in Ecuador and Bolivia. Defeat in Ecuador led to the ousting of Lamar by Agustín Gamarra, 1829-33, a Conservative. Luis Orbegosa, a more liberal figure, followed Gamarra in the presidency, 1833-35.

1835-45

IDEA OF CONFEDERATION. Threatened by revolts led by Gamarra and Felipe Salaverry, Orbegosa requested the aid of Santa Cruz, the president of Bolivia. Santa Cruz defeated the rebel generals and then established the Peruvian-Bolivian Confederation, 1836-39, a union between the states of North Peru, South Peru, and Bolivia with Santa Cruz as lifetime "Protector." Despite the advantages of and historical justification for the Confederation, it was opposed by those local leaders who resented Santa Cruz's assumption of power and by Peruvians who considered him a foreign invader. The Confederation's most determined enemies, however, were Argentina and, especially, Chile. Chile declared war, 1837-39, and defeated Santa Cruz's forces at Yungay, 20 Jan., 1839. The Confederation was dissolved, and Gamarra recaptured the presidency, 1839-41. Reversing the policy of Santa Cruz, he started a war to annex Bolivia, but was defeated at Ingavi, 18 Nov., 1840. This temporarily ended foreign wars, but the struggles among Peruvian generals continued.

1845-62

CREATIVE ORDER UNDER CASTILLA. Ramón Castilla (1797?-1867), a Conservative who made some concessions to the Liberals in education and religious matters, gave Peru a much-needed period of stability and progress, 1845-51. He allowed José Echenique to succeed him, 1851-55, but Echenique proved so corrupt that Castilla brought about his deposition, and took power again himself, 1855-60. The Constitution of 28 July, 1860, embodied Castilla's presidentialist but relatively enlightened program.

1863-72

WAR AND CORRUPTION. The Spanish seizure of Peru's guano-rich Chincha Islands, 14 Apr., 1864, theoretically to enforce payment of claims, pro-

voked a diplomatic and political crisis in Peru. After concluding an unpopular treaty with Spain, Juan Pezet, 1863-65, was displaced by Mariano Prado, 1865-68. Meanwhile, as a result of a Latin American Congress held at Lima, a Quadruple Alliance was formed, consisting of Chile, Peru, Ecuador, and Bolivia. The Alliance declared war on Spain, 14 Jan., 1866. After a defeat at Callao, Spain withdrew. The Liberal, Prado, was replaced by a Conservative, Pedro Díaz Canseco, 1868. Canseco's successor, José Balta, 1868-72, symbolized the confusion of that decade. Persuaded by his finance minister, Nicolás de Piérola, Balta embarked on an extravagant program of public works, which further corrupted politics and dissipated Peruvian resources.

1872-83

CIVILIAN RULE AND THE WAR OF THE PACIFIC. The newly formed Civilist Party succeeded in electing Manuel Pardo president, 1872-76. Pardo favored economic nationalism, decentralization, and educational reform, but was hindered by an economic recession. His policies were not continued by his successor, Mariano Prado, 1876-79. Fighting between the Civilists and the Democrats, a radical party led by Nicolás Piérola, weakened Peru, and helped to contribute to her defeat by Chile in the War of the Pacific, 1879-83. During this international crisis, provoked by Chile's desire to exploit the nitrates on Peruvian and Bolivian soil, the presidency was occupied successively by Prado, Piérola, García Calderón, and Montero, 1879-82. Finally, Miguel Iglesias, representing northern Peru, signed the Treaty of Ancón, 20 Oct., 1883, by which Peru ceded the provinces of Tarapacá, Tacna, and Arica to Chile, the latter 2 for 10 years, after which a plebiscite was to be held.

1884-94

THE GENERALS RETURN. With the Civilists discredited by Peru's disastrous defeat, Andrés Cáceres, the leader of guerrilla resistance during the war, seized

power, 1884-90. Cáceres and Remigio Morales, 1890-94, helped to reconstruct the country, but their dictatorships drove the political parties into opposition.

1895-1908

PARLIAMENTARY OLIGARCHY. In 1895 Piérola seized the presidency and ruled until 1899. A popular figure, supported by both Democrats and Civilists, he introduced reforms and stimulated the economy. Under Eduardo Romaña, 1899-1903, and José Pardo, 1904-8, there was further progress along these lines.

1908-14

THE SOCIAL QUESTION. Augusto Leguía, 1908-12, encouraged economic development and promised a pro-Indian social policy, but his autocratic methods antagonized both parties. His successor, Guillermo Billinghurst, 1912-14, relied on popular support. Billinghurst was overthrown, however, when he tried to weaken the powers of the oligarchic Congress. (*Cont. p. 453.*)

BOLIVIA

1825-29

INDEPENDENCE. After defeating the last royalist forces at Tumulsa, 2 Apr., 1825, Antonio José de Sucre (1795-1830) remained in charge as Bolívar's representative. Against Bolívar's wishes, independence was declared, 6 Aug., and Sucre became president, 1826-28, under a constitution especially designed for the new nation by Bolívar. This constitution, which specified a lifetime presidency and created a Chamber of Censors, indicated to what degree Bolívar had become a conservative thinker. Sucre ruled well, but fell victim to an anti-Colombian reaction, led by rival Bolivian leaders and assisted by a Peruvian invasion.

1829-41

ERA OF SANTA CRUZ. Andrés Santa Cruz (1792?-1865), a Bolivian, was elected

president, 1829-39. A constructive dictator, Santa Cruz established the foundations of the Bolivian state. His continuing interest in Peru, where he had been president, finally led to his creation of the Peruvian-Bolivian Confederation, 1836-39, but when the Confederation was defeated by Chile he fell with it.

1841-80

NATIONAL UNIFICATION AND POLITICAL UNREST. After rallying the country to defeat the Peruvian invasion, José Ballivián became president, 1841-47. Ballivián was autocratic but progressive, and Bolivia under his rule achieved some advances. In 1848 Manuel Belzú seized the presidency and instituted a kind of popular dictatorship, encouraging the urban workers to riot against the upper classes. Belzú's chosen successor, Jorge Córdoba, proved incompetent. He was overthrown by José Linares, the first civilian to be president, 1857-61, but Linares' attempt to impose administrative reforms soon led to his downfall. José María de Achá, a moderate but weak president, followed him, 1861-63.

Under the administration of the ignorant and brutal Mariano Melgarejo, 1864-71, Bolivian political life reached its nadir. Completely irresponsible, Melgarejo ceded rich rubber lands to Brazil, and gave Chile a nitrate concession. He was finally unseated by another violent soldier, Agustín Morales, 1871-72. A breathing space was obtained during the terms of Adolfo Ballivián and Tomás Frías, 1873-75, both civilians and reformers. But Hilarión Daza's seizure of power, 1876-80, meant a return to reckless military dictatorship. Daza's attempt to renege on previous nitrate agreements with Chile, 1866, 1872, 1874, provoked the disastrous War of the Pacific, 1879-83, as a result of which Bolivia lost control of her nitrate deposits and all coastal territory. Accused of treason after Bolivia's defeat, 1880, Daza was overthrown.

1880-1914

GOVERNMENT BY PARTY. The War of the Pacific, temporarily settled by a

truce with Chile, 4 Apr., 1884, served as an issue around which Conservative, Liberal, and Democratic parties were formed. Narciso Campero, Daza's successor, was followed in the presidency by the Democrat Gregorio Pacheco, a wealthy mineowner, 1884-88. Political stability continued under the clerical and authoritarian, but economically progressive, regimes of the Conservatives Aniceto Arce, 1888-92; Mariano Baptista, 1892-96; and the less competent Severo Fernández Alonso, 1896-98.

In 1899 José Pando exploited the issue of the location of the capital to attain power, ruling until 1904. The federalist system he proposed was not implemented. Bolivia lost the rich Acre rubber territory to Brazil by the Treaty of Petropolis, 17 Nov., 1903. Under the Liberal Ismael Montes, 1904-8, however, anticlerical laws were passed. In a final treaty with Chile, Bolivia recognized the loss of her coast in exchange for 2 free ports, 20 Oct., 1904. After the term of Eliodoro Villazón, 1909-13, Montes returned to office. (*Cont. p. 453.*)

CHILE

1825-41

FOUNDATION OF THE CONSERVATIVE REPUBLIC. Supreme Director Ramón Freire was unable to control the warring Liberal and Conservative factions, and accomplished little, 1823-26. Resigning, he was replaced by Francisco Pinto, 1826-29, who first tried to govern through the federalist Constitution of 1826 and then through the centralist Constitution of 1828. Liberal disunity finally enabled the Conservatives under Joaquín Prieto to overthrow Pinto at Lircay, 17 Apr., 1830. Prieto became president, 1831-41, but the real ruler of Chile was Diego Portales Palazuelos. Using the Constitution of 1833, Portales Palazuelos imposed an authoritarian, centralist, clerical regime. This system, at least for a time, was well suited to the social structure of the country and, because of Portales' moderation, his control of the army, and his emphasis on eco-

conomic development, formed the basis for the stability which distinguished Chilean politics. But Portales Palazuelos was assassinated, 6 June, 1837, during the war against the Peruvian-Bolivian Confederation, 1837-39.

1841-61

THE LIBERAL REACTION. Victory brought national self-confidence and the election of Manuel Bulnes, the hero of the war, 1841-51. A period of efficient government ensued, and there was a minor relaxation of Portales' authoritarianism. The growing Liberal Party, however, was not appeased. Manuel Montt, the 1st civilian president of Chile, 1851-61, had a farsighted educational and economic program. But his determined opposition to political reforms infuriated the Liberals, who rebelled twice during his term, 1851, 1859. Montt's insistence on the supremacy of the state over the church during the Affair of the Sacristan, 1856, lost him much Conservative support. Liberals and Conservatives, uniting in opposition to the ruling Nationalist Party, eventually formed the Fusion Party, 1858.

1861-76

PARTY POLITICS AND LIBERAL RULE. Impressed by the strength of the Fusion Party, Montt chose a moderate, José Joaquín Pérez, to succeed him, 1861-71. Pérez proceeded to introduce minor political and religious reforms, eventually turning from the Nationalist Party to the Fusion for support. Meanwhile, Liberals dissatisfied with the Fusion had broken away to form a Radical Party, 1863. The only violence which occurred during Pérez' "Era of Good Feeling" was the Spanish bombardment of Valparaíso, 1865. During the term of Pérez' successor, Federico Errázuriz Zañartu, 1871-76, the Fusion split over the issue of church control of education. Errázuriz then relied on a coalition of Liberals, Radicals, and Nationalists to put through a program which curbed the power of both the president and the church.

1876-86

WAR OF THE PACIFIC. The Liberal Aníbal Pinto, 1876-81, was chiefly concerned with an economic crisis and the war against Peru and Bolivia, 1879-83. Basing her attack on Bolivia's violation of previous treaties, Chile was technically right, but fought the war in fact to wrest from Peru and Bolivia their valuable nitrate deposits. Despite early naval victories won by Chile, 1880, Peruvian resistance postponed peace until 1883, when the Treaty of Ancón, 20 Oct., 1883, was signed. Victory greatly enriched Chile, increased self-confidence and prestige, and fortified the power of the Liberals. Thus, when Domingo Santa María was elected president, 1881-86, he approved all the anticlerical legislation desired by the Liberals, except for the separation of church and state. Progress was achieved in economic development. Political reforms limiting the power of the executive were also enacted, but these had little practical effect.

1886-91

REVOLUTION. General opposition to President José Manuel Balmaceda's progressive program of government planning, economic nationalism, and social reform, 1886-91, and the failure of the Liberal majority in Congress to support him, led Balmaceda to try authoritarian methods to realize his aims. His attempt to override Congress on the budget issue, however, led to his deposition, and the government's troops were defeated by a navy-Congress coalition, probably backed by British nitrate interests. Balmaceda's fall meant the end of the presidentialist, Santiago-based government created by Portales, and the beginning of a decentralized, parliamentary, but even more oligarchical, political system.

1891-1914

THE FUTILE YEARS. Under Jorge Montt, 1891-96, and Federico Errázuriz Echaurren, 1896-1901, both backed by Conservative-led coalitions, there was

some economic growth, and constitutional liberties were maintained. The number and power of the parties, however, led to extreme ministerial instability and, consequently, the lack of any constitutional program. Political life became increasingly corrupt and opportunistic. Germán Riesco, 1901-6, a moderate Liberal, achieved diplomatic settlements with Argentina, 20 Nov., 1902, and Bolivia, 20 Oct., 1904, but accomplished little else. Neither Pedro Montt, 1906-10, nor Ramón Barros Luco, 1911-15, dealt with the pressing political issues of labor reform and sustained economic development. These matters became rallying cries for the Radicals and for the Socialist Labor Party, formed in 1912. (*Cont. p. 452.*)

ARGENTINA

1825-29

THE FAILURE OF LIBERALISM. The war with Brazil over the possession of what became Uruguay, 1825-28, brought home to the disunited provinces of Argentina the need for national government. Bernardino Rivadavia (1780-1845), a Liberal from Buenos Aires, was elected president, 1826-27. Though extremely capable, Rivadavia pleased neither the interior provinces, which opposed his centralist constitution, liberal political ideas, and mild anticlericalism, nor Buenos Aires, which disliked his financial policies and the federalization of the city. Failure to win the war finally led to Rivadavia's downfall. The central government was dissolved, each province governing itself as the struggle continued between the Federalists on one side and the Unitarians, supporters of a centralized government based on Buenos Aires, on the other. Neither of the next 2 governors of Buenos Aires, the Federalist Manuel Dorrego, 1827-28, nor the Unitarian Juan Lavalle, 1828-29, could impose order on the country.

1829-35

ROSAS' 1ST TERM. Juan Manuel de Rosas (1793-1877), a wealthy cattleman,

seized the governorship of Buenos Aires in 1829. He defeated the Unitarians, and signed a loose pact of union with 3 other provinces. This pact officially recognized the right of Buenos Aires to conduct foreign affairs, 4 Jan., 1831. Still resisted by some Liberals, Rosas refused to serve again, and led a series of Indian campaigns in the south, increasing his popularity. Meanwhile, his *Sociedad Popular Restauradora* harassed the governors who succeeded him.

1835-52

DICTATORSHIP OF ROSAS. Rosas was finally granted full powers, which he used to establish a clerical, Conservative, and highly oppressive regime, 1835-52. Refusing to set up a national constitutional government, he styled himself a Federalist. In fact, his personal power together with his friendships with provincial leaders permitted him to control the country. His economic policies benefited mainly Buenos Aires. He relied on his popularity, and on an aggressive foreign policy, in his campaign to unify, and perhaps expand, Argentina. An attack on the Peruvian-Bolivian Confederation failed, 1837, but he had more success in his resistance to the French and British blockades of Buenos Aires, 1838-40, 1845-50, provoked by Argentina's interference in the affairs of Uruguay. In the end Rosas was defeated at Caseros, 3 Feb., 1852, by a coalition of provincial governors led by Justo José Urquiza (1800-1870), by Unitarians and Liberal intellectuals at home, and by Brazil and Uruguay abroad. Rosas had created a nation, but at the price of arbitrary dictatorship and rule by the cattle barons of Buenos Aires.

1852-62

THE 2 ARGENTINAS. Urquiza now ruled as a provisional president. His gaucho background and his federalism, however, antagonized Buenos Aires, which demanded special status for itself. The other provinces formed the Argentine Confederation under Urquiza, 1854-60, and adopted the Constitution of 1853, a pro-church, nominally federalist, docu-

ment. At Cepeda, 23 Oct., 1859, the 1st clash between the 2 Argentinas, Urquiza triumphed, but Buenos Aires remained the richest and most populous province. At Pavón, 17 Sept., 1861, the Confederation, now under Santiago Derqui, withdrew from association with Buenos Aires, leaving Bartolomé Mitre (1821-1906) provisional president, 1860-62.

1862-68

WAR OF THE TRIPLE ALLIANCE.

Bartolomé Mitre, 1862-68, the 1st of a group of progressive presidents, set up a Liberal National government, and reached a compromise on the issue of the status of Buenos Aires, but was soon diverted by the War of the Triple Alliance, 1865-70, in which Brazil, Argentina, and Uruguay fought Paraguay. Intervention by all three countries in the affairs of Uruguay caused this costly and unpopular war. Territorially, Argentina profited little from participation in it.

1868-80

THE SCHOOLMASTER PRESIDENTS. During the administration of the brilliant and energetic Domingo Faustino Sarmiento, 1868-74, a provincial sympathetic to Buenos Aires, education and immigration were emphasized. Sarmiento also used the power of the central government to repress provincial revolts. In 1874 dissension in Buenos Aires again enabled a provincial, Nicolás Avellaneda, to win the presidency, 1874-80. Avellaneda's term was one of increasing prosperity for the country. The status of Buenos Aires was finally settled in 1880, when Julio Roca, backed by Avellaneda and the provinces, defeated the Buenos Aires candidate, federalized the city, and created a new provincial capital.

1880-90

THE CORRUPT OLIGARCHY. During the term of Julio Roca, 1880-86, of the landowners' Partido Autonomista Nacional (PAN), Argentina experienced a booming prosperity, which stimulated much speculation in land and railroads.

Anticlerical laws were passed at this time, 1884. Unfortunately Roca's successor, Miguel Juárez Célman, 1886-90, allowed corruption and reckless financing to produce a serious economic crisis. Economic difficulties and the iron rule of the PAN party machine provoked a revolt by the newly formed Radical Party under Leandro Alem, 1890. The Radicals were defeated, but Juárez Célman was forced to resign.

1890-1904

THE FLEXIBLE OLIGARCHY. Vice-President Carlos Pellegrini, 1890-92, who succeeded Célman, was no reformer, but by trying to stabilize the economy and reduce corruption he revealed the readiness of the oligarchy to adapt itself to change. This ability and the divisions among the Radicals made possible the election of another Conservative PAN candidate, Luis Sáenz Peña, 1892-95. A sick man and without party support, Sáenz Peña had to contend with both a reaction in Congress against the power of the president and with another Radical revolt, 1893. Resigning, he was replaced by Vice-President José Uriburu, 1895-98. It was not until the reelection of Roca, 1898-1904, that the oligarchy really recovered from the crisis of 1890. Despite the growing power of the Radicals, now under Hipólito Irigoyen, and the existence of a Socialist Party, another wave of prosperity permitted Roca to reimpose his centralized, corrupt, and rather autocratic style of rule. This time his term was enhanced by a favorable settlement with Chile, 1902, and the enunciation of the Drago Doctrine, 1904, the internationally agreed principle that foreign debts could not be collected by force.

1904-14

THE RADICAL MOVEMENT. Conservative Presidents Manuel Quintana, 1904-6, and José Figueroa Alcorta, 1906-10, continued to ignore the Radicals and their demands, despite another revolt, 1905. By 1910, however, lower- and middle-class pressure made PAN realize that some compromise was required.

Roque Sáenz Peña, a Conservative with a reform program, became president, 1910-16. His electoral law, signed in 1912, guaranteed universal male suffrage and the secret ballot, and eventually enabled the Radicals to come to power legally. (*Cont. p. 451.*)

PARAGUAY

1825-40

THE HERMIT DICTATOR. Dr. José Gaspar Rodríguez Francia (1761?-1840), in breaking the power of the church and upper classes, imposed an iron dictatorship on Paraguay, 1814-40. Fearing the threat to his position which immigration and foreign trade might bring, he completely isolated his country from the outside world. This policy fostered national unification, but kept Paraguay backward.

1841-62

RULE OF CARLOS LÓPEZ. Carlos Antonio López, 1844-62, more progressive but less honest than Francia, allowed external trade, conciliated the church, and sought to increase national prestige by creating a powerful army and by pressing claims against foreign powers.

1862-76

WAR OF THE TRIPLE ALLIANCE. Francisco Solano López, 1862-70, the son of Carlos López, thought of himself as the arbiter, and perhaps one day the conqueror, of the La Plata region. When his diplomatic attempts to curb Brazilian and Argentinian intervention in Uruguay were rebuffed, López attacked both countries, initiating the War of the Triple Alliance, 1865-70. That Paraguay survived a crushing defeat was due only to the rivalry between the victors, for she had lost nearly half her population and a great deal of territory. Under a new constitution, Cirilo Antonio Rivarola became president, 1870. Brazilian troops did not leave Paraguay until 1876.

1876-1914'

THE PERIOD OF INSTABILITY. In reaction to 62 years of dictatorship, Paraguayan politics now entered a period of almost continuous disorder. The party of the Conservatives ruled, led by Bernardino Caballero and then by Patricio Escobar. A revolt, 1904, brought the Liberals to power, but the change meant little for the people of Paraguay. (*Cont. p. 453.*)

URUGUAY

1825-35

INDEPENDENCE. The war between Brazil and Argentina was ended by Great Britain, which proposed the creation of a new state out of the disputed territory, 27 Aug., 1828. Independence was guaranteed by the Constitution of 1830, and José Fructuoso Rivera (1790?-1854) became the first president of Uruguay, 1830-35. Unwilling to surrender power to a successor, Manuel Oribe, 1835-39, Rivera led a revolt. From this struggle emerged Uruguay's 2 traditional parties, the conservative, rural, clerical *blancos*, led by Oribe, and the liberal *colorados*, under Rivera.

1836-63

CIVIL WAR AND FOREIGN INTERVENTION. Despite Rosas' backing of Oribe, aid from many quarters (Brazil, certain Argentine provinces, the Unitarians, and France) put Rivera back into the presidency, 1839-46. When the French withdrew, Oribe renewed his offensive, which culminated in the siege of *colorado*-controlled Montevideo, 1843-51. The French and British blockade of Buenos Aires, 1845-49, helped Rivera somewhat, but it was the forces of Brazil and the Argentinian, Urquiza, that raised the siege and defeated Oribe. Despite a compromise between the parties, the *colorado* President Venancio Flores, 1851-55, was soon faced with a *blanco* revolt, which even Brazilian aid could not

quell, and the *blancos* seized power, 1855-63. Stable government, however, was rendered impossible by continuing pressure from Buenos Aires and Brazil.

1863-71

WAR OF THE TRIPLE ALLIANCE.

An invasion in support of Flores, backed toward the end by Brazilian troops, overthrew the *blanco* President Anastasio Aguirre, 1865, and provoked Paraguay's attack on Brazil. This was the 1st stage of the War of the Triple Alliance. Despite the assassination of President Flores, 1868, the *colorados* remained in control, defeating the *blancos* again in a new civil war, 1870-71.

1872-90

RULE OF THE COLORADO GENERALS.

A postwar settlement gave the *blancos* a subsidy and control of 4 of Uruguay's 15 departments. This assured the peace needed for economic progress. The gaucho leaders gave way to a series of army generals: Lorenzo Latorre, 1876-80, autocratic but interested in education, Máximo Santos, 1882-86, unpopular and dictatorial, and Máximo Tajes, 1886-90, who tried to curb the army and conciliate both political parties.

1890-1903

RULE OF THE COLORADO CIVILIANS.

Julio Herrera y Obes, 1890-94, worked to establish competent civilian government, but the highhanded methods of his successor, Juan Idiarte Borda, 1894-97, provoked another *blanco* revolt. The *colorados* promised concessions, but these were not implemented by Juan Cuestas, 1897-1903, who instituted a reasonably progressive though authoritarian regime.

1903-14

BATLLE AND THE BIRTH OF MODERN URUGUAY. During his 1st term José Batlle y Ordóñez, 1903-7, was preoccupied with another *blanco* revolt, which

he settled by substituting proportional representation for the old system of *blanco* control of rural departments. With the country more unified, his successor Claudio Williman, 1907-11, and later Batlle himself, 1911-15, were able to introduce a program of social welfare reform, economic nationalism, state-owned corporations, and increased political democracy, including the establishment of a biparty plural executive. (*Cont. p. 451.*)

BRAZIL

1825-31

REIGN OF DOM PEDRO I. Due to the peaceful transition from colony to empire, 1822, the advice of capable ministers, and Pedro's own efforts, Brazil remained a unified, relatively stable state during the first difficult post-Independence years. But Pedro's failure to work within the framework of the Constitution of 1824 and his extravagance made him increasingly unpopular. Nativist feeling was aroused by his appointment of Portuguese to high office and by the way in which he involved Brazil in Portuguese dynastic struggles. A treaty with Great Britain, 23 Nov., 1826, promising to end the slave trade antagonized the planters. Finally, the unsuccessful war against Argentina to retain Uruguay as a Brazilian province, 1825-28, weakened Pedro's position. He was forced to abdicate in favor of his 5-year-old son, 7 Apr., 1831.

1831-41

THE REGENCY. During the first years of Pedro II's minority, a 3-man regency governed Brazil, 1831-35. It was seriously weakened by fighting among the newly emerging national political parties. The chief problem, however, lay in a rash of regional revolts, some military, some popular—both monarchical and republican. The regency responded with the Additional Act, 12 Aug., 1834, which appeased the federalists by giving more power to the provincial legislatures, sup-

pressed the conservative Council of State, and created a single regent. The priest, Digno Antonio Feijó, the first regent, 1835-37, was capable, but his autocratic measures antagonized Congress without repressing the 2 worst uprisings of the decade: a civil war in Pará, 1835-40, and the Revolução Farroupilha in Rio Grande do Sul, 1835-45, this latter state even declaring itself an independent republic. Under Feijó's successor, the Marquês de Olinda (1793-1870), national unity continued to be threatened by federalist revolts, 1837-40. Both parties agreed that the majority of Pedro II should be proclaimed early in order to strengthen the central government. The regency had avoided both partition and dictatorship, but had been too preoccupied with maintaining order to institute many lasting reforms.

1841-50

CONSOLIDATION. A man of wide intellectual interests and liberal ideas, Pedro II (ruled 1841-89) soon showed himself to be a capable, conscientious emperor. Aided at first by the Conservatives, he pursued a policy of centralization, reversing the Additional Act, 3 Dec., 1841, and successfully repressing a new group of revolts as well as the secession of Rio Grande do Sul, 1845. The political parties also felt Pedro's firm hand. Although he carefully maintained parliamentary forms, the power granted him by the constitution and his own political skill enabled him to control the government. He favored no particular party. Efficient administration gave his regime a progressive reputation.

1850-60

THE TRIUMPHANT DECADE. Due to Pedro's popularity and to the political stability which culminated in the biparty Ministry of Conciliation, 1853, Brazil was able to embark on a period of remarkable economic progress. National self-confidence inspired an aggressive foreign policy. True, Brazil was forced by British military pressure to abolish the slave

trade, 4 Sept., 1850, but Brazilian influence continued strong in the La Plata region to the south. The threat posed by Argentina to the independence of Uruguay and the possibility of a denial of free access to the La Plata River system provoked Brazil to join the coalition which overthrew Rosas in 1852. In return Brazil received much disputed territory and a decisive influence in Uruguay, where in 1854 Brazilian troops put the *colorado* party in power.

1860-70

WAR OF THE TRIPLE ALLIANCE.

The Christie Affair, 1861-65, a diplomatic clash between Britain and Brazil over a minor incident involving British sailors, showed that Brazil was still not strong enough to resist a great European power. The War of the Triple Alliance, 1864-70, however, proved that Brazil was dominant in Latin America. This war, in which Brazil, Argentina, and Uruguay imposed a crushing defeat on Paraguay, grew out of the rivalry among these countries for effective control of Uruguay, the key to dominion in the La Plata region. Pressured by Rio Grande do Sul interests with investments in Uruguay, Pedro ordered the invasion of that state in support of the *colorados*, who favored Brazil, 1865. This provoked the Paraguayan dictator López to attack Brazil and then Argentina, allegedly in defense of the balance of power. Paraguay's tenacious resistance prolonged the uneven struggle until the death of López, 1 Mar., 1870. The positive results for Brazil were an increase in prestige and territory and a sense of national unity.

1870-80

BREAKDOWN OF THE SYNTHESIS.

The formation of a Republican Party, 1870, had its roots in traditional agitation for a more decentralized, democratic government, but it was also a specific protest against the length of the War of the Triple Alliance and Pedro's use of his moderating power to oust a Liberal ministry, 1868. Slavery was challenged, too,

receiving its 1st defeat in the Rio Branco Law, 28 Sept., 1871, which freed all future slave offspring, though apprenticing them to their masters until the age of 21. Finally, a quarrel with the church over Freemasonry and the power of the state in religious matters, 1872-75, lost Pedro the support of the Brazilian Church and the religious population.

1880-89

THE COMING OF THE REPUBLIC.

Despite the return of a Liberal ministry, 1878, and a more democratic electoral law, 1881, Pedro's power became increasingly resented as he grew out of touch with national problems. Meanwhile the abolitionist movement gained strength, leading 1st to the passage of a law freeing all slaves over 60, 28 Sept., 1885, and ultimately to complete abolition, 13 May, 1888. Since the "Golden Law" granted no compensation to slaveowners, it greatly alienated the planter class from the monarchy. The decisive blow to the empire, however, came from the army, which had emerged from the War of the Triple Alliance with a new sense of professional importance. From 1884 onward, various army officers made determined efforts to win a special political status for the army. When the emperor and the parties resisted these attempts, the officers became republicans. Tacitly supported by other groups which opposed the monarchy, Floriano Peixoto, Deodoro da Fonseca, and the civilian positivist intellectual, Benjamin Constant, forced Pedro to abdicate after an unexpected military coup, 15 Nov., 1889.

1889-98

BIRTH PANGS OF THE REPUBLIC.

Deodoro da Fonseca (1827-92), the president of the provisional government, 1889-91, promulgated decrees establishing a federal republic, separating church and state, and widening the electorate, all of which were confirmed by the Constitution of 24 Feb., 1891. Despite these federalist provisions, Fonseca's government was so

centralized and presidentialist that, coupled with an economic crisis, it provoked a revolt. Fonseca was forced to resign in favor of his vice-president, Floriano Peixoto, 1892-94. Peixoto proved to be even more authoritarian than Fonseca, but he was also far more capable. He met the growing dissatisfaction with the republic, which culminated in the monarchist uprising supported by the navy and Rio Grande do Sul, 1893-94, by repression. He was respected, however, as a founder of the republic and for permitting Prudente José de Moraes Barros, a civilian, to succeed him, 1894-98. A transitional president, Moraes Barros relaxed Peixoto's tightly centralized control, and made some progress in the fields of finance and foreign relations, reaching a boundary settlement with Argentina, 9 Aug., 1895. But his administration was discredited by its clumsy repression of the revolt of the backland religious community of Canudos.

1898-1914

THE STABLE REPUBLIC. During the administration of Manuel de Campos Salles, 1898-1902, civilian, constitutional government was the rule. Foreign loans helped to finance the bureaucracy, public works, and the army. The Treaty of Petropolis with Bolivia, 17 Nov., 1903, which gave Brazil most of the rubber-rich Acre territory, was one of several favorable boundary settlements with both Latin American states and European colonial powers. The presidencies of Francisco Rodrigues Alves, 1902-6, and Affonso Penna, 1906-9, continued this constructive record. Politics were still quite corrupt, however, and were controlled by the state machines of Rio de Janeiro, Minas Gerais, and São Paulo. The electoral victory of Marshal Hermes da Fonseca, 1910-14, indicated that the army had again replaced the party oligarchies as the arbiter of national politics. Fonseca's corrupt and dictatorial regime ushered in an era of severe economic and political problems for the republic. (*Cont. p. 453.*)

CENTRAL AMERICA

1825-40

UNITED PROVINCES OF CENTRAL AMERICA. This was a loose federation, comprising Guatemala, Nicaragua, Honduras, El Salvador, and Costa Rica. Manuel Arce (1783?-1847), its 1st President, 1825-29, failed to satisfy either the Liberal or Conservative factions, which soon, 1826, began fighting over the issues of anticlericalism, centralism, and the dominant position of Guatemala. Liberal Honduran Francisco Morazón (1799-1842) was victorious, and during his progressive administration, 1829-39, he sought to realize a program of federal government, economic growth, and, especially, anticlericalism. This last issue eventually provoked Conservative and Indian opposition, led by Rafael Carrera (1814-65). The Union was dissolved, 1838, and Morazón defeated, 1840. Attempts to revive the Confederation were made every decade thereafter, but, except for short-term agreements, they were uniformly unsuccessful.

1840-70

CENTRAL AMERICA IN CONFUSION. During the 30 years after 1840, unstable dictatorships of varying severity and civil wars within the various states between Liberal and Conservative factions were the general rule. The outstanding personalities of the time were the Guatemalan Indian Rafael Carrera, the North American William Walker (1824-60), and the Costa Rican Presidents Braulio Carrillo (1800-1845) and Juan Mora Porras (1814-60). Carrillo, 1835-42, and Mora Porras, 1849-59, in co-operation with a relatively enlightened oligarchy, helped lay the basis for Costa Rica's unusually progressive and democratic political tradition. In Guatemala, Carrera, 1838-65, supported by the Conservatives and his own Indian followers, instituted a clerical dictatorship, which permitted some material progress but

gave little real help to the large Indian community. By intervening in neighboring El Salvador and Honduras, Carrera enabled the Conservatives to come to power in those countries. Nicaragua suffered from being the likely site for an interoceanic canal, thereby attracting the attention of foreign powers. The Clayton-Bulwer Treaty between the U.S. and Britain, 19 Apr., 1850, which followed British occupation of San Juan del Norte, 1848, and the establishment of Vanderbilt's Transit Co. to ferry California gold-rush prospectors, stipulated that neither country was to control a future canal or to occupy any part of Central America. Intervention reached a peak soon after, however, when the U.S. adventurer William Walker made himself president of Nicaragua, 1856-57, with the help of the Liberals. Opposition to him united Central America, but only until his defeat. The Liberals were discredited, and the Conservatives ruled Nicaragua, 1863-93.

1870-1914

RULE BY DICTATORS. Guatemala's next important president, 1871-85, was Justo Rufino Barrios (1835?-85), who came to power as a Liberal but soon instituted another dictatorial, anti-Indian regime. An able administrator, Barrios promoted modernization by means of anticlerical legislation and by encouraging foreign investment. He also tried to revive a Central American Union, but was killed when he invaded El Salvador to impose it. His most notorious successor was the corrupt "Liberal" dictator, Manuel Estrada Cabrera (1857-1924), 1898-1920. Unlike Guatemala, El Salvador was governed during this period by a fairly progressive group of families. Nicaragua, however, suffered Central America's 2 chronic evils: dictatorship and foreign intervention. Conservative disunity enabled the Liberal José Santos Zelaya (1853-1919) to seize the presidency, 1893-1909. His tyrannical and corrupt regime earned him many domestic enemies; his meddling in the politics of Honduras and El Salvador in the name of Central

American unity led to the Washington Conference, 1907, which set up a Central American Court to forestall such aggression.

FOREIGN INTERVENTION. The threat of British intervention in Nicaragua to collect unpaid debts provoked the U.S. to aid the Conservatives in overthrowing Zelaya. A period of U.S. financial and military control followed. Conservative President Adolfo Díaz (1874-1964) was kept in office by U.S. marines, 1912. Honduras was also under the shadow of the United Fruit Co. and the marines at this time. Former President Policarpo Bonilla (1858-1926) was restored to power, 1911-13, with the help of the U.S. The most striking example of U.S. domination, however, was the creation of Panama out of Colombian territory, 1903. The 2nd Hay-Pauncefote Treaty with Britain, 18 Nov., 1901, had granted the U.S. the sole right to construct an interoceanic canal through the isthmus. Colombia refused to ratify the Hay-Herrán Treaty, 22 Jan., 1903. Impatient, the U.S. encouraged Panamanians to revolt, 3 Nov., and by the Hay-Bunau Varilla Treaty, 18 Nov., obtained permanent rights to a 10-mi. zone and permission to intervene in the rest of Panama. Despite the apparatus of a constitutional democracy (Manuel Amador Guerrero [1833-1909] became the 1st president, 1904-8), Panama remained under the rule of a feuding oligarchy, the national police force, and, most important, the U.S.-owned Canal, which opened 15 Aug., 1914. The exception to this gloomy picture was again Costa Rica. Although at first under the dictatorial but economically progressive administration of Tomás Guardia (1832-82), 1870-82, by 1889 the political climate was democratic enough for an opposition candidate to win the presidential election (*Cont. p. 451*).

THE CARIBBEAN ISLANDS

1825-44

SPANISH ISLANDS. Cuba's isolated location, the influx of many royalist refu-

gees from mainland Latin America, and the presence of a strong Spanish garrison meant that Cuba, and the similarly isolated Puerto Rico, remained loyal to Spain even after her other colonies had declared their independence. Hispaniola, however, comprising present-day Haiti and the Dominican Republic, took the opposite course. Independent since 1804, Haiti was ruled, 1818-43, by the French-educated mulatto, Jean Pierre Boyer (1776-1850). Initially liberal, Boyer became more dictatorial as Haiti's economy and administration deteriorated, a result of the earlier destruction of her educated class and of financial burdens imposed by France in accordance with the 1825 treaty of recognition.

During this period the Dominican Republic was ruled, 1822-44, by Haiti, which occupied it, exploited it economically, and repressed it culturally. Boyer's overthrow gave Dominican revolutionaries the chance to declare independence.

BRITISH ISLANDS. By the Emancipation Act of 28 Aug., 1833, all slaves in the British West Indies under 6 years of age were declared free, the remainder being required to serve a period of apprenticeship: 6 years for field hands, 4 years for others. For field laborers the apprenticeship system was terminated in 1838.

FRENCH ISLANDS. In Martinique slave conspiracies were uncovered in 1822, 1824, and 1833. In 1832, however, the tax on slave manumissions was abolished throughout the French islands, and in 1833 registration of slaves was made compulsory, and mutilation and branding of captured fugitives declared illegal. In 1836 all slaves entering France itself became automatically free.

In 1831 free persons of color were granted full civil rights, and in 1834 Colonial Councils were established for Martinique and Guadeloupe.

1845-99

CUBAN INDEPENDENCE. Increasingly authoritarian rule from Spain, which hurt the sugar industry, finally drove Cuba to

rebel. The 1st attempt, the destructive 10 Years' War, 1868–78, was unsuccessful. It did, however, intensify the desire for independence, which increased as administrative reforms and freer trade policy promised by Spain failed to materialize. In 1896 a Cuban government in exile in New York, headed by Tomás Estrada Palma (1835–1908) and the poet journalist José Martí (1853–95), was able to instigate a full-scale revolt. When setbacks threatened another defeat, the U.S. intervened and defeated Spain, 1898. Puerto Rico became U.S. territory and Cuba, as pledged by the Treaty of Paris, 10 Dec., gained its independence.

HAITI. Haiti meanwhile experienced a period of economic and social stagnation under a series of incompetent and tyrannical generals, culminating in the administration, 1847–59, of Faustin Soulouque. The more progressive presidents who followed him, Fabre Geffrard, 1859–67; Lysius Salomon, 1879–88; and Florvil Hyppolite, 1889–96, tried to restore constitutional government, foster the economy, and create foreign ties, but they made little headway.

DOMINICAN REPUBLIC. The Dominican Republic had similar problems plus the extra complication of the threat of another Haitian invasion. This provoked the 2 dictatorial generals who alternated between 1844 and 1878 in the presidency, Pedro Santana (1801–64) and Buenaventura Báez (1810–84), to seek protectorate status for the Dominican Republic. Santana restored it to Spain, 1861–65, but Spanish political, economic, and ecclesiastical control turned out to be distasteful to the Dominicans and also to U.S. investors. Báez looked to the U.S., offering the lease of Samaná Bay and then annexation, an offer declined by the U.S. Senate. The Dominican Republic did, however, become an economic dependency of the U.S. especially during the harsh, efficient dictatorship, 1882–99, of Ulises Heureaux (1846?–99).

BRITISH CROWN COLONIES. Following a revolt in Jamaica, Oct. 1865, the Jamaica Act was passed, 12 Dec., which,

together with an Imperial Act of the following year, removed power from the island's representative Assembly and transferred it to the governor. Crown-colony government was also initiated in the other British islands, except Barbados. On 19 May, 1884, a Legislative Council was created in Jamaica, and on 1 Aug., 1891, a measure of representative government was attained by British Guiana.

1899–1914

U.S. INTERVENTION. During the short period of direct U.S. rule, 1899–1901, Cuba was administered by a military governor, Leonard Wood (1860–1927). A centralized, anticlerical constitution was then promulgated, and Tomás Estrada Palma became president, 1902–6. But the Platt Amendment, which the U.S. insisted be incorporated in the constitution, made Cuba effectively a protectorate, since it provided for U.S. intervention if required and limited Cuba's right to contract debts and to make treaties. When the re-election of Estrada was challenged by the Liberal opposition, he appealed to the U.S., and Charles Magoon, supported by U.S. marines was sent in as governor, 1906–9. A new election brought José Miguel Gómez (1858–1921) to power, 1909–13. Despite Gómez' Liberal affiliations, this meant another round of venality, violence, sugar prosperity, swollen bureaucracy, and eventual U.S. intervention, 1912. Mario García Menocal continued this unimpressive record, 1913–21.

Puerto Rico remained under the U.S., but after the Foraker Act, 12 Apr., 1900, was governed by civil authorities. The Dominican Republic and Haiti were also occupied by U.S. forces. Continuing disorder hurt North American investments, and failure to satisfy European creditors encouraged foreign intervention. The U.S. first administered the Dominican customs revenues, 1905, and after a brief interval of political calm, 1908–11, under Ramón Cáceres, assumed complete control, 1916. (*Cont. p. 328.*)

The Areas of White Settlement, 1770-1870

CANADA

1760-83

CONQUEST OF FRENCH CANADA.

By the Treaty of Paris, 10 Feb., 1763, Britain's conquest of French Canada was confirmed. France also ceded Cape Breton Island, and the Mississippi was recognized as the boundary between Louisiana and the British colonies. After 1763 Britain faced the problem of incorporating a French Roman Catholic colony into a British Protestant system of government; differences in religion, law, and nationality formed the background of subsequent political and social discord.

PROCLAMATION OF 1763. 7 Oct.

The former French colony was renamed Quebec (the boundaries roughly those of the seigniorial tenures), while, in the south, lands (New Brunswick and Prince Edward Island) still largely unsettled were added to Nova Scotia, and Labrador was placed under the Newfoundland administration. Territory west of a line drawn approximately at the Ottawa River became an Indian reserve, in which land purchases and settlement were prohibited, though trading licenses were freely granted. A governor, with a nominated advisory council of 4 official and 8 nonofficial members, received restricted powers to legislate and create courts of justice until an Assembly could be summoned.

ADMINISTRATION OF GOV.

MURRAY. James Murray (gov., 1763-66) set up a judiciary, continuing as far as possible French laws of property and inheritance, and allowed Catholics to sit on juries. He used revenue from customs' dues to defray administrative expenses, which angered the British merchants of Montreal, as also did his refusal to call an assembly because anti-Catholic exclusion laws would have placed the French majority at the mercy of the British minority. The merchants refused to pay duties,

petitioned the Board of Trade in London, and forced Murray's recall, 1766.

Gov. Sir Guy Carleton, Lord Dorchester, built a line of forts along the Lake Champlain route linking Quebec with New York, 1768. By an ordinance of 1770, he established 2 courts of common pleas to take over the jurisdiction of the justices of the peace. Confusion of laws and institutions, the doubtful legality of ordinances, and fiscal measures increased pressure for new legislation.

QUEBEC ACT. 7 Oct., 1774. The western boundaries were redrawn to include land set apart by the Proclamation of 1763, and the Ohio and Mississippi valleys. The territory remained an Indian reserve, but was placed under the colony's jurisdiction. A revised oath allowed Roman Catholics to take office. The governor, with an appointed council of 17-23 members, was granted legislative authority, but without power to tax except for local improvements. Ordinances dealing with religious matters had to have royal consent. The seigniorial system was continued, and French law was maintained for civil cases, while British law was to be used in criminal cases. The Quebec Revenue Act, 1774, imposed customs duties, and crown revenues were to pay the costs of civil administration.

WAR OF THE AMERICAN REVOLU-

LUTION. 1775-83. Although the Quebec Act removed some French-Canadian grievances, the British minority considered it a punitive measure directed against the American colonies. The 1st Continental Congress appealed, 1774, to Canadians to rebel, and John Brown, a New England lawyer, attempted, Mar. 1775, to win the support of dissatisfied Montreal and Quebec merchants. In May 1775, the "Green Mountain Boys" under Ethan Allen, joined by Benedict Arnold, captured Fort Ticonderoga and Crown Point, Arnold later occupying St. John's.

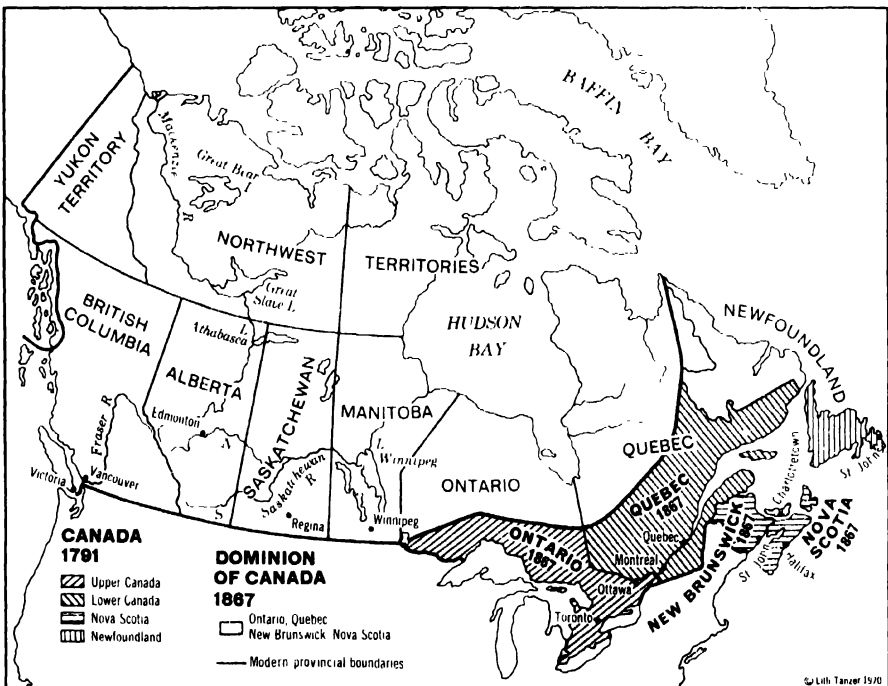

Montreal was captured, 12 Nov., and Quebec was besieged throughout the winter. The arrival, May 1776, of British reinforcements forced the American troops to retreat, and by the end of the year Lake Champlain was again under British control. By the Treaty of Paris, 6 Sept., 1783, Britain surrendered the country between the Ohio and the Mississippi, and it was provided that the American government would recommend to the individual states appropriate compensation for the Loyalists.

1784-1814

LOYALIST IMMIGRATION. 1783-91. Disenfranchised and dispossessed by the Revolution, Loyalists from the former American colonies moved into Canada. About 35,000 went to Nova Scotia, from which, 1784, New Brunswick was separated under a gov., nominated council, and elected assembly; Prince Edward Island became a separate administrative area under a lieut. gov. Another 20,000 moved to Quebec with the largest settlements on the upper St. Lawrence, Lake

Ontario, Lake Erie, and the Eastern Townships region bordering New York and Vermont. Land grants of 200 acres were given to noncommissioned officers, while privates and civilians received 100 acres, with 50 acres for each additional member of the family. The composition of the Canadian population was altered by the Loyalist immigrants, who increased the pressure for the use of English law and language, and for a representative assembly with powers to tax. Following the *Haldimand v. Cochrane* case, the English party forced, 1784, through the Legislative Council an ordinance introducing habeas corpus, and Lieut. Gov. Henry Hamilton, in the absence of Gov. Haldimand, instituted trial by jury, 1785. In 1785, Loyalists petitioned that the settlements above Montreal should be constituted as a separate province.

CANADA ACT. 10 June, 1791. This act divided Quebec at the Ottawa River into 2 provinces, Upper and Lower Canada, each with a Legislative Council nominated for life and an elected Assembly, the crown reserving the right to disallow colonial laws. In Upper Canada,

land was to be granted in freehold, in Lower Canada, seigniorial tenure was retained unless conveyance by English law was requested. One-seventh of all lands granted was to be reserved for the maintenance of the Protestant clergy (Clergy Reserves), and the rights of Roman Catholics were guaranteed.

WESTERN EXPANSION AND TRADE. Before the British conquest of Canada, British and French fur traders in the western territories had competed for the support of the Indian tribes, on whose cooperation successful trading largely depended. As French competition increased, the Hudson's Bay Co., whose charter of 2 May, 1670, gave it a monopoly and jurisdictional control of the Rupert's Land region, pushed inland to set up trading posts. Subsequent rivalry arose between the Hudson's Bay Co. and Montreal fur traders, who, in 1783, formed the Northwest Co. (merged with Hudson's Bay Co., 1821), which established a network of posts from Lake Superior to the Rockies, while at the same time American traders were coming in from the Ohio area. Peter Pond, 1775-88, re-explored much of the area covered by Siem de La Vérendrye, 1731-42, and crossed the watershed between rivers emptying into Hudson Bay and the Arctic. Alexander Mackenzie (1764-1820) discovered, 1789, the Mackenzie River, and in 1793, making the 1st overland journey from the east, reached the Pacific coast. At first for the Hudson's Bay Co., and later for the Northwest Co., David Thompson (1770-1857) explored, traded, and surveyed the future Manitoba, Saskatchewan, and Alberta, 1785-1807, and Simon Fraser (1776-1862) with John Stuart (1779-1847) explored the Fraser River.

On the Pacific coast the fur-trading post which had been set upon Nootka Sound was seized by Spain, which, by an agreement with the British, surrendered its claims to the area, 1790. Between 1792 and 1794 George Vancouver explored the coast and circumnavigated Vancouver Island. J. J. Astor's Pacific Fur Co. established, 1811, a trading post at Astoria, near the mouth of the Columbia River. At the same time, Lord Selkirk overcame the opposition of the Hudson's Bay Co., from

which he bought 116,000 sq. mi. of land, and was given a grant, 1812, to settle Scottish immigrants in the Red River Valley. In 1815 and 1816, forcible attempts by the Northwest Co. to oust the colonists failed, and after an investigation, 1817, Selkirk's grant was confirmed and the colony resettled.

JAY'S TREATY. 17 Nov., 1794. Britain, having failed to evacuate the northwestern military posts ceded to the U.S. by the Treaty of Paris, agreed to withdraw by 1796, and a boundary commission was appointed to settle the disputed western and Maine frontiers. But western expansion by both countries, American immigration into Upper Canada, and intrigue for Indian support continued, the British being accused of supplying and inciting the Indians.

WAR OF 1812. U.S. attacks on Canada failed. The Treaty of Ghent, 24 Dec., 1814, restored the *status quo* and provided for a boundary commission to make recommendations regarding the Maine-New Brunswick frontier, but left western and lake problems unsettled.

1815-40

RUSH-BAGOT AGREEMENT. 28-29 Apr., 1817. Resolving the problem of disarmament left unregulated by the Treaty of Ghent, this agreement limited British and American naval vessels on the Great Lakes to 1 ship each on Lakes Champlain and Ontario, and 2 each on the upper lakes, no vessel to exceed 100 tons or to mount more than 1 18-pound cannon.

NORTHWEST BOUNDARY SETTLEMENT. 20 Oct., 1818. The northwest boundary between Canada and the U.S. was established at the 49th parallel from Lake of the Woods to the Rocky Mountains. The region west of the mountains (Oregon Territory) was to be jointly occupied for a 10-year period. The agreement also conceded the U.S. fishing rights off the Labrador and Newfoundland coasts.

FAMILY COMPACT AND CHATEAU CLIQUE. In both Upper and Lower Canada, resentment grew from the constitutional conflict between the elected Assemblies and the dominant adminis-

trative cliques (the Family Compact in Upper Canada, the Château Clique in Lower Canada). Under the provisions of the Canada Act, the governor, responsible only to the British government and supported by a nominated Legislative Council, could override the actions of the Assembly. Although between 1791 and 1814 relations with the United States and Britain overshadowed local provincial affairs, the colonists' opposition, which led to the eventual breakdown of government, was based on (1) long-standing disputes about control of patronage and the judiciary; (2) Clergy Reserves, questions of church establishment, and the control of education; (3) settlement, land development, and the provision of public works; and (4) revenue and supply. In Lower Canada, party lines were sharpened by national differences. The administration and Legislative Council were controlled by the British minority, including the merchants, and the Assembly by the French majority with largely agricultural interests.

EXECUTIVE-LEGISLATIVE CONFLICTS. Led by Louis Joseph Papineau (1786–1871; elected Speaker, 1815), the Assembly concentrated its efforts on controlling crown revenues and supply. In 1818 the British government accepted the Assembly's proposal to meet provincial expenses out of the permanent revenues, which, being usually insufficient, had to be supplemented by the legislature, thus opening the way for control of all expenditures. In 1819 the Assembly refused to vote the appropriation until it had examined and voted on each item in both the permanent and supplementary revenues. In 1820 the Assembly refused the request for a permanent civil list and, with its demands becoming more aggressive, Gov. Lord Dalhousie (1770–1838) dissolved the legislature, and after the election refused to recognize Papineau as Speaker. Under Gov. Sir James Kempt, Papineau was again made Speaker, and in 1829 a law was passed increasing the representation from the Eastern Townships. In 1831 the government transferred the crown revenues to the control of the Assembly, which refused the requested civil list. The Assembly of 1834 adopted

Papineau's 92 Resolutions and his party won a huge majority in the election of that year. In 1836 the Assembly voted supplies for a 6-month period only, and in 1837 refused supplies altogether.

GRIEVANCES OF UPPER CANADA.

In Upper Canada the postwar depression revived issues of reform, and in 1817 discontent was voiced by Robert Gourlay by means of his 31 Questions, which drew attention to the large undeveloped land holdings in Upper Canada, where there was much speculation, and to the position of the Anglican Church, which was identified with the ruling oligarchy by settlers and traders, most of whom were dissenters. In 1828 the Reform Party, led by Robert Baldwin (1801–58), Marshall Spring Bidwell (1799–1872), William Lyon Mackenzie (1795–1861), and Egerton Ryerson (1803–82), won a majority in the Assembly and passed 58 bills, all of which were rejected by the Legislative Council. Defeated in 1830, when the new Assembly granted his own funds to the governor, Sir John Colburne, the Reformers again won control in 1834 and Mackenzie, as chairman of a committee of the Assembly, issued, 1835, the 7th Report on grievances. In 1836 some moderate reformers, appointed to the Legislative Council by Gov. Sir Edward Bond Head (1793–1875), resigned. The Assembly passed a vote of no confidence and, refusing to vote supplies, was dissolved. Head's part in the ensuing election campaign assured the defeat of the Reformers and the "Bread and Butter" Assembly voted, Nov. 1836, the necessary appropriations.

REJECTION OF BRITISH PLANS

FOR UNION. Common provincial concerns led to a British government proposal, 1822, for a Canadian union, designed to satisfy the demands of the British minority in Lower Canada, and to resolve disputes over the distribution of revenue from customs dues. For the proposed bill, rejected in Lower Canada as detrimental to French-Canadian interests, and in Upper Canada as undemocratic, was substituted the Canada Trade Act, 5 Aug., 1822, which apportioned the disputed revenue between the provinces. In 1828 and again in 1834, British parlia-

mentary commissions failed to recommend viable solutions, the main obstacles being demands for an elective council and a permanent civil list. Lord John Russell's 10 Resolutions presented, '6 Mar., 1837, to Parliament rejected Canadian demands for responsible government and authorized the governor to use public funds to carry on the government. The Lower Canada Assembly refused to submit and was prorogued. In Upper Canada, the Resolutions were the occasion for mass meetings. Joint action was agreed on by the radicals in both provinces, while moderate reformers like Baldwin, Bidwell, and John Neilson of Lower Canada withdrew their support from Mackenzie and Papineau, who together signed, 31 July, 1837, the "Declaration of the Reformers of Toronto."

REBELLIONS IN UPPER AND LOWER CANADA. In Upper Canada armed resistance began when Mackenzie's rebels were scattered, 4 Dec., 1837, by Loyalist volunteers at Montgomery's Tavern in Toronto. Mackenzie escaped across the border, and occupied Navy Island in the Niagara River, where a Canadian force burned the American ship, *Caroline*, which was supplying the rebels. Mackenzie evacuated, 13 Jan., 1838, the island and was arrested by U.S. authorities. Throughout the rest of the year his followers, with the help of American supporters (Hunters' Lodges), staged border clashes. In Lower Canada, Papineau, learning that there was a warrant for his arrest, went into exile shortly before rebel forces were routed, Nov.-Dec. 1837, at St. Charles, St. Eustache, and St. Denis.

MISSION OF LORD DURHAM. As a result of the rebellions, the constitution of Lower Canada was suspended, 1837, and Lord Durham (1792-1840) was appointed governor in chief of all 5 British North American provinces, 29 May, 1838. In Lower Canada, Durham established a special governing council, and by ordinance granted a general amnesty except for rebel ringleaders in exile in America and 8 others who, pleading guilty, were banished to Bermuda. Destined to be the scapegoat of British political factions, Durham's policy was unsupported in Par-

liament and the ordinance was disallowed, and Durham, by his proclamation of 9 Oct., 1838, resigned.

DURHAM'S REPORT. 11 Feb., 1840, Lord Durham's "Report on the Affairs of British North America," published a year and a half after his resignation, recommended a union of Upper and Lower Canada, and responsible government for a united Canada, reserving for the British government control over foreign relations, regulation of trade, disposal of public lands, and the form of the constitution. Revenue bills were to be sponsored by the cabinet and to be presented to the legislature, while in return for a permanent civil list crown revenues were to be in the hands of the colonial government. In Oct. Lord Sydenham (1799-1841) arrived in Quebec as governor in chief to prepare for the union.

ACT OF UNION. 23 July, 1840. The act provided for the union of Upper and Lower Canada (renamed Canada West and Canada East) with a governor, a nominated legislative council of not less than 20 members to hold office for life, and an elected assembly of 84 members divided equally between each of the former provinces. Reports were to be in English, but French could be used in debates; crown revenues were surrendered for a civil list; supply bills were to originate with the governor and be submitted to the Assembly, provincial debts were to be consolidated and assumed by the new union, and existing laws were to continue unless and until amended.

1841-70

MAINE-NEW BRUNSWICK FRONTIER. Unresolved by the Treaty of Ghent and also when submitted, 1827, for arbitration by the king of the Netherlands, the dispute over the Maine-New Brunswick frontier flared up over land grants to British settlers along the Aroostook River. In 1839 Canadian lumberjacks, cutting timber in the disputed areas and refusing to leave, seized the U.S. land commissioner. This marked the beginning of the "Aroostook War." The fracas ended in a truce, with the frontier problem once more referred to a boundary

commission. By the Webster-Ashburton Treaty, 9 Aug., 1812, the boundary was drawn at the present line. The U.S. received more than half the disputed territory, but Britain retained a region through which passed a proposed military route from New Brunswick to Quebec.

OREGON BOUNDARY TREATY. In 1845 President Polk claimed the whole Oregon Territory for the U.S. By a treaty of 15 June, 1846, the U.S.-Canadian frontier was fixed at the 49th parallel to the middle of the Vancouver Island Channel, and then through Juan de Fuca Strait. Both countries were guaranteed navigation rights in the Channel, the Strait, and on the Columbia River.

PUBLIC WORKS PROGRAM. Gov. Sydenham (term of office, 1839-41) initiated a program of public works for the completion of the Welland Canal (opened 1829) between Lakes Erie and Ontario, the improvement of navigation, and the construction of roads and bridges, for which the British government guaranteed a loan of £1.5 m. He also guided through the legislature bills dealing with municipal government, disposal and settlement of land, the reform of the criminal law, and the school system.

SYDENHAM-HARRISON RESOLUTIONS. The issue of responsible government, left unclarified in the Union Act, was raised by Baldwin in 1841. He introduced a series of resolutions (Sydenham-Harrison Resolutions) proposing that the governor, while responsible to the crown, should choose as his advisers those having the confidence of the Assembly.

BALDWIN-LAFONTAINE MINISTRY. Sydenham's successors, Sir Charles Bagot (1842-43) and Sir Charles Metcalfe (1843-46), tried to maintain the policy of maintaining a core of moderates in the Executive Council, but problems increasingly revolved around the relationship of the Council to the Assembly, in which political factions were forming. In 1842, moderate reformers under Baldwin combined with the French led by Louis Hippolyte Lafontaine (1807-64) to form a powerful coalition forcing Bagot to construct a ministry under their joint

leadership. In 1843 the Baldwin-Lafontaine ministry resigned over the question of patronage, Metcalfe dissolved the Assembly, and after a stormy election, 1844, Metcalfe formed a Conservative ministry with a tiny majority.

GOVERNORSHIP OF LORD ELGIN. Under Lord Elgin (gov., 1847-54) relations between the Executive Council and the Assembly were further defined. After the victory of the reformers in both Canada West and East in the 1847 elections, the Conservatives resigned and Baldwin and Lafontaine again formed a ministry. In the session of 1849 the Assembly enacted legislation for judicial, municipal, and educational reforms, a general amnesty, and the promotion of railroad construction. The membership of the Assembly was increased from 84 to 130. Elgin's policy was tested when he gave his consent to Lafontaine's unpopular Rebellion Losses Bill. The bill provoked a storm of protest, and rioting broke out in Montreal among the anti-French factions, but Elgin was supported by the British Parliament, which refused to interfere in what was now considered a local matter.

ANNEXATION MANIFESTO. 10 Oct., 1849. Repeal of the British Corn Laws, 1846, and Navigation Acts, 1849, caused a sharp economic depression in Canada. Discontent with the British connection therefore increased among the Montreal and Eastern Townships commercial community, and was expressed in a short-lived movement for annexation to the U.S. (Annexation Manifesto, 10 Oct.) To help meet the economic situation, Elgin, with the co-operation of Francis Hincks, conducted a long-drawn-out negotiation with the U.S., and on 5 June, 1854, a Reciprocity Treaty was concluded.

MARITIME PROVINCES. In New Brunswick, Charles Fisher (1808-80) became prime minister of the 1st party government, 1854. In Prince Edward Island, torn by disputes over land tenure, the Assembly voted, 1847, a resolution asserting executive responsibility, and George Coles (1810-75) became prime minister in 1851. In Nova Scotia the hold of the Halifax oligarchy on the Executive

Council (nominated for life) and the governor was broken by the efforts of Joseph Howe (1804-73). By taking advantage of Russell's dispatch of 1839 to Sir John Harvey (gov. of New Brunswick) authorizing Harvey to make changes in his council for "reasons of public policy," Howe succeeded in persuading, 1840, the Assembly to pass a vote of no confidence in the Council. After a period of unsatisfactory coalitions, the Assembly again passed, Jan. 1848, a vote of no confidence, and James B. Uniacke was called on to form the 1st party government, Feb.

COALITION GOVERNMENT. By 1860 nearly half of the clauses of the Union Act had been changed by legislation or modified in practice, including a revision, 1856, making the Legislative Council elective and reducing the number of its members from 60 to 18, 12 chosen biennially for an 8-year term. Between 1854 and 1867, 10 ministries held office and government was brought to a virtual standstill. Sectional interests had given rise to the convention of the "double majority" (the support on important issues of a majority of representatives from each of the old provinces), and any ministry was in effect a coalition of the moderate center. As the population of Canada West outstripped that of Canada East, the radical "Clear Grits" led by George Brown (1818-80) demanded representation by population, a policy opposed by French Canadians, who also opposed nondenominational schools.

WESTERN EXPANSION. Expansion in the northwest, the ineffectual jurisdiction of the Hudson's Bay Co., and the discovery of gold, including the Fraser River deposits, revived the issue of Canadian control in that region. On 19 Nov., 1858, British Columbia was made a separate province. The need for an interprovincial railway system and railway expansion into the northwest, and the financial confusion surrounding railway construction underlined the necessity for comprehensive Canada-wide planning and control.

MOVEMENT TOWARD CONFEDERATION. In 1856 Antoine A. Dorian (1818-91), leader of the French *Rouges*,

suggested federal union; 2 years later Alexander T. Galt (1817-93) presented resolutions also favoring federation; and in the election of 1859, Brown and William McDougall (1822-1905), campaigning on a platform of federation and annexation of the northwest, won a majority. In 1863 the John Sandfield-John S. Macdonald (1812-72)—L. V. Sicotte (1812-89) ministry, committed to the "double majority" principle, was defeated over the issue of the Separate School Bill and its refusal to accept a British government loan to guarantee the costs of the construction of the Intercolonial Railway. With the outbreak of the American Civil War and consequent strained relations with the U.S., problems of imperial defense and neutrality provided an impetus to the federal movement, as did the later repeal, 1866, of the Reciprocity Treaty of 1854 by the U.S. and Irish Fenian raids on the Niagara and Vermont border. After the collapse of the Macdonald-Dorian Ministry in 1864, Gov. Lord Monck was unable to put together another ministry until, under the titular leadership of Étienne Taché, a ministry was formed, committed by Brown, G. F. Cartier (1814-73), and John A. Macdonald (1815-91) to seek federation.

CHARLOTTETOWN AND QUEBEC CONVENTIONS. The question of legislative federation for the Maritime Provinces was raised by Charles Tupper (1821-1915) of Nova Scotia and S. L. Tilley (1818-96) of New Brunswick. They arranged for the Charlottetown Convention, 1 Sept., 1864, which a Canadian delegation asked to attend. Plans were then quickly drawn for the Quebec Convention, 10-28 Oct., which drew up 72 resolutions outlining an Act of Confederation. The resolutions were submitted to each provincial legislature, and in spite of opposition in New Brunswick and Nova Scotia, a delegation went to Britain, where the London Resolutions were published, Dec. 1866.

BRITISH NORTH AMERICA ACT. 28 Mar., 1867. This act of the British Parliament established the Dominion of Canada (Ontario, Quebec, New Brunswick, Nova Scotia) under a bicameral

federal government, with an appointed Senate of 24 members each from Ontario and Quebec and 12 each from Nova Scotia and New Brunswick, and a House of Commons with representation by population. Provincial governmental powers were defined, the residual powers being with the federal government. On 1 July, John A. Macdonald became 1st Dominion prime minister, heading a Liberal-Conservative ministry.

RED RIVER REBELLION. By a British Act of 1869, Rupert's Land and the Northwest Territory were bought from the Hudson's Bay Co. for £300,000 and William McDougall was appointed lieut. gov. Subsequent unrest among the population (mostly hunters, trappers, and fur traders) was caused by land surveys, leading to a belief that the land was to be confiscated. Under the leadership of Louis Riel, rebels seized Fort Garry (Winnipeg) and, setting up a provisional government, issued a bill of rights demanding an elected legislature and representation in the Dominion parliament, 1869. A commission under Donald A. Smith pacified the rebels to some degree, but their execution of Thomas Scott, leader of a small English opposition, aroused indignation in Ontario, and the rebels were eventually dispersed by an expedition led by Col. Garnet Wolseley.

MANITOBA ACT. 5 July, 1870. This act constituted Manitoba as a province, and in 1871 British Columbia also joined the Dominion on the understanding that construction of a transcontinental railway would begin within 2, and be completed within 10, years. (*Cont.* p. 321.)

AUSTRALIA

1770-1808

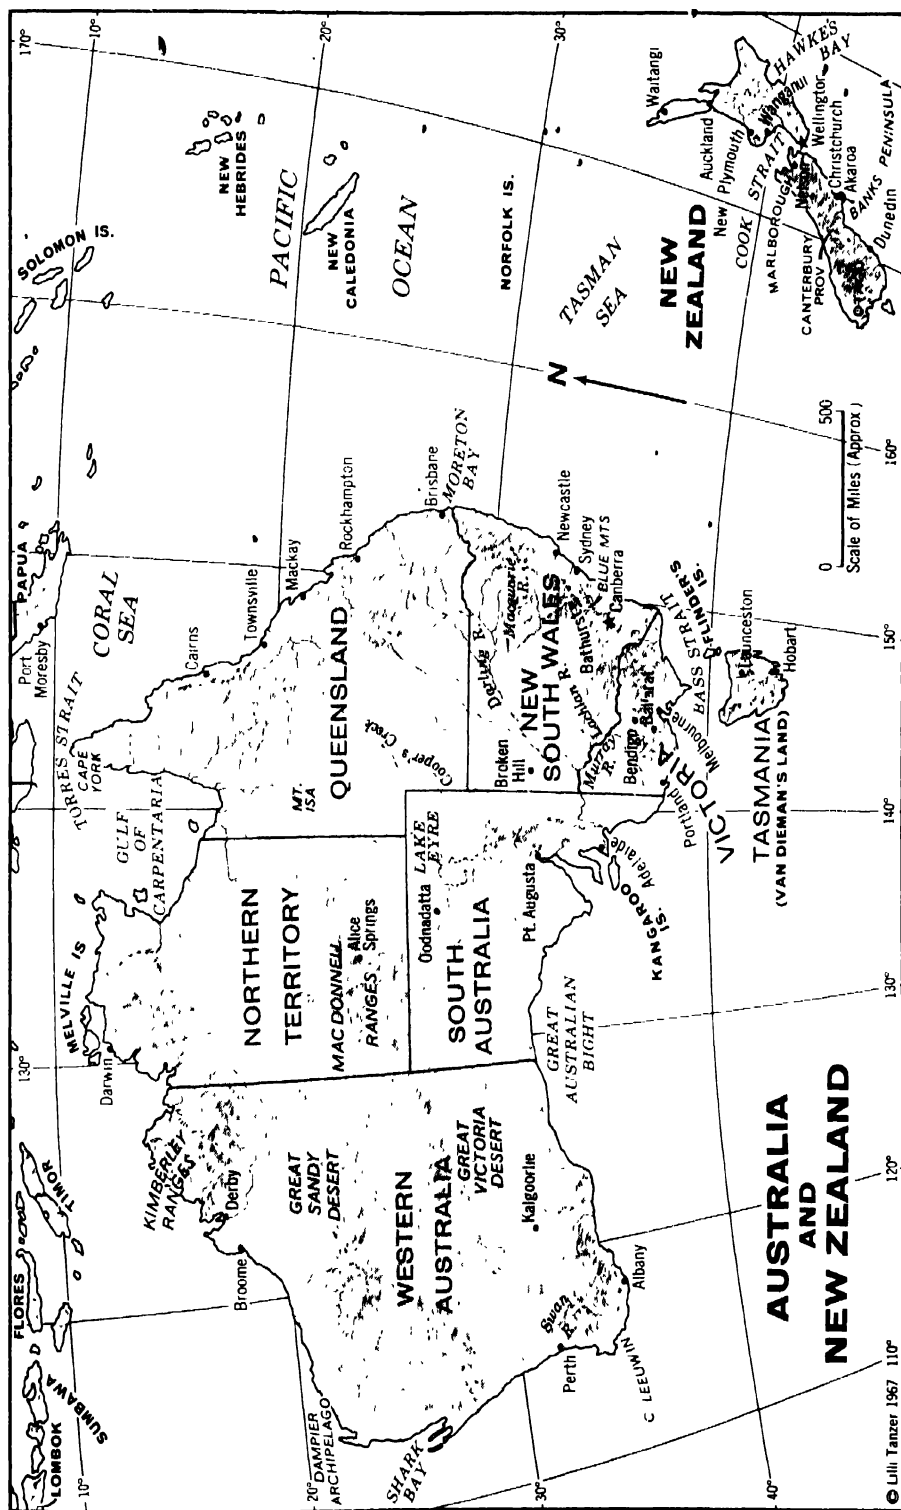

DISCOVERY. From 1596 to the discovery of Van Diemen's Land (Tasmania) by Abel Tasman in 1644, the Dutch, sailing from the East Indies, landed at many points on the north and west coasts of Australia, calling the land New Holland. William Dampier, the English adventurer, anchored at Melville Island, 1688, and Shark's Bay, 1699. On 30 Apr., 1770,

Capt. James Cook (1728-79) landed at Botany Bay, explored northward, and claimed, 23 Aug., for Great Britain the east coast, which he named New South Wales.

1ST CONVICT SETTLEMENT. Influenced by Cook's reports, the British government considered New South Wales as a possible place of settlement for American loyalists, subsequently deciding on a self-supporting penal colony to relieve overcrowding in British jails after the loss of the American colonies made it impossible to send criminals sentenced to transportation to America. On 18 Jan., 1788, Capt. Arthur Phillip arrived at Botany Bay with 11 ships, including 6 convict transports carrying 717 convicts of whom 520 were men, and moved, 26 Jan., to Port Jackson (Sydney). Problems of settlement were compounded by the disorderliness of the convicts and the failure of supply ships to arrive, causing strict rationing of food, 1789-92. A contingent of Marines initially provided protection, but in 1789 the New South Wales Corps was organized on a permanent footing, both officers and soldiers being promised grants of land. Phillip began the practice of giving convicts conditional pardons for good behavior and land grants of up to 30 acres. He also assigned convicts as laborers to private individuals. The 1st free settlers arrived in New South Wales in 1793.

NEW SOUTH WALES CORPS. Phillip's successors in command, Francis Grose and William Paterson, officers of the New South Wales Corps, relaxed controls, permitted land grants (many officers, e.g., John Macarthur [1767-1834], became powerful landowners), and allowed the officers of the Corps to establish a trade monopoly over arriving cargoes, including rum. The officers were also able to call on the unlimited services of convicts. Civil jurisdiction was replaced by military.

ADMINISTRATION OF GOV. HUNTER. Capt. John Hunter (gov., 1795-1800) re-established the civil magistracy, but was unable to break the economic monopoly of the Corps. He supported the efforts of Macarthur, who had

started sheep raising and breeding in 1794. Macarthur imported, 1797, merino sheep from South Africa. Coal was discovered, 1797, on the Hunter River and at Botany Bay, whence, 1800, it was exported to India.

EXPLORATION OF COASTS.

George Bass (1771–1803) discovered, 1798, Bass Strait, and in 1798 sailed with Matthew Flinders (1774–1814) around Van Diemen's Land. In 1802–3 Flinders circumnavigated Australia, proving New Holland and New South Wales to be all one continent. At Flinders' suggestion the continent was named Australia.

SETTLEMENT OF VAN DIEMEN'S LAND. Alarmed by the proximity of French naval expeditions, Philip King (gov., 1800–1806) ordered an expedition to Van Diemen's Land to establish settlements near Hobart and Launceston.

RUM REBELLION. Appointed as a disciplinarian to control the officers and to stop the traffic in rum, William Bligh (1754–1817) imposed strict penalties on the officers of the New South Wales Corps and ran foul of Macarthur, whom he arrested, 1807. The infuriated officers persuaded their commander, Maj. George Johnston, to release Macarthur, declare Bligh unfit to govern, and imprison him (the Rum Rebellion).

1809–30

ADMINISTRATION OF GOV. MACQUARIE. Lachlan Macquarie (gov., 1809–21) disbanded the New South Wales Corps, 1810. Civil courts were established, 1814; restrictions on free immigration removed, 1816, greatly increasing the flow of immigrants; and the Bank of New South Wales founded, 1817. Macquarie's governorship was marked by efforts to secure social and legal recognition for "emancipists" (pardoned convicts, many of whom had become merchants and landowners) against the opposition of the "exclusives" (officials, wealthy free settlers, and large landowners).

OPENING UP OF THE INTERIOR. Gregory Blaxland (1778–1853), William Charles Wentworth (1790–1872), and William Lawson (1774–1850) crossed the Blue Mountains, 1813. Their route was re-

traveled by the surveyor, George Evans, and a road built from Sydney to establish, 1815, the 1st interior town, Bathurst. In 1817–19 John Oxley (1783–1828) explored the Lachlan and Macquarie rivers, opening up grazing lands. Land was freely granted and the region was quickly occupied by settlers, who, together with the squatters (freed and escaped convicts and settlers using land without permission), came into increasingly violent conflict with the aborigines.

BIGGE REPORT. John Thomas Bigge, a London barrister, was appointed by the House of Commons to investigate and report on conditions in New South Wales, 1819. Among his recommendations, 1821, were proposals to increase large land grants and to assign more convict labor.

ADMINISTRATION OF GOV. BRISBANE. Sir Thomas Brisbane (gov., 1821–25) favored large as against small landholdings. Grants up to a maximum of 4 sq. mi. were made according to the amount a settler could invest in development or to the number of laborers he employed, 1 convict being assigned per 100 acres. The Australian Land Co was formed, 1824, with a grant of 1 m. acres and a monopoly of coal mining in New South Wales. The Van Diemen's Land Co., 1825, received 400,000 acres in Tasmania.

NEW SOUTH WALES JUDICATURE ACT. 19 July, 1823. A Legislative Council was established of from 5 to 7 nominated members to advise the governor. A Supreme Court was created with military juries for criminal cases and an ordinary jury in civil cases if requested by both parties. The act increased the pressure for self-government, of which William Charles Wentworth became a leading advocate. In 1825 an Executive Council was established.

The explorations of Hamilton Hume (1797–1873) and William Hovell (1786–1875) in the Murray River region further encouraged inland settlement.

VAN DIEMEN'S LAND. Van Diemen's Land, under Liéut. Gov. Col. George Arthur (1784–1854), was separated from New South Wales in 1825. A large, unruly convict population and bush-

rangers (escaped convicts and outlaws) terrorized the countryside, leading to retaliation by the aborigines and causing the Black War. Arthur finally controlled the situation, but failed in his efforts to round up, 1830, the aborigines to ensure their survival. George Robinson, a Methodist minister, eventually took, 1835, the Van Diemen's Land aborigines to Flinders Island, where the last one died in 1860.

LAND POLICY UNDER DARLING. Sir Ralph Darling (gov., 1825-31) approved a land policy which permitted grants of up to 2,560 acres and the sale of crown lands up to 4,000 acres at not less than 5s. an acre. The power of the wealthy landowners increased and the demands of the emancipists, led by Wentworth, for recognition became more insistent. Darling tried to set a policy of limits of location, i.e., concentrated settlement, within the 19 Counties (bounded by a semicircular line around Sydney).

INCREASE IN LEGISLATIVE COUNCIL MEMBERSHIP. An Act of 25 July, 1828, increased the size of the Legislative Council to 18 members, of whom 8 were to be administrative officials and 7 "nonofficials." In practice the nonofficials were always leading exclusives.

DISCOVERIES OF STURT. In 1827 Allan Cunningham explored the Darling Downs region and in 1828 Charles Sturt (1795-1869) discovered the Darling River and traveled, 1829-30, down the River Murray to its mouth. Sturt's journeys opened up a huge new region for pastoral settlement.

FOUNDING OF WESTERN AUSTRALIA. Claimed in 1826 by the British when a military post was set up at King George's Sound, the Swan River was explored, 1827, by Capt. James Stirling (1791-1865), who urged colonization. Initial opposition to the scheme was overcome by Thomas Peel (1795-1864) and by Stirling, and a grant of 1 m. acres was made, Peel being given 250,000 acres for his own use. Immigrants were to receive 40 acres for every £3 they invested in development. On 18 June, 1829, a settlement was made on the Swan River. Inadequate preliminary surveys, insuffi-

cient capital and labor, poor terrain, and geographic isolation from other colonies made life in the new colony difficult, and Western Australia led a precarious existence for many years.

1831-36

LAND POLICY IN NEW SOUTH WALES. In 1831 regulations were issued fixing the price of land at a minimum of 5s. an acre to be sold at auction. Revenue obtained from land sales was to be applied to financing immigration and to public works. Pressure to obtain grazing lands mounted, making it impossible to contain settlement within the 19 Counties. The New South Wales Legislative Council passed, 1836, the Squatting Act, which allowed the occupation of crown lands for an annual fee of £10, with no limit set on the size of runs. This marked the beginning of pastoral expansion, the term "squatter" gradually losing its derogatory meaning as educated, wealthy settlers obtained land.

SYSTEMATIC COLONIZATION. Economic and social conditions in England stimulated interest in "systematic colonization," promoted by Edward Gibbon Wakefield (1796-1862) and his supporters. Wakefield, realizing that successful settlement required adequate land, capital, and labor, developed the theory that if land were sold at a "sufficient price" and the proceeds applied to assist further emigration, there would be a supply of laborers needing to work for several years before they had enough money to buy their own land, and the number of landowners would be restricted to those with capital. By these means a suitable balance would be achieved between land, capital, and labor. Wakefield's adherents formed, 1833, the South Australian Association, with George Fife Angus (1789-1879) a principal investor. The Association received, 1834, a charter to establish a colony with a governor and a Board of Commissioners in London to supervise land sales at not less than 12s. an acre.

FOUNDING OF SOUTH AUSTRALIA. The 1st South Australian settlers landed at Kangaroo Island, soon

moving to a mainland site at Adelaide. Despite the work of surveyor William Light (1786–1839), more immigrants were sent out before proper surveys had been made. Land speculation consequently became rife. John Hindmarsh (1782–1860), the 1st governor, was succeeded in 1838 by George Gawler (1795–1869), who combined the offices of gov. and resident commissioner. By accelerating surveys, controlling land sales, and a road-building program, Gawler tried unsuccessfully to overcome the problems. The colony was near bankruptcy when George Grey (gov., 1841–45) was sent out. By an Act of 30 July, 1842, the Board of Commissioners was abolished and South Australia became a crown colony. Grey reduced expenditures and restored solvency. The discovery, 1841–45, of copper and lead-silver mines attracted both capital and immigrants.

SETTLEMENT OF VICTORIA. In 1834, Edward Henty (1810–78) and his brothers began farming at Portland Bay. In 1835 John Batman (1801–39) and his associates arrived from Van Diemen's Land and, having made a treaty with uncomprehending aborigines, settled at Melbourne. A group from Van Diemen's Land, led by John Fawkner (1792–1869), arrived in the same area, and other settlers came overland. The New South Wales Legislative Council passed an act, 1836, prohibiting the occupation of crown lands without permission, but this proved impossible to enforce. The Port Phillip District was later administered by Superintendent C. J. Latrobe (1801–75).

1837–50

CESSATION OF TRANSPORTATION. The report of a Parliamentary Committee, 3 Aug., 1838, headed by Sir William Molesworth, led to criticism of the transportation system both in Britain and Australia. On 18 Nov., 1840, transportation to New South Wales ceased. Until 1853 convicts continued to be sent to Van Diemen's Land, and to Norfolk Island until 1855. Convicts were sent to Western Australia from 1850 to 1868.

EXPLORATION OF THE INTERIOR. Edward Eyre (1815–1901) reached the Lake Eyre region, turned south to Streaky Bay on the Great Australian Bight, and then crossed the deserts to reach Albany, 1841–45. Charles Sturt forced his way into the Stony Desert, and Ludwig Leichhardt (1813–48) explored the region from Darling Downs to the Gulf of Carpentaria.

CONSTITUTION ACT OF 1842. An Act of 30 July, 1842, created for New South Wales a 36-member Legislative Council, with 12 nominated and 24 elected members (6 to be from the Port Phillip District), to hold office for a 5-year period. The franchise was to be based on a property qualification. The act also made provision for systems of local government.

LAND POLICY. By an Act of 22 June, 1842, free grants of land were abolished. From then on land was sold by auction at a minimum upset price of £1 an acre throughout all the colonies. In 1844 Gov. George Gipps (1791–1847) of New South Wales levied a squatting fee on each run (a run was to be not more than 20 sq. mi. or carry more than 4,000 sheep) and granted leaseholders the right to purchase their land. A regulation of 9 Mar., 1847, further systematized leaseholding.

AUSTRALIAN COLONIES GOVERNMENT ACT. 5 Aug., 1850. Port Phillip District was separated from New South Wales to form the new colony of Victoria. Each colony could now constitute its own legislature, make its own franchise laws, alter its own constitution, and impose customs duties. The constitution drawn up for New South Wales provided for a Legislative Council appointed for life, an elected Legislative Assembly, and cabinet government. With the exception of Western Australia, the other colonies adopted similar constitutions, though their Councils were elective. Constitutions were adopted by New South Wales, Victoria, and Tasmania (the former Van Diemen's Land) in 1855, and by South Australia in 1856. Manhood suffrage was introduced in South Australia, 1855, Victoria, 1857, and New

South Wales, 1858, and vote by ballot in Victoria and South Australia in 1856, and in New South Wales in 1858.

1851-70

GOLD RUSH. Gold strikes were made at Bathurst (N.S.W.) in 1851 and at Ballarat and Bendigo (Victoria). The rapid inflow of miners and adventurers necessitated government regulation of the gold fields. In 1851 a license fee of 30s. (reduced in 1853 to £1) was imposed. Opposition to fees, problems of collection, and the severity of law enforcement measures caused discontent among the diggers, especially at Ballarat, where Peter Lalor led the easily crushed rebellion at Eureka Stockade, 3 Dec., 1854. In 1855 a Miner's Right, costing £1 a year and entitling the holder to vote, replaced the licensing system. The gold rushes acted as a spur to wheat growers and agriculturalists, who had to feed an increased population, but the influx of diggers and the diversion of labor from towns and farms disrupted the economy, especially in Victoria. As alluvial deposits were exhausted and deep mining became both profitable and necessary, the diggers drifted away from the gold fields, causing problems of unemployment.

CHINESE RESTRICTION ACT. **June 1855.** This act was passed by the Victoria legislature because of the large Chinese immigration to the gold fields. It imposed a poll tax of £10 on each Chinese and later a yearly residence tax of £4 was required. Despite the opposition of the British government, similar restrictive laws were passed by other colonies.

TORRENS TITLE. The Real Property Act (Torrens Land Transfer Act), 28 Jan., 1858, passed in South Australia, and copied by other colonies, provided for the systematic registration of land transactions.

COLONY OF QUEENSLAND. In 1859 Queensland, the former Moreton Bay penal settlement, became a separate colony. As exploration opened up the interior, immigration into Queensland

increased, and it developed into a leading pastoral center.

LAND SELECTION. The Land Acts of 1861, promoted by John Robertson (1816-97) in New South Wales and Charles Gavan Duffy (1816-1903) in Victoria, attempted to help diggers and small farmers, and to break up large squatter-owned leaseholdings by allowing selection of land before survey of from 40 to 640 acres at £1 an acre with a down payment of 5s. on condition of occupancy and development. Abused by squatters turned selectors and also using hired "dummies," the selection laws settled fewer people than predicted. The unpredictable climate and the bringing into cultivation of marginal land militated against the success of small holdings. Revised Acts of 1865 and 1869 imposed stricter laws, but the squatters had already obtained large tracts of freehold land.

KANAKA LABOR. In 1868 Queensland regulated "blackbirding," the importing of Kanaka labor from the Pacific islands for work on the sugar plantations. Inaugurated in 1842 by Robert Towns for cotton plantations, the practice had degenerated into a system close to slavery.

COLONIAL DEFENSE. In 1863 the Duke of Newcastle (colonial secretary) circulated a dispatch laying down the principle of colonial responsibility for local defense. By the Colonial Naval Defence Act of 1865, Australian authorities obtained several ships for coastal and harbor defense. Finally, in 1870, local militia forces were established, and British garrison troops were withdrawn. (*Cont. p. 323.*)

NEW ZEALAND

1770-1839

1ST SETTLEMENTS. Discovered in 1642 by the Dutch Captain Abel Janszoon Tasman, New Zealand was not rediscovered until Capt. James Cook (1728-79) landed, 7 Oct., 1769, on the 1st of 3 voyages, circumnavigated both islands, and claimed them for Great Britain. From 1792 American, British, and French

sealing and whaling ships arrived in New Zealand waters with increasing frequency, and eventually established settlements ashore, notably at the Bay of Islands and around Cook Strait. In 1794 the 1st traders from Sydney arrived, seeking timber and flax for the Australian penal colonies. They paid the Maoris with metal tools and firearms. The possession of muskets by the Maoris led to fierce tribal warfare, the campaigns, 1821, of Chiefs Hongi around Auckland and Te Rauparaha from Wanganui to Akaroa causing widespread destruction. Mainly populated by drifters and escaped convicts, the New Zealand settlements became notorious for outlawry.

ESTABLISHMENT OF CHRISTIAN MISSIONS. Samuel Marsden (1765–1838), chaplain of the penal colony at Sydney, decided to protect the Maoris from the evils of colonization. He opened a Church of England mission station at the Bay of Islands and, returning to Sydney, left behind lay missionaries who opened schools, cleared land for farms, and taught European methods of agriculture. In 1820 Thomas Kendall, a schoolteacher, took Chiefs Hongi and Waikato to England in order to have their language transcribed, and in 1827 a Maori translation of parts of the Bible was published by William Colenso. Missionary activity increased with the arrival, 1823, of the 1st ordained Anglican minister, Henry Williams, who worked closely with the Wesleyan mission, opened 1822, at Hokianga. In 1828 the 1st Roman Catholic mission was established at Hokianga. Imbued with the ideals of the humanitarian and evangelical movements, the missionaries opposed colonial expansion and directed their efforts toward keeping the country for the Maoris.

APPOINTMENT OF BRITISH RESIDENT. In 1827 James Busby was appointed as British resident. Since Britain had not claimed sovereignty and was reluctant to do so, Busby had no real powers of law enforcement.

THIERRY LAND CLAIM. In 1835 Baron Charles de Thierry, English-born son of French emigré parents, claimed sovereign rights to territory at Hokianga.

Australian and British speculators and traders were already buying and claiming large tracts of land from the Maoris, while responsible settlers, missionaries, and officials in New South Wales were demanding that the British take steps to control the situation.

NEW ZEALAND COMPANY. In 1837 the New Zealand Land Association was formed by a committee of influential colonial reformers, including Lord Durham and Edward Gibbon Wakefield. The Association urged annexation and planned colonization, a policy opposed by both the Colonial office and the missionaries. In May 1839 the Association was dissolved. Its members reorganized as a joint-stock enterprise, the New Zealand Co., and bought land without waiting for a charter or governmental permission.

1840–55

1ST COLONIZATION. 22 Jan., 1840. The 1st British colonists landed from the ship *Tory* at Port Nicholson (the site of Wellington) in Cook Strait. Capt. William Hobson (1793–1842) arrived as consul, 29 Jan., with instructions to claim British sovereignty over North Island, and to annex the sparsely populated South Island by right of discovery, the country to be a dependency of New South Wales.

TREATY OF WAITANGI. 6 Feb., 1840. This treaty was negotiated between Britain and certain Maori chiefs, with missionaries acting as interpreters. The chiefs ceded sovereign rights to Great Britain and were guaranteed protection and possession of their lands, although the crown reserved rights of pre-emption. On 21 May Hobson proclaimed British sovereignty and placed the capital at Auckland.

LAND POLICY. In 1841 New Zealand was declared a separate colony with Hobson as governor. Hobson imposed customs duties and, by voiding all land claims until investigated by Land Commissioner William Spain, came into immediate conflict with the New Zealand Company, which, with settlers already arrived and waiting for land, claimed

some 2 m. acres under its charter (granted Feb. 1841) and the right to sell land at 5s. an acre, as against the £1 an acre decided on by the government. About $\frac{1}{6}$ of the company's claims were eventually recognized.

During 1841 settlements were established at New Plymouth, in Taranaki, and at Nelson under the auspices of the New Zealand Co. Capt. Robert Fitzroy (gov., 1843-45) attempted to solve the land question and acquire revenue by permitting the direct purchase of land from the Maoris on payment of 10s. an acre (early reduced to 1d.) to the government. The measure was disallowed and Fitzroy recalled.

MASSACRE OF WAIRU. At Nelson, colonists under Arthur Wakefield (1799-1843) tried to arrest the chiefs Te Rauparaha and Te Ranghaeata for resisting land surveys, and were murdered at the massacre of Wairu, 17 June, 1843. Gov. Fitzroy condemned the slaughter, but, feeling the settlers were at fault and without military strength, failed to take effective action against the Maori chiefs. At the Bay of Islands, Maori discontent with customs duties and falling profits from trade came to a head when Chief Hone Heke sacked Kororareka (Russell).

ADMINISTRATION OF GOV.

GREY. Arriving in New Zealand with a reputation for firmness, Capt. George Grey (gov., 1845-54) quashed Maori unrest in the north; held, 1845, Te Rauparaha in custody; and put down, 1847, an uprising at Wanganui. Grey restored crown control over land transfers, instituting a policy of block purchases from the Maoris. By these means he acquired most of South Island. In 1853 he reduced the price of land to 10s. an acre. His vigorous governorship brought a period of stability.

CONSTITUTION ACT OF 1846. An Act of 23 July, 1846, divided New Zealand into 2 provinces, New Ulster in the north and New Munster (Wellington and South Island), each with a governor, appointed council, and elected assembly. Grey recommended that this elaborate system was premature, and the act was suspended, 1847, for 5 years. In conse-

quence, the colonists' demands for self-government increased.

SOUTH ISLAND SETTLEMENTS.

Dealing through the New Zealand Company, the Association of the Scottish Free Church settled Otago (capital Dunedin) in 1878. The Church of England Canterbury Association, led by John R. Godley (1814-61), settled, 1850, Canterbury (capital Christchurch). In these settlements sheep raising soon proved suitable and profitable, and with the grant, 1851, of 14-year grazing licenses the industry grew rapidly in importance.

CONSTITUTION ACT OF 1852. An Act of 30 June, 1852, established 6 provinces, each with an elected superintendent and provincial council. The franchise was to be based on a small property tax. A governor, nominated Legislative Council, and an elected House of Representatives (General Assembly) were to be responsible for general administration, while the Colonial Office, through the governor, retained control of Maori affairs. Grey's delay in summoning, 1854, the General Assembly allowed the provinces to assert their authority. The period of provincial government lasted from 1852 to 1875.

1856-70

RESPONSIBLE GOVERNMENT. Responsible government was granted to New Zealand on 17 Aug., 1857. At the same time the provinces gained control over land sales and revenues. The cost of land purchases was to be met out of central government loans ("Compact of 1856").

NEW PROVINCES. The New Provinces Act, 1858, established Hawke's Bay, 1859; Marlborough, 1859; Southland, 1861 (reunited with Otago in 1870); and Westland, 1873.

MAORI WARS. 1860-72. Expanding colonization with its accompanying demand for land, a growing reluctance to sell on the part of the Maoris, and their doubts about the efficacy of the protection promised them by the Treaty of Waitangi were the main causes of the wars of 1860-72. The situation was aggravated by

the Maori "king" movement, a tribal union to achieve self-government, promoted by Wiremu Tamihana; Te Whero Whero was elected king in 1858. In 1862 arose the fanatical Hau-Haus, who combined in their belief system primitive Maori mythology and Judaeo-Christian doctrines. Guerrilla warfare broke out in Taranaki over the land claims long disputed by Te Rangitake. Ineffectual British suppressive campaigns encouraged the more hostile and warlike Waikato tribes, who were not pacified until the defeat, Apr. 1864, of Rewi at the Orakau *pa* (fort), and the capture, June 1864, of Te Ranga and, 1869, Titokowaru at Otauto. With the suppression of Te Kooti, who had escaped from imprisonment on Chatham Island and killed settlers and Maoris at Poverty Bay as he moved inland, the war came to an end. The gradual withdrawal of troops, sent from Australia under Gens. Pratt and Cameron, was completed by 1870.

INCREASES IN SELF-GOVERNMENT. From 1860 onward, relations between Britain and New Zealand and between the provincial and central governments became more clearly defined. During Grey's 2nd term as governor, 1861-67, the colony became, 1862, responsible for native affairs, the crown abandoned its rights of pre-emption, and by the New Zealand Settlement Act, 1863, the colony was able to assert a policy of "self-reliance" and assumed responsibility for the conduct of the Maori Wars.

ECONOMIC DEVELOPMENT. The discovery of gold in Otago, 1861, and Westland, 1865, tripled the population of South Island, greatly increasing its prosperity. Almost untouched by war, the southern provinces embarked on programs of public works. The 1st railroad, Christchurch to Ferrymead, opened in 1865. The northern provinces, disrupted by the fighting, were less prosperous.

SEPARATISM. In the 1860's a separatist movement developed, especially in South Island. Provincialist and centralist factions appeared, with problems of military and native affairs further confusing the issues by cutting across party lines. In 1865 Wellington replaced Auckland as

the capital to meet South Island complaints that the government was not centrally located. The decline in gold discoveries, growing unemployment, and a diminishing revenue fanned discontent. (*Cont. p. 325.*)

BOER AND BRITON IN SOUTH AFRICA

1770-95

SOUTH AFRICA IN 1770. Founded in 1652 as a refreshment station for ships of the Netherlands East India Company, by 1770 Cape Colony extended north to the Orange River and east to the Great Fish River. Dutch-speaking Boers (cattle farmers) lived in the frontier regions in isolation from the Company's administration at Cape Town. They had driven the nomadic Bushmen from their hunting grounds, were already employing cattle-herding Nama (Hottentots) on interior farms, and the struggle with the Bantu (black African) peoples living east and north of the Great Fish River had begun.

GRAFF-REINET REBELLION. In 1785, on petition of the colonists, the area of Graff-Reinet was made a separate administrative district. Adriaan van Jaarsveld, who had routed, 1781, the Bantu Xhosas, became border commandant. Honoratus Maynier was then given orders to settle disputes, and successfully negotiated treaties with the Xhosas. Bantu infiltration and raids persisted, however, and, evicting Maynier, the colonists set up, June 1795, their own government under van Jaarsveld. The district of Swellendam also rebelled.

END OF COMPANY RULE. In Cape Town demands for reform increased, and petitions were sent to the Company's directors in the Netherlands seeking an equal number of civilians on the High Court of Justice, representation on the Council of Policy, and permission to trade freely and export produce to the Netherlands. Forestalling seizure by the British during the American War of Independence, the French stationed, 1781-83, a fleet at the Cape, inducing a temporary prosperity which, on their

leaving, was quickly followed by a slump. In great financial distress owing to the wars in Europe, British naval supremacy, and outworn financial policies, the Company appointed 2 special commissioners to investigate the situation at the Cape, but in 1795 it went bankrupt. At this time the population of the colony was about 45,000, of whom some 20,000 were slaves.

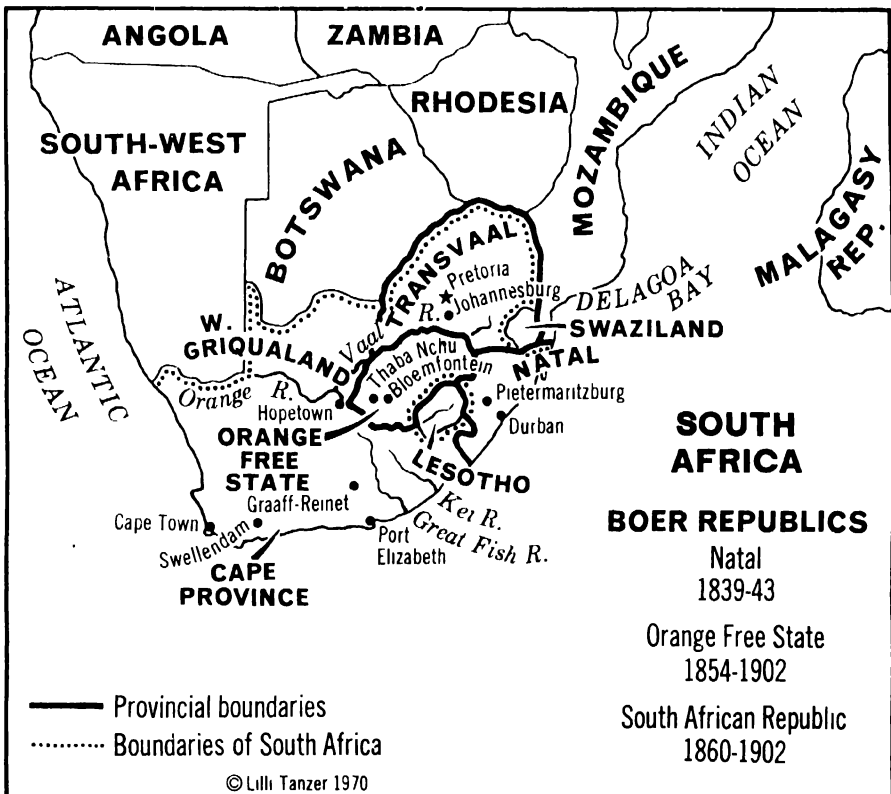

1795-1806

1ST BRITISH OCCUPATION. In 1795 the British ordered a fleet under Adm. Sir George Elphinstone and a military force led by Maj. Gen. James Craig to occupy the Cape, and by the Capitulation of Rustenburg, 16 Sept., the Dutch garrison surrendered. As 1st British gov. of Cape Colony, Craig followed a conciliatory policy, replacing the Committee of the High Court with a nominated burgher Senate of 6 members. Earl Macartney,

who succeeded Craig in 1797, introduced judicial reforms and abolished monopolies.

RESTORATION OF DUTCH RULE.

Under the Treaty of Amiens the British returned the Cape to the Netherlands (Batavian Republic), 1803. A Dutch commissioner-general, Jacob de Mist, tried to establish a centralized administration, creating 2 new districts, codifying the functions of the landdrosts (sheriffs) and heemraaden (justices of the peace), and adding civil duties to the military ones already possessed by the field-cornets. Liberal in outlook, de Mist tried to protect Hottentots by registration and supervision of labor contracts, and allowed Johannes van der Kemp of the London Missionary Society to establish, 1803, a Hottentot reserve at Bethelsdorp. Other London Society missionaries helped to settle a mixed Hottentot-European people (Griquas) under Andries Waterboer along the Orange River with headquarters at Griquatown.

2ND BRITISH OCCUPATION. Following the expiration of the Truce of Amiens, the Dutch garrison, by the Capitulation of Papendorp, 10 Jan., 1806, again surrendered to the British, who acquired permanent possession of Cape Colony under the terms of the Convention of London, 13 Aug., 1814.

1807-19

HOTTENTOT ORDINANCES. The abolition of the slave trade throughout the British colonies threatened a labor shortage, a result of which in the Cape was a greater demand for Hottentot workers, whom the colonists accused the missionaries of protecting in the mission stations. By the Hottentot Code, proclaimed, 1809-11, by the Earl of Caledon (gov., 1807-11), Hottentots were required to have a fixed place of abode registered with the landdrost, and a pass if they moved beyond the district boundaries. Written contracts were to be required for terms of service longer than a month, and wages were to be paid. Further ordinances, 1812, 1819, permitted farmers to apprentice the children 8-18 years old of the Hottentot workers, and landdrosts to apprentice orphans.

BLACK CIRCUIT. An ordinance of 1811 appointed annual circuit courts to try civil and criminal cases. In 1812 circuit judges were instructed to investigate complaints of abuses against Hottentots. Most accusations proved unfounded, but the incident angered the Boers.

SLACHTER'S NEK. In 1815 Frederik Beuidennout, accused of ill-treating Hottentots and of failing to appear before a court to answer the charge, was killed while resisting arrest by a white officer leading a Hottentot corps. Having unsuccessfully tried to stir up revolt among the Xhosas under Gaika, and among the burghers, Bezuidenhout's brother and a group of insurgents were arrested at Slachter's Nek. At their trial 6 were condemned to death and others to banishment.

FRONTIER POLICY. On the frontier, believing that close permanent settlement was needed to secure law and order, Sir

John Cradock (gov., 1811-14) cleared the Xhosas from the Zuurveld, where many farms had been abandoned. By a proclamation of 1813, Cradock tried to encourage voluntary change of loan farms from leasehold to perpetual, hereditary quitrent, accompanied by accurate land surveys. The policy proved ineffective and farmers again left their farms. Lord Charles Somerset (gov., 1814-26), revising Cradock's plan of separation of Boer and Bantu, tried, 1817, at the Kat River Conference with the Xhosas to promote co-operation, and recognized Gaika as paramount chief. During a feud with his uncle, Ndlambi, Gaika appealed for help. British and burgher forces repulsed, 1819, a Xhosa attack on Grahamstown, and Gaika was restored to the chieftaincy. The region between the Fish and Keiskamma rivers was declared a neutral zone, the Ceded Territories.

1820-36

1820 SETTLERS. The postwar depression in Britain acted as a spur to emigration, and the withdrawal of trained troops from the Cape provided additional backing for a plan to establish a buffer settlement of British immigrants between the Bantu and the discontented Boer colonists. Parliament voted £50,000 to pay the passages of groups of not less than 10, organized under a leader, each man being entitled to a quitrent grant of 100 acres. Approximately 4,000 British were settled in the Zuurveld (Albany). The land turned out to be unsuitable for agriculture and a 3-year drought added to the difficulties of the settlers, many of whom left for the towns. Settlers' complaints, the deteriorating economic condition of the Cape, and pressure from the missionary Dr. John Philip of the London Missionary Society led to the appointment, 1823, of a commission of inquiry, consisting of J. T. Bigge and Maj. William Colebrooke.

"ANGLICIZATION." Problems of government revolved around the economic and strategic importance of the Cape, the conflicting demands of a sparse population (British settlers wanting more

effective government and Boers wanting less regulation), and relations between Africans and Europeans. English became the official language of government, 1824, and of the courts, 1828. The governor's autocratic powers were modified by the establishment, 1825, of an Advisory Council of 4 official members, and the colony was divided into 2 provinces, Andries van Stockenström becoming commissioner-general of the Eastern District. In 1833, letters patent and supplementary instructions issued to Sir Benjamin D'Urban (gov., 1834-38) ordered the setting up of an Executive Council of official members and a Legislative Council comprising 5 official and from 5 to 7 nominated unofficial members, all legislation to be initiated by the gov. only.

JUDICIAL REORGANIZATION. A Charter of Justice was issued (1828, revised, 1832, promulgated in final form, 1834), whereby the gov. ceased to be the final court of appeal, judges had to be barristers appointed by and responsible to the crown, and Roman-Dutch law was to continue as the basis of the law, but with English practices and rules of court. At the same time the landdrosts and heemraaden were replaced by civil commissioners and magistrates. Somerset's Ordinance of 1823 covering the treatment of slaves was followed, 1824, by the 19th Ordinance (issued by Acting Gov. Richard Bourke), which allowed slaves to give evidence in criminal cases. These regulations were consolidated by orders in council, 1830 and 1831.

50TH ORDINANCE. Desiring to ameliorate the condition of the Hottentots, Philip and other missionaries pressed for improvements. The 50th Ordinance canceled civil restrictions, abolished the pass system, and allowed Hottentots to buy land. In 1829 the Kat River Settlement was established for Hottentots under the guidance of the mission societies.

BANTU INVASIONS. It had been recognized that the colonists' northward movement and unrest among Africans living beyond or in any one section of the border produced repercussions along the whole frontier. During the 1820's imps

(regiments) commanded by the Zulu king, Chaka, conquered much of Natal, driving many of the inhabitants of the area southward and also westward across the Drakensberg Mts. Northern expansion by white colonists was thus blocked. Frustrated in the east, the Boers tried to find pastures and permanent settlements in Griqualand, but the Cape government refused to allow any further extension of the frontier. Raiding and counterraiding by both Xhosa and Boers continued. In 1835 D'Urban ordered troops to push the Xhosa back across the Kei River, and named the region Queen Adelaide Province. The Colonial Office disallowed this action, however, and the attempt to control the province was abandoned, Dec. 1836.

The Cape of Good Hope Punishment Act, 1836, made British subjects liable to punishment on their return to the Colony for crimes committed south of Lat. 25° S., though to neither colonists nor Bantu did the Cape government provide adequate protection along the frontiers.

1836-53

GREAT TREK. Stirred by dislike of government policies, especially those influenced by the humanitarian movement and missionary support of African rights, and by the introduction during a period of drought of a new land policy of sale by auction, the Boers began to look for new lands and freedom from government interference. Acting on reports that most of the population had been cleared from the High Veld by Chaka's depredations, exploring parties went out, and in 1835 Louis Trigardt led a small group of trekkers as far as Zoutpansberg. The following year a large trek under Andries Hendrik Potgieter (1792-1852) established itself at Thaba Nchu, where it was joined by a trek from Graaff-Reinet led by Gerrit Maritz. The trekkers elected a Volksraad (combined legislature and court), and appointed Maritz as landdrost with Potgieter as commandant. After the arrival of Piet Retief's trek in 1836, Retief (1780-1838) was chosen both gov. and commandant-general.

Dissension among the trekkers caused the parties to separate. Potgieter defeated the Ndebele at the Battle of Marico River, Nov. 1837, and, crossing the Vaal River, claimed the region (Transvaal). Retief led his party into Natal, where, during negotiations with Dingaan, the Zulu king, he and his men were murdered, Feb. 1838. Regrouping under Andries Pretorius (1798-1853), the Boers defeated Dingaan at Blood River, 16 Dec., settled in Natal, and formed, 1839, the first Boer republic, with its capital at Pietermaritzburg.

FOUNDING OF BRITISH NATAL.

The British withdrew their troops from Port Natal, 1839, but, because of continuing Zulu incursions and unrest among other eastern tribes due to the trekker policy of segregation, British troops reoccupied, May 1842, the port after quelling trekker opposition. Many Boers left Natal to return to the High Veld. In 1843 Natal became a British possession, and was organized, 1845, as a district of Cape Colony with a separate administration.

BOER-AFRICAN RELATIONS. In the northeastern region, to keep order among the trekkers, Africans, and Griquas under Adam Kok at Philippolis, Sir George Napier (gov., 1838-44) made treaties with Kok and with Moshesh, the Sotho king. Both undertook to maintain order and to enforce the Punishment Act, which had the effect of putting trekkers under African governments. In June 1845 Napier's successor, Sir Peregrine Maitland (gov., 1844-47), summoned the Trans-Orangian chiefs to a conference at Touwfontein, where each agreed to divide his territory into an alienable area available for European settlement and an inalienable area reserved for Africans, with a British resident at Bloemfontein to handle European affairs.

ORANGE RIVER SOVEREIGNTY. A 2nd trek was set in motion by the Napier treaties and by the assertion of British authority over Natal. Potgieter negotiated the cession of Portuguese territory in the eastern Transvaal and, failing to secure Trans-Orangia, followed other trekkers north to set up, 1845, a capital at Andries-Ohrigstad. After the War of the Axe,

1846-47, Sir Harry Smith (appointed both gov. and high commissioner with powers to deal with affairs beyond the colonial frontier) (1847-52) annexed the Ceded Territory, naming it Victoria East and settling Fingos (refugees from Natal) in its northern half, and also annexed the former Queen Adelaide Province as a separate dependency and an African reserve (British Kaffraria). While still negotiating with the Natal Boers under Pretorius, Smith proclaimed, Feb. 1848, British sovereignty over the region between the Orange and Vaal rivers and the Drakensberg. In protest Pretorius marched south, but was defeated at Boomplaats, 29 Aug. Smith once again proclaimed the Orange River Sovereignty.

SAND RIVER CONVENTION. 17 Jan., 1852. Intermittent strife persisted between the Orange River Sovereignty, the Basutos, the Griquas, and the Transvaal. Despite an agreement, 1849, to elect a single Volksraad, religious separatism and an inadequate revenue and police force prevented unity among rival Boer groups. On the outbreak of the War of 1850-53 along the eastern frontier, the British sent special commissioners to investigate. At the Sand River Convention these commissioners met with delegates from the Transvaal, agreed to recognize the independence of that territory, and disclaimed alliances with tribes north of the Vaal River.

CONSTITUTION ORDINANCE. 11 Mar., 1853. Although an ordinance of 1836 had established municipal districts and although the synods of the Dutch Reformed Church had been freed, 1843, from state control, racial friction and prejudice, the expense of the military establishment, and increasing rivalry between the East and West Districts hindered the further development of representative government in the Cape. Confidence in the Legislative Council, in which the unofficial members could be outvoted, declined. Anticonvict demonstrations, 1848, caused the nominated members to resign. Proposals for reform deadlocked the Council until 1853, when the Constitution Ordinance finally passed. The ordinance provided for 2 elective houses,

equal representation for East and West, voting by word of mouth, and a franchise based on so low a property qualification that 80% of the adult male population became entitled to vote regardless of race. The 1st parliament, 1854, divided Cape Colony into municipal and rural units of local government and extended trial by jury to civil cases.

1854-70

BLOEMFONTEIN CONVENTION. 13 Feb., 1854. Continued guerrilla warfare, the defeat of a British force under Lieut. Gen. George Cathcart (gov., 1852-54) by the Basutos at the Berea, Dec. 1852, the cost of maintaining troops, and reluctance to accept the responsibilities of expansion caused the British government to reconsider its frontier policies. A new special commissioner, Sir George Clerk, was sent with instructions to abandon, if necessary, the Orange River Sovereignty. In the face of some burgher opposition, the British government agreed by the Convention of Bloemfontein to withdraw from the Sovereignty and to refrain from interference beyond the Orange River. Relations with the Griquas and Basutos were left undefined. The Orange Free State was established with a president and Volksraad, 1854.

BRITISH EXPANSION IN THE EAST. Following a policy of interspersing white colonists and Africans in tribal areas, Sir George Grey (gov., 1854-61) settled German immigrants in regions depopulated by cattle killing and famine in British Kaffraria. In 1860 Grey decided to extend the frontier to link up with Natal, which had been made a crown colony, 1856, and started to import indentured Indian labor, 1860. He also persuaded Adam Kok to surrender the Philippolis lands to the Orange Free State and accept instead Nomansland (Griqualand East). In 1864 Sir Philip Wodehouse (gov., 1862-70) abandoned the Transkei lands and British Kaffraria was annexed to the Cape.

SOUTH AFRICAN REPUBLIC (TRANSVAAL). Marthinus Pretorius was elected president of the Transvaal,

1853. Hoping for a single Boer Republic, he also accepted, 1859, the presidency of the Orange Free State. Opposition in the Transvaal forced him to resign from the presidency of that region, to which, however, he was re-elected in 1864. Seeking an outlet to the coast, Pretorius bargained with the Zulu king, Cetewayo, who ceded, 1861, a strip of land along the Blood River. Natal protested the annexation and the British government immediately claimed a prior right to Delagoa Bay. Although wars and burgher disaffection had broken out in the Zoutpansberg region, following the discovery of gold, 1868, in the northwest, Pretorius issued a proclamation annexing territory in that area and also a corridor of land down the line of the Maputa River to Delagoa Bay.

ORANGE FREE STATE-BASUTO WAR. Land hunger and the undefined boundaries of both Basutoland and the Free State continued to cause border conflicts. In 1858 the Free State lost a war against the Basutos. Further encroachments by white colonists caused the outbreak of a 2nd war, which had repercussions in the Cape, the Transvaal, and Natal, and helped to deepen a general commercial depression. Moshesh petitioned unsuccessfully for annexation by the British and, threatened by famine, was forced to agree to cede, by the Treaty of Thaba Bosigo, Apr. 1866, most of his people's arable land. Recurring commando raids and growing dissatisfaction with the policy imposed by the Convention pushed the British government into a decision to authorize the attachment of Basutoland to Natal. Wodehouse, however, distrusting Natal's native policy as carried out by Theophilus Shepstone, annexed, 1868, Basutoland to the crown. (It was transferred to Cape Colony in 1871.) The Orange Free State acquired only part of the arable lands. Land losses caused the Basutos to supplement their agricultural production by working as laborers for whites.

DISCOVERY OF DIAMONDS. When diamonds were discovered at Hopetown and on the lower Vaal, 1868, 3 problems arose: (1) who was to supervise the diggings; (2) where did the frontiers lie as

between Boers, Griquas, and Tswanas; and (3) who should control the "Missionaries' Road" to the north? Negotiations concerning the Griqua Campbell lands were conducted by David Arndt, who, deserting Adam Kok, claimed them for Nicolaas Waterboer. They were thus denied to the Free State, which, however, seized them in 1871. First attempts at arbitration failed, and Sir Henry Barkly (gov., 1870-77) and Pretorius agreed to joint control of the diamond fields until the settlement of claims could be decided by a commission headed by Lieut. Gov. Robert Keate of Natal. Jan Brand, on the other hand, president of the Free State, insisted on foreign arbitration. In Oct. 1871 Keate awarded in favor of the African chiefs. Soon afterward Barkly annexed Griqualand West, which included the diamond fields, and proclaimed the boundary at the Keate Award line. (*Cont.* p. 326.)

THE FRENCH IN NORTH AFRICA

1770-1830

TURKISH RULE IN ALGERIA. Turkish military officers, acting autonomously but receiving the approval of the Ottoman sultan, governed northern Algeria until 1830 as a regency of Constantinople. The dey succeeded to office by the election of his fellow officers or the assassination of his predecessors, and ruled Algiers Province by means of Turkish civil subordinates, Turkish military garrisons, and indigenous chiefs. He received regular taxes and customs from the 3 other provinces or beyliks: Oran (west), Titteri (interior center), and Constantine (east). Each of these was controlled by a bey assisted by a similar structure of Turks together with Kulughis (descendants of Turkish men and indigenous women) and makhzan (proadministration) tribes. However, most of northern Algeria escaped effective Turkish administration, and serious revolts by non-makhzan tribes and religious leaders punctuated the early decades of the 19th century.

FRANCO-ALGERIAN DISPUTE. Members of the Bacri and Busnach families, Jews of Livornese origin, had ac-

quired most of the carrying trade of Algiers by 1800. By 1819 the Bacri had obtained a monopoly and were collaborating closely with Marseille merchants, the French government, and the French consul in the regency capital. An argument between Dey Husayn and Consul Pierre Deval, 1829, led to French demands for an apology and a French blockade of the port. The Polignac cabinet of 1830, anxious to increase its prestige and win the national elections in France, invoked the "insult" of 1827 as the principal cause of its expedition against Algiers.

1830-48

CONQUEST OF THE COAST. In the summer of 1830, 37,000 men under Gen. Louis Bourmont (1773-1840) took control of Algiers and most of the surrounding province; they soon occupied Bône and Oran as well. Subsequent French rule was plagued by political controversies within the army over the 1830 Revolution in France, frequent changes in command, and the beginnings of resistance in Titteri Province and at Bône. Nonetheless, by 1834 the army had "pacified" Titteri; spread its control to Bougie, Arzew, and Mostaganem; and established the 1st "Arab Bureau," the primary instrument of information and administration in the interior.

"LIMITED OCCUPATION." The French government and army embarked in 1834 on their first Algerian policy, "limited occupation." This policy involved control of the coast, interior garrisons in selected positions, and the use of whatever existing indigenous structures (often the makhzan tribes) were available. A gov. gen. commanded the operation from Algiers. Inconsistencies in application, the brutalities of some soldiers, and indigenous resistance to Christian European control made this policy fail and brought on the plan of total conquest in the 1840's.

DEFEAT OF BEY AHMAD. In the eastern province the French tried to dominate the interior and encountered the resistance of Bey Ahmad (Ahmad) at

Constantine. After defeating Gov. Gen. Bertrand Clauzel (1772-1842), 1836, Ahmad succumbed to Clauzel's successor, Sylvain Charles Valée (1773-1846) in the following year and withdrew to the Awras (Awrās) mountains to conduct a much more limited campaign until his surrender in 1848.

JIHAD OF ABD-EL-KADER. A more dangerous opposition arose in the western and central provinces in the form of a loose tribal confederation headed by Amir Abd-el-Kader ('Abd al-Qādir) (1807-83). From the time of his election as amir, 1832, until his declaration of the jihad against the French, 1839, Abd-el-Kader focused his attention against the land and privileges of the makhzan tribes and on consolidating his strength in the west and at the garrisons of Mascara, Saida, Boghari, and Takdempt, his capital in the Tell Atlas Mountains close to the Oran-Titteri provincial boundary. From 1839 until his surrender in 1847, the amir was the "Commander of the Faithful" combating the European.

Abd-el-Kader signed a treaty, 1834, with Gen. Desmichels, and a secret pact, 1837, with Gen. Bugeaud, both designed to preserve order and recognize the respective spheres of control in the interior and along the coast. The amir was able to consolidate and develop a thriving arms trade through Morocco and Tlemcen, but he encountered significant indigenous opposition in some quarters, such as that expressed by the Tijaniyya (Tijāniyya) Moslem center at Ain Mahdi on the Saharan border. The march of French troops through the central interior in 1839 in violation of the 1837 accord was the occasion of the amir's declaration of holy war. Subsequently, the rapid loss of European control and prestige made it imperative that the French either evacuate or subdue the interior.

DEFEAT OF ABD-EL-KADER. France and the new gov. gen., Thomas Robert Bugeaud (1784-1849), opted for conquest and increased their forces to over 72,000 men, including both indigenous and French contingents of cavalry and infantry. Through devastation, the deposition and replacement of chiefs, and the con-

struction of forts, Bugeaud managed to end the control of the amir's coalition in the center and west and, by 1844, to drive Abd-el-Kader into Morocco.

The Moroccan sultan, Abd-er-Rahman ('Abd al-Rahmān), had tended to support the amir and now responded to a French advance into his "sphere" by attacking a reconnaissance unit. The French reacted quickly, defeated the Moroccan army decisively at Isly, 14 Aug., 1844, and signed the Tangiers Treaty and the Lalla Maghnia Convention of the same year. These agreements forbade Moroccan intervention in "Algerian" affairs and drew a boundary between the 2 areas. France's reluctance to continue the penetration of Moroccan territory was partly due to her desire to avoid conflict with the strong British interests in the Sultanate.

The 1845 revolt of Bu Maza, a religious leader in Oran Province, and other uprisings provided Abd el-Kader with an opportunity to reorganize in the west. His effort was short-lived and the French captured him, 1847, and exiled him to Damascus.

1848-70

ADMINISTRATION AND COLONIZATION. The army administered the 3 provinces (Oran, Algiers, and Constantine) from its headquarters at Algiers until the influx of civilian Europeans (beginning in 1835 and expanding in the 1840's) necessitated substantial changes. By 1847, 110,000 Europeans inhabited Algeria, 6% in urban centers. 50% were French. Spaniards predominated in and around Oran and Maltese at Bône, and there were many Italians, Germans, and Swiss. By this time Bugeaud's efforts at military colonization of the land had failed and civilians, both individual and corporate, had taken over many of the best farming areas of the coastal plains under spoliation laws passed in 1844 and 1846.

In this situation the administrative reforms of 1845, 1847, and 1848 were passed, dividing each Algerian province into civil territories under prefects and

military ones under generals. The former included most of the coastal cities and some of the European plantations; in 1848 they became French departments. The latter included the indigénous and "mixed" areas, utilized old Turkish institutions and Arab bureaus, and fell under the jurisdiction of the gov. gen. The growing civilian population continued to feel, however, that the military dominated Algeria.

In 1858-60, Napoleon III removed the military areas temporarily from the control of the Army Ministry and put them under a Ministry for Algeria and the Colonies. Although he attempted to protect tribal or collectively owned lands through the *senatus consultum* of 1863, the over-all effect of his policies was to favor great concessions to large companies and consequently to continue the dismemberment and expropriation of indigenously held land. The *senatus consultum* of 1865 gave Algerians the option of French nationality, but few were willing to take the necessary step of abandoning their Moslem identity.

FRENCH ENTRY INTO THE SAHARA. Led by Jacques César Randon (1795-1871; gov. gen., 1851-58), the army took the northern Saharan centers of Laghouat, Wargla, and Tougourt in successive years, in response to the resistance of Mohammed ibn-Abdullah (Mu-

hammad ibn 'Abd Allah); and in an effort to develop influence in the Sahara and attract its trade back to Algerian ports. Subsequently the French expressed their interest through explorations like those of Henri Duveyrier in 1860 in Tuareg country, but did not expand again militarily until the late 19th cent.

CONQUEST OF THE 2 KABYLIA'S.

Rivalries and disagreements among officers and strong Kabylia resistance extended the conquest of these areas and made the operation more brutal than it might otherwise have been. By 1854, the French controlled Little Kabylia around Bougie and Djidjelli, but only after the suppression of the revolt of the Rahmaniyya (Rahmāniyya) brotherhood and other Kabylia in 1857 was European influence firmly imposed in Greater Kabylia around Dellys.

RESISTANCE TO FRENCH RULE.

In 1859 the Banu Snassen of Oran Province attempted to unite groups in Algeria and Morocco, but succumbed to the campaign of Gen. Martimprey. The same officer put down a revolt of the Awlad (Awlād) Sidi Shaykh in the southwest, 1864-65, in protest against abuses by the Arab bureaus. Epidemics of cholera, typhus, and famine reached serious proportions in Constantine Province in 1866-69, probably killing at least 1/3 of the population. (*Cont. p.* 333.)

THE AGE OF IMPERIAL RIVALRY, 1870-1914

The Preponderance of the West

GREAT BRITAIN AND IRELAND

1871

ARMY REGULATION BILL. 17 Aug. Introduced by the secretary for war, Edward Cardwell (1813-86), the bill initiated short-service enlistment, established the "linked-battalion" system, abolished the practice of purchasing commissions, and equipped the infantry with breech-loading rifles. Through these and other reforms, Cardwell transformed the British army into an efficient, modern force.

UNIVERSITIES TESTS ACT. 16 June. Men of all creeds could now hold teaching posts at Oxford and Cambridge Universities.

TRADE UNION ACT. 29 June. This act protected union funds and held that a trade union could not be declared illegal simply because it might be in restraint of trade. Strike enforcement, however, was denied unions by the Criminal Law Amendment Act, 21 Aug., which strengthened the Combination Act of 1825 by increasing the penalties for picketing and coercion.

1872

BALLOT ACT. 18 July. Voting by secret ballot was established.

1873

IRISH UNIVERSITY BILL. An attempt to create a religiously integrated univer-

sity, Gladstone's Irish University Bill was defeated in the Commons, 12 Mar. Gladstone resigned, but Disraeli forced him to continue in office by refusing to accept the prime ministership.

JUDICATURE ACT. 5 Aug. This sweeping reform remodeled the court system and fused the common law and the rules of equity into a single system. One supreme court of judicature was established, under which were a High Court of Justice and a Court of Appeal. The High Court's 3 subdivisions were Chancery, Queen's Bench, and Probate, Divorce, and Admiralty.

1874

2ND DISRAELI MINISTRY. Disraeli came to power with an overwhelming Conservative majority in the Feb. general election. An independent Irish party, an unexpected result of the Ballot Act, appeared at Westminster; 59 Home Rulers were led by Isaac Butt (1813-79).

1875

PARNELL'S TACTICS. Charles Stewart Parnell (1846-91) was elected to Parliament as member for Meath. He perfected a technique of obstructionism to draw attention to the Irish question.

DOMESTIC LEGISLATION. Home Secretary Richard Cross (1823-1914) introduced a series of acts designed to better the conditions of life and labor.

The Conspiracy and Protection of Property Act, 13 Aug., legalized peaceful picketing and collective bargaining. The Public Health Act, 11 Aug., consolidated earlier sanitary laws and laid new responsibilities on local authorities for the provision and maintenance of sewers and drains. The Artisans' Dwelling Act, 19 July, gave local authorities the right to condemn holdings and whole areas as unfit.

SUEZ CANAL SHARES. In Nov. Disraeli acted to purchase 176,602 ordinary shares in the Suez Canal Co., representing a 44% interest, from the Khedive Ismail of Egypt. The British were thereby enabled to reduce merchant shipping rates, and Disraeli's action paved the way for the subsequent British occupation of Egypt.

1876

ROYAL TITLES BILL. Interest in the East was heightened by the conferring, Apr., upon Queen Victoria of the title of empress of India.

TRADE UNION AMENDMENT ACT. 27 June. This act provided a legal definition of a trade union.

MERCHANT SHIPPING ACT. 15 Aug. Passed as a result of the efforts of Samuel Plimsoll (1824-98), the Merchant Shipping Act prohibited the overloading of ships and the use of unseaworthy vessels.

1877-79

IRISH LAND WAR. The Fenian Michael Davitt (1846-1906) founded the Irish National Land League, 21 Oct., 1879, to prevent eviction, reduce rents, and gain Irish ownership of tenanted land. Parnell, now leader of the Irish party in Parliament, served as the League's president. The League was suppressed in 1881, and its leaders arrested. Simultaneously a Land Act was passed which instituted a system of dual ownership, created a special court to determine

fair rent, and gave tenants the right to sell their interest in holdings to the highest bidder.

1880

2ND GLADSTONE MINISTRY. Gladstone's continued criticism of the "imperial idea" helped to unseat Disraeli. The Mar. general election brought the Liberals to power, and Gladstone took office on 28 Apr.

1881

BRADLAUGH INCIDENT. Charles Bradlaugh (1833-91), newly elected to the Commons, refused to take the oath of allegiance on the grounds that he was an atheist, and offered instead an affirmation of allegiance. An opposition group led by Lord Randolph Churchill (1849-95) raised the cry of "Bradlaugh and Blasphemy" and twice prevented passage of an Affirmation Bill, 1881, 1883. In 1886 the question was withdrawn as being outside the competence of the Commons, but in 1888 Bradlaugh succeeded in legalizing affirmation, thus removing the last trace of religious discrimination from Parliament.

1882

KILMAINHAM TREATY. Gladstone made peace with Parnell, who was released from Kilmainham Prison on 2 May. Lord Spencer (1835-1910) became viceroy of Ireland and Lord Frederick Cavendish became chief secretary.

PHOENIX PARK MURDERS. On 6 May, Cavendish and Thomas Burke, his undersecretary, were murdered in Phoenix Park, Dublin, by a group known as "the Invincibles."

1883

CORRUPT AND ILLEGAL PRACTICES ACT. 25 Aug. This act limited the total amount permitted to be spent

by all parties, in a general election to £800,000 and ruled out all forms of bribery and undue influence.

1884-85

FRANCHISE ACT. New Radical demands for social legislation resulted in the introduction of a Franchise Act, which passed the Commons early in 1884, but was held up in the Lords pending redistribution measures. As passed on 6 Dec., 1884, the Franchise Act fully extended the franchise to Ireland.

REDISTRIBUTION ACT. Passed in June 1885, the Redistribution Act introduced virtual manhood suffrage and created a system of single member constituencies. Counties and boroughs ceased to be the basis of representation in the House of Commons.

1ST SALISBURY MINISTRY. Gladstone's failure to rescue General Gordon at Khartoum damaged his prestige, and an opposition amendment to his budget led to his defeat, 8 June, 1885. Lord Salisbury (1830-1903) formed a minority government on 24 June. His administration tried to gain Irish support in the Commons by passing the Ashbourne Act, Aug. 1885, which provided a £5-m. loan fund to assist Irish tenants to purchase land.

1886-87

3RD GLADSTONE MINISTRY. Gladstone returned to power, 13 Feb., with Liberal and Irish support. On 8 Apr. he introduced a Home Rule Bill. It was defeated, 8 June, and the "Liberal Unionists" bolted the Liberal Party. A general election called in July resulted in a severe defeat for Gladstone.

2ND SALISBURY MINISTRY. Salisbury assumed office on 26 July. His nephew Arthur Balfour (1848-1930) became chief secretary for Ireland, Mar. 1887, and supported a new Crimes Bill to suppress dissent in Ireland. Passage of this bill was aided by the Pigott forgeries. In Apr. 1887 *The Times* published a letter, allegedly written by Parnell, con-

doning the Phoenix Park murders. A special commission discovered the letter to be a forgery by Dublin journalist Richard Pigott, exonerated Parnell, and ordered *The Times* to pay the cost of the inquiry.

LABOR AGITATION. A huge Socialist meeting in Trafalgar Square, 13 Nov., became a battle between the police and the crowd in which 2 were killed and over 100 injured. The day became known as "Bloody Sunday."

1889

LONDON DOCK STRIKE. 15 Aug.-16 Sept. The movement to organize unskilled labor began with this strike, led by Ben Tillett, with the aid of Tom Mann and John Burns. The dockers demanded and won a standard wage of 6d. an hour.

1890

FALL OF PARNELL. Divorce-court proceedings revealed, 17 Nov., Parnell's adulterous liaison with the wife of Capt. W. H. O'Shea. As a result, Justin McCarthy (1830-1912) succeeded him as leader of the Irish party, 6 Dec. Parnell died, 6 Oct., 1891.

1892

4TH GLADSTONE MINISTRY. After assuming office, 18 Aug., Gladstone drafted a 2nd Home Rule Bill, which passed the Commons, 1 Sept., 1893, but failed to pass the Lords, 8 Sept., 1893. When Gladstone resigned, 3 Mar., 1894, Victoria chose Lord Rosebery (1817-1929) to succeed him.

1893

INDEPENDENT LABOUR PARTY. An avowedly socialist organization, the I.L.P. was established, Jan., by Keir Hardie (1856-1915), 1 of 2 socialists elected to Parliament in 1892. Its membership benefited from the industrial unrest and rioting that marked 1893, especially in the Midlands.

GAELIC LEAGUE. Douglas Hyde formed the Gaelic League to restore Irish as the spoken language of Ireland. Though nonpolitical, the League was revolutionary in its separatist implications.

1894

DEATH DUTIES. A new direct tax was created with the levying of death duties on all forms of property.

1895

3RD SALISBURY MINISTRY. After Secretary for War Henry Campbell-Bannerman (1836–1908) was censured by the Commons, 21 June, for failing to provide the army with sufficient cordite, the cabinet resigned. Salisbury formed a Conservative cabinet which included such Liberal Unionists as Joseph Chamberlain (1836–1914), who became colonial secretary.

1897

WORKMEN'S COMPENSATION ACT. 6 Aug. Employers were made directly responsible for injuries suffered by their workers.

1900

LABOUR REPRESENTATION COMMITTEE. Trade unionists and Independent Labour Party members formed the Labour Representation Committee in Feb. to increase their representation in Parliament. The leader in creating this precursor to the Labour Party was Keir Hardie. The committee's secretary, J. Ramsay MacDonald (1866–1937), later became the first Labour prime minister.

1901

TAFF VALE CASE. Legal action was brought by the Taff Vale Railway Co. of South Wales against the Amalgamated Society of Railway Servants for damage done to railway property during a strike.

The union was found responsible for its members' actions and was ordered to pay damages and costs. Trade unionists regarded the decision as an attack on the right to strike.

DEATH OF VICTORIA. Queen Victoria died, 22 Jan., after a brief illness, and her son, Edward VII (1841–1910), became king.

1902

BALFOUR MINISTRY. On Salisbury's resignation, 11 July, Balfour became prime minister.

EDUCATION ACT. Framed by R. L. Morant (1863–1920), the Education Act of 1902 abolished the school boards established by the Education Act of 1870, and made county and borough councils responsible for primary and secondary education. Voluntary as well as board schools were brought under the authority of the councils' Statutory Education Committees. Despite Nonconformist objections to the financing of church schools by rate payers, the Education Act became law in Dec.

1903

TARIFF REFORM LEAGUE. Joseph Chamberlain resigned, 18 Sept., over Balfour's refusal to restore duties on imported foodstuffs. The Tariff Reform League was organized, and Chamberlain toured the country preaching protectionism.

1904

MILITARY REFORMS. Balfour reactivated the Committee of Imperial Defence, giving it a permanent secretariat. Sir John Fisher (1841–1920), 1st sea lord, and the Earl of Cawdor (1847–1911), 1st lord of the admiralty, worked to counter German naval strength by redistributing the fleet—the sea routes to the Far East were no longer considered to be endangered by France because of the Anglo-French Entente of 8 Apr.—and by laying down the battleship *Dreadnought* and

the battle cruiser *Invincible*, the 1st all-big-gun ships.

1905

SINN FEIN. Founded by Arthur Griffith (1872-1922), the Sinn Fein ("We Ourselves") advocated the establishment of a separate Irish state, politically and economically self-sufficient.

CAMPBELL-BANNERMAN MINISTRY. Balfour resigned, 4 Dec., and Campbell-Bannerman succeeded him, 5 Dec. The Liberals won an overwhelming majority in the general elections of Jan. 1906.

1906

TRADE DISPUTES ACT. 21 Dec. Trade unions were made immune from actions of tort. The Taff Vale ruling was thereby reversed.

MILITARY REORGANIZATION. Secretary for War R. B. Haldane (1856-1928) undertook massive military changes, beginning with the creation of a general staff.

1907-8

LLOYD GEORGE'S REFORMS. David Lloyd George (1863-1945), president of the Board of Trade, was responsible for such reforms as the Merchant Shipping Act, 1906; the Act for Taking a Census of Production, 1906; and the Patents Act, 1907. Through his efforts, the Port of London Authority was established, 1908, to bring order to the docks.

ASQUITH MINISTRY. Campbell-Bannerman resigned, 6 Apr., 1908, and died on 22 Apr. Herbert Asquith (1852-1928) succeeded him. The new administration passed the Old-Age Pension Bill, effective 1 Jan., 1909, which provided 5s. per week to persons over 70 whose incomes did not exceed 10s. per week.

1909-10

PEOPLE'S BUDGET. Lloyd George, now chancellor of the exchequer, wished to reduce the national debt and provide for

defense needs. His 1909 budget increased income tax and tobacco, liquor-license, and death duties. These measures were unpopular with the upper classes, especially because they included a land tax that required a national land survey. The budget passed the Commons, 4 Nov., but was rejected by the Lords, 30 Nov. Asquith denounced the Lords' action as unconstitutional, 2 Dec. A general election was fought on this issue and on the Home Rule question, and the Liberals won. The Commons passed the budget on 27 Apr., 1910, and the Lords immediately let it pass.

ACCESSION OF GEORGE V. Edward VII died, 6 May, and George V (1865-1936) ascended the throne.

1911-12

PARLIAMENT ACT. 18 Aug., 1911. The Parliament Bill deprived the House of Lords of veto power over money bills; provided that other bills would become law, even if rejected by the Lords, if they had passed the Commons 3 times and if 2 years had lapsed since introduction; and reduced the duration of Parliament from 7 to 5 years. The bill passed the Commons, 15 May, 1911, and, under the threat of the creation of 250 Liberal peers, was passed by the Lords on 10 Aug., 1911.

NATIONAL INSURANCE ACT. Passed in Dec. 1911, this act provided health insurance for all workers and unemployed insurance for some. Both schemes were to be financed by contributions from employers, employees, and the government.

INDUSTRIAL UNREST. A wave of strike and riot activity by dock workers and railwaymen began in the summer of 1911, and 850,000 coal miners struck in Mar. 1912. A Minimum Wage Law, Mar. 1912, brought temporary quiet.

ULSTER OBSTRUCTIONISM. The Ulster party, led by Sir Edward Carson (1854-1935) joined with Conservatives in opposition to Asquith's Home Rule Bill. The measure passed the Commons twice, but was rejected by the Lords. In July 1912 the Ulstermen pledged to oppose Home Rule by every means, including

armed insurrection. The government, which needed Irish party support, was thus gravely embarrassed politically.

1913-14

SUFFRAGETTES. Militant action to secure the vote for women was led by Emmeline Pankhurst (1858-1928), who had joined with her daughters, Cristabel and Sylvia, in forming the Women's Social and Political Union in 1903. Her violent tactics led to her arrest and imprisonment on several occasions. In 1913 a follower, Emily Davidson, flung herself under the king's horse at Epsom, and died. Women over 30 were enfranchised in 1918, and women between 21 and 30 in 1928.

DUBLIN STRIKE. In Aug. a bitter strike began in Dublin, led by James Connolly (1870-1916) and James Larkin. By Sept., 24,000 people were unemployed. The 8-month strike, though inconclusive, led to the growth of the Irish Citizen Army.

HOME RULE. On 25 May, 1914, the Commons gave Asquith's Home Rule Bill a 3rd reading. The Lords demanded that Ulster be given permanent exclusion. With this disagreement still unresolved, George V signed the Home Rule Bill on 10 Sept., and it was ratified by Parliament the following day. Because of the deteriorating situation in Europe, however, it was put in abeyance for 1 year, and was then postponed until the end of World War I. (*Cont. p. 401.*)

FRANCE

1870

FRANCO-PRUSSIAN WAR. The announcement, 2 July, 1870, that Prince Leopold of Hohenzollern was a candidate for the Spanish throne awakened French fears of encirclement by Prussia. Protesting to Emperor William I, French diplomats obtained assurances that Leopold's name would be withdrawn. But when Napoleon III insisted on guarantees, William refused, 13 July, and Chancellor

Bismarck published an inflammatory account of the French setback (Ems Telegram, 13 July). The message aroused French opinion. Over the objections of the extreme left and without firm commitments from allies, the Ollivier government, pushed by the bellicose foreign minister, the duc de Gramont, declared war, 19 July.

The French had superior infantry weapons but lacked the artillery, the imaginative leadership, and the organization of the Prussians. Disastrously chaotic mobilization left France ill-prepared to resist invasion.

Defeated in Alsace, 6 Aug., the emperor retired to Metz to regroup his forces, while Right and Center legislators brought down the Ollivier ministry, 9 Aug.

Napoleon relinquished command, but stayed in the field as French armies suffered decisive defeats near Metz, 14, 16, and 18 Aug. Taking refuge at Sedan, the emperor and his troops came under German artillery fire, 1 Sept. He ran up the white flag and capitulated, 2 Sept.

GOVERNMENT OF NATIONAL DEFENSE. When news of Sedan reached Paris, crowds overthrew the empire and established a republican "Government of National Defense" (Revolution of 4 Sept.). Failing to obtain acceptable armistice terms, the new government ordered war to the bitter end.

On 18 Sept. Prussian troops reached Paris and began a siege, 19 Sept., which lasted until 28 Jan., 1871. Léon Gambetta (1838-82), war minister, ordered, 5 Nov., an offensive to relieve Paris. The French recaptured Orléans (Battle of Coulmiers, 7 Nov.), but Prussian troops, strengthened after the fall of Metz, 27 Oct., forced the French into retreat. In 3 battles—St.-Quentin, Le Mans, Héricourt, Jan. 1871—the Prussians defeated the main French armies. With Paris close to starvation, the government capitulated, 28 Jan.

1871

BORDEAUX ASSEMBLY. Parliamentary elections, 8 Feb., returned a provincial,

royalist majority determined to end the war. Adolphe Thiers, designated, 17 Feb., "Chief of the Executive Power," negotiated peace terms: Prussian annexation of Alsace and part of Lorraine and occupation of territory held in France until payment of a 5,000-m. franc indemnity (Treaty of Frankfurt, ratified 21 May).

PARIS COMMUNE. 18 Mar.-28 May. Assembly decisions to transfer the capital to Versailles, to end the wartime moratorium on debts and rents, and to suspend National Guard payments, Mar., stirred intense popular resentment in Paris. Violence broke out when government troops attempted to remove stockpiled cannons, 18 Mar. Thiers ordered withdrawal, 18 Mar., and began to mass troops for assault. Paris organized for civil war, electing, 26 Mar., a municipal council, self-christened the "Commune."

Although Karl Marx immortalized the Commune as a Socialist-directed class war, its leaders, Jacobin-inspired revolutionaries, fought to defend the republic and municipal rights. Intent on war and conscious of legality, the Commune produced no significant socialist legislation.

On 21 May government troops entered Paris through an unguarded gate. As they advanced, the Communards countered with a ferocious but futile defense (Bloody Week, 21-28 May). Summary executions and mass deportations left the working class without leaders.

1871-73

GOVERNMENT OF THIERS. The monarchist Bordeaux Assembly, divided between Orléanists and Legitimists, postponed establishment of permanent political institutions. Thiers continued without specific term as "President of the Republic" (Rivet-Vitet Law, 31 Aug., 1871).

Benefiting from rapid economic recovery, France paid the indemnity due to Prussia by 1873 and ended Prussian occupation.

Suspicious of Thiers's preference for the conservative republic, the monarchists united to force his resignation, 24 May, 1873. Marshal MacMahon (1808-93), a royalist, accepted the presidency, 24 May.

REPUBLIC BY DEFAULT. The monarchists appealed to the Legitimist pretender, the Comte de Chambord (1820-83), but his refusal, 14, 27 Oct., 1873, to accept the tricolor flag made his accession impossible. Prospects for restoration died as republican gains in by-elections, 1871-73, and royalist divisions threatened the monarchist majority. To guarantee a conservative executive, the royalists voted a 7-year term for MacMahon (Law of the Septennate, 20 Nov., 1873).

1874-79

CONSTITUTION OF 1875. After months of indecision, the Assembly established a republic, with a president elected by a 2-chamber legislature (Wallon amendment, 30 Jan., 1875). Additional constitutional laws created extensive presidential powers, a responsible cabinet, and an indirectly elected Senate to balance a Chamber of Deputies elected by universal suffrage.

THE "REPUBLICAN REPUBLIC." Although after the elections of 1875, Republicans controlled the Chamber, MacMahon forced out, 16 May, 1877, the Republican minister, Jules Simon (1814-96) and called on the royalist, de Broglie. Dissolution followed, 25 June, but the Republicans, organized under Gambetta, maintained their majority following the elections of 14 and 28 Oct. The "May 16 Crisis" established cabinet responsibility to parliament alone, opening the way to legislative predominance. Henceforth, no president dared dissolve the Chamber on his own responsibility.

On 30 Jan., 1879, MacMahon resigned and was replaced, 30 Jan., by the conservative republican Jules Grévy (1807-91). With victory at the senatorial elections, 5 Jan., 1879, Republicans controlled the republic.

1880-85

REPUBLICAN REFORMS. In order to end clerical domination of education, the Republicans established free, 16 June, 1881, secular, and compulsory, 28 Mar.,

1882, primary schools. Republican governments accomplished other long-promised reforms: amnesty for Communards, July 1880; freedom of public meeting, 30 June, 1881, and of the press, 29 July, 1881; legalization of trade unions, Mar. 1884; decentralization of local administration; and abandonment of life senatorships.

FROM BOOM TO SLUMP. Government spending (Freycinet plan, 1878) sparked a boom that ended with the crash of the Union Générale, a Catholic bank, Jan. 1882. Economic stagnation and a series of bad harvests hit France.

POLITICAL DEVELOPMENTS. "Opportunist" Republicans, advocates of gradual reform, held power, while "Radical" Republicans urged faster change. Dormant since 1881, the Conservatives gained strength in the elections of 1885. An expanding Socialist movement split, 1882, into the Marxist Parti Ouvrier Français, under Jules Guesde (1845-1922), and the more moderate Possibilist party.

Republican divisions necessitated coalition governments which were a prey to shifting majorities. Few governments lasted long enough to implement solid programs.

1886-89

BOULANGER CRISIS. A scandal involving Grévy's son-in-law Daniel Wilson, forced the president's resignation, 2 Dec., 1887. Government immobility, economic downswing, and a surge of nationalism focused on the recovery of Alsace-Lorraine fed the opposition.

The discontented rallied to Gen. Georges Boulanger (1837-91), minister of war, Jan. 1886-May 1887. But, despite an impressive electoral mandate, Boulanger refused to seize the government, 27 Jan., 1889, and fled France, 8 Apr.

The elections of 22 Sept., 1889, confirmed Republican control of the Chamber. Moving out of opposition, the Radicals co-operated in a government of "republican concentration," dominated by the Moderates.

1890-96

THE RALLIEMENT. Convinced of the futility of the monarchist cause, Pope Leo XIII urged French Catholics to accept the republic, Feb. 1892. The order split the Conservatives. Some obeyed and rallied to the republic, but others remained unreconciled.

PANAMA CANAL SCANDAL. The builder of the Suez Canal, Ferdinand de Lesseps, organized a company, 1880, heavily backed by the small French investor, to dig a canal in Panama. In serious financial difficulty, the company bought journalistic silence and parliamentary support for a new loan, which failed, forcing the company to admit ruin, Feb. 1889. Exposure of the scandal, 1892, by revealing the involvement of important Republican officials and deputies, undermined confidence in the republic.

PROTECTIONISM. Pressure from industrialists and the fall of agricultural prices converted a reluctant majority from free trade to protection (Méline Tariff, Jan. 1892). High tariff barriers contributed to a revival of industry, 1895, which in turn stimulated general prosperity.

FRANCO-RUSSIAN ALLIANCE. To escape the isolation imposed by the Triple Alliance, France made overtures to Russia, 1890-91. An entente, 1891, prefaced the secret adoption of a mutual-defense pact, Dec. 1893 and 4 Jan., 1894. Although conceived largely as the instrument of an anti-German policy, the alliance forced France to follow Russia into closer relations with Germany.

SOCIALIST GAINS. Criticizing the "*embourgeoisement*" of the Possibilist deputies, the Allemanists (under Jean Allemane), working-class militants, broke away, Oct. 1890, forming the Parti Ouvrier Socialiste Révolutionnaire. Trade union organization progressed, and the Socialists made gains in municipal elections. As parliamentary Socialist representation increased, a group of gifted

Socialist deputies emerged: René Viviani (1863-1925), Alexandre Millerand (1859-1943), and Jean Jaurès (1859-1914).

In 1896 most Socialist factions adopted a common minimum program, 30 May, advocating the destruction of capitalism by reform, not revolution.

ANARCHIST VIOLENCE. Following a new wave of terrorism in 1892, anarchists bombed the Chamber, 9 Dec., 1893. Repressive legislation did not prevent the assassination of President Sadi Carnot, Jules Grévy's successor, by an anarchist, 24 June, 1894. Measures to limit revolutionary activity passed after violent opposition from the left, July 1894. The Radicals broke with the Moderates and cemented ties with the Socialists.

POLITICAL INSTABILITY. Ministerial crises multiplied as the Left intensified pressure on shaky governments, 1893-95. Jean Casimir-Perier (1847-1907), Carnot's successor, resigned, 17 Jan., 1895, and was replaced by Félix Faure (1841-99). An all-Moderate ministry under Jules Méline (1838-1925) restored some stability, Apr. 1896-June 1898.

1897-99

DREYFUS AFFAIR. The army accused Capt. Alfred Dreyfus (1859-1935), a Jew, of passing military documents to the Germans and condemned him on flimsy evidence to life imprisonment on Devil's Island, Dec. 1894. Although re-examination of the evidence incriminated Maj. Esterhazy, a military court acquitted him, Jan. 1898. Émile Zola's *J'accuse*, 13 Jan., 1898, riveted public attention on the "Dreyfus Affair."

Conservatives, nationalists, and anti-Semites, the anti-Dreyfusards, insisted on the preservation of the army's authority and honor. The Dreyfusards, liberals and intellectuals, defended justice and demanded a revision of the Dreyfus judgment.

President Faure died, 16 Feb., 1899, and was replaced by Émile Loubet (1838-1929). As anti-Republican attacks increased, René Waldeck-Rousseau (1846-1904) formed a government of Republican Defense, 22 June, supported by Radi-

cals and Socialists. Breaking a precedent, the Socialist, Millerand, entered the cabinet.

At the long-anticipated retrial, judges found Dreyfus guilty, 11 Sept., 1899, but reduced his sentence to 10 years. President Loubet pardoned Dreyfus, 19 Sept., and in 1906 he was fully exonerated. The Dreyfus Affair had divided France and had badly shaken the republic.

1900-1905

SEPARATION OF CHURCH AND STATE. Striking at clerical sources of anti-Republican activity, the Waldeck-Rousseau government, by the Associations Law, 1 July, 1901, required all religious orders to obtain state authorization.

The 1902 elections confirmed a shift of power from the Moderates to the Radicals and Radical Socialists, spokesmen of the lower middle classes. Socialists joined Radicals in a Bloc des Gauches. Backed by a solid anticlerical majority, the Émile Combes (1835-1921) government, June 1902-19 Jan., 1905, barred religious orders from public-school teaching, 1904. Formal separation of church and state followed, 9 Dec., 1905. The state relinquished control over the appointment and payment of church officials, provided that lay organizations take over church property, and guaranteed freedom of conscience.

MILITARY REFORMS. Gen. Louis André (1838-1913), war minister, directed the republicanization of the army, 1900-1904, until the opposition discovered his reliance on Masonic information and forced him to resign, 15 Nov., 1904 (*Affaire des Fiches*). In Mar. 1905 the Chamber established 2-year military service for all, without exception.

SOCIALIST UNITY. In 1902 French Socialists split on the issue of support for bourgeois governments. But under orders from the Socialist International, meeting in Amsterdam, Aug. 1904, the Socialists united in the Parti Socialiste Unifié (S.F.I.O.) and adopted the principle of nonco-operation with bourgeois governments, Apr. 1905.

TRADE UNION MOVEMENT. The major trade union organizations merged

with the *Confédération Générale du Travail* (C.G.T.) in 1902. Revolutionary syndicalist leadership committed the C.G.T. to political neutrality, the general strike, and social revolution.

ANGLO-FRENCH ENTENTE. France and Britain signed a convention, 8 Apr., 1904, regulating outstanding colonial differences. France accepted British occupation of Egypt and obtained recognition of its interests in Morocco.

1ST MOROCCAN CRISIS. William II, the German emperor, speaking in Tangier, challenged French claims to special interests in Morocco, 31 Mar., 1905. Théophile Delcassé (1852-1923), foreign minister since 1898, urged resistance to Germany, but the cabinet, afraid of war, accepted the international conference demanded by the Germans (Algéiras Conference, 16 Jan.-7 Apr., 1906). Delcassé resigned, 12 June.

1906-11

RETURN TO POLITICAL INSTABILITY. Armand Fallières (1841-1931), Bloc des Gauches candidate, succeeded the outgoing president, Loubet, 17 Jan., 1906. The 1906 elections crushed the Conservative opposition and strengthened the Bloc des Gauches. But, when Radical governments under Clemenceau and Briand used force to restore order during a prolonged period of strikes, 1907-10, the Socialists abandoned the Bloc. The emergence of 2 oppositions forced a reversion to Center governments and cabinet instability.

2ND MOROCCAN CRISIS. Germany pressed for compensation for French gains in Morocco. When negotiations lagged, Germany dispatched the gunboat *Panther* to Agadir, 1 July, 1911, ostensibly to protect German property. The French agreed to buy German acceptance of French special interests in Morocco with a slice of the Congo, 4 Nov.

1912-14

DOMESTIC DISINTEGRATION. To restore stability, the Chamber called on

Raymond Poincaré (1850-1934) to form a government, 14 Jan., 1912. He resigned, 18 Jan., 1913, to become president of the republic. As the Radical majority disintegrated, cabinet instability intensified. Voted on the eve of war, a law increasing military service from 2 to 3 years aroused the violent opposition of the Left, pushing the Radicals and Socialists together. The elections of 26 Apr.-10 May, 1914, delivered the Chamber to the Radicals, Radical Socialists, and Socialists. (*Cont. p. 401.*)

THE GERMAN EMPIRE

1871

FOUNDING OF THE EMPIRE. On 18 Jan. in the Hall of Mirrors at Versailles (symbolizing the victory over France by the German princes united under the Hohenzollerns) King William I of Prussia was crowned emperor of Germany. The states which constituted this new empire were the North German Confederation, dominated by Prussia, and the southern kingdoms of Bavaria, Baden, Hesse-Darmstadt, and Württemberg. On 14 Apr. the Reichstag adopted an Imperial Constitution, framed by Otto von Bismarck, by which the king of Prussia received the hereditary right to the German throne. As emperor of Germany, the Prussian king represented the Reich in foreign affairs and commanded the armed forces. He presided over the Bundesrat (Upper House), in which the individual German states were represented, with Prussia dominant; and he convened and adjourned the Reichstag (Lower House), whose 397 members were elected by all German men over 25 years of age. The only all-German minister was the imperial chancellor. The chancellor appointed heads of department for Reich affairs, but the individual state governments retained responsibility for most domestic matters. The chancellor was responsible to the emperor, not to the Reichstag, and a vote of no confidence or a defeat in the Reichstag did not necessarily affect his position. In 1871 Bismarck

held the chancellorship, as well as the influential post of minister-president of Prussia.

POLITICAL PARTIES. Bismarck's power was further enhanced by the division of the Reichstag into several conflicting parties. To the far right were the Conservatives, mostly Prussian landowning aristocrats, whose major interests were the preservation of Prussian traditions and protection of their own agricultural livelihoods. An offshoot of the Conservatives, under the leadership of Wilhelm von Kardorff (1828-1907), was the Free Conservative Party, or *Reichspartei*, which drew into its membership nobles from other parts of the empire as well as from Prussia. These nobles owned industrial as well as agricultural enterprises, and the Free Conservatives had therefore a wider, more liberal orientation. The National Liberal Party represented chiefly business and professional interests. Its leaders included Rudolf von Bennigsen (1824-1902) and Eduard Lasker (1829-84). Its members had the typical 19th-cent liberal sympathy for national unity, free trade, material progress, and anticlericalism. The Progressive Party, which fluctuated greatly in strength from one election to the next, drew its main support from the commercial middle classes, lower officials, and intellectuals; its members, led by Eugen Richter (1838-1906), demanded a full-fledged parliamentary state. The Center Party, led by Ludwig Windthorst (1812-91), was unique in that its basis lay not in class or ideology but in religion. As the representative of German Catholic interests, it attracted members from all classes and geographic areas of the empire who supported federalism, autonomy for the church, and freedom of religious education. Finally, the Social Democrats represented the German working classes.

In addition to these parties, the Reichstag contained a few representatives of dissident minorities, including Poles, Guelph Party supporters of the former king of Hanover, and Danes from North Schleswig. On 10 May, 1871, another minority group reluctantly joined the

empire when the Peace of Frankfurt, which officially ended the Franco-Prussian War, transferred Alsace-Lorraine from France to Germany.

1871-88

KULTURKAMPF. On 8 July, 1871, Bismarck abolished the special division for Catholic affairs in the Prussian Ministry for Public Worship and Education. This action marked the beginning of the *Kulturkampf* (cultural struggle) against the Catholic Church in Germany. During the previous decade the church, under the direction of Pope Pius IX, had taken a more aggressive attitude than in the past, culminating in a definition of papal infallibility in 1870. Bismarck, supported by the National Liberals, saw the Catholics as a menace to German unity. Not only were Catholic Germans sympathetic to Catholic Poles and Hanoverians within the empire, but on the international level there was a danger that German Catholics might unite under papal leadership with their Catholic neighbors in France and Austria. Bismarck attacked the Center Party in the Reichstag, and on 4 July, 1872, obtained a law dissolving the Jesuit order. Most of the other anti-Catholic laws were passed in Prussia under the direction of Adalbert Falk (1827-1900), Prussian minister for public worship and education. The "May Laws," passed in 1873, 1874, and 1875, provided for state supervision over education and the appointment of clergy, made civil marriage compulsory, and placed ecclesiastical discipline under state control. By 1876 many Prussian bishops and priests were in prison and opposition was increasing to Bismarck's policies, as Liberals became alarmed at restrictions on basic liberties and Conservatives began to worry that similar action might be taken against the Lutheran Church. Bismarck, searching for a way to retreat, was helped by the accession in 1878 of a new pope, Leo XIII. The 2 men held direct negotiations which led to the gradual repeal over the next decade of most of the anti-Catholic laws. Falk resigned in 1879.

LEAGUE OF THE 3 EMPERORS.

Bismarck's foreign policy after the Franco-Prussian War attempted to maintain the *status quo* through a complex system of defensive alliances. Friendship with France was impossible so long as Germany held Alsace and Lorraine; Bismarck therefore aimed to isolate France, and particularly to prevent any kind of Russo-French alliance which might lead to Germany's having to fight a war on 2 fronts. In Sept. 1872, Emperor William I met in Berlin with Alexander II of Russia and the Hapsburg Emperor Francis Joseph. Their cordial discussion of European affairs led, Oct. 1873, to the formation of the 3 Emperors' League, by which they pledged themselves to co-operate in the preservation of the European peace. This peace was disturbed briefly in the spring of 1875 by the "war in sight" crisis. Alarmed at France's quick economic recovery and plans to increase her army, Bismarck made angry statements, while the German press published excited articles, climaxed by the headline "Is War in Sight?" At this point both Britain and Russia intervened, and Germany backed down.

CONGRESS OF BERLIN. 13 June–13 July, 1878. A more serious situation arose in the Balkans, where Austria and Britain opposed Russia's domination after her defeat of Turkey in 1877. Bismarck refused to support the Russian position, instead offering to serve as "honest broker" at an international congress. The congress met in Berlin, and the disgruntled Russians saw their gains reduced. Bismarck turned toward Austria, with whom he signed a secret defensive treaty against Russia, Oct. 1879. But Russia, facing a chaotic domestic situation at the time preferred a peaceful course in her foreign relations. Her conciliatory attitude allowed a re-establishment of the 3 Emperors' League in June 1881.

RISE OF THE SOCIAL DEMOCRATS. In the 1874 elections to the Reichstag the Social Democrats won 9 seats, and in May 1875 Social Democrats of various persuasions came together at

Gotha to form a united party. The Gotha program represented a compromise between the followers of Karl Marx and of Ferdinand Lassalle: it called for an economy of productive co-operatives financed by the state, in order to emancipate labor and construct a society in which exploitation would cease. In the 1877 elections, Social Democratic strength increased to 12 seats. Bismarck viewed this new, class-based, internationally oriented party with alarm. In 1878 there were 2 attempts, May and June, to assassinate the emperor. Bismarck accused the Social Democrats and dissolved the Reichstag; in the new elections the Conservatives gained strength while the Social Democrats lost 3 seats. The Reichstag passed an anti-socialist law, 19 Oct., 1878, which gave the government authority to suppress labor organizations and socialist activities of all kinds. During the next decade, Bismarck attempted to substitute his own kind of social reform, through sickness insurance, 1883; accident insurance, 1884; and old-age and incapacity insurance, 1889. Under these acts employers, employees, and the state contributed in various proportions to compulsory insurance schemes. In spite of this social legislation, the Social Democratic Party continued to grow, and after 1890 the anti-socialist laws were not renewed.

INDUSTRIALIZATION. The boom after the Franco-Prussian War was followed by depression in Germany in 1873, but by 1880 the economy had revived and continued to grow until World War I. Improvements in canals extended the already well-developed transport system; increasing coal and iron production formed the basis for new manufactures; and the textile, chemical, and electrical industries all expanded. Along with industrial growth came a growth in banking facilities. The Reichsbank, or central bank, was established in 1875. Banking institutions had a powerful role in financing German industry, and between banking and industry a system of interlocking directorates developed. German industry, moreover, tended to develop by means of cartels, or combinations controlling prices

and production for a horizontal or vertical group of products.

During the 1870's German producers debated the question of free trade vs. protection. Responding to the demands of both farmers and industrialists, the Reichstag adopted a protective tariff, 12 July, 1879. That year also marked a change in the direction of German politics, since Bismarck turned away from the Liberals in order to get Conservative and Center support for passage of the tariff. This alliance persisted until the debate in 1887 over the Septennate, a bill to increase army strength by 10% for a period of 7 years. The Center opposed the bill, but Bismarck achieved its passage with support from an alliance of conservative parties and the now demoralized National Liberals.

RELATIONS WITH RUSSIA. In May 1882 Bismarck attempted to make Germany's international position even more secure by joining with Austria and Italy in a Triple Alliance directed against France. In the mid-1880's another Balkan crisis strained this new alliance system. Russia, at odds with Austria, withdrew from the 3 Emperors' League, 1887; but to replace the League, Czar Alexander agreed to a Reinsurance Treaty with Germany. This secret treaty committed each of the 2 states to benevolent neutrality if the other fought a war, except if Germany began a war against France or Russia began hostilities against Austria. Germany further pledged diplomatic support for Russian ambitions in the Balkans, a pledge which conflicted with the spirit of German agreements with Austria.

COLONIAL POLICY. Until the 1880's Bismarck refused to join in the European imperial scramble, although north-German merchants were eager for overseas expansion. The Deutsche Kolonialverein (German Colonial League) was founded, Dec. 1882. In the following year Bismarck reversed his policy and began to support German imperial ventures. In 1884 Adolf Lüderitz signed treaties resulting in the creation of a German protectorate in Southwest Africa. Also in that year Ger-

many acquired Togoland and the Cameroons. In 1885 an official protectorate was declared in East Africa as a result of the efforts of Karl Peters (1856-1918), founder of the Gesellschaft für Deutsche Kolonisation (Society for German Colonization). During these same years Germany obtained possessions in the Southwest Pacific, including a part of New Guinea, the Bismarck Archipelago, and the Marshall and Solomon islands.

1889-1914

FALL OF BISMARCK. Emperor William I died on 9 Mar., 1888, to be succeeded by his son, Frederick III (1831-88). Through his wife, Victoria, eldest daughter of Queen Victoria of Great Britain, Frederick had been exposed to liberal British influences and had become the hope of German liberals. But by the time of his accession to the throne he was mortally ill with cancer of the throat. Unable to take any active part himself, he left the conduct of affairs to Bismarck. On his death, 15 June, 1888, the crown passed to his son, William II (1859-1941), a man of very different views. Within the next year an inevitable conflict arose between the 74-year-old chancellor and the 29-year-old emperor, who was determined to exercise his own rule. Moreover, the Reichstag elections of 1890 resulted in a defeat for Bismarck's supporters and an increase in strength for the left. Bismarck resigned as chancellor, 18 Mar., 1890, and was replaced by Gen. Leo von Caprivi (1831-99).

RULE OF WILLIAM II. After Bismarck's retirement there occurred some decentralization of the power which had formerly rested with the chancellor alone. The emperor now took a more active part in policy formation, as also did various secretaries of state. William leaned toward liberalism at the beginning of his reign, supporting progressive laws passed to improve factory conditions and soften the treatment of minority groups. But these measures failed to reduce socialist and minority opposition to the central government. The Social Democrats met at

Erfurt, Oct. 1891, and adopted a new program which emphasized class struggle. They dropped their former demands for state-financed producers' associations, which represented an ideological switch from Lassalle to Marx. In reaction to the liberal measures of the government, the conservatives started their own propaganda leagues and pressure groups. In Apr. 1891 the organization which later took the name *Alldeutscher Verband* (Pan-German League) was formed; its members advocated union of all German ethnic groups in one pan-German state which, in the end, would rule the world. In Feb. 1893 the Prussian landowners joined in the *Bund der Landwirte* (Agrarian League) to protect agrarian interests and oppose Caprivi's policy of lower tariffs. In the same year the *Ostmarkenverein* (Eastern Marches Association) was formed to protest against concessions to the Poles. By this time the emperor had become disenchanted with liberalism and was allowing his innate conservatism to come to the fore. He encouraged Caprivi to push through the Reichstag a bill to increase the size of the army, 1893, and declined to support his chancellor against attacks from the conservative agrarians. In Oct. 1894 he accepted Caprivi's resignation and appointed as his successor the 75-year-old Prince Chlodwig zu Hohenlohe-Schillingsfürst (1819-1901).

NAVAL EXPANSION. Hohenlohe remained chancellor until 1900, when he was replaced by Prince Bernhard von Bülow (1849-1929), who held the post until 1909. Both men pursued a generally conservative policy, which tried to contain the increasing agitation of Social Democrats and trade unions. William, an ardent yachtsman, was preoccupied with building a great German navy. In 1897 he appointed as state secretary for naval affairs Adm. Alfred von Tirpitz (1849-1930), who shared his enthusiasm for naval expansion. In 1898 the Reichstag passed a costly bill for ship construction, and further appropriations followed in 1900. In 1898 also the *Flottenverein* (Naval League) was founded to generate

patriotic propaganda for the navy. Like the other propaganda leagues, it drew membership and financial support from the great industrialists, who in turn made large profits from the military expansion programs.

INCREASING STRENGTH OF THE LEFT. In 1909 Theobald von Bethmann-Hollweg (1856-1921) succeeded Bülow as chancellor, to serve until 1917. During his term industrialization and urbanization increased, and the strength of the trade unions and socialists grew. In 1910 Berlin had more than 2 m. residents, and over 50% of the German population lived in urban areas. Membership in the Free Trade Unions had passed the 2-m. mark, and in the election of 1912 the antigovernment Social Democrats became the largest single party in the Reichstag.

GERMAN WELTPOLITIK. Under the inconsistent and often irresponsible direction of William II and his advisers, Germany became increasingly isolated from all other European nations except Austria, her one remaining dependable ally by 1914. In June 1890, acting on advice from Baron Friedrich von Holstein (1837-1909), permanent counselor at the Foreign Office, William decided not to renew the German-Russian Reinsurance Treaty. In the same year Germany appeared to move closer to Britain, following an agreement which defined boundaries of German and British territories in East Africa and gave Zanzibar to Britain in exchange for German possession of Helgoland. But subsequent German policy served increasingly to alienate Britain as well as other states. William was determined to pursue a policy of *Weltpolitik* (world politics) which would make German influence felt everywhere. In 1895, after the Jameson raid against Johannesburg, William sent President Kruger of the Transvaal a telegram congratulating him on the defeat of the British invaders. This incident inflamed British public opinion. In addition, the continued build-up of the German navy presented a serious threat to Britain.

In 1897 Germany used the murder of 2 German missionaries as a pretext for

landing at Kiaochow and demanding from China a 99-year lease of the Shantung Peninsula, despite previous Russo-Chinese negotiations for Russian control in that area. In 1900 Germany took the lead in sending an international army to put down the Boxer Rebellion in China. Meanwhile, Germany was also active in the Middle East, where in 1903 the promoters of the Berlin-Baghdad railway obtained from the Turkish government wide concessions for their project, which antagonized the Russians. In 1905 William met Nicholas II of Russia at Bjorko in the Baltic, and reached agreement on a mutual-aid treaty between their countries. Neither Foreign Office would ratify the treaty, however, and Russia's ally France rejected the idea of a Russo-German accord completely.

MOROCCAN CRISIS. In 1905 William II traveled to Tangier to challenge French influence in Morocco. At the ensuing international conference at Algeiras, 1906, Russia and Britain backed France. The event forced the resignation of Holstein. It also drew Russia and Britain closer, and by 1910 Europe had become divided into 2 opposed and increasingly armed camps: a Triple Entente of Britain, France, and Russia faced the Triple Alliance of Germany, Austria and Italy. The general staffs of the various powers busied themselves formulating strategies in case of war. In Germany the plan which had been worked out under Count Alfred von Schlieffen (1833-1913) anticipated simultaneous war against Russia and France. In this event Germany must first crush France by an attack through neutral Belgium and Luxembourg, and then turn east to meet the Russians, who would have taken longer to complete their mobilization. In 1911 another crisis occurred in Morocco when Germany sent the cruiser *Panther* to the port of Agadir in order to protest French military action in the sultanate. Negotiations resulted in German agreement to a French protectorate in Morocco in exchange for French cession to Germany of a part of the Congo.

OUTBREAK OF WORLD WAR I.

During 1912 and 1913 local wars in the Balkan Peninsula increased tension between Russia and Austria, the 2 major powers with interests in the area. Germany took no part except to stand behind her ally Austria. In July 1914, as he departed for his summer cruise, William agreed to back Austria in any action she wished to take against Serbia in retaliation for the assassination of the Archduke Francis Ferdinand. Russia in turn declared her solidarity with Serbia. Within the next few weeks, the crisis widened as all the major European powers were drawn in to support their various allies. Bethmann-Hollweg, realizing finally the seriousness of the situation, tried to moderate Austrian policy, but without success. Austria declared war on Serbia, 28 July, 1914. Russia responded with an order for general mobilization, 29 July. By this time foreign policy had become subordinate to military strategy. Following the dictates of the Schlieffen Plan, Germany mobilized, and declared war on Russia, 1 Aug. On 3 Aug. she declared war on France, and German troops invaded Belgium next day (*Cont. p. 401.*)

THE RUSSIAN EMPIRE

1871-78

3 EMPERORS' LEAGUE. After a meeting in Berlin of the Russian, Austrian, and German emperors, Sept. 1872, agreements were made between Germany and Russia, May 1873, and Austria and Russia, June 1873, providing for a loose alliance between the 3 powers. The league was never put to effective use and broke down because of Austro-Russian rivalry in the Balkans.

ARMY REFORM. 13 Jan., 1874. The old Russian army, composed of long-term peasant conscripts, was replaced by one based on a universal system of military obligation, with a lottery used to choose recruits who then served 6 years on active duty and 9 years in the reserve. The term of service was reduced in proportion to

the conscript's level of education, university graduates serving only 6 months.

FOUNDING OF THE "LAND AND LIBERTY" SOCIETY. The main aim of the "Land and Liberty" Society, a populist, revolutionary organization, founded 1876, was the distribution of all land to the peasants. When its members, mainly urban intellectuals, found their propaganda efforts among the peasants ineffectual, a number of them turned to the use of terror as a political weapon. In 1879 the society split into those who still favored propaganda activities and those who were self-conscious terrorists, the latter forming the "People's Will," an organization committed to assassination with the czar as a major target.

RUSO-TURKISH WAR. Revolts in Bosnia, Herzegovina, and Bulgaria, 1875-76, were put down with great ferocity by the Turks, causing Serbia and Montenegro to declare war on the Ottoman Empire, 1876, and arousing strong pan-Slavic feeling in Russia. When the Turks refused great-power intervention on behalf of the Christian population of the Balkans, Russia declared war, 24 Apr., 1877. After initial successes the Russians were stopped at Plevna, 20 July, and did not capture it until 10 Dec. They then crossed the Balkan highlands and, with their armies threatening Constantinople, were able to negotiate the Treaty of San Stefano, 3 Mar., 1878. The Turks recognized the independence of Rumania, Serbia, and Montenegro, with the latter 2 regions gaining territory; agreed to the creation of an autonomous principality of Bulgaria, including Macedonia; promised reforms in Bosnia and Herzegovina; and ceded to Russia part of the Dobruja (the area between the lower Danube and the Black Sea) and districts in the Caucasus.

TREATY OF BERLIN. 13 July, 1878. British and Austrian objections to the Treaty of San Stefano led to a great-power conference in Berlin to revise its terms. Macedonia and a new province of Eastern Rumelia were detached from Bulgaria, the former being returned to full Turkish rule while the latter was made administratively autonomous under the political and military control of the sultan of Turkey. The territorial gains of

Serbia and Montenegro and of Russia in the Caucasus were reduced, and Russia ceded the Dobruja to Rumania in exchange for southern Bessarabia. Austria was given control of Bosnia and Herzegovina and authorized to maintain garrisons in the sanjak (district) of Novi Pazar.

1879-87

SPECIAL COMMISSION AGAINST TERRORISM. 25 Feb., 1880. The terrorist activities of the "People's Will" led to the appointment of a special commission, headed by Count Mikhail Loris-Melikov (1825?-88), with almost unlimited powers to deal with the problem. The police forces were reorganized and Loris-Melikov, who believed it necessary to resume the reform efforts of the 1860's, forced the more conservative ministers out of the government, notably the minister of education, Dmitri Tolstoy (1823-89). By Aug. 1880 the danger had seemingly been greatly reduced, and the commission was ended, Loris-Melikov becoming minister of internal affairs.

ASSASSINATION OF ALEXANDER II. 13 Mar., 1881. The "People's Will" was on the verge of extinction, but its remaining members made 1 last effort to kill the czar, and succeeded. The same day he had signed a proclamation announcing his acceptance of a proposal by Loris-Melikov for the creation of commissions, including zemstvo representatives, to propose reform measures. His son, Alexander III (1845-94), rejected the plan, and on 11 May, 1881, announced his commitment to unlimited autocracy, causing Loris-Melikov to resign.

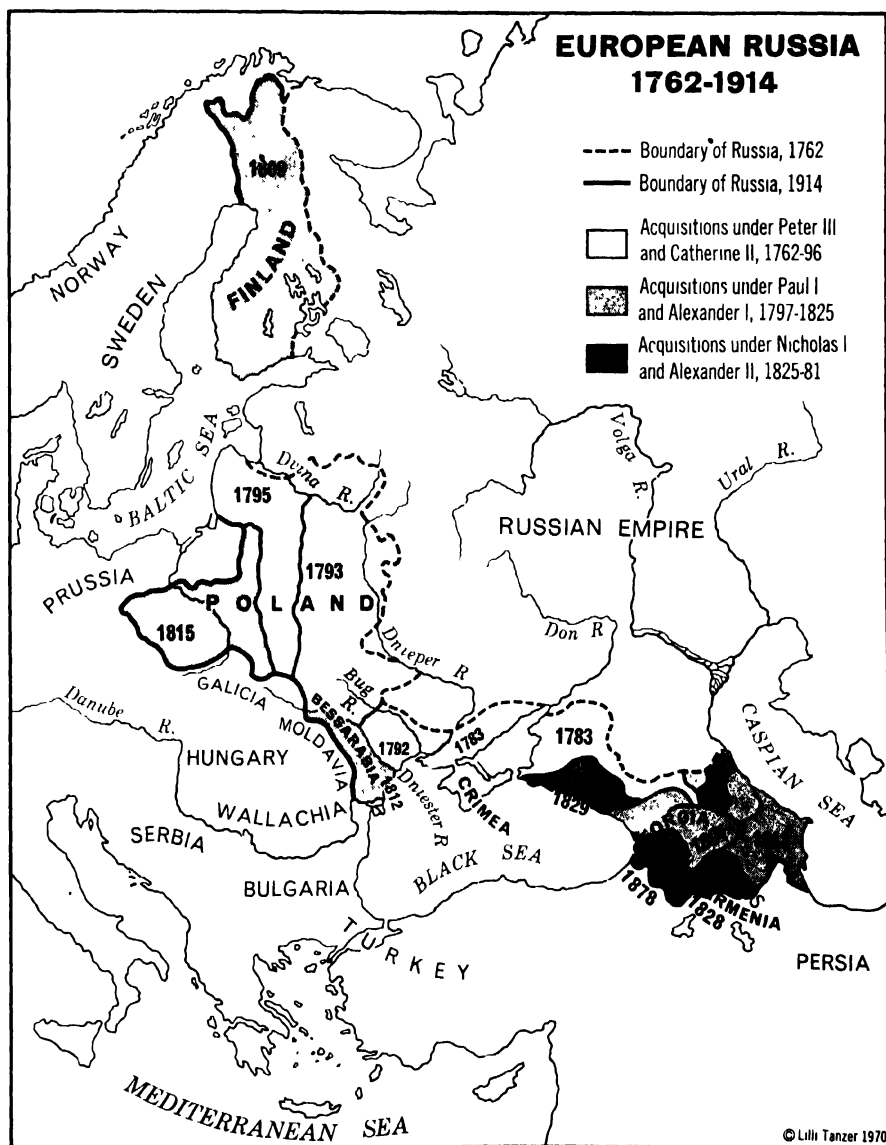

RENEWAL OF THE 3 EMPERORS' LEAGUE. 18 June, 1881. A 3-year agreement between Germany, Austria, and Russia provided for the benevolent neutrality of the other 2 if 1 of them was at war, with the exception of a war with Turkey. It was renewed, 1884, but allowed to lapse, 1887, due once again to Austro-Russian disagreements in the Balkans.

ISSUE OF THE "TEMPORARY REGULATIONS." 26 Aug., 1881. These regulations, which actually remained in

force until 1917, 'provided that when a state of emergency had been declared in any area, local officials should have greatly increased powers over all types of gatherings and administrative powers of search, arrest, and deportation. In Sept. 1882 the censorship was also greatly strengthened.

REDEMPTION OF PEASANT LAND. 9 Jan., 1882. By the emancipation decrees, the start of the period of re-

demption of peasant land had depended on voluntary agreements between the landowner and the peasants. By imperial decree redemption was now to begin in cases where such agreement had not been reached, and all redemption payments were to be reduced. In June 1886 payments by state peasants were changed from rent to a redemption payment, and the peasants were given ownership of the land they occupied.

REINSURANCE TREATY WITH GERMANY. 18 June, 1887. Replacing the 3 Emperors' League, a new 3-year agreement was made, providing for neutrality on the part of Russia if Germany was involved in war, and vice versa, except in the case of an aggressive war against either France or Austria.

1888-99

FRANCO-RUSSIAN ALLIANCE. 27 Aug., 1891. France and Russia agreed on mutual consultation in international affairs. A military convention, 17 Aug., 1892, provided for military co-operation against any threat from the Triple Alliance (Germany, Austria, and Italy), and was ratified by an exchange of diplomatic notes, 27 Dec., 1893, and 4 Jan., 1894.

RULE OF NICHOLAS II. As committed as was his father to autocracy, Nicholas II (1868-1918), who became czar on 1 Nov., 1894, was a much weaker ruler. During his reign, the industrialization of Russia proceeded at a greatly increased rate, particularly as a result of the policies of the minister of finance, Sergei Witte (1849-1915), between 1892 and 1903. The creation of an urban working class plus widespread crop failures in the early 1890's led to the reappearance of political unrest, which had been largely absent during the reign of Alexander III.

REDUCTION OF FINNISH AUTONOMY. By decree, Feb. 1899, imperial laws were given precedence over Finnish in areas of imperial concern. In addition, after the appointment of Gen. Nicholas Bobrikov (1839-1904) as gov., Aug. 1898, a policy of Russification was followed. The attempt to turn Finland into a Russian province resulted in the growth of a revolutionary movement in what had been a peaceful and loyal area.

1900-1905

FOUNDING OF THE S.R. The Socialist Revolutionary Party (S.R.), founded 1901, inherited the traditions of Russian populist radicalism and favored communal ownership of all land by the peasants. The party revived the use of political

assassination as a revolutionary technique and was the cause of numerous murders between 1902 and 1907.

2ND CONGRESS OF THE S.D. 30 July-23 Aug., 1903. Founded in 1898 by the union of various Marxist groups, the Russian Social Democratic Labor Party (S.D.) had no real existence until its 2nd congress, held in 1903 in Brussels and London. It was split into 2 factions, which formed 2 almost separate parties: the Bolsheviks, led by Lenin (born Vladimir Ilyich Ulyanov, 1870-1924), favoring a small, centrally controlled party of professional revolutionaries, and the Mensheviks, favoring a broader, freer party.

RUSO-JAPANESE WAR. Russia had created a sphere of influence in Manchuria, obtaining a concession for the Chinese Eastern Railway, 1896, and a lease on Port Arthur, 1898, and occupying Manchuria after the Boxer Rebellion, 1900. Here and in Korea the Russians were in conflict with the Japanese. In Feb. 1904 the Japanese broke off diplomatic relations and attacked the Russian naval squadron in Port Arthur. The war consisted of a series of Russian defeats: on the Yalu River, May 1904; at Liaoyang, Aug.-Sept.; at Port Arthur, which fell Jan. 1905; and at Mukden, Feb.-Mar. 1905. On 27 May a fleet which had sailed from the Baltic was destroyed by the Japanese at the Battle of Tsushima Strait. President Theodore Roosevelt of the U.S.A. acted as mediator, and the Treaty of Portsmouth, 5 Sept., 1905, ended the war. Japan's sphere of influence in Korea was recognized, both powers evacuated Manchuria, and Japan received a lease on Port Arthur and the southern half of Sakhalin Island.

"BLOODY SUNDAY." 22 Jan., 1905. Defeat in the Far East brought increased unrest and demands for change in Russia. A meeting of zemstvo leaders, Nov. 1904, demanded a representative assembly and was supported by widespread expressions of public opinion. In Jan. 1905 an iron-workers' strike in St. Petersburg developed into a general strike in favor of political reform. When the workers, led by Father George Gapon (1870?-1906),

joined in a mass demonstration, 22 Jan., to present a petition to the czar, they were fired on by troops and hundreds were killed and wounded.

REVOLUTION OF 1905. "Bloody Sunday" was followed by uprisings and strikes throughout the country. The government attempted to quiet unrest with vague promises of popular participation in the government, 3 Mar., but with little effect. A revolt on the battleship *Potemkin*, June, indicated that even the loyalty of the armed forces was uncertain. On 19 Aug. the czar created a state Duma, but gave it only consultative powers and excluded the urban working class and most professionals from the suffrage. This was unacceptable to the opposition and a railway strike in Moscow, Oct., resulted in a general strike movement throughout the country and the creation of the St. Petersburg Soviet (council) of Workers' Deputies. In the same month the liberal Constitutional Democratic Party (Cadets) was organized, with a program favoring parliamentary government and economic and social reform. On 30 Oct. the czar issued a manifesto, based on proposals made by Sergei Witte, granting civil liberties and a Duma, elected on a broadened franchise, with control over legislation and the ministries. Witte was made head of the newly created Council of Ministers, in effect becoming prime minister. In Nov. peasant redemption payments were abolished, effective 1907, and the autonomy of Finland fully restored. Radical opposition continued, but the government was now strong enough to regain the initiative. In Dec. the members of the St. Petersburg Soviet were arrested and an uprising in Moscow put down by force, after which the revolutionary ferment in the country subsided.

1906-14

CODE OF FUNDAMENTAL STATE LAWS. 6 May, 1906. The decrees establishing the Duma were codified and, in some degree, changed by a new Code of Fundamental Laws. Almost universal manhood suffrage was introduced, but with a complicated system of indirect

elections. The Duma was chosen for 5 years, but the czar could dissolve it earlier provided he called for new elections at the same time. The Council of State was made an upper legislative house, half its members appointed by the czar and half elected by various public bodies. Laws could be initiated by either house and required the approval of both houses and of the czar. The Duma had the right to question ministers, but no power over them, and about $\frac{1}{3}$ of the budget was excluded from its control. The czar retained full authority over the administration, the armed forces, and foreign policy, and the government could issue temporary emergency decrees which had the force of law. At the same time as the code was issued, Witte, whom the czar distrusted, was replaced by I. L. Goremykin (1839-1917). Peter A. Stolypin (1863-1911) became minister of internal affairs.

1ST DUMA. 10 May-21 July, 1906. The members of the 1st Duma were almost all in opposition to the government, the Cadets, the largest single party, dominating the proceedings, since the S.D. and S.R. had both boycotted the elections. An address was adopted calling for further constitutional changes and the division of large estates among the peasants. This was rejected by the government, and as co-operation between it and the Duma proved impossible, the czar, after considering the creation of a Cadet ministry, dissolved the Duma.

RULE OF STOLYPIN. Stolypin was appointed head of the government, 21 July, 1906. He retained the Ministry of the Interior, and attempted both reform and the repression of radical groups at the same time. An emergency decree, 1 Sept., permitted local officials to use field courts-martial for the summary trial and execution of revolutionaries. On the other hand, a decree removed most of the remaining legal disabilities of the peasants, 18 Oct. On 22 Nov. a decree was issued permitting peasants to leave their communes and retaining and consolidating their land holdings.

2ND DUMA. 5 Mar.-16 June, 1907. The S.D. and the S.R. took part in the election which led to the 2nd Duma,

while the government gave active support to rightist groups, notably the Union of the Russian People. The result was a strengthening of both left and right at the expense of the center parties. Stolypin proposed a program of reform, but the opposition did not accept it and the Duma was again dissolved.

ELECTORAL LAW. 16 June, 1907. In order to secure a conservative Duma, the representation of the national minorities was decreased by a new franchise law, while greatly increased weight was given to landowners and wealthy city dwellers.

ANGLO-RUSSIAN ACCORD. Conflicts in Persia, Afghanistan, and Tibet were settled by an agreement between Russia and Britain, 31 Aug., 1907. This accord, combined with the Franco-British *entente cordiale* formed in 1904, resulted in the de facto creation of a Triple Entente in opposition to the Triple Alliance, although no formal alliance or military agreement was ever made between Russia and Great Britain.

3RD DUMA. The revised electoral law resulted in a greatly decreased leftist representation in the 3rd Duma, which lasted from 1907 to 1912. The largest party was now that of the Octobrists, a liberal group somewhat to the right of the Cadets and composed of landowners and commercial and industrial leaders. Stolypin was able to work with a coalition of Octobrists and some rightists, and his peasant reforms were confirmed and extended by laws of 27 June, 1910, and 11 June, 1911. Stolypin also supported Russification in the border areas, and by a law of 30 June, 1910, the Finnish Diet was subordinated to the Russian Duma and Finnish autonomy ended. Stolypin aroused the distrust of the rightists and the czar and was on the verge of being dismissed when he was assassinated, Sept. 1911.

AUSTRIAN ANNEXATIONS IN THE BALKANS. Although the annexation by Austria of Bosnia and Herzegovina, Oct. 1908, represented only a formal change in the status of the provinces, the Russians suffered a major diplomatic defeat when they were forced, by German

threats, to accept it without the *quid pro quo* they desired, the opening of the Dardanelles to Russian warships.

LENIN AND THE S.D. Taking advantage of the dominance of his supporters at a congress of the S.D. held in Prague and convened by him, Lenin formally expelled, Jan. 1912, all those who differed from him ideologically. The opposition, divided into many factions, was unable to develop a united front against him.

BALKAN WARS. Montenegro, Bulgaria, Serbia, and Greece defeated Turkey, Oct. 1912–May 1913, and then, following a dispute over the spoils, Serbia, Greece, Rumania, and Turkey defeated Bulgaria, June–Aug. 1913. Russia, in concert with Austria, attempted to prevent these wars and then, after the 1st of them, acted to stop Bulgarian annexation of Constantinople. The wars caused a great increase in tension in the area, with Bulgaria becoming an Austrian ally, while Serbia and Rumania were allied to Russia.

4TH DUMA. In the 4th Duma, 1912–17, the right had greater representation than in the 3rd, and the Octobrists, who were reduced in strength, tended to move into opposition to the government. This reflected a general conservative reaction in the country which led Nicholas to give serious consideration to reducing the Duma to the status of a consultative body. The royal family at this time was strongly under the influence of Gregory Rasputin (1871–1916), a semiliterate "holy man," who apparently had the power to control the bleeding of the heir to the throne, Alexis, who suffered from hemophilia. (*Cont. p. 425.*)

THE SMALLER STATES OF EUROPE 1870–1914

BELGIUM. Leopold II (ruled 1865–1909) built a great and prosperous state on the foundations laid by his predecessor. He established companies all over the world, acquired a vast colonial empire in the

Belgian Congo, and made Brussels a magnificent capital. A principal domestic political issue in Belgium, the question of religious education, contributed to the establishment of the rival Liberal and Catholic parties. The Catholic Party gained control of Parliament in 1884, and during its 30-year rule restored religious education in most of the public schools and removed property qualification for voting. King Albert I succeeded Leopold II in 1909.

THE NETHERLANDS. When Willem III (ruled 1840-90) died without a male heir, his widow Emma served as regent until her daughter, Wilhelmina (ruled 1890-1948), came of age in 1898. Although the franchise was greatly extended in 1867 and 1896, universal suffrage was not enacted until 1918. A law establishing compulsory education at some schools, passed in 1900, partially resolved disputes between Catholics and Calvinists about the control of elementary education.

LUXEMBOURG. On the death, 1890, of King Willem III of the Netherlands, who was also the grand duke of Luxembourg, the grand duchy passed to Adolphus of Nassau (ruled 1890-1905). Luxembourg thus became independent, and its territorial integrity and neutrality were guaranteed by the European powers.

SWITZERLAND. Switzerland underwent a constitutional revision in 1874 which introduced the principle of the referendum and also enlarged the powers of the Confederation. In 1891 the initiative was adopted, resulting in a great deal of popular legislation for all of Switzerland. To provide for defense, compulsory military service was established in 1874 and subsequently strengthened, particularly in 1907. Switzerland developed economically as a result of industrialization and an ever-growing tourist trade.

SCANDINAVIA. The reign of King Christian IX of Denmark, 1863-1906, was marked by a constant struggle between the lower house of Parliament on the one side and the monarch and upper house on the other. The constitution was ignored between 1892 and 1901, when the

king ruled without restraint. In 1901 the middle class, augmented by economically well-off peasants, succeeded in forcing the king to recognize a ministry representative of the Liberal majority in the lower house. Demands for the democratization of political institutions resulted in constitutional amendments, 1914-15, which lowered the voting age from 30 to 25, extended the vote to all men and most women, and abolished the appointive seats in the upper house.

The enforced union of Sweden and Norway in 1815 was dissolved by action of the Norwegian Parliament in 1905, which unanimously decreed the complete separation of Norway and Sweden, and deposed the king of Sweden in favor of the 2nd son of the king of Denmark, who became Haakon VII (ruled 1905-57). When a Norwegian plebiscite ratified the decree, it was reluctantly accepted by the Swedish government.

Universal male suffrage was introduced in Norway in 1898. Direct elections rather than indirect came in 1906. Women with property qualifications received the vote in 1907, and all such qualifications were removed, and the royal veto abolished, in 1913.

The Swedish King Oscar II (ruled 1872-1907) was succeeded by his son Gustavus V in 1907. Shortly thereafter, proportional representation in both houses of Parliament was adopted and universal manhood suffrage established for elections to the lower chamber.

SPAIN. Amadeo I, duke of Aosta (1845-90), the 2nd son of Victor Emmanuel II of Italy, became king of Spain in 1870. Having the support of only a fraction of the Spanish people and constantly frustrated in his attempts to govern, he abdicated in 1873. Parliament declared the throne vacant and established a republic. Anarchy ensued, and Alfonso XII (1857-85), son of Isabella II, was put on the throne to restore order. His strong government was ably directed by the prime minister, Cánovas del Castillo (1828-97).

The Spanish Constitution of 1876 established a bicameral Parliament and

limited the king's power, but popular government was curbed by an agreement between the 2 parties that they would alternate control of the government. The nobility, the army, and the Catholic Church all opposed the rise of popular government. Much emigration to Latin America ensued, leaving illiterate masses behind. María Cristina (1858-1929) acted as regent for her son after the death of Alfonso XII in 1885 until the accession of Alfonso XIII (1886-1941) in 1902. María Cristina's reign was marred by the Spanish-American War of 1898 and the loss of Cuba, Puerto Rico, and the Philippines, Spain's last colonies of any importance.

PORTUGAL. The reign of Louis I, 1861-89, saw the decline of civil war and some progress toward constitutional government, but, as in Spain, the government was controlled by the wealthy, the church, and the bureaucrats. Chaos and corruption returned after the accession of Carlos I (ruled 1889-1908). Carlos was assassinated in 1908 and Manuel II ruled for only 2 years. A revolution, Oct. 1910, established the Portuguese Republic.

ITALY. The formal political unity of Italy was attained in 1870 when King Victor Emmanuel II (ruled 1861-78) used the Franco-Prussian War to enable him to overpower the pope and take Rome. In practice the king's powers were exercised by a ministry responsible to a 2-chamber Parliament. In view of the history of the Catholic Church in Italy, the royal government decided to keep Catholicism as a kind of national institution by paying the salaries of the clergy and permitting religious instruction in the schools, while concurrently reducing the number of monastic establishments, confiscating church property, and tolerating anti-Catholic propaganda. Pope Pius IX refused to accept Italy's proposed "law of papal guarantees" and insisted on viewing himself as a prisoner and calling on foreign governments to come to his aid. By forbidding Italian Catholics to vote or hold office under the royal government, the pope alienated a large number of patriotic Italians from the church and

deprived Italy of the services of many Italians who were obedient to him.

Italy had 2 main political groups, the Right and the Left. The Right was in power, 1870-76, and various groups of the Left were in power, 1876-96, under the leadership of Agostino Depretis (1813-87) and Francesco Crispi (1819-1901). The Right assumed control again, 1896-1903, and then the Left regained power, 1903-13, generally under a coalition headed by Giovanni Giolitti (1842-1928). The major changes which occurred when a ministry moved from Right to Left were in patronage, not in policy.

Italy's nationalistic ambitions led to an increase in and reorganization of the Italian army after compulsory military service was enacted in 1875, and also to the building of fortifications and the creation of a navy. These military costs and the resulting colonial empire were paid for by increased taxation which ultimately led to bankruptcy and cuts in social and educational services. Popular unrest resulted, indicated by emigration from Italy, by movement from the southern to the northern part of the country, and by the spread of socialism. A Socialist Party in Milan, founded in 1891, elected 12 members to the Chamber of Deputies in 1895. Another reaction to unrest was anarchism, which resulted in the assassination, 1900, of King Humbert I (b. 1844), who had succeeded Victor Emmanuel II in 1878.

Soon after the Ethiopian setback and the retirement of Crispi, 1896, movements were made toward internal reform. These included old-age pensions, workmen's accident insurance, nationalization of private insurance companies, nationalization of railways, municipal ownership and operation of public utilities, and the legalization of trade unions.

The property qualification for voting was reduced somewhat in 1882, but a literacy test and some property qualifications remained until 1912. The general election of 1913 resulted in a large increase in Socialist representation. The bourgeois-Left coalition group under Giolitti resigned and was replaced by a

nationalist ministry under Antonio Salandra (1853-1931)

AUSTRIA-HUNGARY. In the Austrian part of the Dual Monarchy rapid industrialization and commercialization occurred. During the 1870's the industrial and financial *bourgeoisie* exerted power through the Liberal Party, enacting laws favorable to their interests, establishing public schools, and countering church influence. The Christian Socialist Party, organized by Karl Lueger (1844-1910), gained influence in the 1880's by attracting the lower middle class of the cities and the peasantry. Emphasizing social legislation and political democracy, the Christian Socialists regulated factories and mines, forbade work on Sundays, limited the employment of women and children, legalized unions, instituted accident and sickness insurance for workers, enlarged the number of parliamentary electors, 1896, and enacted universal manhood suffrage, 1907. By the turn of the century the influence of the Christian Socialists was declining, primarily because of the adherence of young intellectuals and the urban proletariat to Marxist socialism and the Social Democratic Party, which increased its representation in Parliament from 11 to 87 in the 1907 general election. Increasing democratization provided opportunities for Austria's subject minorities—Rumanians, Italians, Czechs, Slovaks, Poles, Croats, Serbs—to press for greater cultural freedom and autonomy, which Emperor Francis Joseph would not consider. In Hungary, the Magyar aristocracy refused to share power even with the Magyar masses, much less with the subject nationalities. The large landed estates remained intact; Hungarian was used in the public schools throughout the kingdom. The Slovaks in the north and the Serbs in the south were subjected to repeated attempts at Magyarization; and local autonomy was abolished in largely Rumanian Transylvania, and also in Croatia in the west. There was no extension of the suffrage, and property qualifications were so high and voting laws so intricate that only 1 in 20 could vote in 1910. Although the Magyars

represented only about half the population, Parliament consisted almost entirely of Magyar representatives. Hungary's agricultural development mainly benefited the large landowners and led to large-scale emigration, 1896-1910, and popular agitation for electoral reform.

GREECE. Under King George I (ruled 1863-1913) Greece made some progress in spite of political and financial difficulties. Since most ethnic Greeks still lived under the Ottoman Empire, efforts were made in 1897 to remove Crete from Turkish rule. The attempt was unsuccessful, but the leader of the insurgents, Eleutherios Venizelos (1864-1936), attained such popularity that George I had to invite him to form a government, 1910, on mainland Greece. By reforming the government and reorganizing the army and navy, Venizelos prepared Greece for national unification.

RUMANIA. In 1878, after the Russo-Turkish War, Rumania became 1st an independent state and then a kingdom, 1881, with a German prince of the family of Hohenzollern-Sigmaringen as King Carol I (ruled 1881-1914). Rumania was faced with a complex national unification problem since Rumanians were scattered through the Ottoman Empire, the Russian province of Bessarabia, the Hungarian province of Transylvania, and Austrian Bukovina. A Rumanian alliance with Austria-Hungary resulted in a preponderance of German influence and modeling of political institutions on those of Prussia. Under Carol I agricultural progress was made, foreign markets encouraged, and mineral resources exploited. The failure of the peasantry to share in the affluence touched off anti-Semitism, emigration, and rioting.

SERBIA. Serbian politics revolved around the rivalry between the family of Karageorge, the original peasant leader of the Serbian rebellion against the Ottoman Empire, and the family of Milo Obrenović, the soldier who secured autonomy for Serbia. The Obrenovićs were in power from 1859 to 1903, sustaining occasional pro-Karageorge insurrections and assassinations.

Prince Milan Obrenović (1854-1901)

transformed Serbia into a kingdom, 1882, and, after losing the Serbo-Bulgarian War of 1885, fell under the control of the Austrian Hapsburgs and had to impose heavy taxes to pay war debts. In an attempt to regain popularity, he instituted a democratic constitution, 1889, and then abdicated in favor of his son, Alexander I, who reigned until murdered in 1903. The grandson of Karageorge, Peter I (1844-1921), then became king. He restored the Constitution of 1889 and chose his ministers from the majority party in Parliament. (*Cont.* p. 415.)

THE UNITED STATES OF AMERICA

1878-79

SAMOA. 12 Jan., 1878. The U.S. acquired by treaty nonexclusive rights to a naval station at Pago Pago.

CURRENCY PROBLEMS. Sought by western silverites and inflation-minded farmers and laborers, the Bland-Allison Act, 28 Feb., 1878, ordered the monthly purchase and conversion into currency of \$2 m. to \$4 m. in silver. A Greenback Labor Party, a prolabor and proinflation organization led by James B. Weaver (Iowa), won 14 congressional seats. On 1 Jan., 1879, specie payments were resumed without difficulty, as greenbacks reached their gold face value, 17 Dec., 1878.

1880

PRESIDENTIAL ELECTION. 2 Nov. Republicans James A. Garfield (1831-81, Ohio) and Chester A. Arthur (1830-86, N.Y.) defeated (214-155) Democrats Winfield Scott Hancock (Pa.) and William H. English (Ind.) by less than 10,000 out of 9 m. votes.

CHINESE TREATY. 17 Nov. The U.S. decided to limit the immigration of Chinese laborers. The Exclusion Act, 1882, stopped this influx for 10 years.

1881

ASSASSINATION OF GARFIELD. Garfield, supported by the "Half-Breeds," wrested N.Y.'s patronage from Sen. Ros-

coe Conkling's "Stalwart" machine. On 19 Sept. he died of wounds inflicted, 2 July, by a disappointed "Stalwart" office seeker, and was succeeded in the presidency by Arthur.

1883

PENDLETON ACT. 16 Jan. Sen. George H. Pendleton (Ohio) sponsored a bill establishing the principle of competitive examinations for federal civil-service positions.

1884

PRESIDENTIAL ELECTION. 4 Nov. Republican James G. Blaine (Me.) faced Democratic Gov. Grover Cleveland (1837-1908) (N.Y.), who had independent Republican ("Mugwump") support. Rev. Samuel D. Burchard's remark, 29 Oct., associating Democrats with "Rum, Romanism, and Rebellion," cost Blaine New York and the election (219-182).

1886

PRESIDENTIAL SUCCESSION ACT. 19 Jan. This act arranged the heads of the executive departments in the line of succession behind the Vice-President.

"STEEL NAVY." Navy Secretary William C. Whitney launched the construction of a modern steel navy built in U.S. shipyards.

1887

ELECTORAL COUNT ACT. 3 Feb. Each state became the judge of its electoral returns.

INTERSTATE COMMERCE ACT. 4 Feb. Prompted by the Supreme Court's Wabash decision, 1886, which undermined states' authority to regulate railroads, the Interstate Commerce Act forbade numerous unjust practices and established the Interstate Commerce Commission (I.C.C.) to oversee the industry. Operators circumvented the ambiguous law and the Supreme Court (Alabama Midlands Case, 1897) emasculated the commission.

1888

CANADIAN FISHERIES. The Republican Senate rejected, 21 Aug., the Anglo-U.S. Bayard Chamberlain Treaty, but an accompanying *modus vivendi* granting Americans privileges in Canadian ports regulated use of the fisheries until 1923.

PRESIDENTIAL ELECTION. 6 Nov. The Democrats nominated Grover Cleveland and Allen G. Thurmond (Ohio), and the Republicans Benjamin Harrison (1833-1901) (Ind.) and Levi P. Morton (N.Y.). Campaigning for a high protective tariff and soldiers' pensions, Harrison won (233-168).

1889

SAMOA. A conference in Berlin, 14 June, established a tripartite (U.S., Britain and Germany) protectorate guaranteeing the independence and sovereignty of the islands.

LATIN AMERICAN CONFERENCE. 2 Oct., 1889-19 Apr., 1890. Attended at Washington by all the hemispheric nations except Santo Domingo, this conference paved the way for reciprocal tariff agreements. Secretary of State James G. Blaine had unsuccessfully called a similar meeting, 1881, when he held the same post under Garfield.

1890

DEPENDENT PENSION ACT. 27 June. Under Harrison annual pension expenditures leaped from \$81 m to \$135 m.

SHERMAN ANTITRUST ACT. 2 July. When state antitrust laws proved inadequate to regulate the interstate industrial combinations developing in America, Congress passed the Sherman Antitrust Act outlawing consolidations in restraint of trade. This ambiguous act was ineffective.

SHERMAN SILVER PURCHASE ACT. 14 July. Requiring the monthly purchase and conversion into redeemable notes of 4.5 m. ounces of silver, this act increased the money supply and weakened the federal gold reserves.

1891

U.S.-CHILE RELATIONS. A Valparaiso mob killed, 16 Oct., 2 American sailors. Harrison virtually asked, 25 Jan., 1892, Congress for war. Chile finally apologized and paid a \$75,000 indemnity.

1892

BERING SEA DISPUTE. 29 Feb. Britain and the U.S. agreed to submit the latter's claim to exclusive sealing rights in the Bering Sea to international arbitration. The U.S. lost the case, 15 Aug., 1893.

PEOPLE'S (POPULIST) PARTY. Disgruntled farm and labor groups established, 22 Feb., the People's Party of the U.S.A. and nominated, 2 July, James B. Weaver for President. The Populists demanded free silver coinage at 16 to 1 and government ownership of transportation and communication lines.

PRESIDENTIAL ELECTION. 8 Nov. Cleveland (277) was elected over Harrison (145) and Weaver (22). Opposition to the high McKinley Tariff, 1890, and Cleveland's support of the gold standard were important factors.

1893

HAWAII. American sugar planters under Sanford B. Dole, supported by the U.S. minister, John L. Stevens, overthrew Queen Liliuokalani's autocratic government and requested annexation, Feb. President Cleveland's investigator, Congressman James H. Blount (Ga.), found that most Hawaiians opposed annexation, but the President, declining to use force when the Dole government refused to step down, recognized the Republic of Hawaii, 7 Aug., 1894.

FINANCIAL PANIC. The Panic of 1893 forced Cleveland to have the Sherman Silver Purchase Act repealed, 1 Nov., thus splitting the Democratic Party.

1894

"COXEY'S ARMY." Led by Populist Jacob S. Coxey (Ohio), 400 jobless men

demonstrated in Washington, 30 Apr., but dispersed when their leaders were arrested, 1 May, for trespassing.

1895

"APPEAL OF THE SILVER DEMOCRATS." 5 Mar. Framed by Representatives William Jennings Bryan (1860–1925, Neb.) and Bland, the appeal advocated free silver.

GOLD RESERVE. When the public failed to subscribe to government bond issues, Treasury Secretary Carlisle obtained loans from bankers, including J. Pierpont Morgan, Feb., to protect the gold reserve. Political opponents attacked this action, which gave the bankers a \$1,500,000 profit on a \$62-m. loan.

VENEZUELAN BOUNDARY DISPUTE. When Britain rejected a U.S. offer, Feb., to arbitrate her long-time quarrel with Venezuela over the British Guiana boundary, Secretary of State Richard Olney, invoked, 20 July, the Monroe Doctrine, and Cleveland proposed, 17 Dec., an independent commission whose decision the U.S. would enforce against Britain. Desirous of American friendship, Britain co-operated, and the commission supported, 3 Oct., 1899, most of her claims.

1896

PRESIDENTIAL ELECTION. 3 Nov. The Republicans nominated William McKinley (1843–1901, Ohio) and Garret A. Hobart (N.J.) on a gold-standard and high-tariff platform. The Democrats and dissident National Silver Republicans selected William Jennings Bryan and Arthur Sewall (Me.), and advocated free silver at 16 to 1. The Populists nominated Bryan and Thomas E. Watson (Ga.). McKinley won, 271–176.

1898

OUTBREAK OF SPANISH-AMERICAN WAR. Relations between the U.S. and Spain deteriorated after the Cubans revolted, 24 Feb., 1895. The American "yellow press" and expansionist Republicans demanded action even after Spain

recalled brutal Gen. Valeriano "Butcher" Weyler. William R. Hearst's N.Y. *Journal* printed, 9 Feb., Spanish Minister Dupuy de Lôme's private letter stating that McKinley was vacillating.

When an explosion sank, 15 Feb., the *Maine* in Havana Harbor, killing 260 Americans, McKinley, under powerful pressures, reversed his pacific course and requested, 11 Apr., U.S. intervention. Congress agreed, 20 Apr., pledging (Teller Amendment) that the U.S. had no goal except Cuban independence. Spain declared war 24 Apr. and the U.S. 25 Apr.

MANILA BAY. 1 May. America's excellent navy gave her a decided advantage. Commodore George Dewey's Asiatic Squadron, suffering 8 wounded, destroyed the Spanish fleet at Manila Bay, killing 381. After a blockade of Manila, the Spanish surrendered, 14 Aug., the Philippines.

CUBAN EXPEDITION. Gen. William Shafter's 17,000 troops arrived off Santiago, 20 June. The Americans were victorious at San Juan Hill, 1 July, where dismounted "Rough Riders" under Lt. Col. Theodore Roosevelt fought. On 3 July the Spanish fleet was destroyed as it tried to escape Rear Admiral William T. Sampson's fleet blockading Santiago. Admiral Cervera suffered 474 casualties, the Americans 2. Santiago surrendered 17 July.

On 7 July, the war having shown its strategic value, Hawaii was annexed. By the Treaty of Paris, 10 Dec., Spain agreed to relinquish Cuba and to cede Puerto Rico, Guam, and the Philippines to the U.S.

1899

PHILIPPINE QUESTION. Their hopes for immediate independence dashed, Filipinos under Emilio Aguinaldo revolted, 4 Feb., against U.S. rule. The rebellion lasted until 1902.

1ST HAGUE CONFERENCE. 18 May–29 July. With U.S. support, the conference established the Permanent Court of International Arbitration.

PARTITION OF SAMOA. 2 Dec. Samoa was divided between Germany and

the U.S. American Samoa became a strategic naval base.

1900

CURRENCY (GOLD STANDARD) ACT. 14 Mar. This act declared the gold dollar of 25.8 grains the standard U.S. unit of value.

OPEN DOOR POLICY. 20 Mar. Announced by Secretary of State John Hay, the policy provided for equal commercial access to China for all nations.

BOXER REBELLION. When traditionalist Chinese tried to oust foreigners, an international expedition, including U.S. troops, suppressed them. The Boxer Protocol, 7 Sept., 1901, demanded a \$333-m. indemnity from China.

PRESIDENTIAL ELECTION. 6 Nov. Stressing prosperity, the Republicans nominated William McKinley and Theodore Roosevelt (1858-1919, N.Y.). The Democrats selected William Jennings Bryan and Adlai E. Stevenson (Ill.), and denounced imperialism. McKinley won 292-155.

1901

PLATT AMENDMENT. 2 Mar. Drawn up by War Secretary Elihu Root (1845-1937), the Platt Amendment authorized U.S. intervention to protect Cuban independence and maintain law and order. Cuba had to include this in her constitution, 12 June, before U.S. troops would leave.

ASSASSINATION OF MCKINLEY. On 14 Sept. Roosevelt succeeded McKinley, who died of wounds inflicted, 6 Sept., by anarchist Leon Czolgosz.

HAY-PAUNCEFOTE TREATY. 18 Nov. British agreement was obtained for the construction by the U.S. of a neutral isthmian canal open to all nations on equal terms.

1902

ROOSEVELT TRUST POLICY. Roosevelt's policy was to regulate the monster corporations rather than destroy them, although he did successfully have the

Northern Securities Co., a railroad holding company, dissolved, 1904.

REFORM. The Reform states, notably Wisconsin under Robert M. La Follette (1855-1925), instituted broad administrative and legislative reforms in this period.

1903

HAY-HERRAN CONVENTION. 22 Jan. Colombia was offered \$10 m. and a \$250,000 annual rental for a 6-mi.-wide strip for an isthmian canal through its province, Panama. Colombia's Senate delayed action to obtain more money.

MUCKRAKERS. Between 1903 and 1910 numerous writers exposed corruption in business and politics and attacked social evils. Ida M. Tarbell's *History of the Standard Oil Company*, 1903, exemplified the genre.

ELKINS ACT. 19 Feb. This Act defined unfair discrimination between shippers and provided punishments for giving or receiving rebates.

PANAMA REVOLT. 3 Nov. With tacit U.S. approval, Panama declared herself independent of Colombia.

HAY-BUNAU-VARILLA TREATY. 18 Nov. Panama received \$10 m. and a \$250,000 annual rental for a 10-mi.-wide canal strip.

ALASKAN BOUNDARY DISPUTE. An Anglo-U.S. commission, influenced by Roosevelt's threat of force, awarded the U.S. control of disputed ocean inlets in the Alaskan Panhandle.

1904

PRESIDENTIAL ELECTION. 8 Nov. Republicans nominated Theodore Roosevelt and Charles W. Fairbanks (Ind.), and the Democrats, whose platform denounced trusts, chose Alton B. Parker (N.Y.) and Henry G. Davis (W. Va.). Roosevelt won 336-140.

ROOSEVELT COROLLARY TO THE MONROE DOCTRINE. 6 Dec. The bombardment by Britain and Germany of Venezuelan ports, Dec. 1902, for nonpayment of debts made clear the possibility of European intervention in Latin America. Consequently, when Santo

Domingo became involved in similar difficulties, Roosevelt enunciated his doctrine that the U.S. would act as an international peace force in cases of flagrant wrongdoing or impotence in the Western Hemisphere. The U.S. took over, 1905, the management of Dominican debt payments.

1905

PORTSMOUTH (N.H.) PEACE CONFERENCE. 9 Aug. Suggested by Roosevelt, the conference ended the Russo-Japanese War. Roosevelt did not desire the complete defeat of either power lest it upset the Asian balance and endanger U.S. interests.

1906

HEPBURN ACT. 29 June. The I.C.C. was authorized to set maximum railroad rates and made its orders binding pending court action.

PURE FOOD AND DRUG ACT. 30 June. Adulterated products were banned from interstate commerce.

1907

GENTLEMAN'S AGREEMENT. 24 Feb. The influx of Japanese laborers stirred antagonism on the West Coast. Japan agreed, 24 Feb., to withhold passports from laborers emigrating to the U.S., and recognized America's right to prohibit Japanese from entering on passports originally issued for travel to any other country.

2ND HAGUE PEACE CONFERENCE. 15 June–15 Oct. The conference adopted the Drago Doctrine that European nations should not use force to collect debts owed by American nations.

PANAMA CANAL. Construction began under Lt. Col. George W. Goethals (1858–1928). The canal from Cristobal to Balboa was opened 15 Aug., 1914.

1908

WHITE HOUSE CONSERVATION CONFERENCE. 13 May. The conference expounded the necessity of preserving the

nation's natural resources and led to the establishment, 8 June, of the National Conservation Commission under Gifford Pinchot.

ALDRICH-VREELAND ACT. 30 May. This act established a National Monetary Commission whose report, 1912, contained proposals that contributed to the Federal Reserve Act, 1913.

PRESIDENTIAL ELECTION. 3 Nov. The Republicans nominated Roosevelt's choice, William H. Taft (1857–1930, Ohio) and James S. Sherman (N.Y.), and pledged antitrust enforcement and conservation. The Democrats chose Bryan and John W. Kern (Ind.). Taft won 321–162.

ROOT-TAKAHIRA AGREEMENT. 30 Nov. The U.S. and Japan recognized the Pacific *status quo* and upheld the Open Door policy.

1909

"DOLLAR DIPLOMACY." The policy of President Taft and Secretary of State Philander C. Knox, which sought to increase U.S. trade by supporting American enterprises abroad, aggravated international relations in China. Wilson ended Taft's policy.

1910

TRUST POLICY. Taft's administration started 90 antitrust proceedings (compared to Roosevelt's 44) and obtained Standard Oil's dissolution, 1911.

MANN-ELKINS ACT. 18 June. The I.C.C. was granted jurisdiction over telephone, telegraph, cable, and wireless companies.

REPUBLICAN INSURGENCY. Progressive Republicans led by Sen. Robert M. La Follette (Wis.) opposed Taft's signature, 1909, of the Payne-Aldrich Tariff. House insurgents deprived Speaker Joseph G. Cannon (Ill.) of his power to appoint the Rules Committee.

1911

U.S.-CANADIAN RELATIONS. The Reciprocity Agreement was terminated, 26 Jan., when Canadians, upset by Taft's

talk of annexation, elected the antireciprocity Conservatives to power.

NICARAGUAN INTERVENTION. The Knox-Castrillo Convention, 6 June, with Nicaragua authorized U.S. intervention and a customs receivership to refund the national debt. Although the U.S. rejected the agreement, dissatisfied Nicaraguans revolted, and U.S. marines landed, 14 Aug., 1912, to protect American interests.

1912

SOCIAL LEGISLATION. State action characterized the Progressive era. Maryland's workmen's compensation law, 1902, and Massachusetts' minimum-wage law, 1912, were notable firsts.

ROOSEVELT'S CANDIDACY. Alienated from Taft and supporting the New Nationalism, Roosevelt entered the race, 24 Feb., for the Republican presidential nomination.

LODGE COROLLARY. 2 Aug. Prompted by a Japanese syndicate's attempt to buy a site in Lower California, the Lodge Corollary extended the Monroe Doctrine to non-European nations and to foreign companies.

PRESIDENTIAL ELECTION. 5 Nov. When conservative Republicans renominated Taft and Sherman, a Progressive ("Bull Moose") Party chose Roosevelt and Hiram W. Johnson (Calif.). The Democrats selected Gov. Woodrow Wilson (1856-1924, N.J.) and Thomas R. Marshall (Ind.). Wilson's "New Freedom" sought the abolition of monopolies, while Roosevelt's "New Nationalism" demanded their regulation. Wilson (35) defeated Roosevelt (88) and Taft (8).

1913

MEXICAN REVOLUTION. Taft recognized the democratic reformer, Francisco I. Madero, who overthrew long-time dictator Porfirio Díaz, 25 May, 1911, but not the reactionary Gen. Victoriano Huerta, who had Madero assassinated, 22 Feb.

Wilson asked Huerta to resign, 7 Nov., and allowed arms to go to rebels under Venustiano Carranza.

CONSTITUTIONAL AMENDMENTS. The 16th Amendment, authorizing a federal income tax, took effect, 25 Feb. The 17th, authorizing popular elections of U.S. senators, took effect 31 May.

PUJO REPORT. 28 Feb. Representative Arsène Pujo's (La.) committee's report on the increasing concentration of money and credit aided Wilson's banking and reform program.

FEDERAL RESERVE (OWEN-GLASS) ACT. 23 Dec. Designed to control credit and ensure a flexible currency, the act established a Federal Reserve Board and 12 Federal Reserve Banks which could issue notes based on cash deposits of member banks.

1914

VERACRUZ INCIDENT. 21 Apr. Huerta broke relations with the U.S. when troops bombarded and occupied Veracruz to prevent a German munitions delivery.

ABC CONFERENCE. 20 May-30 June. Although Mexico rejected the peace plan of Argentina, Brazil, and Chile, moral pressure forced Huerta to accept its provision that he resign, 15 July. The U.S. withdrew its troops, 23 Nov., and recognized, 19 Oct., 1915, Carranza as *de facto* President.

FEDERAL TRADE COMMISSION ACT. 26 Sept. The act established a bipartisan board to investigate and stop unfair competition in interstate commerce.

CLAYTON ANTITRUST ACT. 15 Oct. This act forbade price discriminations to create monopolies, some interlocking directorates, and stock acquisitions lessening competition. The law made corporation officers individually responsible, but exempted agricultural and labor organizations. (*Cont. p. 440.*)

The Reaction of the East

REFORM AND REVOLUTION IN CHINA

1870-95

WEAKENING OF MANCHU POWER.

In the early years of imperialist pressure on China, the western powers sought economic and commercial privileges rather than territory. Moreover, they hoped to maintain the authority of the Manchus, with whom the "unequal treaties" had been concluded. After the collapse, 1864, of the Taiping Rebellion, however, which had threatened Manchu power, the western nations exploited China's weakness by nibbling at her dependencies and outer territories. The activities of the Russians in Turkestan, the British in Burma, and the French in Indochina seriously weakened Manchu control over the outer regions of the Chinese Empire. It was Japan, however, that posed the greatest threat to China.

LOSS OF RYUKYU ISLANDS. A Sino-Japanese Treaty, 13 Sept., 1871, provided for reciprocal extraterritorial rights, but did not satisfy Japan's desire for a privileged position, especially most-favored-nation treatment, similar to that enjoyed by the western powers in China. In 1872 the Japanese brought the king of Okinawa, who traditionally paid tribute to both China and Japan, to their country to pay homage to the Meiji emperor. This was a first step toward bringing the Ryukyu (Liuchiu) Islands, of which Okinawa was the most important, under Japanese control. A few years later, the murder of some shipwrecked Ryukyu islanders by Formosan natives brought a Japanese expedition to occupy part of Formosa. Although China did not administer the area occupied by the Formosans, Britain intervened to demand Japanese withdrawal from Formosa. An article in the ensuing Sino-Japanese agreement, however, tacitly reaffirmed Japanese claims to the Ryukyu Islands.

INDEPENDENCE OF KOREA. A much more serious Japanese provocation arose as a result of Japan's challenge to China over Korea. In 1875 the Japanese sent a survey party to Korea, and a naval clash occurred. When China disclaimed responsibility for such incidents, the Japanese sent a strong naval force to Korea, forcing that country, 1876, to sign a treaty of independence, thus denying Chinese suzerainty. The treaty also accorded Japan extraterritoriality in Korea, the opening of several Korean ports, and the establishment of diplomatic relations.

BRITISH INTERVENTION IN SINKIANG. In 1872 the Russians signed a trade agreement with Yakub Beg, commander of the Khojan army, which opened eastern Turkestan to Russian commerce. In 1873 Yakub's nephew, Saiyed Yakub Khan Tora, arrived in India, where he received a warm welcome from the British and a promise of arms. With the approval of the Indian government, a trading company was formed to carry on commerce with Sinkiang. From India, Tora went to Istanbul, where he was welcomed by the sultan of Turkey. In 1874 the sultan conferred on Yakub Beg the title of "Commander of the Faithful," signed a trade treaty with Sinkiang, and agreed to send arms. Tora returned to Sinkiang accompanied by the British agent, T. Douglas Forsyth, who concluded a commercial agreement with Yakub Beg. Yakub also received the right to exchange ambassadors with India. In 1876 the government of India ratified the treaty of 1874.

CHINESE RECONQUEST OF SINKIANG. Noting the increase in foreign influence in Sinkiang, the Manchu government appointed, 1876, Tso Tsung-t'ang as commander in chief of a military expedition designed to reconquer Sinkiang. During the same year a Russian mission under Gen. Aleksei Nikolaevich Kuropatkin demanded control of certain strategic posts in the mountain passes

west of Kashgar. Yakub acceded to these demands. As clear indications of Manchu efforts to regain Sinkiang appeared, a conference of high czarist officers concerned with Siberia and Turkestan was held in St. Petersburg, Mar. 1876. The Russians decided that they would abide by the Kuldja agreement of 1851, that the Tekes River Valley should remain within the Russian Empire, and that the Manchus must grant commercial privileges to Russian traders and pay an indemnity to Russia for losses suffered during the recent upheavals. In 1877 a Manchu army under Tso captured Tien Shan, Khara Shahr, Toksun, and Turfan, Yakub Beg committed suicide or was assassinated. By the autumn of 1877, Kucha, Bai, Aksu, and Uch Turfan had also fallen before the Manchu advance. The power of Yakub Beg and the independence of Sinkiang had been destroyed.

GROWTH OF REGIONALISM. The Chinese central government never recovered its strength after suppressing the Taiping rebellion. Moreover, the Manchus crushed the Taipings at the cost of their own administrative disintegration. military officials dispatched to wrest certain regions from the rebels remained there and built up their own political and military machines. The central government was compelled to name these officials as governors general of the provinces they controlled. Possessing considerable military and financial resources, the regional officials had to be consulted by the throne on all major policy issues, and many even dealt directly with foreign powers. Significantly, most of these officials, being Chinese, contributed to the rise of a Chinese nationalist movement directed against the Manchus. The growth of regional power in China was a major characteristic of periods of dynastic decline.

INCREASE IN FOREIGN FINANCIAL CONTROL. The new commercial activity in the western-dominated treaty ports provided Chinese provincial officials with an important source of revenue and a field for patronage. The regional leaders worked closely with the new Chinese business class which had arisen in

the treaty ports and thus remained outside the jurisdiction of the central government. China's problems were further complicated by financial difficulties. Since the "unequal treaties" provided for fixed tariff levies on imports, China could not collect enough revenue from her trade to cover rising government expenditures. The Manchus were thus forced to rely increasingly on loans from western banks and governments, a situation which rendered China still more vulnerable to outside pressure.

Thus, by the closing decades of the 19th cent., China, while not strictly a colony, was no longer an independent state in control of her own fate. Far from being able to play one imperialist power off against another, she was compelled to grant to all any concessions she granted to one. In short, China suffered most of the disadvantages of the colonial system, especially the plunder of her resources by foreigners, without benefiting from its advantages, such as protection by a metropolitan country and assistance toward economic development.

SINO-JAPANESE WAR. The Chinese had long maintained Korea as a tributary state, but the vagueness of the tribute system in contrast to western concepts of international law meant that China could retain her position in Korea only so long as she was strong enough to exclude outside interference. When Japan opened Korea in 1876, China's protests were unavailing, and the western powers quickly signed their own treaties with Korea. In 1885, after several coups and counter-coups in Seoul, Li Hung-chang for China and Ito Hirobumi for Japan concluded a treaty by which both countries obtained the right to send troops to Korea when necessary, provided they gave notification in advance. A lull followed this treaty, but in 1894 the outbreak of the Tonghak Revolt threatened the Korean government. The king of Korea requested Chinese military assistance, though the revolt had petered out before the troops arrived. Japan also sent troops, and the Japanese claimed that China's notification of her intention to send them was dispatched too late and contained an

unwarranted reference to the suzerainty of the Manchus in Korea. The Japanese then sank a ship bringing Chinese reinforcements, and thus launched a full-scale Sino-Japanese war. Japan won a rapid series of victories and, when Japanese troops seemed ready to march on Peking, China sued for peace. By the Treaty of Shimonoseki, 17 Apr., 1895, China had to relinquish all claims to suzerainty over Korea, whose independence was thus reaffirmed, cede the islands of Formosa and the Pescadores to Japan, and pay a huge indemnity. In addition, Japan obtained extraterritorial rights for her subjects in China, as well as most-favored-nation treatment, thus acquiring a status and commercial privileges in China equal to those of the western powers.

1896-1901

THE "SLICING OF THE MELON."

Defeat in the war against Japan placed in doubt China's continued existence as an independent state, and invited the imperialist powers to begin the "slicing of the melon," i.e., the carving up of her territory. Aware of western intentions, the Chinese approached Russia for support. A secret Sino-Soviet military alliance was signed, 1896; but, since Russia's role was prompted by her own expansionist designs in Manchuria, the alliance failed to benefit China. In fact, its terms gave Russia the right to build a railway through northern Manchuria. In 1898 Russia extended her railway rights, and also obtained the Kwangtung "leased territory," including the strategic port of Dairen and the naval base of Port Arthur. The British, too, added the Kowloon territories to the Crown Colony of Hong Kong, and received assurances that China would reserve for Britain the dominant position she held in Shanghai and in the Yangtze Valley provinces. France also joined the scramble for Chinese territory; she forced the Chinese, 1895, to agree not to alienate Hainan Island to anyone but the French, and in 1898 received special mining and railway privileges in southern China, preferential customs rates for goods from French Indochina, and a 99-

year lease on Kwangchow Bay. In the same year Germany received the "leased territory" of Kiaochow, and secured mining and railway priorities in the Shantung Peninsula. The Japanese forced China to agree, 1898, not to alienate Fukien Province, opposite Japanese-occupied Formosa, to anyone but Japan. By the end of the century almost every Chinese province, harbor, and economic concession had become a "leased territory" or "sphere of influence," the former usually implying a larger degree of political as opposed to purely economic control.

THE 100 DAYS. Beset with administrative collapse and foreign encroachments, the young Manchu emperor, Kuang-hsü (1871-1908), turned in desperation to K'ang Yu-wei (1858-1927), the last important thinker in the Confucian tradition, to devise a program of reform that would preserve Chinese independence. K'ang aimed to transform China into a constitutional monarchy, eliminate the swollen and corrupt bureaucracy, and regain control over the provincial and district administrations. A series of imperial edicts laid the foundation for K'ang's reform program. He advocated abolition of the traditional examinations for government officials and a complete renovation of China's educational system in order to introduce liberal arts and sciences on the western model alongside the Chinese classics. He also proposed the creation of agricultural and technical schools throughout China. The new educational system had a dual purpose: to equip officials with the knowledge and techniques of the modernization process, and to instill information on public affairs as a first step toward representative government. Establishment of newspapers and the training of journalists were also to contribute to the public educational process. To encourage popular participation in government, district and provincial assemblies were to be elected which would, in turn, select delegates to a national parliament. In the economic sphere K'ang advocated state support of industry, the creation of a modern banking system, the establishment of bureaus to encourage mining and

improve agriculture, the introduction of a modern national budget, and the construction of more railways to facilitate commercial transportation and thus stimulate trade. His major problem was the speed at which his reforms, if they were to be successful, had to be carried out. His measures did not have time to mature, and aroused the opposition of powerful vested interests, particularly among the scholar-gentry class.

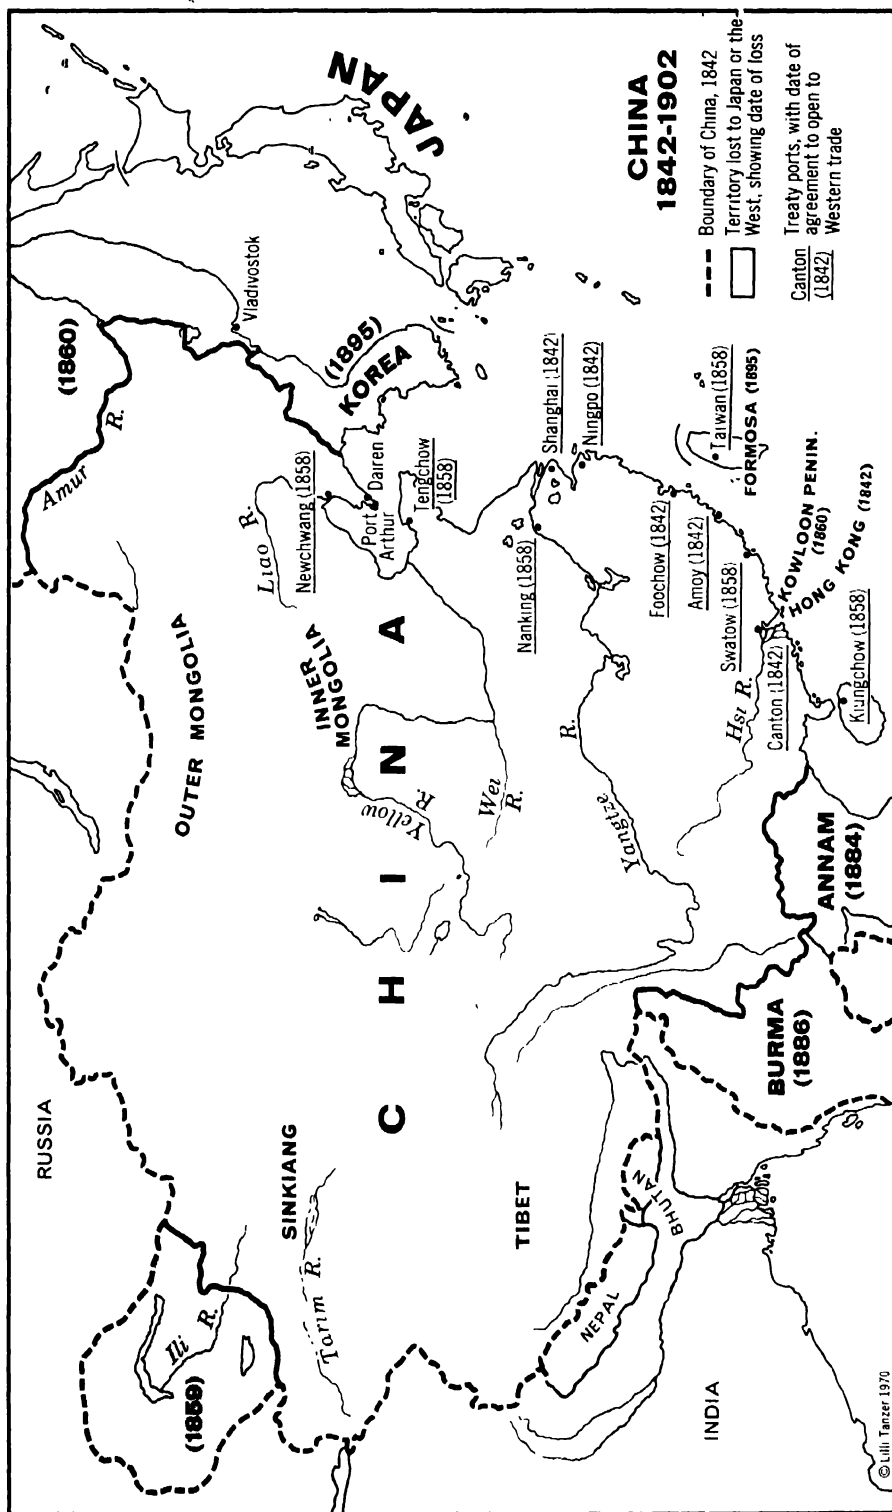

Those opposing the reforms found their champion in the empress dowager, Tz'u-hsi (1835-1908), the former regent for her nephew and still a strong behind-the-scenes influence at court. K'ang advised the emperor to call in Yuan Shih-k'ai, China's strongest military leader at the time, to arrest the chief military supporters of the empress dowager. Yuan, however, revealed K'ang's plan, and the latter had to seek refuge in Hong Kong. The empress dowager then took the emperor prisoner, and resumed power herself under a new regency. K'ang's reform edicts were rescinded, and China relapsed into weakness and confusion. The failure of the "100 Days" deprived her of her last chance, under the monarchical system, to modernize her institutions.

THE "OPEN DOOR." China's increasing vulnerability to western encroachments and her inability to prevent them undermined the traditional U.S. policy of protecting Chinese independence and assuring equal economic opportunity for all foreign powers in China. The American secretary of state, John Hay, sought to bolster this policy by issuing the so-called Open Door Notes to Britain, France, Germany, Russia, Italy, and Japan. The notes demanded that no foreign power interfere with the rights and privileges of other powers in China by establishing economic and commercial monopolies or by discriminating in railway rates or harbor dues. American insistence that the Chinese government collect its own revenues emphasized the authority of that government and the territorial and administrative integrity of China. Only the Russians hesitated, announcing that they would respect the Open Door provided

the other powers did the same. but, while promising to treat citizens of all countries equally, they omitted a pledge to accord them equal status with Russian subjects. Russia's negative attitude automatically released all other powers from adherence to the Open Door, but, since no nation was willing to deny its commitment publicly, Hay was able to pretend that his notes had been accepted. In fact, the Open Door policy had some success in stopping the trend toward foreign monopolies in China.

BOXER REBELLION. Foreign influence seeped into China not only in the form of economic and territorial concessions but also through missionary activity. Hatred of the missionaries provided the driving force behind the Boxer Rebellion, 1899-1901. The members of the "Society of Righteous Harmony," a peasant-based secret society in north China, were called Boxers because their stylized physical exercises resembled boxing. In many areas the Boxers were primarily an antigovernment organization; but in places where there was widespread missionary activity, they adopted a xenophobic attitude as well. Christian converts had been denouncing certain aspects of village life as "pagan," thus arousing the anger of other peasants. Local officials then attempted to divert blame for the villages' economic ills away from themselves and on to the missionaries and their disciples. Reactionary court officials saw in the Boxer movement an opportunity to focus responsibility for China's difficulties on foreigners. These officials, ignorant of the true strength of the foreign powers, even believed that the Boxers might free China from the imperialist grip. The empress dowager herself harbored a grudge against the powers for preventing her from formally deposing the emperor and for refusing to surrender K'ang Yu-wei and other escaped leaders of reform.

Thus encouraged from many sides, the Boxers launched their uprising in Shantung, 1899, by attacking isolated missionaries, foreigners employed on railroads and other enterprises, and Chinese converts to Christianity. The attacks spread

into other areas of China and culminated, May 1900, in the siege of the foreign legation quarter in Peking. The Boxers murdered the head of the Japanese legation, and the German minister to Peking was later killed by a Manchu sergeant. An international military expedition, composed of Japanese, British, French, Italian, Russian, and American troops, arrived at Peking, Aug., to relieve the legations, and a German unit joined the occupation forces later. Negotiations to end the fighting dragged on for nearly a year because of disputes among the occupying powers on the size and distribution of the indemnity. Finally, 7 Sept., 1901, the Boxer Protocol was signed. Its most important provisions were the imposition of a huge indemnity, to be paid out of China's maritime customs and salt gabelle (tax), and the granting to the powers of a right to station troops between Peking and Tientsin. This right the Japanese later exploited in their campaign for control of northern China. The Boxer Protocol also required that China apologize for the murder of the Japanese and German officials, cease the importation of arms and war matériel or their manufacture for at least 2 years, fix customs dues at 5% *ad valorem*, punish officials responsible for the Boxer insurrection, destroy certain forts, and establish a western-style ministry of foreign affairs. The powers would have liked to abolish the imperial government, but the Boxer rising indicated the difficulties such a course might encounter; they therefore allowed the empress dowager to remain in power.

1902-14

REFORM UNDER THE EMPRESS DOWAGER. The decade between the Boxer Protocol and Sun Yat-sen's revolution witnessed a mounting struggle between regional authorities and the Peking-based central government. Having finally realized that only basic reforms could preserve its position, the Manchu dynasty, headed by the empress dowager, instituted some of the programs first put for-

ward by K'ang Yu-wei; any relationship between them, however, was firmly denied. Unlike K'ang's reform program, the measures now taken were piecemeal and designed to meet an immediate threat rather than to modernize China. By far the most significant reform was the abolition, 1905, of the traditional examination system. Since the examinations had determined membership in the scholar-gentry class, this class, the very backbone of the dynasty, soon disappeared. Thus the death knell of traditional Chinese society sounded, and the way was paved for an attack on Confucian philosophy itself. The introduction of western-type educational institutions led to a demand on the part of students—supported by provincial leaders wishing to limit the power of the throne—for a constitution and representative government. After much hesitation, the empress dowager announced, 1907, a 9-year program during which a representative governmental system would be created. Both she and her imprisoned nephew, the emperor, died the following year.

MOVES TOWARD REPRESENTATIVE GOVERNMENT. In 1909 the provincial assemblies, organs designed to advise provincial governors general but not to legislate, convened for the first time. The constitutional assembly convoked in 1910 witnessed an intense struggle between the delegates representing provincial assemblies and those appointed by the central government. The government was forced to shorten the period of preparation of a constitution to 5 years and to promise that a national parliament would be created by 1913.

REGIONAL CHALLENGES TO MANCHU AUTHORITY. Yüan Shih-k'ai and other regional leaders, meanwhile, continued to strengthen their power against both the central government and Japanese and western encroachments. Manchu attempts to play the provincial leaders off against one another reaped little success. The climax of the struggle between the regional authorities and Peking occurred in 1909-11 over railway policy. Having lost most

of its authority over military and financial resources, the central government placed great importance on its control of railways. In 1911 the Manchus proposed a plan to finance a centrally controlled railway using provincial capital, which was to be paid back through interest-bearing government bonds. Large demonstrations and strikes greeted the announcement of this plan in Szechwan, and Peking was forced to dispatch troops to the rebellious province. The Szechwan uprising initiated the republican revolution.

RISE OF SUN YAT-SEN. Born of peasant stock, Sun Yat-sen (1866-1925) received a western education in a British missionary school in Hawaii, where he adopted Christianity, and later in Hong Kong. The shock of China's defeat in the Sino-Japanese War set him seriously working for the overthrow of the Manchu government. In 1894 he founded a secret revolutionary group, the "Revive China Society," which staged an abortive uprising in Canton, 1895. Forced to flee, he became a fugitive from the Chinese government with a price on his head. He traveled widely abroad, collecting funds and recruiting members for his group. At a meeting in Tokyo in 1905, several secret societies joined with Sun's group to become the T'ung-meng-hui (Combined League Society). Sun remained head of the new group. Its program was vague, the only definite goal being the overthrow of the Manchu dynasty and the creation of a Chinese republic. Support for the T'ung-meng-hui came from cadets of regional military schools sent overseas to study; among these cadets was Chiang Kai-shek (b. 1886), sent to Japan by Yuan Shih-k'ai's military academy. Men like Chiang created a link between the T'ung-meng-hui and regional groups within China struggling against the Manchus.

REVOLUTION OF 1911. On 10 Oct., 1911, the date regarded as the start of the Chinese Revolution, an explosion ripped apart a house in Wuhan where T'ung-meng-hui members manufactured bombs. Police seeking the cause of the explosion discovered a list of the society's members

and local army officers. Fearing reprisals, these officers forced their commander to lead an uprising against Manchu troops. The insurrection quickly spread to other cities in central and southern China. The Manchus called on Yuan Shih-k'ai, who commanded the loyalty of the powerful northern army. In exchange for the post of governor general in the central Yangtze Valley and other concessions, Yuan agreed to lead a campaign against the revolutionaries. Faced by Yuan's superior military force and their own divided leadership, the revolutionary groups negotiated a settlement, Feb. 1912, by which Sun surrendered his leading role to Yuan in return for the latter's promise to end Manchu rule. Having yielded its effective power to Yuan, the Manchu dynasty had no choice but to abdicate the throne and transfer authority to him in exchange for a guarantee of personal protection and a financial settlement. Many leaders of the T'ung-meng-hui served in Yuan's first cabinet, but it collapsed, Aug. 1912, as a result of a struggle between Yuan and the society.

FOUNDATION OF THE KUOMINTANG. Sung Chiao-jen (1866-1918) amalgamated, Aug. 1912, the T'ung-meng-hui with 4 other political groups to form the Kuomintang (Nationalist Party). Unlike the T'ung-meng-hui, the Kuomintang was an open political party; Sun Yat-sen himself opposed its foundation, preferring a closed, secret-society type of organization loyal to himself. The parliamentary elections of 1913 made the Kuomintang the strongest single party in China, but the parliamentary cause suffered a severe blow when Yuan, jealous of Sung's growing power and popularity, engineered the latter's assassination. After Sung's death, parliament became the scene of a struggle between Yuan, who favored a strong presidential system of government, and a group advocating the election of a prime minister responsible to a parliamentary majority. When Yuan sought to enhance his power by replacing pro-Kuomintang military officials in the Yangtze Valley with his own supporters, the Kuomintang staged an open rebel-

lion, Aug. 1913. Yuan quelled this uprising and, 3 months later, outlawed the Kuomintang. (*Cont.* p. 479.)

THE MODERNIZING OF JAPAN

1870-76

THE MEIJI ERA. 1870 can be taken as the year in which the basic trends of the Meiji period began to emerge. By 1869 the government had taken the form it was to retain until 1885, under a Dajokan (Council of State). In keeping with the restorationist mood, the titular heads of the major government bodies were court nobles. However, it was their samurai assistants who held the real power. The most prominent of these samurai were from the former feudal domains of Satsuma, Choshu, Tosa and Hizen in Kyushu, Shikoku, and southern Honshu. Among them were Okubo Toshimichi (1830-78), Kido Takayoshi (1833-77), Ito Hirobumi (1841-1909), Yamagata Aritomo (1833-1922), Okuma Shigenobu (1832-1922), Itagaki Taisuke (1836-1919), and Saigo Takamori (1827-77). Some became oligarchs, ruling in the name of Emperor Meiji, and some became opponents of the regime. But all made an indelible mark upon Japanese history.

ABOLITION OF THE FEUDAL DOMAINS. In Aug. 1871 the former feudal domains were completely abolished and their armies disbanded. The move had not been possible until Saigo and other conservative leaders were won over to the modernizing cause. Japan was divided into ken, or prefectures.

IWAKURA MISSION. A mission headed by Iwakura Tomomi (1825-83), the only court noble with real power, left for a long tour of the U.S.A. and Europe, Dec. 1871. The avowed purpose of the mission was to seek revision of the unequal treaties, but every government turned it down on this issue. Instead the mission members, including Okubo, Kido, Ito, and other leaders, were able to see with their own eyes the technological superiority of the modern West. This educational experience had a profound impact on their later policies.

NEW SOCIAL ORDER. In early 1872 the new Japanese social order was given its final 3-class form: aristocrats, gentry, and commoners. In practice, the gentry (former samurai) had no useful advantages over the commoners. Japan's small eta (pariah) class was also legally emancipated by this time, being placed on a level with the commoners. Social equality was further promoted in 1872 by the announcement of plans for a system of compulsory primary education. By 1906, 98% of all Japanese children attended primary schools.

CONSCRIPT ARMY. The establishment of a conscription system, Jan. 1873, for the army shattered Japan's aristocratic warrior tradition. All ranks were thrown open to men of every social origin. The great leader behind Japan's military modernization was Yamagata.

LAND-TAX REFORM. A radical land-tax reform, July 1873, provided the government with a uniform and dependable source of revenue. The tax was to be paid in cash, instead of in kind, at the yearly rate of 3% of the market value of the land. The new tax weighed heavily on the farmers, for it allowed no leniency in bad years; nor could the farmers always obtain cash advantageously.

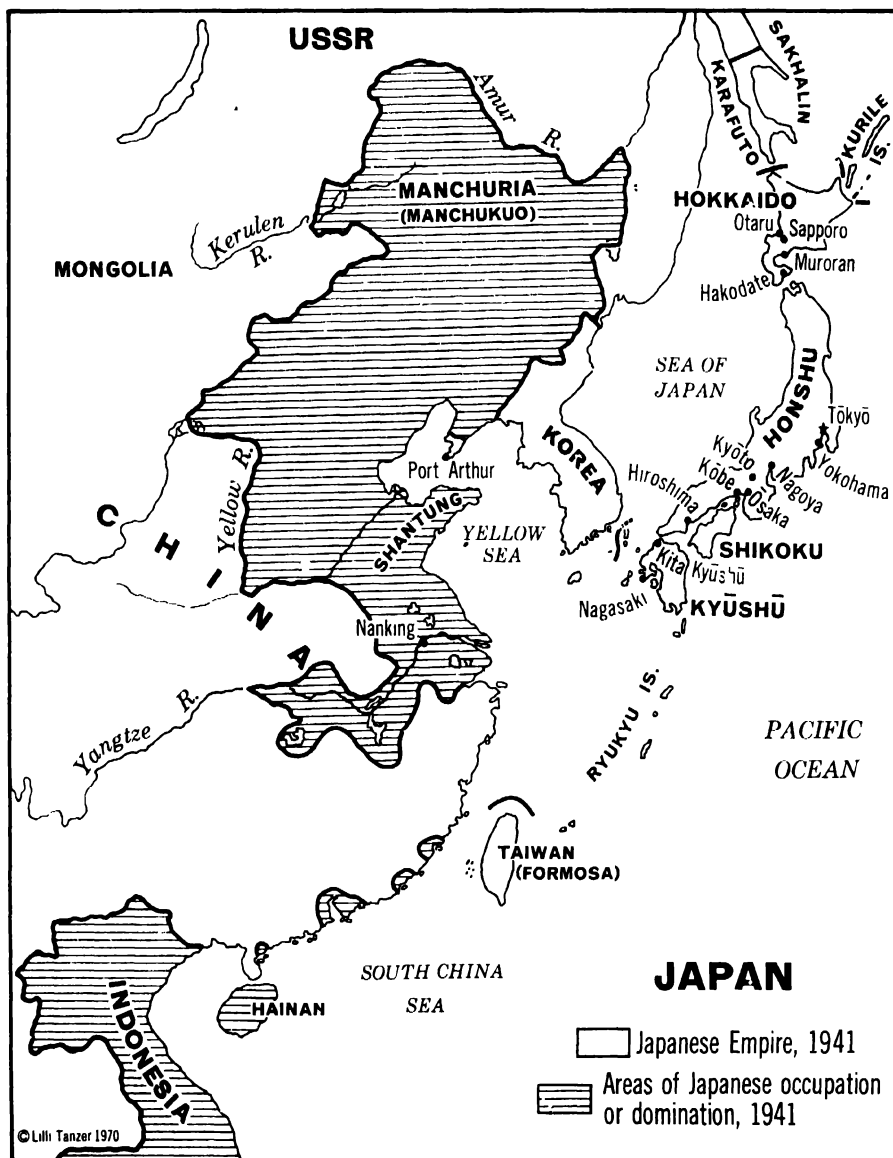

STATUS OF SAMURAI. In Dec. 1873 the government allowed former daimyo and samurai to commute their feudal stipends for a lump sum. This was a step toward relieving the government of an unproductive financial burden. In 1876 all former samurai were forbidden to wear their swords in public and were forced once and for all to commute their stipends for government bonds. This settlement was generous to the daimyo, but far less so to the regular samurai.

KOREAN QUESTION. In 1872 Japan had sought, without success, to open Korea to trade. The Japanese had strategic designs on Korea, and the rebuff wounded their pride. Hence a faction led by Saigo came to press for war. Its members, mostly from Hizen and Tosa, were those who were losing out to men of Satsuma and Choshu in the contest for power, and therefore advocacy of war was also a move in a domestic power struggle.

Most of the top Stacho (Satsuma and Choshu) leaders had gone abroad with the Iwakura mission, leaving Saigo as the head of a caretaker government. Although of Satsuma himself, Saigo was a conservative and deeply worried about the fate of the samurai; he saw war as a chance to revive them. In the summer of 1873 he obtained approval for a campaign. The Iwakura mission then returned, and in Oct. the

plan was canceled. Okubo argued that Japan was not strong enough for war; that she should concentrate on internal strengthening and reform; and that she should not give the western powers any excuse for action against her.

With the victory of the Satcho clique headed by Okubo, Saigo, Itagaki, Okuma, and their followers resigned. Some became involved in armed rebellion; others turned

to political opposition. Okubo soon became Japan's first home minister, an extremely powerful position. Satcho domination of the government was now secure.

MOVEMENT FOR REPRESENTATIVE GOVERNMENT. In Jan. 1874 Itagaki and Goto Shojiro, in a memorial, denounced the oligarchs for ruling without regard to the emperor or to the people. They proposed a popularly elected assembly so as to unify public opinion and save the state from decay. The government rejected the proposal, but at least referred it to a committee for study. Thus began an enduring debate over representative government. The oligarchs felt, in view of the vehemence of the "popular rights movement," that the creation of an assembly might tame the opposition, but that such an assembly should be given no real power.

In Feb. 1875 the government called a conference with the political opposition at Osaka. It agreed to create a Genro-in (Senate) and a supreme court, and to call prefectural assemblies. However, these bodies were to represent only a very small part of the population, and were to be advisory only.

FORMOSA EXPEDITION. The murder of some Ryukyuan by Formosan natives provided the Japanese with the occasion for a punitive expedition. The expedition employed many former samurai and released some of the tension created by the Korean issue. In Oct. 1874 China's agreement to pay an indemnity amounted to tacit recognition of Japanese sovereignty over the Ryukyu Islands. In 1879 Japan incorporated them as Okinawa Prefecture.

FOREIGN RELATIONS. In May 1875 Russia recognized Japanese sovereignty over the Kuriles, while Japan recognized Russian sovereignty over Sakhalin. In Feb. 1876 the Treaty of Kanhwa opened 2 Korean ports besides Pusan to trade with Japan. China, however, refused to recognize Korea's competence to conclude a treaty, since Korea had always been a vassal state. Thus Japan did not obtain an implied recognition by China of Korean independence, as she had hoped to do.

1877-89

SATSUMA REBELLION. After his resignation Saigo had returned to Satsuma and established private schools for the samurai there. He was profoundly admired by many former samurai, who were deeply dissatisfied with the policies of the government, especially its failure to launch an expedition against Korea. A threatening situation thus developed in Satsuma. In Jan. 1877 the government tried to remove the contents of an arsenal in Kagoshima, the Satsuma capital. Saigo's followers promptly seized the arsenal and began a march on Tokyo. Saigo himself had no thought of armed rebellion, but placed himself at the head of the march out of loyalty to his men. The march was blocked at Kumamoto, immediately to the north, but it was not until Sept. 1877 that the rebellion was finally put down. Saigo died as Kagoshima fell. The new conscript army had proved its worth.

CONSTITUTIONAL PROPOSALS. In Tosa, his home province, Itagaki had formed the Risshisha (Society for Striving toward a Definite Aim) to aid the samurai and to promote his political views. In June 1877 the Risshisha submitted to the government a memorial bitterly attacking the oligarchs and demanding the creation of a diet. The government turned the proposal down. The Genro-in had in fact been preparing an English-style constitution since 1876. In May 1878, Okubo was assassinated because of his dictatorial methods of administration, and Ito replaced him as home minister. Ito favored extreme caution in granting a constitution.

POLITICAL REPRESSION. In response to the rapidly growing movement for representative government a law was enacted, 1880, placing political meetings under police supervision and forbidding members of the armed forces, teachers, and students to attend such meetings. Political groups were forbidden to advertise or to correspond with one another. This law was one of several enacted over the years to repress the political opposition.

FALL OF OKUMA. The future outline of the Meiji government emerged clearly from the crisis that brought about the expulsion of Okuma from the government. Being from Hizen, he was not of the Satcho clique, and was in fact Ito's rival for power. He had withheld his views on a constitution, although the other oligarchs had long since declared cautious approval. In Mar. 1881 he challenged Ito by demanding the introduction of a constitutional form of government in which the cabinet would be responsible to a parliament with real authority. Moreover, he demanded that the 1st elections be held in 1882. These proposals were rejected. After a time serious governmental corruption in Hokkaido was brought to light, and the government came under severe public criticism. The oligarchs assumed that Okuma was trying to exploit the scandal and stir up trouble in order to overthrow the Satcho clique. Accordingly, they ousted Okuma, Oct. At the same time it was announced that a diet would be created by 1890. By this action those in power hoped to reduce the strong anti-government feelings that had been aroused.

FOUNDING OF THE POLITICAL PARTIES. Itagaki founded the Jiyuto (Liberal Party) before the end of 1881, in anticipation of the opening of the diet. The Jiyuto was supported mainly by rural interests and imbued to some extent with the ideas of French radicalism. Okuma founded the Kaishinto (Progressive Party), based more on urban interests and influenced by English liberalism, in early 1882.

PREPARATION FOR THE CONSTITUTION. In 1882, Ito left for Europe to study suitable models for the constitution, and spent nearly all his time in Berlin and Vienna. The political parties became fragmented and weakened by repressive laws. Violence provoked by the drastic retrenchment of 1881 discredited them further. In late 1884 the Jiyuto was dissolved. It did not re-form until just after the first elections. In 1885 the first Japanese cabinet replaced the Dajokan.

In 1886 Ito began drafting the constitu-

tion, in complete secrecy. The draft was submitted to the Privy Council in May 1888. The Privy Council had been created to review the draft, and lived on as the highest advisory body in the government. It was totally removed from public scrutiny.

LI-ITO CONVENTION. By the Li-Ito Convention, 1885, Japan and China undertook to withdraw their troops from Korea and to notify each other of any intention to intervene there. Japan was biding her time before a showdown.

PROMULGATION OF THE CONSTITUTION. 11 Feb., 1889. The emperor of Japan bestowed the constitution on his subjects. The text reserved to him all sovereign powers such as the declaration of war and the conclusion of treaties. He exercised legislative power "with the consent of the Imperial Diet" (as the parliament was called). He alone could initiate amendments to the constitution, and he had extensive powers of ruling by ordinance. He was the direct commander of the military services, which placed the services on a level with the premier himself. The constitution did not mention a cabinet, for each minister was in theory responsible to the emperor alone. The Diet consisted of an appointed House of Peers and an elected House of Representatives. It could be dissolved at will by the premier and was powerless to enforce a vote of no confidence. Its budgetary powers were very limited. The constitution also provided for a supreme court.

As between executive, legislature, and judiciary, the executive branch was clearly dominant. The constitution provided for the basic rights of the people, but all were made subject to law. It laid clear and positive stress on the duties of the emperor's subjects.

1890-99

EDUCATIONAL POLICY. The Imperial Rescript on Education, Oct. 1890, set a lofty moral tone for all of Japanese education until 1945. It exalted the emperor as the father of the nation, and

required of his subjects selfless devotion toward him and filial piety toward their parents.

FUNCTIONING OF THE IMPERIAL DIET. The 1st Diet opened in Nov. 1890. It proved hostile to the government even though only 1.24% of the population was qualified, on the basis of property, to vote. The Diet demanded drastic budget cuts, and the government was barely able to reach a compromise. But a lasting peace proved impossible. Yamagata resigned in May 1891; Matsukata, his successor, had to dissolve the Diet in Dec. In the election that followed, the government tried to influence the vote by violence. 25 people were killed, but the new Diet was still hostile. Characteristically, it was not the ensuing furor which felled Matsukata, but the resignation of the war and navy ministers. They were protesting the removal of a protégé, the home minister responsible for the violence. Ito himself then became premier and frustrated a Diet attempt to impeach him. More dissolutions and elections followed. A stalemate had been reached, but it could not be broken to the Diet's advantage.

EXTRATERRITORIALITY. In July 1894 Japan and Great Britain signed a treaty to abolish extraterritoriality, which was to become valid with the adoption of Japan's new civil code, 1899. The government had been trying for many years to have the unequal treaties abolished, and the parties had turned its lack of success into a powerful political weapon. Public indignation had wrecked a compromise settlement in 1889, and Okuma, the foreign minister, nearly lost his life to an assassin.

SINO-JAPANESE WAR. In June 1894 the Tonghak Rebellion broke out in Korea. When the king of Korea called in Chinese troops, Japan quickly sent her own, and demanded acceptance of a sweeping Japanese-oriented reform program. For once both Diet and oligarchs were of one mind in desiring a settlement. In Aug. Japan declared war and, to the surprise of the European powers, rapidly gained control of Korea, the Liaotung Peninsula, and the adjacent seas.

With 7 divisions poised to march on Peking, China was obliged to come to terms.

TREATY OF SHIMONOSEKI: 17 Apr., 1895. China recognized the independence of Korea, opened certain commercial ports to Japan, and agreed to pay an indemnity of 200 m. taels. Japan received Formosa, the Pescadores Islands, and the Liaotung Peninsula.

THE TRIPLE INTERVENTION. Within a week, Russia, France, and Germany—all powers with important interests in China—advised Japan, Apr. 1895, to retrocede Liaotung, and Russia threatened force. Japan was obliged to comply. It was a bitter blow to the entire nation, and in the end served only to rally Japan's nationalistic feelings—especially since Russia herself moved into the Liaotung Peninsula in 1898. Partition of China seemed increasingly likely at this time, and Japan bitterly resented being prevented from taking no more than the other powers were taking for themselves. In the Rosen-Nishi Agreement of Apr. 1898, however, Russia recognized Japan's claim to economic preference in Korea.

PARTY ALLIANCES WITH THE OLIGARCHS. After the Sino-Japanese War, the Diet turned hostile again. However, in seeking for a way out of their dilemma, the parties began to ally themselves with key oligarchs. In 1895 Ito gained the support of the Jiyuto and persuaded Itagaki to accept the Home Ministry. Okuma's party soon gave its support to Matsukata. Yamagata remained aloof. The parties were soon disillusioned. In 1898 Itagaki and Okuma joined forces to achieve the main goals of the liberal movement: party cabinets and a cabinet responsible to the Diet. Ito, the premier, withdrew, and allowed Okuma and Itagaki to form a joint cabinet. They soon split hopelessly and, in Oct., resigned. Yamagata then took over and restored oligarchic rule.

1900-1905

YAMAGATA-ITO RIVALRY. By 1900, 2 broad factions existed within the oligarchs. Yamagata commanded the support

of the military services, while Ito, more flexible, was aligned with the highest civilian members of the government. One important move in this power struggle was an imperial ordinance issued, May 1900, under the premiership of Yamagata. It required that the war and navy ministers be drawn only from among high-ranking generals and admirals on active duty. Thus a service could order its minister to resign and the whole cabinet would fall. Then a successor could be withheld until the new cabinet suited the service concerned.

FORMATION OF THE SEIYUKAI.

In Sept. 1900 Ito moved to compromise with the party movement by forming a party of his own: the Seiyukai (Society of Political Friends). For his patronage Ito demanded obedience to his orders and conceded nothing to liberal deals. Yamagata immediately resigned. Ito succeeded him, but was unable to establish control over the Yamagata faction. He resigned as premier in May 1901, and as party president in July 1903. He was the last of the original Meiji oligarchs to hold the office of premier. The Seiyukai was taken over by Saionji Kimmochi (1849-1940), his friend, and developed into a major political force. The Yamagata-Ito rivalry continued, but indirectly through Saionji and Katsura Taro (1847-1913), Yamagata's protégé. From 1901 to 1913, the 2 alternated as premier, evidencing the stalemate that existed between the factions.

A Social-Democratic Party was founded, 1901, and was instantly banned by the police. The socialist movement itself, however, was not suppressed.

POWER OF THE GENRO. The Genro (Elders) took on added importance. The Genro were a strictly unofficial group of the emperor's top advisers. No longer overtly active in politics (Ito was the last of them to retire), they continued to rule from behind the scenes and to decide the highest issues of state.

ANGLO-JAPANESE ALLIANCE. Russia did not withdraw her troops from China after the Boxer Rebellion, and pressured the Chinese for concessions in

Manchuria. It took vigorous protests from the powers to check her. Japan and Great Britain both feared Russian expansion in Manchuria, and Katsura, unlike Ito, was strongly anti-Russian. Thus an Anglo-Japanese alliance was signed, Jan. 1902. It recognized Japan's special interest in Korea, and guaranteed the neutrality of either power if the other was at war with any single enemy in the Far East. The alliance was a triumph for Japan, since it placed her on an equal footing with Britain and strengthened her in her rivalry with Russia.

RUSO-JAPANESE WAR. Russia had agreed to withdraw from Manchuria, but by 1903 she showed signs not only of staying but of advancing. When Japan protested, Russia gave a harsh reply. Katsura needed no further provocation. In Jan. 1904 Japan delivered an ultimatum to Russia and, when it was ignored, declared war, 10 Feb. By mid-1904 the Japanese had taken Port Arthur. They captured Mukden after a long siege, Mar. 1905, and, in May, destroyed the Russian fleet off Tsushima in the Korean Strait. However, Japan was approaching the limit of her strength. She asked President Theodore Roosevelt of the U.S.A. to mediate.

TREATY OF PORTSMOUTH. 5 Sept., 1905. The treaty ending the Russo-Japanese War, signed at Portsmouth, N.H., recognized Japan's paramount interest in Korea and ceded to her the leasehold of the Liaotung Peninsula, the southern portion of the Eastern Chinese Railway, and the southern half of Sakhalin. Japan pressed for an indemnity and for all of Sakhalin, but was not strong enough to prevail over Russia's flat refusal. The Japanese public, which saw only a total victory over a major European power, was outraged at this retreat, and there were riots in the streets. But the treaty stood, marking for Japan a great step toward major-power status.

1906-14

ANNEXATION OF KOREA. In Nov. 1905 Japan established a virtual protec-

torate over Korea: Ito became the first resident general. June 1906 saw the founding of the South Manchuria Railway Co., with both government and private capital. The company enjoyed very broad economic rights in southern Manchuria, and played an essential role in administration and policy formulation for the area. The first governor general of Kwantung (the Liaotung area) was appointed, Aug. 1906, and Korea became a full protectorate in July 1907. Russia recognized the protectorate in a secret convention. The Root-Takahira Agreement, Nov. 1908, between the U.S.A. and Japan, tacitly acquiesced in Japan's actions in Korea. There remained the final step: outright annexation. Ito steadfastly opposed it, and resigned as pressure for annexation became strong. In Oct. 1909 he was killed by a Korean assassin at Harbin. The Treaty of Annexation was signed, 22 Aug., 1910, under the next resident general, Gen. Ierauchi Masatake (1852-1919).

THE "TAISHO CHANGE." During the habitual alternation between Katsura and Saionji the Diet resolutely opposed military pressure for greater armaments. The death of Emperor Meiji, 30 July, 1912, ended the most momentous reign in Japanese history. Katsura, leading his 3rd cabinet, met with strong opposition from the political parties. He sought to overcome Seiyukai opposition by having the new emperor Taisho order Saionji to support the government. But he failed, and antigovernment riots broke out in Tokyo and other big cities. Katsura resigned, Feb. 1913, but he had been obliged to recognize the power of the parties. Increasingly, the parties came to be seen as respectable wielders of political influence.

Katsura was followed briefly by Adm. Yamamoto Gombei (1852-1933). Okuma was appointed premier in Apr. 1914. The army's drive for expansion had resumed, and Okuma saw no reason to stop it. He dissolved the Diet when it once more opposed the plan to increase the size of the army. The next Diet, however, co-operated willingly, and the stage was set for Japan's entry into World War I. (*Cont. p. 487.*)

KOREA

1870-83

INCREASE* IN JAPANESE INFLUENCE. In 1873 King Kojong of Korea reached maturity and the regent, Tai-won-kun, was forced to retire. Power now accrued to the faction of Queen Min, which was more amenable to the West than the regent's had been. In 1874 a Japanese mission under Moriyama Shigeru failed to negotiate a trade treaty. In Sept. 1875 a Japanese gunboat, supposedly engaged in marine surveys off the Korean coast, provoked an incident and was fired upon. The Japanese sent a mission to Peking to seek a definite Chinese avowal of Korean independence. They were told that in domestic and foreign affairs Korea was self-governing, and Li Hung-chang agreed to aid the Japanese to secure a friendly reception at Seoul. At the same time he advised the Koreans to negotiate and modernize.

KANGHWA TREATY. The Japanese then sent an expeditionary force to Korea and, despite opposition from Tai-won-kun, extorted the Kanghwa Treaty from the Korean government, 26 Feb., 1876. This treaty provided for Japanese diplomatic representation at Seoul, for the opening of 3 ports to trade, and for extraterritorial rights for Japanese residents. Between 1876 and 1883 Pusan, Inchon, and Wonsan were opened for trade. The treaty resulted in the rise of a pro-Japanese faction in Korea opposed to the factions of Tai-won-kun and the queen.

CHEMULPO TREATY. In July 1882 the Yi (Tai-won-kun's) faction, aided by military rioters, unsuccessfully attacked Queen Min and the Japanese legation. Chinese and Japanese troops arrived to settle the affair, Aug. On 30 Aug. the Japanese negotiated the Chemulpo Treaty, an agreement which provided for an indemnity and punishment of the guilty, as well as further trade privileges for Japan. The Japanese also obtained the right to station troops in Seoul and to

travel in the interior. To assert their suzerainty the Chinese kidnapped Tai-won-kun and imprisoned him in Tientsin for 3 years. In 1882 they obtained a treaty which gave Chinese discriminatory advantages over other foreigners in matters of residence, travel, trade, and import duties. These Chinese actions left in power the Queen Min faction, which had become conservative, antireform, and pro-Chinese.

1884-93

LI-ITO CONVENTION. On 4 Dec., 1884, Korean progressives led by Kim Ok-kiun and Pak Yong-hio, with assistance from the Japanese, attempted a coup against the pro-Chinese conservatives, and seized the king. The insurgents called for Japanese military protection, but Chinese troops under Yüan Shih-k'ai drove the Japanese to the coast and restored the king to the throne. The leaders of the revolt fled to Japan.

Against this background on 18 Apr., 1885, the Japanese, represented by Ito Hirobumi, and the Chinese by Li Hung-chang signed the Li-Ito Convention, also known as the Treaty of Tientsin. By this agreement both powers decided to withdraw their troops from Korea and announced they would consult one another before sending troops there again. Japan thus gained equality with China in the matter of intervention in Korea.

1894-1904

SINO-JAPANESE WAR. In 1894 insurrections in protest against taxation occurred in Chonju, Iksan, and Kobu. These were soon followed by the Tonghak Rebellion, which called for the extirpation of all foreigners. Government forces sent to put down the rebels were defeated. On 6 June, 1894, by request of the Korean government, the Chinese sent in 1,500 troops, informing Japan of their action. Invoking the Li-Ito Convention, the Japanese dispatched 400 troops, 9 June. On 20 July the Japanese government sent an ultimatum to the Korean government, demanding reform, and on 23 July Japanese forces seized the king,

threw out the Min faction, and recalled Tai-won-kun to power. The Japanese then fired on a Chinese warship, 25 July, and captured Seoul and the royal palace. On 26 July a Special High Commission was appointed to prepare government reforms, and the Japanese took control of government appointments. Under strong Japanese pressure, Korea declared war on China, 27 July. On 1 Aug. the Japanese declared war on China themselves, and during July and Aug. their forces defeated the Chinese at battles at Asan, Pyongyang, and Yalu. On 16 Aug. a provisional treaty was signed by which Japan guaranteed Korean independence but stipulated that Japanese advice and aid must be sought by the Korean government. On 17 Apr., 1895, the Treaty of Shimonoseki was negotiated by Ito Hirobumi and Li Hung-chang. China now finally renounced her suzerainty over Korea.

GROWTH OF RUSSIAN INFLUENCE. On 8 Oct., 1895, Queen Min was assassinated, and next day a pro-Japanese cabinet took office. The Japanese government, however, disclaimed responsibility for the queen's death. On 11 Feb., 1896, King Konjong took refuge in the Russian embassy, and yet another cabinet was formed, with Pak Chongyang as prime minister. During 1896-98 American-influenced reformers led by Dr. Philip Jaisohn (So Chae-p'il, 1868-1951) founded the Independence Society, and published the 1st modern newspaper in Korea, the *Independence News*. To counter the reformers the government organized the Hwangguk Society, and by the end of 1898 the reform movement had been suppressed and its leaders, including Jaisohn and Syngman Rhee (1875-1965), were in exile. The movement did, however, succeed in extracting some reforms from the government.

RUSSO-JAPANESE RIVALRY. On 9 June, 1896, the Yamagata-Lobanov Agreement was signed in Moscow, Japan and Russia agreeing to support the Korean king's efforts to restore and maintain order, and guaranteeing foreign loans so that an adequate police force could be maintained. A secret article

provided that, in case it became necessary to send troops to Korea, the 2 powers would consult with a view to fixing a neutral zone between their spheres of action. Korea thus became virtually a joint protectorate.

In Feb. 1897 King Konjong returned to his palace, and on 12 Aug. he assumed the title of emperor, since that of king (wang) had become secondary. In the same month the name of the country was changed from Chosen to Taehan (Great Han Empire).

In Apr. 1898 the Nishi-Rosen Protocol was signed. It provided for Japanese and Russian recognition of Korean independence, a mutual agreement not to assist the Korean army or engage in financial reorganization, and Russian recognition of Japanese commercial and industrial interests in Korea.

RUSO-JAPANESE WAR. Early in 1903 the Russians moved troops to the mouth of the Yalu River, and in July the Japanese opened direct negotiations with them on both Manchuria and Korea. These negotiations lasted from Aug. 1903 to Feb. 1904. The Japanese sought recognition of their interests in Korea; the Russians offered commercial and industrial supremacy for Japan in the southern part of the peninsula and neutralization of the northern. The Japanese would not accept the Russian proposals.

On 8 Feb., 1904, Japanese forces occupied Seoul, and 2 days later declared war on Russia. Japan and Korea signed a protocol, 23 Feb., guaranteeing Korean independence and territorial integrity in

return for acceptance by the Koreans of Japanese advice. By the Treaty of Portsmouth, 5 Sept., 1905, which ended the war, Russia acknowledged Japan's "paramount interests" in Korea. The Japanese assumed police responsibility in Seoul, placed a resident general there, and stationed their own police inspectors in all provinces. In Nov. Korea officially became a Japanese protectorate.

1906-14

JAPANESE ANNEXATION. In June 1907 the Korean emperor sent a secret mission to the 2nd Hague Peace Conference seeking aid against Japanese exploitation. Although his request was virtually ignored, the Japanese in retaliation forced him to abdicate, 19 July, in favor of his son, Sunjong (ruled 1907-10), and tightened their control of Korea under the direction of Resident General Ito. On 1 Aug. they ordered the disbanding of the Korean army. Korean resistance continued, however; between 1908 and 1910, 12,000 rioters were killed by Japanese police and troops. On 26 Oct., 1909, Ito, who had resigned as resident general and who opposed complete annexation, was assassinated in Harbin by Korean nationalists. In response, Japan annexed Korea, 22 Aug., 1910. The royal family were given Japanese titles of nobility and a financial settlement, and lesser leaders were bribed or terrorized into accepting the *fait accompli*. On 30 Sept., effective 1 Oct., the new system of government was promulgated. (*Cont. p. 486.*)

The Imperial and Colonial Worlds

THE BRITISH DOMINIONS

Canada

1870-85

RED RIVER REBELLION. When government forces under Col. Garnet Wolseley (1833-1913) put an end to the

Red River Rebellion of the métis (half-Indian, half-French), Manitoba became an equal, self-governing province of Canada, 15 July, 1870. The métis had united under Louis Riel (1844-85) to protect their land. The rebellion was rapidly suppressed, but not before Thomas Scott, a government agent, had been

killed. Riel was bribed to leave the country in order to minimize the Anglo-French friction this incident created.

TREATY OF WASHINGTON. 8 May, 1871. Sir John Macdonald (1815-91), representing Canada on a team of British negotiators, signed the Treaty of Washington with the U.S.A. Although major Canadian questions were not discussed, e.g., Fenian Raid damages, it was the first time that Canada had been recognized at a diplomatic conference table.

DEVELOPMENT OF THE WEST. British Columbia joined the Confederation, 20 July, 1871, on the strength of a promise that the central government would begin a transcontinental railway within 2 years and finish it within 10. Although other provinces were to be added (Prince Edward Island and Nova Scotia, 1873) or organized out of existing territory (Alberta and Saskatchewan, 1905), with the addition of British Columbia, Canada stretched from ocean to ocean. On 7 Nov., 1873, Canada's 1st prime minister, the Conservative Macdonald, was forced to resign over a railway scandal that grew out of the feverish bidding for the Intercolonial Railway to the Pacific. The Northwest Mounted Police, forerunners of the Royal Canadian Mounted Police, were formed at this time to control the Indians and prepare the west for settlement. The Liberal ministry of Alexander Mackenzie (1822-92) organized the Northwest Territories in 1875.

"NATIONAL POLICY." Macdonald and the Conservatives triumphed in the elections of 1878 with an appeal to nationalism and protective tariffs, known as the "National Policy." In the next few years Macdonald consciously set out to lay the foundations of the Canadian nation and to stir up a sense of patriotism among Canadians. In 1879 the post of high commissioner was created to represent Canadian interests in London.

CANADIAN PACIFIC RAILWAY. By an imperial order in council, 31 July, 1880, all British possessions in North America, except Newfoundland and its

dependencies, were annexed to Canada. The same year the Canadian Pacific Railway Co. was awarded a generous contract (\$25 m., 25 m. acres of land, and monopoly of the trade) to build a line to the West Coast. As more and more money was poured into the C.P.R., the Canadian public began to doubt the wisdom of the scheme. Only the return of Louis Riel to lead the 2nd Métis Rebellion, 1885, saved the railway. The swift movement of troops to the troubled area justified present and future outlay on the grounds of national security. The capture and execution of Riel also had the effect of aggravating Anglo-French enmities.

1886-99

INTERPROVINCIAL CONFERENCE.

In 1887 the Interprovincial Conference, under the leadership of Honoré Mercier (1840-94) and Oliver Mowat (1820-1903), met at Quebec. It was symbolic of the growing discontent with the power of the central government under Macdonald. It pondered a general revision of the constitution, especially the clauses that permitted the federal authorities to disallow provincial legislation. This meeting, like its successor of 1906, achieved no practical results, mainly because it was so predominantly a 1-party organization, "a Liberal Party gathering."

INCREASE IN IMMIGRATION. The McKinley Tariff of 1890, passed by the U.S.A., aggravated a Canadian economic depression which had begun in 1873 and caused a revival of the old Liberal demands for a reciprocity agreement, while strengthening Canadian ties with Britain. By 1896, however, general prosperity was beginning to revive, a prosperity which was both caused by and the cause of an influx of settlers into Canada, attracted by her new rail links with the Far West and her liberal land policy. Above all, the American West had now reached the saturation point, and potential immigrants were deflected to America's northern neighbor. Canada became a melting pot as millions of settlers flowed in from the continent of Europe, the United

Kingdom, and the United States—a total of 2.5 m. between 1896 and 1914. The Conservative Party, which had declined steadily under competent but unspectacular successors to Macdonald, lost the elections of 1896 to the Liberals under (Sir) Wilfred Laurier, one of the few men in Canada who combined in his person the attributes of the many warring factions of society, being a lawyer, a scholar, a Roman Catholic, and of French origin.

IMPERIAL PREFERENCE. At Laurier's suggestion the Colonial Conference of 1897 accepted a system of preferential tariffs within the British Empire. Preferring economic to political union of the empire, as proposed by the British colonial secretary, Joseph Chamberlain, Laurier saw this as a way to improve Canada's economic position in relation to both the U.S. and Europe.

SOUTH AFRICAN WAR. The sending of Canadian troops to the South African War in 1899 caused great controversy in Canada. The French-speaking inhabitants of Quebec, identifying with the Boers, demanded the return of the Canadian contingent. Laurier circumvented the problem by dispatching only volunteers and having them maintained by Britain, though the South African War still cost Canada some \$2.5 m.

1900-1914

CANADIAN-U.S. BORDER PROBLEMS. One of the last great outbursts of anti-American feeling in Canada resulted from negotiations concerning the Alaskan boundary line. The court of arbitration that made the binding decision was composed of 3 Americans chosen for their outspoken pro-U.S. stance, 2 Canadians, and Lord Alverstone for the United Kingdom. Smooth Anglo-American relations were preserved, as had often happened before, at the expense of Canada, as Alverstone, under American and British pressure, voted for the U.S. Better American-Canadian relations followed in the wake of the International Waterway Commission, 1905, and, especially, the

Boundary Waters Treaty, 1909, which set up a permanent board to decide all future border questions.

INDEPENDENCE OF CANADIAN FOREIGN POLICY. In an attempt to assert herself within the British Empire, Canada, which had won the right to withdraw from commercial treaties negotiated by London on her behalf in 1899, gained the more sweeping right, 1908, to decide whether any kind of treaty should be binding on her or not. Laurier's next step was to establish a Department of External Relations.

ROYAL CANADIAN NAVY. A law was passed, 1910, to provide for a small Canadian navy. But a later attempt, 1913, to contribute 3 dreadnoughts to the Royal Navy was rejected by the Liberal Senate on the grounds that Canada still had an inadequate voice in imperial policy making.

CANADIAN-U.S. RECIPROCITY. Due to internal political considerations in the U.S.A., the American Congress passed legislation enabling a reciprocity agreement to be negotiated between the U.S. and Canada. The Liberal Party seized on this long-desired panacea, but Canadians were no longer charmed by it, and in the elections of 1911 voted against the Liberals, thus ending the possibility of reciprocity. (*Cont. p. 476.*)

Australia

1870-89

THE AUSTRALIAN CONTINENT. By 1870 Australians were beginning to think continentally. In that year, as part of a steadily improving communications and transportation network, the 1st transcontinental telegraph was completed. By 1872 there was a regular cable service to both Europe and Asia. Expeditions under John Forrest, 1873-74, and Ernest Giles, 1875, continued the work of exploring and mapping the interior.

TRADE UNIONISM. Labor unions, which had been struggling for recognition, held the 1st Australian Trade Union Congress in 1878-79. The unions

not only demanded regulated wages, an 8-hour day, and decent working conditions but also hoped to restrict the employment of Chinese immigrants as laborers. The 2nd Congress was held in 1884 and, except for the turbulent, strike-ridden period 1891-98, annually thereafter, thus giving the Australian workingman a sense and symbol of unity amid intercolonial rivalries.

BEGINNING OF THE FEDERATION MOVEMENT. Sectionalism and friction between the colonies increased during the prosperous 1870's, as each colony asserted itself at the expense of the others. The 1st conference called to discuss federation thus failed, 1880. But the pressures that would eventually bring about union were increasing. Gold was discovered at Kimberley and silver at Broken Hill, and the tide of immigrants continued to flow in. The resources of the colonial governments proved inadequate. Such events, moreover, as the completion of the railway joining Victoria and New South Wales, 1883, were concrete examples of the benefits to be derived from co-operation. To foster that co-operation the imperial government established a permanent body, the Federal Council, to meet every 2 years and decide intercolonial questions. A meeting of the Council in 1888 approved more stringent measures against Asian immigrants. These were subsequently adopted by the colonies, and boosted the growing prejudice in favor of a "White Australia."

ANNEXATION OF PAPUA. An early spur to federation was the realization that Australia was an isolated and militarily weak island in an age of German, French, and Japanese expansion in the Pacific. Australian public opinion therefore rallied behind the policy of preventative expansion espoused by Sir Thomas McIlwraith (1835-1900), premier of Queensland, who annexed Papua (southern New Guinea) in 1883. As had happened 10 years earlier, when the claims of Capt. John Moresby (1830-1922) to New Guinea were disavowed by the imperial government, London at first rejected McIlwraith's move, only agreeing to it,

1884, after the Germans had already occupied much of the northern coast.

1890-99

PRELIMINARIES TO FEDERATION.

The failure of the great New Zealand-Australian maritime strike, 1890, convinced many trade union leaders that the road to reform lay along parliamentary channels. They tended, therefore, to support the federation of the Australian colonies. A severe financial crisis and depression, 1893, indicated the futility of tariff barriers between the colonies. This combined with a growing fear of Japanese imperialism (the "Yellow Peril") resulted in a Federal Convention held in Hobart, 1897-98. Delegates from all colonies attended and drew up a constitution, though they could agree on little other than the basic need for federation. There was to be a bicameral, directly elected parliament under the crown as represented by an appointed governor general. The 1st Federal Referendum to decide on the constitution showed that the necessary majorities in all colonies except New South Wales were willing to accept it, 1898. At a meeting of premiers, amendments to the constitution concerning surplus revenues and the powers of the Upper House were adopted, and the constitution was ratified by a 2nd Federal Referendum. Western Australia, 90% of whose revenues came from customs dues, was for this reason reluctant to turn power to levy customs over to a federal government as the constitution provided. However, a compromise was reached, and Western Australia joined in return for a federally financed railway and the right to levy her own customs dues for 5 years after the federation came into being.

1900-1914

COMMONWEALTH OF AUSTRALIA.

1 Jan., 1901. The Commonwealth of Australia began its existence under a government led by the protectionist, Sir Edmund Barton (1849-1920). Because

voting strength in parliament was almost evenly divided among 3 rival factions, no party had a clear majority (until the 2nd Fisher government in 1910). This resulted, in political instability, and there were 9 separate governments during 1901-14. The best organized of the parties, the Labour Party under J. C. Watson (1867-1941), was able to exert a pressure for reform greater than its size warranted.

SOCIAL LEGISLATION. Both the main programs of the Labour Party—social welfare and restriction of Chinese labor—had long traditions of acceptance in the individual colonies. In 1885 Victoria had set up a board to fix wages in "sweated" industries, extending its competence to other industries in 1896. South Australia enfranchised women, 1894, and other colonies followed suit (Western Australia, 1899, New South Wales, 1902). New South Wales set up conciliation and arbitration courts in 1901, copying those established in South Australia, 1894. From 1902 onward, women could vote in Commonwealth elections. A federal law of the same year limited Asian immigration, and from 1905 onward Anglo-Saxon immigration was actively encouraged. Old-age pensions, available in New South Wales from 1901, were established by federal law for all residents over 65 who had lived in Australia for at least 25 years.

In 1908 Canberra was chosen as the federal capital city. The selection of this site—within the territory of New South Wales—was part of the compromise that won that colony over to the idea of federation.

DEFENSE POLICY. The role of the new Australian Commonwealth in the British Empire was marked as much by co-operation as by self-assertion. Australia participated in the various Empire and Colonial Conferences—1887, 1899, 1902, 1907, 1909, 1911—accepted imperial preference, and supported the British naval squadron deployed in the Pacific. However, just as the danger to Australian security became greatest, British ships were withdrawn for service elsewhere. Thus in 1909 Australia set about con-

structing its own navy, and instituted compulsory military service along the lines laid down by Lord Kitchener's "Report on Australian Defences" of the same year. (*Cont. p. 477.*)

New Zealand

1870-89

ECONOMIC EXPANSION. The ambitious plans proposed by the colonial treasurer (Sir) Julius Vogel (1835-99), 1870, based on borrowing £10 m. in 10 years, helped New Zealand to lay the foundations for future economic expansion and prosperity. Extensive public-works projects, especially railway construction, were accompanied by new external trade arrangements, such as the establishment of a regular steamship service to and from San Francisco, 1870, and the founding of the New Zealand Shipping Co., 1873. In addition, new laws eased land sales, 1873, and attracted settlers. By 1875, however, it was evident that the scramble by individual provincial governments for large loans and for the profits to be derived from land speculation bred inefficiency and corruption, and was mainly responsible for the economy failing to respond satisfactorily to the influx of new capital.

UNIFICATION. The provincial governments were abolished, 1 Nov., 1876, and the central government began to replace divergent provincial schemes with others designed for the welfare of New Zealand as a whole. Railway routes were organized on a master plan to avoid duplication of services. Free, secular, and compulsory education was established, 1877. Trade unions received legal recognition, 1878. All male residents over 21 were enfranchised and, on the Australian model, Asian immigration was restricted in 1881 and again in 1899.

ECONOMIC DOWNTURN AND THE RISE OF LABOUR. The extended depression of the 1880's, due in part to overspeculation and the heavy borrowing of Vogel, was only somewhat relieved by the introduction of successful refrigera-

tion vessels, 15 Feb., 1882, which in time enabled New Zealand's meat and dairy products to reach world markets. During the decade of the 1880's there was an almost "continuous ministry" of the Conservative Sir Harry Atkinson (1831-92), for no opposition offered coherent alternative policies. But the depression itself, with accompanying mass unemployment, encouraged the Labour Movement, which first asserted itself when it supported the passage of New Zealand's 1st protective tariff, 1888.

1890-1906

SOCIAL WELFARE. Labour, having turned from striking as a tool of reform after the failure of the maritime strike of 1890, joined the Liberal Party to bring in a coalition government under John Ballance (1839-93). The election of 1890 was the 1st held under a system of universal manhood suffrage. Combining Labour and Liberal social-welfare programs, Ballance placed graduated taxes on income and on the unearned increment from land, 1891, and had the 1st of 3 sets of Factory Acts, 1891, 1894, 1901, passed to protect the workers.

Richard John Seddon ("King Dick," 1845-1906), who became premier on the death of Ballance in 1893, continued his program by extending the vote to women, 1893. By 2 acts in 1894 the Bank of New Zealand, which had been on the point of collapse, was virtually taken over by the state. In the same session was passed the Industrial Conciliation and Arbitration Act, under which all future industrial disputes were to be settled without immediate recourse to striking. This was followed by a law enabling the central government to buy large estates at a reasonable price and to divide them for resale. The Shops and Shop Assistants Act, 1894, imposed a compulsory early closing time, while the Family Housing Protection Act of the same year set out to secure additional housing and to protect homeowners from forced sale for debt. Further acts included the abolition of a property qualification for voting in national elections, 1896; the establishment

by law of an 8-hour day, 1898; and the introduction of old-age pensions, 1898. These various measures combined with the Government Accident Insurance Office, 1899, and State Fire Insurance, 1903, to form one of the world's most comprehensive social-welfare systems.

1907-14

DOMINION STATUS. New Zealand was granted the status of a dominion in the British Empire, 1907, partly because of her many manifestations of loyalty, including the dispatching of troops to the South African War, 1899; participation in imperial preference, 1903; and support for the British naval squadron in the Pacific. Universal military training was introduced in 1911.

REFORM PARTY. When the Liberal-Labour coalition disintegrated after the death of Seddon, 1906, the Conservative Party was revived as the "Reform Party." Labour set up its own separate representative organizations, the Federation of Labour, 1907, and the Labour Party, 1909.

William Ferguson Massey (1856-1925), who created the Reform Party from old-guard Conservatives and dissatisfied farmers, became prime minister, 1912, and implemented his principal program of turning all crown leases into freeholds. His 1st major problem was with the trade unions, which abandoned the Arbitration Act of 1894 in a series of strikes, 1912-13, in the gold mines and on the docks of Auckland and Wellington. This action culminated in an unsuccessful attempt at a general strike organized by the newly formed United Federation of Labour, 1913. (*Cont. p. 478.*)

The Union of South Africa

1870-94

GRIQUALAND WEST. When the Keate Award, 1871, gave the newly discovered diamond-rich area around Kimberley to the Griqua leader, Nikolaas Waterboer, the territory was taken over by Britain, under pressure from Cape Colony and

London business interests, as the province of Griqualand West. It was made a crown colony in 1873.

SEPARATISM VS. UNION. Basutoland was annexed to Cape Colony in 1871. The Colony, on being granted responsible government, chose (Sir) John Molteno (1814-86) as its first prime minister, 1872. Molteno put all telegraph lines and railways under government control, 1873-74; and adopted a policy opposed to the unification of British territories in South Africa. He and his colleagues rejected the plans for closer union put forward, 1875, by Lord Carnarvon, the British colonial secretary, and symbolized by the appointment of the pro-union Sir Henry Bartle Frere (1815-84) as governor and high commissioner at the Cape, 1876.

SOUTH AFRICAN REPUBLIC. As a further step toward unification, Sir Theophilus Shepstone (1817-93), with official approval, annexed the Transvaal, 1877. This and other early British moves toward union underestimated the extent of separatism and divisive racial policies in South African society. The discovery of many new gold and diamond deposits during the last quarter of the 19th cent. brought in a steady stream of European settlers and adventurers who, in a series of minor wars, clashed with Africans fearful of losing their land. Boer-British antagonisms grew. Taking advantage of British preoccupation with the Basuto "War of the Guns" and restlessness in Zululand, the Boers in the Transvaal rebelled against the British, won a brief war against them, and set up the South African Republic. By the Convention of Pretoria, 3 Aug., 1881, the Transvaal (South African Republic) was given complete self-government subject to the "sovereignty" of the British Crown.

GERMAN SOUTH-WEST AFRICA. German trading interests headed by F. A. E. Lüderitz (1834-86) acquired land at Angra Pequena, 1883, a territory on the southwest coast vaguely under British control. In 1884 the German imperial government announced that it would protect this area, and in 1892 took it over officially. The injection of a colonial

Germany into South African affairs caused renewed imperial activity by Britain: Basutoland was separated from Cape Colony, 1884, and made subject to the British home government, as also was Bechuanaland, 1885. Zululand was annexed in 1887.

RULE OF KRUGER IN THE TRANSVAAL. Following a convention signed in London, 27 Feb., 1884, Paul Kruger (1825-1904), president of the Transvaal, was granted a freer hand in negotiating with the African tribes, and the powers of the British resident appointed to the Transvaal were greatly reduced while all mention of British "sovereignty" was dropped. In return, all European settlers were to have their civil rights protected, and there were to be no discriminatory tax levies at the expense of *utlanders* (non-Boer residents). British goods, moreover, were no longer to be at a disadvantage in the Transvaal's markets because of extra tariffs or special taxes.

In 1889 a customs union was set up between Cape Colony and the Orange Free State, and the frontiers of German South-West Africa were defined, 1890.

BRITISH SOUTH AFRICA CO. Cecil John Rhodes (1853-1902), important in Cape affairs since helping to found the De Beers Diamond Co., 1880, an avowed imperialist, and head, from its foundation in 1889, of the British South Africa Co., became political leader of the Cape Colony, 1890. The function of the B.S.A. Co., as Rhodes saw it, was to explore and settle the area north of Cape Colony, thus containing the Transvaal and hindering its expansion.

1895-1902

JAMESON RAID. 29 Dec., 1895-2 Jan., 1896. President Kruger closed to British and Cape traders the overland routes through the Transvaal. Anti-Boer elements in Cape Colony, led by Dr. Leander Jameson (1853-1917), then staged a raid on Johannesburg which was quickly repulsed. The emperor of Germany, moreover, congratulated Kruger by telegram, 3 Jan., 1896, for repelling the invasion. Kruger continued a program of

discrimination against the *uitlanders*. On 26 Sept., 1896, the Alien Expulsion Act was passed, and on 26 Nov. the Immigration Restriction Act. Restrictions on the freedom of the press and on the right of assembly were strengthened. On 17 Mar., 1897, Transvaal and the Orange Free State renewed their 1889 defensive alliance.

SOUTH AFRICAN WAR. The *uitlanders* addressed a petition of grievances to Queen Victoria, 24 Mar., 1899. Between 31 May and 5 June, Kruger and the governor of the Cape, Sir Alfred Milner (1854–1925) held a series of discussions at Bloemfontein. When these failed, the Boers presented an ultimatum to the British government. This ultimatum was rejected, and war began, 11 Oct., 1899, between Britain and the Transvaal and Orange Free State. Although some 448,000 troops from all over the empire were used against 87,000 Boers before the war was over, in 1899 there were only 25,000 British troops in South Africa. This initial numerical advantage, coupled with other factors like familiarity with the terrain and interior lines of supply and movement, gave the Boers an edge at the start. Thus the Boer Gen. Petrus Joubert (1834–1900) won easy victories at Laing's Nek, 12 Oct., and Nicholson's Nek, 30 Oct., and by 2 Nov. was besieging Ladysmith. The appointment early in 1900 of new British generals (Roberts and Kitchener) and the employment of larger forces enabled the British gradually to turn the tide.

TREATY OF VEREENIGING. 31 May, 1902. In return for Boer acceptance of British sovereignty, the Transvaal and the Orange Free State accepted the status of crown colonies, received a rehabilitation grant of £3 m., and were promised representative institutions as soon as practicable. Responsible government was granted to the Transvaal in 1906 and to the Orange River Colony in 1907.

1903–14

INTERCOLONIAL CUSTOMS CONFERENCE. All tariff barriers were abolished, 1903, between Cape Colony, Natal,

the Orange Free State, the Transvaal, Southern Rhodesia, and the High Commission Territories. It was also decided that in future intercolonial conferences of this type should handle relationships with the indigenous Africans.

ESTABLISHMENT OF THE UNION.

31 May, 1910. A national convention met at Durban, 12 Oct.–15 Nov., 1908, Cape Town, 22 Nov.–18 Dec., 1908 and 11 Jan.–3 Feb., 1909, and Bloemfontein, 3–11 May, 1909, to draw up a constitution for a union of the South African territories. The constitution provided for 2 houses: the Lower, with 150 members popularly elected, and the Upper, chosen by provincial councils voting alongside their members in the Lower House. Enabling legislation, the South Africa Act, was passed by the imperial government and in May 1910 the Union of South Africa came into existence, with Louis Botha (1862–1919) as its 1st prime minister.

IMMIGRATION, LAND, AND

LABOR. The Immigration Act, 1913, limited the influx of Asians, and by the Native Land Act, 1913, both Europeans and Bantu were forbidden to buy land in each other's areas. At this period the trade unions were beginning to organize and to assert themselves. In an effort to win recognition, benefits, and concessions, they declared a series of strikes, 1913, in the gold mines and on the railways. (*Cont. p. 474.*)

The British West Indies

1870–89

DECLINE OF SUGAR INDUSTRY.

When the British Empire abolished slavery and adopted free trade, the traditional staple crop of the British West Indies, sugar, began to be uneconomic. Profits on sugar had been dependent on a fertile soil, cheap labor, and a protected market. Years of inefficient farming had exhausted the soil. Attempts were made to diversify the economy of the islands, and by 1870 bananas had become Jamaica's chief export.

CROWN COLONY GOVERNMENT.

In 1871 the ruling oligarchy of British Honduras, rather than see former slaves

enfranchised, requested crown colony status, thus surrendering a 100-year-old tradition of limited, but free, democracy. Most of the other colonies had made, or would make, the same request: Grenada, St. Vincent and Tobago, 1876, and Antigua, 1898, until by 1914 only Barbados, Bermuda, and the Bahamas retained democratic institutions.

In preparation for an eventual closer political union of the British West Indies, British Honduras was detached from Jamaica, 1884, and Barbados from the Windward Islands, 1885, while Tobago was united to Trinidad, 1889. Except in the latter case, where economic hardship dictated union, all attempts at federation were thwarted by vested interests in each colony.

In 1891 a measure of democracy was introduced in British Guiana. The franchise was very limited, but this was the 1st such experiment in the colony's history.

1890-1914

EDUCATION POLICY. The census of 1890 revealed that half the West Indian population was under 5 years of age. In Jamaica a Board of Education was established, 1893, and fees in the elementary school system were abolished. A "house tax" was imposed to finance the schools.

SOCIAL-WELFARE POLICIES. The social-welfare program, mainly associated with the Liberal colonial secretary, Joseph Chamberlain, was based on the recommendations of the Royal Commission of 1896-97. The commission had called for improved transportation facilities, better rural credit, the division of large estates into small farms, and systematic agricultural education. Accordingly, a scheme was adopted in Jamaica whereby crown lands were sold to settlers, 1896. An agricultural research center was established, and a system of tariff reductions under imperial preference applied to aid the sugar industry, 1897.

In 1902, £250 m. was granted by the imperial government to West Indian sugar interests in an effort to counter temporarily the effects of a new U.S. tariff

wall and of competition from government-subsidized beet sugar industries being developed in Europe.

JAMAICAN EARTHQUAKE. In 1907 Jamaica was struck by an earthquake which damaged every building in Kingston and killed over 800 people. (*Cont. p. 473.*)

INDIA AND CEYLON

1870-84

ARYA SAMAJ. Dayananda Sarasvati (1824-83) founded the first Arya Samaj in Bombay, 10 Apr., 1875. Popular among Hindus in Oudh, the Punjab, and Northwest Frontier Provinces, where many Moslems (Muslims) and Sikhs lived, the Samaj taught that pure Hinduism was derived from the Vedas, that Hinduism was superior to all other religions, and that lapsed Hindus should be reconverted. Moslems felt threatened by the organization, the tone of whose doctrines enabled it to be used by Hindu extremist politicians in the early 20th cent. under the inspiration of Lajput Rai (1865-1928).

MOSLEM EDUCATIONAL FOUNDATIONS. Sir Syed Ahmed Khan, a Moslem modernizer convinced that Moslems could overcome their economic and political disabilities only by gaining a western education and abstaining from active politics, opened a school at Aligarh for Moslems, 24 May, 1875. To appease the ulema ('ulamā, Moslem scholars), who opposed western studies, the school included religious education in its curriculum. On 8 Jan., 1877, Lord Lytton (vice-roy, 1876-80) laid the foundation stone of the Mohammedan Anglo-Oriental College, later to be raised to the status of a university.

BUDDHIST THEOSOPHICAL SOCIETY. Founded in Ceylon by H. S. Olcott, the Buddhist Theosophical Society ineffectively challenged during the 1870's the Christian missionaries who were taking over the educational functions of the bhikkus (Buddhist monks).

INDIAN ASSOCIATION. Influenced by Mazzini, Surendranath Bannerjee, a

former civil servant, founded the Indian Association at Calcutta, 26 July, 1876. The Association was an overtly political organization for western-educated Bengalis. It protested, among other matters, the 1876 regulation lowering the maximum entrance age into the I.C.S. (Indian Civil Service) from 21 to 19.

INDIAN EMPIRE. Queen Victoria assumed the title of empress of India, 1 Jan., 1877. This signified the paramountcy of British power in India, including the princely states.

VERNACULAR PRESS ACT. 14 Mar., 1878. The Viceroy's Executive Council passed a Vernacular Press Act subjecting vernacular newspapers to confiscation if they printed material considered seditious. The Indian Association protested against this act, and also against the Arms Act of Apr. 1878, which imposed a heavy import duty on arms and required universal licensing of guns, but exempted Englishmen from compliance. On 10 Jan., 1882, on the initiative of Lord Ripon (viceroy, 1880-84) the Legislative Council repealed the Vernacular Press Act. The act had never been invoked to close down a newspaper.

ILBERT BILL. Sir Courtney Ilbert introduced in the Legislative Council, 2 Feb., 1883, a bill to remove discrimination against certain Indian judges in the districts by enabling them to try Englishmen as well as Indians. The viceroy, Lord Ripon, strongly supported the bill, but agitation against it by British plantation owners and judges resulted in a compromise bill, which provided that a European on trial in any court could have a jury, half of whose members must be European. The new bill was enacted, 25 Jan., 1884. The Ilbert Bill controversy led to the worst racial antagonism since the Mutiny.

1885-98

NATIONAL CONFERENCE. The 1st session of the National Conference was held at Calcutta, 28-30 Dec., 1883. Called by the Indian Association, the conference was intended to be an India-wide political organization. Its 2nd, and final, session was held at Calcutta, 25-27 Dec.,

1885. Delegates from northern India were attracted to the meeting.

INDIAN NATIONAL CONGRESS.

The 1st session of the I.N.C. (Indian National Congress) was held at Bombay, 28 Dec., 1885. Largely inspired and organized by Alan Octavian Hume (1829-1912), a retired I.C.S. officer who feared revolution if responsible Indians did not have a forum in which to vent their grievances against the government, the I.N.C. began as a small group of western-educated persons of the middle class interested in administrative and constitutional adjustments. In 1886 the Congress demanded the expansion and strengthening of the legislative councils and the election of at least half their members. Its membership gradually increased, and it began to meet annually at different cities.

After the founding of the I.N.C., Moslem fears of Hindu domination, as well as Hindu revolutionary exasperation with the servility and gradualness of meliorists and reformers, led to an intensification of communalism and to severe strains within the Congress itself. Unable to satisfy any party, the Indian government's attitude approximated the reformist position.

UNITED INDIAN PATRIOTIC ASSOCIATION. Syed Ahmed Khan, who declared at Lucknow, 28 Dec., 1887, that Moslems and Hindus were 2 different nations and that representative institutions would only result in the subjugation of Moslems to Hindus, founded the United Indian Patriotic Association in Aug. 1888. The establishment of the U.I.P.A. emphasized that the I.N.C. did not represent the views of all Indians.

AGE OF CONSENT BILL. Influenced by Behranji Merwanji Malabai, a Gujarati Parsi, and some Hindu reformers, a bill was introduced in the Legislative Council, Jan. 1891, to raise the minimum age of marriage from 10 to 12 years. Bitter controversy ensued, especially in Maharashtra, where the Chitpavan Brahmin, Bal Gangadhar Tilak (1856-1920), newspaper editor and teacher, attacked the bill on the grounds that foreign rule should not interfere with the Hindu social structure and that the measure was unnecessary. Although the bill passed, 19 Mar., Tilak's revolutionary nationalism,

couched in terms of adherence to traditional Hindu social norms, was to continue.

INDIA COUNCILS ACT. 26 May, 1892. Enacted by the imperial parliament, the India Councils Act enlarged the central and provincial legislative councils and enhanced their powers by allowing members to put questions and discuss financial matters. Although not recognizing the principle of election, the act did permit municipal corporations and certain associations to nominate members of council, thus granting the principle of representation of particular interests. The I.N.C. criticized the act for not granting elections.

TEMPERANCE CAMPAIGN IN CEYLON. During the 1880's and 1890's Buddhist nationalists reacted against a British policy of selling liquor licenses by conducting a fervent temperance campaign. Both the Buddhist Theosophical Society and the temperance movement evidenced the frustration felt by the bhikkhus because of their declining importance in political and social life.

GANAPATI FESTIVAL. Following communal riots in Maharashtra, Tilak and Annasabib, an orthodox Brahmin, organized in Poona, Sept. 1893, the 1st annual public Ganapati festival, an event which gave Hindus a popular deity to venerate at a time when otherwise they might have joined Moslems in the Mohurram festival. During a similar festival at Poona in 1894, a communal riot erupted when a mela (religious gathering), disobeying the law, played music outside a mosque.

NATIONAL SOCIAL CONFERENCE. A split in the I.N.C. between reformists and Maharashtrian revolutionaries was avoided, Dec. 1895, when Gopal Krishna Gokhale, a Chitpavan Brahmin, and M. G. Ranade gave in to Tilak's insistence that the National Social Conference (founded by Ranada, 1887), a social reformist organization, be prohibited from using the I.N.C. tent after a meeting at Poona.

SHIVAJI FESTIVAL. Tilak's inauguration, 15 Mar., 1895, of the Shivaji festival in Raigarh and Poona, honoring the Maratha soldier who killed Aurangzeb's

general, Afzul Khan, in 1659 and became the 1st Maratha king, heightened the mass revolutionary character of the Maharashtrian nationalist movement.

CONVICTION OF TILAK. The Bombay High Court tried and convicted Tilak, 8-14 Sept., 1897, for seditious editorial writing in his paper, *Kesari*, the previous 15 June. Tilak's sentence of 18 months, later reduced to 12, led even moderates to protest the injustice of the sentence.

1899-1914

VICEROYALTY OF LORD CURZON. Lord Curzon (viceroy, 1899-1905) took office on 6 Jan., 1899. He instituted a policy of administrative efficiency, creating, 1901, the Northwest Frontier Province and reducing the area of the Punjab. During Curzon's viceroyalty, the incongruity of British policy and Hindu nationalist expectations and demands contributed to the inability of I.N.C. moderates to mollify the extremists. Moslem separatist aspirations aggravated already strained communal relations.

PROPOSED PARTITION OF BENGAL. Curzon announced, 7 Dec., 1903, that, to improve administrative efficiency, Bengal would be divided: Chittagong, Dacca, Mymensingh, and the Tippera Hills would be transferred to Assam, and Chota Nagpur to the Central Provinces, with some parts of the Central Provinces and Madras going to Bengal. The proposed arrangements would have reduced the population of Bengal from 78.5 m. to 67.5 m., and the new province of East Bengal and Assam would have had a Moslem majority. On 19 July, 1905, Curzon, with the reluctant approval of the India Office, published the official decision to divide Bengal. Surrendranath Bannerjee led a mass meeting at Calcutta, 7 Aug., which resolved to boycott British goods. Antipartition activity also included the Swadeshi movement, designed to promote indigenous production of cloth and other goods and a national education program. On 16 Nov., 1905, Bengali nationalists established the National Council of Education, which sponsored the Bengal National College, 1 June,

1906. Nationalist agitation led to communal riots. Antipartition activity was not confined to Bengal; Tilak promoted the Swadeshi movement in Maharashtra.

MOSLEM POLITICAL DEMANDS.

Led by the Aga Khan and Nawab Moshin-ul-Mulk, 35 Moslems presented, 1 Oct., 1906, to Lord Minto (viceroy, 1905-10) at Simla a set of political demands, including separate Moslem electorates for the municipalities and legislative councils. Minto gave a sympathetic reply.

ALL-INDIA MOSLEM LEAGUE. Responding to the proposal of Nawab Salimullah Khan of Dacca, that Moslems form an overtly political organization, Moslem leaders met at Dacca and established the All-India Moslem League, 30 Dec., 1906. The League's constitution, drafted in 1907, proclaimed as its goals the promoting of constitutional and administrative changes favorable to the Moslem community and encouraging Moslem loyalty to British rule.

DEPORTATION OF NATIONAL-

IST LEADERS. Peasant unrest in the Punjab due to dissatisfaction with the Punjab Colonization Bill, which permitted land inheritance by the soldier pensioners in Chenab Colony only by primogeniture, led to the arrest and deportation, 9 May, 1907, of Lajput Rai, who had spoken in opposition to the bill, on charges of sedition. On 3 June, Ajit Singh, another agitator, was similarly deported. The viceroi disallowed the bill, May, and released the deportees, 18 Nov.

I.N.C. SPLIT. When, in Dec. 1906, the extremists failed to elect their candidate president, and when, as president, Dada-bhai Naoroji proclaimed India's birth-right to be *swaraj* (self-rule), the I.N.C. was held together only by its capacity to live with the moderates' and extremists' divergent interpretations of its goals, and also by an ability to tolerate differing interpretations of the resolution upholding the legitimacy of the Swadeshi movement in Bengal. On 26 Dec., 1907, at Surat the extremists, frustrated by the moderates in an attempt to nominate Lajput Rai as president, fearful that the moderates would soften the 1906 resolution on the Swadeshi movement, and

enraged by the refusal of the chairman of the Reception Committee, N. Malvi, to recognize Tilak for the floor, bolted the meeting. Not until 1916 was the I.N.C. reunited.

INDIA COUNCILS ACT. 25 May, 1909. The India Councils Act of 1909 (Morley-Minto Reforms) (1) increased the number of elected and nominated members of the central and provincial legislative councils (with a majority of nonofficials in the provincial councils); (2) enhanced the powers of these councils by permitting elected members to table resolutions and ask supplementary questions; and (3) extended the number of interest groups represented in the councils. Although the announcement, 1 Nov., 1908, of impending reforms was welcomed by I.N.C. moderates, the regulations, which included the retention by the viceroy of power to disqualify any person from membership in any council, were attacked at the 1909 I.N.C. meeting at Lahore.

McCALLUM-CREWE REFORMS. In Ceylon several small reform societies organized by western-educated Ceylonese pressed demands for constitutional reform, 1910, including power for Ceylonese in the Executive Council and elections to the Legislative Council. Sir Henry McCallum (gov., 1907-13) rejected most of these demands mainly on the ground that they came from atypical Ceylonese who, in contrast to himself who could rely on the reports of the government agents, had no contact with the masses. Nevertheless, the McCallum-Crewe Reforms introduced the principle of election to the Legislative Council by giving Ceylonese who had a yearly income of Rs. 1,500 and who could pass the Senior or Junior Cambridge Examination or a comparable examination the right to elect 1 member to the Legislative Council. The burgher member was to be elected by burghers, and one European urban member and one European rural member were to be elected by their constituencies. There were to be 10 nonofficial members (6 nominated to represent communal groups as well as the 4 elected members) and 11 official members.

DELHI DURBAR. Dec. 1911. At a durbar in Delhi, attended by the new King-Emperor George V and Queen Mary, the emperor announced (1) the repeal of the partition of Bengal, which had the effect of reuniting the 2 Bengals, reducing the status of Assam to a chief-commissionership, and creating a new province, Bihar and Orissa; (2) the raising of the status of Bengal to that of a governorship; and (3) the transfer of the capital of British India from Calcutta to Delhi. (*Cont. p. 455.*)

FRENCH NORTH AFRICA

1870-99

REVOLT IN THE KABYLIA. As a result of a reduction in strength of French garrisons during the Franco-Prussian War and of a reaction against land expropriation and Jewish naturalization (by the Crémieux Decrees, 1870), the Moqrani family and the Rahmaniyya Order led a revolt in the Kabylia (Algeria) in 1871. Adm. Louis Henri de Gueydon (1809-86), the French commander, needed 80,000 soldiers to suppress the revolt. The Kabylia had to pay indemnities, abandon 500,000 more hectares of land, and, in some cases, suffer criminal penalties.

GROWTH OF CIVILIAN POWER IN ALGERIA. The civilian population of the Algiers area expelled the military in 1870 and temporarily established the revolutionary government of the "commune" of Algiers. Although a military regime returned the following year, the authority of the governor general was reduced, civilian territory steadily grew in extent, and "mixed communes" began to replace the Arab bureaus. The influence of Archbishop (later Cardinal) Lavergne (1825-92), who had arrived in Algeria in 1867 and founded the White Fathers order soon afterward, was significant in these changes.

DEBT QUESTION IN TUNISIA. The Husaynid (Husaynid) beys, nominally pashas of the Ottoman sultan, progressively lost their autonomy to Europeans during the later 19th cent.

Under Mohammed as-Sadiq (Muhammad as-Sadiq) (ruled 1859-82), haphazard efforts at modernization by the Turkish elite continued, and the tax burden on the peasants grew heavier. The expanding power of Prime Minister Mustafa Khaznadar (1837-73) meant increasing corruption and indebtedness to European interests, and helped bring about the creation, 1869, of a Financial Commission for the Tunisian Debt composed of French, Italians, Maltese, and Tunisians. Efforts to reform and to renew ties with Constantinople by Prime Minister Khayr ad-Din (ad-Din), 1873-77, failed, mainly because of sharpening rivalry between France and Italy in Tunisia as represented by their respective consuls, Roustan and Maccio. In 1878 the Financial Commission collapsed, and France obtained British and German acquiescence in the event she decided to declare a protectorate; Italian power was unable to check the ambitions of the dominant French.

RULE OF SULTAN HASSAN OF MOROCCO. In spite of his reputation in Europe as an admirable ruler, Sultan Mawlay Hassan (ruled 1873-94) was not able to arrest the decline of the Moroccan economy and independence. Plagued by inadequate finances and a weak army, he exerted little sustained control over the mountainous and southern portions of his kingdom, and could not protest the Madrid Convention, 1880, by which European states joined Britain and France in receiving rights to most-favored-nation treatment and a guarantee of protection for their nationals in Morocco.

ESTABLISHMENT OF THE TUNISIAN PROTECTORATE. An incursion into Algeria by mountain brigands provided the pretext for French occupation of Tunisia in 1881. There was no resistance, and the Treaty of Kassar Said (I.e. Bardo), signed in May, temporarily authorized the French resident minister to handle external affairs and assist the bey in financial matters. After an uprising in the center and south under Ali ben Khalifa ('Alī ibn Khalifa), France signed the La Marsa Convention, 1883, which committed the bey to ad-

ministrative, judicial, and financial reforms suggested by the French government; this declaration contained no time limit.

FRENCH RULE IN TUNISIA. As minister of foreign affairs, president of the bey's council, and commander of virtually all military forces in the country, the French resident general became the real ruler of Tunisia. The beylical family received a subsidy and continued to hold office until 1957. French civil controllers oversaw the existing Tunisian provincial administrations, while French technicians and teachers immigrated in increasing numbers to man the developing modern sectors of the economy and society. The traditional sectors declined in importance. In 1883-84 France guaranteed the Tunisian debt and abolished the Financial Commission, and the European powers renounced their consular jurisdictions. In 1891 France replaced the piaster with the franc, and instituted, 1892, compulsory military service in a Tunisian army, a tradition resulting in significant Tunisian participation (involving the death of 10,000 troops) in World War I. The customs privileges of the European powers were revoked, 1896-97, but Italy continued to possess some special rights and was able to exert great influence because of large-scale Italian immigration into Tunisia. The Italian press, banks, schools, and private organizations were powerful.

FRENCH EXPANSION IN THE SAHARA. French interest in a trans-Saharan railway linking her North and West African possessions rose sharply in the late 1870's, but declined again after the massacre of the Flatters exploratory mission, 1881, by Tuareg and Chamba Arab tribesmen. Also in 1881 a fraction of the Awlad (Awlād) Sidi Shaykh revolted in the northwestern Sahara under Bou Amama (Bu 'Amāma), but were suppressed by a large French force the following year. Later in the decade France successfully discouraged Moroccan claims to the Tawāt (Tawāt) oases, but limited her own expansion to the capture of El-Golēa, 1891. In 1899 the French took In-Salah, a commercial center on the edge of

Tawāt. The military expedition led by Foureau and Lamy, 1898-1900, crossed the Sahara via the Hoggar (Ahaggar) to join in a convergence of French columns around Lake Chad. The Hoggar Tuareg officially submitted to French control, 1905. During 1906 the completion of the railway from Oran to Colomb Bechar in the northwestern Sahara provided a base for eventual French rule in Morocco.

1900-1914

ECONOMIC DEVELOPMENT OF ALGERIA. In 1900 the departmental structure in Algeria was abolished and the territory received full administrative and financial autonomy. The governor general's powers were increased and the *délégations financières*, a group representing various Euro-Algerian economic interests, obtained the authority to decide on budgets. Under the impetus of this autonomy and through the application of new techniques, the production of grapes and wine, citrus fruits, and other agricultural commodities increased markedly, and the European and especially the indigenous population grew at a rapid rate.

GROWTH OF FRENCH INFLUENCE IN MOROCCO. During the dictatorial regency of Vizir Ba Ahmad ben Musa, 1894-1900, and the efficient reign of Mawlay Abd al-Aziz ('Abd al-'Aziz), 1900-1909, customs revenues from European trade probably constituted more than half the government revenue of Morocco. The influence of France grew relative to that of the other European powers. At the turn of the century France was consolidating her position in the western Algerian Sahara and regulating her border disputes with Morocco. By 1905 Italy and Britain had acquiesced in French preponderance in the sultanate, and Spain had agreed to a parallel hegemony for herself in the northern zone. France increasingly determined the general conduct, customs policy, and budget of the Moroccan state.

By contrast the domain of the Sultan and his makhzan (administration) was shrinking, and revolts were increasing in

frequency and seriousness. Bou Amama, Raisuli, Ma al-Ainin (Ainin) and his son al-Hiba (Hiba), and others were all active in attacking the sultanate or the Europeans from bases in the mountains or the south.

RISE OF TUNISIAN NATIONALISM. A demand for reform, 1906, by a group of "Young Tunisians" developed by 1908 into a movement for a constitution. In the tense atmosphere resulting from the Italian occupation of Tripolitania in 1911, anti-European sentiment increased, and erupted into protests and riots in and around Tunis, 1911-12. This proto-nationalist activity was confined to the capital and subsided during World War I.

GERMAN INTERVENTION IN MOROCCO. In order to embarrass France and win economic advantages, Germany challenged French preponderance in Morocco on 3 occasions between 1905 and 1912. In 1905-6 she disputed the 1904 agreements substantiating French hegemony, but obtained only an ineffectual statement (Algeciras, 1906) on the internationalization of Morocco. During 1906-8 French troops intervened to quell disturbances at Oujda and Casablanca. Reaction against this helped Mawlay Hafid, whose sympathies were pro-German, to emerge as the new sultan, 1908-9. The stage was now set for the 2nd crisis, 1909, when Germans encouraged French Legionnaires in Casablanca to desert. The resulting controversy was settled in favor of France by the International Court at The Hague. Soon, however, revolts spread throughout the country, and Mawlay Hafid had to request the assistance of French troops against the threat of a rival sultan. The last Franco-German controversy over Morocco followed the arrival, 1911, of the gunboat *Panther* in Agadir Harbor. After an argument, an accord cleared the air, and the 1912 convention establishing a French protectorate over Morocco became possible: Gen. Louis Lyautey (1854-1934) and the new sultan, Mawlay Yusuf (Yūsuf) (ruled 1912-27), then instituted a system of indirect rule and began a slow "repacification."

SPANISH MOROCCO. After the massacre of some Spanish miners near Melilla, 1910, Spain conquered Larache and Alcazarquivir (al-Ksar al-Kabir). The following year she signed a convention with France creating Spanish Morocco, selecting a khalifa (khalifa) (lieutenant) nominally responsible to the sultan, and projecting the construction of a jointly controlled railway from Tangiers to Fez. (*Cont. p. 469.*)

THE PARTITION AND COLONIZATION OF TROPICAL AFRICA

TROPICAL AFRICA IN 1870. Alien rule in tropical Africa in the 1870's was generally restricted to a very few coastal enclaves. The French were an exception in that they had penetrated into the interior behind Senegal, and Pierre Savorgnan de Brazza (1852-1905) was in the process of securing treaties on their behalf with chiefs in the River Ogooué region. Elsewhere, the French occupied coastal trading posts along the Ivory Coast and Dahomey, and had a settlement at Gabon. The Portuguese had tried unsuccessfully to extend their trading activities into the interior of Mozambique and Angola. They also controlled the islands of São Tomé and Fernando Po in the Bight of Biafra and had some influence in Portuguese Guinea, south of Senegambia. Britain had de facto control over the Sultanate of Zanzibar, but had no plans for any official assumption of sovereignty in East Africa. The British West African colonies of Lagos, Sierra Leone, and the Gambia were surrounded by viable African states. On the Gold Coast, however, British administration extended over large numbers of coastal peoples.

The Congo

1870-85

INTERNATIONAL AFRICAN ASSOCIATION. At a meeting in Brussels, Sept. 1876, King Leopold II of the Bel-

gians (1835–1909) took the 1st step toward making himself the personal ruler of the Congo. The delegates he persuaded to come to the Brussels meeting were not government representatives but distinguished Europeans and Americans from many fields. They agreed to establish an International African Association. At its 1877 meeting the Association declared its goals to be the suppression of the slave trade and the gathering of scientific information.

STANLEY EXPEDITION. Henry Morton Stanley (1841–1904), who had traced the Congo from the Lualaba to the Atlantic, 1874–77, was recruited by a special committee of the Association to “open up” the region, Aug. 1879. He stayed and worked almost continuously in the Congo until 1884, building roads, establishing settlements, and making treaties with local chiefs.

DE BRAZZA EXPEDITION. From 1879 de Brazza, who had explored the Ogooué, 1875–78, became an official French agent. He reached the north bank of the Congo, 1880, and obtained numerous treaties, 1880–82. The French government endorsed his work and financially supported it. The result was French control of the north bank of the Congo, while Stanley’s activities gave Leopold’s Association control of the south bank.

ANGLO-PORTUGUESE TREATY. Becoming alarmed at the activities of Stanley and de Brazza, the Portuguese pressed their claims northward from Angola to the Congo mouth. Negotiations with Britain began, Nov. 1882, and the 2 countries signed a treaty, Feb. 1884. An Anglo-Portuguese Commission was to guarantee freedom of navigation on the Congo to all nations, and Britain was to recognize Portuguese claims as far as the Congo estuary and also a Portuguese right to the enclave of Cabinda to the north. The treaty was roundly condemned both in Britain and on the Continent, and was shelved when Portugal failed to convene an international conference on the issue.

BERLIN WEST AFRICA CONFERENCE. 15 nations attended a conference

summoned by Bismarck to Berlin, Nov. 1884–Feb. 1885. The Congo basin was declared a free-trade area, all rivers in the region were to be open to all, and international action was to free the area from the slave trade. Throughout the continent, notice was to be given of new annexations, and occupation, to be valid, must be effective.

INDEPENDENT STATE OF THE CONGO. The Berlin Conference recognized the possessions of the International African Association as the Independent State of the Congo and guaranteed the new state’s neutrality. King Leopold became its sovereign, Apr. 1885. Initially the activities of Leopold’s agents were confined to the lower Congo, where a railway from the coast to Léopoldville was begun, while the eastern Congo was left in the hands of Arab-Swahili slavers from Zanzibar.

1886–1914

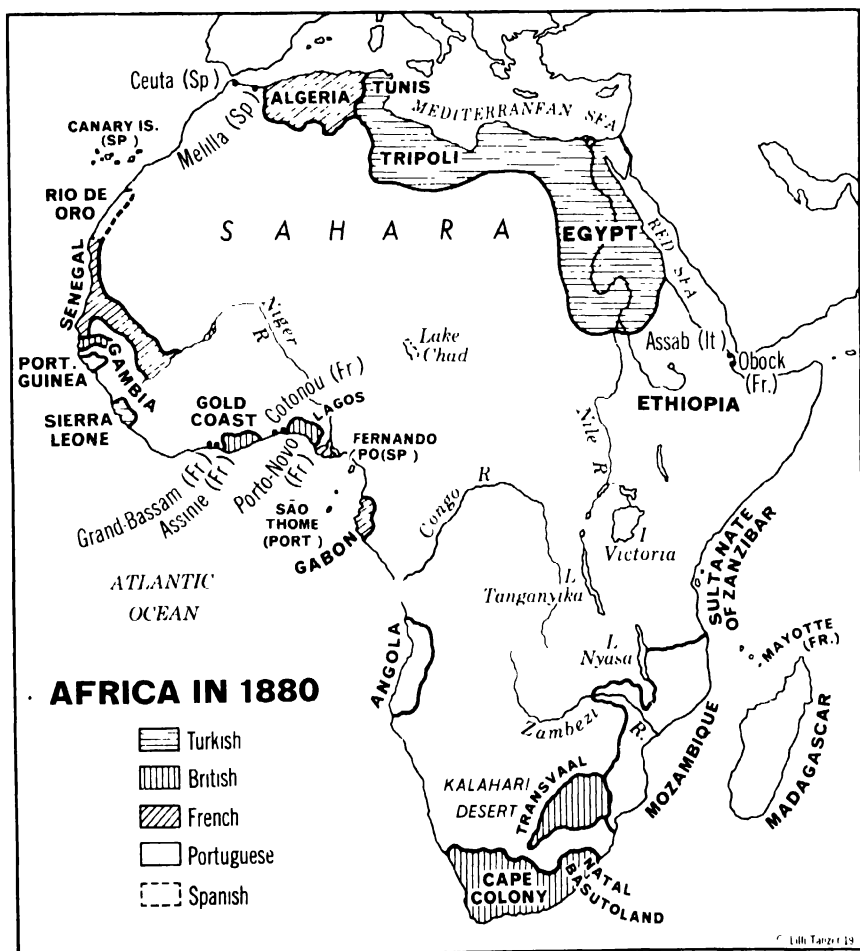

COMPETITION FOR KATANGA. The Katanga region of the interior, even then famed for its rich mineral deposits, was ruled by Msiri, who directed a commercial empire whose influence extended from the Indian to the Atlantic Ocean. The activities of missionaries at Msiri’s capital inspired fears on Leopold’s part that another European power might be about to secure the region. His apprehensions were justified, since representatives of the British South Africa Co. were making determined efforts to persuade Msiri to sign away his sovereignty. The company’s diplomacy failed, however, 1890, and the Belgians were on the scene in 1891, offering protection to Msiri. The chief refused and, when civil war broke out in Katanga, suspected the Belgians of intending to join an alliance against him. He therefore attempted to open negotiations with Rhodes’s agent once again, but his letter was intercepted by W. G. Stairs, an agent of Leopold. Stairs arranged to have Msiri killed, and Katanga became part of the Congo Independent State. By 1894 Belgian military operations had driven the slavers from the eastern Congo,

though fighting and rebellions continued to c. 1900, after which Leopold's control over the region became firm.

CONGO ATROCITIES. King Leopold's commercial enterprises required African labor, and the conditions under which Africans were forced to live and work in the Congo were seen to be no better than the slavery against which the International African Association originally campaigned. European and American humanitarians became concerned over reports of atrocities in the 1890's, and a report by Roger Casement (1864-1916), the British consul, forced Leopold to take action in 1904. A commission investigated and reported, but outrages continued.

ESTABLISHMENT OF THE BELGIAN CONGO. International pressure overcame Belgian opposition to an assumption by the Belgian home government of responsibility for the Congo Independent State. Leopold surrendered control of the Congo to the Belgian parliament, 18 Oct., 1908, and died the following year.

RAILWAY TO KATANGA. Belgian administration in the Congo continued to concern itself more with the exploitation of the country's resources than with the improvement of the human condition. Foreign firms and concessionnaires benefited from improvements in transport, and the completion of the railway to Elisabethville, 1910, permitted an ever-increasing

ing extraction of the mineral wealth of Katanga. (*Cont. p. 473.*)

Central Africa

1870-90

DEATH OF LIVINGSTONE. The last journey of David Livingstone (1813-73) began from Zanzibar in 1867. He traveled into the interior behind Lakes Nyasa and Tanganyika in the hope of finding the source of the Congo, which he believed might also be the true source of the Nile. By 1871 he had reached the Lualaba, out of which the Congo flows, and later in that year was "found" by H. M. Stanley. Together the 2 men disproved any connection between Lake Tanganyika and the Nile system, but Livingstone, sick in body and mind, continued alone on a last journey south toward Katanga, where he still hoped to find the ultimate sources of both great rivers. He died near Lake Bangweulu, May 1873.

MISSIONARY ACTIVITY IN NYASALAND. Livingstone's example and the lingering message of Thomas Fowell Buxton (1786-1845) encouraged the forces of "Christianity and Commerce" to labor for civilization in Central Africa. Commercial concerns soon joined missionaries in attempting to rid the region of the slave trade, exploit its resources, and convert the population. The missions acted independently of European governments, and established in the 1870's networks of hospitals, schools, and trading posts.

ANGLO-PORTUGUESE RIVALRY. The Portuguese considered the region inland from Mozambique to be their own and, after 1880, began pressing their claims. The missionaries asked for British protection, and the British government sent its 1st consul to the region in 1883. The Portuguese were not deterred, however, and throughout the 1880's they attempted to secure treaties with African chiefs and to interfere with the passage of goods and equipment to the traders and missionaries near Lake Nyasa. Britain refused to heed the missionaries' call for a protectorate.

RUDD CONCESSION. Lobengula (1833-94), ruler of the Ndebele state, the most powerful African polity in the area, made treaties of friendship with the Transvaal, 1887, and with Cape Colony, 1888. He also signed over to a representative of Cecil Rhodes, 30 Oct., 1888, exclusive mineral rights to Matabeleland. Rhodes's task was then to secure the concession against Portuguese and Afrikaner counterclaims, an aim shared by the British government.

B.S.A. CO. CHARTER. Rhodes proposed to the British government that the British South Africa Co. be allowed to colonize and administer Bechuanaland and Matabeleland, and to build rail and telegraph lines north to the Zambezi. The company received a royal charter, 29 Oct., 1889. Rhodes agreed to support the efforts of (Sir) Harry Johnston (1858-1927), appointed consul for the Nyasaland region.

DECLARATION OF BRITISH PROTECTORATE. Johnston declared a protectorate over the Shire highlands, 14 May, 1891, and proceeded to negotiate a number of agreements with chiefs beyond the Shire. These were used to support British claims against Portugal, and the British government, early in 1890, threatened to dispatch gunboats to Mozambique. The Portuguese withdrew from the Shire.

LOCHNER TREATY. In Barotseland, west of the River Kafue, Lewanika (c. 1843-1916), *litunga* (king) of the Lozi, ruled a large area. Rhodes wanted to secure mineral rights in the region, and Lewanika was content with the prospect of a British presence between his people and the Ndebele of Lobengula. He therefore signed a treaty with Rhodes's representative, Frank Lochner, 27 June, 1890.

PIONEER COLUMN. Lobengula still controlled Matabeleland and Mashonaland, but Rhodes proposed to settle white farmers in the region in order to safeguard the mineral rights he had acquired against any move by the Portuguese or Afrikaners. South Africans and Britons, led by Dr. Leander Starr Jameson (1853-1917), crossed into Mashonaland, 1890, bypassed Lobengula's capital near Bula-

wayo, and established Fort Salisbury. Other whites soon followed, and Rhodes's grip on Mashonaland was consolidated.

the British government of Nyasaland. British policy remained unchanged. (*Cont. p. 471.*)

1891-1914

CONQUEST OF THE NDEBELE. Although the whites from the south attempted to avoid conflict with Lobengula in Matabeleland, the proximity of the 2 groups produced considerable tension. War finally broke out, 1893, and the Ndebele proved no match for the cannon and machine guns brought against Lobengula's capital. After the conquest, both the Ndebele and the Shona peoples were subjected to humiliations at the hands of the whites.

REVOLT OF NDEBELE AND SHONA. African resentments culminated in revolt, 1896, and the whites were forced to fight on 2 fronts. Rhodes personally convinced the Ndebele to lay down their arms and accept company rule, but various Shona chiefs were not subdued until 1897. Atrocities were committed on both sides before the settlers confirmed their military superiority.

BRITISH RULE IN CENTRAL AFRICA. Although Central Africa was the domain of both the B.S.A. Co. and the British government, the lot of the Africans differed little from one part of the region to another. Land was alienated, reserves created, taxes imposed, and labor conscripted. Railway extensions contributed to economic development, both of agriculture and mining, but the Africans, subjected to the humiliations of racial segregation, did not appreciate the improvements.

AFRICAN PROTEST. African dissatisfaction with white rule was demonstrated primarily through the agency of separatist Christian churches. These churches were evangelistic, and charismatic preachers bewailed African suffering and condemned European duplicity. John Chilembwe (1871?-1915), a Nyasa separatist leader who actively opposed British policy, was particularly outraged when Africans were forced to fight against the Germans in Tanganyika. In 1915 he organized an unsuccessful revolt against

East Africa

1870-95

SUPPRESSION OF THE SLAVE TRADE. Sultan Barghash (ruled 1870-88) was placed on the throne of Zanzibar by the British on the death of Sultan Majid, and Sir John Kirk (1832-1922), the British consul, pressed the new ruler to abolish the slave trade. Barghash resisted because of the dependence on the trade of Zanzibar's economy. In 1873, however, the threat of force by a special British envoy, Sir Bartle Frere, and the persuasive powers of Kirk convinced the sultan of the need to sign a treaty abolishing the slave trade, 5 June, 1873. The British aided Barghash in putting down the various revolts which followed the proclamation suppressing the trade. At this period the British government refused to assume territorial commitments, but dominated the sultanate so completely that it was able to prevent Sir William Mackinnon (1823-93) from accepting a private concession offered him by Sultan Barghash in 1877.

GERMAN COLONIZATION. Returning to Germany from Britain in 1883, Karl Peters (1856-1918) formed, together with other imperialists, a Society for German Colonization. Without the sanction of his government, Peters and his party traveled to Zanzibar, 1884, soon crossed to the mainland, and proceeded inland beyond Bagamoyo. By Dec. 1884 they had secured 124 treaties with African chiefs. Germany had thus unwittingly fallen heir to responsibility for some 2,500 sq. mi. of eastern Tanganyika. Bismarck recognized Peters's acquisitions at the end of the Berlin West Africa Conference, 1885.

ANGLO-GERMAN AGREEMENT OF 1886. German activities in East Africa extended to the Kilimanjaro area and to Witu, north of the Tana River, 1885. The British remained reluctant to act, but when German warships appeared in Zan-

zibar Harbor they changed their minds. Britain, France, and Germany, conferring together in the "spirit of Berlin," decided that the sultan of Zanzibar's authority extended for a depth of 10 mi. along the East African coast between the Ruvuma (Rovuma) and Tana Rivers. On 7 Dec., 1886, Germany and Britain determined their respective spheres of influence, which Sultan Barghash reluctantly accepted.

IMPERIAL BRITISH EAST AFRICA CO. The government of Lord Salisbury, realizing that the British occupation of Egypt was to be a long-term affair, decided that no other European nation must be allowed to control any part of the Nile valley. The Mahdi's forces held the middle reaches of the river in the Sudan, but religious and political strife still divided the state of Buganda at the headwaters of the Nile on Lake Victoria. Salisbury therefore granted a charter, but no financial support, to Mackinnon's Imperial British East Africa Co., 3 Sept., 1888, which received from the sultan of Zanzibar authority over his coastal possessions. Also in 1888, the German East Africa Co. prevailed on the sultan to lease to it his mainland strip in Tanganyika, and both companies looked toward the wealth and strategic position of Buganda in the interior.

RELIGIOUS RIVALRIES IN BUGANDA. In 1888 the Kabaka (king) Mwanga of Buganda attempted to deprive the contending religious factions at his court of their growing influence. The Moslems, Catholics, and Anglicans united against him, however, and he was temporarily deposed. The Moslems then turned the Christians out of Mengo, the capital. In 1889 Mwanga mobilized Christian support and ousted the Moslems. The latter were soon joined, however, by the forces of the Omukama (king) Kabarega of Bunyoro, Buganda's traditional enemy. Once again Mwanga and his Christian supporters were turned out, only to return, 1890, to occupy Mengo.

ANGLO-GERMAN TREATY OF 1890. The activities of Karl Peters forced the British to take seriously the German threat to the Nile. During the struggles in

Buganda, Peters had secured Mwanga's signature to a treaty of friendship with the German emperor. The I.B.E.A. Co.'s representatives were not able to match its terms, and the British government grew alarmed. While the company sent Capt. Frederick Lugard (1858-1945) at the head of a small armed force to establish its authority in Buganda, Salisbury entered into negotiations with the Germans. By giving up the strategic North Sea island of Helgoland and all remnants of Johnston's and Rhodes's Cape-to-Cairo dream, Britain acquired the future Uganda, the German protectorate at Witu, and recognition of her protectorate in Zanzibar, 1 July, 1890. The Germans, though facing active resistance in all parts of the country during the 1890's, were soon in control of the future Tanganyika. Britain had successfully prevented the intrusion of other Europeans into the region of the headwaters of the Nile.

ACTIVITIES OF LUGARD. The I.B.E.A. Co., with headquarters in Mombasa, engaged in little commercial activity in Buganda. Lugard made a show of force there, 1890, and convinced Mwanga and his chiefs to grant "suzerainty" to the company for 2 years. In 1891, although he failed to reconcile the Anglican and Catholic factions, Lugard led a Christian force against the Moslems, defeated them, and temporarily united the Christians. While Lugard was securing further protectorates in the Ankole and Toro regions to the west, the company failed in its appeals for parliamentary support and decided to withdraw from East Africa. Before the withdrawal could be effected, however, Lugard seized the opportunity to overwhelm Mwanga and the Catholics, and prepared to leave behind an Anglican establishment. In the autumn of 1892 an intense public-opinion campaign in Britain was partially successful in turning the attention of the cabinet to Uganda. Lord Rosebery, the foreign secretary, sent the British consul in Zanzibar, Sir Gerald Portal (1858-94), to conduct an investigatory mission in Uganda.

UGANDA PROTECTORATE. Portal's mission succeeded so well that, on 1 Apr., 1893, the Union Jack was raised at Kam-

pala. Portal made sure that the Catholic party regained some measure of equal status with the Anglicans, and proposed that Uganda be retained because of Britain's strategic interest in Egypt. The British parliament approved, 27 Aug., 1894.

EAST AFRICA PROTECTORATE. Convinced of the need for an East African Railway if Uganda's resources were to be exploited, Parliament declared a protectorate, 18 June, 1895, over the region where it would have to be built. The East Africa Protectorate later became Kenya.

1896-1914

EXTENSION OF BRITISH AUTHORITY IN UGANDA. In 1893 the remaining British forces in Uganda had helped the Christians put down a Moslem revolt which had spread westward into Toro. A prolonged war culminated in the flight of Kabarega of Bunyoro and the alienation of much of his land. Mwanga, meanwhile, had become little more than a figurehead under British control, and he fled from Mengo, 1897, to conduct yet another battle to regain power in his capital. His Christian chiefs supported the British, however, and Mwanga was soon forced into exile. His infant son was placed on the throne of Buganda, and the *katikiro* (prime minister), Apolo Kagwa (1869-1927), carried the most influence among the Council of Regents. As the British extended their authority beyond Buganda, they ruled either directly as administrators or through Ganda proconsuls.

BUGANDA AGREEMENT. In 1899 Harry Johnston was sent to Uganda to report on administrative developments and plans. His primary concern was financial, and his 1st proposals regarding land reform favored influential chiefs. The establishment of the *lukiko* (parliament) increased the political power of the appointees of the kabaka and gave Buganda a special position within the Uganda Protectorate, 10 Mar., 1900. Ganda bureaucrats controlled a secular oligarchy which ran the country.

EAST AFRICAN RAILWAY. The British used Indian army troops to dis-

perse African peoples who were obstructing work on the railway inland from the coast. At a cost of almost £8 m., the route was finally completed as far as Lake Victoria, 1901. In 1902 Uganda's eastern province was transferred to the East Africa Protectorate, thus placing the railway under a single colonial administration.

ALIENATION OF KIKUYU LAND. Sir Charles Eliot (1862-1931), commissioner for the East Africa Protectorate (later Kenya), was responsible for making the new railway pay, and he decided on a scheme of white settlement. The highland region was considered to be relatively uninhabited and highly suitable for European farming. The Protectorate government ignored African land rights, and by 1904 had allotted nearly 1 m. acres to fewer than 400 white settlers. Many Africans, meanwhile, were assigned to "reserves." In 1908 taxation of Africans was proposed in order to make them sell their labor to white farmers.

MAJI-MAJI REBELLION. The Maji-Maji Rising, 1905, was the most serious of several faced by the German administration of Tanganyika. It reflected a deep resentment against the uprooting of African traditions, and spread quickly. Leaders distributed *maji* (water), or medicine, which was said to make believers immune to European bullets. The Germans moved systematically to prevent the larger tribes in the west from joining the revolt, and the troubles were over by Jan. 1907. African casualties were very high and a severe famine resulted from the dislocations of war.

INAUGURATION OF THE LEGISLATIVE COUNCIL. Control of the East Africa Protectorate passed from the Foreign to the Colonial Office in 1905, and the commissioner, Sir James Hayes Sadler (1851-1910), became governor. An 8-member Legislative Council 1st met in 1907. The views of the white settlers were well represented in the Council by their leader, Lord Delamere (1870-1931).

SYSTEMATIC ADMINISTRATION AND ECONOMIC DEVELOPMENT. In both the German and British areas efficient administrative procedures were in-

stituted. Railway lines were rapidly extended and cash crops introduced. In Tanganyika the value of sisal exports increased from more than 1 m. marks in 1906 to more than 7 m. in 1912. Coffee, cotton, rubber, hides, and skins replaced ivory as East Africa's staple export, and livestock were introduced on the European farms in the highlands. In Uganda cotton was so successful that by 1915 the imperial grant-in-aid could be withdrawn. (*Cont. p. 471.*)

West Africa

1870-84

FANTI CONFEDERATION. After the announcement of the decision that Britain would withdraw gradually from the Gold Coast (recommended by a Parliamentary Select Committee in 1865), local British administrators decreased their activities. A number of Fanti chiefs reached an agreement to defend their own interests against their common enemy, Ashanti. On 24 Nov., 1871, 31 signatories to a Confederation Agreement envisaged the union of their states, a common assembly, and a constitutional monarchy. They planned a wide range of governmental services under the protection of the British crown. The British administration, however, took offense and charged the Fanti leaders with conspiracy, thus ending the proposed confederation.

WAR BETWEEN BRITAIN AND ASHANTI. Frequent disturbances caused the Gold Coast government to seek to subdue the Ashanti. A force under Sir Garnet Wolseley (1833-1913) looted and burned Kumasi, 6 Feb., 1874, but did not depose the *asantehehene* (king of Ashanti).

FRENCH THRUSTS INTO THE INTERIOR. From Senegal, where Brière de l'Isle became governor in 1876, the French turned toward the Sudan to prevent the British from securing rights in the interior. In 1878 Capt. Joseph Galliéni (1849-1916) won victories, built a fort in Tokolor country, and concluded treaties naming France protector of the region. After 1880, at the urging of de

l'Isle, the French began to construct a railway from Dakar to St.-Louis. By 1881-82 Col. G. Borgnis-Desbordes had led a force up the Senegal to forestall the British on the Niger, and French traders were competing energetically with the British all along the Gulf of Guinea.

COMPETITION ON THE COAST. The United African Co. of George Goldie Taubman (1846-1925), active on the Niger from the Delta to the Benue confluence, became the operational base for British interests. Meanwhile, French merchants were gaining influence in the interior of the Ivory Coast, beyond their posts at Assinie and Grand Bassam. The French navy occupied Porto Novo and Cotonou on the Dahomey coast, 1883, in order to challenge the British at Lagos. German missionaries and merchants had long been active in most of these places and, by 1883, controlled the trade of the Togo region. German firms had also prospered in Cameroon, and in both areas merchants were urging their government to annex their holdings. Annexation became possible after Bismarck had taken the 1st step toward the creation of a German overseas empire in South-West Africa in early 1884.

BRITISH EXPANSION IN THE NIGER REGION. Goldie's continued struggle with French competitors on the Niger and the appearance of Imperial Germany at Cameroon led the British government to order its consul, Edward Hewett, to secure treaties along the coast, 1884. Joseph Thompson, acting for Goldie's new National African Co., secured an agreement with the sultan of Sokoto, 1 June, 1885, in the north.

1885-1914

FRENCH CAMPAIGNS IN WEST AFRICA. After the Berlin Conference of 1884-85, the grand design of the French was to join their African possessions together at Lake Chad. Control of the upper and middle Niger was essential to this end, and campaigns were waged during the following years against resisting Africans. In 1887 French forces con-

quered the Futa Jallon and secured the headwaters of the Gambia, Senegal, and Niger rivers. French generals met stronger opposition, however, from Samori Touré, a Mande (Mandingo) chief who had been building an empire in the western Sudan for 20 years. After being defeated by the French in battles in 1886 and 1889, Samori avoided capture and retired to regroup his forces. From France's equatorial territory, de Brazza's followers were slowly moving north to the Ubangi, Chari, and Adamawa regions by continuing to make treaties with local chiefs. From her stations on the Slave Coast, France gradually took over the state of Dahomey. On the Niger, French forces occupied Segu in 1890, and forced Ahmadu, the son of al-hajj Omar (al-hājj 'Umar), to flee.

BRITISH CONSOLIDATION ON THE NIGER. As a result of the agreements at Berlin, the British declared a protectorate over the lower Niger in 1885. This protectorate extended along the coast from Lagos to Cameroon and included the Niger posts from the Delta to Ibi on the Benue. On 10 July, 1886, Goldie's company was given a royal charter to administer the protectorate. The British government was firmly behind the Royal Niger Co., and when the interests of British merchants were threatened London came to their aid. The most striking example of such British government action was in the case of Ja Ja, the ruler of the Opobo Kingdom of the Delta. His sin was success, for his control over the palm-oil trade was held an obstruction to freedom of commerce. Harry Johnston, then a vice-consul in the Cameroon, captured Ja Ja, who was tried and deported to the West Indies.

West of the Delta, Lagos was suffering both from the disruption of trade caused by warfare in Yorubaland and from the competition of the French in Dahomey. After 1891, when the British annexed several small states surrounding Lagos, their control was extended northward by force and persuasion. The conquest of Oyo completed the subjection of Yorubaland. In the Oil Rivers of the Delta,

armed launches patrolled the creeks and removed unco-operative chiefs. When a British expedition to Benin was ambushed, 1897, British troops retaliated, 1898, by destroying Benin City and its surrounding villages and towns.

COMPLETION OF FRENCH CONQUEST. The French needed only an excuse to make total their control over the Fon Kingdom of Dahomey. They found it in 1892, when the king of Dahomey fired on a French exploratory mission, and later in the year France occupied Abomey, the Fon capital. On the Niger, progress was steady as the French conquered Jenne and Masina, 1893, and entered Timbuktu, 1894, where they were to battle sporadically with the Tuareg for a dozen years. French forces occupied Mossi strongholds to the south, 1896-97. By 1900 Gao had been reached, and the French were marching beyond Zinder toward Lake Chad. Samori continued to harass them in the western Sudan throughout the 1890's, but was finally captured, 1898. In the same year Capt. Marchand's attempt to cut across the Nile and link France's West African empire with her small post at Djibouti met its end in the confrontation with Kitchener at Fashoda. In 1900 a 3-pronged attack on the Sudanese adventurer, Rabah, of the Darfur-Wadai region at last allowed the French to link up their Sudanese and Equatorial empires.

CONQUEST OF ASHANTI. Britain's colony on the Gold Coast prospered only during times of peace with Ashanti, and these periods were few. The *asantehene's* domain had not been pacified by Wolseley's expedition of 1873-74, and civil war erupted there in 1886-87. For almost a decade British governors tried all means short of force to bring the Ashanti under their protection, but the *asantehene* either actively resisted or engaged in lengthy procrastination. In 1895 Sir William E. Maxwell (gov., 1895-97), needing a pretext to intervene, laid down an ultimatum to the Ashanti. When it was rejected, 3,000 troops marched to Kumasi and occupied the city, 1896. Once again the Ashanti question was thought to have

been solved. The way to the north was no longer blocked, and British troops were able to man posts in what became the Northern Territories by 1898, thus preventing the feared encirclement of the colony by the French and Germans. In 1900 the British governor asked for the Golden Stool, the revered symbol of Ashanti unity, and the Ashanti rebelled. Ashantiland was annexed as a crown colony 26 Sept., 1901 (effective 1 Jan., 1902).

CONQUEST OF NORTHERN NIGERIA. France and Britain agreed, 26 June, 1891, to remain on the northern and southern sides, respectively, of a line drawn through Hausaland and Bornu (the Say-Barrua 'Line'), but the middle Niger region remained to be won. Capt. Frederick Lugard reached Borgu in 1894, and Britain gained the upper hand. Various British-led forces then proceeded against the Fulani strongholds, and Bida and Ilorin were occupied, 1897. In 1898 another Anglo-French agreement determined spheres of interest in the middle Niger: France was to control northern Dahomey and Britain northern Nigeria. Lugard then completed the conquest of the city-states: Kontagora and Nupe fell in 1901, whereupon some emirs peacefully accepted British protection. Others resisted, and Kano and Sokoto refused to relinquish their independence. In 1903 these last 2 Moslem strongholds, together with Katsina, succumbed to Lugard's forces and the conquest of northern Nigeria was complete.

COLONIAL ADMINISTRATION. By 1906 the British West African colonies had been pacified, but the French continued to expand northward into the Sahara and conducted campaigns against rebellious Africans. Lugard, theorist and practitioner of "indirect rule," returned to the governor generalship of northern and southern Nigeria in 1912, and effected the unification of the 2 colonies on 1 Jan., 1914. Cocoa, in the Gold Coast, became the most successful of the new cash crops, and rail systems were rapidly built from coast to interior in the British, French, and German colonies. (*Cont. p.* 471.)

SOUTHEAST ASIA

Netherlands East Indies

1870-99

SUGAR AND AGRARIAN LAWS. The Sugar Law, 1870, decreed that the Netherlands Indian government would gradually end forced sugar cultivation and permit the free sale of sugar in Java. The Agrarian Law of the same year allowed capitalists to obtain heritable leases from the government for up to 75 years and to hire land from Javanese owners. The 2 measures marked a decisive stage in a process that had begun with the promulgation of the *Règlement* (constitutional regulation) of 1854. The culture system was progressively abandoned in favor of free enterprise.

SUMATRA TREATY. As the competition among European powers for overseas colonies increased, the Dutch were compelled to strengthen their position in the Indonesian Archipelago to forestall rival claims. Outside Java, Dutch officials concentrated most attention on Sumatra, where piracy jeopardized normal trade. However, Dutch attempts to enforce control there harmed the operations of Malacca and Singapore merchants, who urged London to intervene. The resulting Anglo-Dutch negotiations led to the Sumatra Treaty, 1871, by which, in return for ceding their positions on the Gold Coast of Africa to Britain, the Dutch gained freedom of action in Sumatra. The treaty also stipulated that Britain was to enjoy equal trade opportunities with the Netherlands throughout the archipelago.

WAR WITH ACHIN. A new Dutch expansionist movement followed the Sumatra Treaty. One of its earliest manifestations was the long war against the sultanate of Achin (Atjeh). Achin, strategically located on the northern tip of Sumatra, had long resisted Dutch control, while its pirates wreaked havoc in the archipelago. When attempts at negotiations failed, the Dutch declared war in 1873. The Achinese, motivated largely by Moslem fanaticism against the "infidel,"

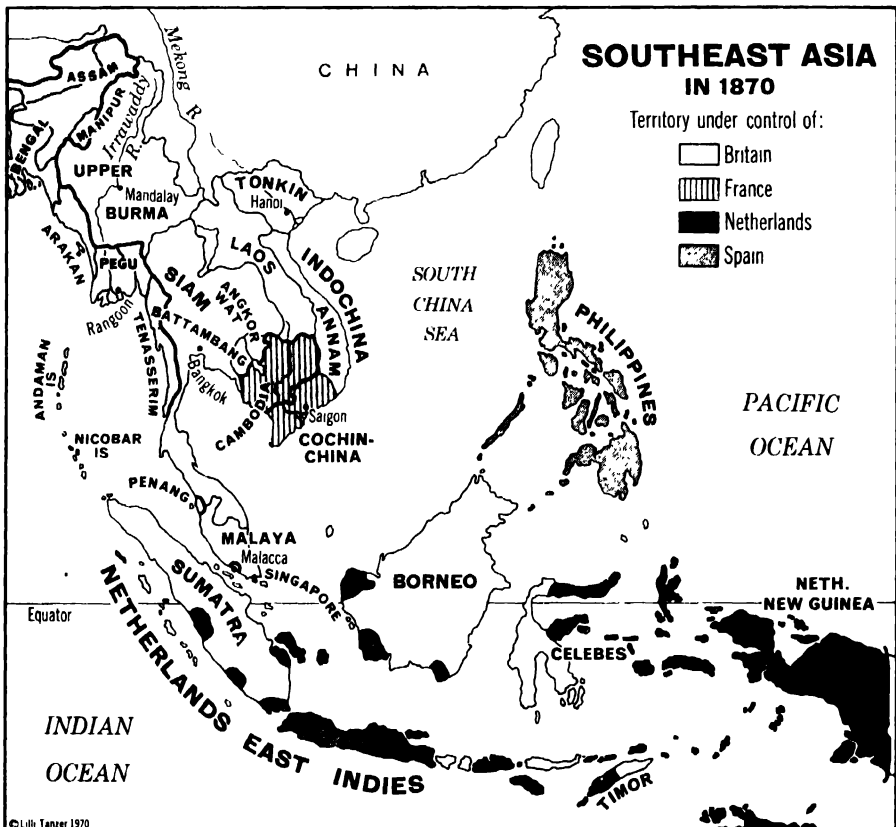

resorted to guerrilla warfare, which continued for more than a quarter of a century. Besides tightening their control over Sumatra, the Dutch in the late 19th cent. extended effective rule over several other outer possessions of the East Indies.

1900-1914

ETHICAL POLICY. Strong pressure developed within the Dutch Parliament and among the Dutch people after 1900 in favor of increased attention to the welfare of the Indonesians. The Ethical Policy, officially launched in 1901, advocated increased spending on welfare and education. At the same time, a process of administrative decentralization was inaugurated. In practice, however, the governor general remained under the complete control of the home government until communications were severed dur-

ing World War I. Similarly, an elaborate scheme of village self-government led to such excessive interference from 'above' that village opposition to Dutch rule grew. As for welfare programs, a rapid population increase offset much of the progress they achieved.

RISE OF NATIONALISM. Awakening nationalism in the Dutch East Indies was centered chiefly in Java, which contained about $\frac{2}{3}$ of the colony's population. An important milestone in the nationalist movement occurred in 1900, when the Javanese princess, Raden Adjeng Kartini, championed education for women. Her efforts led to the founding of Kartini schools for girls in Java. In 1908 Dr. W. S. Usada, who shared Kartini's view of western education as the means by which Indonesians would enhance their status, founded the Dutch East Indies' first nationalist organization. Called Budi Utomo (High

Endeavor), it aimed to establish schools on a national basis. Finally, in 1911, Sarekat Islam, which was to become the colony's chief vehicle of nationalism, was founded. Although it began as a group of Javanese batik traders seeking protection against Chinese exploitation, it had acquired a broad popular base by the eve of World War I. (*Cont. p. 461.*)

Malaya

1870-1905

PANGKOR ENGAGEMENT AND START OF THE RESIDENT SYSTEM.

Following the Sumatra Treaty, the British as well as the Dutch undertook a forward movement in Southeast Asia. Britain abandoned its traditional policy of non-intervention in Malay affairs, most notably through the Pangkor Engagement, Jan. 1874, with the sultan of Perak. This agreement provided for a guarantee of British protection, and for acceptance by Perak of a British resident, whose advice had to be sought and followed in all matters other than those involving Malay religion and custom. In Feb. Selangor accepted a British resident, and in Apr. the chiefs of Sungei Ujong and Linggi did likewise. The murder of the 1st resident of Perak, J. W. W. Birch, on 2 Nov., 1875, led to a crisis in that state, but the dispatch of a British expeditionary force and tactful handling of the situation by Sir Hugh Low (resident, 1877-89) restored order and brought prosperity to Perak. In many areas the resident had to contend with serious quarreling between Malays and Chinese immigrants, especially those working the tin mines. Such quarrels, by impeding economic development, threatened British interests. As time passed, the residents became more and more the actual rulers of their states. The British also established State Councils with legislative powers. The various Malay sultans served as presidents of these councils, whose members also included the local British resident, the major Malay chiefs, and leading Chinese businessmen.

THE FEDERATED MALAY STATES.

By 1896 there were 4 protected states:

Perak, Selangor, Pahang, and the confederation of Negri Sembilan. Because the residents in the respective states pursued unco-ordinated policies, the 4 areas diverged increasingly in such important matters as taxation and land settlement. A plan of co-ordination was formulated in the Treaty of Federation, which united the 4 protected states under a resident general. The Malay sultans lost much of their power but retained their titles and received larger incomes. The position of the State Councils also declined. The British created a large, centralized administrative structure at Kuala Lumpur. The Federation was formally inaugurated 1 July, 1896. As government efficiency improved, prosperity grew and the output of tin and rubber, Malaya's 2 principal industries, expanded dramatically.

1906-14

CREATION OF A FEDERAL COUNCIL.

British fears that the resident general was not under effective control, guilt about ignoring the sultans' administrative role, and pressure from new industrial, commercial, and agricultural interests seeking a voice in government all contributed to the decision to establish a Federal Council in Malaya, 1909. The Council had for its president the British high commissioner, who was also governor of the Straits Settlements, and for its members the resident general, the residents of the 4 protected states, each state's sultan, and 4 unofficial members. Although the sultans enjoyed no veto power over decisions of the Federal Council, they continued to exercise some authority through the State Councils, which kept a free hand in matters of Malay religion and custom.

ANGLO-SIAMESE TREATY. By agreement with Siam, 1909, the British were able to bring under their control the 4 northern states of the Malay Peninsula: Kedah, Perlis, Kelantan, and Trengganu. However, these states refused to join the Federation for fear of losing their autonomy, particularly in fiscal matters. Johore, too, remained outside the Federation. All the unfederated states accepted British

advisers; but, in contrast to the residents, an adviser enjoyed only the right to be consulted by the local ruler and was forbidden to issue orders. (*Cont. p. 462.*)

Borneo

1870-1914

THE WHITE RAJAS. When the first White Raja of Sarawak, Sir James Brooke (1803-68), handed over his state to his nephew, Charles Brooke (1829-1917), he passed on a territory which had been greatly expanded and had received a British consul, but which was still without international recognition. Brooke asked the sultan of Brunei for more land, but was rebuffed.

BRITISH NORTH BORNEO COMPANY. After various trading companies had attempted to establish Bornean settlements, Baron von Overbeck and Alfred Dent obtained a lease of northern Borneo from the sultan of Brunei, 29 Dec., 1877. Since part of the region was under the sultan of Sulu's nominal control, Overbeck also concluded an agreement with Sulu, 22 Jan., 1878. Early in 1879, however, Overbeck withdrew from the enterprise, which was taken over by the firm of Dent Bros. On 1 Nov., 1881, the Dent firm, having by this time transferred its Bornean holdings to a "British North Borneo Provisional Association," received a royal charter as the British North Borneo Co. This was the 1st of a group of chartered companies created by Britain in the 1880's for the commercial exploitation of overseas territories. Two major factors motivated London to grant a charter to the Association: fear that other European colonial powers would annex parts of northern Borneo, and a desire to keep the company's activities under a modicum of British government control.

BRITISH PROTECTORATE POLICY. A series of agreements, 1888, with North Borneo (Sabah), Sarawak, and Brunei made all these areas British protectorates. Such an arrangement, London believed, would restrain French and German expansion in Southeast Asia and

would also prevent Brunei from soliciting the aid of foreign powers against either Sarawak or the British North Borneo Co. The sultan, for his part, welcomed British protection against foreign pressure. (*Cont. p. 462.*)

Burma

1870-84

RULE OF KING MINDON. Burma's king, Mindon, took offense at a British decision, 1871, to conduct future relations with Burma through the viceroy of India. Although Britain had created the province of British Burma, comprising most of Lower Burma, in 1862, Mindon still controlled Upper Burma. He made his capital at Mandalay and sought to maintain good relations with the British authorities at Rangoon. However, he resented being treated like the ruler of a native Indian state. His resentment, coupled with a desire to counter British influence in his kingdom, led him to cultivate friendly ties with France and Italy and to invite French and Italian missionaries, engineers, and government experts to work in Burma. In 1872 Mindon sent his chief minister on a visit to London; en route, the minister stopped in Paris to seek a full-scale alliance. The treaty never materialized, but Britain reacted angrily to the negotiations.

FORSYTH MISSION AND THE "SHOE QUESTION." Anglo-Burmese relations further deteriorated as a result of friction between the king and the business community in Rangoon, which opposed Mindon's commercial methods, especially his retention of royal monopolies. In order to improve Anglo-Burmese relations, Sir Douglas Forsyth led a mission to Mandalay on behalf of the government of India, 1875. Upon his return to Calcutta, however, he complained about the Burmese custom of making foreign envoys remove their shoes and sit on the floor at royal audiences. Later in the year, the government of India ordered the British resident at Mandalay no longer to remove his shoes in the king's presence. Since Mindon could not

yield to this demand, the resident lost the valuable personal contact he had maintained with the king.

RULE OF KING THIBAW. When Mindon died, 1878, Burmese officials plotted to make Prince Thibaw, a non-entity king, in order to create a constitutional monarchy. Thibaw, however, came under the influence of his strong-willed queen, who persuaded him to massacre many members of the royal family and place her minions in key government posts. Meanwhile, a Kachin revolt, forays by Chinese guerrillas, and a renunciation by the Shans of allegiance to the Burmese king plunged Upper Burma into chaos. Continuing slaughters at Mandalay prompted the British trading community in Rangoon to demand a change of government in Upper Burma or its annexation.

1885-1914

BRITISH ANNEXATION OF UPPER BURMA. Thibaw, meanwhile, sought to play Paris off against London, which was increasingly worried about French activities in Southeast Asia. In 1885 Britain learned that France had secretly promised arms and munitions to Burma. British diplomatic pressure led to a French disavowal; but no improvement in Anglo-Burmese relations ensued, for Thibaw framed a case against the Bombay Burma Trading Corp. He fined the corporation, which worked Burma's teak forests, for the alleged illegal export of teak logs. Believing that a French syndicate would take over the corporation's operations, Thibaw refused British pleas for arbitration. The government of India then delivered an ultimatum to Mandalay, demanding, among other things, that Burma submit all foreign-policy questions to India. When Thibaw refused, British troops invaded Upper Burma and occupied Mandalay. Britain planned to make the territory a protectorate and place an approved member of the royal family on the throne. However, when no acceptable candidate could be found, Thibaw's territories were annexed to the British dominions in Jan. 1886. A nationwide reaction

developed against foreign rule and Burmese troops moved into the jungles to conduct guerrilla warfare against the British forces, who required many years to pacify the land.

REFORMS IN VILLAGE ADMINISTRATION. For the sake of administrative convenience, Burma was made a province of British India, Feb. 1886. This arrangement led to neglect of Burma's distinct history and culture. The Upper Burma Village Regulation of 1887 and the Burma Village Act of 1889 were prime examples of the unfortunate effect of Burma's artificial connection with India. By these decrees, the British broke up the circle (Burma's largest indigenous social and political unit) into villages. The plan aimed to strengthen the village as an administrative unit and use it to restore law and order in the country. However, the reform replaced the circle headman, a local resident, with a village headman serving as a British civil servant. British administrators also adopted a negative attitude toward Buddhism. London's reluctance to become embroiled in religious matters after the Sepoy Mutiny in India, 1857, led to refusal to sanction Burma's ecclesiastical code regulating discipline in Buddhist monasteries. Lacking authority to enforce discipline, Burmese Buddhist leaders stood helpless as unruly monks roamed the country preaching sedition.

LEGISLATIVE AUTONOMY. Promotion of the chief commissioner of Burma to the rank of lieutenant governor and appointment of an advisory Legislative Council to assist him, 1897, marked the prelude to a great expansion of government functions. As elsewhere in Southeast Asia, so in Burma, the colonial power abandoned *laissez faire* and sought actively to promote governmental efficiency and social welfare. Bureaucratic government flourished as a new secretariat arose in Rangoon. Attempts to institute local self-government had begun as early as 1874, when Municipal Committees were nominated for some Burmese towns. However, the ethnic diversity of the urban population made joint action difficult. In rural areas self-government was

characterized by inefficiency and corruption and by a frequent transfer of officials. Only in Rangoon, where sizable communities of Europeans and educated Asians resided, was self-government meaningful.

YOUNG MEN'S BUDDHIST ASSOCIATION. Originally organized to revive Buddhist values in the context of western learning, the Y.M.B.A. (founded 1906) was composed primarily of students of religion. By the time of World War I, however, a General Council of Buddhist Associations was assembling regularly, and religious discussions gradually shaded off into political ones. The awakening of Burmese nationalism dates from this period. (*Cont. p. 462*)

Indochina 1870-83

FRANCIS GARNIER AT HANOI. Interested in opening a trade route to western China via Tongking's Red River, French merchant Jean Dupuis sought to exchange products from Yunnan for salt from Hanoi. When Hanoi's mandarins refused to abandon their salt monopoly, Dupuis and his followers seized part of Hanoi and appealed to the French authorities at Saigon for help. Based at Saigon was Adm. Dupré, governor of French-controlled Cochinchina, who saw in Dupuis's grievance a pretext for intervention in Tongking. Against Paris's orders, he sent a naval officer, Francis Garnier, to Hanoi with a small force to arbitrate between Dupuis and the mandarins. When Garnier arrived, 1871, Tongking was infested with so-called Black Flags, a force including local pirates and remnants of China's Taiping rebels. Garnier, finding the mandarins adamant, seized Hanoi's citadel; but the mandarins requested help from the Black Flags, who killed Garnier, Dec. 1873.

TREATY WITH TU-DUC. Having disavowed Garnier's seizure of the citadel at Hanoi, Paris sent an official, Philastre, to negotiate a settlement with the court of Huế. The resulting treaty, 15 Mar., 1874, pledged Emperor Tu-Duc to recog-

nize French sovereignty over Cochinchina; accept a French resident at Huế; open 3 ports, including Hanoi, to French trade; permit free navigation of the Red River as far as Yunnan; and guarantee freedom for Christians in his dominions. For her part, France canceled the unpaid balance of an indemnity owed by Tu-Duc and offered him arms to ward off the Black Flags. In Vietnam's eyes, however, the Philastre-Tu Duc treaty appeared as a sign of French weakness, and as soon as French forces left Tongking, the emperor violated many of the pact's terms. Furthermore, Tu-Duc renewed his declaration of allegiance to the Chinese emperor and dispatched an embassy to Peking with tribute.

RENEWAL OF FRENCH EXPANSIONISM. On the twin pretexts that Tu-Duc had failed to abide by the treaty and that Black Flag activities threatened French citizens in Hanoi, the French government sent Capt. Henri Rivière at the head of an expeditionary force to Tongking. Ostensibly aiming to halt the Black Flag menace to French shipping on the Red River, Rivière's real goal was to pursue the conquest of Tongking where Garnier had left off. In Apr. 1882 Rivière's troops seized Hanoi, but he himself was killed by Black Flags. By this time Jules Ferry, a chief exponent of colonial expansionism, had become France's prime minister. He insisted not only on the seizure of Tongking but also on the submission of the court of Huế to French control. After he sent another strong force to the area, an armistice was finally signed on 25 Aug., 1883, in which, among other things, Vietnam accepted protectorate status.

1884-1914

SINO-FRENCH WAR OVER INDOCHINA. Since Peking had claimed Vietnam as a protectorate, it warned that the treaty was not valid without Chinese approval. When France ignored this warning, China sent troops to Vietnam, and an undeclared Sino-French war erupted. By the Treaty of Tientsin, 9 June, 1884, China conceded French pro-

tectorate claims to Vietnam and pledged withdrawal of Chinese troops from Tongking.

CONSOLIDATION OF FRENCH CONTROL IN ANNAM AND CAMBODIA. As a result of palace intrigues at Hué, the French placed their own candidate, Dong-Khanh, on the throne there, 1884. He permitted France to install residents in each of Annam's provinces. That same year, the governor of Cochin China used alleged abuses by Cambodian mandarins as an excuse for forcing the Cambodian king to accept administrative reforms. A *résident supérieur* assumed the real power in Cambodia, and every Cambodian province received a French resident with authority over native officials. The outcome was a popular revolt led by a Cambodian prince.

UNION INDOCHINOISE. As an attempt at administrative improvement, the French united Cochin China, Annam, Tongking, and Cambodia into an Indochinese Union supervised by a civilian governor general, Oct. 1887. However, each unit maintained an autonomous structure and a separate budget.

FRENCH COUP IN LAOS. Having strengthened her control over the rest of Indochina, France moved to challenge Siamese overlordship in Laos. The French response to the ouster of 2 agents from Siam in 1893 was to claim the entire left bank of the Mekong River and to send gunboats to Bangkok. Although the Laotian king at Luang Prabang continued to reign, the rest of Laos became in effect a group of French provinces.

PAUL DOUMER AND ADMINISTRATIVE REFORM. Paul Doumer (gov. gen., 1897-1902) fashioned the definitive French administrative system in Indochina. Technically, Cochin China was the only 1 of the 5 divisions of Indochina which ranked as a colony; Tongking, Annam, Cambodia, and Laos were all protectorates. Throughout the Indochinese Union, however, assimilation was the key to French policy, which spurned self-government. Although the Annamese, Cambodian, and Laotian kings and courts continued to function, real control in each case was vested in a *résident su-*

périeur. Day-to-day administration was carried out by native officials under the guidance of French representatives. In Cochin China a governor general was the top official. To preserve a façade of democracy in Indochina, the French created a Consultative Native Assembly, whose job it was to assist the *résident supérieur*. However, its members were elected by a small group of officials of trusted loyalty, and it was forbidden to debate political subjects.

EDUCATION AND NATIONALISM. In 1906 an educational system based on the village elementary school was inaugurated; but private education prevailed in Annam and Tongking, while monastic schools provided the sole elementary education in Cambodia and Laos. The University of Hanoi was founded in 1907, but soon closed as the French crushed political dissent among its students. This was the era of nascent nationalism, though the nationalist movement was confined to the Vietnamese, the most numerous people of Indochina. By the eve of World War I, France's contradictory policy of trying to make Frenchmen out of the Vietnamese while keeping them in a subservient position had stimulated nationalist sentiment. (*Cont. p. 463.*)

Philippines

1870-97

REVOLUTION IN SPAIN AND REPERCUSSIONS IN THE PHILIPPINES. The revolution in Spain which replaced the regime of Isabella II with a republic, 1868, had impact on the Filipino nationalist movement, which already possessed a common cultural heritage (thanks to Spain) and ethnic origin and common hatred of Spanish rule. Although the Spanish Republic lasted only 3 years, that period witnessed an influx into the Philippines of colonial officials with democratic ideas. They introduced a degree of administrative autonomy, permitted the circulation of publications containing liberal ideas, and fostered free political discussion. When the Spanish Republic collapsed in 1871, a reactionary

governor general arrived in the Philippines to reverse these policies.

MUTINY AT CAVITE. A mutiny of Filipino soldiers, Jan. 1872, in which local clergy were also involved was magnified by Spanish authorities into an attempted revolution. Spanish repression took the form of the judicial murder of 3 Filipino priests, deportation of various Filipino leaders to penal colonies, and persecution of intellectuals, many of whom fled to Europe, including Madrid. From there they conducted a publicity campaign called the Propaganda Movement. Its adherents were loyalists who sought reform, not revolution. They advocated assimilation of the Philippines as a Spanish province and also voiced such moderate demands as Filipinization of the parishes and freedom of speech, press, and assembly.

JOSÉ RIZAL. Dr. José Rizal, who as a student in Spain had encountered liberal opinion, became the leader of the Propaganda Movement. In 1887 he published in Berlin *Noli Me Tangere* (Touch Me Not), a book describing Filipino suffering under Spanish rule. Four years later, Rizal's publication *El Filibusterismo* (trans. as *The Reign of Greed*) appeared in Ghent. These books circulated secretly in the Philippines and inflamed nationalist sentiment.

FOUNDING OF LIGA FILIPINO AND KATIPUNAN. Upon his return to Manila in 1892, Rizal established the Liga Filipino, an organization dedicated to the social and political advance of Filipinos, but he was soon deported to Mindanao. Both the Propaganda Movement and the Liga soon died out for want of support. The way was then paved for real revolutionaries like Andrés Bonifacio to move to the forefront. In July 1892, in Manila, Bonifacio founded a secret society, the Katipunan (Sons of the People), which aimed to win independence by force.

OUTBREAK OF REVOLUTION. In 1896, Katipunan leaders contacted Rizal at Mindanao, but he warned against a premature revolution. Meanwhile, however, the government had become aware of Katipunan. When Spanish officials began rounding up its leaders, sporadic fighting

erupted and a nationwide rebellion ensued. The government responded with a reign of terror, including the shooting of Rizal on charges of sedition. Although Rizal's martyrdom helped the rebels' cause, they could not hold Manila. Bonifacio took refuge at Tejeros, where he set up a revolutionary government.

PACT OF BIACNABATO. Bonifacio's influence was quickly overshadowed by that of Emilio Aguinaldo, whom the revolutionary assembly named president of the newborn Philippine Republic, Mar. 1897. When Aguinaldo's forces failed to defeat the Spanish troops, he signed the Pact of Biacnabato, Dec., agreeing to end revolutionary activities and to the dispatch of the leaders to voluntary exile in Hong Kong. The Spaniards, for their part, offered to pay the rebels for the surrender of their weapons and to grant compensation to families who had suffered during the uprising. As a result of bad faith on both sides, however, the pact soon collapsed.

1898-1914

SPANISH-AMERICAN WAR AND ANNEXATION OF THE PHILIPPINES.

The Spanish-American War revived Aguinaldo's career. Commo. Dewey, having destroyed the Spanish fleet in the Bay of Manila, 1 May, 1898, lacked enough troops to capture the city. He therefore contacted Aguinaldo in Hong Kong, allegedly promising Philippine independence in return for help against Spain. Aguinaldo led a new nationalist revolt and in June proclaimed the country's independence. However, the Americans, denying any commitment to the rebel leader, annexed the Philippines.

SCHURMAN COMMISSION. It took the Americans more than a year to capture Aguinaldo, 23 Mar., 1901, and some of his followers continued guerrilla operations until 1907. Meanwhile, Washington sent a fact-finding commission headed by President Jacob Schurman of Cornell University to the Philippines, 1899. Concluding that the Filipinos desired independence but could not yet govern themselves, the commission advo-

cated local participation in municipal and provincial government, a vast educational campaign, and other steps to prepare Filipinos for self-government.

TRANSITION FROM MILITARY TO CIVILIAN RULE. The 1st American-sponsored civilian regime in the islands, inaugurated 4 July, 1901, was headed by Judge William H. Taft, who proclaimed equality of rights for all Filipinos, separation of church and state, and freedom of press and assembly. Taft's 5-man commission, which later added 3 Filipino members, began implementing the Schurman resolutions.

PHILIPPINE ORGANIC ACT. Congressional passage of the Philippine Organic Act, 1 July, 1902, assured increased self-government. The bill provided for a popular assembly, with the commission becoming the upper house of a bicameral legislature. Executive power was to be vested in a governor general. The Organic Act also declared that all lands owned by religious orders belonged henceforth to the Philippine government to sell or lease, preferably to the actual occupants. However, there was no serious attempt at agrarian reform. The U.S. maintained a virtual monopoly of Philippine trade. Culturally, the Philippines remained isolated from Southeast Asia, as they had under Spanish rule.

1ST PHILIPPINE GENERAL ELECTIONS. The Nacionalista Party, whose supreme goal was immediate independence for the Philippines, won a resounding victory in the 1st general elections, 1909. The newly elected Philippine Assembly received a large voice in domestic legislation. At the Assembly's inauguration, the U.S. promised independence as soon as the Filipinos were capable of ruling themselves. By the eve of World War I, both legislative houses enjoyed a Filipino majority. (*Cont. p. 463.*)

OCEANIA

1870-1914

THE PACIFIC BASIN IN 1870. Before the 1870's there were few outright European possessions in Oceania. Because of her naval power, Britain held almost

undisputed sway in the Pacific, but the Colonial Office in London did not take the opportunity to acquire islands. Instead, Britain's possessions were usually annexed at the insistence of the Australasian colonies, or when there was clear evidence that another power, often Germany, was interested enough to take political action. There were British, Australian, New Zealand, German, French, and American traders and missionaries in all parts of the Pacific in increasing numbers at this time, and their activities were in large part responsible for the incorporation of the islands into the respective European empires and for the mosaiclike fashion in which this was done.

CHRONOLOGY OF THE ANNEXATIONS. A native government was set up in Fiji, 1870, and in the same year a Colonial Conference in Melbourne demanded its annexation, which was refused by the Colonial Office. A German consul was stationed in Samoa, 1871. The Pacific Islanders Protection Act was passed, 1872, giving the supreme courts of all the Australian colonies power to try British subjects accused of illegally enlisting natives as laborers. In 1873 Commo. Goodenough and F. L. Layard were appointed to report on the situation in Fiji, and Capt. John Moresby annexed a number of islands off the coast of New Guinea. Fiji was annexed by Britain, Oct. 1874. In 1875 a Reciprocity Treaty was signed by the U.S. and Hawaii. Spain claimed the Carolines, and Queensland demanded the annexation of New Guinea.

In 1877 the Germans surveyed parts of New Guinea, and concluded a treaty with Samoa giving them the right to establish a coaling station and naval depot there. The following year the U.S. concluded a treaty with Samoa entitling her to a naval station at Pago Pago, and the Germans began to consolidate their interests in the Marshall Islands. In Jan. 1879 Germany signed another treaty with Samoa, and Britain did likewise in Aug. France annexed Tahiti, 1880.

In 1881 Britain annexed Rotuma. Queensland unilaterally annexed New Guinea, Apr. 1883, but the action was

subsequently disallowed in London. Also in 1883 the Anglo-French agreement of 1878 recognizing the independence of New Hebrides was renewed. The Germans stationed a consul in New Britain, 1884. Britain declared a protectorate over southern New Guinea, 6 Nov., 1884, and Germany claimed the remainder of the island and the Bismarck Archipelago, Dec. Boundaries in New Guinea were settled the following year.

In 1886 Britain and Germany concluded a treaty recognizing each other's Southwest Pacific spheres of influence. France took Wallis Island, 1887; the next year Britain annexed a number of small islands for cable stations. The Berlin Conference on Samoa, 1889, decided to recognize Samoa's independence.

In 1893 Queen Liliuokalani of Hawaii was deposed. In the same year Britain annexed the Solomon Islands. A republic was proclaimed in Hawaii, 1894.

A British protectorate was declared over the Gilbert and Ellice Islands in 1892 and they were annexed as Crown Colonies in 1915. Following the Spanish-American War, 1898, the U.S. took Hawaii, Guam, and the Philippines. In 1899 Germany purchased the Carolines and Marianas from Spain. Britain declared a protectorate over Tonga, 1900. In 1901 the Cook Islands and Niue were absorbed by New Zealand. The Pacific cable was completed, 1902.

On 20 Oct., 1906, Britain and France signed the New Hebrides Convention, which provided that neither power should exercise separate control but rather that each should be responsible for its own nationals. With the outbreak of war in 1914, New Zealand forces occupied Samoa and an Australian force took German New Guinea and parts of the Bismarck Archipelago.

The Areas of Economic Dependence

CENTRAL ASIA

1870-1914

ESTABLISHMENT OF RUSSIAN GOVERNMENT. After the conquest of Turkestan (Tashkent, 1865; Samarkand, 1868; Khiva, 1873; Kokand, 1875), further areas were absorbed into the Russian Empire. Turkmen resistance was broken at Geok Tepe, Jan. 1881, and the region brought under control; Transcaspia was declared an *oblast*, 6 May, 1881; and additions of territory were made at the expense of Afghanistan, 1885 and 1895. The governor-generalship of Turkestan was created on 11 July, 1867, and that of The Steppes in 1882. By 1898 Turkestan consisted of the *oblasts* of Syr Darya, Fergana, Samarkand, Semirechye, and Transcaspia, while The Steppes comprised Akmolinsk and Semipalatinsk *oblasts*. The regions of Ural'sk and Turgai were separately administered under the Ministry of the Interior. Khiva and Bukhara also had a distinct status, being

regarded as vassal states rather than as dependencies.

ADMINISTRATION. A commission headed by Count N. P. Ignatiev drafted, 1884, regulations for Central Asia (the Turkestan Statute went into effect, 1 Jan., 1887), providing for a regional council to assist the gov. gen. and for an independent judiciary. An investigation by Count K. K. Palen, 1908, disclosed much corruption in the Turkestan administration, $\frac{2}{3}$ of the officials serving in Transcaspia being convicted of crimes against the state. No significant administrative reforms, however, were carried out before the Revolution of 1917 disrupted the governmental system.

Nevertheless, in both Turkestan and The Steppes there was religious toleration, light taxation, no poll tax or *corvée* (though unpaid labor was employed in railroad and canal construction), and no compulsory military service before 1916.

COLONIZATION. After a slow start Central Asia became an important Rus-

sian area of settlement. Peasants were encouraged to take up land, particularly in the The Steppes governor generalship. Resettlement Acts of 1889, 1896, and 1904 and the famine of 1890-91 helped to drive the peasants eastward. During 1893-1905 some 400,000 peasant immigrants took up land in The Steppes, and a further 1.5 m. during 1906-12.

In Turkestan a higher proportion of Russian immigrants were urban dwellers rather than peasants. By 1889 there were c. 20,000 Russians resident in Tashkent and 47,500 (out of a total population of 234,000) by 1904.

ECONOMIC DEVELOPMENT. A railroad running eastward from the Caspian Sea was begun in 1881, the 1st train arriving in Samarkand on 15 May, 1888. Samarkand, Tashkent, and Andizhan were connected by rail, 1895-99, and the link joining Tashkent and Orenburg was completed, 1900-1905. Canals and irrigation dams were constructed, the most important being the Romanov Canal (begun 1900, opened 20 Oct., 1913) and the Sultan-belt and Hindu Kush dams (completed 1890 and 1895 respectively). Many new crops were introduced into Central Asia following the Russian conquest, including silk, grapevines for wine, sugar beets, and various cereals and fruits. By far the most valuable crop, however, proved to be cotton. American cotton plants were imported in the early 1880's and prospered in the fertile Fergana Valley. Between 1886 and 1890 the total acreage under cotton in Turkestan increased sixfold. By the end of the 19th cent. Russia had become the 4th largest textile manufacturing country in the world (after Britain, the U.S., and Germany) with 6 m. spindles and 200,000 power looms, more than half of the latter located in the Moscow area.

INTERNATIONAL RELATIONS. The military conquest of Central Asia by Russia inevitably brought about friction with Persia and Afghanistan and strained relations with the British in India. A Russo-Persian treaty of 1869 confirmed the hold of Persia on the lands south of the Atrek River and prohibited Russia from constructing forts in that region,

and another agreement, 1881, established the frontier between the 2 countries. A Russo-Afghanistan boundary agreement was reached, Jan. 1873. No less than 6 'Anglo-Russian frontier protocols were negotiated between 1884 and 1895. Finally, a treaty between Britain and Russia, 1907, delineated the respective zones of influence of the 2 powers in Persia, Afghanistan, and Tibet.

SIAM (THAILAND)

1870-1914

RULE OF CHULALONGKORN. The accession to the Siamese throne of Chulalongkorn (Rama V) in 1873 marked the start of a determined attempt to maintain the country's independence through reforms designed to strengthen its resistance against European encroachments. The new king carried out reforms of 2 kinds: symbolic, such as the abolition of compulsory prostration in the royal presence, and substantive. Included in the latter category were steps toward the abolition of slavery, fiscal reforms, ending of forced labor by the lower classes for the army and crown, considerable freedom of the press, decrees on religious toleration, reorganization of the legal system, and public-works projects. Chulalongkorn considered educational improvements essential, and one of his earliest measures provided for the aristocracy to send its sons to special palace schools with a European curriculum or to Europe itself. To further speed Siam toward modernization, Chulalongkorn hired European advisers. Siam also benefited after 1870 by sharing in the vast expansion of European trade resulting from the opening of the Suez Canal. British and French commercial firms and banks dotted Bangkok.

FRENCH PRESSURE ON SIAM. The French conquest of Indochina impeded Siam's eastward expansion. After Vietnam became a French protectorate in 1883, Siam sought to tighten control over Laos. However, the court of Hué, inspired by France, claimed Luang Prabang, while the French worked to increase their influ-

ence at the expense of that of Siam among the Lao peoples.

SIAMESE ADMINISTRATIVE REFORMS. One of Chulalongkorn's major reforms, 1892, was the centralization of the administrative system and a reduction in the powers exercised by provincial governors. At the same time, local administrative changes designed to give the Siamese people some degree of autonomy were introduced.

PAKNAM INCIDENT. By 1893 France had made it clear that she regarded all territory on the left bank of the Mekong as belonging to Vietnam. When Siam expelled 2 French agents, the French sent troops to occupy land along the lower Mekong and later announced that 2 French gunboats would anchor at Paknam. Siamese pilots were ordered to bring them to Bangkok. Siam refused to provide pilots, but played into French hands by firing first in an engagement with the boats at the Paknam fort, July 1893. Paris then delivered an ultimatum demanding all territory on the Mekong's left bank, payment of an indemnity, and punishment of the Paknam officers who had fired at the French gunboats. London, though alarmed at French expansionism, was fearful of provoking war with Paris and therefore advised Chulalongkorn to accept the ultimatum.

ANGLO-FRENCH AGREEMENT ON SIAM. After much friction, the British and French finally regulated their conflicting claims in the area of Siam, Jan. 1896. In return for renouncing its claims to territory east of the Mekong, Britain won French approval for a joint guarantee of the independence of the Menam River Valley. This provision, by defining Siam's boundaries in terms of the valley, assured the country's independence while also giving it one of the richest areas of the Indochinese Peninsula. Furthermore, Britain and France pledged to seek no exclusive privileges in Siam.

SIAMESE ACCORD WITH FRANCE AND BRITAIN. The years 1904 and 1907 saw Franco-Siamese treaties dealing with territorial claims in Laos and Cambodia. In 1909 an Anglo-Siamese agree-

ment ended British extraterritorial rights in return for Siamese abandonment of 4 Malay states—Kelantan, Trengganu, Kedah, and Perlis—where Siam's rights had been vague and costly to maintain. (*Cont. p. 464.*)

OTTOMAN EMPIRE

1870-99

BLACK SEA CONFERENCE. In 1870 Russia declared that she would no longer observe the provision of the Treaty of Paris of 1856 limiting the number and size of Russian warships in the Black Sea. This decision was accepted by an international conference held in London, 17 Jan.-13 Mar., 1871. The conference also lifted the restrictions on Turkish ships, but retained the prohibition on the passage of warships through the Straits.

RULE OF ABDUL-AZIZ. The global depression which began in 1873 deprived the Turkish sultan, Abdul-Aziz ('Abd al-'Aziz) (ruled 1861-76), of foreign credit. To meet the deficits caused by his extravagance, he had to increase taxes and this led to internal unrest. On 6 Oct., 1875, the Ottoman government defaulted on payments of interest and amortization of its foreign debts. Another factor which made the western powers hostile to Turkey was the Ottoman government's harsh suppression of rebellions in Bulgaria in the summer of 1876.

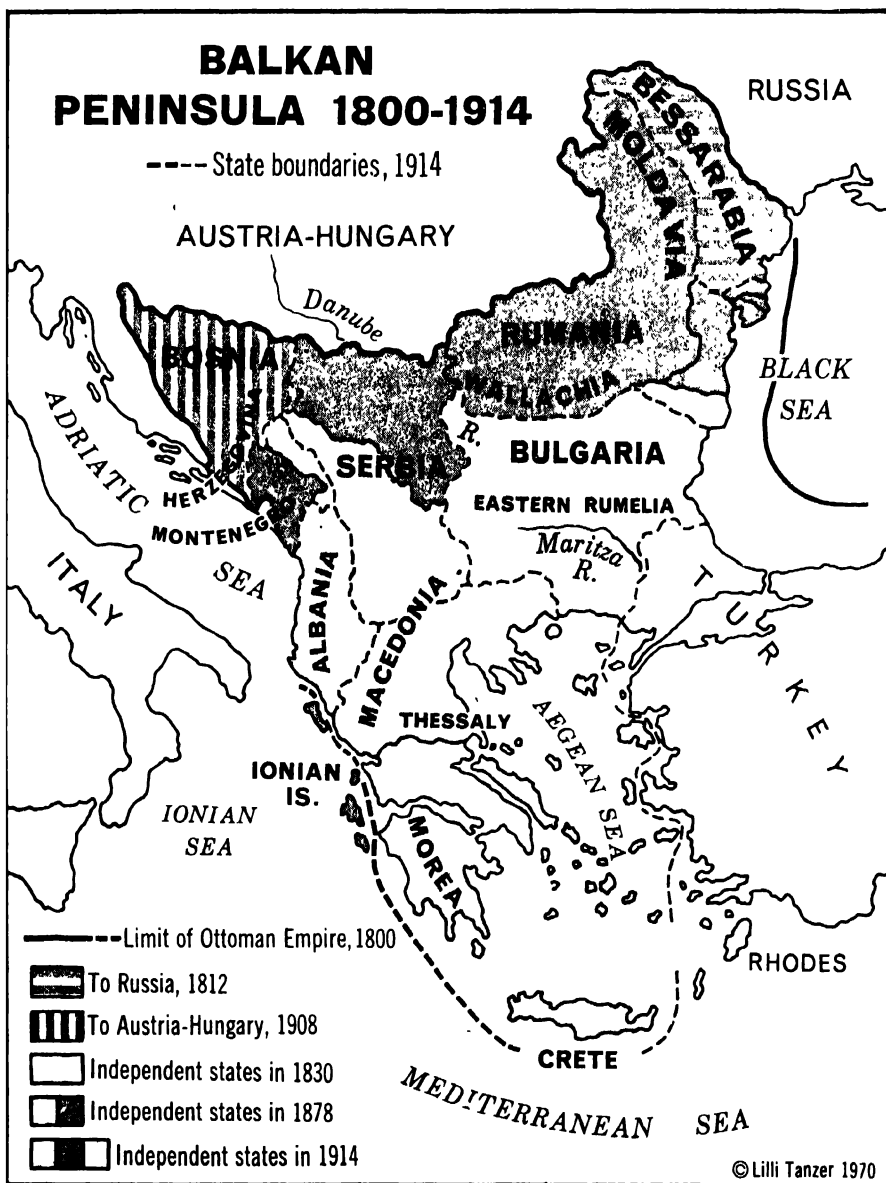

NEW OTTOMAN MOVEMENT. On 30 May, 1876, Abdul-Aziz was dethroned in accordance with a fatwa (*fatwa*) ordering the establishment of a constitutional regime. This was a victory for Midhat Pasha and the Young Ottomans. The Young Ottomans were constitutionalists who had hitherto operated clandestinely or from exile. Among them were the great poets, Namik Kemal Bey and Ziya Pasha.

ACCESSION OF ABDUL-HAMID II. Murad (Murād) V, the direct successor to Abdul-Aziz, was deposed, 31 Aug. 1876, after suffering a nervous breakdown. He was replaced by his brother, Abdul-Hamid ('Abd al-Hamīd) II (ruled 1876-1909). On 12 Dec., 1876, an international

conference was convened in Istanbul on the initiative of Britain to settle the Bosnian, Serbian, and Bulgarian questions which were threatening to cause a war between Turkey and Russia. On 23 Dec., 1876, the Turkish sultan proclaimed a constitution adapted in part from the Belgian model. This constitution included what was in effect a pledge to safeguard

the rights of the Christian subjects of the Ottoman Empire, and had the effect of rendering futile the efforts of the Istanbul Conference.

Abdul-Hamid did not implement all the promised reforms, ignored the constitution, and concentrated on establishing an absolute monarchy. To retain the allegiance of non-Turkish elements within

his empire, he tried to revive the influence of the Caliphate.

RUSSO-TURKISH WAR. On 30 June, 1876, Serbia, at Russian instigation, declared war on Turkey. Montenegro followed. The collapse of Serbian arms led Russia to declare war on Turkey, 24 Apr., 1877. Failing to receive any support from the European powers, Turkey suffered defeat, and agreed to a truce, 31 Jan., 1878, and to the preliminary peace treaty of San Stefano, 3 Mar. Concessions exacted by Russia at San Stefano alarmed the British, who were concerned about the Russian threat to their imperial communications in the Middle East. On 4 June, 1878, Turkey, in return for granting a lease of Cyprus, concluded a defensive alliance with Britain.

CONGRESS OF BERLIN. Convened at Bismarck's instigation, the Congress of Berlin terminated Turkey's dispute with Russia by treaty of 13 July, 1878. This Berlin agreement was more favorable to Turkey than the San Stefano treaty had been. But Turkey had to pledge herself to introduce reforms in certain of her provinces which had Christian inhabitants.

OTTOMAN PUBLIC DEBT. Negotiations between the Ottoman government and representatives of the European bondholders led to the formation of a Council of Administration of the Ottoman Public Debt, with European directors, to ensure the payment of Turkey's debts. By a ferman of 20 Dec., 1881, several categories of Turkish government revenues were assigned to the Council.

REVOLTS AGAINST TURKISH RULE. Following a bloodless revolution in Eastern Rumelia, Sept. 1885, Turkey appointed a Bulgarian governor for that province, 1886, thus tacitly accepting its annexation by Bulgaria. In 1889 a rebellion against Turkish rule began in Crete. In 1894 Armenian mountaineers of the Sassun region also rose against the Turks. The violent suppression of this Armenian revolt prompted Britain and France to force Turkey to promise reforms, May 1895. The sultan did not carry out his promises, the powers failed to take any

measures against Turkey, and Armenians in many areas continued to rebel. Some 80,000 of them were killed. On 17 Apr., 1897, Turkey declared war on Greece, whose government she held responsible for the renewed revolt in Crete. The powers came to the rescue of the Greeks against the advancing Turks. Concessions were made to Turkey, but Crete was placed under international control.

GROWTH OF GERMAN INFLUENCE. Germany opposed the anti-Turkish settlement of the Cretan question. The German government had become keenly interested in, acquiring new markets in the Ottoman Empire. Abdul-Hamid also preferred the Germany of William II to liberal Britain and France. In 1899 he granted to the Deutsche Bank a concession to build a railway to Baghdad.

1900-1914

YOUNG TURK MOVEMENT. While Abdul-Hamid ruled despotically, the Young Turks, successors to the Young Ottomans, agitated (especially among students) by means of clandestine publications and through secret societies for the restoration of the Constitution of 1876. In 1907, in Salonika, Talaat Bey and Rahmi Bey formed the secret Society of Union and Progress. Liaison was maintained with the Turkish revolutionaries in Europe who were led by Ahmad Riza. In June 1908 many officers of the Macedonian army, aroused by reports (later proved false) that Britain and Russia were planning to partition Turkey, joined hands with the Society of Union and Progress. Among them were Niazi, Mustafa Kemal, Enver, and Jemal Pasha. A rising led by Niazi, June 1908, ignited several other revolts, and forced Abdul-Hamid to restore the constitution, 23 July. The rebellious Christian groups in the Turkish Balkans now joined the Union and Progress movement. Racial, religious and national differences, however, made co-operation difficult.

FALL OF ABDUL-HAMID II. Russia and Austria, both of whom considered a

strong Turkey adverse to their interests, co-ordinated their plans against the Ottoman Empire in a meeting on 15 Sept., 1908. Turkey was forced to recognize the Austrian annexation of Bosnia and the independence of Bulgaria. Rebellions by Armenians, Kurds, and Nestorians followed. A revolt in Yemen was settled by agreement with its imam, 1911.

The "reactionary" opposition to the Young Turks culminated in a military coup, 14 Apr., 1909. Abdul-Hamid sided with the reactionaries. But a Young Turk army under Mahmud Shevket Pasha arrived from Salonika and captured the capital, 24 Apr. Abdul-Hamid was deposed, and Mohammed (Mehmed) V became sultan, 27 Apr.

INDEPENDENCE OF THE BALKANS. On 28 Sept., 1909, Italy demanded from Turkey the cession of Tripoli and Cyrenaica. In the war that ensued the Turks scored some victories, but their troubles in the Balkans compelled them to sue for peace. The Treaty of Lausanne signed 18 Oct., 1912, gave Italy control over Tripoli, Cyrenaica, and Rhodes.

In 1912 a 2-year-long negotiation between Turkey and the powers on the status of Christian subjects of the Ottoman Empire broke down. Thereupon, Oct. 1912, a Balkan alliance of Bulgaria, Greece, Serbia, and Montenegro, supported by Russia, attacked Turkey. Despite some naval successes, the Turks had to retreat. In Dec. 1912 a peace conference was convened in London. The resulting agreement displeased the Young Turks, who then staged a coup against the Liberal Unionist government of Kiamil (Kâmil) Pasha, Jan. 1913. Mahmud Shevket was installed as premier. But even this new government had to accept, 30 May, the Enos-Midia line as the western frontier of Turkey. In the summer of 1913 a war among the Balkan allies over the division of the spoils taken from Turkey permitted the latter to regain some of the territory lost. Peace treaties were signed with Bulgaria, 29 Sept., 1913; with Greece, 14 Nov., 1913; and with Serbia, 14 Mar., 1914. Greece received Crete and most of the Aegean Islands. But Edirne was given back to Turkey,

whose frontiers were now moved to the Maritsa River.

PROBLEM OF TURKISH UNITY.

The modernizing efforts of the Young Turks were in part successful, especially in the fields of finance and education. But they were disturbed to find that their liberalism and constitutionalism failed to forestall demands for self-determination on the part of non-Turkish elements of the empire. The Young Turks reacted by abandoning the ideals of the 1908 revolution and pursuing more exclusively nationalistic policies. For a time support for Pan-Islam gained ground in Turkey, but this soon gave way to the greater enthusiasm generated by the Pan-Turkish movement, which was led by Enver Pasha and had as its goal the union of all Turkish-speaking peoples under the Osmanli Turks. Another movement of the period, espoused by Ziya Gökalp, advocated the directing of all efforts toward building a Turkish national state. (*Cont. p. 465.*)

MIDDLE EAST

Persia

1870-1904

EXTERNAL RELATIONS. In 1872 the Sistan Arbitration Commission partially settled a Persian-Afghanistan dispute over Sistan by dividing that province between the 2 countries. Settlement of a boundary question between Persia and British Baluchistan followed. In 1879 Persia agreed to accept Russian officers to train and command the Persian Cossack Brigade. Russia thus came to control Persia's only effective military force. Russia's conquest of Geok Tepe, 1881, and Merv, 1884, made her Persia's sole neighbor to the north and northeast.

RULE OF NASIR ED-DIN SHAH. Nasir ed-Din Shah (ruled 1848-96) visited Europe, 1873, 1878, and 1889. The nature and tempo of his Europeanization program was much influenced by these trips. The concessions he granted to foreigners, especially the tobacco *régie* (monopoly), 8 Mar., 1890, made him unpopular, and he was assassinated, 1 May, 1896.

RULE OF MUZAFFAR ED-DIN SHAH. Nasir ed-Din's successor was his son, Muzaffar ed-Din Shah (ruled 1896-1907). On 28 May, 1901, Muzaffar ed-Din granted an oil concession to a British citizen, William Knox D'Arcy (1849-1917), which became the model for later oil concessions in the Middle East.

1905-14

CONSTITUTIONAL REVOLUTION.

In 1905 a group of merchants took sanctuary in a Teheran mosque to protest the shah's lavish spending and the corruption and mismanagement of his government. Some ulema ('ulamā) joined the protesting merchants, but all were soon forced to leave the mosque. They then took sanctuary in the shrine of Shah Abdul Azim ('Abd al-'Azīm), near Teheran. To disperse them, the shah promised to dismiss 'Ayn al-Dawla, his unpopular *sadr-i azam* (*sadr-i a'zam*) (prime minister), and to establish an *Idalat Kahanah* ('Adālat Khāna, House of Justice). When he failed to carry out these pledges, a large group of Teheran ulema, as a further gesture of protest, journeyed to the holy city of Qum. In Teheran a crowd of some 12,000 merchants and clergy took sanctuary in the British Legation grounds and demanded the removal of 'Ayn al-Dawla and the return of the ulema from Qum. The shah agreed to dismiss his *sadr-i azam*, 30 July, 1906, but the protesters were also demanding a written constitution. To this the shah reluctantly agreed, 5 Aug.

INAUGURATION OF THE MAJLIS.

In Oct. 1906 the first Majlis (the lower house of parliament) was inaugurated. On 30 Dec. the shah signed a law which promulgated the draft of the Fundamental Law (constitution) prepared by a committee of Majlis deputies.

RULE OF MOHAMMED ALI SHAH.

On 8 Jan., 1907, Muzaffar ed-Din Shah died. His son and successor, Mohammed Ali Shah (Muhammad 'Ali Shāh) (ruled 1907-9), was determined to suppress the constitution. But in Aug. 1907, 'Ayn al-Dawla, who had been reappointed *sadr-i azam* by the new shah, was assassinated, and in Oct. Mohammed Ali yielded to

the pressure of public opinion and signed a Supplement to the Fundamental Law.

GROWTH OF EUROPEAN INFLUENCE. On 31 Aug., 1907, Britain and Russia, prompted by a common fear of Germany, agreed to settle their differences in Western Asia. Their agreement divided Persia into a Russian (northern) and a British (southern) sphere of influence, with a neutral "independent" zone in between. The agreement outraged the Persians; the Constitutionalists especially felt betrayed by Britain.

COUNTERREVOLUTION OF 1908.

In Nov. 1907 Mohammed Ali Shah reaffirmed his loyalty to the constitution. But in June 1908 he used the Cossack Brigade to attack the 'Majlis building. Some deputies were killed and others injured, a number were later captured and executed, and a few succeeded in taking refuge in the British Legation. On 27 June the shah declared the Assembly dissolved and the constitution abolished. In protest an uprising took place in Tabriz which was quelled only with the active support of Russian troops in Apr. 1909.

CONSTITUTIONAL REGIME. Anti-shah tribes from the areas of Rasht and Isfahan united in a march on Teheran, July 1909, which met only feeble resistance. The shah was granted asylum in the Russian Legation, and was deposed in favor of his son, Ahmed (Ahmad), by the leaders of a new regime.

In 1911 the Majlis granted vast powers to an American, William Morgan Shuster (1877-1960), to administer Persia's finances. The need for foreign advisers stemmed from the Constitutionalists' desire for financial and administrative reform and from their own lack of expertise in these fields.

Mohammed Ali Shah returned from his Russian exile, 1911, and attempted to regain his throne. But his army was defeated by Constitutionalist troops, who also put down a related revolt in Kurdistan led by Mohammed Ali's brother.

In Nov. 1911, 2 Russian ultimatums demanding the dismissal of Shuster were rejected by the Majlis, whereupon Russian troops invaded northern Persia. The regent, Nasir al-Mulk, used force to close

a recalcitrant Majlis, 24 Dec., and then asked the Shuster Mission to leave. Britain, needing Russian co-operation against Germany, acquiesced in Russia's interference in Persia. (*Cont. p. 466.*)

Arabia

1870-1914

RULE OF SAUD III. In 1871 the Saudi chief, Abdallah ('Abd Allah) II (ruled 1865-71, 1874-84), was defeated by his brother, Saud (Su'ud) III (ruled 1871-74). The Ottoman Turks responded to Abdallah's call for assistance by entering Arabia and bringing the district of al-Hasa under their control. A struggle for leadership produced a period of instability in the Saudi domain. In 1874 Saud III died, and Abdallah returned to the throne.

RASHIDI DOMINATION. Soon after regaining control, however, Abdallah lost it to Mohammed ibn Abdallah (Muhammad ibn 'Abd Allah) al-Rashid of the Shammar tribe. Abdallah was kept in the Rashidi capital until 1889, when, ailing, he was allowed to return to Riyadh. He was succeeded after his death in the same year by his son, Abd ('Abd) al-Rahman (ruled 1886). Rebelling against Rashidi domination, Abd al-Rahman was defeated and forced to flee to Kuwait. The Rashidis now incorporated the Wahabi realm into their own domain.

In 1900 Sheikh Mubarak of Kuwait and Abd al-Rahman staged an abortive military uprising against the Rashidis.

RULE OF ABD AL-AZIZ. In 1901, Abd al-Rahman's son, Abd al-Aziz ('Abd al-'Aziz) (ruled 1902-53), led a group of 40 young supporters in a march toward Riyadh. By the time this force reached the Saudi capital, Jan. 1902, it had grown to 200. Abd al-Aziz invaded the city, 15 Jan., and defeated and replaced the Rashidi governor of Riyadh. In 1904 Abd al-Aziz defeated an army of Rashidis and their Turkish allies, after which Turkey withdrew from central Arabia. In 1906 the chief of the al-Rashid tribe was killed in a battle with Abd al-Aziz. This ended

the Rashidi bid for power at the expense of the Saudis.

In 1910 Abd al-Aziz organized the first Ikhwan (brethren) group in order to revive the ideals of the Wahabi movement. Groups of Bedouins were settled in agricultural colonies, and served Abd al-Aziz as a dedicated and effective military force in the years to come. In 1913 Abd al-Aziz defeated the Turks and annexed the district of al-Hasa to his kingdom.

BRITAIN AND THE PERSIAN GULF SHEIKDOMS. On 22 Dec., 1880, the sheik of Bahrain; on 20 Mar., 1891, the sheik of Muscat, and on 23 Jan., 1899, the sheik of Kuwait in separate agreements surrendered their external sovereignty to Britain. (*Cont. p. 469.*)

Egypt

1870-82

SOUTHWARD EXPANSION. Egyptian forces annexed the former sultanate of Darfur in the Sudan, 1874; occupied Zaila; and took Harar in Ethiopia, 1875. But the invasions of Ethiopia, 1875-76, proved abortive.

FINANCIAL CRISIS. On 8 June, 1873, an Ottoman firman confirmed special privileges, amounting to virtual autonomy, previously conferred on Ismail (Isma'il), the khedive of Egypt. By 1875 Ismail's lavish spending had so depleted Egypt's treasury that he could not even pay the interest on his country's foreign debt. He was therefore compelled to sell his shares in the Suez Canal Co. to the British government, Nov. 1875. On 2 May, 1876, Ismail issued a decree establishing a Public Debt Commission. British dissatisfaction with certain provisions of this decree led him to issue a new one, 18 Nov., 1876, which put the revenues and expenditures of the Egyptian government under the dual control of Britain and France.

On 7 Apr., 1879, Ismail dismissed his British minister of finance and his French minister of public works in an attempt to lessen international control over Egypt's finances. The Ottoman Porte, responding to pressure from Britain and France,

deposed Ismail,⁹ 26 June, in favor of his son, Mohammed (Muhammad) Tawfiq. Anglo-French control over Egypt's finances was reinstated, Sept.

RISE OF NATIONALISM. In 1879¹ Jamal al-Din Afghani, who had been making speeches urging the Egyptians to resist the West, if necessary by violence, was expelled from Egypt. In the same year a mutiny by Egyptian officers indicated the extent of their resentment against foreign domination in the army. In 1882 the khedive felt compelled to appoint a nationalist cabinet, in which the minister of war was Ahmad Urabi ('Urābī), a colonel who had become the leader of Egyptian opposition to foreign control. On 7 Feb., 1882, the khedive ordered the establishment of an assembly of deputies and declared Arabic the official language.

To strengthen the khedive against the nationalists, France and Britain dispatched fleets to Alexandria, May 1882. Alexandria was bombarded by the British, 11 July. The French and Italians having declined to join in, a British invading force defeated Urabi's army, Sept. The British then reinstated the khedive.

1882-1914

BRITISH OCCUPATION. On 20 Sept., 1882, the Egyptian army was dissolved. In Dec. the British began organizing a new army under British officers. On 3 Jan., 1883, the British foreign secretary outlined British policy for Egypt: Britain would hold supreme authority during the period of her occupation, which initially was expected to be short. On 11 Jan. the dual-control system came to an end, and a law of 1 May established consultative councils in Egypt's provinces and 2 assemblies in Cairo. In Sept. Sir Evelyn Baring, later Lord Cromer (1841-1917), arrived in Egypt as British agent and consul general to administer the country.

On 20 Nov., 1883, France acceded to a British demand that the number of British representatives on the Suez Canal control board should be increased from 3

to 10. By means of the London Convention, 18 Mar., 1885, the powers reduced Egypt's national debt and allowed additional borrowing. By a further convention on Egypt, 24 Oct., 1885, Britain and the Ottoman Empire agreed that each would appoint a high commissioner to study the Egyptian situation. The 2 states signed an agreement, 22 May, 1887, but this was never ratified by the Porte. On 29 Oct., 1888, a convention providing for free navigation of the Suez Canal was signed by the Ottoman Empire and the European powers.

On 7 Jan., 1892, on Tawfiq's death, his son, Abbas ('Abbās) II (ruled 1892-1914), succeeded him. On 15 Jan., 1893, the new khedive replaced an Anglophile prime minister with the pro-French Husayn Fakhri Pasha who was sympathetic to the nationalists. In 1894 Mustafa Kamal founded the Hizb al-Watani (National Party). On 12 Nov., 1895, Abbas reappointed the pro-British Mustafa Fahmi prime minister, thus indicating his acquiescence in British domination in Egypt.

INTERNATIONAL RELATIONS. In 1898 French forces occupied Fashoda. The British claimed that the area belonged to Egypt, and the French withdrew. On 19 Jan., 1899, Britain and Egypt signed an agreement that they would rule the Sudan as a condominium, and France formally abandoned her claims in the Nile Valley, 21 Mar. On 8 Apr., 1904, France and Britain agreed to recognize each other's spheres of influence in Morocco and Egypt respectively. In return for greater financial independence, the khedive acknowledged Britain's special position in Egypt, 1 Jan., 1905. On 1 Oct., 1906, the Porte and Egypt agreed that south Sinai should remain under the suzerainty of the Ottoman Empire, while continuing to be administered by Egypt.

EGYPTIAN NATIONALISM AND BRITISH REACTIONS. In 1899 Mohammed Abduh (Mohammad 'Abduh), a disciple of Afghani, was appointed chief mufti, the highest religious office under the state. Despite strong opposition from conservative ulema, Abduh pressed for an extensive modernization of Islam. An in-

cident in June 1906 between some British officers and the inhabitants of the village of Dirshaway became a key factor in uniting the peasants with the nationalists who opposed the British occupation.

In Apr. 1907 Lord Cromer resigned. The new British administration, under Sir Eldon Gorst (1835-1916), was intended to be more liberal, but failed to satisfy the nationalists. On 10 Feb., 1910,

a Moslem nationalist assassinated the prime minister, Butros Ghali, who had angered the nationalists by asking the Legislative Assembly, unsuccessfully, to approve an extension of the Suez Canal Co.'s concession. In Sept. 1911 Lord Kitchener (1850-1916) was appointed head of the British administration in Egypt. (*Cont. p. 466.*)

THE ERA OF WORLD WAR, 1914–1945

The War of 1914–1918

OUTBREAK OF THE WAR

1914

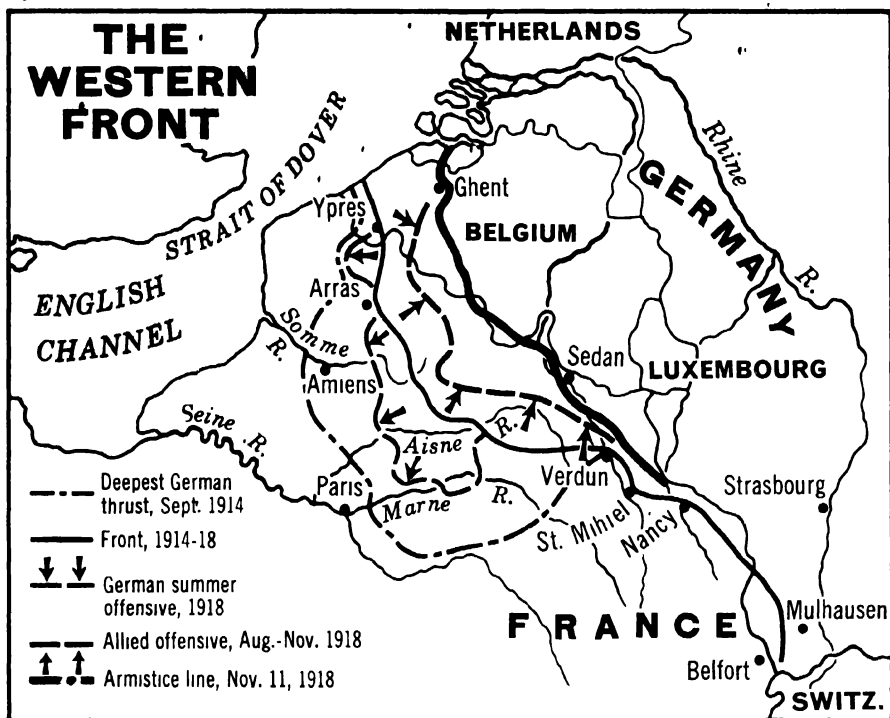

ASSASSINATION OF FRANCIS FERDINAND. 28 June. In Sarajevo, capital of the recently annexed province of Bosnia, on Sunday morning, 28 June, after an abortive bombing attempt by his co-conspirators, Gavrilo Princip (1894–1918), a Serbian nationalist, fatally shot Archduke Francis Ferdinand, the heir to the Austrian and Hungarian thrones, and his wife. Six of the 7 assassins, members of a Serbian secret society, were caught. One was executed; the others, all under age, were sentenced to long terms in prison.

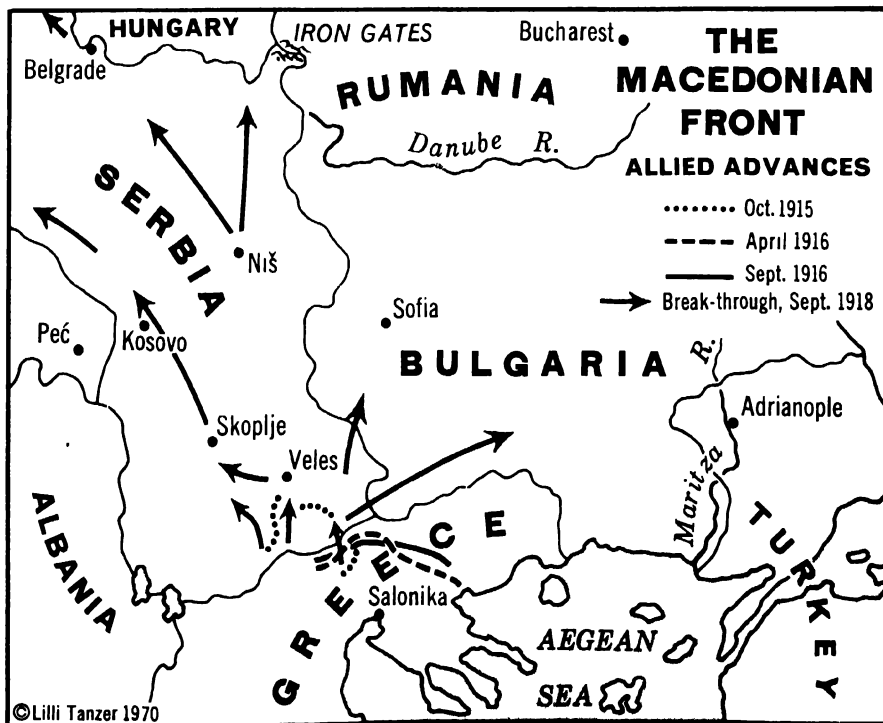

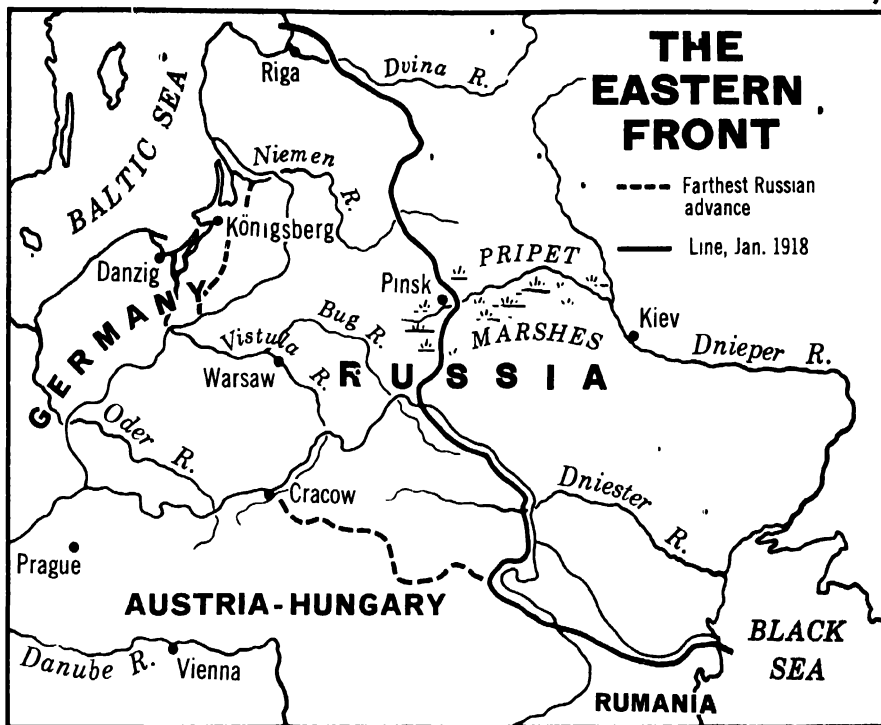

The Sarajevo murders brought to a head a long-standing antagonism between Austria-Hungary and Serbia. In the week following the assassinations, it seemed that no major crisis would result from the incident, but Count Leopold von Berchtold (1863–1942), the Austrian foreign minister, presupposing Serbian complicity (little evidence of which ever came to light beyond possible foreknowledge of the event), determined to make use of the murders to crush once and for all Serbian competition in the Balkans.

THE "BLANK CHECK." 5 July. Berchtold sent an envoy to Berlin and

Emperor William II assured him, 5 July, that Germany would fully support any action the Dual Monarchy might undertake against Serbia because of the assassinations. Chancellor Theobald von Bethmann-Hollweg (1856–1921) officially reiterated this promise of unconditional support, 6 July. Historians differ greatly about the purposes motivating this "blank check." The proponents of German war guilt consider it a proof of Germany's desire for immediate hostilities, other historians consider it at worst diplomatic folly.

AUSTRIAN ULTIMATUM TO SERBIA. 23 July. Berchtold overcame internal opposition to his policy and by 19 July an ultimatum had been drawn up. Its presentation to Serbia was postponed until 6 P.M., 23 July, so that the French president, Raymond Poincaré (1860–1931), and premier, René Viviani (1863–1925), would have left St. Petersburg, where they were on a state visit to their Russian ally, to whom the Serbs looked for support. Berchtold thought it better to wait until the French leaders had departed so that no prompt concerted reaction could be forthcoming. The ultimatum, which called for an answer within 48 hours, included de-

mands that Serbia formally condemn and end all Pan-Serb propaganda, expel from office anyone fomenting it, instigate legal action against certain officials whom Austria-Hungary would name, and allow agents of the Dual Monarchy to participate on Serbian soil in inquiries and proceedings concerning the Sarajevo murders.

A few minutes before the time limit expired, Serbia replied, 25 July, in a manner that was conciliatory but clearly did not meet Berchtold's demands, although the Serbs had gone far in that direction and were willing to submit points remaining in contention to the International Tribunal at The Hague. The reply was rejected and Austria-Hungary broke diplomatic relations with Serbia, which, anticipating this, had earlier that afternoon decreed general mobilization. At 9:23 P.M. Austria-Hungary ordered a countermobilization; 27 July was ordered as "alarm" day, and 28 July as the 1st day of actual mobilization.

DIPLOMATIC NEGOTIATIONS AND MILITARY PREPARATIONS. 25 July–1 Aug. From the time the ultimatum was issued, the statesmen of the Great Powers sought delay or compromise. This failing, other attempts at peaceful settlement were tried; but once the 1st mobilization had begun, steps in the direction of war took on increasing importance. Each country's mobilization was tied to a strict timetable, and none wanted to be unprepared in the event of hostilities.

Sergei D. Sazonov (1861–1927), the Russian minister for foreign affairs, attempted to have the ultimatum's time limit extended, 25 July. At the same time Russia put into effect the necessary military measures preparatory to mobilization.

British Foreign Secretary Sir Edward Grey (1862–1933), whose earlier attempts at mediation failed, proposed a 4-power conference, 26 July. Germany declined; France hesitatingly accepted; Russia agreed in principle, though preferring to rely on direct negotiations with the Dual Monarchy. Meanwhile the Admiralty

ordered the British fleet not to disperse for maneuvers, as planned, and the German fleet was ordered, 27 July, to concentrate off the Norwegian coast and return to base at Kiel.

Alarmed at the warlike course of events, William II interrupted a cruise and returned to Berlin, 27 July.

AUSTRO-HUNGARIAN DECLARATION OF WAR. 28 July. Berchtold thought a *fait accompli* would undercut Russian or other Great Power intervention. Although gunboats bombarded Belgrade, the Serbian capital, the next day, 29 July, the Dual Monarchy's military chiefs estimated that they would need until 12 Aug. to complete their mobilization.

The Austro-Hungarian action caught the Germans by surprise, as they had not believed hostilities would commence until mobilization was complete; William II had just put forward a peace plan which called for occupation of Belgrade as a Serbian pledge for fulfillment of its commitments as well as guarantees of that country's territorial integrity. The declaration of war ended Austro-Russian talks, begun 26 July. French support for Russia was reiterated in conversations between Sazonov and the French ambassador.

RUSSIAN MOBILIZATION. 29–30 July. Czar Nicholas II, under pressure from his military advisers, who argued that Russia needed a very long time to mobilize fully, ordered a general mobilization, 29 July. Telegraphic exchanges between the czar and William II, in which Russia was assured that Austria would be restrained, caused Nicholas to suspend the order and direct only partial mobilization against Austria-Hungary. On 30 July in the late afternoon, the military and Sazonov prevailed on the czar to renew the mobilization order, which was to go into effect on 31 July.

BELGIAN NEUTRALITY QUESTION. 29 July. Germany made a bid for British neutrality in the event of war, but in so doing indirectly admitted that the neutrality of Belgium (established by international treaty in 1839) would not be respected. Upset, Grey the next day, 30 July, requested France and Germany to

respect Belgian neutrality. France answered that she would, and Germany refused, 31 July.

OTHER MOBILIZATIONS. Austria-Hungary ordered general mobilization, 31 July. At 1 P.M. on the same day, Germany proclaimed a state of "threatening danger of war" (*drohendes Kriegsgefahr*), the preliminary step to complete mobilization. By midnight a 12-hour ultimatum had been delivered to Sazonov, requiring that Russia suspend all war measures or face the consequences. The same afternoon Germany demanded to know the French position in case of a Russo-German conflict. If, contrary to Germany's expectations, France chose to remain neutral, she should turn over the fortresses at Toul and Verdun, which would be held as pledges and returned after the end of hostilities in the East.

About 4:45 P.M., 1 Aug., Central European Time, France ordered a general mobilization. About a quarter-hour later the Germans mobilized and that evening declared war on Russia, having received no reply to their ultimatum.

BEGINNING OF HOSTILITIES. Germany declared war on France, 3 Aug., using as a pretext alleged border violations. In reality, strategic considerations dictated this move; German military plans called for a quick victory in the West before turning to face an eastern foe.

Although the course of events on the Continent had become plain, the British cabinet, in a series of long and acrimonious meetings, 2 Aug., failed to resolve upon any clear-cut course. The decision to assure France that the Channel coast and North Sea shipping would be protected against German naval attack (according to Grey, a moral obligation arising out of joint naval and military staff arrangements) caused the resignation of 2 cabinet members.

On the night of 1-2 Aug. the Germans marched into Luxembourg and in the early evening of 2 Aug. they demanded transit across Belgium, guaranteeing that country's territorial integrity. On 3 Aug., at 7 A.M., Belgium rejected the demand

and appealed for help.* That afternoon the Germans invaded Belgium, although they did not declare war until 4 Aug. •

Grey went before Parliament, 3 Aug., and received support for his policies. An ultimatum was sent to Berlin demanding German withdrawal from Belgium. It was at this time that the German chancellor made the unfortunate reference to the 1839 treaty as "a scrap of paper." By midnight, 4 Aug., Great Britain was at war with Germany, partly because honor demanded the action after Belgium's neutrality had been violated, partly because it was a firm principle of British policy that no Great Power should control the Low Countries.

The war spread rapidly. Only Italy among the important members of the original alliance blocs stood aside. She did so on the grounds that she was under no alliance obligation since Austria-Hungary's ultimatum to Serbia was an offensive act.

OPPOSING FORCES. (1) Armies. Germany, considered to have the best military machine in the world, mustered over 2 m. men. Headed by the redoubtable general staff, which had probably the best grasp of the effects of new weapons on battlefield movement, the German divisions were well equipped with artillery and machine guns. Austria-Hungary, which militarily lagged far behind its ally, mobilized over 2,700,000 men when it went on to a full war footing. The Dual Monarchy's heavy artillery was excellent, but training was insufficient, staff work incompetent, supply indifferent, and often a German speaking officer could not make himself intelligible to his men because only 1 soldier in 4 spoke German. Bulgaria and Turkey, which joined the Central Powers after hostilities had begun, added little military strength beyond numbers since their armies were woefully deficient in equipment and training.

France had only 60% of the potential military man power of Germany and in 1914, to mobilize an army of 1,650,000, found it necessary to call up a larger number of reserves. Although lacking in artillery and machine guns, the French

were imbued with a philosophy of attack (*attaque, attaque, toujours l'attaque*), a policy which was to cost their armies dearly. The Russians, who mobilized over 4 m. men in the 1st year of war, relied almost wholly on numbers, but behind the Russian "steamroller" lay technological backwardness, wholesale graft, and almost incredible deficiencies in supply, armament, and training. Great Britain, whose military planners had always emphasized sea power, possessed a small, highly trained, professional army, and initially could put into the field only 125,000 men with limited but good equipment. The Belgian and Serbian armed forces, each numbering about 185,000, although consisting of brave fighters, were equipped very primitively.

TOTAL MOBILIZED MAN POWER
OF ALL BELLIGERENTS,
1914-18

*Allies and
Associated
Powers:*

Russia	12,000,000
France (incl. colonial troops)	8,410,000
Great Britain (incl. colonial troops)	8,095,000
Italy	5,615,000
U.S.A.	4,355,000
Japan	800,000
Rumania	750,000
Serbia	707,000
Belgium	267,000
Greece	230,000
Portugal	100,000
Montenegro	50,000
Total	41,379,000

Central Powers:

Germany	11,000,000
Austria-Hungary	7,800,000
Turkey	2,850,000
Bulgaria	1,100,000
Total	22,750,000

(2) Navies. The war at sea was to be primarily a contest between Great Britain and Germany, whose respective comparative strengths were: large warships, 156 and 87; destroyers, 218 and 142; subma-

rines, 55 and 28. Although the Russian navy was confined to the Baltic and Black seas, the Central Powers were hopelessly outclassed on the high seas. Germany's first-rate navy was superior in many technical features of gunnery and damage control, but her allies had only meager sea forces, while Great Britain, the greatest naval power in the world, could count on the assistance of the French and Japanese navies.

The Central Powers were also greatly inferior in commercial shipping. The allies had over 4 times their gross tonnage.

(3) Air Forces. When hostilities began, military aviation was still in its infancy, and reconnaissance was considered the main function of the airplane. Such small bombs as might be carried were dropped over the side; armament, usually only for defensive purposes, meant a rifle or a revolver. Planes were quite crude, with "doped" fabric wings and 70-hp engines capable of producing speeds of 60-70 mph. The Germans had about 380 planes and 30 dirigibles, also called Zeppelins after their designer, Ferdinand von Zeppelin (1838-1917); the French had approximately 120 planes and 10 dirigibles; the British had about the same number of planes, of which some 60 were assigned to the British forces in France. Russia and Austria-Hungary each had a few planes.

(4) Economic Potential. With the exception of Russia, which was to require major economic assistance to meet her commitments, the highly industrialized economies of the major allied powers enabled them to meet all war requirements. Of the Central Powers, only Germany was heavily industrialized, and her economy had to bear the burden of supporting her allies; Turkey and Bulgaria rapidly became almost entirely dependent on Germany for war materials.

Germany lost her colonies during the 1st few months of the war, and the Central Powers were hemmed in by an effective allied naval blockade. But they, especially Germany, made up most of their deficiencies through territorial conquests which in the West placed them in

control of the facilities of Belgium and industrialized northern France, and in the East gained them Balkan resources and man power as well as some of the Russian granaries. The Russian collapse in 1917 brought the Germans further economic advantages.

Despite intense allied economic warfare against them, the Central Powers held their own economically until the U.S.A., with its great resources and industrial capacity, actively entered the war.

STRATEGY. (1) The Western Front. Germany's Schlieffen plan, the essentials of which were formulated in 1905 by Alfred von Schlieffen (1833-1913), chief of the general staff, 1891-1906, called for an immediate offensive against France while remaining on the defensive against Russia. Believing victory possible within 6 weeks, he planned that an overwhelmingly strong right (northern) wing would crash through the Low Countries, capture the Channel ports, bear down on Paris from the west, and trap the French armies against the Swiss borders and their own fortifications in the Vosges Mts. area. A weak left wing would further unbalance the French by enticing them to liberate Alsace-Lorraine. Reportedly, Schlieffen's dying words were, "Keep the right wing strong." By 1914 Moltke had seriously modified this plan. Russia's rapid recovery from the travails of 1905 and the increased importance of the Rhineland industrial area to Germany led him to change the 7:1 troop ratio favoring the right wing to less than 4:1. He also decided not to violate Dutch neutrality, thus forcing the German armies to pass through the fortified Belgian area at Liège.

The allies had no precise plans. Belgium, which prized its neutrality, had not wished to endanger it by any joint war planning with any of its neighbors. If invaded and hard-pressed, the Belgians anticipated withdrawing into the fortress area of Antwerp—as was done. The British general staff had expected that if war came, a British Expeditionary Force (B.E.F.) would be called upon to fight the Germans on the Continent, but its ulti-

mate destination was not clear. French War Plan XVII, drawn up in 1913 by Gen. Joseph Joffre (1857-1931), chief of the French general staff from 1911 to 1916, unwittingly played into the hands of the Germans in that it called for drives into German territory on both sides of Metz to liberate Lorraine. Joffre's plan recognized that Germany might invade Belgium, but mistakenly assumed that, owing to lack of troops, German operations would remain east of the Meuse, and that if necessary the French could extend their battle lines. The French also counted on a Russian offensive to divert German troops eastward.

(2) Eastern Fronts. Austria-Hungary's war plans assumed that the war with Serbia could be settled before Russia could fully mobilize and open another front. The Dual Monarchy, unaware of Germany's total commitment to an offensive against France, also planned for joint operations against the 250-mile-deep salient formed by Russian Poland, which threatened East Prussia on the north and Austrian Galicia on the south. The Russian offensive plans, which went into effect when the Germans' main drive was made against the French, called for pincer movements from Poland into these areas, where the Russians hoped to envelop their enemy.

The Serbs planned purely defensive campaigns. If hard-pressed, they intended to retire into the mountains and await help—which they did in 1915.

THE WESTERN FRONT AND ITALY

1914

GERMAN SWEEP THROUGH BELGIUM. 4-20 Aug. Crossing into Belgium had begun during the early morning of 4 Aug., and within 24 hours German troops had reached Liège, one of the strongest fortresses in Europe. The city was captured, 7 Aug., but the 12 forts surrounding it held out. Heavy 420-mm. siege howitzers were brought in, 12 Aug., and the forts, which had been built to with-

stand only 210-mm. fire, fell one by one, the last on 16 Aug. The timetable of the not yet completely mobilized Germans had not been greatly delayed. Namur, invested 19 Aug., fell 6 days later. Meanwhile the remaining Belgian forces, under command of King Albert (1875-1934), withdrew north to Antwerp, completing this move by 20 Aug. The same day the Germans entered Brussels.

BATTLE OF THE FRONTIERS. 14-25 Aug. The French, whose limited thrust into Alsace, 7-9 Aug., failed, went on the offensive into Lorraine, 14 Aug. The Germans gave ground according to plan until 20 Aug., when in heavy fighting they mauled the French, who by 24 Aug. had retreated to Nancy. A French attempt in the Ardennes also fared badly, 22-25 Aug., and, having suffered enormous losses, 2 French armies fell back to the western side of the River Meuse. Another French army supporting the Belgians along the River Sambre was also forced to withdraw, 22-24 Aug. The B.E.F., commanded by Sir John French (1852-1925), had moved, 22 Aug., into position at Mons in support of the Belgians. Heavy fighting, 23 Aug., was followed by a retreat, 24 Aug., precipitated by French withdrawal on the B.E.F.'s southern flank. In the battles the French suffered appallingly (over 300,000 casualties), and Moltke, who believed the war won, allowed the detachment of 2 corps from the right wing to East Prussia, then being invaded by Russia. With other corps detached to hold the Belgians at Antwerp, the strong right wing upon which Schlieffen's plan depended had been so emasculated that in some areas the French had achieved numerical superiority.

ALLIED RETREAT. 25 Aug.-4 Sept. The Germans continued their advance. In the Battle of Le Cateau, 26 Aug., part of the B.E.F. was badly defeated. A French counterattack, 29 Aug., resulting in the Battle of Guise, held up the German 2nd Army for 36 hours and also caused the tip of the right wing (the 1st Army) to turn south, 30 Aug., while still east of Paris.

1ST BATTLE OF THE MARNE. 5-9 Sept. The day, 5 Sept., before Joffre's planned counteroffensive was to begin, the Germans made contact with the built-up French forces by the River Ourcq. Heavy fighting ensued, 6-8 Sept. On 6 Sept. the French began their offensive; complicated German and allied maneuvering led to a widening gap between the German 1st and 2nd Armies, which the B.E.F. slowly exploited. Meanwhile, a little farther south, a battle in the Marshes of St.-Gond raged fiercely as the French, under command of Gen. Ferdinand Foch (1851-1929), wavered but held. The Germans, unsuccessful in their attacks and fearing the gap in their lines, began retreating, 10 Sept., 40 miles north to the River Aisne, where by 14 Sept. they had consolidated their positions. That day Gen. Erich von Falkenhayn (1861-1922) secretly replaced Moltke (no public announcement being made until Nov.).

1ST BATTLE OF THE AISNE. 14-18 Sept. This contest marked the transition from a war of maneuver to trench warfare. The allied offensive, with the B.E.F. making the main effort, failed against the entrenched Germans and the front in this area stabilized, with the B.F.F. transferring north to Flanders.

FALL OF ANTWERP. 9 Oct. Fearing a thrust on their flanks, the Germans had begun siege operations against Antwerp at the end of Sept. After the city's fall, the Belgian army retreated along the Channel coast to the River Yser.

BATTLE OF YSER AND 1ST BATTLE OF YPRES. 12 Oct.-22 Nov. A B.E.F. drive, begun on 12 Oct. against the Germans in Flanders, quickly stalled. On 20 Oct. the Germans launched an offensive against the Belgians along the Yser. By 24 Oct. they were across the river, but the battered Belgians hung on grimly, and on 27 Oct. opened the flood gates at Nieupoort. Sea water slowly inundated an area 2 miles wide from Diksmuide (Dixmude) to the coast, halting the German advance. Meanwhile, farther south the Germans began a drive for Ypres, 20 Oct., held in the main by the B.E.F., and

fighting continued until 31 Oct., when the heaviest German drive failed. On 11 Nov. another massive drive to take Ypres barely failed; indecisive fighting continued. The 1st Battle of Artois, a French offensive near Arras, 14-24 Dec., was inconclusive.

TRENCH WARFARE. The front line established at the end of 1914, which did not vary more than 10 miles in either direction until 1917, left the Germans in control of almost all Belgium and the richest part of France. On this immobile front the troops dug in and a line of trenches stretched from Switzerland to the sea with the enemies only a few hundred yards apart, in places as close as 30 yards. Casualties had been tremendous. The British had 50,000 casualties in the Ypres battle alone. During 1914, France suffered almost 1 m. casualties and Germany slightly fewer.

1915

OPPOSING STRATEGIES. During 1915, the Germans remained generally on the defensive in the West while attempting to defeat Russia in the East. The allies continued to concentrate on the 1 big push they believed could win the war, but the Western Front remained stable.

BATTLE OF NEUVE-CHAPELLE. 10-13 Mar. Sir John French believed that, since the French provided the bulk of the fighting forces on the Western Front, the B.E.F. should be as offensive-minded as possible. Joffre, for his planned offensive, needed to pull out the French troops at Ypres, and Sir John decided that once the B.E.F. had relieved these troops he would be unable to support the French offensive. He therefore ordered an attack. Surprise helped the B.E.F. to overrun the German position, 10 Mar., but bad staff work enabled a German counterattack, 11 Mar., to limit the B.E.F. to a gain of about 1,000 yds. on a 1¼-mile-wide front. The British and the Germans each suffered about 13,000 casualties.

ST.-MIHIEL SALIENT. 6-24 Apr. Also known as the Battle of the Woëvre, this operation was designed by Joffre,

with the main drive to come from forces south of the salient. The French achieved negligible results at the cost of "high casualties."

2ND BATTLE OF YPRES. 22 Apr.-25 May. The 1st gas attack of the war occurred here. About 5 p.m., 22 Apr., the Germans, making use of a favorable wind, released chlorine gas from cylinders in their own trenches. Directed at French colonial troops, it caused them to panic and leave a large gap in the allied lines which the Germans were unprepared to exploit fully. On 24 Apr. a 2nd gas attack gained a little more ground for the Germans, this time at the expense of the Canadians. On 27 Apr. the British field commander considered it best to withdraw the B.E.F. 2½ mi. to Ypres. The French, learning of this order, relieved him, but his successor issued the same order, and the withdrawal took place, 1-3 May. Heavy fighting continued until the Germans abandoned the attack, 25 May. Casualties: British, 60,000; French, 10,000; Germans, 35,000.

2ND BATTLE OF ARTOIS. 9 May-18 June. On 9 May the French at Souchez and the British at Festubert made simultaneous attacks. The British failed almost immediately; a shell shortage prevented them from conducting more than an insufficient 46-minute artillery bombardment, and without gaining a yard they suffered 10,000 casualties, 9 May. Intermittent heavy fighting took place, 15-27 May, as the British gained half a mile at very high cost. The French, especially in the center under Gen. Henri Philippe Pétain (1856-1951), managed to gain about 2½ miles, but then the German line held fast despite murderous fighting. Casualties: French, over 100,000; Germans, 75,000.

ENTRY OF ITALY. 23 MAY. After the outbreak of hostilities, both sides courted Italy; but as she eyed mostly Austrian territory, the allies could more easily meet her demands. By 10 May the Germans had convinced Austria-Hungary to meet the Italian demands, but it was too late. On 26 Apr., Britain, France, Russia, and

Italy had concluded the secret Treaty of London which promised Italy the Trentino,* the Tyrol to the Brenner Pass, Trieste, Gorizia, Gradisca, the Istrian Peninsula, Dalmatia, and such ports on the Adriatic not already assigned to Montenegro or Serbia. The treaty also recognized Italian sovereignty over the Dodecanese Islands (occupied in 1912), gave Italy the Turkish province of Antalya when and if Turkey was partitioned, and promised her a share in any colonial or financial spoils. In return Italy bound herself to enter the war 1 month from the date of signing. On 3 May the Italian government denounced the Triple Alliance. Although considerable antiwar sentiment existed in the country, the interventionists managed to win a majority in parliament, and war was declared on Austria, 23 May. Italy did not declare war on Germany until 28 Aug., 1916.

Italy entered the war with an army of 875,000, poorly led, deficient in heavy artillery and machine guns, and whose war material had been largely consumed in the Libyan war of 1911-12 against Turkey. The Italian navy was weak, and economically the country proved to be a heavy burden to the allies.

Ringed by mountains on their northern border, the Italians, having to fight their way up from the plains, were in a poor strategic position. They carried on their campaign in the least mountainous region near the River Isonzo. Under the command of Gen. Count Luigi Cadorna (1850-1928), they fought 4 battles there (23 June-7 July, 18 July-30 Sept., 18 Oct.-4 Nov., 10 Nov.-2 Dec.) in 1915, gaining little ground or strategic advantage in desperate fighting that cost them over 250,000 casualties. Austrian casualties totaled about 165,000.

2ND BATTLE OF CHAMPAGNE. 22 Sept.-8 Nov. The Western Front had been quiet during the summer as the allies prepared for a major autumn offensive. One of the war's heaviest bombardments, 22-25 Sept., preceded the French attack, but to little avail as the 1st wave penetrated about 5,000 yds., after which the attackers came to a standstill, 27 Sept. Joffre futilely kept up a war of attrition

until 8 Nov., at a cost of 145,000 men as against 113,000 for the Germans.

3RD BATTLE OF ARTOIS. 25 Sept.-30 Oct. This battle was fought mainly as a diversion designed to draw off German forces from Champagne. The British, making use of gas for the 1st time, 25 Sept., attacked Loos over particularly difficult terrain. In a battle that dragged on until 14 Oct. the British, losing some 60,000 men to the Germans' 20,000, managed to capture Loos, but failed to reach Lens, their main objective. Dissatisfaction over the use of reserves in this battle led to the replacement, Dec., of Gen. French by Sir Douglas Haig (1861-1928) as B.E.F. commander. On 25 Sept. the French attacked Vimy Ridge, almost winning the crest during the first 3 days before being halted. Fighting continued until 30 Oct.

1916

VERDUN. 21 Feb.-18 Dec. Falkenhayn, who planned to bleed France white in a war of attrition, attacked Verdun, knowing that the French would fight to the last for this famous fortress. Located at the head of an awkward salient split by the Meuse, Verdun offered the French poor lines of communication. Joffre, convinced that fortresses were useless, had stripped the area's forts of their guns and, preoccupied with the Somme offensive, had disregarded warnings of a German attack.

An extremely heavy bombardment, 21 Feb., surprised the French and created havoc. A German attack along the east bank of the Meuse gained ground, and the Germans captured Ft. Douaumont, 25 Feb., a key fort whose skeleton garrison had not been reinforced. Pétain was placed (midnight, 25 Feb.) in command of reinforcements rushed to Verdun and he reorganized the French forces.

The Germans renewed the attack, 6 Mar., this time from both sides of the salient, and bloody fighting raged almost continuously into the summer. The Germans gained little ground, but did take at great cost the hill Le Mort Homme, 31 May, and Ft. Vaux, 7 June. Despite a heavy artillery and gas barrage, 22 June, utilizing the newly perfected and more

deadly phosgene gas, a supreme German effort to capture Ft. Souville failed, as did a lesser attempt on 10 July. The Germans went on the defensive, 15 July.

Limited French attacks in Aug. and Sept. and major offensives launched on 24 Oct. and 15 Dec. won back a large portion of the lost ground, including Fts. Douaumont, 24 Oct., and Vaux, 2 Nov.

Fighting stopped on 18 Dec. after the French had suffered about 400,000 casualties and the Germans over 350,000 in the longest battle of the war.

THE SOMME OFFENSIVE. 1 July–18 Nov. The other major operation of 1916, the Somme offensive, was much affected by Verdun. French appeals for help caused the date of the attack to be moved forward a month to 1 July, and French participation was reduced to a small force on the British right flank as Joffre diverted troops to Verdun. This transformation of the offensive into a mostly British operation meant that the area chosen as the objective, heavily fortified by the Germans and of no real strategic value, no longer had any purpose as a field of battle, since it originally had been chosen because it facilitated a joint Anglo-French offensive.

A heavy but ineffectual artillery bombardment, 24 June–1 July, preceded the attack, 1 July, which, without gaining a yard, cost the British 60,000 casualties on the 1st day, the greatest loss ever sustained in a single day by a modern army. The British failure caused the French to halt their advance for fear of being outflanked.

In heavy fighting the British managed slowly to push forward, 2–10 July, and a surprise early morning attack, 14 July, gained them 5 mi. before it bogged down. Heavy fighting continued into the fall.

On 15 Sept. Haig used a new weapon, the tank (so called because during its secret development the vehicle traveling under canvas could be said to be a water carrier or tank). Some ground was gained, but Haig has been criticized for dissipating the surprise value of the tank by not waiting until he had more than the 36 used in the initial action.

The battle churned on in the mud as

the autumn rains fell until, after a last British attack, 13 Nov., it petered out, having developed into an even greater struggle of attrition than Verdun. The allies had conquered about 125 sq. mi. of territory of little strategic value at huge cost in casualties: British, over 400,000; French, 200,000. The Germans lost about 450,000 men.

CHANGES IN COMMAND. The campaigns in 1916 on the Western Front had been costly, arduous, and inconclusive, and resulted in no real changes except in the German and French high commands. Dissatisfaction with Falkenhayn's policies led to his replacement, Aug., by the Hindenburg-Ludendorff partnership with Field Marshal Paul von Hindenburg (1847–1934) as chief of the general staff and Gen. Erich Ludendorff (1865–1937) as first quartermaster general. Joffre was replaced, Dec., by Gen. Robert Nivelle (1858–1924), who had distinguished himself at Verdun.

5TH BATTLE OF THE ISONZO. 9–17 Mar. Undertaken at the request of Joffre, who pleaded for diversions to relieve the pressure at Verdun, this Italian offensive bogged down in bad weather and cost many casualties.

AUSTRIAN ASIAGO OFFENSIVE. 15 May–17 June. To get behind the Italian forces on the Isonzo, Austria-Hungary attacked south from the Trentino toward the key rail center of Padua. Initially the Austrians did well, capturing Asiago and Arsiero, 30–31 May, but difficult terrain, lack of strength, and a rapid shifting of Italian troops all joined to stop them by mid-June.

ITALIAN COUNTERATTACK. 16 June–7 July. Helped by the moving of Austrian troops to the East to meet a Russian threat, the Italians forced a withdrawal which set the Austrian forces back almost to their original positions. Casualties: Italians, 147,000; Austro-Hungarians, 81,000.

ISONZO CAMPAIGN. 6 Aug.–14 Nov. In the 6th Battle of the Isonzo the Italians captured Gorizia, 8 Aug., but then failed to advance despite bloody fighting. The 7th (14–26 Sept.), 8th (10–12 Oct.), and 9th (1–14 Nov.) battles of the Isonzo

were all marked by heavy fighting and small Italian gains at the cost of large casualty lists.

1917

ENTRY OF THE U.S.A. At the instigation of Ludendorff, a conference of German political and military leaders at Pless, 8-9 Jan., Hindenburg's field headquarters, determined that a policy of unrestricted submarine warfare should be followed. The German high command gambled that if as a result the U.S. entered the war, Germany could win it before American forces became a factor in the struggle. On 31 Jan. the U.S. was notified that, effective 1 Feb., a policy of unrestricted U-boat warfare would be in force. On 3 Feb. the U.S. broke diplomatic relations with Germany.

ZIMMERMANN NOTE. The Zimmermann Note, intercepted by British intelligence, 17 Jan., was a message from the German foreign minister, Arthur Zimmermann (1864-1940), to Mexico. It proposed, in the event of war between Germany and the U.S.A., that there should be an alliance between Germany and Mexico. It offered Mexico financial support and the promise of the restoration of Texas, Arizona, and New Mexico. It also asked Mexico to try to get Japan to change sides. Britain waited until 24 Feb. before transmitting the note to the U.S. and the State Department released it, 1 Mar. U.S.-German relations were further exacerbated by U-boat sinkings of American merchantmen, and on 2 Apr. President Woodrow Wilson (1856-1924) asked Congress for a declaration of war, saying that the "world must be made safe for democracy."

U.S. DECLARATION OF WAR. 6 Apr. The U.S. did not formally join the allies, but remained an "associated power." The U.S. brought fresh manpower and economic resources into the war, but it was to be some time before these could be brought to bear against Germany.

ALLIED PLANS. During 1917 a series of French disasters led to the burden of fighting being placed on the British as the

allies continued to attempt the 1 big push on the Western Front believed necessary to win the war. Very attack-minded, Gen. Nivelle planned a great French offensive in Champagne with a joint French-British drive along the Somme as a preliminary diversion. At a series of conferences, Jan.-Mar., his plan was accepted, and it was agreed that Gen. Haig, subject to the right of appeal, would act under Nivelle's direction in the forthcoming offensive. Friction between the 2 generals delayed the attack after Ludendorff effected, 24 Feb.-5 Apr., a strategic withdrawal to strengthen the German lines. The Germans retrenched on a 65-mile front from Soissons to Arras with an average depth of 20 miles. They desolated the area they left and retired behind well-fortified positions known as the Hindenburg Line. This move invalidated Nivelle's strategic premises, but, despite objections by British and French officers and officials, he insisted that the attack take place.

BATTLE OF ARRAS. 9 Apr.-3 May. Designed to draw the German reserves, the British offensive had great initial success, though the 60 tanks used proved ineffectual. By 12 Apr. the Canadians had secured Vimy Ridge, but stiff resistance ended the advance and Haig continued the battle only to help Nivelle's attack along the Aisne.

2ND BATTLE OF THE AISNE. 16 Apr.-9 May. In most of this area the French troops, to reach their objectives, had to cross steep ridges, cut by ravines and heavily overgrown by shrubs and forest. Poor security, including the capture of a French soldier, 4 Apr., carrying the complete battle plans, led to the Germans' making the natural barriers even more formidable. Nivelle had promised easy victory, and pledged to cease the attack within 48 hours if it failed. When the French went forward, 16 Apr., they were massacred, but nonetheless Nivelle ordered successive futile, costly attacks which resulted in very limited gains.

MUTINY IN THE FRENCH ARMY. May. Nivelle's promises had carried the exhausted French troops beyond the

breaking point. Widespread mutiny occurred. At one time 54 divisions were refusing to obey orders. Thousands deserted and great areas of the front went undefended, although the Germans did not learn of this. Pétain replaced Nivelle, 15 May, and by July had laboriously restored discipline. 100,000 French soldiers were court-martialed. Officially only 55 were shot, but many more were executed without sentence. Pétain personally visited most of the disaffected troops and improved conditions of service (e.g., leave, rations, etc.). To allow the French army time to convalesce, he appealed to the British to keep the Germans engaged.

MESSINES RIDGE. 7-8 June. From this ridge the Germans could perfectly observe behind the British lines and watch attacks being prepared. In a sharp, well-planned and executed operation (making use of tons of mines buried during 2 years under the German positions), the ridge was quickly captured.

3RD BATTLE OF YPRES. 31 July-15 Nov. Against considerable opposition Haig, partly in pursuit of his own strategic concepts and partly in response to Pétain's pleas, conducted an offensive in Flanders. A series of 9 bloody attacks (much of the time fought over muddy and waterlogged terrain) resulted in the advance of the British line about 9,000 yds. and caused 300,000 casualties. After the Canadians' capture of Passchendaele, 6 Nov., the battle petered out in the cold.

FRENCH VICTORIES. At Verdun, 20-26 Aug., and Malmaison, 23 Oct.-2 Nov., Pétain conducted 2 small, perfectly organized, and successful attacks.

BATTLE OF CAMBRAI. 20 Nov.-7 Dec. Over 300 massed tanks surprised the Germans and gained initial spectacular success. Failure to exploit this breakthrough properly stalled the British advance, and heavy fighting ensued. A German counterattack, 30 Nov., drove the British back in some places beyond their starting positions. This battle was the 1st convincing demonstration of what tanks could achieve if efficiently employed.

10TH AND 11TH BATTLES OF THE ISONZO. 12 May-8 June, 18 Aug.-15 Sept. Further fruitless attempts by the

Italians to break into the mountain barrier cost many casualties and weakened the now exhausted Italian troops.

CAPORETTO CAMPAIGN. 24 Oct.-26 Dec. A tired Austria-Hungary needed help, and Ludendorff decided to send German troops to the Italian front to be the backbone of a joint offensive designed to knock Italy out of the war. The German troops shattered, 24-27 Oct., the Italian 2nd Army, whose commander, although warned of the impending offensive, failed to take adequate defense measures. The front broke and, in what at times was a rout, the Italians retreated 70 miles south until they succeeded, 10-12 Nov., in stabilizing their lines along the River Piave, as Austrian and German troops, outrunning their supply lines, had to slow down. The Italians repulsed a number of attempts to cross the river. Gen. Armando Diaz (1861-1920) replaced Cadorna. Fearing the worst, the allies sent 11 divisions from the Western Front to Italy.

SUPREME WAR COUNCIL. Established on 27 Nov., the Supreme War Council was an inadequate attempt to unify allied strategy. It grew out of a conference called to consider the Italian situation, 5 Nov. The important civil and military men on the Council failed to end the bickering, especially on the Western Front, among the allies.

1918

OPPOSING STRATEGIES. The Bolshevik Revolution having led to Russia's withdrawal from the war, Germany's military leaders decided to throw everything they had against the allies on the Western Front and defeat them before effective U.S. forces could arrive. The allied leaders planned to initiate no major action until they could make decisive use of U.S. manpower and economic resources.

STATEMENTS OF ALLIED WAR AIMS. Allied leaders believed that publication, Dec. 1917, by the Bolsheviks of the texts of secret treaties concluded earlier in the war (e.g., the Treaty of London) by the allies made necessary public decla-

rations that would counter any unfavorable impressions. The first to speak out, 5 Jan., 1918, was the British prime minister, David Lloyd George (1863-1945), who produced a statement of war aims that sounded moderate and idealistic and included the restoration to their inhabitants of Belgium, Montenegro, Serbia, and the occupied parts of France, Italy, and Rumania, the establishment of an independent Polish state, and "a reconsideration" of the wrong done France by Germany in 1871. President Wilson issued a statement of his own views, 8 Jan., which set forth 14 points as "the only possible" peace program from the U.S. standpoint. The "14 Points" demanded an end to secret treaties and diplomacy, freedom of the seas in peace and war, removal of barriers and inequalities in international trade, reduction in armaments, colonial readjustments, evacuation of occupied territory, self-determination of nationalities and a redrawing of European boundaries along national lines, and the establishment of an international organization to prevent war. Indicative of Wilson's desire for a peace without victors or vanquished, the 14 Points were privately disliked by Allied leaders (the French premier remarked, "The Lord God had only ten"), but publicly they did not dispute them.

U.S. WAR EFFORT. At the time of her entry into the war, the U.S.A. had only a small army short of war material and armed with antiquated weapons. By the end of 1918, the American armed forces had expanded to over 4 m., and 2 m. military personnel had been sent to Europe, of whom about 1,100,000 were combat troops. Until U.S. war production could be sufficiently expanded, the allies had to provide the American Expeditionary Force (A.E.F.) with much of its equipment, and for some items like heavy artillery and tanks the allies continued until the end of the war to be the A.E.F.'s main source of supply. The commander of the A.E.F. was Gen. John J. Pershing (1860-1948). The first U.S. troops arrived in France 28 June, 1917, and the 1st to go into action did so the following Oct.

GERMAN OFFENSIVES. During the winter Ludendorff planned a series of

hard blows whose ultimate object was to split the allies and drive the British into the sea. Troop transfers from the East gave the Germans a 10% advantage in combat personnel, but they lacked reserve strength. Ludendorff relied on surprise and new tactics (partially tested at Caporetto): a short artillery barrage which included a high proportion of gas shells designed to knock out enemy guns and observation posts, after which would come a rolling barrage (usually advancing at 1 kph) with the infantry following closely behind; field commanders in full control of units; strongpoints by-passed and left for follow-up units to deal with; and an emphasis on the light machine gun as an offensive weapon. Expecting stiff resistance, Ludendorff cannibalized front-line units to form special divisions and trained them for the new type of operation.

SOMME OFFENSIVE. 21 Mar.-8 Apr. Surprise and a dense fog made it easier for the Germans to pierce the British lines along a 41-mi. front on both sides of the Somme. The Germans broke into the open and gained ground rapidly. By 26 Mar. Amiens, a major link between the allied forces, was in peril, but near Abancourt a hastily improvised force stopped the advance, 28-30 Mar., and 2 other German attacks along the line proved futile. The German drive had been a major tactical success, achieving a penetration 40 mi. in depth. Altogether the Germans overran some 1,250 sq. mi. of territory, captured about 80,000 prisoners and 1,100 guns, and inflicted nearly 200,000 casualties. But their own losses had almost equaled those of the allies, and German manpower could not be replaced, so in a strategic sense the drive was ultimately a failure.

ALLIED UNITY OF COMMAND. During the crisis the British got some help from Pétain, but he insisted that, if the German advance continued, French forces would have to retreat southwest to cover Paris even though this meant leaving a gap between the allied armies. The allied leaders assembled at Doullens, 26 Mar., and Gen. Foch was entrusted with the "co-ordination of the Allied armies." On 3 Apr., after another conference at

Beauvais, he was charged with strategical direction of military operations, and on 14 Apr. he received the title "commander in chief of the allied armies in France." Pershing placed U.S. troops at the disposal of Foch, but he continued to insist on a separate U.S. army, and had a reference thereto included in an interallied agreement signed at the Beauvais conference.

LYS OFFENSIVE. 9-29 Apr. Still hopeful of smashing the British, Ludendorff attacked in Flanders toward the vital rail center of Hazebrouck. A Portuguese unit in the center of the British line gave way and the Germans rushed through. Foch sent some French troops, and this help plus the tenacity of the British in holding on combined to stop the Germans. Passchendaele and Arras fell to the Germans, but their 15-mi. advance up the Lys River valley cost them irreplaceable casualties.

BATTLE OF CHEMIN DES DAMES. 27 May-6 June. Attempting to unbalance the allies, Ludendorff decided to attack along the River Aisne to draw off reserves from Flanders. A secret shifting of German troops caught the allied forces by surprise, and the Germans penetrated 13 mi. the 1st day. This success led Ludendorff to postpone his Flanders offensive and allow the attack to run its course. By 31 May the Germans were on the Marne about 40 mi. from Paris. U.S. troops were hurriedly rushed to Château-Thierry to aid in the defense and with the French held, 1-4 June, the south bank of the Marne against repeated German attacks. The offensive proved to be another tactical success of little strategic value; Ludendorff's drive had netted him a vulnerable salient at the cost of considerable casualties.

NOYON-MONTDIDIER OFFENSIVE. 9-13 June. Ludendorff planned a new drive to connect the 2 salients formed by the earlier offensives, but the attack failed.

2ND BATTLE OF THE MARNE. 15 July-6 Aug. Despite a severe worsening of German morale, Ludendorff started a fifth and last attack, 15 July, from both sides of Rheims. By 17 July it too had proved a failure, and the initiative now

passed from the Germans, who had lost more than 800,000 men in their 5 drives. Meanwhile Foch, who had been planning his own offensive, used the opportunity that came with the slackening of the German effort. His 1st objective was the Marne salient and, on 18 July, 4 French armies, including some British and American divisions, attacked along this perimeter. The Germans conducted a fighting withdrawal as they attempted to save their supplies. By 3 Aug. they were in a strong position at the base of the salient along the rivers Aisne and Vesle, from which attacks to dislodge them failed.

REDUCTION OF THE AMIENS SALIENT. 8 Aug.-25 Sept. A surprise British attack spearheaded by over 450 tanks, 8 Aug., cracked the German lines, gaining 5 mi. before noon. Ludendorff called this "the black day" of the German army, not so much because of the defeat, but because for the 1st time the spirit of whole divisions gave way; men would not fight and many officers could not control their units. On 15 Aug. Foch broadened the attack to include the front from Arras to Soissons. In heavy fighting the Germans fell back step by step, finally retreating behind a strengthened Hindenburg Line from which their first drive had been made in Mar.

REDUCTION OF THE ST.-MIHIEL SALIENT. 12-16 Sept. Created during the German 1914 offensive, the St.-Mihiel Salient had been generally quiet ever since. The Germans had begun withdrawing, 8 Sept., before an attack, 12 Sept., launched by U.S. troops, the 1st major offensive conducted largely by the A.E.F. Within 36 hours the salient had been reduced, and by 16 Sept. the front line had been straightened and the attack stopped.

FINAL ALLIED OFFENSIVE. 26 Sept.-11 Nov. Foch's general plan was to capture the key railroad centers of Aulnoye and Mézières, whose loss would deprive the Germans of the principal capabilities for supply as well as withdrawal. The plan called for a giant pincers movement having 2 major converging offensives, with their starting times staggered so as to upset the employment of their limited reserves by the Germans. A Franco-British drive would

advance on Aulnoye and Maubeuge from the west, and a Franco-U.S. drive would move on Mézières from the south.

The battle began, 26 Sept., in the U.S. sector of the front between the Argonne Forest and the Meuse. Over extremely rugged country, American troops attacked a well-entrenched and still determined enemy, and by 3 Oct., despite an 8-1 numerical superiority, had made only slight progress. By 31 Oct., at the cost of many casualties, the U.S. forces had cleared the Germans out of the Argonne Forest. Confusion as command lines broke down led Pershing to give up field leadership, 16 Oct., and limit himself to an over-all command role; a 2nd U.S. Army was created, 12 Oct. In its final drive, 1-11 Nov., the U.S. 1st Army advanced rapidly north, capturing the northern end of the Côtes-de-Meuse and reaching Sedan. The 2nd U.S. Army attacked in the general direction of the Briey iron basin east of the Meuse.

To the north the British launched a heavy assault, 27 Sept., in Picardy between Péronne and Lens; King Albert and the Belgians attacked in the coastal lowlands, 28 Sept.; and the British right wing joined with the French, 29 Sept., in massive attacks all along the front from Péronne to La Fère. Fighting was fierce, but by 5 Oct. the British had breached the last position of the Hindenburg Line, although unusually heavy rain bogged down the attack in the lowlands for almost a week thereafter. By 11 Nov. the Belgians had taken Bruges and Ghent, British forces held Aulnoye and Maubeuge, and the French had made gains in the center of the line.

GERMAN PEACE MOVES. Although dispirited and suffering heavy casualties, the Germans had withdrawn in fair order and kept Foch from closing the pincers. But their leadership cracked. On 29 Sept. Ludendorff's nerve gave way and he asked that an armistice be arranged on the Western Front without delay. This led to the resignation as chancellor, 30 Sept., of Count Georg von Hertling (1843-1919) and to his replacement, 3 Oct., by the liberal Prince Max of Baden (1867-1929). Prince Max asked Wilson, 4 Oct., for an

armistice preliminary to a conference which would negotiate a peace on the basis of the 14 Points. Three exchanges of notes, 4-23 Oct., took place between Washington and Berlin as Wilson wanted to be sure that the character of the German government had changed and truly represented the people, and as the allies proved reluctant to accept the 14 Points as the basis of peace.

On 4 Nov. the allies, under the threat of a separate U.S. peace, formally accepted the 14 Points, with the 2 vital reservations that freedom of the seas be discussed at the peace conference and that Germany pay reparations. Wilson transmitted these conditions to the Germans, 5 Nov., and thereafter the actual negotiations were left to Foch.

Meanwhile Ludendorff had regained some of his composure and, while no longer predicting victory, talked of a defensive war. On 26 Oct. he was dismissed. Recognizing the hopelessness of their cause, the Germans realized the need for an armistice. On 3 Nov. mutiny broke out in the German fleet at Kiel and spread to much of northwest Germany. On 7 Nov. revolution broke out in Bavaria. Had the emperor not proved so stubborn, the monarchy might have been preserved, but, as it was, Prince Max's unauthorized announcement of abdication, 9 Nov., came too late. A republic was proclaimed, and the Kaiser fled to Holland, 10 Nov.

BATTLE OF THE PIAVE. 15-24 June. The Germans, in desperate need of manpower, urged the Austrians to attack and put Italy out of the war so that Austrian troops could serve on the Western Front. Crossings of the River Piave were effected at 3 points, but after fierce fighting the Austrians proved unable to maintain their offensive and ordered a retreat, 22-23 June, back across the river.

BATTLE OF VITTORIO VENETO. 24 Oct.-4 Nov. After extensive preparations and much urging by the allies, Gen. Diaz, with the aid of allied troops, launched an offensive which for 3 days, 24-26 Oct., seemed to be inconclusive as the Austrians fought back fiercely. By 27 Oct., however, 3 small bridgeheads had

been established⁹ across the Piave. As the collapse of the Dual Monarchy became clear to the troops, the Austrians then fell back and resistance had virtually ceased by the night of 30-31 Oct. On 3 Nov. Trent (Trento) was occupied and the Italians landed at Trieste.

END OF THE HAPSBURG MONARCHY. Charles I (1887-1922) had come to the Austro-Hungarian throne in 1916 and, recognizing the war's deleterious effect on his lands, had unsuccessfully attempted peace negotiations. On 4 Oct. he sent a note to the U.S. requesting negotiations on the basis of the 14 Points, to which the U.S. replied, 18 Oct., that it could no longer agree to mere autonomy for the nationalities within the empire. Concurrently, the empire began to fragment. On 15 Oct. Poland declared itself an independent state. On 19 Oct. an assembly of Serbs, Croats, and Slovenes at Zagreb asserted its sovereignty over the South Slav portion of the Dual Monarchy. The Czechs in Prague carried out a bloodless revolution, 28 Oct., and on 30 Oct. in Vienna a German National Council was formed to speak for the German provinces. On 1 Nov. Charles acceded to a request made on 25 Oct. for an independent Hungary. Confronted with this breakup, the government of the empire abandoned all hope of a negotiated peace and offered, 27 Oct., an armistice on almost any terms. On 3 Nov. an armistice was signed between the allied powers and the high command of Austria-Hungary, to go into effect 4 Nov., calling for complete demobilization of the armies of the Dual Monarchy; surrender of half its artillery; evacuation of all occupied territory; the right of free movement for the allies over all roads, railways, and waterways; surrender of much of the fleet, and occupation by the allies of such strategic points as they deemed necessary. Austria-Hungary had ceased to exist.

ARMISTICE IN THE WEST. At Compiègne a commission headed by Matthias Erzberger (1875-1921) negotiated with Foch, 8-11 Nov. The allied terms, designed to make Germany helpless, included German evacuation of occupied territory; evacuation of the left bank of

the Rhine and establishment of bridge-heads at Mainz, Cologne, and Coblenz, which would be occupied by allied troops; surrender of all submarines and internment of much of the German fleet; repatriation of all allied prisoners and deported civilians; surrender of considerable military equipment as well as 5,000 locomotives, 5,000 motor lorries, and 150,000 wagons.

The Germans signed at 5 A.M., 11 Nov. At 11 A.M. on that day, except for some isolated incidents, the war on the Western Front ended.

THE EASTERN FRONT

1914

OPPOSING STRATEGIES. Russia mobilized faster than expected, but the mobilization was only partially completed when, much to her later regret, she succumbed to French pleas for an early offensive to divert German forces from the West. The Russians suffered from lack of mobility (their different-gauge railroad equipment was useless on the German railways), inefficient command (their army commanders, jealous of each other, did not work well together), and poor communications (orders were habitually transmitted uncoded).

The Russian strategy called for a 2-pronged assault on East Prussia, the 1st Army to advance from the east and the 2nd to attack from the south. The Germans, operating with limited forces, planned to make use of their superior mobility to defeat the unco-ordinated Russian assaults one at a time.

BATTLE OF STALLUPÖNEN. 17 Aug. The Russian 1st Army, whose advance began 13 Aug., was defeated when it crossed the border by forces under Gen. Hermann von François (1856-1933), who independently had decided to stand and fight to prevent violation of Prussia's "sacred soil." Tactically sound, François's action upset the planned German strategy of timed counterattacks.

BATTLE OF GUMBINNEN. 20 Aug. François urged the German commander in chief, Gen. Maximilian von Prittwitz

(1848-1929), to launch a counteroffensive, but this attack from positions around Gumbinnen resulted in piecemeal assaults which the Russians repulsed. The ensuing stalemate unnerved Prittwitz, especially after he learned that on the same day the 2nd Russian Army had entered East Prussia from the southeast. Telephoning Moltke, he said he planned to withdraw to the River Vistula, but even there doubted if he could hold without reinforcements. On 23 Aug. Hindenburg and Ludendorff took command in East Prussia with the former as senior officer.

BATTLE OF TANNENBERG. 26-29 Aug. Prittwitz's brilliant operations officer, Gen. Max Hoffmann (1869-1927), had the opportunity between 20 and 23 Aug. to develop and put into effect a new strategic plan which was approved by Hindenburg and Ludendorff. German forces, making use of the excellent railroads, were shifted south to face the Russian 2nd Army, while only a cavalry division and a brigade were left to delay the slow-moving Russian 1st Army. On 24 Aug. the Russian 2nd Army met heavy resistance at Frankenau, but, believing the Germans in flight, the Russian commander announced that 25 Aug. would be a day of rest. On 26-27 Aug. the Russian 2nd Army's flanks were defeated and driven back and its center exposed. Finally, the Russian center was surrounded and crushed, 28-29 Aug.

At 11:30 A.M., 29 Aug., the Russians realized their predicament and ordered a general retreat, but it was too late; the Russian 2nd Army had fallen into a German trap and was almost wholly surrounded. The Russian commander committed suicide. Russian killed and wounded reached staggering numbers: the Germans captured 125,000 men and 500 guns and suffered only about 13,000 casualties themselves.

MASURIAN LAKES CAMPAIGN. 9-14 Sept. The Germans now turned on the Russian 1st Army and, augmented by reinforcements from the Western Front, attacked. During 9-10 Sept. they secured the Russian southern flank near Lyck, making the invaders' position untenable

and forcing a withdrawal. To protect this retreat and avoid envelopment, the Russians launched, 10 Sept., a stiff counter-attack between Nordenburg and Angerburg which surprised the Germans and caused them to move forward more cautiously. Although suffering heavy losses, the Russian commander managed to save most of his army by forced marches of as much as 55 mi. in 50 hours. After 13 Sept. the German pursuit slackened. Although not put out of the war, Russia had suffered a severe defeat, and her much-vaunted steamroller had proved a failure.

GALICIAN AND POLISH CAMPAIGNS. Initially, the vast forces of the Austrians and Russians were locked in confused conflict in the south as in the great empty spaces armies wandered in search of their opponents, encircled one another, and were encircled in turn themselves. The Austrian plans called for part of the Dual Monarchy's forces to invade Serbia, but for the bulk to be deployed, with German support, against the Russians. For their part, the Russians planned a drive against Galicia to protect their Polish salient. Reconnaissance was poor on both sides, and on 23 Aug. the Russians and the Austrians unexpectedly collided at Kraśnik. In the ensuing battle, 23-25 Aug., the Russians, whose forces were not yet ready for combat, retreated after desultory fighting. At the Battle of Komarov, 26 Aug.-1 Sept., the Austrians scored limited gains. Meanwhile, to the east a major Russian attack caught the Austrians unprepared and they were routed at the Battle of the Gnila Lipa, 26 Aug.-1 Sept. Trying to aid their retreating forces, the Austrians moved troops to the Gnila Lipa front, leaving a 40-mi. gap in the line in the Komarov area. The Russians exploited this situation and in a series of engagements, the Battle of the Rawa Ruska, 5-11 Sept., heavily defeated the Austrian forces.

AUSTRIAN RETREAT. 11-28 Sept. Realizing the precariousness of their situation, the Austrian high command ordered a general withdrawal, 11 Sept., first to the River San (reached 16 Sept.), and then to a line at the Carpathian Mts., 100 miles to the rear of the front. Over

100,000 men were left in the fortress of Przemyśl, all of whom were lost together with many stores when, after a long siege, the fortress surrendered, 18 Mar., 1915. Of the 900,000 Austrians operating in Galicia, over 250,000 were killed or wounded.

GERMAN FORCES IN POLAND. 28 Sept.-24 Nov. In an attempt to aid the sagging Austrians, the Germans detached 4 corps from their forces in East Prussia and, constituting them the German 9th Army, invaded southern Poland, 28 Sept.-12 Oct. At its farthest point the German drive was only 12 mi. from Warsaw, but the overwhelming numerical superiority of the Russians forced a withdrawal, 17 Oct.-1 Nov., which was swift and smooth and accompanied by a thorough devastation of the country as the Germans returned to their starting line. On 3 Nov. the decision was made to have the 9th Army invade Poland from the north. By 10 Nov. the Germans had shifted the whole force (once again taking advantage of their superior lines of communication) and begun the offensive. In 4 days they advanced 50 miles and commenced encircling the Russian forces around Lodz. The Russians suffered heavy losses in the bitter fighting which took place in mud and snow as very cold weather hampered both sides. Finally, reinforced by divisions from the Western Front, the Germans took Lodz, 6 Dec., and the Russians fell back to rearrange their lines.

THE BALKANS. The 1st Austro-Hungarian invasion of Serbia failed. The Battle of the Jadar, 16-19 Aug., ended with the invaders defeated, and by 24 Aug. the last Austrian forces had been driven back across the border. A 2nd invasion, launched 8 Sept., was halted by a strong Serbian counterattack, 16 Sept., though the Austrians retained bridge-heads on the rivers Drina and Sava. To shorten their lines, the Serbs then withdrew to higher ground. On 5 Nov. the 3rd Austrian invasion began. Valjevo was captured, 15 Nov., and Belgrade evacuated, 29 Nov. On 3 Dec., inspired by a personal plea from their king, the Serbs counter-attacked and after prolonged and savage

fighting the Austrians had to yield. The last Austrian forces left Serbia on 15 Dec.

1915

OPPOSING STRATEGIES. The Russians planned a break-through in Silesia as well as an offensive north toward East Prussia from the Polish salient. The German high command lacked a central plan as Falkenhayn, who believed that the war must be won in the West, clashed with Hindenburg and Ludendorff, who believed Russia could be quickly knocked out of the war.

WINTER BATTLE OF MASURIA. 7-21 Feb. Part of a joint offensive with the Austrians, who attacked the Russian flank in the south, 23 Jan., the 1st German attack of 1915 took place in severe winter weather and began after the end of a 2-day blizzard. The Russians were taken unaware and beaten back, and the 20th Russian Corps was encircled in the Forest of Augustow. Although in the space of 2 weeks the Germans advanced over 70 miles, killing almost 100,000 of the enemy and capturing over 110,000 prisoners and more than 300 guns, the attack proved of negligible strategic value because the vast manpower of the Russians still gave them a numerical superiority. The Germans were not able to follow up their advance and had to shift troops south, where the Austrian offensive was faring badly.

GORLICE-TARNOW BREAK-THROUGH. 2-4 May. In response to strong pleas for an offensive from the south, Falkenhayn decided against another double offensive, and Hindenburg and Ludendorff's forces were relegated to a subsidiary operation. Drawing troops from France, the Germans formed a new army under Gen. August von Mackensen (1849-1948) to spearhead the drive. Meanwhile, 16 Apr., German forces in the north attacked as a diversion, but made an advance of 75 miles into Lithuania, entrenching themselves along the River Dubissa before later joining in the general advance. At 6 A.M. on 2 May, almost 1,000 guns began a 4-hour heavy-artillery

bombardment along a 30-mi. front between Gorlice and Tarnow. Taken by surprise, the Russians panicked. By 4 May the Germans and Austrians were through the Russian defensive positions. "

AUSTRO-GERMAN ADVANCE. 4 May-1 Oct. All through the spring, summer, and early fall, the Germans and Austrians, with but brief pauses, kept up the attack and forced the Russians back. Much of the Russian infantry was poorly trained; many soldiers were sent into combat without rifles and had to snatch them from the hands of dead and dying comrades. Poor communications, an ammunition shortage, and inept leadership further hampered the Russian defense. By 11 May the Russian line was on the River San, 80 miles to the rear. On 17 May the Russians were forced back from this line, and on 2 June the Germans captured Przemyśl. On 22 June, Lemberg fell; 30 July, Lublin; 5 Aug., Warsaw; 20 Aug., Novogorod; 25 Aug., Brest-Litovsk; 16 Sept., Pinsk.

At the end of Sept., Gen. Falkenhayn ordered a halt to the advance. Both Germans and Austrians had outrun their lines of communication. Poor roads, which all along held up the advance, had made supply difficult, and the approach of winter necessitated consolidation. The Russians had retreated 300 miles, and suffered enormous casualties (400,000 Russian soldiers were taken prisoner), had given up more territory than the whole of France, and had lost stores and guns equivalent to what had been on hand at the outbreak of the war. Russia, however, was not yet out of the fight. The bulk of the Russian army had escaped the enemy's successive enveloping movements. On 8 Sept. the czar took over personal command of the army, and it held on. By the end of the year a stable line had been created running from the eastern end of the Carpathian Mts. in the south to Riga on the Baltic Sea.

THE BALKANS. Turkey's need for supplies made the Germans decide to reopen the rail line through Serbia and Bulgaria to Constantinople. A campaign to crush Serbia was therefore planned. From the outbreak of hostilities, both

sides had wooed Bulgaria with offers of territory and money. Ferdinand (1861-1948), the pro-German Bulgarian king, hoping to avenge his country's humiliation in the 2nd Balkan War, accepted the Central Powers' overtures. Even before the signing of a convention, the Central Powers had forced Turkey, 22 July, 1915, by a treaty, ratified 22 Sept., to cede to Bulgaria the land west of the River Maritsa as well as both banks of that river except for Adrianople, and had extended, 8 Aug., a loan of 400 m. francs. On 6 Sept. Bulgaria signed a treaty with Germany and Austria which, in return for active participation in an invasion of Serbia during the following month, promised her Serbian Macedonia and the northeastern portion of Serbia as far as the River Morava as well as other territories in Rumania and Greece, should these countries join the Allies.

ALLIED FORCES IN SALONIKA. On 21 Sept. the Bulgarians began to mobilize. Serbia appealed to the allies for aid, and they decided to send troops, initially 1 division each from France and Britain. The pro-allied Greek prime minister, Eleutherios Venizelos (1861-1936), secretly consented to a landing at Salonika, 3-5 Oct., but his attempt to bring Greece into the war on the side of the allies resulted in the enforcement of his resignation, 5 Oct., by the pro-German King Constantine (1868-1923).

Moving up the Vardar Valley 40 miles beyond the frontier to near Veles, the French attempted to join up with the Serbians; but their efforts proved inadequate, and by the end of Dec. the allied army had retired on Salonika. The British wanted to re-embark, but the French, who insisted on staying, won their point. Over the next 15 months the allied force grew in numbers, reaching by 1918 500,000 men from 6 different nationalities, but otherwise stagnated, serving no useful function and initiating offensive action only twice before the autumn of 1918. The Germans wryly called Salonika their "largest internment camp."

CONQUEST OF SERBIA. About 375,000 Central Powers troops along a

vast front faced a Serbian army of about 200,000, which had recently suffered severely from a typhus epidemic. On 6 Oct. German and Austrian forces crossed the River Sava. By 7 Oct. they were over the Danube, and on 9 Oct. Belgrade fell. The Bulgarians along Serbia's eastern frontier invaded, 11 Oct. Overwhelmed, the Serbs fell back, blowing up stores and depots, while all able-bodied men joined the colors to halt the invader. Realizing that they could expect little effective help, the Serbs decided, 24 Nov., to conduct a fighting retreat toward the Adriatic Sea. In the face of severe hardships, they withdrew along 3 principal routes through Montenegro and Albania to the coast, from which the allies evacuated about 130,000 of them to Corfu, 15 Jan., 1916. There they were re-equipped and took up positions on the Salonika front. Because of political considerations, Falkenhayn halted the Central Powers forces at the Greek frontier. The Austrians, who quickly crushed Montenegro (which surrendered, 17 Jan., 1916), spent the rest of the war skirmishing in the mountains of Albania with the Italians.

1916

OPPOSING STRATEGIES. The Russians, after conferences with the other allies, agreed to mount an offensive during 1916 no later than 15 June. The Germans planned to concentrate on the Western Front, while the Austrians contemplated an offensive against Italy.

RUSSIAN OFFENSIVE AT LAKE NAROKH. 18-28 Mar. This offensive was undertaken by the Russians, who had been slowly rebuilding and re-equipping their armies, in response to French pleas to create a diversion to draw off the Germans from Verdun. On 18 Mar., after 2 days of artillery bombardment, the Russians launched a hastily conceived and poorly executed attack along a 90-mi. front on both sides of Lake Naroch. Stiff German resistance as well as mud from the spring thaws caused the attack to bog down by 26 Mar. The Germans had regained all lost ground by 30 Mar. and fighting soon died away. This offensive

did not help the French and cost the Russians over 100,000 casualties.

BRUSILOV OFFENSIVE. 4 June-20 Sept. During the spring the Russians resumed their preparations for a summer offensive. Austrian attacks on the Italian front led Italy to appeal to Russia for assistance. The Russian commanders north of the Priwet Marshes declared themselves unprepared to advance the date of the planned offensive, but Gen. Aleksei Brusilov (1853-1926), commander of the Russian forces along the southwestern front, said he could launch an attack, which began on 4 June. Brusilov achieved complete surprise and a tremendous initial success. On 6 June the Russians captured Lutsk. By 10 June the Austrian front had been breached to a depth of 50 mi., and on 17 June the Russians took Czernowitz. By 20 June over 200,000 of the enemy had become prisoners of the Russian armies.

Brusilov had counted on support from the Russian forces to the north of him, but only small operations were undertaken by them, 13 June and 2 July, against Baranovichi, and these failed completely. Meanwhile, his own offensive had lost momentum, and the Germans and Austrians were able to bring in reinforcements from the Western Front, from Italy, and from the northern part of the Russian front.

On 28 July Brusilov renewed the offensive, and when this drive failed after a few days because of ammunition shortages and poor communications, he started yet another one, 7 Aug. Stiff fighting went on through Aug. and into Sept., but the Russians made only small gains. The Russian railroads once again proved inferior to the German-Austrian lateral communications network, and more and more Central Powers troops were brought to bear against Brusilov's forces, which received supplies and reinforcements fitfully. By 20 Sept. the Russians could no longer maintain the momentum of attack and the Brusilov offensive ended. Quiet was generally maintained along the front for the rest of the year.

The Russians had inflicted heavy casualties, capturing upward of 400,000 pris-

oners and over 500 guns, and the front line had been rolled back to the Carpathians in the south and to a line running from Stanislav to Pinsk further north, but the drive had exacted a very heavy toll from the Russians. It cost them 1 m. men, and exhausted almost all their available supplies. Austrian losses were so great as to preclude any further offensive action in the East and the Austrian drive against Italy had to be halted; 15 German divisions had to be transferred from the West to the East, thus hampering the effort at Verdun; Russia's fighting spirit had been undermined and the demoralized remnants of her armed forces were ripe for revolution; and Rumania, believing the Central Powers defeated, entered the war on the side of the allies.

ENTRY OF RUMANIA. From the outbreak of the war, both the Central Powers and the allies had wooed Rumania, but she followed a policy of opportunistic caution until Aug. 1916. An allied offer to Rumania of Bukovina, Transylvania, the Banat of Temesvar, Maramures, and Crisana, as well as the apparent success of the Brusilov drive, combined to bring Rumania to sign, 17 Aug., the Treaty of Bucharest, which called for a prompt Rumanian attack on Austria-Hungary. On 27 Aug. the Rumanians entered the war, rich in natural resources, but with a poorly trained 560,000-man army short of rifles, machine guns, and artillery and with only a 6 weeks' supply of munitions.

DEFEAT OF RUMANIA. 28 Aug.-7 Jan., 1917. The Rumanians began a drive, 28 Aug., into Transylvania, which by mid-Sept., when it was halted, had over a 200-mi. front achieved a penetration of about 40 mi. in the center. Meanwhile in the south a mixed force (Bulgarians, Turks, Austrians, and Germans) under Mackensen's command had crossed the Rumanian frontier, 1 Sept., and made considerable gains up to mid-Sept., when it was halted by a Russo-Rumanian army. Resumed shortly afterward, the Central Powers' advance continued, and on 23 Oct. Constanza, the main seaport, fell. Falkenhayn had been placed in command of the Central Powers

forces, and he began an offensive in the north, 26 Sept., which by 10 Oct. had cleared the Rumanians from Transylvania. After having failed to breach a number of other passes, Falkenhayn's forces began a successful attack, 10 Nov., through the Vulcan Pass into Rumania. This attack turned the defenses of the other passes. Mackensen co-ordinated his drive with that of Falkenhayn. On 23 Nov. Mackensen's forces crossed the Danube above Sistova and joined up with the other invading groups, 26 Nov. The Rumanians fought back stoutly, but gave ground as they retreated east. On 6 Dec. Bucharest fell. Heavy rains then slowed the pursuit. The Rumanians withdrew across the River Sereth (Siret), and were able, with the aid of heavy Russian reinforcements, to hold that line. On 7 Jan., 1917, the Germans suspended operations.

Rumania had been completely overrun except for Moldavia in the northeast; her armies had been reduced to about 150,000 men; and her granaries and oil fields had been damaged, though not destroyed, and were in the hands of the Central Powers. The country, for all practical purposes, had been eliminated from the war.

SALONIKA. Gen. Maurice Sarrail (1856-1929), the titular head of the allied forces at Salonika, because of the diverse instructions sent directly to the commanders of each national contingent by their superiors, had much difficulty in exercising command over his force, which was now called the "Armées Alliées en Orient."

The Greeks generally showed themselves indifferent to the allied cause. On 26 May they surrendered a key stronghold, Ft. Rupel, to the Bulgarians without a fight. In Aug., as the Bulgarians moved to forestall any relief offensive that might accompany Rumania's intervention, Greek forces holding forts on the coastal strip of Kavalla similarly surrendered, 24 Aug., without firing a shot. Meanwhile, the Serbs had been driven back from Florina.

The allies, fearful that the Greeks might join the Central Powers, interfered with that country's internal affairs. Gen. Sarrail supported Venizelos, who formed

a provisional government, 29 Sept., in Crete. This government, which moved to Salonika, 9 Oct., created an army to fight the Central Powers. The French seized the Greek fleet, 11 Oct. Later, when as a token of good faith they asked King Constantine for the surrender of 6 mountain batteries and these were not forthcoming, British and French marines landed at Pireaus, 1 Dec., and fought with the Greeks before embarking again.

A limited allied offensive was launched from Salonika, 10 Sept., in support of the Rumanians. The left wing, mostly Serbs, gained about 25 miles by 19 Nov., and drove the Bulgarians from Monastir, but the right wing failed to advance and as winter set in the fighting petered out except for skirmishes. The Rumanians received no help. Casualties: allies, about 50,000; Central Powers, about 60,000.

1917

PROVISIONAL GOVERNMENT IN RUSSIA. On 12 Mar. the Russian Duma formed a provisional government. On 15 Mar. Nicholas II abdicated in favor of his brother, who refused the crown, 16 Mar. The provisional government then headed Russia, though because of the general disruption its authority was limited.

RUSSIAN JULY OFFENSIVE. The government decided, despite the war-weariness of its people, to uphold its military obligations, hoping also that a successful military effort would galvanize support for itself. Alexander Kerensky (b. 1881), minister of war after 19 May, attempted through rousing speeches and an inspection tour of the front, including the most forward lines, to inspire the soldiers to fight. Brusilov assembled a force of some 200,000 men in the Galicia sector, mostly Finns, Poles, and Siberians. He knew an offensive had only a limited chance of success and his plan was simple: to strike for the nearest place of importance, Lemberg. On 29 June a preliminary artillery bombardment began. Then came the attack, 1 July, and by 8 July the use of additional forces had broadened the front to 40 miles. The Russians scored initial gains against the

Austrians, but on 19 July the Germans counterattacked, and the Russian offensive ground to a halt. The poorly equipped Russian troops, many of whom had shown little inclination to fight even when successful, now deserted. ("The army voted for peace with its feet," said Lenin.) By mid-Aug. the Russians, with most of their forces in a state of complete disorganization, had been pushed back behind the offensive's starting line. The Germans checked their drive because they felt confident that there was now little to fear from the crumbling Russian army.

GERMAN DRIVE AT RIGA. 1-21 Sept. The German high command believed that by attacking Riga and thus threatening Petrograd 300 miles away, the new Russian government could be unnerved and peace could be forced. In a surprise attack, 1 Sept., which came after only a few hours of artillery bombardment, the Germans breached the Russian lines. On 3 Sept. Riga was occupied. The Germans advanced, facing almost no opposition as the Russian troops melted away, until 21 Sept. when a halt was called to the operation.

The Germans also took the islands of Oesel (Saare), 16 Oct.; Moon (Muhu), 17 Oct.; and Dago (Hiiumaa), 18 Oct., in the Gulf of Riga, thus gaining control of the eastern Baltic.

PEACE NEGOTIATIONS. The Bolsheviks seized power in Russia on 7 Nov. Under the new regime, ending the war seemed more a matter of course than ever before. As part of their peace drive, the Bolsheviks made public over the ensuing few weeks the secret diplomacy which had preceded the outbreak of hostilities. On 8 Nov. a radiogram was addressed to all nations calling for an immediate armistice based on the right to self-determination and on the repudiation of all secret and open claims to annexations and indemnities. On 20 Nov. all allied ambassadors received notes calling for an immediate armistice. Formal application was made to the German high command, 26 Nov., for an immediate armistice, and the next day Germany said she was ready to negotiate. The allies were asked by the new Russian regime, 30 Nov., if they were

prepared to open negotiations in co-operation with Russia; if they were not, Russia would negotiate alone.

TRUCE TALKS. Talks with the Central Powers opened, 3 Dec., at the Polish fortress town of Brest-Litovsk. On 5 Dec. the discussions recessed for a week while the Soviet delegates sought instructions, and were renewed, 12 Dec. On 15 Dec. a truce was agreed on for 28 days as from 17 Dec., during which time the terms for a final settlement would be worked out. On 22 Dec. peace negotiations proper began at Brest-Litovsk.

At the 1st round of discussions, the Soviets and the Central Powers could not agree on any basis for a settlement. Adolf Joffe (1883-1927), the head of the Soviet delegation, thought he had won the Germans to accept the Russian demand for peace without annexations and indemnities, but he was mistaken. On 28 Dec. the negotiations were adjourned while delegates returned to their respective capitals for instructions.

RUMANIA. With the aid of a French military mission, the Rumanian forces in Moldavia were reorganized, and on 22 July they joined with the Russians in launching a diversionary attack between the fortress of Focsani on the River Sereth and the Carpathians, a front of some 60 miles. On 6 Aug. Mackensen's forces, mostly German, counterattacked, and the Russo-Rumanian armies fell back. The Central Powers could not spare the troops necessary for decisive success, but the collapse of Russia forced the Rumanians, 6 Dec., to sign a truce ceasing all hostilities.

GREECE. A probing operation, Mar., around Lake Prespa by allied forces soon bogged down, achieving nothing but casualties. Abortive night attacks, 24 Apr., 8 May, by the British gained no ground and cost over 5,000 men. On 9 May Sarraïl began his long-heralded spring offensive, but stiff resistance forced its abandonment, 21 May.

OVERTHROW OF CONSTANTINE. Charles Jonnart (1857-1927), a Frenchman, was sent to Athens as allied high commissioner to demand that Constantine abdicate. He arrived, 9 June, and the

next day French troops landed at Corinth and Thessaly, encountering resistance. Late on 11 June, Constantine abdicated in favor of his 2nd son, Alexander (1893-1920), and left the country, 14 June. On 22 June Venizelos was made prime minister, and Greece formally joined the allies, 2 July.

1918

PEACE NEGOTIATIONS. The Brest-Litovsk conference was reconvened, 9 Jan., with Leon Trotsky (1874-1940) heading the Soviet delegation. A stalemate ensued as Trotsky, hoping the revolution would spread and save Russia, stalled and would not accept any of the demands (including autonomy for Poland, the Ukraine, and the Baltic provinces, and continued occupation of Russian territory) put forward by the heads of the German delegation, Gen. Hoffmann and Baron Richard von Kuhlmann (1873-1949), the German foreign minister. Divisions existed among the Central Powers. In contrast to German civilian officials, the high command wanted harsh terms imposed. The Austrians, in need of grain from the East to stave off famine, were desperate for peace.

There was a further recess, 18-30 Jan., as Trotsky returned to Petrograd for conferences. On 1 Feb. the Central Powers recognized the independence of the Ukraine for which a delegation from that area had been agitating at Brest-Litovsk. On 2-7 Feb. came another adjournment while Austro-German talks took place in Berlin. Negotiations resumed, 8 Feb., and next day the Central Powers signed a separate peace at Brest-Litovsk with the Ukraine, the "bread peace," the effect of which was theoretically to leave the Ukraine an independent and neutral state, while actually it became a granary and storehouse for the Central Powers. On 10 Feb. Trotsky, who refused to accept the Central Powers' conditions, announced that Russia would neither sign a peace treaty nor continue fighting ("no peace-no war"), and the Russian delegation went home.

The German government was at first

taken aback, but, 18 Feb., terminated the armistice and ordered an advance. The remnants of the Russian army offered almost no resistance. In the north the advance halted near Narva and at Pskov. In the south the Germans, continuing on even after peace had been signed, penetrated into the Crimea and beyond Rostov, almost 600 miles within the old frontier. The allies used this advance as an excuse to send troops which later supported the Bolsheviks' enemies.

On 19 Feb. the Germans received a telegram from Lenin accepting the earlier terms, but they delayed answering until the advance in the north was almost completed. A German ultimatum was then transmitted to the Soviets, 23 Feb., and next day the Russians gave in, as Lenin, who feared for the revolution, won out over those who wanted to carry on the war. The ultimatum allowed only 3 days for talks and these began on 1 Mar.

TREATY OF BREST-LITOVSK. 3 Mar. The Soviets agreed to recognize the independence of Georgia and the Ukraine, to leave Poland, Estonia, Latvia, and Lithuania to the disposition of Germany and Austria-Hungary; to reaffirm Finland's independence, to hand over Kars, Ardahan, and Batum to Turkey; to halt all propaganda activity in Central Europe, and to open immediately commercial relations with the Central Powers. The territory of Russia was reduced by over 1,200,000 sq. mi. and her population by 62 m. Lost were 32% of the country's arable land, 26% of the railroads, 33% of the factories, and 75% of the coal and iron mines. For the Russians it was a sad ending to a war in which 2 m. Russian soldiers had been killed, over 4 m. wounded, and nearly 3 m. made prisoner. On 15 Mar. the Soviets ratified the treaty. Supplementary treaties signed on 27 Aug. further defined the terms of the peace.

PEACE WITH RUMANIA. The Treaty of Bucharest, 6 May, imposed by the Central Powers on Rumania, included provisions for a long-term German lease on the Rumanian oil fields, cession of Dobruja to Bulgaria, and the payment of indemnities in goods by

Rumania. On 9 Nov. Rumania re-entered the war on the allied side with the backing of a French military mission.

ALLIED BALKAN OFFENSIVE. Under 'Gen. Marie Louis Guillaumat (1863-1910): the Salonika front was reorganized: forces were reassigned, the Greek army was made battleworthy, and the Serbs received replacements from troops who had been moved from Russia. In June Guillaumat was recalled to France to serve as governor of Paris, and Gen. Franchet d'Esperey (1856-1942) replaced him.

D'Esperey's well-equipped army of 350,000 men faced a mostly Bulgarian force, low in morale, weak in equipment, and reduced to about 310,000 when the Germans moved most of their forces to the Western Front. D'Esperey's attack was planned in conjunction with the allies' main drive in France. On 1 Sept. the British feinted in the Vardar Valley, and on 15 Sept. the Serbs and French attacked along a 7-mi.-wide front at Dobropolye. By 17 Sept. the allies had penetrated 20 miles and the front had widened. On 19 Sept. the Serbs crossed the Vardar and the enemy retreated in disorder. The French entered Prilep, 23 Sept., and next day the Serbs captured Gradsko. Meanwhile, 22 Sept., the Bulgarian forces, under heavy pressure on the right, had begun to retreat, closely followed by the British and the Greeks.

COLLAPSE OF BULGARIA. The position of the Bulgarians was now hopeless. The front had been cut in 2 and the halves were being driven in different directions. On 26 Sept. they asked for an armistice, repeated the request, 28 Sept., and were granted one, 29 Sept., to go into effect at noon on 30 Sept. They agreed to surrender all arms and weapons of war, evacuate all Greek and Serbian territory, demobilize most of their army, order other Central Powers troops out of their country, and allow the allies full use of Bulgarian facilities to prosecute the war further against Germany, Austria-Hungary, and Turkey.

END OF THE WAR IN THE EAST. 30 Sept.-11 Nov. Allied forces continued their advance, encountering some fierce

resistance from hastily mustered German and Austrian troops. On 12 Oct. the Serbs retook their ancient capital of Nish, reoccupied Belgrade, 1 Nov., and crossed the Danube. Mackensen's troops began a rapid retreat through Transylvania. Meanwhile the French had occupied Sofia, joined the Serbs on the Danube, and later occupied part of Hungary.

THE TURKISH FRONT

1914

TREATY OF BERLIN. 2 Aug. Within the government of Young Turks which ruled Turkey, a small clique headed by the pro-German minister of war, Enver Pasha (1881-1922), feared (not without reason) that the allies intended to partition the Ottoman Empire. They believed that the best chance for Turkey's survival lay in an alliance with Germany. In July Enver Pasha went to Berlin and there negotiated a secret treaty, known only to 4 or 5 Turkish government officials, obligating Turkey to enter the war on the side of the Central Powers in return for the promise of conquered Russian territory. However, with the consent of its allies, Turkey postponed entering the war for 3 months in order to complete needed military preparations.

"GOEBEN"-“BRESLAU” AFFAIR. Two German cruisers, *Goeben* and *Breslau*, which were caught in the Mediterranean when war broke out, bombarded Bône and Philippeville in French North Africa, 4 Aug., before steaming for Constantinople. Their determined commander, Vice-Adm. W. A. T. Souchon (1869-1940), escaped a trailing British squadron and other allied vessels sent in pursuit, reaching the Dardanelles, 10 Aug., and after receiving permission from the Turks to pass through anchored in the Bosphorus.

International law held that a belligerent's vessel could find only 24 hours' sanctuary in a neutral port before either sailing out or being interned. Neither happened. The Turks announced that the German cruisers had been sold to Turkey, but this was a fictitious sale. The *Goeben* and *Breslau*, renamed *Selim*

Yavuz and *Midilli*, respectively, continued to be officered by Germans and almost entirely manned by them (with German sailors wearing fezzes and playing at being Turks).

ENTRY OF TURKEY. Despite German pressure for Turkish fulfillment of treaty commitments, a desire for peace prevailed in Turkey except among the Enver Pasha group. Souchon, who had been made commander of the Turkish navy, was ordered by the German emperor to attack the Russians. On 29 Oct., with the connivance of Enver Pasha, Souchon took his 2 cruisers and some smaller Turkish vessels and shelled the Black Sea ports of Novorossisk, Feodosiya, Sevastopol, and Odessa. Russia accordingly declared war on Turkey, 1 Nov., and on 5 Nov. Great Britain and France followed suit. On 14 Nov. the sultan, as caliph, called all Moslems to a jihad (holy war) against those making war on Turkey or her allies.

Turkey had an army of some 500,000 men. Many of its technical and staff officers were Germans, who had arrived, Dec. 1913, with Gen. Otto Liman von Sanders (1855-1929), who had been hired to reorganize the remnants of the Turkish armed forces shattered in the Balkan Wars. Artillery and other equipment were fair; communications were execrable. The most immediate effect of Turkey's entry into the war was the closure of the Black Sea straits and the isolation of Russia, which could neither export her wheat nor import needed munitions via this route. The Turks began military operations in the Caucasus.

CAUCASIAN FRONT. Despite the difficulty of transporting troops to the front (they had to march at least 250 mi. from the nearest railhead), Enver Pasha chose to inaugurate a campaign against Russia with, as a 1st step, the envelopment of the fortress of Kars. During Nov. light encounters took place along the border. On 21 Dec. Enver himself arrived in the Caucasus and the Turks attacked in force. They were hampered by a rigorous terrain and by their commanders' inefficiency. During 29 Dec.-3 Jan., 1915, the Russians won a great

victory at Sarikamis, 83 mi. southwest of Kars. Perhaps 50,000 Turkish troops froze to death, and the Turkish 3rd Army was almost annihilated. The most important result of the campaign was a Russian request delivered in London, 2 Jan., 1915 (before the Russian victory had become clear), asking for action against the Turks elsewhere to ease the Caucasus situation. From this resulted the allied attempt to force the Straits in 1915.

MESOPOTAMIAN FRONT. Initiated by the government of India and carried out by troops of the Indian army, allied action in Mesopotamia was designed to support friendly Arabs against the Turks and safeguard British oil interests. On 23 Oct. Indian army troops took up stations at the British-held island of Bahrain in the Persian Gulf. The Turkish forces in Mesopotamia, about 90% of whom were Arabs, and unreliable from the Turkish point of view, were poorly armed. Between 6 Nov. and 8 Dec., the British occupied the area at the head of the Persian Gulf, entering Basra, 23 Nov., after hard fighting and reaching Al Qurna, 8 Dec. Numerous small inconclusive actions were fought.

1915

CAUCASIAN FRONT. On 10 July the Russians launched an attack on the hills northwest of Lake Van. A Turkish counterattack, 16 July, pushed them back, and on 26 July the Turks occupied Malazgirt. A new Russian drive, 4-8 Aug., forced the Turks back, causing heavy casualties, not less than 10,000 being killed and wounded and over 6,000 being taken prisoner. The Russians, however, did not have the strength to follow up, and consolidated their position along a line from Vastan on the southeast corner of Lake Van to Tutak.

ARMENIAN MASSACRES. At the beginning of the war, the Christian Armenian minority in Turkey numbered about 1,500,000, located mostly in Aleppo and in the 8 Anatolian vilayets of Erzerum, Van, Bitlis, Kharpout, Diyarbakir, Sivas, Adana, and Trebizond (Trabzon). Near Van the Armenians rose, 13 Apr., and seized the fortress, which they turned over

to the Russians, 19 May, who later evacuated, 4 Aug., and then recovered it, 8 Aug. In June, claiming that the Armenians were aiding the Russians, the Turkish government decreed that all non-Moslems must be transported from points of military concentration and away from lines of communication. Put into effect with unreasonable cruelty, this order resulted in the death of tens of thousands of Armenians. Marched off into the desert, they died from exposure and starvation as well as from attacks by marauders encouraged by members of the government. Death was the fate of most Armenian men; rape, forced conversion to Islam, and slavery the plight of the women. Altogether, during 1915-16 an estimated 1 m. Armenians perished; by the end of the war only a remnant remained in Asia Minor, and these mostly in refugee camps.

EGYPTIAN FRONT. On 3 Feb. an attack was made by the Turks on the Suez Canal. A force of some 22,000 men under the command of Jemal Pasha (1872-1922), the minister of marine, whose chief of staff was a Bavarian, Friedrich Kress von Kressenstein (1870-1924), had been conveyed secretly and efficiently across the Sinai Peninsula. The force attacked near Tussum, halfway between Lake Timsah and the Great Bitter Lake, and although a few boats got across the Canal the attack failed, and the Turks, who lost about 2,000 men, retreated. Except for some raids back and forth the front was quiet in this area during the rest of 1915. The main result of the Turkish attack was that the British, fearing repetitions, kept large numbers of troops in Egypt which might have been employed elsewhere.

SANUSSI RISING. The Sanussi, a powerful Moslem brotherhood, rebelled, Nov. 1915, in the Western Desert near the Nile Delta. Several hard-fought actions, Wadi Majid, 25 Dec., and Halazin, 23 Jan., 1916, interspersed with long and trying desert pursuits, ended with Turkish victory at Agagiya, 26 Feb., 1916.

GALLIPOLI CAMPAIGN. 19 Feb.-9 Jan., 1916. The Dardanelles are a 40-mi.-long channel, in places only 2 to 3 mi. wide, connecting the Mediterranean with

the entrances to the Black Sea. A plan was evolved to force them, and thus free the Russian fleet. On 13 Jan. the decision was taken that the British Admiralty should prepare a naval expedition to breach the Dardanelles and bombard Constantinople. A strong advocate of this project was the 1st lord of the Admiralty, Winston Churchill (1874-1965), who argued that the navy could force the Dardanelles. On further consideration it was decided, 16 Feb., that the shores of the Dardanelles would have to be held if the fleet passed through. On 19 Feb. Australian and New Zealand troops (Anzac), who had been sent to Egypt for training, were assigned to Gen. Ian Hamilton (1853-1948), who had been appointed to command.

NAVAL ACTIONS AT THE STRAITS. 19 Feb.-18 Mar. A powerful allied naval squadron bombarded the outer forts, beginning 19 Feb., and landed marines to blow up abandoned guns. The final attack was on 18 Mar., commanded by Vice-Adm. John de Robeck (1862-1928). The Narrows forts were successfully reduced, and Turkish munition supplies gave out. In all likelihood an allied fleet could have passed through the next day unopposed. But the attack had cost 6 out of 16 capital ships and, despite the urging of his staff officer, Commo. Roger Keyes (1872-1915), de Robeck decided against renewing the attack. Hamilton, who had just arrived and concurred in this decision, discovered that the transports carrying his troops had been loaded so capriciously that it would be wiser to retire to Alexandria and repack. The Turks used the respite granted them to strengthen their defenses.

1ST LANDINGS. 25 Apr. The 1st troops were disembarked at Cape Helles and at Ari Burnu, 25 Apr., while the French made a feinting attack at Kumkale. The Russians bombarded the Bosphorus ports and Liman von Sanders rushed to Bolayir, thinking the allied assault would take place there. The surprise effect was wasted, however, because of the mistakes made in the landings, especially at Helles, where a sickening slaughter ensued. At Ari Burnu a naviga-

tion error put the Anzaç ashore a mile north of the intended beach among steep ridges, but the determined attackers fought their way ashore and almost carried the heights above. They were stopped by Mustafa Kemal (1880-1938), later known as Kemal Atatürk, who saved the situation for the Turks by committing his whole division, though lacking authority to do so. The troops on the rocky beachheads suffered terribly, being constantly exposed to Turkish fire. All their supplies, even water, had to be brought ashore. The threat of submarines dictated that the supporting fleet stay mainly in the protected harbor at Moudros Bay, Lemnos, which reduced the allies' already limited artillery support. Despite the harrowing conditions, fighting continued. Breakouts were attempted at Helles three times, 6 May, 4 June, and 12 July, with little success, the total gain being 3 mi.

SUVLA BAY LANDINGS. 6 Aug. By now the Gallipoli campaign was receiving heavy support in munitions, even being given priority over the Western Front. Fresh troops were sent in, and a plan evolved calling for a landing at Suvla Bay, a little to the north. A force landing here would join forces with the Anzaç and cut across the peninsula, while the troops at Helles attacked at the same time. The Suvla affair started perfectly, with the troops landing and achieving surprise, but the advantage was soon dissipated, one column got to within a quarter of a mile of the heights with only 20 Turks ahead of them when they sat down for breakfast. Elsewhere hard fighting failed to make gains, 8-10 Aug. Further attacks, 15 and 21 Aug., also failed, and at Suvla Bay the fighting degenerated into bitter trench warfare. The Gallipoli enterprise was seen to be a disaster.

EVACUATION FROM GALLIPOLI. 10 Dec.-9 Jan., 1916. By 20 Dec. all troops were evacuated from Suvla and the Anzac zone without a casualty. On 9 Jan., 1916, the British completed the evacuation of Helles. The costs of the Gallipoli campaign were enormous, both sides together suffering over 500,000 casualties. Its effect on the war as a whole was slight.

MESOPOTAMIAN CAMPAIGN. During early Apr. 1915 the British anticipated a Turkish advance in Mesopotamia, and constructed an entrenched camp at Shaiba, about 10 mi. southwest of Basra. On 12-14 April the Turks attacked, but were repulsed, losing some 6,000 men. The British occupied Ahwaz, 16 May. A Turkish force besieged them, but was driven off and by the end of May Turkish troops had been cleared from the area. The British continued a somewhat haphazard policy of advancing up the Tigris and Euphrates rivers. On 3 June they captured Amara on the Tigris and An Nasiriya on the Euphrates, 25 July. They met considerable opposition, but under Maj. Gen. Charles Townshend (1861-1924) pushed on. Kut was captured 28 Sept., and on 5 Oct. the British reached Al Aziziya. They assaulted Ctesiphon, 22-23 Nov., in the hope of taking Baghdad, but casualties proved too heavy, and they withdrew to Kut, 25 Nov., which was invested by the Turks, 7 Dec.

1916

CAUCASIAN FRONT. The Russians under the able and vigorous Gen. Nikolai Yudenich (1862-1933) began an advance on 17 Jan. By 26 Jan. the Turks had been driven back 50 mi. along a 7-mi. front. On 12 Feb. the Russians renewed their drive, capturing Erzerum, 16 Feb. During Mar. they moved slowly along the Anatolian coast and on 17 Apr. captured Trebizond, an important Turkish military center and the best roadstead in northern Anatolia. Turkish counterdrives at the end of May and in June, using troops released by the allied evacuation of Gallipoli, had limited initial success and eventually petered out. On 2 July Yudenich launched another offensive, capturing Erzincan, 25 July, and the Turks replied by taking Mus and Bitlis, 6 Aug. By the end of Sept. the Turks had been forced to retreat after suffering heavy losses: 30,000 casualties out of an effective strength of about 100,000. The winter of 1916-17 came early and was bitterly cold. By Oct. conditions were such that all fighting ceased except for patrol activity.

EGYPT AND PALESTINE. The British under Gen. Archibald Murray (1860-1945), by building a water pipeline and a railway, began, May, a step-by-step advance from Egypt through Sinai toward the Palestinian frontier. On 23 Apr. the Turks raided Qatia and Duedir, causing heavy casualties but delaying the construction work by only a few days. On 4-5 Aug. Kress von Kressenstein, leading 16,000 Turkish troops supported by German machine-gun companies, attacked at Rumana. He was defeated with losses of almost 50%. The British attacked the outpost camp of Magdhaba, 23 Dec., and after hard fighting captured most of its garrison. Meanwhile they had occupied El Arish, 20 Dec., 27 mi. from the Palestinian frontier.

HEJAZ REVOLT. The Hejaz revolt began, 5 June, with an unsuccessful attack by Arabs on the Turkish garrison at Medina. On 7 June Hussain ibn Ali ('Ali) (1856-1931), sherif of Mecca, proclaimed the independence of the Hejaz, and on 10 June the Turkish garrison at Mecca surrendered.

MESOPOTAMIAN FRONT. The siege of Kut lasted from 7 Dec., 1915, to 29 Apr., 1916. The British made 3 attempts to lift it (9-21 Jan., 7-16 Mar., and 5-23 Apr.), but all failed. Kut, which had supplies for only 2 months, managed to hold out for 5 before surrendering. The British suffered nearly 22,000 casualties in attempting relief, and the captured garrison, which had endured great hardship, numbered about 10,000. The rest of 1916 was spent by the British in defense, as they improved their communications. Meanwhile a Russian advance on Baghdad had failed, June, and the Russians retreated north. On 13 Dec. the British began a slow drive against Kut.

1917

CAUCASIAN FRONT. Only the outbreak of the Russian Revolution saved the Turks from complete disaster in Asia Minor. The winter had been very hard and the Turkish forces suffered more than the Russians from disease, lack of winter equipment, and desertion. When the czar's government fell, the Russian

troops initially stood fast, but by the early summer of 1917, though the process of disintegration was more gradual and less dramatic than on the main Russian front, the Russian army in the Caucasus was falling apart. Gen. Yudenich resigned in June. The Bolshevik seizure of power accelerated the breakup, and by the end of the year self-demobilization had led to the complete disintegration of the front. The debilitated Turks, whose manpower by this time amounted to only some 20,000 riflemen, remained inactive except for the reoccupation of the Lake Van area, from which the Russians had withdrawn.

EGYPT AND PALESTINE. Continuing their advance across the desert, the British crossed the Palestinian frontier, 8 Jan., and captured Magruntein and Rafa, 9 Jan. They then continued north up the coast, and on 28 Feb. took the small village of Khan Yunis. The Turks retreated to a defense line running from Gaza to Beersheba.

Murray's assignment, the clearing of the Sinai Peninsula, had stemmed from the British need to defend the Suez Canal. Now the British high command decided to push on in order to keep the Turks occupied.

1ST BATTLE OF GAZA. 26-27 Mar. Gaza, gateway to Palestine, was a formidable objective, even though held by only some 4,000 men. The terrain made it a natural fortress. The British plan called for a cavalry screen to hold off the Turks on the east and southeast, while infantry attacked from the south. To be effective the plan had to be carried out quickly, since communications were stretched and the cavalry's horses could be watered only in Gaza. The starting point of the attack was Wadi al-Ghazze, 6 miles south of Gaza. Heavy fog on the morning of 26 Mar. hampered the attackers but the troops captured the ridges 3 miles south of the town and the cavalry found water there. Bad staff work, however, led to the withdrawal of the cavalry at a critical moment because it was believed the infantry attack had failed. The next day the Turks closed in and took the British troops in enfilade with artillery fire, forc-

ing them to retreat back to their starting point. Casualties: British, about 4,000; Turkish, about 2,400.

2ND BATTLE OF GAZA. 17-19 Apr. Under Kress von Kressenstein the Turks had carefully fortified their positions, making them much stronger, and they had dug in along the Gaza-Beersheba road. The new British plan required an attack on this position along a 2-mi. front, beginning 2 mi. southwest of Gaza. The approach to the Turkish position was almost a glacié and made the advance very hazardous. Despite the courage with which the British attacks were pressed, they failed to pierce the Turkish lines. The British had 6,500 casualties as against 3,000 suffered by the Turks.

In June, Gen. Sir Edmund Allenby (1861-1936) was appointed to command the British forces. Allenby demanded and received reinforcements, and by Oct. the British outnumbered the Turks 2 to 1 in infantry, 8 to 1 in cavalry, and 3 to 1 in guns.

3RD BATTLE OF GAZA. 31 Oct.-7 Nov. Allenby planned a feint at Gaza while Beersheba and its vital water wells were attacked by troops who had circled to the east. The Turks, caught by surprise, put up a good fight; but although they could have destroyed the wells, failed to do so. By 1 Nov. Beersheba was in British hands and the British had begun to roll up the Turkish line. Meanwhile, 2 Nov., a British attack secured the outlying Turkish positions at Gaza, and on the night of 6-7 Nov. the Turks evacuated the town. The British gained a decision at Gaza but did not destroy the Turkish forces.

BATTLE OF JUNCTION STATION. 13-14 Nov. As the British fought their way up the coastal plain (the "Plain of the Philistines") the Turks took up positions in front of Junction Station. After 2 days of fighting it was captured with its steam water-pumping plant intact. This meant that for the first time water in large quantities was available. On 16 Nov. Jaffa was occupied.

OCCUPATION OF JERUSALEM. Part of Allenby's force had wheeled into the Judean hills, where Falkenhayn, in

command of the *yilderim* (lightning) divisions (units put together by Enver Pasha to fight in Mesopotamia but sent to Palestine because of the impossibility of transporting them to Mesopotamia), harassed it. Finally, on 8 Dec. Allenby was able to mount an attack on Jerusalem mainly from the west, with a secondary assault from the south. On 9 Dec. the municipal authorities to whom the Turks had handed over the city surrendered to Allenby. Under Falkenhayn's command the Turks attempted to recapture Jerusalem, 26-30 Dec., but they lacked the strength and a British counterattack drove them back. Over-all casualties for the whole campaign: British, about 18,000; Turkish, about 25,000.

HEJAZ REVOLT. Arab activity was not of major importance during 1917, but raids by Arabs along the Hejaz railway strained Turkish resources and caused troops to be diverted there from elsewhere. The Arab revolt was strongly influenced by T. E. Lawrence (1888-1935), an Englishman with a genius for organizing the Arabs and utilizing their strength.

MESOPOTAMIAN FRONT. Although the British drive on Kut bogged down because of the winter rains, the Turks were driven out of their Khudhaira Bend positions, 6-19 Jan., and by 16 Feb. the whole south bank of the Tigris had been cleared. On 17 Feb. an assault on Sannaiyat was thrown back in disorder, but the British heavily outnumbered the Turks and renewed the attack, 22 Feb. On 25 Feb. Kut was found deserted and in ruins. By 7 Mar. the British pursuit of the Turks had reached Diyalah, on the Tigris 10 mi. below Baghdad. The Turkish positions were now outflanked, and on 11 Mar. the British entered Baghdad unopposed.

The British had taken 9,000 prisoners and an immense quantity of military material, and the Turks had lost their best base of operations in Mesopotamia. The British now drove in 3 directions to clear away the remaining Turkish opposition: east into Persia, north of the Adheim, and along the Tigris and Euphrates rivers. On 29 Sept. they occupied Ramadi,

capturing most of its garrison, and on 9 Dec. drove the Turks from Khanaqin.

1918

CAUCASIAN FRONT. The Treaty of Brest-Litovsk, which gave the Turks some Russian territory, ended the war in the Caucasus, but hostilities continued as Enver Pasha, in pursuit of his trans-Caucasian ambitions, involved the Turks in the confusion of the civil war in Russia. For their efforts the Turks gained little, and transfers of troops weakened them on other fronts.

PALESTINE AND SYRIA. Bad winter weather which washed out communications stalled Allenby's offensive plans, and by the end of Mar. the German attacks on the Western Front had necessitated sending nearly 60,000 men from Palestine to France. Allenby received replacements, but these came slowly and were raw. He was able to strike twice, 22 Mar.-2 Apr. and 29 Apr.-3 May, in the Jordan Valley, but strong Turkish resistance was met. The only other important actions took place in the south, where the Arabs hacked away at the Hejaz railway, and finally completely destroyed a long stretch of it. To assist them Allenby provided regular British forces, including armored cars and machine-gun companies.

BATTLE OF MEGIDDO. Allenby planned to break through the Turkish right flank along the coastal plain using naval guns in support. A feint in force was made by the Arab Northern Army at Dera Junction on the other side of the River Jordan, 16-17 Sept. The Megiddo attack, 19 Sept., was a considerable success; before nightfall the Turkish lines had been pierced, and Nazareth, the general headquarters of Liman von Sanders, was captured next day. Haifa fell on 23 Sept. and Samakh on 25 Sept. The Turkish forces west of the Jordan were in a state of collapse.

Meanwhile, on the east side of the river, Anzac troops had captured Amman, 25 Sept., taking 10,000 prisoners, and Lawrence, leading the Northern Army, took Dera Junction, 27 Sept.

PURSUIT OF THE TURKS. The Turkish forces had now almost disintegrated. Damascus was taken, 1 Oct. Malaria and influenza broke out among the British cavalry, but the advance continued, Homs being entered on 15 Oct. Aleppo, over 300 mi. from the offensive's starting point, fell on 26 Oct. 75,000 prisoners were captured, while British casualties were about 5,700. An encounter at Haritan, 26 Oct., where troops under Mustafa Kemal checked the advance of 2 Indian regiments, was the last action before an armistice (signed 30 Oct., effective next day) ended the fighting on this front.

MESOPOTAMIAN FRONT. With the collapse of Russia the Germans and the Turks raced each other on either side of the Black Sea for the Baku oil fields and for Persia. On 18 Jan., Gen. L. C. Dunsterville (1865-1946) had been appointed chief of a British mission charged with reorganizing the scattered remnants of Russian, Caucasian, and Armenian troops into an effective force with which to halt the Turko-German advance. He failed to get through, established himself at Hamadan (about 400 mi. south of Baku), and gradually built up a British force known as "Dunsterville Force." At the end of July the local government in Baku, fearful of the Turkish advance, revised its earlier anti-British attitude and appealed for aid. Small forces began landing there, 4 Aug., until by the end of the month about 2,000 British troops were in Baku. Turkish attacks began, 20 Aug. The British, who received little assistance from the local government, held on against very superior forces until 15 Sept., when they re-embarked and sailed across the Caspian Sea to Enzeli (Pahlevi).

Meanwhile on the Euphrates Hit was taken, 9 Mar., by the British, and other local actions at this time harassed the Turks. Operations then virtually ceased until the autumn. On 23 Oct. the British began yet another offensive along the Tigris. The Turks withdrew to the Little Zab River, 50 miles to the north, but the British pursued them at great speed, at one point covering nearly 80 mi. in 39 hours. The ensuing Battle of Sharqat ended, 29 Oct., when the British broke

through the Turkish defenses, and the Turkish commander, realizing the hopelessness of his position, surrendered the next morning. This ended hostilities on the Mesopotamian Front and an armistice came into effect the following day.

Anxious to occupy the oil fields of Mosul, the British moved on despite the armistice and entered the city, 3 Nov. After some delay British troops also reoccupied Baku, 17 Nov.

ARMISTICE. Bulgaria's surrender on 29 Sept. had isolated Turkey. The Turkish armies had collapsed and allied forces were pressing northward in Syria and Mesopotamia. On 13 Oct. the sultan dismissed Enver Pasha and the other Young Turk ministers, and a new cabinet appealed for an armistice, 14 Oct. Negotiators met, 26-30 Oct., on the British warship *Agamemnon* in Moudros Bay, Lemnos Island, with Adm. Arthur Calthorpe (1864-1937) representing the allies.

Signed on 30 Oct. to go into effect at noon the following day, the armistice called for the Turks to open the Dardanelles, demobilize their army, surrender all war vessels, facilitate the clearing of mines from the Straits, withdraw all forces from northern Persia and the Caucasus, permit allied occupation of strategic points in Turkey, and surrender all garrisons in Tripolitania, Cyrenaica, Arabia, Syria, and Mesopotamia.

THE WAR IN THE COLONIES 1914-18

GERMAN OVERSEAS EMPIRE. In 1914 Germany had a colonial empire over 1 m. sq. mi. in extent. In Africa, her colonies were Togo, Cameroons, South-West Africa, and German East Africa; in the Pacific, the Bismarck Archipelago, North-East New Guinea (Kaiser-Wilhelmsland), Western Samoa, the Caroline and Marshall Islands, and parts of the Solomon and Mariana Islands. In China the Germans held a 99-year lease, obtained in 1898, on Kiaochow. Germany's overseas territories had a total population of about 15 m., of whom only about 25,000 were Germans.

KIAOCHOW. German Kiaochow consisted of about 200 sq. miles on the south coast of the Shantung Peninsula. Tsingtao, its excellent port, was located at the end of a small subsidiary peninsula $3\frac{1}{2}$ mi. wide at the isthmus. By 1914 Tsingtao had been turned into a strong, modern fortress protected by heavy guns covering the coast and by well-fortified defensive zones across the neck of the peninsula. The regular garrison of about 4,000 German marines had been augmented by some 2,500 reservists, Germans and Austrians who had gathered there at the outbreak of war.

On 15 Aug., 1914, Japan demanded that the Germans evacuate the area. Receiving no suitable reply, the Japanese declared war, 23 Aug. On 27 Aug. a Japanese fleet invested the port, but too late to prevent the escape of the German Far Eastern naval squadron. Japanese troops landed at Lungkow, 2 Sept., on the far side of Shantung, and came into contact with German outposts, 14 Sept. Another landing was made, 18 Sept., this time closer to the defensive zone. On 23 Sept. British forces from Hong Kong landed at Laoshan Bay. By 15 Oct. allied troops (about 30,000 Japanese and 1,500 British) were within 5 mi. of Tsingtao. On 31 Oct. bombardment by land and from the sea began as regular methods of siege warfare were adopted. On the night of 6-7 Nov. a general assault captured the infantry redoubts, and at 6:20 A.M. on 7 Nov. the German governor hoisted a white flag. German losses were 199 killed and about 500 wounded; Japanese casualties were 1,800 and British 70.

THE PACIFIC. The German islands in the Pacific fell an easy prey to the allied forces. On 30 Aug., 1914, a New Zealand force occupied Western Samoa, and on 11 Sept. the Australians landed on New Britain in the Bismarck Archipelago. German and indigenous forces in North-East New Guinea surrendered, 21 Sept. On 7 Oct. the Japanese occupied the Marshall and Caroline Islands, and on 9 Dec. an Australian force moved on the Solomon Islands. Little fighting accompanied these actions.

TOGO. German Togoland was a strip of territory in West Africa about 90 mi.

wide and 300 mi. deep. Some 100 mi. inland, at Kamina, there was a powerful wireless station, which served as the chief German radio link between Europe and Africa. On 7 Aug., 1914, small Anglo-French forces, pushing in from both sides, captured Lomé, the port. The allied force then moved north, and on 27 Aug., after blowing up the Kamina wireless facilities, the German force there surrendered.

SOUTH-WEST AFRICA. The Germans had few troops in South-West Africa, since they anticipated receiving help from Boers rebelling against the British in South Africa. British South African forces took Lüderitz, 19 Sept., 1914, but further action had to await the suppression by Gen. Louis Botha (1862-1919) of a rebellion, Oct. 1914-Feb. 1915, which involved some of the commanders and troops intended for the South-West African campaign. Botha took command, and the South Africans renewed their assault in Jan. 1915. The campaign was mainly a struggle against nature and the climate rather than against a hard-fighting enemy. 60,000 South Africans moved against the Germans from 4 directions. 20,000 under Botha landed at Swakopmund, 25 Dec., 1914; proceeded against Windhoek, the capital; and captured it, 12 May, 1915. Another force of 24,000 advanced inland from Lüderitz. A third force of 8,000 moved north over the River Orange, and a fourth of about 2,000 crossed the border from the east. The Germans retreated inland to Otavi, at the end of the railway line. Surrounded, they asked for terms, 6 July, and capitulated, 9 July. German casualties, exclusive of indigenous troops, were 1,200; South African losses were 275 killed and 318 wounded.

CAMEROONS. Here German plans called for withdrawal of all forces to Yaoundé, some 200 mi. inland from the coast. On 20 Aug., 1914, a French force, including a Belgian contingent, invaded from the southeast. British troops crossed the frontier from Nigeria, 25-27 Aug., but were soon driven back. On 26 Sept. a joint Anglo-French amphibious expedition attacked Duala, 20 mi. up the River Wuri. Duala surrendered the next day, though most of its garrison escaped.

Allied pursuit resulted in the capture of Edia, 35 mi. to the southwest, on 26 Oct., but again the bulk of the German forces got away. After an unsuccessful counter-attack the Germans retreated to Yaoundé. Beset by German guerrilla action and ambushed by hostile Africans, the allies took over a year to reach Yaoundé, and when, 1 Jan., 1916, the British entered it, they found it empty. The German forces had evacuated the town, and had begun a 125-mi. trek to neutral Spanish Guinea, which they ultimately reached successfully. By the end of Feb. all German garrisons had been cleared from Cameroons. Battle losses were small on both sides, disease being the main killer.

GERMAN EAST AFRICA. German East Africa (Tanganyika) was the largest and richest of the German colonies as well as the most difficult to conquer. A German force of about 3,500 whites and 12,000 Africans was skillfully led by Gen. Paul von Lettow-Vorbeck (1870-1964). On 8 Aug., 1914, British cruisers bombarded Dar-es-Salaam, the chief port. During Sept. Lettow-Vorbeck directed a series of raids across the borders of British East Africa and Uganda, at one time threatening Mombasa. On 2 Nov. Indian troops landed at Tanga, but German attacks as well as harassment from wild bees caused severe losses, and reembarkation took place, 4-5 Nov. The year 1915 was spent in sporadic and indecisive fighting along the lakes and frontiers. The Germans seized portions of the Uganda Railway. The conquest of German South-West Africa allowed many of the South African troops there to be transferred for operations against German East Africa. Gen. Jan Christiaan Smuts (1870-1950), who had under his command about 20,000 men, moved south against Lettow-Vorbeck, while other columns converged from Uganda in the east and Rhodesia to the south. The Germans rarely stood and fought; when confronted by superior numbers they scattered into the bush and proved very elusive. Meanwhile the South Africans, unused to the climate, suffered severely from disease and were slowly replaced by Nigerian troops. During 1916-18 British battle

casualties were 19,717," but nonbattle casualties totaled 336,940. Despite his elusiveness Lettow-Vorbeck was gradually pushed into a corner. Smuts left, Jan. 1917, for an Imperial Cabinet post in London, but his successors continued the offensive. The main German force of 5,000 men was surrounded near Mahenge and surrendered, 28 Nov., 1917, while Lettow-Vorbeck, with about 1,300 troops and now commanding the only German force left in the field, withdrew south across the Portuguese frontier. For the remainder of the war Portuguese and British troops pursued him as he led them a hard chase through Mozambique, back into German East Africa, and then into Northern Rhodesia. He surrendered, 23 Nov., 1918, at Abercorn, only after having been informed of the armistice.

THE WAR AT SEA

1914-18

NAVAL STRATEGY. 1914. In late July 1914, as the Serbian crisis deepened, the British and German fleets were mobilized and concentrated in home waters. British naval strategy throughout the war aimed at forestalling a German invasion of Britain, preventing war materials from reaching the Central Powers by sea, and containing the German High Seas Fleet by stationing fleets in the North Sea and the English Channel. German strategy was to wear down British sea power through raids and submarine and mine warfare until the British fleet could be engaged with good prospects of a successful battle.

NORTH SEA AND ENGLISH CHANNEL OPERATIONS. 1914-15. When hostilities broke out, 4 Aug., the British Grand Fleet under Admiral Sir John Jellicoe (1859-1935) began the 1st of its sweeps through the North Sea. Between 5 and 23 Aug. the British Expeditionary Force was convoyed to France without loss. British units raided the German coast on the night of 28-29 Aug., trapping a German patrol in the Battle of the Helgoland Bight. The Germans lost 3 light cruisers and a destroyer. The Ger-

mans now intensified their mine and submarine operations around the British Isles. On 22 Sept. the *U-9* sank 3 British cruisers within an hour. Following this action, new orders were issued limiting the use of heavy ships on patrol in submarine waters. In late Sept. British naval units escorted troops to Antwerp, and through Oct. supported the withdrawal down the Belgian coast. The fear of submarine penetration of Scapa Flow led to the movement of the Grand Fleet to Lough Swilly, 20 Oct., where it remained until defenses at Scapa Flow were improved. The battleship *Audacious* was destroyed by a mine, 27 Oct. On 2 Nov. the North Sea was declared a military area, and all neutrals were warned that travel outside prescribed routes was at their own risk. German cruisers raided Gorleston, 3 Nov., while Scarborough and Hartlepool were bombarded, 16 Dec. British battle cruisers forestalled another raid when they defeated a German squadron, 24 Jan., 1915, in the Battle of the Dogger Bank. During the rest of 1915 the German fleet put to sea only to support minelaying operations.

CRUISER AND RAIDER CAMPAIGN. 1914-15. At the beginning of the war there were 13 German cruisers detached from the High Seas Fleet, along with 7 gunboats; 5 armed merchantmen also put to sea. Aside from the cruisers *Goeben* and *Breslau*, which were able to elude the British Mediterranean squadron and escape to the Dardanelles, 10 Aug., the rest of these German ships were neutralized by early 1915.

The German light cruiser *Emden* was able to slip away from Tsingtao in early Aug. and reach the Indian Ocean. Before the *Emden* was sunk, 9 Nov., she had destroyed 15 ships. The rest of the German Far East Squadron under Adm. Count Maximilian von Spee (1861-1914) was able to evade allied forces in the Pacific and make for South America. After bombarding Papeete, 22 Sept., and cutting the British cables at Fanning Island, Spee's cruisers rendezvoused with the *Dresden*, from the West Indies, and the *Leipzig*, from the California coast. The enlarged squadron sank 2 British

cruisers in the Battle of Coronel, 1 Nov., off the Chile coast. British squadrons were quickly concentrated in the Southern Pacific and Atlantic. On 8 Dec. Spee's cruisers were sighted, and 4 of his 5 ships were lost in the Battle of the Falkland Islands. The remaining cruiser, the *Dresden*, was hunted down and destroyed, 14 Mar., 1915.

The cruisers *Karlsruhe* and *Königsberg* had successful careers as raiders until the *Karlsruhe* blew up at sea, 4 Nov., and the *Königsberg* was discovered and destroyed in the Rufiji River, 11 July, 1915.

Of the German commercial raiders, the *Kaiser Wilhelm der Grosse* was sunk off Rio de Oro, 26 Aug., 1914, while the *Cap Trafalgar* was sunk off Trinidad, 14 Sept. The *Kronprinz Wilhelm* was interned at Newport News, 8 Apr., 1915, as was the *Prinz Eitel Friedrich*, 12 Mar. During their short campaign the German cruisers and raiders were able to sink about $\frac{2}{3}$ of 1% of British commercial shipping.

NAVAL SUPPORT OF LAND CAMPAIGNS. 1914-15. Action in the Pacific centered around the successful Anglo-Japanese amphibious attack on German Tsingtao, 2 Sept.-7 Nov., 1914. The Australian squadron assisted in the conquest of German Samoa, 30 Aug., and German New Guinea, 11-15 Sept. British naval units assisted in the capture of Douala, 27 Sept., and were employed in blockade duties and river warfare throughout the Cameroons campaign. British battleships and cruisers helped the South African army occupy Walvis Bay and Swakopmund, German South-West Africa, Jan. 1915. Units from the Indian squadron were involved in the abortive amphibious operations at Tanga, 2-5 Nov., 1914, and in the blockade of German East Africa begun in Mar. 1915.

SUBMARINE WAR ON COMMERCE. 1915-16. On 4 Feb., 1915, the German government declared a submarine blockade of Great Britain beginning 17 Feb. Strong U.S. protests against the sinking of the *Lusitania*, 7 May, and the *Arabic*, 19 Aug., led to a revision of German submarine policy. On 1 Sept. the German government announced that no more passenger liners would be sunk

without warning and without provision for the safety of noncombatants. Following the announcement, 21 Feb., 1916, that armed merchantmen would be treated as cruisers, the Germans began a period of unrestricted submarine warfare. When the *Sussex* was sunk, 24 Mar., 1916, with the loss of American lives, the U.S. government issued a virtual ultimatum which temporarily ended unrestricted submarine warfare, 10 May.

MEDITERRANEAN AND DARDANELLES CAMPAIGNS. 1914-16. Initially, operations in the Mediterranean were limited to transporting French North African forces to Europe, early Aug. 1914. A French blockade was established over the Austrian fleet in the Adriatic, 16 Aug., while the Dardanelles were blockaded by the British, 29 Oct., following a German-Turkish naval raid on the Russian Black Sea coast.

In early 1915, Russian appeals for relief of the pressure on the Caucasus front led to the attempt to penetrate the Dardanelles. Naval operations began, 19 Feb., but the Anglo-French fleet could not silence the Turkish shore batteries or sweep the mine fields. On 18 Mar. a concerted attack was launched, but it was beaten off with the loss of 1 French and 2 British battleships. The failure of the fleet to force a passage through the Straits led to the Gallipoli Campaign, 25 Apr., 1915-9 Jan., 1916. During this operation, 3 more British battleships were lost.

After the failure of the Dardanelles campaign, emphasis shifted back to blockading the Adriatic and the Dardanelles. After Italy entered the war, May 1915, a combined Anglo-Italian fleet was responsible for containing the Austrian fleet. Utilizing Austrian and Greek ports, German and Austrian submarines ranged all through the Mediterranean, preying upon commerce and supply vessels bound for Salonika and the Near East.

NORTH SEA OPERATIONS. 1916. In early 1916 Adm. Reinhard Scheer (1863-1928) was given command of the German High Seas Fleet and adopted a new activist policy. German destroyer groups put to sea more often. Yarmouth and Lowestoft were bombarded by Ger-

man battle cruisers, 24 Apr., 1916. The High Seas Fleet sailed, 30 May, to trap part of the British Grand Fleet. The British under Adm. Jellicoe were alerted, and the 2 battle fleets engaged in the Battle of Jutland, 31 May. British losses were heavier—3 battle cruisers, 3 cruisers, and 8 torpedo boats against 1 battleship, 1 battle cruiser, 4 light cruisers, and 5 torpedo boats for the Germans—but the British Grand Fleet retained control over the North Sea. Another fleet encounter was narrowly averted by the Germans, 19 Aug. The British lost 2 cruisers, while 2 U-boats were sunk. German destroyer flotillas raided the Strait of Dover, 26-27 Oct., sinking 2 British destroyers.

UNRESTRICTED SUBMARINE WARFARE. 1917-18. By late 1916 German U-boats were sinking some 300,000 tons of shipping a month. In an attempt to cut Britain off from her overseas suppliers and thereby end the war, the Germans declared a policy of unrestricted submarine warfare after 1 Feb., 1917. The U.S. soon broke diplomatic relations, and on 6 Apr. declared war on Germany. Although the German campaign reached a peak of 875,000 tons destroyed in Apr. 1917, the introduction of convoys, 10 May, and the increased use of antisubmarine craft began to turn the tide. By early 1918 the allies were launching more new tonnage than was being destroyed.

THE MEDITERRANEAN. 1917-18. Allied shipping losses to German and Austrian submarines became serious by mid-1917. In Aug. protection of trade was placed under the control of a single British commander at Malta, while a convoy system was begun under British and Japanese destroyer protection. The German cruisers *Goeben* and *Breslau* raided into the Mediterranean, 20 Jan., 1918. After destroying 2 British monitors, the *Breslau* was blown up by a mine, and the severely damaged *Goeben* retired to the Dardanelles.

Austrian attempts to pierce the Adriatic blockade, Apr. and June, failed. On 31 Oct., 1918, Italian torpedo craft were able to enter the Austrian base at Pola, where they sank the battleship *Viribus Unitis*.

NORTH SEA OPERATIONS. 1917-18. British and German destroyer groups clashed in raids off the Dover and Dutch coasts, 23 Jan., 17 Mar., 20 and 26 Apr., 2 May, 1917; 17 Nov., 14 Jan., and 15 Feb., 1918. German light cruisers attacked the Scandinavian convoy, 27 Oct., 1917, sinking 2 British destroyers and 9 merchantmen. After the raid of 12 Dec., in which a destroyer and 4 armed trawlers were sunk, the British strengthened the escorts and reorganized the Scandinavian routes.

British attempts to blockade German submarines in their bases led to attacks on Zeebrugge and Ostend, 22-23 Apr., 1918. While the entrance to Zeebrugge was partially blocked, the attempt at Ostend failed. Another attack on Ostend, 9-10 May, also was unsuccessful. Both submarine bases were finally overrun in the British land offensive, 17-20 Oct., 1918.

DESTRUCTION OF THE HIGH SEAS FLEET. In late Oct. 1918 plans were laid by the Germans for a last raid into the English Channel. As the High Seas Fleet began to get under way, 29 Oct., mutiny broke out, and the fleet was immobilized. Under the terms of the 11 Nov. armistice, the Germans were to surrender 10 battleships, 6 battle cruisers, 8 light cruisers, 50 destroyers, and all their submarines. These terms were complied with, 20-21 Nov. Following the imposition of the naval clauses of the Versailles Treaty, an additional 8 battleships, 8 light cruisers, and 92 destroyers and torpedo boats were surrendered. On 21 June, 1919, most of the ships of this fleet were scuttled by their crews at Scapa Flow.

THE PEACE

1918-21

PARIS PEACE CONFERENCE. Following the armistice of 11 Nov., 1918, representatives of the major allied and associated powers held preliminary meetings, and on 12 Jan., 1919, the Council of 10, consisting of 2 delegates each from France, Britain, Italy, Japan, and the U.S., was organized to formulate the terms of

the peace. Representatives of the other states which had fought against the Central Powers or had broken off diplomatic relations with them were each given a vote in the plenary sessions. Neutral states were permitted to attend those sessions to which they were summoned by the Council of 10.

At the 1st plenary session, 18 Jan., 1919, it became clear that the small powers would act only to approve the decisions reached by the Council of 10. Georges Clemenceau was elected president of the conference. The secretary general selected by the Council of 10 was appointed, and a drafting committee whose members represented the 5 major powers was approved.

The work of the conference was divided between a number of commissions. A Supreme Economic Council was established, 8 Feb., 1919, to advise the conference on economic measures needed until the peace negotiations were completed. Commissions were also created to investigate war guilt; reparations; the establishment of a League of Nations Covenant; international labor legislation; international control of certain ports and transportation networks; economic, financial, and territorial questions, inter-allied military affairs; and aeronautics. On all these commissions, representatives of the 5 major powers constituted a majority. The Supreme War Council, which sat at Versailles under the presidency of Marshal Foch, supervised the execution of the terms of the armistice.

During Feb. and Mar. 1919 the Council of 10 was gradually abandoned in favor of a Council of 4, consisting of Clemenceau, Lloyd George, Orlando, and Wilson. The Japanese plenipotentiary attended only those meetings which dealt with matters of concern to Japan. The ministers of foreign affairs of these states met as a Council of 5 to work out minor technical and executive matters.

ISSUES BEFORE THE CONFERENCE. The main issues confronting the Council of 4 were French attempts to separate the territory east of the Rhine and the Saar from Germany, French insistence that Germany be held respon-

sible for reparations up to the limit of its capacity to pay, and Polish claims to Danzig. Following Wilson's threat to abandon negotiations and return to the U.S., 7 Apr., 1919, the deadlock on these matters was broken and compromises were reached. The Rhineland was demilitarized, while control of the Saar was vested in the League of Nations for 15 years, after which a plebiscite would decide whether the territory would remain under League control, join France, or rejoin Germany. French views prevailed in the matter of reparations. Danzig was made a free city under the League's protection, and Poland was guaranteed access to the Baltic Sea. The Covenant of the League was made an integral part of the treaty and was approved by the conference, 28 Apr., 1919.

Lesser crises developed over Italian, Yugoslavian, Belgian, and Japanese claims. Italy's demands for territories up to the Brenner Pass were met, but its claims on the eastern shore of the Adriatic, including Fiume, were left unresolved. While Yugoslavian indemnity claims were dismissed, Belgium was assured preferred treatment on reparations. Japanese resistance to Wilson's attempts to return German Shantung to China resulted in a compromise by which Japan pledged to restore Chinese sovereignty over Shantung as soon as possible.

On 7 May, 1919, the draft treaty was presented to the chief German delegate, Count Ulrich von Brockdorff-Rantzau (1869-1928). Although the German delegation vehemently protested the reparations clauses as too severe and the other terms of the treaty as inconsistent with the pre-armistice agreement, only minor revisions were conceded. The treaty was signed, 28 June, 1919.

THE TREATY. The Treaty of Versailles consisted of 15 parts, with 440 articles. Part I set forth the Covenant of the League of Nations. Germany's frontiers were redrawn in Parts II and III, the Rhineland was demilitarized, and schedules for plebiscites in the Saar, Schleswig, East Prussia, and Upper Silesia were outlined. In Part IV Germany ceded all its overseas territories, which were given over to the allies as mandated territories,

and Germany's special rights in China, Siam, Egypt, Morocco, and Liberia were canceled. The military clauses of Part V reduced the German army to 100,000 men, disbanded the general staff, severely limited the size of the German navy, and prohibited any military air forces. Part VI provided for the return of prisoners of war and the maintenance of graves. Provisions to punish Kaiser Wilhelm II and other Germans accused of war crimes were outlined in Part VII. Germany's responsibility, along with that of its allies, for the war was set forth in Part VIII along with the reparations procedures. Parts IX and X dealt with financial questions and the restoration of commerce. By Part XI the allies were given full liberty to fly over Germany until 1 Jan., 1923. Part XII guaranteed Czechoslovakia access to the sea; recognized the Rhine, Elbe, Oder, Niemen, and Danube as international waterways; and established commissions to govern them. The International Labor Organization was created by Part XIII. Procedures to guarantee Germany's compliance with the treaty were set out in Part XIV, and a number of miscellaneous matters occupied Part XV.

RATIFICATION OF THE TREATY. Germany ratified the treaty, 9 July, 1919; Britain followed, 31 July; Italy, 7 Oct.; France, 13 Oct.; and Japan, 27 Oct. The U.S. Senate rejected the treaty, 19 Nov., 1919. Germany agreed to give compensation for the scuttling of its fleet in a separate protocol, 10 Jan., 1920. Ratifications were exchanged, 10 Jan., and the League of Nations was formally inaugurated, 16 Jan., 1920.

FORMATION OF THE LEAGUE OF NATIONS. The League grew out of efforts to provide for a postwar system of mutual security, and to create mechanisms for international social and economic co-operation. The Covenant of the League, as set forth in Part I of the Treaty of Versailles, established the constitutional basis of this new system. Membership was to consist of the allied signatories of the treaty, and of 13 neutral states. Other states could be admitted after approval by a $\frac{2}{3}$ majority of the Assembly. The League Covenant pro-

vided for 3 major organs. The Assembly, comprising representatives of all the members, could deal with any matters within the League's competence. The Executive Council, composed of representatives of France, Britain, Italy, Japan, and the U.S. as permanent members, and 4 others elected by the Assembly, was to have primary responsibility for peacekeeping. Both the Council and the Assembly were to act by unanimous vote. A permanent secretariat was created, and its expenses were to be borne by the member states.

The Covenant provided for disarmament and established procedures for the peaceful settlement of disputes or the implementation of sanctions. It also provided for a permanent international court, the registration and publication of all treaties, and the operation of the mandate system.

Although the U.S. Senate rejected the Versailles Treaty containing the Covenant, both became effective for other signatories, 10 Jan., 1920, and the 1st meeting of the Executive Council followed on 16 Jan. The 1st Assembly convened in Geneva on 15 Nov. A number of subsidiary organs were established, including 2 commissions on military affairs, the Economic and Financial Committees, the Communications and Transit Organization, and the Health Organization. The Permanent Mandates Commission and the Refugee Organization followed in 1921. The International Labor Organization, created by Part XIII of the Versailles Treaty, began independent operation. Established on 21 Jan., 1920, a Conference of Ambassadors (representing the allies) paralleled the League in its early years.

Europe Between the Wars

WESTERN EUROPE AND THE RISE OF FASCISM

1918-24

POSTWAR ELECTIONS. In Great Britain, efforts to keep the tripartite wartime coalition together failed as the Labour Party and part of the Liberal Party refused to continue under Lloyd George's leadership. What remained of the coalition campaigned on a platform of: Germany "must pay to the uttermost farthing," and Britain must be made a land "fit for heroes to live in." The new Conservative-dominated coalition won, 14 Dec., 1918, an unexpectedly decisive victory (c. 500 out of 707 seats).

In Germany, National Constituent Assembly elections were held on 19 Jan., 1919, 4 days after the violent suppression of the "Spartacist Week" demonstrations, 6-15 Jan., had ended with the murder of the Spartacist (now Communist) leaders, Karl Liebknecht and Rosa Luxemburg. The German electorate, now consisting of the entire adult population (universal suffrage adopted 24 Oct., 1918), repudiated extremist agitation. The 3 parties supporting the republic without apol-

ogy—the Majority Socialists (moderate Social Democrats), Catholic Centrists, and Democrats—won 326 of 421 seats.

In France, a large multimember district system with no second ballot was adopted, 12 July, 1919. The comparative unity of the conservative National Bloc enabled it to take advantage of this proportional representation system, and gain 376 or two-thirds of the Chamber of Deputies seats, 16 Nov.

Italy did not receive the Dalmatian coast as promised by the Treaty of London, 26 Apr., 1915, and Premier Vittorio Orlando (1860-1952) was forced to resign, 19 June, 1919, for alleged mismanagement of the peace negotiations. Francesco Nitti (1868-1953), who succeeded him, called a national election. On 16 Nov., under a new proportional representation system, adopted 2 Sept., the trend away from coalitions and toward parties adamant on principles became clear. Socialists with 156 and Christian Democrats with 100 seats constituted more than half the Chamber of Deputies.

WEIMAR CONSTITUTION. 31 July, 1919. Germany was declared a federated nation, political authority being executed

in national affairs by the national government and in state affairs by state governments. The Legislature was to consist of the Reichsrat, representing the states, and the Reichstag, representing the people as a whole. The president was to be elected by popular vote for a 7-year term. Article 48 gave the president the power in case of emergency to take all necessary measures to restore public order, including the suspension of civil rights stipulated in the constitution.

BRITISH INDUSTRIAL UNREST.

In Britain labor stoppages took place, the most serious being the coal miners' strike of 24-29 Mar., 1919. Many Britons considered too limited such government measures as the Housing and Town Planning Act (Addison Act), 31 July, 1919, and the 1920-22 Unemployment Insurance Acts.

IRISH INDEPENDENCE. On 7 Jan., 1919, 26 of the 73 Irish M.P.'s in the British House of Commons met in the Mansion House, Dublin, to establish an independent assembly, the Dail Eireann. An undeclared state of war followed between the I.R.A. (Irish Republican Army) and the R.I.C. (Royal Irish Constabulary). Fighting continued despite passage of the Better Government of Ireland Act, 23 Dec., 1920, by the British Parliament. The Irish Free State was officially established in Jan. 1923.

WEAKNESS OF THE WEIMAR REPUBLIC. In Germany, a large segment of the population continued to oppose the republic. On 13 Mar., 1920, Wolfgang Kapp (1858-1922) led a *Putsch* in Berlin in the name of the monarchy, forcing the government to flee first to Dresden and then to Stuttgart. Kapp capitulated, 17 Mar., after a paralyzing general strike by Berlin workers. That dissatisfaction with the republic was not confined to disgruntled soldiers was evidenced by the election of 6 June, 1920, in which the strength of the "Weimar Coalition" parties fell to only half the Reichstag seats. On 10 May, 1921, right-wing terrorists began a campaign against republican notables by assassinating Karl Gareis (1844-1921), leader of the Bavarian Independents and vocal opponent of the "free corps" associations. Other victims were

Matthias Erzberger (1875-1921), 26 Aug., 1921, and Walther Rathenau (1867-1922), 24 June, 1922.

FRENCH ATTITUDE TO GERMANY. In France, although some became interested in the Soviet experiment and joined the Communist Party, most people were preoccupied with the problems of securing France against the German invasion of revenge which they were certain would come. France had suffered most from the war: 1,654,550 lives lost, and \$10 billion in property damage. The legislature, dissatisfied with the provisions of the Treaty of Versailles regarding geographical security and fearing the ambitions of Premier Georges Clemenceau, denied him the presidency, 17 Jan., 1920. Political success accrued to those adopting a hard line on Germany. When Premier Aristide Briand (1862-1932) showed a willingness to grant a moratorium on German reparation payments during the Cannes Conference, 6-13 Jan., 1921, severe opposition from President Alexandre Millerand, the legislature, and the press forced him to give way to Raymond Poincaré (1860-1934).

RISE OF MUSSOLINI. In Italy, severe economic difficulties and wounded national pride were the basic causes of postwar unrest and extremism. Peasants seized areas promised them during the war. On 31 Aug., 1920, a breakdown of wage negotiations in the metallurgical industry led to a lockout. Workers responded by occupying some large northern factories, remaining there for 8 weeks. Premier Giovanni Giolitti (1842-1928) refused to use force, and the incident was cited by such right-wing groups as the Fascist Party of Benito Mussolini (1883-1945) as an example of the Socialist danger. Giolitti's nonintervention gave new confidence to labor, and 1920-21 saw a rash of work stoppages. Party leaders, unable to cope with the situation, further weakened themselves by continuing to express their dissatisfaction with the peace settlement, thus magnifying their own failures. On 12 Sept., 1919, Gabriele D'Annunzio (1863-1938) took over Fiume and established a petty dictatorship. Giolitti secretly supported him for a time,

but on 27 Dec., 1920, the D'Annunzio regime was brought to an end by Italian troops. Giolitti signed the Treaty of Rapallo with Yugoslavia, 12 Nov., 1920, and alienated the upper classes and the church by his plan to make bondholders register and pay taxes. He was compelled to seek new support through a national election. On 15 May, 1921, with the Fascists included in the Giolitti bloc, the election brought Mussolini 35 seats in the Chamber and political respectability. The Socialists forced out Giolitti's successor, Ivanoe Bonomi (1873-1951), on 2 Feb., 1922, and Luigi Facta (1861-1930) became premier, 25 Feb. A vote of no confidence caused Facta's fall, 21 July, but because only Mussolini was willing to form a government, he resumed office, 31 July. Finally, with the government completely debilitated, a curiously hesitant Mussolini agreed to the Fascist "March on Rome," 27 Oct. King Victor Emmanuel III (ruled 1900-1946), fearing the royal aspirations of his cousin the Duke of Aosta, would not proclaim martial law, and Mussolini's "black shirts" took control of Rome. On 31 Oct. Mussolini was appointed premier, and on 25 Nov. he received dictatorial powers until 31 Dec., 1923, to restore order and enact reforms.

WAR REPARATIONS. Although a Reparation Commission was created by Art. 233 of the Treaty of Versailles to calculate the total war damage for which Germany was to be held responsible, allied statesmen decided that the issue was diplomatic as well as economic, and held 8 meetings before the final decision date stipulated by the treaty, 1 May, 1921. At a London meeting, 21 Feb.-14 Mar., 1921, a German counterproposal on reparations provoked the allies into drawing up a list of alleged German treaty defaults and an ultimatum of acceptance of allied reparation terms, drafted at a conference in Paris in Jan., or military sanctions. When the German delegation balked, the threatened military occupation of Düsseldorf, Duisberg, and Ruhrort on the rim of the Ruhr Basin was carried out, 8 Mar., 1921. On 27 Apr. the Reparation Commission announced the total bill: 132 billion gold marks. Failing to secure con-

cessions, German Chancellor Konstantin Fehrenbach (1852-1926) resigned, 4 May. The allies issued, 5 May, an ultimatum giving Germany a week to accept the announced sum or face occupation of the Ruhr. Josef Wirth (1879-1956) of the Catholic Center Party, with the support of the Weimar coalition, formed a government, 10 May, and yielded, 11 May.

REPARATIONS DIPLOMACY. After paying the 15 July and 15 Oct., 1921, installments, concluding the Loucheur-Rathenau or Wiesbaden Agreement, 6 Oct., for the direct supply of reparation material, and delivering bond payments, 28 Oct., Germany requested a moratorium for the part of her debt due on 15 Jan. and 15 Feb., 1922, because of the Nov. 1921 collapse of the mark. A conference of allied leaders at Cannes, 6-13 Jan., 1922, reviewed the request. Simultaneously, Briand and Lloyd George attempted to heal the postwar breach in Anglo-French relations caused by British failure to ratify a treaty of guarantee against a German invasion of France, disputes over the meaning of the plebiscite in Upper Silesia, 20 Mar., 1921, and such other matters as the French insistence during the Washington Naval Conference, 12 Nov., 1921-6 Feb., 1922, on construction of a submarine fleet and the British refusal to become involved in the affairs of France's ally, Poland. A proposed Anglo-French defensive alliance failed because of French popular dissatisfaction with Briand's willingness to accept the reparations moratorium, although at the conclusion of the conference the moratorium was granted.

To examine the general economic situation in Europe the allies called the Genoa Conference, 10 Apr.-19 May, 1922, to which the Soviet Union was invited. To the surprise of the allies, on 16 Apr. at Rapallo German Foreign Minister Rathenau and Soviet Foreign Minister Chicherin signed a treaty restoring diplomatic relations and renouncing all past financial claims. This treaty led to a secret arrangement whereby Germany's tank and air forces were to be allowed to train in Russia (a violation of the Treaty of Versailles) in return for an annual

payment and the use by the Soviet Union of German military experts. The Genoa Conference was paralyzed by Poincaré's adamant insistence on the payment by the Soviet Union of prewar debts.

GERMAN INFLATION: The continued fall of the mark resulted in a cessation of timber deliveries to the German government, which in turn caused it to default in reparations (sawn timber and telegraph poles). The French, Italian, and Belgian representatives on the Reparation Committee judged, 26 Dec., 1922, Germany in default, despite British opposition to the motion. The French, who considered Germany deliberately unco-operative, used this ruling as an excuse, and French and Belgian troops began to occupy the Ruhr, 11 Jan., 1923. German Chancellor Wilhelm Cuno (1876-1933) adopted a policy of passive resistance, and French and Belgian technicians had to be brought in to operate mines and railways. In an effort to subsidize those most directly involved in passive resistance, Germany printed additional paper money, precipitating an inflation so extreme (DM 2,520 billion to U.S. \$1 on 15 Nov.) that barter replaced money as a system of exchange. Gustav Stresemann (1878-1929) of the People's Party replaced Cuno, 13 Aug., and ended the policy of passive resistance, 26 Sept.

The franc had also fallen and Frenchmen were tiring of Poincaré's futile display of strength. In the elections of 11 May, 1924, the Cartel of the Left won enough seats to displace Poincaré. The last of the occupation troops left the Ruhr, 31 July, 1925. Meanwhile the German monetary crisis had been ended by the issue of the *Rentenmark*, based theoretically on the country's total industrial and agricultural resources. The formulator of this scheme was Hjalmar Schacht (b. 1877), appointed president of the Reichsbank, 22 Dec., 1923.

BRITISH LABOUR GOVERNMENT. In Britain, 15 Nov., 1923, national elections called by the Conservative Stanley Baldwin (1867-1947), who had taken over as prime minister from his colleague Andrew Bonar Law (1858-1923), 22 May, were held. Baldwin had

gone to the country on the issue of a protective tariff which he wanted as a means of combating unemployment. His party, which had a majority of 87 seats, lost 90, and Ramsay MacDonald (1866-1937) came in at the head of a Labour ministry. MacDonald extended Britain's postwar policy of international co-operation to such previously taboo areas as the establishment of diplomatic relations with the Soviet Union, 1 Feb., 1924. He was forced into calling new elections, however, by a vote of censure, 8 Oct., on the government's handling of the "Campbell Case," an affair involving a Communist editorial urging British workers not to participate in wars against other workers. On 25 Oct., 5 days before the election, a letter purporting to be from the Comintern chief, Grigori Zinoviev, suggesting means whereby the Labour Party might be taken over and a revolution precipitated, appeared in the Conservative *Daily Mail*. The result was a Conservative election victory and the return of Baldwin. Austen Chamberlain (1863-1937) became foreign secretary and continued the MacDonald policy of international co-operation.

HERRIOT MINISTRY. In France, Edouard Herriot (1872-1957), leader of the victorious left coalition, refused to take over from Poincaré unless President Alexandre Millerand, who had publicly favored the right, resigned. Millerand bowed, and Gaston Doumergue (1863-1937) replaced him, 13 June, 1924. With Herriot as premier, French foreign policy became more flexible, as exemplified by the 28 Oct. recognition of the Soviet Union; nevertheless, the question of security against Germany in the form of the active maintenance of France's defensive alliances with Belgium, 7 Sept., 1920, Poland, 19 Feb., 1921, and Czechoslovakia, 25 Jan., 1924, continued to be of the utmost concern.

RÜLE OF STRESEMANN. In Germany, Chancellor Stresemann, once a firm monarchist and opponent of the Treaty of Versailles, now believed that Germany must co-operate with France in order to end mutual suspicion and rebuild the Reich. However, he was faced with vari-

ous problems resulting from the Ruhr crisis: a French-supported Rhineland separatist movement, serious Communist advances in Saxony and Thuringia, and extreme-right activity in Bavaria. One aspect of the Bavarian problem was the abortive revolution, 8-9 Nov., 1923, staged by the Nazi (Nationalsozialistische Deutsche Arbeiterpartei) Party leader, Adolf Hitler (1889-1945), who was given a lenient sentence of 18 months in Landsberg Prison by a sympathetic German judiciary. Rhineland separatism failed, and the army suppressed Communists in Saxony and Thuringia. Stresemann's delicate treatment of the rightist threats and his thorough subduing of leftist actions brought a no-confidence vote in the Reichstag, 23 Nov., compelling him to resign. Centrist Wilhelm Marx (1863-1946) succeeded him, 30 Nov., though Stresemann remained as foreign minister and immediately illustrated his policy of co-operation with the allies by supporting the suggestions of the Dawes Commission (plan announced 9 Apr., 1924, accepted by the Reichstag 28 Aug.) concerning rearrangement of the reparations schedule and acceptance of an allied loan of 800 m. gold marks.

FASCIST RULE IN ITALY. Unlike other major Western European nations, Italy did not experience changes of political personnel in the early 1920's, but she did undergo a change of attitude toward existing policies. The Fascist regime became entrenched. On 14 Nov., 1923, the Acerbo electoral law gave $\frac{2}{3}$ of Chamber seats to a party obtaining a plurality, providing that the number of votes was at least a quarter of all votes cast. In the Fascist-directed elections of 6 Apr., 1924, Mussolini's coalition received 65% of the vote and 375 of the 403 seats. Fascist terror methods had become familiar to Italians, but the senseless murder of the outspoken opposition deputy, Giacomo Matteotti (1885-1924), 10 June, 1924, shocked them into a clearer realization of the nature of the Fascist regime. Opposition deputies withdrew in protest from the Chamber, 15 June, in the so-called "Aventine secession." On 3 Jan., 1925, Mussolini brazenly announced that he

accepted full responsibility for the murder.

1925-29

GERMAN PRESIDENTIAL ELECTION. 26 Apr., 1925. To succeed President Ebert (d. 28 Feb.) the Social Democrats nominated the Prussian premier, Otto Braun; the Communists nominated the former Hamburg transport worker, Ernst Thälmann; a coalition of parties including Democrats and Nationalists nominated the mayor of Duisburg, Karl Jarres; and the Centrists nominated Wilhelm Marx. In the election, 29 Mar., Jarres received the most votes, followed in order by Braun, Marx, and Thälmann. But Jarres had not received an absolute majority, and a runoff election was called. The Social Democrats, Centrists, and Democrats (the old Weimar coalition) united to form the "People's Bloc," supporting Marx. To combat this union, the Nationalists, People's Party, Bavarian People's Party, and Nazis threw their support behind Hindenburg, who reluctantly accepted after an appeal by Admiral von Tirpitz. Thälmann was again the Communist candidate. In the 26 Apr. election Hindenburg received 14,655,766 votes to Marx's 13,751,615 and Thälmann's 1,931,151.

LOCARNO AGREEMENTS. 16 Oct., 1925. On 9 Feb. Stresemann revived the offer previously rejected by Poincaré of a treaty to preserve the *status quo* in the Rhineland. The major stumbling block in the negotiations that followed was Briand's stipulation that Germany enter the League of Nations without reservations, which meant acceptance of sanctions under Art. 16 and the possibility of Germany having to aid in the protection of Poland. This difficulty was overcome by making co-operation under Art. 16 dependent on geographical position and state of armaments. On 16 Oct. Germany, France, Belgium, Britain, and Italy initialed the Locarno Agreements: (1) mutual guarantee of the Franco-German and Belgo-German frontiers by Britain and Italy; (2) Franco-German and Belgo-German arbitration conventions; (3) Ger-

mano-Polish and Germano-Czech arbitration conventions; and (4) Franco-Polish and Franco-Czech treaties of assistance in the event of German aggression. Because of the threat of rejection in the Reichstag, the allies offered to evacuate Cologne. The vote was held on 27 Nov., and the pacts ratified, 271-174, opposition coming from Nationalists, Nazis, and Communists. Hindenburg, to the surprise of many, promptly approved, and the signing took place in London, 1 Dec.

DETENTE IN INTERNATIONAL AFFAIRS. The Locarno Agreements marked the beginning of 4 years of relaxation of international tensions. This turn of events was primarily the work of Stresemann of Germany, Briand of France, and Chamberlain of Britain.

The promised evacuation of the Cologne area was accomplished, 30 Jan., 1926, and Germany applied for admission to the League of Nations, 10 Feb. Unexpected delay was encountered when Poland, Czechoslovakia, Spain, Brazil, China, and Persia demanded permanent seats on the League Council if Germany was admitted to this directing body. A compromise solution raising the number of nonpermanent seats from 6 to 9 soothed most feelings, but Brazil protested and filed notification of withdrawal from the League. On 8 Sept., 1926, Germany was admitted to the League and the Council on a permanent basis. The Allied Military Control Commission was withdrawn from Germany, 31 Jan., 1927, and supervision of the Versailles armaments limitations was entrusted to the League Council. The League's Preparatory Disarmament Commission worked toward an international conference to limit armaments of all member nations. On 24 Sept., 1927, the League Assembly unanimously adopted a Polish resolution prohibiting wars of aggression and, 27 Aug., 1928, the Kellogg-Briand Pact outlawing war as an instrument for settling international disputes was signed by 9 nations, including the U.S.A., France, Britain, Germany, Italy, and Japan. In a short while it was accepted universally. On 16 Sept., 1928, agreement was reached for the complete evacuation of the Rhineland and the final settlement of repara-

tions. The consequences of these agreements were the Young Plan (announced 7 June, 1929, accepted by the Reichstag 12 Mar., 1930), which set a 59-year period for reparations while reducing the total debt and giving Germany the responsibility for transfer; and the Hague Conference of 6-31 Aug., 1929, which arranged for the evacuation of the Koblenz, 30 Nov., 1929, and Mainz, 30 June, 1930, occupation zones.

Although this was a time of relative international good will, the problem of security remained. France signed a defensive alliance with Rumania, 10 June, 1926, and a similar pact with Yugoslavia, 11 Nov., 1927. The French legislature voted, 28 Dec., 1929, credits for the Maginot Line, a series of fortifications to protect the Alsace-Lorraine area and give France time to mobilize her reserves. Germany reaffirmed the 1922 Rapallo agreement with the Soviet Union by the Treaty of Berlin, 24 April, 1926, which contained a promise that each would remain neutral if the other signatory were attacked by a third power and that neither would support an economic boycott directed against the other.

ECONOMIC REVIVAL. Partly because of a lack of co-operation from the Bank of France, Herriot could not stem the fall of the franc. Consequently, Poincaré formed, 28 July, 1926, a National Union ministry with 6 former premiers as ministers. Taxes were increased, government expenditure reduced, and confidence restored so that capital returned from abroad and hiding and the franc checked at \$.039, or 20% of its prewar value. By 1930 production and trade totals had reached record levels, to some degree because of the recovery of the textile mills of Alsace and the iron-ore and steel plants of Lorraine, and temporary coal deliveries from the Saar. Another contributory factor was industrial modernization.

U.S. and to a lesser extent British loans were chiefly responsible for Germany's prosperity in these years. Some of these loans were returned as reparations payments; others went to support government and industry. Germany's production rose so rapidly that she achieved a posi-

tion second only to the U.S.A. By 1928 unemployment was only 650,000. However, criticism of the amount of nonproductive spending in the form of large national subsidies and high unemployment payments was made, 10 June, 1927, by the allied agent-general for reparations, S. Parker Gilbert.

Britain's recovery was less marked than that of France and Germany. The post-war building boom and new communications and transportation industries gave the economy a boost, but Britain's older industries failed to regain important pre-war markets. Unemployment never fell below 1 m., and confused government labor policies brought on such difficulties as the general strike of 3-12 May, 1926.

Italy recovered from her immediate postwar depression, in 1926 reaching pre-war levels of production and rates of consumption. On 6 May, 1926, the Bank of Italy was made sole bank of issue in the creation of a central banking system. In 1926-27 a deflation policy caused a sharp dip in the economy, with production and trade down and unemployment up. On 3 Apr., 1926, the Rocco Law on Corporations began centralizing the economy with the creation of 13 trade unions (6 for labor, 6 for employers, and 1 for intellectuals and professionals). Disputes were to be settled by the minister of corporations, and strikes and lockouts were not to be permitted. On 21 Dec., 1927, the lira was stabilized at 19 to U.S. \$1. In 1928-29 production recovered and crops were good, but trade decreased substantially because of the too-favorable rate Mussolini had fixed for the lira. The establishment of the corporative state envisioned in the Rocco Law was finally completed, 20 Mar., 1930.

FASCIST ITALY. Mussolini continued his assertive foreign policy. On 27 Nov., 1927, he signed a Treaty of Mutual Assistance with Albania which amounted to formal establishment of an Italian protectorate. On 5 Apr., 1927, and 6 Feb., 1930, he signed treaties of friendship with Hungary and Austria respectively, hoping to become the leader of the revisionist states. At home, on 31 Jan., 1926, Mussolini gave himself the right to issue decrees having the force of law. The

Fascist Grand Council received, 12 May, 1928, the power to choose the legislative candidates for public office from a list drawn up by the unions of workers and employers. The slate had to be accepted or rejected as a whole by an attenuated electorate of men over 21 who paid taxes or union dues of not less than 100 lira. An 8 Dec., 1928, law gave the task of choosing the head of government to the Fascist Grand Council, making it the chief organ not only of the Fascist Party but also of the Italian political system. Mussolini also ended the estrangement between the Italian state and the Catholic Church: the Lateran Accords, 11 Feb., 1929, provided for recognition by Pius XI (pope, 1922-39) of the state, recognition by Italy of Catholicism as the state religion, the establishment of Vatican City as an independent state, and an indemnity to the pope in money and state bonds of 1,750 m. lira for the papal territory taken by the Italian state in the 19th cent.

NAZI LEAN YEARS. In Landsberg Prison, Hitler wrote the first part of *Mein Kampf*, and on 20 Dec., 1924, he was amnestied. The Nazis, who had won 32 Reichstag seats in the 4 May, 1924, elections during the brief agitation over the Dawes Plan, could hold only 14 of them in the 7 Dec. elections. A struggle for control of the disintegrating party developed between Hitler and Gregor Strasser (1892-1934), who emphasized the socialist aspects of the Nazi doctrines. By Feb. 1926 Hitler had won over Joseph Goebbels (1897-1945), Strasser's most able supporter. Appointed by Hitler editor of the Berlin publication, *Der Angriff*, Goebbels made full use of his talent for propaganda. In 1925 Hitler began to expand the S.S. (defense corps) to rival the S.A. (storm troops), headed by the increasingly powerful Ernst Röhm (1887-1934). On 6 Jan., 1929, Heinrich Himmler (1900-1945) was made S.S. leader, and its numbers and importance in the Nazi movement grew rapidly. After the 19 May, 1928, elections the Nazi contingent in the Reichstag, headed by Hermann Göring (1893-1946), numbered only 12.

EFFECTS OF THE U.S. DEPRESSION. Hardest hit because of her financial dependence on the U.S.A. was Ger-

many. By 1932 production was off by $\frac{1}{2}$ and unemployment had reached 6 m. France, due to a relatively balanced economy, was not severely affected until 1931-32, when production dropped by $\frac{1}{4}$; those seeking unemployment relief in 1935 numbered 503,502 (as against 1,000 in 1930). In Britain $\frac{1}{4}$ of the working force was on the dole. However, the British economy managed to level off in 1933, and by 1937 production was $\frac{1}{8}$ higher than in 1929. Italy was able to weather some of the disaster by public works programs such as the reclamation of the Pontine Marshes.

1930-33

END OF MINISTERIAL RESPONSIBILITY IN GERMANY. The cabinet of the Social Democrat, Hermann Mueller (1876-1931), the last in which Stresemann (d. 3 Oct., 1929) served, resigned, 27 Mar., 1930, because of its inability to get a satisfactory increase in unemployment insurance from the Reichstag. The chairman of the Centrist Reichstag contingent, Heinrich Brüning (b. 1885), succeeded Mueller. After failing to obtain Reichstag support for financial reforms, Brüning was authorized by Hindenburg, invoking Art. 48 of the constitution, to institute his program by decree. On 16 July the financial decrees were issued, and ministerial responsibility was at an end. A motion, principally instigated by Social Democrats, for the recall of the decrees was passed, 18 July. Brüning's answer was to use the weapon of dissolution also given him by Hindenburg.

REICHSTAG ELECTION OF 1930. Nazis and Communists vied for the many German voters made ripe for extremist solutions to Germany's problems by the depression. However, the Communists, instructed by the Soviet Union to attack the Social Democrats, at times co-operated with the Nazis, who were able to mount an extremely effective campaign using donations from such industrial magnates as Fritz Thyssen (1873-1951) of the United Steel Works and Emil Kirdorf (1847-1938) of the Rhenish-Westphalian coal syndicate. The result was a great Nazi success in the

election of 14 Sept., 1930: 6,409,600 votes and 107 deputies (an increase of 95). Only the Social Democrats had more seats (143). The Communists increased their 54 seats to 77; the Catholic Center won 68 seats, an increase of 7; and the Nationalists won only 41 seats, a loss of 37.

AUSTRO-GERMAN CUSTOMS UNION PROPOSAL. On 5 Sept., 1929, Briand had proposed a scheme for European federal union, the emphasis of which was economic. Using the Briand proposal as justification, Austrian Vice-Chancellor and Foreign Minister Johann Schober (1874-1932) and German Foreign Minister Julius Curtius (1877-1948) negotiated a customs union (announced 21 Mar., 1931), which seemed to be a step toward total merger (*Anschluss*) of the 2 countries, though such an act was forbidden by Art. 80 of the Treaty of Versailles and by Art. 88 of the Treaty of St. Germain. France, Italy, and Czechoslovakia protested, and Britain asked the League Council to make a judgment on the matter. The Austrian government agreed, 17 Apr., to do nothing until the Council ruled. On 11 May Austria's Credit-Anstalt began to falter, and France, in retaliation for the proposed customs union, aggravated the situation by putting financial pressure on the bank. On 3 Sept. the abandonment of the customs-union idea was announced by Schober. The League Council's decision, 5 Sept., now meaningless, upheld the legality of the union by an 8-7 vote.

"NATIONAL GOVERNMENT" IN BRITAIN. The British general elections of 30 May, 1929, returned Ramsay MacDonald to the prime ministership. However, when it became clear that the Labour government did not have the confidence of important foreign financial institutions, MacDonald reorganized his cabinet, 25 Aug., 1931, to include Conservatives and Liberals. The new "National Government" was unacceptable to Labour Party executives, and on 28 Aug. Arthur Henderson was elected party leader in MacDonald's stead. MacDonald and his followers reorganized as the National Labour Party. In the 27 Oct. general election the government coalition

won 556 seats (471 of them Conservative) to Labour's 52.

The National Government was responsible for the Statute of Westminster, 11 Dec., 1931, which put into effect the Imperial Conference (12 Oct.-18 Nov., 1926) decisions giving autonomy and equal status to the dominions and abandoning free trade, 4 Feb., 1932. To protest the latter decision Liberals led by Herbert Samuel (1870-1963) left the government coalition, 28 Sept., 1932. In 1933-34 the fiction of MacDonald directing a coalition government wore thin, and it was recognized that Baldwin and the Conservatives were in command.

FRENCH POLITICAL CHANGES. In France President Doumergue's 7-year term of office ended in 1931. The logical successor, Briand, was passed over in favor of Paul Doumer (1857-1932) because of Briand's conciliatory policy toward Germany. Doumer's tenure and life were ended, 6 May, 1932, by an assassin, and Albert Lebrun (1871-1950) was chosen to take over the presidency, 10 May. The legislative elections of 8 May (single-member districts had been re-adopted, 13 July, 1927) gave power to the Cartel of the Left: Socialists won 131 Chamber seats, Radicals took 160, and other leftists 43. Herriot formed a ministry, 3 June, but, following tradition, without Socialist participation. But Herriot, abused for his proposal to pay the war-debt installment owed to the U.S.A., soon resigned. He was succeeded, 18 Dec., 1932, by Joseph Paul-Boncour (b. 1879).

RE-ELECTION OF HINDENBURG IN GERMANY. In Germany President Hindenburg's 7-year term ended in 1932. Brüning, hoping to avoid the dangers of an election in extremist-ridden Germany, asked Hitler to consent to the extension of Hindenburg's term until the depression had been brought under control. Hitler refused, deciding to challenge Hindenburg for the office. The Communists again chose Thälmann, and the Nationalists nominated Theodor Duesterberg (1875-1950). In the 13 Mar., 1932, election Hindenburg received 18,661,736 votes to Hitler's 11,338,571, Thälmann's 4,982,079, and Duesterberg's 2,553,976, but

failed to receive a majority of the votes by 4/10 of 1%. In the runoff, 10 Apr., the candidates remained the same except for Duesterberg, who was ousted by the Nationalists' resolve to support Hitler. Hindenburg received 19,360,000 to Hitler's 13,400,000 and Thälmann's 3,700,000. A decree was signed by Hindenburg, 13 Apr., dissolving the S.A. and S.S. as agents inimical to the public safety.

ACCESSION TO POWER OF ADOLF HITLER. Putting the finishing touches to the efforts of Kurt von Schleicher (1882-1934) and Ruhr industrialists who resented the government's attempts to keep prices down, Brüning advocated the partitioning of insolvent East Prussian estates. Hindenburg, who owned an East Prussian estate himself (Neudeck), was sensitive about such suggestions, and Brüning was asked to resign, 30 May, 1932. Schleicher advanced Franz von Papen (b. 1879) for the chancellorship, and Hindenburg concurred, 31 May. On 4 June the Reichstag was dissolved. Papen counted on Germany's gratitude for the role of his government's representative in the permanent fixing of the 6 July, 1931, Hoover Moratorium during the Lausanne Conference (16 June-9 July, 1932), and its insistence on armament equality at the Disarmament Conference. The election campaign was savage, as Communists and Nazis battled. One of these battles, at Altona, 13 July, served as justification for Papen to take over the governing of Prussia, 20 July. The election, 31 July, gave the Nazis 230 seats, the Social Democrats 133, the Communists 89, the Centrists 75, and the Nationalists 37.

Although the election was a repudiation of Papen's aristocratically composed "Cabinet of Barons," he refused to resign. However, he realized the need for some sort of popular support and asked Hitler to become vice-chancellor, 13 Aug. Hitler declined. Hitler's assertive behavior in an interview with Hindenburg that day endangered his chances of being offered the chancellorship. He also hurt his cause by a violent attack on Papen and an expression of eagerness at the prospect of Hindenburg's apparently imminent death

in a manifesto protesting the death sentence given 5 Nazis accused of murdering a Communist worker. Papen hoped to force the Nazis into submission by a policy of draining the party economically through repeated elections. On 12 Sept., after a farcical parliamentary duel about rules with Reichstag speaker Göring, Papen had the legislature dissolved and funds from his industrialist friends cut off from Nazi election coffers. The election, 6 Nov., seemed to mark the beginning of Nazi decline: Nazis, 196 Reichstag seats (loss of 34); Social Democrats, 121 seats; Communists, 100 seats (gain of 11); Centrists, 70 seats; and Nationalists, 51 seats (gain of 14).

Schleicher, now minister of war, forced Papen into the tactical move of resigning, 17 Nov., believing that Papen would be recalled in a stronger position. But Hindenburg, displeased with this maneuvering, instead gave, 2 Dec., the burden of the chancellorship to Schleicher, depriving him of his former freedom from responsibility. The Nazis were divided between the Gregor Strasser position of co-operation with Schleicher and the Göring, Goebbels, and (after some hesitation) the Hitler position of continued opposition. On 8 Dec. Strasser resigned from the apparently sinking Nazi Party. Papen then made his bid to harness what remained of Nazi strength. On 4 Jan., 1933, he arranged a meeting with Hitler at the home of the Cologne banker, Baron Kurt von Schroeder (b. 1889). Hitler agreed to support a cabinet headed by someone else if the minister of war was to his liking. Papen's moneyed friends paid most of the Nazi debts. However, Nazi successes in the Lippe election, 15 Jan., 1933, gave Hitler enough confidence to renege on his promise and reassert his demand for the chancellorship. Failing to receive Hindenburg's approval for a dissolution of the Reichstag to prevent opponents of his program from holding it up, Schleicher resigned, 28 Jan. On 30 Jan., with the opportunistic Papen as vice-chancellor and supposedly the real director of the cabinet, Hitler, through legal appointment by Hindenburg, became chancellor of the German republic.

CONSOLIDATION OF NAZI POWER. On 27 Feb., 1933, the Reichstag burned. Whatever the extent of their guilt for the act, the Nazis took immediate advantage of it by accusing a half-witted Dutch Communist, Marinus van der Lubbe, of the crime, and by obtaining from Hindenburg an emergency decree, 28 Feb., for the suspension of constitutional liberties, control over the states, and the death sentence for "serious disturbances of the peace." Thus the Nazis were able to suppress campaigns for the 5 Mar. elections. Nevertheless, they obtained only 288 Reichstag seats to 52 for the Nationalists, 120 for the Social Democrats, 81 for the Communists, and 74 for the Centrists. The combined Nazi-Nationalist strength was not sufficient to implement Hitler's plan to have the Reichstag vote itself a vacation until 1 Apr., 1937, and turn its authority over to him. However, with the promise that the presidential veto would be respected, Centrist leader Monsignor Ludwig Kaas (1881-1952) threw his party's support behind this "Enabling Act," and it passed on 23 Mar.

1934-36

STAVISKY AFFAIR. Serge Stavisky had been held by the French police for various criminal financial dealings, but had never been brought to trial. In Dec. 1933 an enterprise he was involved in collapsed and he escaped to the Alps. When he was found dead, suicide was assumed; but when the body of a government lawyer involved in the case was found soon afterward, suspicions were aroused. The Radical Party, which had been in power since the May 1932 election and was headed by Premier Édouard Daladier (b. 1884), was the target of abuse by extreme right-wing organizations such as Action Française and the Croix de Feu, which held, 6 Feb., what developed into bloody demonstrations in the Place de la Concorde and around the Chamber of Deputies. Daladier resigned, 7 Feb., and Doumergue formed a ministry of "National Union," 8 Feb.

PURGE OF THE S.A. Honoring his part in a pact made, 11 Apr., 1934, on the

cruiser *Deutschland* with the commander of the German army, Gen. Werner von Fritsch (1880-1939), and the commander of the navy, Adm. Erich Raeder (1876-1960), who gave him their support in the Hindenburg succession—Hindenburg died 2 Aug., and Hitler then styled himself Führer, or leader—Hitler launched a purge of the S.A., 30 June. Together with Roehm and Edmund Heines (1897-1934), such figures as Schleicher and the Catholic Action leader, Erich Klausener (1885-1934) and, indeed, anyone else the Nazis wished removed were liquidated. The S.S. was Hitler's instrument on this "Night of the Long Knives." Estimates of the number murdered range from 400 to over 1,000.

NAZI FOREIGN POLICY. Hitler had indicated the style of his foreign policy by announcing, 14 Oct., 1933, Germany's withdrawal from the League of Nations and the Disarmament Conference. In an effort to separate Germany's allied neighbors, France and Poland, and to ease suspicions concerning plans for the controversial Germano-Polish frontier, Hitler signed a 10-year nonaggression pact with Poland, 26 Jan., 1934. On 13 Jan., 1935, he scored his first territorial success when 90% of the inhabitants of the Saar in a plebiscite conducted by the League of Nations chose reunion with Germany rather than union with France. Hitler took his first calculated risk in defiance of the Treaty of Versailles on 16 Mar., 1935, when he issued a decree for universal military service, thus exceeding the treaty limit of a 100,000-man army. He concluded, however, a naval agreement with Britain, 18 June, by which the German fleet was to be maintained at no more than 35% of the British.

REACTIONS TO HITLER'S GERMANY. A British White Paper of 4 Mar., 1935, affirmed Britain's decision to rearm. The French foreign minister, Pierre Laval (1883-1945), signed an agreement with Mussolini, 7 Jan., to settle disputes over colonial matters and, by inference, to cooperate in European matters as well. That Germany was worrying Mussolini was evidenced by his sending troops to the Brenner Pass to stop a possible

German-inspired take-over in Austria following the assassination of the Austrian chancellor, Engelbert Dollfuss (b. 1892) by Austrian Nazis on 25 July, 1934. On 15 Mar., 1935, French legislators agreed to a 2-year military service bill, reversing the trend set by the 18-month service act of 1 Apr., 1923, and the 1-year service act of 28 Mar., 1928. On 2 May, 1935, France signed a mutual-assistance pact with the Soviet Union, a member of the League of Nations since 19 Sept., 1934. At the Stresa Conference, 11-14 Apr., 1935, France, Britain, and Italy agreed to follow a common policy with regard to Germany.

ITALIAN INVASION OF ETHIOPIA. Trumping up a dispute over the Wal-Wal oasis on the Ethiopio-Somali-land border, Mussolini sent troops into Ethiopia. Emperor Haile Selassie (b. 1891) appealed to the League, and economic sanctions were declared, 11 Oct. 1935. On 7 Dec. the French premier and foreign minister, Laval, and the British foreign secretary, Sir Samuel Hoare (1880-1959), agreed on a plan to save some independence for Ethiopia by dividing it into spheres of influence. However, the French press learned of the plan prematurely, and the consequent indignant popular reaction wrecked it. Hoare was replaced, 22 Dec., by Anthony Eden (b. 1897), and Laval was followed by the Radical, Albert Sarraut (1872-1962), 24 Jan., 1936. On 5 May, 1936, Addis Ababa fell, and on 9 May Ethiopia was formally annexed by Italy. The League's ineffective economic sanctions were discontinued, 4 July.

GERMAN REOCCUPATION OF THE RHINELAND. The Franco-Russian alliance, after a delay of almost a year, was presented to and ratified by the French Chamber, 27 Feb., 1936. On 7 Mar. Hitler used this treaty as an excuse to denounce the Locarno Agreements and to order 3 battalions into the demilitarized Rhineland in violation of the Versailles Treaty. French Premier Sarraut consulted his cabinet, and the chief of the French general staff, Gen. Maurice Gamelin (1872-1958) presented the alternatives of total mobilization or total inaction; the latter policy was adopted. On 11 Mar.

the French foreign minister, Pierre Flaudin (1889–1958), went to London to get assistance from Britain, a guarantor of the Locarno Agreements, but the British wanted to review German notes to the British, French, and Belgian ambassadors offering a 25-year nonaggression pact to France and Belgium, an agreement for the demilitarization of both sides of the Franco-German border, and a German promise to return to the League. Because demilitarization would constrain France to disassemble the Maginot Line, French resolve to take no action strengthened. On 14 Mar. the League Council declared Germany guilty of violating international agreements. Perturbed by these events, Belgium withdrew, 14 Oct., from its 1920 alliance with France and reasserted its neutrality, making the northeastern frontier of France extremely vulnerable.

FRENCH POPULAR FRONT. In the wake of the 6 Feb., 1934, rightist demonstrations in Paris, French Socialists, along with the C.G.T. (the Socialist trade-union confederation), called a strike for 12 Feb. When the Communists agreed to cooperate, the power of a united working-class movement was evidenced. On 27 July, Socialists and Communists signed a pact of united action against "fascist" organizations. However, further moves toward Socialist-Communist association came only after the Franco-Russian alliance of 2 May, 1935, gave Moscow-oriented Communists an ideological stake in French national defense. By the elections of 3 May, 1936, Socialists, Communists, Radicals, and other leftists had agreed to join in a "popular front," and the result was a victory: Socialists, 146 Chamber seats; Communists, 72; Radicals, 116; and other leftists, 36. The Socialist Léon Blum (1872–1950) formed a ministry of Socialists and Radicals, 4 June, the Communists refusing to accept governmental responsibility. Nevertheless, at the 2–8 Mar. congress at Toulouse, the C.G.T.U. (Communist trade-union confederation) reunited with the C.G.T. This leftist victory was met by a series of sit-down strikes, a development rightist governments had escaped. Blum conferred with employers and employees, 7–8 June, at the Hotel Matignon, and the

"Matignon Accords" were reached, providing wage increases and the safeguarding of collective bargaining. Legislation for a 40-hour week, obligatory paid vacations, and compulsory arbitration followed. Other measures taken by the Blum government included nationalization of certain aircraft plants and extension of a measure of state control over the Bank of France.

SPANISH CIVIL WAR. His financial schemes having collapsed and his army support gone, the Spanish dictator, Gen. Primo de Rivera (1870–1930), who had taken over on 13 Sept., 1923, abjured his office on 28 Jan., 1930, and died, 16 Mar. On 14 Apr., 1931, King Alphonso XIII was forced to leave Spain. On 9 Dec. a republican constitution was adopted by a revived Cortes. The republic, however, was hamstrung from the beginning by uncompromising leftists and rightists. On 10 Aug., 1932, military royalists under Gen. José Sanjurjo revolted and took Seville before they were suppressed; in 1933, anarcho-syndicalists organized a series of urban revolts. Separatist difficulties also plagued the republic as Catalans forced the government to accept their Charter of Autonomy, 25 Sept., 1932. Other separatist movements, encouraged by this success, increased their agitation. On 6 Oct., 1934, the Catalans proclaimed their independence, but government troops held Spain together, also putting down a serious Communist uprising in Asturias. The rightist-dominated Spanish parliament was dissolved, 6 Jan., 1936. In the ensuing elections, 16 Feb., the leftist "Popular Front" won 278 Cortes seats, the rightist "National Front" won 134, and the center won 55. On 13 July the rightist political spokesman José Calvo Sotelo was assassinated. Meanwhile, the rightist Gens. Emilio Mola (d. 3 June, 1937) and Francisco Franco (b. 1892) were planning a coup d'état. During the night of 17–18 July an assault on the republic began in Spanish Morocco. Burgos became the rebel headquarters on the mainland, and on 1 Oct. Franco was made rebel chief of state. He was aided by Italian and German "volunteers," while the Soviet Union sent supplies to the republican government, headed by the Socialist Largo

Caballero (1869-1946), which also received assistance from the "International Brigade" of men of various nationalities who sought, unsuccessfully, to restore the balance upset by the Fascist and Nazi forces. French Premier Blum called for nonintervention in the Spanish conflict, 1 Aug., 1937. Britain and the Soviet Union concurred, as did Germany and Italy. Britain and France kept their pledge, but Germany and Italy, which had formed an "axis" of co-operation, insisted that their nationals in Spain were volunteers. The Soviet Union also continued to intervene, but only with supplies and technical assistance. Franco's forces slowly pushed back those of the government, now headed by the Socialist premier, Juan Negrín (1894-1957). On 28 Mar., 1939, Madrid was overrun, and the National Defense Council, formed after the fall of Negrín, 6 Mar., by Gen. José Miaja, surrendered. On 7 Apr. the Franco regime signed the Anti-Comintern Pact previously agreed to by Germany and Japan on 17 Nov., 1936, and by Italy on 6 Nov., 1937.

BRITISH ABDICATION CRISIS. On 20 Jan., 1936, King George V, who had been on the throne since 6 May, 1910, died. The new king, Edward VIII, told Prime Minister Baldwin, 16 Nov., that he intended to marry Mrs. Wallis Warfield Simpson, an American recently divorced from her 2nd husband. Baldwin rejected Edward's suggestion that legislation be introduced to allow a morganatic marriage because, among other things, of the unanimous opposition of the Dominion governments. On 10 Dec. an abdication bill passed the Commons, 403 votes to 5, and the king signed it the following day. He was succeeded by his brother, George VI (reigned 11 Dec., 1936-6 Feb., 1952). Baldwin himself resigned and was succeeded by Neville Chamberlain (prime minister, 28 May, 1937-10 May, 1940).

1937-39

THE ANSCHLUSS. The first move toward union of Austria and Germany came on 11 July, 1936, when the Austrian chancellor, Kurt von Schuschnigg (b. 1897) agreed to conduct his country's foreign policy in general conformity to

that of the German government in return for a promise by Hitler to respect Austrian independence. On 5 Nov., 1937, at a meeting at the Reich chancellery, German military leaders were informed (according to the notes of Hitler's military adjutant, Col. Friedrich Hossbach) that Hitler was considering invading Austria and Czechoslovakia. Nazi terror within Austria increased, and when Austrian police raided the "Brown House" Nazi headquarters, 25 Jan., 1938, documents were found outlining a plan to use the German army to compel Schuschnigg to relinquish power to Austrian Nazis. Minister Extraordinary Franz von Papen, abruptly recalled, convinced Hitler that Schuschnigg must be persuaded to speak with Hitler directly. Schuschnigg consented and met Hitler at Berchtesgaden, 12 Feb. After much intimidation Schuschnigg was given a list of demands: the Nazis Arthur von Seyss-Inquart (1892-1946), Edmund Glaise-Horstenaus, and Hans Fischboeck were to head the ministries of the interior, war, and finance; a system of officer exchanges was to be established for closer co-ordination of the armed forces of the 2 countries; and the ban on the Austrian Nazi Party was to be lifted and all Nazi prisoners amnestied. Under threat of invasion the terms were met by Schuschnigg and President Wilhelm Miklas (1872-1956). On 9 Mar. Schuschnigg announced a 13 Mar. plebiscite in which Austrians would decide on the continuance or otherwise of an independent Austria. As for the guarantors of Austrian independence, the British made it clear that they would not intervene; at the time there was no effective government in France (Premier Chautemps had resigned on 10 Mar.); and Mussolini told Hitler's messenger Philip of Hesse, 11 Mar., that the fate of Austria was immaterial to him. On 12 Mar. the German army marched into Austria. The new Austrian chancellor, Seyss-Inquart, signed a document, 13 Mar., declaring in effect the union of Austria and Germany.

CZECHOSLOVAKIAN CRISIS. On 4 separate occasions the British government learned from German sources that aggression against Czechoslovakia was being planned for the autumn of 1938. On 12

Sept. Hitler made a violent speech concerning the allegedly oppressed German minority in Czechoslovakia which sounded ominously like a pretext for imminent action. The German population of the Sudetenland, the region over which the dispute raged, staged a 2-day revolt. On 15 Sept. Chamberlain flew to Berchtesgaden, where Hitler demanded the cession to Germany of the Sudetenland. Chamberlain gave his personal assent, but added that the matter had to be discussed with his government and with the French, who were formally allied to Czechoslovakia. French Premier Édouard Daladier went to London, 18 Sept., and agreed that the cession had to be made. An Anglo-French note containing the cession proposal was sent to the Czech government, 19 Sept., but was rejected. However, after threats of no assistance in the event of a German invasion (upon which contingency the Russo-Czech alliance of 16 May, 1935, would not go into effect), President Eduard Beneš (1884–1948) acceded, 21 Sept. Chamberlain again met Hitler, 22–23 Sept., this time at Godesberg, and informed him of the Czech agreement. Hitler demanded that the cession be fully completed by 1 Oct. On 25 Sept. French and British leaders received a formal Czech rejection of the Godesberg terms. Hitler, however, accepted a British-inspired offer made by Mussolini to mediate the problem at a general conference to be held in Munich. Invitations were sent to Britain, France, and Italy, but not to Czechoslovakia or the Soviet Union. The Munich Conference, 29–30 Sept., accepted a solution to the Sudetenland problem drafted by Göring and other Nazi officials. German occupation was to begin on 1 Oct. and end by 10 Oct. The Czech government accepted the Munich agreement "under protest to the world," 30 Sept. Taking advantage of Czech impotence, Poland seized a 650-sq.-mi. area around Teschen, 1 Oct., and Hungary received, 2 Nov., a 7,500-sq.-mi. piece of southern Slovakia. The rest of Czechoslovakia was converted, 19 Nov., into a federal state, consisting of Bohemia and Moravia, autonomous Slovakia, and autonomous Ruthenia. Slovakia, headed

by Mgr. Josef Tiso (1887–1947), demanded, 9 Mar., 1939, from the central Prague government permission for a separate army and diplomatic corps. On 10 Mar. President Emil Hácha (1872–1945) dismissed Tiso and ordered troops into Slovakia. Tiso rallied the Slovakian Diet into declaring independence, 14 Mar. Hácha then went to Berlin to appeal to Hitler; instead of receiving assistance, he was bullied into placing his country under the "protection" of Germany, 15 Mar. That day German troops occupied Prague. On 15 Nov. Ruthenia was annexed by Hungary, and on 16 Nov. Slovakia too became a German protectorate.

POLISH CRISIS. Hitler made clear the aggressive nature of his plans by coercing the Lithuanian government into ceding to Germany the port of Memel, 23 Mar., 1939. The next target was Poland, where the free city of Danzig and the Polish Corridor separating East and West Prussia were, in the German view, unsettled matters. On 31 Mar. Chamberlain formally abandoned the "appeasement policy" by announcing in the Commons that Britain and France would aid Poland if her independence were threatened. Nevertheless, it was not until 25 Aug. that an Anglo-Polish pact was signed, by which time Germany had strengthened herself by the offensive defensive "Pact of Steel" with Italy, 22 May, which had conquered Albania on 7 Apr. More importantly, Germany had outbid the western powers and reached agreement with the Soviet Union. The "Hitler-Stalin Pact," 23 Aug., publicly consisted of a mutual pledge of nonaggression, the maintenance of neutrality in the event of the other signatory becoming involved in armed conflict, and nonparticipation in groupings of powers directed at the other signatory. A secret protocol, however, divided up the Baltic states and Poland "in the event of a territorial and political transformation." On 28 Aug. the British government proposed direct discussions of Germano-Polish disputes. Hitler consented, provided that a Polish representative arrive by the evening of 30 Aug. This ultimatum startled the Polish government

into declaring a partial mobilization on 31 Aug. On 1 Sept., without a declaration of war, Germany invaded Poland. The British and French reacted cautiously, stating their willingness to discuss the situation provided German troops and planes were withdrawn. On 2 Sept. Mussolini tried to slow developments by proposing a 5-power conference. Hitler, however, refused to withdraw his forces, and on 3 Sept. Britain and France declared war on Germany. (*Cont. p. 516.*)

EAST CENTRAL EUROPE AND THE BALKANS

Austria

1918-19

END OF THE DUAL MONARCHY.

After a series of military setbacks stemming from the deteriorating morale of the troops and the growing food shortage in several cities, Emperor Charles I, in a last desperate effort to save the empire from disintegration, issued a manifesto, 16 Oct., 1918, calling for reconstruction of the monarchy on a federalized basis. But the irreversible demands of the subject nationalities for complete independence forced Charles to abdicate, 11 Nov., 1918, only 8 days after the armistice with Italy had been signed. With this act, the Hapsburg dynasty, which had reigned in Europe since 1282, came to an end.

PROCLAMATION OF THE REPUBLIC. Prior to the abdication of Charles, the German deputies of the imperial Reichsrat, inspired by Bohemian and Hungarian deputies, constituted a Provisional National Assembly and declared the independence of "German-Austria" (*Deutschösterreich*), 21 Oct., 1918. On 12 Nov., 1918, the Assembly adopted a temporary constitution, proclaimed German Austria a republic, and declared its desire to form a union (*Anschluss*) with Germany.

During the next 4 months, a bloodless power struggle ensued between extremist and moderate elements. The struggle was finally resolved in the elections of Feb. 1919, when a moderate coalition govern-

ment, composed of urban Social Democrats and agrarian Christian Socialists (Pink Coalition), replaced the provisional government. This coalition was also effective in preventing the establishment of a Soviet-type republic despite Russian and Hungarian efforts to that end.

CREATION OF THE FEDERAL REPUBLIC. A newly elected Constitutional Assembly adopted a permanent constitution, 1 Oct., 1920, and, at the instigation of the Christian Socialists, transformed the country into a federal republic of 9 provinces (*Länder*). The constitution also provided for a government consisting of a president, chancellor, and a bicameral legislature, the latter comprising the Federal Assembly with the power to elect the president. Two months later, in Dec. 1920, Austria was admitted to the League of Nations.

TREATY OF ST.-GERMAIN. 10 Sept., 1919. The boundaries and the political form of the new state were defined in the Treaty of St.-Germain. This treaty forbade any political or economic union with Germany without the consent of the League and compelled the Austrians to change the name "German Austria" to "Republic of Austria." In total, the Austrian half of the Dual Monarchy was reduced in area and population by 75% to Italy, Austria had to cede the predominantly German-Austrian-inhabited South Tyrol, the Trentino, Trieste, Istria, and some Dalmatian islands, to the newly created Czechoslovakia, Bohemia, Moravia, part of Lower Austria, and most of Austrian Silesia; to Poland, Austrian Galicia and part of Teschen (Těšín); to Rumania, South Bukovina; to newly created Yugoslavia, Bosnia, Herzegovina, and Dalmatia. Austria also lost her entire naval force and her army was reduced to 30,000 volunteers. She received, however, Burgenland in western Hungary, the only territorial award granted by the allies to a defeated power.

1920-38

ECONOMIC PROBLEMS. As a result of the war and the terms of the peace treaty, Austria was reduced to a landlocked and

homogeneous country with a German-speaking population. Her new boundaries left her without significant raw materials, food, industry, or foreign markets; her economy, virtually self-sufficient under the Dual Monarchy, became completely dislocated. As a result, she had to face the prospects of prolonged starvation and chaotic internal conditions.

After having failed to carry through a proposed currency and customs union with Italy, Chancellor Ignaz Seipel (1876–1932) appealed for help to the League of Nations, Sept. 1922. The League undertook the country's rehabilitation by granting a loan equivalent to (U.S.) \$135 million, 4 Oct., 1922. By June 1926 Austria had achieved a balanced budget, but the coming of the world depression forced her to turn to the League again. Although the League granted a 20-year loan of \$42 million in 1932 (Lausanne Protocol), a pledge not to enter into any union with Germany was extracted from her in return.

HEIMWEHR vs. SCHUTZBUND. Austria's economic problems were greatly compounded by a growing rivalry for political control between two militant organizations, each having its own well-armed militia: the *Schutzbund* and the *Heimwehr*. The Socialist *Schutzbund* drew its strength of about 90,000 men from among Social Democrat workers in and around the industrial districts of Vienna (Red Belt); the conservative *Heimwehr* had its power base largely among fascist, anti-Socialist, and reactionary monarchical groups in the rural areas. The *Heimwehr*, numbering some 60,000 men, was largely financed by Prince Ernst von Starhemberg (1899–1956).

The frequent clashes between the 2 militias during the 1920's and 1930's seriously sapped the strength and authority of several governments, headed 1st by the Social Democrat Karl Renner (1870–1950) and later by Social Christian and Pan-German coalitions under Johann Schober (1874–1932) and Seipel respectively. During a demonstration by Viennese workers on 15 July, 1927, 85 persons died in a clash with the police. The subsequent general strike, called by the Social Democrats, was broken by the army, aided by

the *Heimwehr*. Strife between the rightists and moderates led to a civil war, 12 Feb., 1934. Finally, on Mussolini's advice, Chancellor Engelbert Dollfuss (1892–1934), who had come to power in 1932, decided to enlist *Heimwehr* aid again to crush what was believed to be a Socialist conspiracy.

ASSASSINATION OF DOLLFUSS. In attempting to fight on 2 fronts while confronting at the same time the rapid growth of Nazism, the country under Dollfuss slowly drifted toward the establishment of a corporate Fascist state. After the abolition of the Social Democratic Party, Apr. 1934, Dollfuss introduced an authoritarian constitution, 1 May. Once the Social Democrats had been crushed, the local Nazis, aided by those in Germany, staged a *Putsch*, 25 July, 1934. Although the Nazi take-over attempt was foiled, Dollfuss, who had opposed the Nazis as well, was killed in his office.

BANNING OF THE HEIMWEHR. In Apr. 1936 Chancellor Kurt von Schuschnigg (b. 1897), successor to Dollfuss, whose policies he followed, outlawed the *Heimwehr* and, repudiating a provision of the Treaty of St.-Germain, introduced compulsory military service.

ANSCHLUSS OF 1938. The *Schutzbund* and the *Heimwehr* eliminated, the country's position deteriorated fast as a result of Mussolini's shift toward Hitler and the ever-worsening economic conditions. Following an ultimatum given him during a visit to Hitler, Feb. 1938, Schuschnigg responded by calling for a plebiscite (for 13 Mar.) on the issue of *Anschluss*. Two days prior to the plebiscite, Hitler threatened to invade unless it was canceled. On 12 Mar., 1938, Interior Minister Dr. Arthur von Seyss-Inquart (1892–1946) assumed power from Schuschnigg (who had resigned the day before) and invited the German army to "maintain order." The *Anschluss* went into effect the same day. (*Cont. p. 526.*)

Hungary

1918–21

END OF THE DUAL MONARCHY. Amidst the great turmoil which befell the Austro-Hungarian Monarchy in the clos-

ing months of 1918, Hungary experienced a violent transformation. What emerged at the end was far different from what until then had been known as the kingdom of historic Hungary. Following the proclamation, 16 Oct., 1918, of the federalizing manifesto by Charles I (Charles IV as king of Hungary)—an act which Hungary considered as terminating the 1867 Compromise (*Ausgleich*)—events in quick succession led to an internal crisis which lasted until Nov. 1919.

ESTABLISHMENT OF A LIBERAL REGIME. Upon the outbreak of revolutionary ferment in Budapest, King Charles IV named the liberal Count Mihály Károlyi (1875–1955) to form a new government, 31 Oct., 1918. Trying desperately to preserve the country within its historic borders, Károlyi declared, 16 Nov., 1918, a republic and promulgated long-overdue social and political reforms, including federative status for the minorities. In the meantime, however, both internal and external pressures prevented him from implementing his ambitious program, and the nationalities, refusing to accept his federalizing scheme, attacked the country from 3 directions. Since the Hungarian army had earlier been demobilized, the allied ultimatum drawing the new border with Rumania at the Tisza River found Károlyi unprepared and, sensing the failure of his pro-allied policy, he went into exile, Mar. 1919.

THE SOVIET REPUBLIC. A Soviet-type republic, attended by widespread terror, was proclaimed, Mar. 1919, under the leadership of Béla Kun (1885–1937). An ex-officer in the Austro-Hungarian army, but one who had been captured, trained, and then returned by the Bolsheviks, Kun hoped, with promised Soviet-Russian aid, to repel the invading Rumanian armies. After initial success against the Czechs in Upper Hungary, the Hungarian Red Army without Russian help—which was not forthcoming—could not withstand the Rumanians. Before the Rumanians captured Budapest in Aug. 1919, Kun had fled the country.

TREATY OF TRIANON. 4 June, 1920. During the 3-month-long pillaging of the capital by the Rumanian army, the allies were searching for a government

which could sign the peace treaty that had been delayed by the chaotic situation. In Nov. 1919, Miklós Horthy (1868–1957), a rear adm. of the former Hapsburg navy, entered the capital at the head of counterrevolutionary forces; on 1 Mar., 1920, the National Assembly, elected earlier in the year, chose Horthy to act in the absence of the king for the new Hungary. The “new” Hungary, as one of the successor states to the Hapsburg Monarchy, was defined by the Treaty of Trianon.

According to the treaty, Hungary had to cede Slovakia (in the north) and Ukrainian-inhabited Ruthenia (in the northeast) to form Czechoslovakia; Transylvania proper and some purely Magyar-inhabited areas extending into the Great Plain and part of the Banat of Temesvar in the south went to Rumania; and the other half of the Banat, Backa, Slovenia, and Croatia, went to form the new state of Yugoslavia. With a slice of western Hungary having been awarded to Austria proper, Hungary had ceded substantial territory to all her neighbors. Despite repeated pleas for plebiscites, the only case where one was granted was in the city of Sopron (Burgenland), which voted to remain within Hungary, 1921.

As a result, Hungary lost 71.4% of her territory and about 60% of her population, including about 3.5 m. Magyars, nearly 2 m. of whom had lived in areas adjacent to her new borders. Having lost her access to the Adriatic Sea, Hungary was reduced to a landlocked country without most of her natural resources and communication and cultural centers. Her army was also limited to 35,000 men.

HAPSBURG RESTORATION ATTEMPTS. Twice during 1921, King Charles IV attempted to reclaim the Hungarian crown. On 26 Mar., 1921, Charles returned to Hungary, but Horthy, fearing allied reaction, refused to yield without the consent of the Assembly. In Oct. 1921 Charles, with the aid of a small loyalist force, tried again to march on Budapest. The Little Entente mobilized, and pro-Horthy forces captured Charles before he could reach the city. Thereafter Charles was exiled by the British to Madeira, where he died in 1922. In response, the Little Entente

forced Hungary to pass a dethronement act deposing the Hapsburgs.

1922-44

THE HORTHY REGIME. Among the 1st acts of the provisional Horthy government had been to hold elections for a Constituent Assembly in early 1920. Although no single party received a majority, the assembly agreed to restore the monarchy and to nullify all acts that had been passed under both the liberal Károlyi and the Communist Kun regimes.

The period between 1921 and 1931 was dominated by Horthy's appointee, Count István Bethlen (1874-1947), under whose premiership the country reverted to a generally conservative rule. The relative financial stability—achieved in part through the help of the League of Nations—which characterized these years was greatly offset by the absence of much-needed land and social reforms. During the premiership of Gyula von Gömbös, 1932-36, the country embarked upon a strongly revisionist policy for which the help of Fascist Italy was enlisted.

Progress toward parliamentary democracy was also made with the passage of the Electoral Reform Bill of 1938. The bill provided for secret balloting and introduced near-universal suffrage.

Although the successive governments of Kálmán de Darányi, 1936-38, Béla Imrédy, 1938-39, and Count Pál Teleki, 1939-41, were successful in checking the local Nazi movement, the country was drawn ever closer toward the Axis powers as the surest way to regain the territories lost in 1920.

FOREIGN POLICY. Hungary's foreign policy during the entire interwar period remained one of open irredentism toward her neighbors in the little Entente. In this goal, Hungary had no effective ally until Apr. 1927, when the conclusion of a friendship treaty with Italy paved the way for secret rearmament.

In Feb. 1934, Hungary both recognized the Soviet Union and concluded a trade agreement with Germany. On 17 Mar. Hungary, Italy, and Austria signed the Rome Protocol.

Following the Vienna Awards—the 1st returning Upper Hungary, Nov. 1938, and the 2nd returning northern Transylvania, Aug. 1940—Hungary became irrevocably indebted to the Axis powers.

In Apr. 1941, when in order to attack Yugoslavia Germany requested troop passage through Hungary, Teleki committed suicide, 3 Apr., rather than abrogate the treaty of "eternal friendship" which he had signed with Yugoslavia in Dec. 1940. (*Cont. p. 533.*)

Czechoslovakia

1918-39

CREATION OF CZECHOSLOVAKIA.

As 1 of the successor states to the former Austro-Hungarian Empire, Czechoslovakia received Silesia, Bohemia, and Moravia from Austria and Slovakia and Ruthenia from Hungary under the Treaties of St.-Germain and Trianon respectively. In all, the population of the new state was made up of 5 nationalities: Czechs and Slovaks, comprising $\frac{2}{3}$, and Germans, Magyars, and Ukrainians, comprising $\frac{1}{3}$.

Considered as perhaps the most fortunate of the successor states, Czechoslovakia received most of the monarchy's industry, connected by an excellent railway system, as well as some agricultural areas growing hops, fruit, and sugar beets. Unlike any of the new or greatly enlarged states in predominantly agricultural Central Europe, Czechoslovakia as a result of her gains inherited a stable and balanced economy and experienced hardly any of the financial problems which beset Austria and Hungary.

PROCLAMATION OF THE REPUBLIC. Thomas G. Masaryk (1850-1937), a former professor in Prague, and Eduard Beneš (1884-1948), his student, are regarded as the founding fathers of Czechoslovakia. Their ambitious nationalistic campaign gained them early allied support and led to the declaration of an independent state of Czechs and Slovaks in Paris, 18 Oct., 1918, just 2 days after Emperor Charles I announced his manifesto envisaging a federalized empire.

On 14 Nov., 1918, the Provisional Assembly sitting in Prague declared the state a republic; it also designated Masaryk as president, 1918-35, Beneš as foreign minister, and Karel Kramář (1860-1937) as premier.

In Feb. 1920, the National Assembly adopted a democratic constitution which provided for a centralized bicameral legislature (whose joint session elected the president). The centralized constitution was adopted despite protest from the Slovaks, who demanded a federalized state which had been agreed upon in the Pittsburgh Pact, 30 June, 1918, stipulating the terms of the Czech-Slovak union.

LAND REFORM AND MINORITY PROBLEMS. To obtain broad support from the people, the new government embarked upon an extensive land reform, particularly in Slovakia, where large estates had been concentrated in the hands of the Slovak Catholic Church and the Magyar nobility. Another urgent task was to bring about reconciliation between the ethnic minorities. Despite guarantees of equality prescribed in a minorities treaty, signed in Paris in 1919, the minority issue continued to plague the government through the 1930's; exacerbated by foreign agitation, it became one of the major causes for the collapse of Mar. 1939.

NAZI AGITATION. Some 3.3 m. German-speaking people, living largely in compact groups along the mountainous border regions of Bohemia-Moravia as well as in inland Bohemia, constituted the largest minority in the new state and proved to be the most susceptible to Nazi propaganda. Beginning in 1932 and gradually gaining momentum, a pro-Nazi party, the Sudetendeutsche Party, became a growing threat to the country's internal stability under the extremist leadership of Konrad Henlein (1898-1945). In the elections of May 1935, the party gained a numerical majority despite attempts by the government to both suppress and appease its opponents.

To counter the new danger, the government tried to disarm the Sudetendeutsche Party by offering far-reaching concessions in cultural and economic

matters. Henlein, however, emboldened by Hitler's 1933 victory, rejected the offer as inadequate and pressed for complete autonomy.

With the absorption of Austria by Germany in Mar. 1938, stepped-up Nazi propaganda succeeded in convincing most of the other, smaller German-speaking splinter groups to join the Sudetendeutsche Party. Having thus enlarged his following, Henlein demanded full political as well as ideological autonomy, Apr. 1938. When Prague refused to comply, the stage was set for Hitler to force the issue.

FORMATION OF THE LITTLE ENTENTE. The leaders of Czechoslovakia early realized that the country's continued existence depended on the maintenance of the Central-East European *status quo* as dictated at the Paris Peace Conference in 1919. Under Foreign Minister Eduard Beneš, a series of negotiations were initiated, 1920-21, which led to the formation of a regional bloc known as the Little Entente. Throughout its existence the Entente guarded against Hungary's openly revisionistic policies and hindered attempts to restore Hapsburg rule.

The Entente was based on 3 bilateral treaties: (1) Czechoslovakia-Yugoslavia, 14 Aug., 1920; (2) Czechoslovakia-Rumania, 23 Apr., 1921; and (3) Rumania-Yugoslavia, 7 June, 1921. On 21 May, 1929, the alliance was tightened by an agreement which made the renewal of the alliances automatic at the end of each 5-year period. The Entente drew its members even closer when Hitler came to power in 1933; in Feb. of that year, a permanent office in Geneva was set up which housed a council of the 3 foreign ministers; but in 1938 it proved too weak to withstand the subversive pressure of Germany.

THE MUNICH AGREEMENT. 29 Sept., 1938. Since the Little Entente was designed primarily against Hungary, Czechoslovakia looked elsewhere for support against possible aggression by Germany. A Czecho-Polish treaty of neutrality was signed, 1921. An accord of formal alliance with France was concluded, 25

Jan., 1924. Although the Czechs also entered into alliance with the Soviet Union, 16 May, 1935, neither Soviet nor French aid was forthcoming when it was most needed. In Sept. 1938, the leaders of France, Britain, Italy, and Germany signed an agreement in Munich which sanctioned the union of the Sudetenland with Germany; in Mar. 1939, Hitler occupied the remaining Czech lands and made northern Slovakia into an autonomous protectorate. (*Cont. p. 531.*)

Rumania

1918-40

TERRITORIAL GAINS. The territories awarded to Rumania by the Treaties of St.-Germain, Trianon, and Neuilly—the 3 together increasing the country by over half its original size—exceeded the expectations of her most rabid nationalists. From Hungary, Rumania gained Transylvania, Partium (part of east Hungary proper), and the eastern zone of the Banat of Temesvar (the other half going to Yugoslavia); from Austria, the province of Bukovina; possession of south Dobruja, which she had gained in the 2nd Balkan War, was confirmed and, in addition, she acquired Bessarabia by seizure from Russia.

MINORITIES PROBLEMS. With these territorial gains, Rumania was transformed from a country of homogeneous people into one with a population of which nearly $\frac{1}{3}$ consisted of minorities. Among the complaints by the minorities, especially from Transylvanian Hungarians, were allegations of discriminatory applications of land reform, 1921. The ceiling for landholdings set by the reform was much higher in the old kingdom (1,250 acres) than in Transylvania (300 acres), where much of the land was in the hands of the Hungarian minority of 1.5 m. The Magyars also resented the suppression of their 1,000-year-old cultural institutions as well as the imposition of unsympathetic Rumanian officials from the old kingdom. Rumania also encountered resistance to her

nationalistic policies from her Ukrainian (1 million), German (750,000), and Bulgarian (250,000) minorities.

ELECTORAL REFORM. Retaining the monarchical form of government under King Ferdinand (ruled 1914-27), Rumanian internal developments, 1918-27, were dominated by the prewar Liberal Party under the control of the Brătianu family. Despite the carrying out of far-reaching land reforms, 1921, and the granting of universal suffrage, 1923, the Liberal regime of Ion Brătianu (1864-1927) became associated with the pursuit of an extreme nationalistic policy and was accused of corruption at the expense of the peasantry and the minorities. Opposition to Brătianu was further increased when an electoral law granting parliamentary control to the party which obtained 40% of the electoral vote was passed, 1926.

THE MANIU REGIME. Following the death of Ferdinand, 1927, who was succeeded by his grandson Michael, Iuliu Maniu (1873-1951), leader of the National Peasant Party, was appointed premier in 1928. Despite his progressive legislation abolishing press censorship and martial law and curbing the oppressive police, Maniu was ousted by King Carol II in 1930. (Carol, after returning from exile, had deposed his son Michael the same year.)

THE IRON GUARD. During the next 7 years, personal intrigue, corruption, and mismanagement under a series of governments led to a tactical coalition between the opposition National Peasant Party and the Iron Guard, a terroristic, anti-Semitic, and Fascist group under the leadership of Corneliu Zelea-Codreanu (?1899-1938). The defeat of the incumbent Tatarescu government in the Dec. 1937 elections by a Maniu-Codreanu coalition prompted Carol to promulgate a new constitution, Feb. 1938, which outlawed all political parties and granted him virtual dictatorial powers. Although outlawed and its leaders executed, Nov. 1938, the Iron Guard continued to challenge Carol's personal rule until, in 1940, accused of "treachery" for the territorial

losses to Hungary, the Soviet Union, and Bulgaria the same year, he was forced to abdicate.

FOREIGN RELATIONS. As 1 of the victorious powers, Rumanian foreign policy during the interwar years was governed by her concern to preserve her territorial gains against the irredentist policies of Hungary, the Soviet Union, and Bulgaria. For this reason she joined both the Little and the Balkan Ententes. She also concluded a treaty of alliance with Poland, 3 Mar., 1921, to safeguard against the possible loss of Bessarabia to the Soviet Union. As a double guarantee, Rumania also entered into a nonaggression pact with the Soviet Union in 1933.

As a result of the failure of the Little Entente to protect Czechoslovakia against Hitler as well as the tendency of Hungary to look to Germany to realize her revisionist designs, Rumanian foreign policy during the last few years before the outbreak of World War II became increasingly pro-Axis. (*Cont.* p. 537.)

Yugoslavia

1917-41

CORFU MANIFESTO. Overcoming longstanding differences in customs, culture, and religion which had separated them for centuries, representatives of the South Slavs—Serbians, Croats, and Slovenes—met on allied-held Corfu and proclaimed a union, 20 June, 1917, under the Serbian King Peter I. Montenegro also joined the union, 26 Nov., 1918, after her National Assembly deposed King Nicholas I for opposing the union under Serbia.

Although—according to the manifesto—the 3 national groups were to “rank equally” in the projected federal state, the South Slavs split into 2 factions when the Hapsburg Monarchy finally disintegrated in Oct. 1918. One faction, headed by the Serbian national leader Nikola Pašić (?1845-1926), advocated a strong centralized state; the other, led by the Croatian Stefan Radić (1871-1928), demanded a large degree of autonomy for all constituent members in a federal

union. Finally, on 4 Dec., 1918, the “Kingdom of the Serbs, Croats, and Slovenes” was formally proclaimed.

CENTRALISM vs. FEDERALISM. The domestic affairs of the new state remained confused and explosive throughout most of the interwar period. The issue which most prevented it from achieving a semblance of national unity was that of centralism vs. federalism.

A long-postponed election for a constituent assembly was held in late 1920 and, after much Croatian opposition and the subsequent boycott of the proceedings by 50 Croatian deputies, a centralist constitution was adopted, 28 June, 1921. Designed to do away with traditional localism and regional differences, the constitution replaced the provincial diets (parliaments) with one central Parliament (*Skupština*) in the Serbian capital, Belgrade. The Croatian Peasant Party under Radić, however, was determined to pursue an obstructionist policy until its avowed goal of complete autonomy was achieved.

The internal situation came to a crisis, 8 Aug., 1928, when Radić died of wounds he had received on 20 June for venturing to attack the Serbian-dominated government in Parliament. The Croats then responded by convoking a separate Parliament in Zagreb, 1 Oct., 1928. To head off the collapse of the state, King Alexander I (ruled 1921-34) proceeded to dissolve the Parliament and instituted a dictatorship, 5 Jan., 1929. During the next 3 years, the state was ruled by decrees aimed at erasing particularism. In Oct. 1929, by royal proclamation the name of the state was changed to “Kingdom of Yugoslavia.”

The adoption, Sept. 1931, of a new constitution ended the monarchical dictatorship. The new constitution, providing for a parliamentary procedure to ensure victory for the government party, was, however, rejected by the Croats, who viewed it as yet another attempt at “Serbianization.”

ASSASSINATION OF ALEXANDER. Serbo-Croat antagonisms culminated in the assassination of King Alexander in Marseilles, 9 Oct., 1934, while on a state

visit to France. Although new elections were held, May 1935, under the boy King Peter II (b. 1923), all opposition members boycotted the Parliament to protest repressive campaign tactics.

SERBO-CROATIAN ACCORD. It was not, however, until 24 Aug., 1939, that an accord between the Serbian and Croatian leaders was reached. The agreement, prompted by the growing alarm at Hitler's *Drang nach Osten*, provided for full autonomy in all matters but defense, internal and foreign affairs, foreign trade, and communications. At the same time, the Yugoslav government was also reorganized so as to allow greater Croatian representation; Vladko Machek, who succeeded Radić as head of the Peasant Party, became vice-premier.

FOREIGN RELATIONS. Yugoslav foreign relations in the 1920's were dominated by a conflict with Italy over the latter's ambitions to gain Dalmatia and the port city of Fiume (based on secret promises by the allies during World War I). The conflict was settled in the Treaty of Rapallo, 1920, making Fiume a free port, and later modified by the Treaty of Rome, 1924, which gave the city to Italy but granted Yugoslavia access to the port for 50 years.

Since Yugoslavia was created largely at the expense of her former enemies Hungary, Austria, and Bulgaria, she entered into alliances with Rumania and Czechoslovakia, thus forming under French tutelage the Little Entente, 1921. Relations with Hungary became especially tense in 1934, when that country, in pursuing a revisionist policy, exploited Serbo-Croatian antagonism and, as a consequence, found herself implicated in King Alexander's assassination. Yugoslavia subsequently retaliated by deporting a number of Hungarian nationals across the border. In a gradual shift to a policy of *rapprochement* with her former enemies under Prince Paul (acting as regent for King Peter II), Yugoslavia first signed on 12 Dec., 1940, a "Treaty of Eternal Friendship" with Hungary and the next year in Mar. Premier Dragisha Tsvetkovich visited Vienna and signed the Tripartite Pact formally joining Yugoslavia to the Axis powers.

Within two days, however, the military opposing the pro-Axis drift executed a *coup d'état* which, in turn, provided Hitler with a pretext to invade the country in April 1941. (*Cont. p. 539.*)

Bulgaria

1919-39

TREATY OF NEUILLY. 27 Nov., 1919. As a member of the defeated Central Powers, Bulgaria signed the Treaty of Neuilly by which she ceded western Thrace to Greece—thereby losing her access to the Aegean Sea—and 4 other smaller areas to the newly created Yugoslavia. The treaty also limited her army to 20,000 men; her navy was reduced to 4 torpedo boats and 6 motor boats, "all without torpedoes." South Dobruja was confirmed as a Rumanian possession.

RULE OF BORIS III. Blamed for joining the defeated Central Powers, King Ferdinand was forced to abdicate in 1918 in favor of his son Boris III (ruled 1918-43). With the fall of the existing cabinet as well, Aleksandr Stamboliski (1879-1923), the Agrarian Party leader who had dared to oppose Ferdinand on the war issue, was named premier, Oct. 1919. He remained in power until 9 June, 1923, when a *coup d'état* ousted him for ruthlessly suppressing all but the peasantry. In the following years, Aleksandr Tsankov (1879-1959), the new prime minister, had to combat repeated Communist attempts at establishing a Soviet-type republic. Finally on 19 May, 1934, fear of Communism led to a military *coup d'état* under Kimon Georgiev; the following year Boris III introduced a personal dictatorship.

SUPPRESSION OF IMRO. In addition to the increasing Communist activity, Bulgaria's internal situation was made more difficult by the presence of some 200,000 World War I refugees from Serbian and Greek Macedonia. The well-armed Internal Macedonian Revolutionary Organization (IMRO), founded in 1893, constituted a constant source of embarrassment to Bulgarian governments because of its guerrilla activities—fanned by Communist agitation—against Greece

and Yugoslavia. Already torn by internal dissension, IMRO, along with all other political parties, was finally suppressed in a *coup d'état* in 1934. Once the Macedonian exiles had been checked, the way was cleared for Bulgaria to join the Balkan Entente on 31 July, 1938 (Treaty of Salonika).

NAZI INFLUENCE. Not unlike the other states of Eastern Europe, Bulgaria also was affected by the spread of Nazism. Although officially outlawed in 1938 and 1939, the Nazi movement continued its activity under the leadership of former premier Tsankov. (*Cont. p. 530.*)

Albania

1920-39

PRESERVATION OF ALBANIAN INDEPENDENCE. Albania's independent status, which she had gained during the Balkan War of 1912, was confirmed by the allied powers at the Paris Peace Conference after World War I. A national congress (*Lushnje*) in 1920 also reasserted national independence and moved the capital to Tirana. Real independence, however, did not come until, in the fall of 1920, the Italian occupation troops left the country. Albania was admitted to the League of Nations in Dec. 1920.

ACCESSION OF ZOG I. With the election early in 1921 of a Council of Regents (acting for King William I), Albania remained a monarchy. During 1921-25, however, Albanian politics was characterized by a power struggle fought between various minorities, tribes of mixed origin and following different religions. From the beginning, the political situation was dominated by the personality of Ahmed, Bey Zogu (1895-1961), a nationalist of long standing. The conflict turned into violence when, after the elections in 1924, the defeated candidates, followers of Zogu, resorted to arms to contest the results. After a brief sojourn in Yugoslavia, Zogu returned before the year was out and, with the aid of his faction, established himself president. Three years later, however, the monarchy was restored when, 1 Sept., 1928, Zogu was proclaimed King Zog I. In his attempt to introduce

the country to the modern age, he ruled over his kingdom with an iron hand and maintained a semblance of order.

GROWTH OF ITALIAN INFLUENCE. Italian domination over Albania began to increase after the signing of the Treaty of Tirana in 1926; King Zog looked to Italy for financial, technical, and military aid, and, in order to gain a long-coveted foothold in the Balkans, Italy willingly complied. Under cover of the treaty, Italian influence continued to grow until, on Good Friday of 1939, the Italian army occupied the country outright. Zog fled and Albania, under King Victor Emmanuel III, was joined to Italy in a personal union. (*Cont. p. 529.*)

Greece

1921-40

GRECO-TURKISH WAR OF 1921-22.

World War I fighting between Greece and Turkey was to have ended along the lines laid down in the Treaty of Sèvres of 10 Oct., 1920. Although the treaty was accepted by the government of Sultan Mohammed VI at Istanbul, a rival nationalist government under Kemal Ataturk proceeded to repudiate its terms. Despite initial successes due to British backing, Greece in the end lost the war and was obliged to sign, Oct. 1923, the Treaty of Lausanne which restored the Maritsa River in Thrace as the Greco-Turkish border. The new treaty also stipulated an exchange of population which left Greece with about 1.2 m. Greek refugees to assimilate. Greco-Turkish relations thereafter remained at best cool until 1930, when the 2 signed a treaty of friendship.

ROYALISTS vs. REPUBLICANS. The war with the Turks exacerbated an already tense internal situation. King Constantine, who had been deposed for his neutrality in 1917, was recalled after the death of his son King Alexander in 1920. Since his reign was too closely associated with military defeat by the Turks, Constantine was forced to abdicate again, 1922. Although he was succeeded by his son George II, defeat by the Turks shifted public sentiment toward the anti-

royalist party and a republic was proclaimed, 1924, following the expulsion of George II in 1923.

The republican years 1924-35 were filled with political feuds, *coup d'états*, and counter coups, with Adm. Pavlos Koundouriotis, 1924-29, Eleutherios Venizelos, 1928-33, and Panagis Tsaldaris, 1933-35, among the chief political figures. In 1935, a plebiscite organized to decide the monarchy issue—which in the meantime had been revived—was canceled as a result of a *coup d'état* engineered by former War Minister Gen. Georgios Kondylis. In quick succession, Kondylis, now acting both as premier and regent, defeated the forces of Venizelos, ousted Premier Tsaldaris, and restored the monarchy under a reinstated King George II in Nov. 1935. Within less than a year, however, King George removed Kondylis for nonco-operation, Aug. 1936, and restored the 1911 constitution. A dictatorship was introduced under Gen. Joannes Metaxas (1871-1941). Death within 3 months eliminated Kondylis, Venizelos, and Tsaldaris; in 1938 Metaxas was named premier for life.

FOREIGN RELATIONS. In addition to the Turkish war, Greek foreign affairs in the 1920's were complicated by strained relations with Bulgaria over Greek minorities within Bulgarian Macedonia and Bulgarian aspirations for an outlet to the Aegean Sea, with Italy over Corfu, and with Yugoslavia over mutual ambitions to control Yugoslavian Macedonia.

When a Greek army contingent invaded parts of Bulgarian Macedonia in retaliation for alleged atrocities against Greek nationals, the League of Nations intervened on Bulgarian request and, scoring one of its few successes, arbitrated against Greece. Thereafter, relations between Greece and Bulgaria continued to improve until, in 1938, Bulgaria joined the Balkan Entente.

BALKAN ENTENTE. The Balkan Entente was a loose alliance created in 1934 by Yugoslavia, Rumania, Greece, and Turkey to secure their territorial integrity against Bulgarian and Hungarian revisionism.

Despite Greek neutrality at the outbreak of World War II, Italy, in Oct. 1940, invaded Greece. (*Cont. p. 527.*)

Poland

1918-39

REBIRTH OF HISTORIC POLAND.

Although there had been faint attempts by the Central Powers and Russia to give Poland independence, 1914-16, the Polish nationalists, especially General Józef Piłsudski (1867-1935), soon realized that only through their own efforts could real independence be achieved. After the defeat of the Central Powers and with the support of the allies, the various nationalist factions arrived at a compromise and proclaimed an independent and united Poland, 9 Nov., 1918. On 16 Nov. Poland was declared a republic.

ESTABLISHMENT OF THE POLISH FRONTIERS. Recognizing the existence of an independent Poland, the allied powers by the Treaty of Versailles of 1919 fixed her boundaries according to economic, strategic, and ethnographic considerations, at least to the extent that these principles could be reconciled. On the west, Poland was given from Germany western Prussia, comprising an area stretching from Silesia to the Baltic Sea (Polish Corridor); and on the south, she received from Austria Teschen and Galicia. From the Soviet Union on the east, she was to receive parts of the former eastern provinces of historic Poland (which were inhabited mainly by White Russians and Ukrainians). But since the eastern border envisaged by the treaty (known as the Curzon Line) would have given Russia the easternmost parts of historic Poland, war ensued between Polish forces under General Piłsudski and the Red Army of Soviet Russia. It was not until 1921 that the Treaty of Riga fixed a border approximating that of 1772, as claimed by Poland.

Territorial disputes with the newly independent states of Lithuania (over the city of Vilna) and Czechoslovakia (over formerly Austrian-held Teschen) were prolonged throughout most of the inter-war period.

MILITARY DICTATORSHIP. After his release from German imprisonment, Piłsudski appeared in Warsaw, took command of the army, and declared himself chief of state, 10 Nov., 1918. (Another national leader who had been active in promoting the Polish cause in allied circles in Paris, Ignacy Paderewski [1860-1941], became premier in Jan. 1919.) Piłsudski, after the adoption of a republican constitution, Mar. 1921, and its confirmation by a plebiscite, Nov. 1922, temporarily retired from public life.

Despite attempts by various cabinets at financial and agrarian reforms during the following 4 years, protracted parliamentary infighting between radicals and conservatives resulted in corruption and ineffectual government which, in turn, led Piłsudski to engineer a *coup d'état* on 11 May, 1926. With the ouster of Premier Wincenty Witos (1874-1945), Piłsudski named his friend Ignacy Mościcki (1867-1946) as president of Poland. The 2 co-operated in forming what came to be regarded as a virtual military dictatorship, which lasted until Piłsudski's death in May 1935. Following the adoption of another constitution, which reduced the Parliament to the role of a rubber stamp, Mościcki, under the tutelage of the military, continued in power until 1 Sept., 1939. On the outbreak of World War II, invasion by Germany and the Soviet Union led to the partitioning of Poland for the 5th time.

MINORITY PROBLEMS. The new state's non-Polish national minorities of Germans, White Russians, Ukrainians,

and Jews—together comprising $\frac{1}{3}$ of the population—made the task of establishing political harmony very arduous. Constant friction between government and minorities led to incidents which precipitated intervention by the League of Nations. The latter, however, tried in vain to enforce special treaty statutes designed to protect the minorities which Poland had been required to sign in 1919; by the 1930's, Poland became more and more associated with anti-Semitic policies.

BORDER SECURITY. As a new country wedged in between 2 major powers, Poland's principal concern during the inter-war years was to ensure her security through alliances. After settling the border conflict with the Soviet Union in 1921, she signed the same year treaties with 3 other countries. A treaty of alliance was negotiated with France and Rumania to guard against the Soviet Union and Germany, and a treaty of neutrality was concluded with Czechoslovakia. Both treaties were motivated by Poland's desire for friendly relations with the Little Entente without actually joining it, while enabling her to retain amicable relations with her traditional friend Hungary.

In 1929 Poland joined Finland, Latvia, Estonia, Rumania, and the Soviet Union in signing the Litvinov Protocol, which in turn activated the Briand-Kellogg Pact, Aug. 1928, designed to outlaw war as a means of settling conflicts between states. Poland also concluded nonaggression pacts with the USSR in 1931 and with Germany in 1934. (*Cont. p. 535.*)

The Growth of Russian Power

LENIN AND THE BOLSHEVIK REVOLUTION

1917

THE FEBRUARY REVOLUTION. A new era in Russian history dawned in 1917, when the Romanov dynasty, which had ruled the country for more than 3 centuries, was overthrown. Although the

Romanov regime had already been gravely undermined by World War I, the immediate spark which ignited the February Revolution was the shortage of bread in Petrograd, at that time the Russian capital. On 12 Mar. (27 Feb. by the old Russian calendar), in the midst of bread riots, Czar Nicholas II (1868-1918) was forced to abdicate. A Provisional

Government set up by the Duma (parliament) and headed by Prince Georgi Lvov (1861-1925) superseded the monarchy. Meanwhile, more radical revolutionaries organized a Soviet of Workers' and Soldiers' Deputies, modeled on a similar institution which sprang up in St. Petersburg during the Revolution of 1905. Other soviets followed. Thus in the aftermath of the February Revolution a system of dual power prevailed in Russia, and the soviets proclaimed many decrees which directly contradicted the policies of the Provisional Government.

Vladimir Ilich Ulyanov, known as Nikolai Lenin (1870-1924), was in exile in Switzerland when the February Revolution occurred. With German approval he returned to Russia secretly via Germany in a sealed train. On arrival he promulgated the "April Theses," which called for opposition to the "bourgeois" Provisional government and assumption of power by the soviets.

Meanwhile, the Provisional Government had failed to stabilize itself, and attempted to postpone most vital decisions until a Constituent Assembly could be convened. In July Alexander Kerensky (b. 1881), a member of the Social Revolutionary Party (SR), became head of the Provisional Government. Kerensky dealt severely with the Bolsheviks after they staged a large demonstration in the capital, and Lenin was forced to flee to Finland. An important turning point for the Provisional Government was the Kornilov mutiny, Aug. The specter of military dictatorship frightened many, and the Bolsheviks were able to claim most of the credit for preventing counter-revolution. The soviets made no move to seize power, and control over them gradually passed from the Mensheviks and SR's to the more radical Bolsheviks. By Sept. the soviets in Moscow and Petrograd (the name of St. Petersburg from 1917 to 1924, when it became Leningrad), were under Bolshevik control.

THE OCTOBER REVOLUTION. Although the Bolsheviks remained a minority in most soviets, Russia's military situation became desperate in the autumn and

peasant riots erupted throughout the country. In such an atmosphere Lenin was able to return from Finland and prepare an armed insurrection. His plan was opposed even by some of his intimate associates, notably Grigori Zinoviev (1883-1936) and Lev Kamenev (1883-1936), who argued that conditions in Russia were not yet ripe for a socialist revolution. These objections were voiced at a secret meeting of the Bolshevik Central Committee, 23 Oct., but Lenin overrode the protests. At this meeting the Bolshevik Party's first Political Bureau, its chief policy-making body, was selected. It consisted of Lenin; Lev Davydovich Bronstein, known as Leon Trotsky (1877-1940); Josif Vissarionovich Dzhugashvili, known as Joseph Stalin (1879-1953); Zinoviev; Kamenev; Grigori Sokolnikov (b. 1888); and Andrei Bubnov (1883-1940). The revolution began before dawn on 7 Nov. (25 Oct. by the old calendar), when military detachments loyal to the Bolsheviks seized key installations in Petrograd. In the late evening the Bolsheviks moved against the Provisional Government, whose headquarters were in the Winter Palace. The Bolsheviks simply entered the palace through a poorly guarded back door and arrested the government ministers. The change of government was virtually bloodless and resistance minimal.

CONGRESS OF SOVIETS. On 8 Nov. the 2nd Congress of Soviets convened and named a Council of People's Commissars with Lenin as chairman. (The terms "cabinet" and "prime minister" were rejected as bourgeois labels.) Trotsky was chosen foreign commissar and Stalin commissar of nationalities. The government was virtually a Bolshevik dictatorship, since the Bolsheviks refused to heed Menshevik and SR demands for a broad socialist regime, and provoked a walkout by these two groups. The Congress of Soviets also passed a Decree of Peace, proposing an end to World War I, "without annexations and indemnities," and a Decree on Land, which announced the abolition of private property in land and the transfer of private and church lands to special committees of the Soviets

of Peasant Deputies for distribution to the peasantry. The Congress' last act was the election of a new Central Executive Committee composed of Bolsheviks and leftist SR's, with the former in a majority.

1918-21

CONSTITUENT ASSEMBLY. After assuring himself that all soviets were under Bolshevik domination, Lenin turned to the Constituent Assembly, which convened, Jan. 1918, with an SR majority. He would have preferred the Assembly not to convene at all, but strong popular support for it forced his hand. He therefore allowed it to meet, but dispersed it by force with the aid of Bolshevik-led sailors. Thus the last political institution around which the opponents of Bolshevism might have rallied was destroyed. Lenin was now free to construct a "dictatorship of the proletariat," which meant in practice dictatorship by the Bolshevik (renamed Communist in 1918) Party.

BOLSHEVIK PROGRAM. "Peace! Land! Bread!" These were the slogans with which the Bolsheviks had sought popular support in the prerevolutionary period. Peace was secured through the Treaty of Brest-Litovsk with Germany, 3 Mar., 1918. As for the land slogan, many acres were distributed to the peasants, and private property in land was formally abolished. The new regime at first left the peasants undisturbed in the use of the land. Early economic measures in the cities included the inauguration of an 8-hour working day, the establishment of "workers' control" through workers' committees given the right to oversee production, the creation of a Supreme Economic Council to supervise the entire economy, the nationalization of banks, and, June 1918, the nationalization without compensation of all major industries.

CIVIL WAR. Fulfillment of the Bolshevik program was impeded by the outbreak of civil war between "Reds" and "Whites," which lasted more than 3 years and almost destroyed the Russian economy. The White armies began to form in the winter of 1917-18 in peripheral areas of the former Russian Empire and

planned thrusts toward the center to destroy the Bolshevik regime. The fact that they had to operate on the periphery placed the Whites at a severe military disadvantage, since their communications and supply lines were overstretched. Another major weakness was lack of unity among the Whites: all agreed on the immediate objective, to overthrow Bolshevik power, but their plans for a postwar government were vague and contradictory. Nor did the Whites possess a leader who could unify their movement on a nationwide basis. Their generals, indeed, lacked political experience. Still another White handicap was, ironically, allied intervention on their side. The 14 nations contributing troops or other assistance to the Whites failed to do enough to turn the tide of battle against the Reds, yet they provided the Bolsheviks with a valuable propaganda weapon by enabling them to pose as champions of the defense of the fatherland against foreign invaders. As a result thousands of Russians ignorant of or hostile to Communist ideology nevertheless fought on the Red side to preserve their country's territorial integrity. Trotsky, who became war commissar after Brest-Litovsk, created the victorious Red Army.

ESTABLISHMENT OF THE COMINTERN. While the civil war was in progress, Lenin sought to promote world Communist revolution. In Mar. 1919 he established the Comintern (Third International) as the vehicle for spreading revolutionary propaganda. In Apr. a Communist regime headed by Béla Kun seized power in Hungary, and soon afterward Bavaria came under Communist control. The Comintern played no significant role in these events, however, and both regimes were short-lived. Similarly, when Finnish Communists seized Helsinki in 1918, they were soon driven out by anti-Communist Finns. During 1920-21, Bolshevik troops brought the newly independent Transcaucasian republics of Georgia, Armenia, and Azerbaijan back under Russian control. The Red Army met more determined resistance in the free Baltic republics, however, and Latvia, Lithuania, and Estonia retained their

independence until World War II. During a brief war with Poland, 1920-21, the Red Army failed to install a Communist regime in Warsaw.

CONSOLIDATION OF THE COMMUNIST REGIME. On the home front Lenin's main problem was to preserve his infant regime, which he had barely begun to consolidate when the civil war erupted. In particular he had to ensure the flow of grain from the countryside to the urban workers and the soldiers in the Red Army. His solution was to inaugurate the system of War Communism. Its chief feature was forcible requisitioning of the peasants' crops by the state. After grain had been distributed in urban and war zone areas, the remainder was to be divided among the peasants. The peasants resisted War Communism, however, by hiding grain and by refusing to produce more than their own subsistence required. Numerous peasant uprisings occurred during the summer and autumn of 1918. Shortages became so extreme that money lost all value and most workers had to be paid in kind.

Lenin also took steps to subordinate Russian trade unions to Communist Party control. Moreover, the power of workers' committees was steadily curtailed by political appointees stationed in industrial enterprises. Meanwhile, opposition to Bolshevik policies rose to dangerous heights. In Mar. 1918 the representatives of the Left SR's, the Bolsheviks' junior partners in the coalition government, resigned in protest against the Treaty of Brest-Litovsk. At the Fifth Congress of Soviets, held in June of the same year, Left SR's denounced the practice of requisitioning grain. In July a Left SR named Jacob Blumkin killed the German ambassador, Count von Mirbach, in hopes of provoking renewed Russo-German hostilities. In Aug. a group of Left SR's inflicted on Lenin an injury from which he never fully recovered, and assassinated 2 other Communist leaders.

In reply the Communists unleashed a Red Terror under the aegis of the Cheka, the first of a series of names for the secret police. Lenin also used the atmosphere of civil war as a pretext for eliminating all

real or potential enemies of the Communist Party. Among the victims were the entire imperial family, who were executed in July 1918. The first Soviet constitution, promulgated in the same month, guaranteed civil rights, but Lenin was already tightening the noose around dissenters. Mensheviks and orthodox SR's were expelled from the soviets, June 1918, and similar action was taken against the Left SR's after the Mirbach assassination. Even within the Bolshevik ranks opposition to Lenin was sharply curtailed.

NEW ECONOMIC POLICY. Red victory in the civil war was purchased at the price of the complete collapse of the Russian economy, widespread famine, and severe tensions in every segment of society. A revolt by sailors at the Kronstadt naval base, Mar. 1921, symbolized the mounting opposition to Lenin's regime. The men of Kronstadt, a bulwark of Bolshevik support during the revolution, now called for "Soviets without Communists!" Even as Lenin quelled the revolt, he realized that it reflected rising discontent throughout Russia.

To relax tensions, stimulate production, and achieve some measure of popular support, Lenin inaugurated the New Economic Policy (NEP), 28 Apr., 1919. The government retained control over the "commanding heights" of industry, but it now allowed a limited degree of freedom to peasants and small businessmen. The NEP abandoned forced requisitioning of crops, the peasants being required to pay the state only a tax in kind based on a certain percentage of output and receiving permission to sell the remainder of their produce on the free market. The Communist theoretician, David B. Goldendach, known as David Riazanov (1870-1942), termed the NEP the "peasant Brest-Litovsk," since it involved a temporary retreat from Communist principles and the granting of concessions to the peasants (like those at Brest-Litovsk to the Germans) and gave Lenin's regime time to strengthen itself. While urging the peasants to increase production, Lenin had to offer them consumer goods for which to trade their surplus grain. He thus focused on reviv-

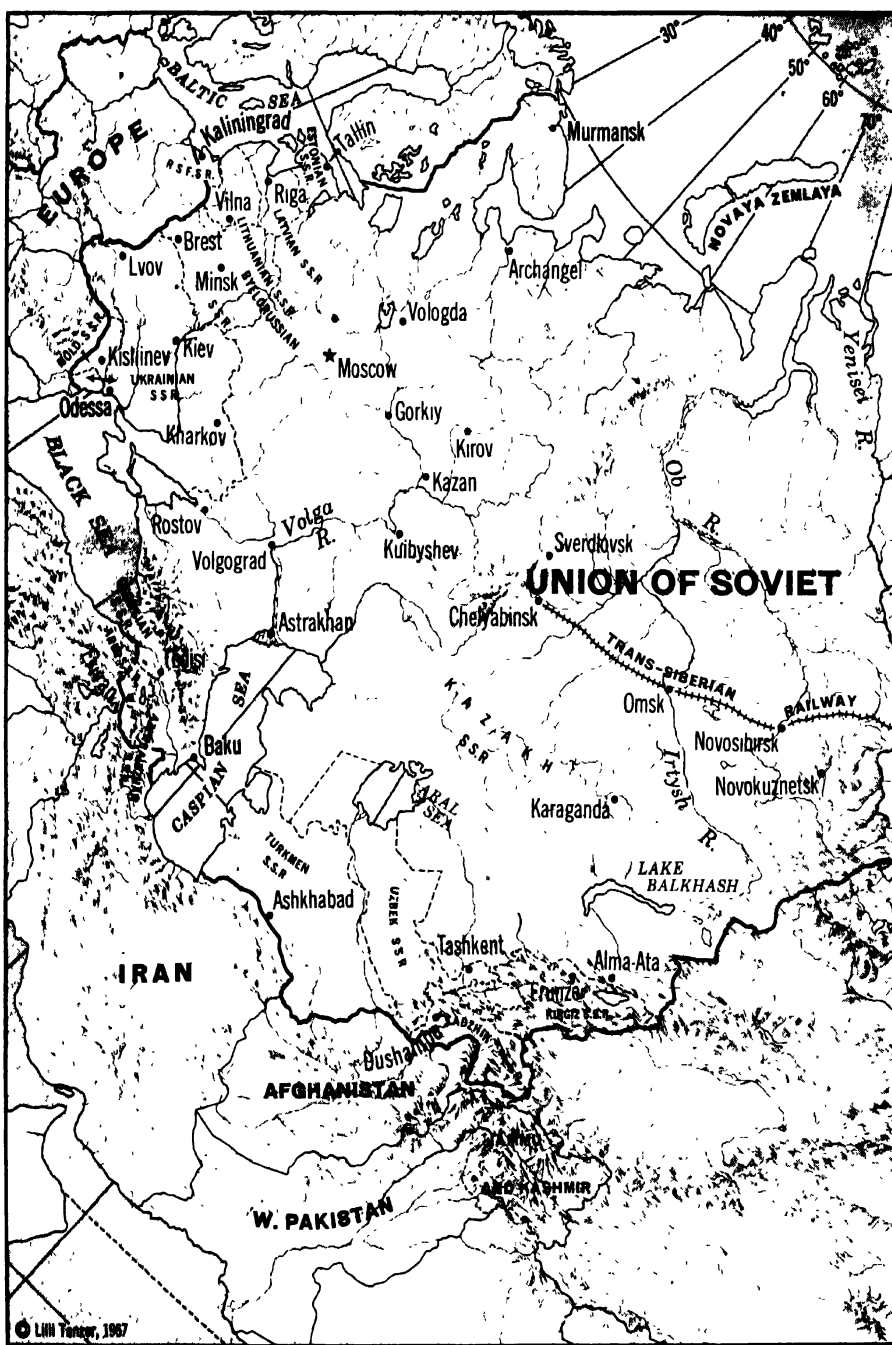

ing industry. In consequence, small businessmen in particular benefited from the NEP; they gained permission to hire labor and to trade with relative freedom in the goods produced. In its early phase, the NEP encouraged the development of small industries, whether private or co-operative enterprises. The government promised new industries freedom from nationalization, while it leased to former owners or producers' co-operatives many small enterprises which had been nationalized previously. The NEP also stimulated trade. A class of so-called "NEP men" arose, operating through their own private trading concerns or as agents of state trading organizations. Many Communists looked suspiciously on the NEP men as an incipient capitalist class. But on the whole the NEP proved successful, both in its economic aspect of stimulating industrial and agricultural production, regaining financial stability, and generally repairing the war damage to the economy and in its political aspect of improving the attitude of social groups, especially the peasants, toward the Communist regime. Nevertheless, the peasant problem continued to haunt Lenin and the Party; they ruled an overwhelmingly peasant country with an ideology which stressed industrialization and glorified the proletariat.

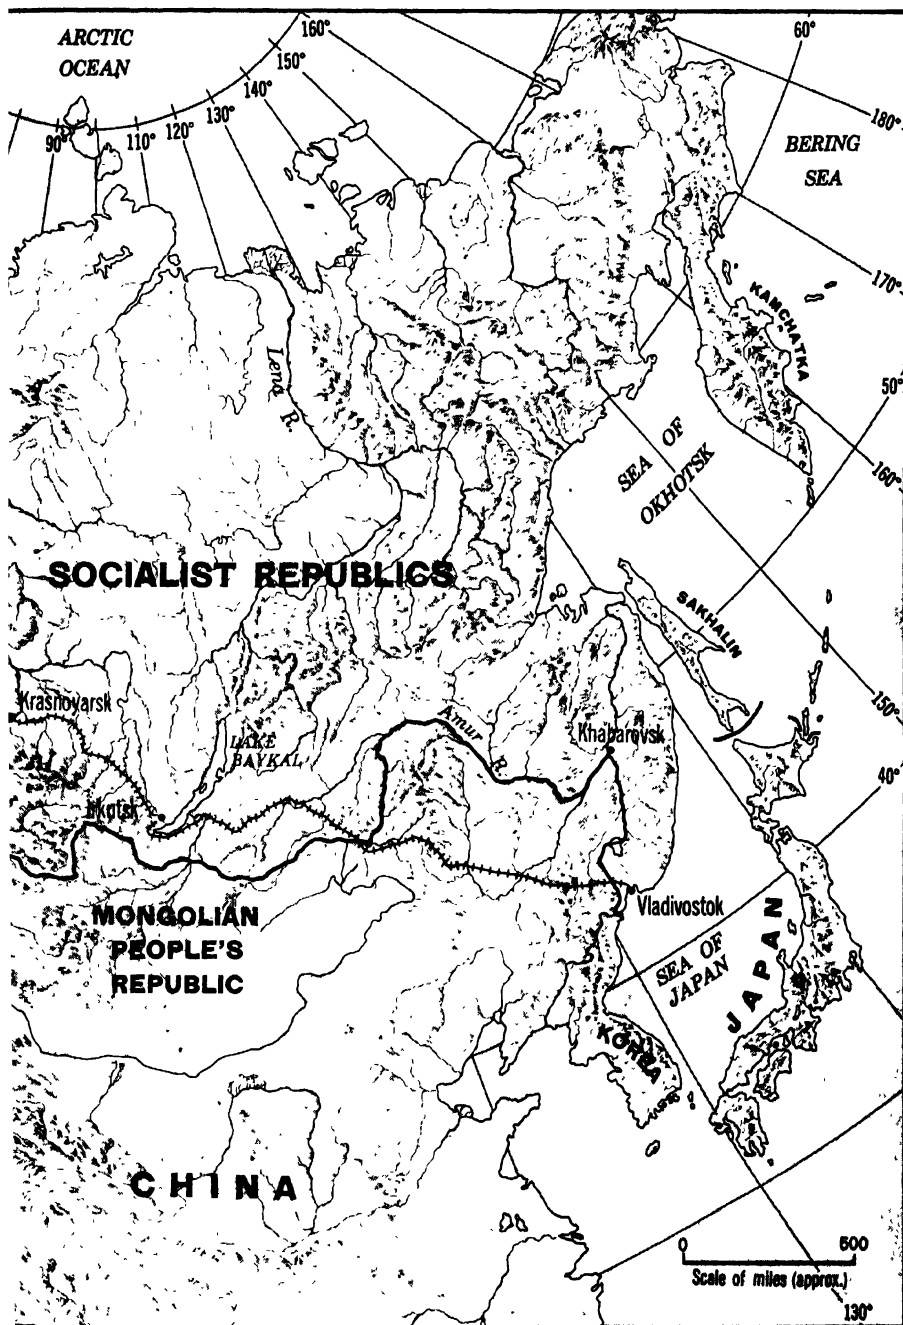

1922-28

CONSTITUTION OF THE SOVIET UNION. While Lenin was introducing greater economic freedom in Russia, he was at the same time sharply reducing political freedom and seeking to eliminate all obstacles to Communist domination. The Tenth Party Congress in 1921, which had ratified the NEP, also banned factionalism within the Party. Shortly after this congress Lenin purged about 1/3 of the Party's membership. Beginning in 1922, any form of Menshevik, SR, or other anti-Communist political activity was labeled counterrevolutionary and was ruthlessly eliminated. Also in 1922 the GPU replaced the Cheka and, unlike the latter, obtained the right to arrest Communist Party members. A new Soviet

constitution was promulgated in 1922, but did not differ significantly from the 1918 charter. Basic freedoms such as speech, press, and assembly were proclaimed, but only for the "working class." The constitution declared the separation of church and state, but guaranteed religious freedom as well as antireligious propaganda. Discrimination against national minorities was forbidden. The constitution formally instituted the Union of Soviet Socialist Republics (USSR). It contained a clause providing for the right of the constituent republics to secede, but this right existed only in theory. While the constitution described the USSR as a federation, in practice it became a union dominated by the Russian Republic. Surprisingly, the constitution did not even mention the Communist Party, which in fact was the fountainhead of power in the nation. The apparatus of the state was wholly subordinate to the parallel apparatus created by the Party at every level of administration.

FOREIGN POLICY. In part, the NEP symbolized a Soviet retreat in the face of the failure of Communist revolutions to materialize in the West. Unable to rely on economic assistance from western comrades, Lenin resorted during the NEP period to attempts to attract outside capital by granting concessions to foreign entrepreneurs. More significant, however, was his over-all policy of peaceful coexistence with capitalist nations. Lenin never ceased to believe in the inevitability of world revolution, which he held necessary for the building of socialism in Russia. After the collapse of Communist coups in Hungary and parts of Germany, however, he realized that world revolution would be delayed, and conceded that capitalism had entered a period of temporary "stabilization." He therefore took steps to end Russia's isolation. Already in 1920 the Russian government had signed peace treaties with Latvia, Lithuania, and Estonia; the following year witnessed treaties of friendship and commerce with Persia and Afghanistan. An Anglo-Russian commercial agreement negotiated in 1921 marked the beginning of a series of

trade accords with Britain, Italy, France, and Germany. In 1922 Russia was invited to participate in the European Economic Conference at Genoa, Apr.-May. Grigori Chicherin (1872-1936), then foreign commissar, met his German counterpart, Walther Rathenau, at Rapallo, where they signed a treaty, 16 Apr., canceling Russian reparations claims from World War I in return for cancellation of czarist debts to Germany. The Treaty of Rapallo provided the Soviet Union with much more than economic benefits. It initiated a rapport between the 2 outcasts of Europe, ended their isolation, and greatly enhanced their diplomatic bargaining position. The treaty also marked Soviet Russia's 1st major success in the use of balance-of-power tactics; the accord guaranteed that no united capitalist world could launch an attack on the USSR. Most important, the Rapallo agreement inaugurated a shift away from British and French predominance in Europe and toward a new balance of power on the Continent. A Russian-German neutrality pact, 24 Apr., 1926, marked another step away from Soviet isolation. Several western nations accorded the Soviet Union diplomatic recognition in the 1920's, though the U.S.A. withheld recognition until 1933.

While the Foreign Commissariat pursued "peaceful coexistence" with capitalist governments, the Comintern, the second arm of Soviet foreign policy, worked by both secret and public means to prepare the overthrow of the same governments. An important new departure in Comintern policy occurred at the organization's 3rd Congress in 1921, when Moscow authorized the formation of united fronts between Communists and other parties. The united-front policy was put into effect during the 1920's in Britain and China. In Britain, 1924, the Conservative Party published the "Zinoviev Letter," a message allegedly sent by Zinoviev, then president of the Comintern, urging British Communists to support the Labour government in order to overthrow it at some future, unspecified date. The letter contributed to that government's downfall; it had recently estab-

lished diplomatic relations with the USSR. The Communists then tried to seize power by means of the Anglo-Russian Trade Union Committee, but hopes of this faded when in 1927 British unionists dissolved the committee. In China the Comintern inaugurated a policy of collaboration with the Kuomintang in 1923. Four years later, however, Chiang Kai-shek ordered the liquidation of a large number of Chinese Communists and virtually annihilated their party. The sole Communist success abroad occurred in Outer Mongolia, where in 1924 Moscow established the Mongolian People's Republic.

RISE OF STALIN. Lenin alone possessed the stature and prestige to hold the competing factions in the Russian Communist Party in check. From the time he suffered his 1st stroke in 1922 a fierce struggle for the succession took place. He never designated a successor, but made clear his belief that Trotsky and Stalin were the party's 2 most capable leaders, at the same time deploring the bitter antagonism between them. The greatest achievement of Trotsky was the creation of the Red Army which won the civil war. Stalin, lacking Trotsky's intellectual and military prowess, made his mark by performing routine administrative chores scorned by more theoretically minded Bolshevik leaders. The most important of these chores involved liaison between the party's Politburo and the Orgburo, which assigned personnel to carry out Politburo directives. Stalin thus obtained a unique opportunity to staff the Party apparatus with his own supporters. He also held the post of commissar of nationalities, enabling him to exercise influence in the non-Russian republics, containing about $\frac{1}{2}$ of the population of the Soviet Union, where his party adversaries had little leverage. As Commissar of the Workers' and Peasants' Inspectorate (*Rabkrin*), he was also responsible for efforts to combat corruption and inefficiency in all branches of government. He thus had numerous pretexts for dismissing his personal enemies on grounds of corruption or poor performance. Finally, he was a member of the Politburo and General

Secretary of the Communist Party's Central Committee.* The latter post made him head of the Party's powerful Secretariat, its major administrative organ.

DEATH OF LENIN. After suffering a 2nd stroke in Dec. 1922, Lenin wrote his will, in which he criticized Stalin for overzealousness in the use of power. On 4 Jan., 1923, Lenin added a postscript to the will, urging the Central Committee to remove Stalin from the post of general secretary. Lenin later wrote to Stalin saying he was severing all personal relations with him. Lenin intended to culminate his assault on Stalin at the 12th Party Congress, scheduled for the spring of 1923; in Mar. of that year, however, he suffered a 3rd stroke, from which he never recovered although he clung to life until 21 Jan., 1924. Meanwhile, Lenin's will in its entirety was known only to his wife, Krupskaya, and his secretaries; knowledge of his personal break with Stalin was shared only by a few top Communist leaders.

STALIN-TROTSKY RIVALRY. With Lenin incapacitated, power passed into the hands of a triumvirate composed of Stalin; Zinoviev, then chairman of the Petrograd Soviet and president of the Comintern; and Kamenev, chairman of the Moscow Soviet and, like Zinoviev, a noted Communist theoretician. These 3 men, members of the Bolshevik Party from its birth in 1903, united against Trotsky, a relative newcomer to the party. Trotsky's brilliance, charismatic personality, and military achievements aroused jealousy among the triumvirate, which further added to their resentment against him. The party's 12th Congress in 1923 marked the triumvirate's victory over Trotsky and others, who denounced the "bureaucratic degeneration" of the party and vigorously opposed continuance of the NEP, which they saw as a virtual return to capitalism. Trotsky retained tremendous popularity in the Party, and especially in the Red Army he had created. At the time of Lenin's death, however, he was ill and away from Moscow. Stalin took advantage of this by posing as the sole defender of the Leninist tradition. Five days after Lenin died,

Stalin delivered a eulogy in which he vowed to fulfill Lenin's behests. Although Zinoviev, because of his presidency of the Comintern, enjoyed international prestige unmatched by Stalin, and although both Zinoviev and Kamenev were regarded as Communist theoreticians in a way that Stalin was not and were both Russians while Stalin was a Georgian, the latter skillfully outmaneuvered his fellow triumvirs. An important turning point came in May 1924, when Lenin's will was read aloud to the Party's Central Committee. Zinoviev pointed to the smooth operation of the triumvirate as evidence that Lenin's fears of Stalin as general secretary were groundless. More important, the decision was taken not to publish the will.

As the struggle for power developed from 1924 onward, it involved both personal rivalries and controversies over the best and fastest way to realize Communist domestic and foreign goals. The 1st aim of the triumvirate was to eliminate Trotsky as a contender for power. Trotsky proved peculiarly unable to resist pressures on him, as was shown when Zinoviev demanded that he retract his "errors" at the 13th Party Congress, May 1924. Trotsky succumbed, declaring that one could be right only within the Party, not against it. This cry of "my Party, right or wrong" rendered Trotsky morally vulnerable to his opponents, who justified their actions in the name of the Party. The controversy between Trotsky and the triumvirate then took a theoretical turn. In the fall of 1924 Trotsky published *Lessons of October*, a restatement of his theory of "permanent revolution" with its emphasis on the necessity of world revolution and aid from the international proletariat if socialism in Russia was to survive. *Lessons of October* also reopened an ugly wound between Trotsky and 2 of the triumvirs by recalling the opposition of Zinoviev and Kamenev to Lenin's decision to launch an insurrection in 1917. Stalin used the appearance of *Lessons of October* to reiterate once again that Trotsky was a relative newcomer to the Bolshevik ranks, thus implying that he was unqualified to assume Lenin's

mantle. More important, however, Stalin fashioned his own theoretical platform from which to challenge Trotsky. His *Problems of Leninism*, published in 1924, set out the theory of "socialism in one country," in direct contradiction to Trotsky's insistence that the preservation of socialism in the Soviet Union necessitated Communist revolutions in the West. Since the prospects of world revolution appeared dim at this time, Stalin's treatise generated a great psychological impact. Lenin and Trotsky both believed that construction of a socialist society could begin in the Soviet Union; what Stalin now asserted was that it could be successfully completed there as well, because of the country's natural wealth and the protection from outside interference offered by its great size. Stalin added that if the Soviet Union did not push on toward socialism despite the lack of Communist revolutions elsewhere, it would soon be unable to abandon the NEP and prevent a return to capitalism. Lenin himself had regarded the NEP as only a temporary expedient designed to spur recovery of the economy after World War I and the civil war. The question therefore arose of how and when to abandon this stage and build socialism and Communism.

ASCENDANCY OF STALIN. Meanwhile, the struggle between Trotsky and the triumvirate continued. In 1925 Trotsky was removed as war commissar. Shortly afterward, however, the Party's formal adoption of "socialism in one country" gave Stalin the influence needed to break up the triumvirate. Zinoviev and Kamenev had been too preoccupied with their struggle against Trotsky to notice the threat from Stalin's increasing power. Kamenev's attack on Stalin at the 14th Party Congress late in 1925 led to his demotion from full to candidate member of the Politburo. In the reconstituted Politburo which emerged from this Congress, 3 Stalin henchmen held full membership. After the Congress, Leningrad remained the only stronghold of resistance to Stalin, who therefore removed Zinoviev as Party leader there. Not until 1926, when the supporters of all 3 had

been dismissed from positions of authority, did Zinoviev and Kamenev make common cause with Trotsky against Stalin. Even then, although all 3 opposed the continuation of the NEP, their personal antagonisms made their alliance extremely unstable. By this time Stalin had found new allies in Alexei Rykov (1881-1938), Lenin's successor as chairman of the Council of People's Commissars, Michael Tomskey (1880-1936), leader of the trade unions; and Nikolai Bukharin (1888-1938), a former Left Communist who now headed the Rightists. While Zinoviev, Kamenev, and the other Leftists advocated the abandonment of the NEP, the Right argued that it was successful and should continue. Bukharin championed a "snail's pace" construction of socialism, and told the peasants, "enrich yourselves." Stalin was later to champion the program of Trotsky and the Left, but felt this could not be implemented until the state had accumulated enough power to push it through against the peasants' will. Meanwhile Stalin used his allies on the Right to discredit the Left on both domestic and international issues. In July 1926 he engineered Zinoviev's expulsion from the Politburo; 3 months later he removed Trotsky from the Politburo and Zinoviev from the presidency of the Comintern, which Bukharin inherited. In 1927 Stalin plotted the removal of Trotsky and Zinoviev from the Central Committee on charges of attempting to overthrow the government; when the 2 men led street demonstrations on the 10th Anniversary of the Bolshevik revolution later that year, they were expelled from the Communist Party. At the 15th Party Congress, Dec. 1927, Stalin was able to oust the opposition from the Party en masse. By this time the Soviet united-front policy had collapsed. For this setback Stalin used Trotsky as a scapegoat, although the latter had cautioned against Communist dependence on an alliance with the Chinese Nationalists. The situation in Europe was equally bleak; Britain had severed diplomatic relations with the USSR in the wake of sharp political conflicts over Soviet policy in the Middle East and China, France

followed with a *de facto* break in relations, and the Soviet minister in Warsaw was assassinated. Stalin shrewdly conjured up a "war scare" to rally the Party behind him, divert attention from his foreign-policy failures, and further consolidate his power. At the 15th Congress Zinoviev and Kamenev renounced their earlier views, and were permitted to re-enter the Party. Trotsky, however, refused to submit to his critics, and was exiled to Alma-Ata in Soviet Central Asia.

The way was now clear for Stalin to attack the Rightists. Having packed the Politburo with more of his henchmen at the Congress, he isolated Rykov, Tomsky, and Bukharin. He then launched a frontal assault on the concept of a "snail's pace" construction of socialism, calling instead for a rapid economic transformation and an end to the independence of the peasantry. Having made this *volte-face* in policy, he then proposed an alliance with the followers of Trotsky and Zinoviev, who had previously advocated the course he was now proposing. At the end of 1928 Stalin staged a test of strength with the Rightists; Bukharin lost the Comintern presidency and Tomsky the leadership of the trade unions. The following year Stalin expelled Bukharin from the Politburo. Tomsky and Rykov suffered the same fate in 1930, at which time Rykov was replaced as chairman of the Council of People's Commissars by Vyacheslav Mikhailovich Molotov (b. 1890).

Stalin now abandoned the myth of "collective leadership" and emerged as the unchallenged dictator of the Soviet Union. His victory in the succession struggle was based on several major factors: his skillful use of the party machinery, his ability to capitalize on the concept of Party loyalty instilled by Lenin, and his own shrewd sense of timing. Not until several years later, however, did he follow up the political liquidation of his opponents with their physical extermination. Trotsky, Stalin's prime rival, was deported from the Soviet Union in 1929, and ultimately enjoyed more years of freedom than did Stalin's foes who remained behind. During his

years of exile he edited the *Bulletin of the Opposition*, copies of which found their way to Moscow. Although he denounced "bureaucratic degeneration" in the Soviet Union, Trotsky remained convinced that attempts to overthrow Stalin would merely benefit the cause of counterrevolution. He retained a substantial body of adherents, who built up parties in many countries, and sought in vain to affiliate them in a 4th International. The Trotskyite schism plagued international Communism from that time onward. Trotsky himself moved to various places, but Stalin's hired assassins finally caught up with him in Mexico, where one of them killed him, 21 Aug., 1940, with an icepick.

THE SOVIET UNION UNDER STALIN 1928-34

NATURE OF THE STALINIST REGIME. By 1928 Stalin was the unchallenged master of the Soviet Union. He had defeated his Party opponents, both Left and Right. He had been able to silence all opposition in the secret police, army, and trade unions, and to bring these bodies more closely under the Party's, and his own, surveillance. The Cheka had been virtually independent of Party control, but the GPU (*Gosudarstvennoe Politicheskoe Upravlenie*), as the Cheka was renamed, was directly subordinated to the Commissariat of Interior. Trotsky's ouster as war commissar had been followed by the installation of Stalin's henchmen as political commissars and by the tightening of Party supervision over the military. Stalin had also destroyed the considerable independence enjoyed by trade unions during the NEP period, and transformed them into organs of state control over industrial workers.

1ST 5-YEAR PLAN. Having secured his power in the Party and government apparatus, Stalin launched the 1st 5-Year Plan, covering the period 1928-32. The aim of the plan, which signaled the end of the NEP and of compromise with the peasantry, was to industrialize rapidly,

and simultaneously to bring about a basic socioeconomic transformation by converting the entire urban and rural labor force into employees of state-controlled enterprises. Stalin presented his rationale for speed in 1931, when he declared: "We are 50 to 100 years behind the advanced countries. We must cover this distance in ten years . . . or they will crush us."

ENFORCED COLLECTIVIZATION.

The socioeconomic transformation was most profound in the countryside, where the independent peasant producers constituting the great bulk of the Soviet Union's population were herded into collective farms, there to become a landless agricultural proletariat with the duty of providing the lion's share of the capital needed for industrialization. Stalin sought to foment class war in the villages by calling on "poor peasants" to "liquidate the kulaks [richer peasants] as a class." In practice, government officials brought class war to the villages from without and, by defining "kulaks" in accordance with arbitrary criteria, attacked all peasants who opposed socialism, i.e., the great majority of the peasantry. Faced with peasant unwillingness to join collectives, the state imposed its will by force. Stalin thus not only adopted the basic domestic program of his defeated Left opponents but ignored Lenin's warning that a proletarian-peasant alliance was indispensable to Communism's survival in Russia. Stalin expected some resistance in the campaign against the peasants, but the extent of the defiance, in which peasants slaughtered their own livestock and burned crops rather than deliver them to the state, took him unawares. From 5 to 10 m. peasants died in the process of collectivization and in the resultant famine of 1932-33; millions more were conscripted into industry.

SOVIET TOTALITARIANISM. Despite the disastrous economic consequences of the collectivization drive, its political results were far-reaching. In fact, collectivization ushered in the real beginning of Soviet totalitarianism. A powerful state was the prerequisite for a socioeconomic revolution from above (i.e., against

the peasants rather from below, with their support), but this revolution, in turn, presupposed an authoritarian state to maintain the peasants in subjection. Such a system was required in the cities as well, where workers were assigned to jobs in state-owned enterprises, punished drastically for absenteeism or tardiness, deprived of collective bargaining through their trade unions, forced to engage in campaigns of "socialist emulation" to raise productivity still higher than the already inflated norms of the 5-year plans, and obliged, as were all social groups, to carry internal passports. The technique underlying the 5-year plans involved permanent intimidation of both the urban and the rural labor forces; such a tactic, coupled with the inefficient nature of Soviet planning and the substitution of political fanaticism for rational principles of management, undermined the success of the plans. In 1932, after 4¼ years had elapsed, the government announced that the 1st plan had been fulfilled, and 1933 witnessed the promulgation of the 2nd, covering the years 1933-37. The new plan was formally adopted at the 17th Party Congress in Jan. 1934.

By 1934, 99% of all industry was controlled by the state, and collective farms covered 90% of the country's arable land. The only private enterprise remaining in the Soviet Union was the sale of crops grown on the peasants' small garden plots. However, as a result of peasant resistance, collective farms (*kolkhozy*), in which peasants owned all land and farm implements in common and divided their profits, far outnumbered state farms (*soukhozy*), in which the state owned all land, equipment, and livestock, and hired the peasants as wage laborers. What has been called the "second revolution" or Russia's "Iron Age" involved much more far-reaching economic and political consequences than the Bolshevik Revolution of 1917. For the first time, the Soviet totalitarian structure extended into every corner of every citizen's life. Far from "withering away," as Marx and Lenin had predicted, the state had become stronger than ever. Stalin justified this development by a theory of "capitalist

encirclement," implying that the state would remain until Communists controlled the entire world.

FOREIGN POLICY. In 1927, a decade after the Bolshevik Revolution, Soviet foreign policy was at a low ebb. Comintern-sponsored coups and united fronts had failed, and Britain and France, then Europe's leading powers, had assumed a hostile stance toward Moscow. Stalin told the 1927 Party Congress that the era of "stabilization" of capitalism was ending and that the "imperialist" powers were plotting anew against the Soviet Union. The following year the 6th Comintern Congress adopted this interpretation by abandoning the concept of united fronts of Communists and other leftist groups and advocating an attack on all bourgeois political groups, including Social Democrats, who were labeled "Social Fascists." This policy reaped the most dire results in Germany, where the Communists not only assailed the Social Democratic policy of improving relations with the western powers but also aided Hitler's rise by refusing the pleas of many Social Democrats to make common cause against him. Hitler, once in power, repaid the favor by destroying the German Communist Party.

The Comintern's ineptitude stemmed not only from ideological rigidity—Stalin, professing that Nazism represented the highest stage of capitalism in Germany, claimed that it would soon be superseded by a Communist regime—but from Stalin's transformation of the International from a vehicle of world revolution to an instrument of Soviet foreign policy. At the 1928 Party Congress the preservation of the world's first Socialist state, the USSR, was proclaimed as the foremost duty of Communist parties everywhere. Stalin also purged and Russified the Comintern staff. The hard line imposed on the Comintern in 1928 found a certain parallel in Soviet foreign policy on the level of relationships with individual states. Moscow continued, as under Lenin, to regard Britain (held to be the strongest capitalist power) as the main enemy and to play the anti-Versailles powers against Britain and France in the European power balance. At the same

time, however, Stalin was forced by the Soviet Union's isolation and the internal difficulties accompanying the 1st 5-Year Plan to pursue a cautious foreign policy. He was particularly anxious to neutralize the countries on the Soviet Union's western borders to prevent their being used by the capitalist powers as a potential staging area for an invasion of Russia. This was the chief motive behind the so-called Litvinov Protocol, named for Foreign Commissar Maxim Litvinov (1876–1951), and signed on 9 Feb., 1929, by the Soviet Union, Poland, Rumania, the 3 Baltic republics, Turkey, Persia, and the Free City of Danzig. Continuing domestic troubles and anxiety over rising German nationalism also led the Soviet Union to conclude nonaggression treaties with Poland, the Baltic states, Finland, and even France.

Meanwhile Moscow, although the USSR was not a member of the League of Nations, participated in many League-sponsored committees seeking to reduce international tensions. The Soviet Union also sought wider diplomatic recognition. Anglo-Soviet relations were renewed in 1929. In 1933 the U.S.A. accorded recognition. Sino-Soviet ties, severed in 1929, were revived in 1932 as a response to Japanese aggression in Manchuria. Mounting anxiety over Nazism in Germany and militarism in Japan led the Soviet Union to join the League of Nations, 17 Sept., 1934, and to veer away from the Comintern hard line toward bourgeois governments. What became known as the Comintern's "Popular Front" policy received its first trial in France in 1934, though the policy was not officially inaugurated until the following year.

1934–39

THE GREAT PURGES. The extent to which Stalin had disposed of all opposition to his regime was revealed at the 17th Party Congress held in Jan. 1934. At this "Congress of Victors," ostensibly so named to celebrate the achievements of the 1st 5-Year Plan, Stalin declared that "there is nothing more to prove and, it

seems, no one to fight." On 1 Dec., 1934, however, Sergei M. Kirov (b. 1888), Zinoviev's successor as Leningrad Party chief, was assassinated. Stalin reasoned that since the assassin, Leonid V. Nikolaev, had had close ties with Zinoviev, the latter was "objectively" responsible. Beginning early in 1935, large numbers of real and alleged supporters of Zinoviev, Trotsky, and other "Leftists" were deported to Siberia. A more ominous development occurred in Aug. 1936, when 16 distinguished Old Bolsheviks, including Zinoviev and Kamenev, were placed on public trial, forced to fabricate confessions of their "errors," and executed. That same year N. I. Yezhov (1895-1938), the "bloodthirsty dwarf," became head of the NKVD, successor of the GPU, and the purges rolled to their peak. In Jan. 1937, 17 leading Communists were condemned to death at the trial of the so-called "Anti-Soviet Trotskyite Center." Marshall Mikhail Tukhachevsky (1893-1937), chief of the army general staff, together with most of the army's top generals, were tried and shot, June 1937. In Mar. 1938 the major leaders of the Right Opposition, including Bukharin and Rykov (Tomsky committed suicide), perished. Yezhov himself was executed after being replaced by Lavrenti P. Beria (1899-1953), Dec. 1938.

Beria's accession to leadership of the police signaled the end of the mass purges and show trials, although numerous arrests and exiles continued. The NKVD became, in fact, the Soviet Union's largest individual employer in the 1930's; perhaps as many as 10 m. persons toiled in its forced labor camps. The purge victims included Lenin's entire Politburo (Trotsky was tried *in absentia*) except Stalin himself, the whole Bolshevik Old Guard, 70% of the members and candidates of the Central Committee elected at the 1934 Congress, and the cream of the leadership of the army, economy, trade unions, and secret police. Reportedly, the police were empowered arbitrarily to arrest a certain percentage of the entire population of the Soviet Union; an estimated 8 m. people were thus affected.

The Great Purges fatally undermined

the degree of independent action still left to Soviet institutions, which now became pliant instruments of Stalin's will. Younger and presumably more reliable men, who had spent their formative years under the Stalinist system, replaced the purge victims in key posts. All owed their careers, and some their lives, to Stalin. The totalitarian state structure was now complete. Stalin ignored even his own Party in reaching decisions; 13 years elapsed between the 18th and 19th Party Congresses, held in 1939 and 1952 respectively, and during those years Stalin consulted the Central Committee and even the Politburo ever more infrequently. He had become the infallible *vozhd* (leader), and the "cult of personality" rolled into high gear.

CONSTITUTION OF 1936. In Nov. 1936 Stalin promulgated a new constitution. He explained that the Soviet Union had now completed the building of socialism ("from each according to his ability, to each according to his work," as opposed to Communism, "to each according to his need"); exploitation of man by man had ended (allegedly because there was no more private ownership of the means of production); and antagonistic classes had disappeared (what remained were "friendly classes"—workers and peasants—and a "stratum"—the intelligentsia). Unlike the old constitution, which provided for indirect suffrage weighted in favor of the proletariat, the new document pledged equal, secret, and direct voting. (In fact, secret balloting was regarded with the utmost suspicion, while direct voting meant merely the fruitless and risky option of crossing out the name of the Party nominee on the ballot paper.) The new constitution guaranteed freedom of speech, press, and assembly, and even permitted "street processions and demonstrations." In fact these rights were lacking throughout the Stalin era. Soviet "federalism" and the right of union republics to secede were emphasized in the constitution, but still had no meaning in reality. The most glaring contradiction between the constitution and the facts of Soviet life was that the document merely mentioned the Communist

Party, the true center of power in the country (though naming it "The guiding force"), and omitted any mention of Marxism-Leninism, the official state ideology.

POPULAR FRONT POLICY. At its 7th Congress in the summer of 1935 the Comintern formally adopted the Popular Front policy, which proclaimed the willingness of all Communist parties to cooperate with any political group, whether Socialist or Rightist, which struggled against Fascism. Soviet entry into the League of Nations, implying that Moscow would respect the norms of international behavior, particularly necessitated such a Comintern shift. The major applications of the Popular Front policy occurred in France, Spain, and China.

In the French elections of May 1936 the Communists contributed to the Socialist leader Léon Blum's victory, and supported his government while refusing to enter it. Later, however, the French Communist Party helped to undermine the government through strikes and other tactics. The Communists repeated the same pattern until 1938, by which time the Popular Front policy in France had run its course.

In Spain the Socialists and Communists, both on the Republican side in the Spanish Civil War, formed a Popular Front government with Communist participation, Sept. 1936. Moscow, however, ordered the NKVD to arrest and execute Trotskyites, anarchists, and many Socialists in Spain. Stalin also began sending Soviet aid to the Spanish Republicans; by the summer of 1938 the Communists exercised a strong influence over what was left of the republican regime. Shortly afterward the Soviet Union cut off its aid; unable to secure British or French aid for the Republicans, Stalin hesitated to overcommit Soviet resources and prestige unilaterally, and feared a confrontation with Nazi Germany, which supported Franco's forces. Nevertheless, Stalin managed to delay Franco's victory until he had reaped the maximum advantage from the Popular Front policy; moreover, the experience in warfare and political infiltration gained by Soviet agents in Spain

was to serve Stalin well in his Communization of Eastern Europe. On the other hand, Soviet intervention in Spain increased western distrust of Moscow.

A Popular Front appeared in China in 1937, when the Nationalists and Communists agreed to make common cause against the Japanese. The 2 groups cooperated sporadically over the next few years, but both took advantage of the united front to strengthen their respective positions. Since Communist-Nationalist collaboration heightened Chinese resistance to Japanese aggression, it served to protect the Soviet Union's eastern frontier.

INTERNATIONAL RELATIONS. The Popular Front policy gained Moscow little security, which Stalin was obliged to seek through conventional diplomacy. Once the Soviet Union had joined the League of Nations, it became a leading advocate of League action to maintain the peace. At the same time Stalin, ever fearful of Soviet isolation and hoping to divert world attention from the Great Purges, sought closer bilateral contacts with other European countries. In 1935, mutual assistance pacts were signed with France and Czechoslovakia. The latter pact obligated the Soviet Union to aid the Czechs only if France did likewise; this escape clause allowed Stalin to remain inactive after France and Britain had surrendered Czechoslovakia to Hitler. Soviet feelings of insecurity deepened in 1936, when Germany and Japan signed the Anti-Comintern Pact, 25 Nov., 1936. In 1937 the Soviet Union concluded a nonaggression treaty with the Chinese Nationalists, then engaged in a full-scale war with Japan. Soviet advisers poured into China, and limited Russian military aid to Chiang Kai-shek's forces continued until Germany invaded Russia in 1941. To some extent the Soviet Union used both bilateral pacts and the Popular Front policy, which had won Communism its greatest international influence up to that time, as diplomatic bargaining counters. As late as 1938, however, both the western democracies, which still believed appeasement of Hitler would work, and the Axis powers virtually ignored

the Soviet Union. Then, in the spring of 1939, both sides began to court Moscow, which had meanwhile grown disenchanted about collective security as a result of the Munich agreement and had decided to draw closer to Hitler.

NAZI-SOVIET PACT. During the spring and summer of 1939 the Russian government was simultaneously negotiating openly with the western powers and secretly with the Nazis. Although Stalin regarded both western and Axis coalitions as anathema and hoped they would mutually exhaust each other in war, he aimed to prevent either from attacking the Soviet Union and to secure the highest possible price for adhering to one or the other. Molotov's replacement of Litvinov as foreign commissar, May 1939, symbolized Soviet intentions, for Litvinov had become identified with the policy of collective security against Nazism. Molotov immediately insinuated that Britain and France were not sincere in their negotiations with the USSR and were encouraging Hitler to expand eastward. Not until 5 Aug. did the British and French dispatch a military mission to Moscow, however, and then by ship and

without providing it with written authorization to make political decisions. When talks finally began, 12 Aug., the Westerners proved unable and unwilling to meet Stalin's price for a pact—a free hand in the Baltic states and the right to send troops into Poland if Germany attacked. The Nazis, on the other hand, wanted an accord guaranteeing Soviet neutrality before they activated their planned invasion of Poland. On 23 Aug. Foreign Ministers Molotov and Ribbentrop signed the Nazi-Soviet Pact. Its public text was simply an agreement on nonaggression and neutrality; a secret protocol, however, divided Eastern Europe into "spheres of influence" by which the Soviet Union was to receive Finland, Estonia, Latvia, and Bessarabia. Furthermore, the Nazi-Soviet Pact was accompanied by a trade treaty and arrangements for a large-scale exchange of raw materials and arms. The pact, embodying the unusual provision that it was to take effect immediately, enabled Stalin to obtain temporary immunity against Nazi attack and to remain neutral in the 1st stage of the war, which he labeled an imperialistic conflict for the redivision of the world. (*Cont.* p. 540.)

The United States in Crisis and Recovery

EMERGENCE OF THE U.S. AS A WORLD POWER

1914-18

INTERVENTION IN HAITI. The U.S., holding large financial interests, intervened in strife-torn Haiti, 29 July, 1915. President Dartiguenave signed a treaty, 16 Sept., making Haiti a virtual U.S. protectorate. American troops left on 6 Aug., 1934.

BRYAN-CHAMORRO TREATY. 18 Feb., 1916. By this treaty the U.S. granted Nicaragua \$3 m. in return for exclusive rights to a canal route and naval base.

MEXICAN BORDER CAMPAIGN. Pancho Villa's marauders killed 18 Americans, 18 Jan., 1916, at Santa Ysabel, Mexico, and 17, 9 Mar., at Columbus,

N.M. President Wilson dispatched 15,000 men under Gen. John J. Pershing across the border to pursue Villa. The troops were withdrawn by 5 Feb., 1917. The U.S. recognized Carranza, who became president, 11 Mar.

INTERVENTION IN SANTO DOMINGO. Domestic difficulties in Santo Domingo further increased that country's national debt, and forced the Dominican president to resign, May 1916. The U.S. declared full military occupation, 29 Nov., and U.S. naval officers took over internal administration. The American marines withdrew, July 1924, when Gen. Horacio Vásquez became constitutional president.

WAR PREPAREDNESS. The war in Europe prompted individuals like Theo-

dore Roosevelt and organizations like the National Security League to demand military readiness. Wilson resisted until the *Lusitania* incident, 7 May, 1915. On 3 June, 1916, the National Defense Act was passed. It expanded the army and authorized a 450,000-man National Guard.

PRESIDENTIAL ELECTION. 7 Nov., 1916. The Republicans nominated Supreme Court Justice Charles E. Hughes (N.Y.) and Charles W. Fairbanks (Ind.). Despite Roosevelt's support of Hughes, Wilson and Marshall, campaigning on a peace platform, won a close election, 277-254. (For entry of U.S. into World War I, see p. 374.)

WAR LEGISLATION. The Liberty Loan Act, 24 Apr., 1917, authorized the public sale of war bonds and loans to the allies to buy food and war matériel. The Selective Service Act, 18 May, established a military draft for men between 21 and 30 (later 18 and 45); 2,810,296 men were called. The War Industries Board was established, 28 July, to maximize efficiency in the nation's war industries. The Lever Food and Fuel Control Act, 10 Aug., empowered the President to control the production and distribution of food and fuel necessary for the war. An Act of 6 Oct. prohibited trading with the enemy. On 26 Dec. Wilson placed the railroads under emergency federal control with Secretary of the Treasury William Gibbs McAdoo (1863-1941) as administrator. The Sedition Act, 16 May, 1918, forbade statements detrimental to the war effort or attacking the American form of government.

1919-32

REJECTION OF LEAGUE OF NATIONS MEMBERSHIP. Wilson submitted to the Paris Peace Conference, 14 Feb., 1919, a draft covenant for a League of Nations, and then returned to the U.S., where 39 Republicans had signed Henry Cabot Lodge's senatorial "round robin" denouncing the League's proposed form. On his return to Europe, Mar.-Apr., Wilson agreed to certain compromises regarding reparations, the wording of the covenant, etc. After the signing of the

Treaty of Versailles, 28 June, with its accompanying covenant, opposition to ratification broke out in the U.S. Senate. Wilsonian Democrats supported immediate ratification; Lodge's moderates had reservations; "irreconcilables" led by Hiram Johnson and William E. Borah opposed it. Wilson was adamant. Democrats and moderate Republicans defeated the Foreign Relations Committee's "irreconcilable" amendments, and Democrats and irreconcilables rejected Lodge's reservations, 19 Nov. The League Covenant was rejected and the U.S. did not become a member of the League.

WASHINGTON ARMAMENT CONFERENCE. 12 Nov., 1921-6 Feb., 1922. The conference reduced naval armaments and considered East Asian problems. Five powers agreed not to build capital ships for 10 years and to apportion capital tonnage among themselves at the ratio of 5 (U.S.) : 5 (Britain) : 3 (Japan) : 1.67 (France) : 1.67 (Italy). They also limited submarine warfare and outlawed asphyxiating gases. Nine powers reaffirmed the Chinese Open Door policy.

INTERALLIED WAR DEBTS. Wilson refused British and French arguments in favor of cancellation of interallied war debts. Congress established the World War Foreign Debt Commission, 9 Feb., 1922, which negotiated agreements based on the debtor nations' ability to pay. The European financial situation led the U.S. to reduce drastically the debt's principal, 1925-26, but U.S. insistence on partial payment generated anti-American feeling abroad and isolationism at home.

DAWES PLAN. 9 Apr., 1924. President Calvin Coolidge (1872-1933) appointed, 15 Dec., 1923, a commission under Charles G. Dawes to investigate why Germany had defaulted on her reparations payments. The resulting Dawes Plan advocated reorganizing the Reichsbank under allied supervision and a schedule of graduated reparations payments.

POLICY TOWARD THE LEAGUE OF NATIONS. The U.S., though not a member, was represented at numerous League gatherings, including the International Opium Conference, 1924. Five U.S.

officials represented American interests at Geneva.

WORLD COURT. Despite Senate approval, 27 Jan., 1926, U.S. reservations prevented her from joining the Court of International Justice proposed in the League Covenant. Elihu Root (1845-1937) formulated a plan, 1929, which prohibited the Court from rendering advisory opinions, without American consent, on matters involving U.S. interests. The Senate did not act, and later, 1935, rejected membership.

KELLOGG-BRIAND PACT. 27 Aug., 1928. The French foreign minister, Aristide Briand, submitted a bilateral treaty, 20 June, 1927, outlawing war. Secretary of State Frank B. Kellogg made the agreement multinational, and 14 nations signed the Kellogg-Briand Pact.

RELATIONS WITH NICARAGUA. Henry L. Stimson (1867-1950) negotiated, 1927, an agreement between warring Liberal and Conservative factions in Nicaragua, and Liberal José Moncado was elected president, 4 Nov., 1928, at a U.S.-supervised election. American marines, dispatched in 1926, withdrew in 1928.

YOUNG PLAN. A plan put forward by Owen D. Young, 1929, reduced German reparations to \$8,032,500,000, payable over 58½ years at 5½% interest. The Lausanne Conference canceled, 16 June, 1932, over 90% of this obligation.

LONDON NAVAL CONFERENCE. 21 Jan.-22 Apr., 1930. The U.S., Britain, and Japan agreed to limit cruiser construction at the ratio of 10-10-6. Neither France nor Italy signed the more important provisions of the treaty, which was to expire on 31 Dec., 1936.

HOOVER DEBT MORATORIUM. 20 June, 1931. The desperate world economic situation prompted acceptance of President Hoover's 1-year moratorium on both interallied debts and reparations.

STIMSON DOCTRINE. Arising out of Japan's attack on Manchuria, 18 Sept., 1931, the Stimson Doctrine declared, 7 Jan., 1932, U.S. opposition to any agreement impairing China's sovereignty or integrity. After Japan's attack on Shanghai, 29 Jan., the League endorsed the Stimson Doctrine.

1933-39

"GOOD NEIGHBOR POLICY." President Franklin D. Roosevelt pledged a "Good Neighbor policy" toward Latin America, 4 Mar., 1933, and rejected, 28 Dec., the idea of armed intervention.

RECOGNITION OF SOVIET RUSSIA. 16 Nov., 1933. Notes were formally exchanged as the USSR agreed not to interfere in U.S. domestic affairs and to extend religious freedom to Americans in Russia.

HEMISPHERIC SOLIDARITY. Various Pan-American conferences met in response to the threat of European Fascism: the Montevideo Conference outlawed, 26 Dec., 1933, outside interference in internal affairs, and the Lima Conference's "Declaration of Lima" expressed, 24 Dec., 1938, the Americas' determination to resist foreign intervention.

COLONIAL POLICY. The Philippine legislature accepted the Tydings-McDuffie Act, which provided, 24 Mar., 1934, for eventual Philippine independence and promised removal of U.S. military posts. Roosevelt approved a Philippine constitution, 8 Feb., 1935, and Manuel Quezon (1878-1944) became president of the Philippines, 17 Sept. An Organic Act, 22 Jan., 1936, established a territorial legislature in the Virgin Islands.

DECLINE OF DOLLAR DIPLOMACY. Ambassador Sumner Welles (1892-1962) negotiated a treaty, 29 May, 1934, with conservative Carlos Mendieta's Cuban government abrogating the Platt Amendment. Roosevelt allowed, 17 Oct., 1933, Panama more equitable commercial rights in the Canal Zone (ratified 1939), and withdrew U.S. troops from Haiti, 1934.

NEUTRALITY ACTS. As Europe moved toward war, Americans became increasingly isolationist. The Neutrality Act of 1935 authorized a temporary embargo on arms shipments to all belligerents. The 1936 Act outlawed loans or credits to belligerents. Neutrality Acts in 1937 forbade munitions shipments to either side in the Spanish Civil War, empowered the President to list other

commodities to be paid for on delivery, and made travel on belligerents' ships illegal.

RELATIONS WITH JAPAN. The Japanese sank, 12 Dec., 1937, the U.S. river gunboat *Panay* in China, but quickly apologized, 14 Dec. However, they rejected, 18 Nov., 1938, the Open Door policy.

MEXICAN EXPROPRIATION CONTROVERSY. President Lázaro Cárdenas nationalized most of the properties of American oil companies operating in Mexico, 18 Mar., 1938. Secretary of State Cordell Hull (1871-1955) insisted that fair compensation was due, and the governments eventually agreed that Mexico should pay American claims in return for financial aid.

RELATIONS WITH EUROPE. The British prime minister, Neville Chamberlain, rejected Roosevelt's proposal of 11 Jan., 1938 for a world conference to reduce armaments. Hitler denied hostile intentions when Roosevelt asked, 15 Apr., 1939, Germany and Italy to pledge themselves not to attack 31 specified European and Middle Eastern nations.

DOMESTIC ISSUES

1919

PROHIBITION. The 18th Amendment to the Constitution, prohibiting the manufacture and sale of alcoholic beverages, and submitted for ratification, 18 Dec., 1917, was ratified on 29 Jan., 1919. The National Prohibition Enforcement (Volstead) Act, 28 Oct., 1919, passed over Wilson's veto, defined any beverage with more than half of 1% of alcohol as an intoxicant.

1920

ECONOMIC LEGISLATION. The Esch-Cummins (Transportation) Act, 28 Feb., returned the railroads to private control, strengthened the I.C.C., and established a Railroad Labor Board. The Jones (Merchant Marine) Act, 5 June, ended war-time shipping legislation. The Water

Power Act, 10 June, established a Federal Power Commission empowered to authorize construction to improve navigation and develop power resources.

• **WOMEN'S VOTE.** The 19th Amendment to the Constitution, giving the vote to women, was ratified, 26 Aug.

"RED RAIDS." The success of Russia's Bolshevik Revolution prompted mass arrests and deportations of political and labor agitators by A. Mitchell Palmer's Justice Department.

PRESIDENTIAL ELECTION. 2 Nov. The Republicans nominated Sen. Warren G. Harding (Ohio) and Gov. Calvin Coolidge (Mass.), attacked the proposed League of Nations, and promised a "return to normalcy." The Democrats chose Gov. James M. Cox (Ohio) and Franklin D. Roosevelt (N.Y.), and supported the League. Harding won, 404-127.

1921

ECONOMIC RECESSION. A recession, bringing unemployment to 4,750,000 persons, was caused by tight credit, a glutted domestic market, and a decline in exports. Agriculture began a downward spiral which lasted through the depression.

BUDGET AND ACCOUNTING ACT. 10 June. This act created the Bureau of the Budget. The President was instructed to report annually to Congress on the government's fiscal status.

PACKERS AND STOCKYARDS ACT. 15 Aug. Unfair and monopolistic practices in the livestock, poultry, and dairy industries were prohibited.

1922-23

KU KLUX KLAN. The K.K.K., a fundamentalist, racist, and nativist organization, was revived in 1915 and grew in membership to 5 m. by 1922. Newspaper revelations, 1923, of its vicious tactics and the conviction of Indiana Grand Dragon David C. Stephenson for murder, 1925, caused its decline.

ACCESSION OF COOLIDGE. When Harding died, 2 Aug., 1923, of embolism,

Calvin C. Coolidge (1872-1933) became President. Coolidge's annual message to Congress, 6 Dec., advocated government economy and aid to business.

1924

HARDING ADMINISTRATION SCANDALS. Several departments of government were shaken by exposures of corruption in Harding's administration. Interior Secretary Albert B. Fall was jailed after Sen. Thomas J. Walsh's (Mont.) committee discovered that Fall had secretly leased naval oil reserve lands at Teapot Dome, Wyo., and Elk Hills, Calif., to oil operators Harry F. Sinclair and Edward L. Doheny. Attorney General Harry M. Daugherty resigned after revelations that he had received money from prohibition legislation violators.

SOLDIERS' BONUS ACT. 19 May. The World War Adjusted Compensation (Soldiers' Bonus) Act, passed over Coolidge's veto, provided 20-year endowment policies to veterans below the rank of major.

PRESIDENTIAL ELECTION. 4 Nov. Republicans nominated Coolidge and Gen. Charles G. Dawes (Ill.) and endorsed the high Fordney-McCumber Tariff. Democrats, split between the supporters of William G. McAdoo (Tenn.) and Alfred E. Smith (N.Y.), nominated John W. Davis (W. Va.) and Gov. Charles W. Bryan (Neb.), and advocated a competitive tariff. A farmer-labor Progressive Party chose Sen. Robert M. La Follette (Wis.) and Sen. Burton K. Wheeler (Mont.). Coolidge (382) defeated Davis (136) and La Follette (13)

1925-29

SACCO-VANZETTI CASE. Italian anarchists Nicola Sacco and Bartolomeo Vanzetti were executed, 23 Aug., 1927, for 2 murders committed in 1920. Liberals claimed their Massachusetts trial was prejudiced, but a Massachusetts commission sustained the verdict, 27 July, 1927.

PRESIDENTIAL ELECTION. 6 Nov., 1928. Republicans nominated Commerce

Secretary Herbert Hoover (Calif.) and Sen. Charles Curtis (Kan.), and supported prohibition and the protective tariff. Democrats chose Gov. Alfred E. Smith (N.Y.) and Sen. Joseph T. Robinson (Ark.), and supported farm relief and collective bargaining for labor. Hoover (444) defeated Smith (87), whose Roman Catholicism and anti-prohibition views cost him votes.

EXPORT DEBENTURE PLAN. This plan, approved in 1929, provided for export bounties on certain agricultural commodities to be paid in debentures receivable in payment for import duties. Senate support collapsed when Hoover announced he would veto the measure.

AGRICULTURAL MARKETING ACT. 15 June, 1929. This act created a Federal Farm Board to promote the marketing of farm commodities through agricultural co-operatives and price stabilization corporations.

PANIC OF 1929. The stock market collapse of 1929 ended a period of unparalleled U.S. prosperity and touched off a worldwide depression.

1930-31

HOOVER RELIEF POLICY. Opposing direct federal relief to alleviate the depression, Hoover proposed federally aided local public-works projects to help the unemployed.

WICKERSHAM REPORT. 19 Jan., 1931. George W. Wickersham's Law Observance and Enforcement Commission advocated revision of the unpopular Prohibition Amendment. Hoover opposed repeal, 20 Jan.

VETERANS' BONUS. Over Hoover's veto, Congress authorized, 27 Feb., 1931, loans of up to 50% of veterans' bonuses.

1932

RECONSTRUCTION FINANCE CORPORATION. The R.F.C. was established, 2 Feb., to revive the economy by extending credit to banks, life insurance companies, building and loan societies, railroads, and farm mortgage associations.

GLASS-STEAGALL ACT. 27 Feb. An expansion of credit was encouraged by the allocation of \$750 m. in government gold for business needs.

RELIEF AND CONSTRUCTION ACT. 21 July. The R.F.C. received authorization to lend \$300 m. to states unable to finance economic relief themselves.

FEDERAL HOME LOAN BANK ACT. 22 July. Discount banks for home mortgages were established. The aims were to curtail foreclosures and encourage construction.

"BONUS ARMY." 28-29 July. In June 17,000 veterans camped around Washington to demand cash payment of their bonuses. Gen. Douglas MacArthur commanded troops who forcibly removed 2,000 veterans who had remained through July.

PRESIDENTIAL ELECTION. 8 Nov. The Republicans renominated Hoover and Curtis. The Democrats nominated Gov. Franklin Delano Roosevelt (1882-1945) (N.Y.) and John Nance Garner (Tex.). Both parties advocated cuts in government spending and a balanced budget, but Roosevelt pledged a "New Deal" for Americans and help for the "forgotten man at the bottom of the economic pyramid." Hoover attacked as radicalism ideas for government economic regulation proposed by Roosevelt's "Brains Trust," which included Rexford G. Tugwell and Adolph A. Berle, Jr. Roosevelt (472 electoral votes, 42 states) defeated Hoover (59), and the Democrats took both houses of Congress by substantial margins.

1933

THE NEW DEAL. Between Roosevelt's election and his inauguration the economic crisis became desperate. By 4 Mar. almost every state had closed its banks. On 5 Mar. Roosevelt called a special session of Congress for 9 Mar., and declared a bank holiday until then. Almost at once 75% of the Federal Reserve System banks reopened and stock prices began to rise. The "Hundred Days"

session of Congress, 9 Mar.-16 June, produced the following relief and recovery measures:

9 Mar. An Emergency Banking Relief Act approved Roosevelt's emergency actions, enlarged his control of monetary policy, and authorized the Treasury to call in all gold.

20 Mar. An Economy Act, to balance the budget, reduced government salaries and veterans' benefits.

22 Mar. The Beer-Wine Revenue Act legalized and taxed beverages containing 3.2% or more of alcohol.

31 Mar. The Civilian Conservation Corps Reforestation Relief Act provided work for 250,000 young men developing the nation's natural resources.

19 Apr. The U.S. abandoned the gold standard. Stock and commodity prices rose.

12 May. A Federal Emergency Relief Act, administered by Harry L. Hopkins (1890-1946), authorized outright grants to local governments for relief purposes.

12 May. The Agricultural Adjustment Act (AAA) sought to restore prosperity by establishing parity prices for basic commodities based on farmers' 1909-14 purchasing power. It also authorized government subsidies for farmers who voluntarily limited production, and established the Agricultural Adjustment Administration.

18 May. Sen. George W. Norris (Neb.) proposed that the government reopen its First World War power plant at Muscle Shoals, Ala., to service inhabitants of the Tennessee River Valley. Hoover and Coolidge had vetoed the measure, but Roosevelt established the Tennessee Valley Authority (TVA) to sell electricity and fertilizer and develop the area, and serve as a "yardstick" to judge fair power rates.

27 May. A Federal Security Act required that prospective purchasers receive full information on securities issues.

13 June. A Home Owners Refinancing Act sought to save other than farm residences from repossession by refinancing mortgages through the Home Owners Loan Corporation (HOLC).

16 June. The Glass-Steagall (Banking) Act established the Federal Deposit Insurance Corporation (FDIC) to safeguard bank deposits under \$5,000.

16 June. The Farm Credit Act provided low-interest, long-term mortgage refinancing by extending short-term production and marketing credits.

16 June. The National Industrial Recovery Act (NIRA) authorized the President to prescribe industrial fair-trade codes, exempt from antitrust legislation, in order to stimulate business. The act guaranteed labor's right to collective bargaining, and established Harold L. Ickes' Public Works Administration to promote recovery through construction programs. The Supreme Court (*Schechter v. U.S.*, 1935) declared the National Recovery Administration unconstitutional.

LATER NEW DEAL LEGISLATION.

18 Oct. The Commodity Credit Corporation attempted to raise farm prices by extending loans to enable farmers to retain their crops.

8 Nov.-Mar., 1934. The Civil Works Administration (CWA) put 4 m. jobless to work on government projects.

5 Dec. The 21st Amendment to the Constitution repealed the 18th (Prohibition) Amendment.

1934

30 Jan. The Gold Reserve Act enabled the government to control dollar devaluation by empowering the President to set the value of the dollar in relation to its gold content.

2 Feb. The Export-Import Bank encouraged overseas commerce by extending short- and long-term loans to American exporters.

15 Feb. The Civil Works Emergency Relief Act appropriated \$950 m. for civil works and direct relief in fiscal 1935.

28 Mar. Independent Offices Appropriations Act. Congress overrode Roosevelt's veto to restore the expenditures reduced by the 1933 Economy Act.

7 Apr. The Jones-Connally Act and the Jones-Costigan Sugar Act placed additional crops under the AAA.

21 Apr. The Cotton Control (Bankhead) Act provided for compulsory limitation of the cotton crop.

6 June. The Securities Exchange Act created the Securities and Exchange Commission to license stock exchanges and regulate trading in securities.

7 June. A Corporation Bankruptcy Act enabled corporations to reorganize if $\frac{2}{3}$ of their creditors agreed.

19 June. The Communications Act established the Federal Communications Commission to regulate interstate and foreign telegraph, cable, and radio communications.

19 June. The Silver Purchase Act, designed to please farm and silver interests, authorized an increase in the Treasury's silver holdings until they reached $\frac{1}{3}$ of the value of its gold stocks.

28 June. A Federal Farm Bankruptcy Act (Frazier-Lemke Bankruptcy Act), later declared unconstitutional, 1935, enabled farmers to secure credit extensions.

28 June. The National Housing Act established a Federal Housing Authority (FHA) to encourage home construction.

28 June. The Tobacco Control Act imposed compulsory crop limitations in the tobacco industry.

1935

2ND NEW DEAL. On 4 Jan. a 2nd New Deal, containing social-reform legislation, was promised by Roosevelt.

8 Apr. The Emergency Relief Appropriation Act, relegating direct relief to the states, established Harry L. Hopkins' Works Progress (later "Projects") Administration (WPA) to employ the jobless in a national works program. By 1943 the WPA had employed 8,500,000 individuals in manual labor and the arts.

27 Apr. A Soil Conservation Act established the Soil Conservation Service.

1 May. The Resettlement Administration (RA), under Rexford G. Tugwell, conducted conservation projects and moved poor laborers and farmers to better housing, sometimes in government-built "greenbelt towns."

11 May. The Rural Electrification Ad-

ministration (REA), intended to bring electricity to isolated rural areas, was founded.

22 May. The Patman Bonus Bill, authorizing cash payment of World War I bonuses, was vetoed as inflationary.

7 June. A National Resources Committee was created to plan the development of America's natural resources.

26 June. The National Youth Administration (NYA), under Aubrey Williams, provided part-time employment for needy school, college, and graduate students.

5 July. The National Labor Relations Act (Wagner-Connery Act) created a National Labor Relations Board (NLRB) and guaranteed workers' rights to organize and bargain collectively.

OPPOSITION TO THE NEW DEAL. An anti-New Deal coalition developed in 1934-35. Business interests established the Liberty League. Dr. Francis E. Townsend's Old Age Revolving Pension Plan, Sen. Huey Long's (La.) and Rev. Gerald L. K. Smith's Share-Our-Wealth program, and Rev. Charles E. Coughlin's National Union for Social Justice also opposed Roosevelt's policies.

SOCIAL SECURITY ACT. 14 Aug. This act established a federal-state system of unemployment insurance financed by a payroll tax, old-age and survivors' insurance financed by a tax on employers and employees, and appropriations to help states pay their own old-age pensions and help the destitute.

BANKING ACT OF 1935. 23 Aug. The ex-officio members were removed from the new 7-man Board of Governors of the Federal Reserve System.

PUBLIC UTILITY HOLDING COMPANY ACT (WHEELER-RAYBURN ACT). 28 Aug. Gas and electricity companies were placed under federal regulation and holding companies had to justify their existence or dissolve.

WAGNER-CROSSER ACT. 29 Aug. Retirement pensions were provided for railroad employees.

GUFFEY-SNYDER BITUMINOUS COAL STABILIZATION ACT. 30 Aug. This act, known as the "little NRA," applied NRA-type codes to the coal indus-

try. It was later, 1936, declared unconstitutional.

REVENUE ACT (WEALTH TAX ACT). 30 Aug. This act increased the tax rate on incomes over \$50,000, corporate earnings over \$50,000, estates, and gifts.

1936

UNCONSTITUTIONALITY OF THE AAA. On 6 Jan. the AAA was struck down by the Supreme Court.

ADJUSTED COMPENSATION ACT. 24 Jan. This act authorized, over Roosevelt's veto, immediate cash payment of veterans' bonuses.

SOIL CONSERVATION AND DOMESTIC ALLOTMENT ACT. 29 Feb. This act replaced the AAA by granting benefit payments to farmers who conserved soil by restricting production.

REVENUE ACT. 22 June. Among other provisions the act levied an undistributed profits tax on corporate incomes.

MERCHANT MARINE ACT. 26 June. Government subsidies were authorized to develop the U.S. merchant marine.

PRESIDENTIAL ELECTION. 3 Nov. Republicans nominated Gov. Alfred M. Landon (Kan.) and Col. Frank Knox (Ill.); they condemned the New Deal and claimed regulated monopoly had replaced free enterprise, but did not predict repeal of Roosevelt's legislation. Fr. Coughlin's supporters endorsed Republican Representative William Lemke (N.D.) and Thomas C. O'Brien (Mass.) for the Union Party. Democrats renominated Roosevelt and Garner. Roosevelt attacked the "economic royalists" who opposed his policies and won a smashing victory, receiving 27,751,612 popular and 523 electoral votes (46 states) to Landon's 16,681,913 and 8.

1937

SUPREME COURT FIGHT. 5 Feb.-22 July. The Supreme Court's frequent invalidation of New Deal legislation prompted Roosevelt to suggest increasing its membership to 15 if justices refused to retire at age 70. Opponents attacked

F.D.R.'s attempt to "pack" the Court, and some New Dealers like Sen. Wheeler (Mqnt.) supported them. Chief Justice Charles E. Hughes' denunciation, 21 Mar., of Roosevelt's claim that more justices were needed to handle the case load and the Court's decisions sustaining New Deal measures, including the Social Security and Wagner Labor Relations Acts, doomed the bill, which had irreparably split Democratic ranks, to languish in committee. Roosevelt appointed 7 justices during the next 4 years through normal procedures.

GUFFEY-VINSON BITUMINOUS COAL ACT. 26 Apr. By this measure the unconstitutional Guffey-Snyder Act was re-enacted, except for its wages-and-hours clause.

BANKHEAD-JONES FARM TENANT ACT. 22 July. Forty-year, low-interest loans were authorized to enable farm tenant laborers and sharecroppers to buy farms.

MILLER-TYDINGS ENABLING ACT. 18 Aug. This act legalized contracts to maintain the resale price of branded nationally advertised products traded in interstate commerce.

NATIONAL HOUSING (WAGNER-STEAGALL) ACT. 1 Sept. The U.S. Housing Authority (USHA) was established to extend 60-year, low-interest loans to local governments for slum clearance.

1938

LUDLOW RESOLUTION. 10 Jan. A resolution put forward by Rep. Louis Ludlow (Ind.) proposed an amendment requiring a national referendum before war could be declared, except if American territories were invaded. Roosevelt opposed and the House returned the resolution to committee.

AGRICULTURAL ADJUSTMENT ACT. 16 Feb. The AAA was reconstituted without the objectionable processors' tax. The Secretary of Agriculture was authorized to set acreage allotments if $\frac{2}{3}$ of the farmers agreed to a marketing quota. The act authorized loans based on surpluses

which would be stored until they could be sold at parity.

BUSINESS RECESSION. 14 Apr. Roosevelt expanded the WPA and authorized the Federal Reserve System to follow a loose-money policy to stimulate business.

HOUSE UN-AMERICAN ACTIVITIES COMMITTEE. 26 May. The committee was created to investigate Nazis, Fascists, Communists, and other "un-American" organizations.

REVENUE ACT. 27 May. Passed over Roosevelt's veto, the Revenue Act of 1938 lowered taxes on large businesses and raised them on small ones to stimulate the economy.

TEMPORARY NATIONAL ECONOMIC COMMITTEE. 16 June. The TNEC, headed by Sen. Joseph O'Mahoney (Wyo.), investigated the effects of monopolies on the economy. Its report, 31 Mar., 1941, advocated strengthening the Clayton Act and the FTC and passing legislation prohibiting corporations from acquiring the assets of large competitors.

FAIR LABOR STANDARD ACT (WAGES AND HOURS LAW). 25 June. A 40-hour week was established and also a minimum wage of 40 cents an hour.

CONGRESSIONAL ELECTIONS. 8 Nov. Roosevelt's attempt to "purge" conservative Democratic congressmen was generally unsuccessful, although he ousted Rep. John J. O'Connor (N.Y.). The Democrats lost 7 Senate and 80 House seats.

1939

DEFENSE POLICY. 12 Jan. Roosevelt requested a \$525-m. emergency defense appropriation, and later asked for additional funds, 4 Mar. and 29 Apr.

ADMINISTRATIVE REORGANIZATION ACT OF 1939. 3 Apr. This act streamlined governmental bureaucracy, which had proliferated since the early 20th cent. A presidential order, 1 July, created the Federal Security, Federal Works, and Federal Loan Agencies, and another, 8 Sept., reorganized the President's Executive Office.

EMERGENCY RELIEF APPROPRIATION ACT. 30 June. Continuous WPA employment was limited to 18 months. Despite Roosevelt's wishes, lack of funds necessitated cutbacks in WPA jobs.

HATCH ACT. 2 Aug. It became illegal for non-policy-making federal officeholders to campaign politically and to take contributions from relief employees.

SOCIAL SECURITY AMENDMENTS. 10 Aug. The Social Security Act increased the federal contribution to state aid to dependent children, the number of occupations covered, and granted supplementary benefits to aged wives. Social Security Acts in 1950, 1952, 1954, 1956, and 1960 further liberalized the law. (*Cont. p. 598.*)

Latin America in Transition

LATIN AMERICA BETWEEN THE WARS

1914-30

THE NEW POLITICS. Although Latin America remained militarily aloof from World War I, the area could not isolate itself from the war's economic effects. Disruption of former trading patterns led to greater trade with the U.S.A. and stimulated local light manufactures. The change, however, was more apparent than real. The U.S. began to replace Great Britain as principal foreign investor, more than doubling direct private investment, 1914-29 (to \$3.5 billion), but Latin America's economy remained largely semicolonial, dependent upon the export of agricultural and subsoil primary products.

The war itself had less political impact than the convergence of long-term social and economic change. Explosively in Mexico and more or less peacefully in Uruguay, Argentina, and Chile, the economic development of 4 decades combined with immigration and urbanization (in the southern countries) to produce a new politics. The urban middle sectors, with the support of awakening working classes, successfully challenged traditional landholding forces for control of the government. Elsewhere in Latin America, where socioeconomic change had been less extensive, established elites maintained their dominance—at least until the depression.

URBANIZATION IN ARGENTINA AND CHILE

	Urban (%)	Pop. (m.)
<i>Argentina:</i>		
1869	24.0	1.7
1895	31.8	4.0
1914	40.4	7.9
<i>Chile:</i>		
1875	17.2	2.1
1895	24.1	2.7
1920	32.2	3.7

NOTE: "Urban" defined as 20,000 pop. or over, based on Philip M. Hauser, ed., *Urbanization in Latin America* (New York, UNESCO, 1961), p. 98.

1930-45

EFFECTS OF THE DEPRESSION. The world depression dramatically demonstrated the vulnerability of Latin America's monocultural economies. In 1929-32 exports were down c. 60%, imports c. 75%. Foreign investment dried up almost completely until the end of World War II; U.S. direct private investment was \$3.5 billion in 1929, but only \$2.7 billion in 1943. The trade drop directly undercut governmental capabilities by shutting off crucial customs revenues. Latent social problems were sharply exacerbated and suddenly thrust upon traditional political systems quite unprepared to cope with them. The immediate political result almost everywhere was a military coup; only Colombia, Costa Rica, and

Uruguay had civilian-controlled governments in the early 1930's. Economic nationalism and "statism" were the typical response of the reformers to the crisis. The coming of the war, with its increased demand for Latin American raw materials, contained the new pressures for a time. But by the end of the war a new series of revolts signaled the beginnings of an agonizing adjustment to the modern era.

MEXICO

1914-17

THE MEXICAN REVOLUTION. On 20 Nov., 1910, Francisco Madero (1873-1913) launched an essentially liberal political revolt which succeeded in ousting, 25 May, 1911, the dictator Porfirio Díaz. The effect of Madero's assassination, 22 Feb., 1913, by Victoriano Huerta was to destroy central authority and broaden the conflict into a full-scale social revolution, the 1st in the Americas. By late 1915 Venustiano Carranza (1859-1920), together with his able general, Álvaro Obregón (1880-1928), had asserted military control over the other principal regional leaders, Emiliano Zapata (?1877-1919) and Francisco (Pancho) Villa (1877-1923) and secured *de facto* recognition, 19 Oct., 1915, from the U.S. and 5 Latin American countries. Carranza was elected president, 11 Mar., 1917, ending a 4-year constitutional interregnum. During the conflict the U.S. exacerbated the new Mexican nationalism by clumsy diplomacy, armed intervention at Vera Cruz, 21 Apr.-23 Nov., 1914, and the punitive Pershing expedition, 16 Mar., 1916-5 Feb., 1917.

CONSTITUTION OF 1917. A new constitution, written at Querétaro and reflecting the social as well as the political goals of the revolution, was promulgated, 5 Feb., 1917. Socialistic, nationalist, anticlerical, it was the vision of the new Mexico. Its views that the state should intervene actively in the economy, that property had an inherent social function, and that labor was not a commodity but a

way of life were to have great influence elsewhere in Latin America. It struck at the power and property of the church (Art. 130) and established an exclusively, and militantly, secular public elementary educational system (Art. 3). In Art. 123 it encouraged labor union organization and set conditions for wages and hours, etc. Art. 27 provided for the breakup of large estates in favor of small and communal holdings and curbed foreign ownership of land, mines, and oil fields.

1918-34

RULE OF OBREGÓN. President Carranza was deposed, May 1920, by Gen. Obregón (ruled 1920-24), organizer of the last successful coup d'état in modern Mexican history. Subsequent revolts in 1923, 1927, and 1929 were all put down, though Obregón survived the one headed by Adolfo de la Huerta, 1923-24, only with the aid of the U.S. and armed workers and peasants. Obregón presided over a great flowering of cultural nationalism which glorified Mexico's Indian heritage (*indigenismo*). The minister of education, José Vasconcelos, sponsored muralists such as Diego Rivera, José Clemente Orozco, and David Alfaro Siqueiros, who, like the revolution itself, blended Marxism and *indigenismo*. Educational "missionaries" were sent out by the thousands to bring modernity to the parochial countryside.

RULE OF CALLES. In an effort to disguise a lack of fundamental reform, President Eliás Calles (ruled 1924-34) began a campaign of strident anticlericalism. In the *Cristero* rebellion the church in effect went on strike for 3 years, performing no sacraments and stirring up rural violence against the government. In 1929 Calles created the National Revolutionary Party (PNR; since 1946, PRI) in an attempt to maintain personal control of the government and various regional elites—without actually succeeding himself in office. In this he was successful until 1934. In subsequent years a unique single-party system developed which, while not allowing democratic alternation

in office, did provide stability with some representation and civil liberties.

1934-45

PRESIDENCY OF CÁRDENAS. Although chosen by Calles within the PNR, Lázaro Cárdenas (ruled 1934-40) soon proved as president to be his own man, conciliating the church and emphasizing the economic reform Calles had neglected. Cárdenas, more than any other president, strove to realize the social goals of the revolution. He distributed to peasants almost twice as much land, nearly 50 m. acres, as had been given away by all governments since 1916. Much of this (22.2% of the land area of Mexico by 1940) went into *ejidos*, traditional communal Indian holdings which Cárdenas believed distinctively valuable for agrarian Mexico. He fought for the country's "economic independence" by expropriating the foreign-owned railroads, 23 June, 1937, and oilfields, 18 Mar., 1938. The forbearance of the U.S. on the latter issue under the principles of the Good Neighbor policy (negotiated settlement, 17 Apr., 1942) was largely responsible for the warm ties which in the 1940's replaced the previously acrimonious relations between the 2 countries.

On 30 Mar., 1942, Mexico declared war on the Axis powers and subsequently gave the U.S.A. vital economic support. (*Cont. p. 609.*)

URUGUAY

1914-45

RULE OF BATLLE Y ORDÓÑEZ. During the 19th cent. Uruguay's history was full of civil strife, but José Batlle y Ordóñez (president, 1903-7, 1911-15) led the country to democratic stability through a uniquely peaceful social revolution. He was able to establish a working relationship with his opponents, the rural Blanco Party. His dominant, urban, middle-sector Colorado Party gained civilian control of the military, minimized the influence of the church, and established full

civil liberties. Batlle early foresaw the need for a nation to control its own economic development. He instituted high tariffs to protect local industry and began the gradual nationalization of key foreign-dominated structures (railroads, electric power plants, telephone services, meat-packing plants, etc.). The state fostered labor organization and implemented some of the most advanced social security and welfare legislation anywhere in the world at that time. Batlle hoped to create lasting political stability by replacing the office of president with a plural executive of 9 men, an idea derived from his study of Swiss democracy. A modified version of this was embodied in the Constitution of 1 Mar., 1919. •

CONSTITUTION OF 1934. President Gabriel Terra (ruled 1931-38) found his powers inadequate to deal with the effects of the depression. He therefore staged a bloodless coup, 1933, and wrote a new constitution, 1934, restoring presidential dominance. He and his successors continued to pass progressive social legislation. (*Cont. p. 606.*)

ARGENTINA

1914-30

IRIGOYEN AND MIDDLE-SECTOR REFORM. The Sáenz Peña law of 1912 made possible the free and representative election which, in 1916, brought Hipólito Irigoyen's party (UCR) to power. Under Irigoyen (ruled 1916-22, 1928-30) the urban middle classes proved no more effective in social reform than the landed *estancieros* had been. Education did improve, literacy rose, and the university reform movement, designed to give students and faculty a greater voice in university affairs, spread from Argentina throughout the continent. But the Radicals neglected fundamental social and economic problems. The government violently suppressed labor unrest during the *Semana Trágica*, Jan. 1919, and in the following decade failed to implement significant labor or welfare legislation. The prosperity derived from cereal and meat

exports, begun during World War I, was largely taken for granted, and little thought was given to the need to develop an indigenous industrial base (although the national oil authority, YPF, was established in 1922).

1930-43

CONSERVATIVE RESURGENCE. Ending more than 75 years of civilian rule, Gen. José F. Uriburu deposed the aging Irigoyen, 6 Sept., 1930, amidst economic chaos. President Augustin P. Justo (ruled 1932-38), heading a conservative civilian coalition, revived the economy, but at the cost of dependence on Britain (Roca-Runciman Agreement, May 1933), thus offending Argentinian nationalist sentiment.

1943-45

PERÓN AND MILITARY NATIONALISM. The army returned forcefully to politics when a group of pro-Axis, nationalist officers (GOU) seized the government, 4 June, 1943. Juan Domingo Perón (b. 1895), who as labor minister skillfully built support among the neglected working classes, had gained effective control of a semi-Fascist regime by mid-1944. Argentina was the last Latin American state to declare war on Germany, 27 Mar., 1945. (*Cont. p. 605.*)

CHILE

1914-25

RULE OF ALESSANDRI. Arturo Alessandri Palma (1868-1950) was elected president in 1920 at the head of a distinctively middle-sector reformist coalition. The backlog of social and economic problems (collapse of the nitrate market after 1910, declining real wages, etc.), the dogged obstruction of a malapportioned Senate, plus the ineptitude of his own administration, proved too much for him. After instituting a moderate income tax and a progressive labor code (comparable to those of Mexico and Uruguay), he was forced from office, 1924, by junior military

officers impatient with the slow pace of reform. This was the army's first intervention in Chilean politics for almost a century.

CONSTITUTION OF 1925. In a brief return to office Alessandri pushed through a modern constitution, 18 Sept., 1925, which strengthened the presidency, ended some 35 years of parliamentary dominance, separated church and state, and committed the government to an active role in economic development.

1926-45

IBÁÑEZ DICTATORSHIP. After several years of confusion Col. Carlos Ibáñez (1877-1960) became president (ruled 1927-31). He did not come to power to impede reform but to speed it. His action reflected the changed social composition of the army and anticipated the similar interventions that occurred in Brazil, 1930; Cuba, 1933; and Bolivia, 1936-39, and which became common toward the end of World War II. Benefiting from a large influx of foreign capital and the worldwide prosperity of the late 1920's, Ibáñez carried out extensive public works. His political repressiveness and the effects of the depression brought his downfall.

CONSERVATIVE REGIME OF ALESSANDRI. Following a brief and chaotic "socialist republic," Dec. 1931-Sept. 1932, Alessandri returned to office and restored political stability, 1932-38. His able finance minister, Gustavo Ross, successfully achieved economic recovery, but at the cost of growing social and political unrest.

THE POPULAR FRONT. The Socialists and Communists joined the Radicals to elect Pedro Aguirre Cerda (1879-1941) to the presidency by a narrow margin over Ross, 1938. The European-style Popular Front suffered from internal bickering but managed to beat back pro-Axis pressures and to benefit the lower- and middle-income groups that were its chief support. The Development Corporation (CORFO, 1939) was a major step toward a planned economy. (*Cont. p. 606.*)

War II, Vargas joined the allies and sent troops to Europe. (*Cont. p. 608.*)

BRAZIL

1914-30

THE OLIGARCHICAL REPUBLIC.

From its late birth as a republic, 15 Nov., 1889, to 1930 Brazil was dominated by the powerful landowners (*coroners*) of the states of Minas Gerais and São Paulo, with significant army influence. For Brazil, an immense and highly regionalized country, urbanization and national unity came more slowly than for the nations to the south. Army revolts in 1922, 1924, and 1927, and a 2-year harassment, 1924-25, by a guerrilla band led by Luís Carlos Prestes indicated strong dissatisfaction with the traditional leadership among reformist junior army officers (*tenentes*). When the overproduction of coffee and the depression produced economic chaos, Getúlio Vargas (1883-1954), governor of the state of Rio Grande do Sul, supported by the *tenentes* among others, rebelled, 3 Oct. 1930, and succeeded to the presidency, 3 Nov., 1930.

1930-45

VARGAS AND BRAZILIAN NATIONALISM.

During the following 15 years of moderate, personalist dictatorship, Vargas led Brazil along a unique path toward modernity. He held no elections, abolished all parties, 1937, but quadrupled the electorate by 1945. He organized labor for the 1st time, but kept it under close government control. Symbolized by the corporatist (but little-implemented) *Estado Novo* constitution of 1937, the state was at the center of a drive for national integration. Economic independence was to be won by government-sponsored industrialization; tariffs were raised to protect domestic industry; state-financed institutes were founded to control vital commodities (coffee, sugar, cotton, etc.); and a base of heavy industry was begun, epitomized by the national Volta Redonda steel plant, 1942. In 1943 total industrial output reached \$1.4 billion (\$153 m. in 1920). Although always ambivalent in his attitude toward World

BOLIVIA

THE CHACO WAR. A 50-year period of comparative stability and growing tin prosperity was ended by the Chaco War, 1932-35. Great social currents were set in motion, and the mobilization of highland Indians as soldiers began finally to break down their castelike segregation from national life. Bolivia's defeat, at a cost of 60,000 lives, turned junior army officers decisively against the nation's traditional political leadership.

MILITARY RADICALISM. Col. José David Toro (president, 17 May, 1936-14 July, 1937) and the more radical Germán Busch (ruled 1938-39) dominated a period of modernizing military dictatorship, during which oil was nationalized, miners were organized, and attempts were made to establish public control of tin.

VILLARROEL. After a conservative resurgence and increasing agitation on both left and right, Maj. Gualberto Villarroel (ruled Dec. 1943-July 1946), with the aid of the radical Nationalist Revolutionary Movement (MNR), established a socialist Perónist-leaning government. (*Cont. p. 606.*)

PARAGUAY

CHACO WAR AND ITS EFFECTS. The most traditional country in South America, Paraguay was little changed by its 3-year conflict with Bolivia over the Chaco, 1932-35. A brief modernizing regime led by Col. Rafael Franco, Feb. 1936-Aug. 1937, which initiated economic nationalism and state intervention, was quickly followed by a return to more conservative authoritarianism. (*Cont. p. 606.*)

PERU

INFLUENCE OF THE APRA. A "Progressive" dictatorship by Augusto B. Leguía (ruled 1919-30) was distinguished

chiefly by its (largely U.S.-financed) material prosperity and unenforced social legislation. In 1924 Víctor Raúl Haya de la Torre (b. 1895) founded the Revolutionary Popular Alliance (APRA), which was to be the dominant force in Peruvian politics for the next 40 years, though rarely in power. *Aprismo* was a kind of native socialism which sought to end the "Indian problem" (the exploitation and isolation of the Indian from national society) by glorifying *indigenismo* as the cornerstone of Peruvian (and Latin American) cultural identity. APRA's economic nationalism drew wide support from the urban middle sectors. Victorious in the 1931 presidential election, Haya de la Torre was kept from office and APRA suppressed until the final years of World War II. (*Cont. p. 607.*)

ECUADOR

INSTABILITY AND LACK OF CHANGE. Although the breakdown of cocoa prosperity after 1916 created an economic crisis, Ecuador produced no leaders equal to its problems. Between 1931 and 1940 a succession of 14 men filled the presidency. The Indian remained outside national life. Dictator Carlos Arroyo del Río (ruled 1940-44) brought some tranquillity, but lost scarce national territory in a disastrous war with Peru, 1942. (*Cont. p. 607.*)

COLOMBIA

CONSTITUTIONALISM. After a pre-dominance which had lasted since 1880, the Conservative Party split in 1930 and allowed the moderate Liberal, Enrique Olaya Herrera (1881-1937), to be elected. The peaceful transfer of power, although rightly distinguished from the coups so common elsewhere in Latin America during these years, in effect involved only a shift within the same ruling stratum.

ALFONSO LÓPEZ AND LIBERAL REFORM. Olaya's successor, Alfonso López Pumarejo (ruled 1934-38, 1942-45), personified an attempt by the most progressive part of the traditional ruling

group to meet the social and economic crisis of the times. López' 1936 constitutional amendments echoed the rhetoric (labor code, statism, agrarian reform, etc.) of the Mexican constitution without implementing its substance. Although labor unions were gathered into a national federation (CTC), it was essentially an appendage of the Liberal Party. Opposition to the *Revolución en marcha* within López's own party and from the Conservatives had, by 1938, recaptured the initiative, electing the moderate Eduardo Santos (ruled 1938-42) and causing López to resign early in his second term. (*Cont. p. 607.*)

VENEZUELA

THE LEGACY OF GÓMEZ. The ruthless dictatorship of Juan Vicente Gómez (ruled 1908-35) brought Venezuela some stability and an oil-based prosperity. Stimulated by huge North American, British, and Dutch investments after 1918, Venezuela had by 1928 become the 2nd oil-producing nation in the world. That this wealth was of small benefit to the masses and did not promote economic diversification was of somewhat more concern to Gómez' 2 authoritarian successors—not enough, however, to forestall the rapid growth of nationalist and democratic ideas. (*Cont. p. 607.*)

MIDDLE AMERICA

U.S. DOLLAR DIPLOMACY. The small countries of Central America and the Caribbean were largely dominated by the U.S. under the "international police power" asserted by the Roosevelt Corollary of 6 Dec., 1904. U.S. military interventions and direct occupations (notably in Nicaragua, 1912-25, 1927-33; Haiti, 1915-34; and the Dominican Republic, 1916-24) gave short-run stability but did little to change fundamental conditions or prepare the countries concerned for self-rule. Although the Good Neighbor policy withdrew U.S. troops; renounced interventionism, 1933; and abrogated special controls over Cuba, 1934, and Pan-

ama, 1939, its effect, following the older policy, was often to help U.S.-tutored military men to establish long-term dictatorships, e.g., those of Rafael Leonidas Trujillo (1891-1961), Dominican Republic, 1930-61, and Anastasio Somoza (1896-1956), Nicaragua, 1936-56. Repressive regimes also existed in Honduras (Tiburcio Carias Andino, 1932-48) and El Salvador (Maximiliano Hernández Martínez, 1930-44), the downfall of the latter being brought about by a spontaneous general strike. Costa Rica was notable for its stable constitutionalism and peaceful social reform, particularly during the enlightened rule of Ricardo Jiménez (ruled 1924-28, 1932-36).

CUBA. Even after abrogating the right of political intervention, the U.S.A. dominated Cuba economically. By 1929, 29% of all U.S. direct private investment abroad was in Cuba, mostly in sugar. The brief regime of Ramón Grau San Martín, 10 Sept., 1933-15 Jan., 1934, put in power

by a junior officers' coup, 5 Sept., 1933, led by Sergeant Fulgencio Batista (b. 1901), threatened U.S. influence momentarily, but was forced out by diplomatic pressure. Batista, who held power for the next 10 years, moved his army-labor-based government gradually to the left, co-operating with the Communist Party. His progressive 1940 constitution, although frequently violated in practice, voiced the aspirations of a new generation. Batista accepted his candidate's defeat in the 1944 election at the hands of Grau San Martín and the *aprista* Auténtico Party.

GUATEMALA. The long-time dictatorship of Gen. Jorge Ubico (ruled 1931-44) was ended, 1 July, 1944, by a general strike in the capital. The victory of junior officers in the ensuing power struggle, 20 Oct., released pent-up social pressures and led to the election of the radical reformer Juan José Arévalo, Dec. 1944. (*Cont. p. 609.*)

The Rise of Nationalism in the Dependent World

SOUTH ASIA

India

1914-26

INDIA IN WORLD WAR I. British policy in India during and immediately after World War I had 2 strands. While the British took steps to suppress all revolutionary activity, they had nevertheless to promise further constitutional reforms leading to eventual self-government because of their ideological position in the war and because of the military exigencies of both recruiting Indians into the army and winning battles. The strands refused to intertwine when nationalists saw that the implementation of the former together with the apparent lack of fulfillment of the latter were oppressive. Nationalists were, however, divided, both in their perception of British policy goals and in the tactics they wished to adopt to achieve self-rule.

On 8 Sept., 1914, the Imperial Legislative Council at Simla expressed loyalty to

the British cause and resolved to contribute to war expenses. During the war some 800,000 troops and 400,000 non-combatants participated in the war effort. India also supplied arms, ammunition, and other materials at an annual cost of c. £20 m.

GHADR MOVEMENT. Har Dayl began the Ghadr (Mutiny) Movement in California, U.S.A., by urging Indians resident there to return home and rebel. Early in 1914 it was arranged for a Japanese ship, the *Komagata Maru*, to carry 351 Sikhs and 21 Punjabi Moslems from Hong Kong to Vancouver to test Canadian immigration laws, which made it difficult for relatives of Indians in Canada to join them there. The ship arrived at Vancouver, 23 May, stayed in harbor for 2 months, during which time only a few passengers were admitted to Canada, and was forced to sail for India, arriving 29 Sept. 300 Sikhs refused to board a special train for the Punjab and marched to Calcutta; they were repulsed by force. This incident created an impetus for

violence in the Punjab, 1914-15. Several thousand Indians returned home from the U.S. and Canada at this time.

BRITISH COUNTERREVOLUTIONARY LEGISLATION. On 5 Sept., 1914, the Ingress Ordinance was enacted to give the government of India power to jail or restrict to their villages Indians returning from overseas. The Defense of India Act, Mar. 1915, empowered the government to intern alleged revolutionaries and try them by special tribunals.

MONTAGU-CHELMSFORD REFORMS. When Lord Chelmsford (1868-1933) became viceroy, Apr. 1916, he solicited opinions regarding postwar methods of government. The 19 elected members of the Imperial Legislative Council submitted a proposal, Oct. 1916, calling for greater legislative authority and autonomy for the Indian vis-à-vis the British home government. With some changes these proposals were accepted by the Indian National Congress (INC) and by the Moslem League at a joint meeting in Lucknow, Dec. 1916. Included in the joint Congress-League scheme were (1) acceptance of communal electorates for central and provincial legislative councils, and (2) approval of the principle of "weightage," whereby minority communities would have more legislative seats than their population alone justified.

On 8 July, 1918, Montagu and Chelmsford published a report which was to be the basis of the Government of India Act, 23 Dec., 1919. The major elements of their reforms were (1) decentralization of authority, with the provinces receiving control of law and order, some classes of revenue, education, agriculture, and public health; (2) changes in the central government, with the creation of a bicameral legislature consisting of a Council of State with a 5-year life and 60 seats, 27 of which were for government-nominated members, and a Legislative Assembly with a 3-year life and 40 of its 140 seats for government nominees; (3) changes in the composition of the provinces, 5 chief commissioner's provinces being created and 10 governor's provinces (including Burma which, following the 1935 consti-

tution, was separated from India in 1937); (4) the principle of dyarchy in the provinces, whereby the governor had some "reserved" powers, e.g., control of law and order, land revenue, canals, and finance, while the legislative councils acquired jurisdiction over "transferred" functions, e.g., education, agriculture, and public health; and (5) the extension of communal representation to include the Sikhs in the Punjab, Marathas in Bombay, non-Brahmins in Madras, and Europeans, Anglo-Indians, and Christians.

Bal Gangadhar Tilak, who controlled the INC by 1917, attacked the proposed reforms mainly because of the retention of overarching power by the governor general. Moderates who approved the report withdrew from the INC and, under the presidency of Surrendranath Bannerjee (1848-1925), held the 1st session of the All-Indian Conference of Moderates (changed to the National Liberal Federation of India, 1921) at Bombay, 1 Nov., 1918.

ROWLATT ACT. 18 Mar., 1919. Whereas the Montagu-Chelmsford Report seemed inadequate, at best, to Indian nationalists, the Rowlatt Act (after Sir Sidney Rowlatt, the British judge who chaired a Sedition Committee which reported on 19 July, 1918) antagonized almost all Indians. The act prolonged the wartime legal devices by which suspected revolutionaries could be interned and tried before a court of 3 High Court judges with no appeal. The INC had denounced the report, Dec. 1918.

GANDHI AND "SATYAGRAHA." Mohandas K. Gandhi (1869-1948), who returned to India from South Africa, 9 Jan., 1915, helped to recruit soldiers for the army during the war. Not yet a powerful figure in the INC, he initiated early in 1915 his 1st national *Satyagraha* (lit., "truth-force") campaign, aimed against the Rowlatt Act and other repressive laws, including the salt-tax law and prohibitions on some literature. The campaign opened with a nonviolent *hartal* (general strike) in Delhi, 30 Mar., and in other cities, 6 Apr. It consisted of mass nonco-operation with the government of India and civil disobedience against se-

lected laws by those who had made the special *Satyagraha* pledge and had observed a 24-hour fast. The *hartal* was generally successful in closing down shops, but violence erupted in Delhi, Ahmedabad, Lahore, and Amritsar, as well as in several smaller towns.

AMRITSAR MASSACRE. At Amritsar, 9 Apr., the government arrested 2 INC leaders, provoking mob violence, 10 Apr. On 12 Apr., Gen. Edward H. Dyer arrived to take command. He banned public meetings, but the order was not widely publicized. On 13 Apr. a crowd gathered at Jallianwalla Bagh, a closed-in, courtlike area with few exits, to hear speeches. Without first warning the meeting to disperse, Dyer ordered his soldiers to open fire on the crowd, and about 379 were killed and 1,200 wounded. Martial law was imposed, and Dyer ordered all Indians to crawl when passing along a lane where an Englishman had been killed.

NON-CO-OPERATION. Gandhi won his first fight for control of the INC at Amritsar, Dec. 1919. He persuaded the INC, against Tilak's objections, to support the Montagu-Chelmsford reforms, which had been passed the previous day. However, the leniency of the recommendations of a commission appointed to inquire into the Amritsar Massacre, Mar. 1920, which merely censured Dyer, and the approval given Dyer's action by the House of Lords in Britain, repelled Gandhi. He turned to active nonco-operation, initially in conjunction with the Moslem Khilafat movement led by Mohammed and Shaukat Ali with the aim of persuading the British to amend the peace imposed on the Ottoman Empire.

The Non-Co-operation Movement began 1, Aug., 1920, and consisted of a boycott of British courts, schools, goods, and the Nov.-Dec. 1920 elections held under the 1919 Government of India Act. The movement was generally successful so far as the electoral boycott was concerned; some 75% of the electorate abstained. However, Gandhi canceled, 8 Feb., 1922, a planned civil disobedience campaign in Bordeli county in the Bombay Presidency, when he learned that

on 5 Feb. an Indian crowd in Chauri Chaura, United Provinces, had killed police who had fired on them. By this time the Non-Co-operation Movement was dying. Without the threat of mass civil disobedience the government felt safe in arresting Gandhi, 10 Mar. He was tried at Ahmedabad, 18 Mar., for writing seditious editorials in *Young India* (19 Sept. and 15 Dec., 1921, and 23 Feb., 1922) and sentenced to 6 years in prison.

GROWTH OF INC MEMBERSHIP. The INC was restructured to enhance the mass character of its political activity, while facilitating centralized control. In Dec. 1920 it not only ratified its Sept. decision to nonco-operate but also, at Gandhi's urging, transformed its constitution to allow for mass participation. 21 Provincial Congress Committees (PCC's), based on linguistic divisions, were created, their members to be elected respectively by district, town, and village committees. An All-India Congress Committee (AICC), which theoretically was to conduct business between the annual sessions and to elect the real decision-making body, the Working Committee, was to be composed of delegates of the PCC's. The appeal to the masses was heightened by a change in the INC goal from "self-government within the Empire" to "*swaraj* . . . by all legitimate and peaceful means," thus making a Hindi word the key word. Because of this obvious appeal to Hindus, M. A. Jinnah (1876-1948) left the INC.

1927-39

SIMON COMMISSION. Sir John Simon (1873-1954), chairman of the Indian Statutory Commission, arrived in India early in 1928 to study the functioning of the 1919 constitution and to recommend improvements. Because his 7-man commission excluded Indians, the INC, at its Madras session in 1927, had decided to boycott it and organize *hartals* in the major cities as the members of the commission visited them.

NEHRU REPORT. An All-Parties Conference, Aug. 1928, adopted a report drafted by Motilal Nehru (1861-1931), which proposed the creation of 4 Moslem

provinces, the retention of a strong central government, and the acceptance of dominion status within the British Empire. Dominion status was disapproved of by leftists like Jawaharlal Nehru (1889-1964) and Subās Bose (1897-1945). In Dec. 1928 the INC at Calcutta accepted a compromise resolution submitted by Gandhi, who called for a mass civil disobedience movement if Britain did not grant India independence by Dec. 1929.

At a meeting in Lahore, Dec. 1929, the INC, insisting on *purna swaraj* ("full independence"), called for a boycott of the legislatures and civil disobedience campaigns as decided upon by the AICC. Within a short time 172 Congress members had resigned from the central and provincial legislatures.

SALT MARCH. 12 Mar., 1930. Gandhi, with 78 followers, began the "Salt March" of 241 miles from Ahmedabad to Dandi, on the Arabian Sea, where, 5 Apr., he took salt from the sea, thus violating the salt-tax law. Both the method and the goal had mass appeal, and widespread boycotts of British goods and civil disobedience, including several instances of violence, followed. The government arrested some 60,000 persons, including the Nehrus and Gandhi, and initiated piecemeal measures to quell the agitation.

DELHI PACT. 5 Mar., 1931. By this pact Gandhi agreed with the viceroy to discontinue civil disobedience in return for efforts to rectify some of the repression resulting from nationalist agitation. Without the prior consent of the INC Working Committee Gandhi accepted the principle of a federal constitution (rather than the unitary constitution proposed by the Nehru Report). This federal constitution had been accepted by the 1st Round Table Discussion in London, 1930, at which the INC was not represented. The Delhi Pact achieved at least a moratorium during which the government and the INC could bargain.

2ND ROUND TABLE DISCUSSION. Gandhi was the sole INC representative at the 2nd Round Table Discussion, 1931, attended by British officials, Indian princes, and representatives of communal

groups. The talks ended in a deadlock over the question of communal representation.

NO-TAX CAMPAIGN. In the United Provinces, Autumn 1931, a "no-tax campaign" was mounted by peasants who claimed they were unable to pay even half the usual land revenue tax. They were supported by the U.P. Congress Committee, and the protest spread to the North-West Frontier Province and Bengal. The government arrested all INC leaders, Dec. 1931-Jan. 1932, and passed emergency acts to halt the campaign.

FAST BY GANDHI. On 17 Aug., 1932, Prime Minister Ramsay MacDonald announced that the new constitution proposed for India would provide separate electorates for Harijans (untouchables). Arguing that this would only increase the rift between Harijans and caste Hindus, Gandhi stated from Yeravda Prison, 13 Sept., that, beginning 20 Sept., he would fast unto death unless the decision was reversed. On 26 Sept. his fast ended when the British cabinet approved a compromise between him and the Harijan leader B. R. Ambedkar, whereby Harijan representatives would be elected to reserved seats by the entire Hindu electorate after having been nominated by Harijans alone. If he had not done so before, by his fast Gandhi created a charismatic relationship between most Hindus and himself. He was released from prison, 8 May, 1933.

GOVERNMENT OF INDIA ACT. 4 Aug., 1935. This act, comprising the last constitution given India by the British, introduced the principle of federation: (1) the provinces were granted autonomy, and 3 lists of subjects—provincial, central, and concurrent—defined the limits of their authority; (2) when princes governing one half of the population of princely states acceded to the union, the central legislature would take responsibility for defense and foreign relations in those states. The suffrage was extended to about a sixth of the adult population, communal representation was retained, and reserved powers were granted to the governor general and the provincial governors. Since responsible government was

not granted, the INC, and the Moslem League were hostile to the new constitution.

ELECTIONS OF 1937. Elections held in the autumn of 1937 were contested mainly by the Moslem League and the INC. Both had organizational structures capable of reaching the masses. The INC captured 7 provincial governments, including the N.W.F.P., a Moslem majority province, but failed to win majorities in the Punjab, Bengal, Sind, and Assam. The elections demonstrated the weakness of the League's appeal to Moslems, and Nehru's renegeing on a tacit agreement to form a coalition government with the League in the U.P. demonstrated to Jinnah the precarious position of a minority party in a parliamentary system. In Oct. 1937, in a presidential address, Jinnah made clear that the League must struggle against the INC.

1939-45

INDIA IN WORLD WAR II. On 3 Sept., 1939, without consulting the Legislative Assembly, the viceroy declared India a participant in the war. In Oct., INC ministers resigned after the viceroy had refused to promise independence immediately after the war in return for INC support of the war effort.

On 22 Mar., 1940, the Moslem League passed the "Lahore Resolution," demanding a separate Moslem state. Taking a pacifist line, Gandhi, 13 Oct., 1940, called for individual *satyagraha* by INC leaders to protest the war. About 14,000 were arrested.

With the Japanese threatening Burma and eastern India, Prime Minister Churchill sent Sir Stafford Cripps (1889-1952) to India; Mar. 1942, with an offer of immediate Indianization of the Executive Council, an Indian constituent assembly elected by provincial legislative assemblies, optional dominion status after the war, and the right of a province to secede from the union. The latter was an obvious sop to the League and encouraged Jinnah to strengthen his demand for partition. On 11 Apr. the Congress Working Committee rejected the Cripps offer because it recognized separatism and

failed to give Indians control of defense. According to Gandhi, the offer was "a post-dated cheque on a failing bank." •

On 8 Aug., 1942, the AICC passed the "Quit India Resolution," promising support for the war in return for independence. It sanctioned mass civil disobedience. On 9 Aug. the members of the Working Committee were arrested. News of the arrests prompted widespread demonstrations and violence, which the government dealt with by emergency measures, including the outlawing of the INC. This enabled the Communist Party to assert control over the hitherto INC-dominated All-India Trade Union Conference, and helped the League to expand its membership on a mass basis.

Assuming that the war with Japan would last at least another year, the viceroy called a conference, 25 June, 1945, at Simla of 21 Indian leaders, including the Congress Working Committee and the heads of the Moslem League, to work out an immediate political settlement. On Jinnah's insistence that the League nominate all the Moslem members, the conference foundered, 14 July. (*Cont. p 56f.*)

Ceylon

1914-25

COMMUNAL VIOLENCE. Fighting between Buddhists and Moslems erupted in Kandy and Gompala, 28 May, 1915, due to the playing by Buddhists of music in front of mosques. With the spread of violence into 5 provinces, the governor declared martial law, 2 June. Although the agitation was quelled within a week, martial law, including courts-martial for civilians, remained in force for 3 months. D. S. Senanayake (1884-1952), a western-educated Buddhist, was among those mistakenly arrested.

CEYLON REFORM LEAGUE. In 1917 educated Tamils and Sinhalese united in the Ceylon Reform League, with Ponnonbalam Arunachalom (1853-1924) as 1st president. In Dec. 1917 the League presented to the British colonial secretary a scheme of constitutional reform: (1) abolition of nominated members of the Legislative Council; (2) an

elected majority with an elected speaker; and (3) reduction of the number of official members of the Executive Council and introduction of more elected, non-official members.

CEYLON NATIONAL CONGRESS.

The 1st session of the Ceylon National Congress, which incorporated the Reform League and the National Association, was held, 11 Dec., 1918, under the presidency of Sir Ponnonbalam Arunachalom. It pressed for constitutional reforms.

CONSTITUTION OF 1920. Without making significant reforms the constitution introduced in 1920 increased to 37 the number of seats in the Legislative Council. Government officials and nominated members, however, still retained a majority. Congress rejected the constitution as inadequate, but co-operated to make it function in return for a promise by Sir William Manning (gov. 1918-25) that revisions would be considered in a year. At this time the complexion of the Congress changed because of the resignation of most of its Tamil members, who claimed that the Sinhalese had allowed Britain to impose a constitution that failed to make provision for Tamil representation in the Western Province. In Jaffna the Tamil association "Mahajana Sabha," with the goal of adequate Tamil representation, was founded.

CONSTITUTION OF 1924. The Legislative Council was expanded to 49, with a majority of unofficial, elected members, 23 of whom were elected by territorial constituencies and 11 by communal electorates (3 Europeans, 2 burghers, 2 Indian Tamils, 3 Moslems, 1 Western Province Ceylon Tamil). While there was no significant change in the composition of the Executive Council, members of the Finance Committee did gain the right to discuss with department heads their budgets, thus acquiring some power to participate in the executive machinery.

1926-45

CONSTITUTION OF 1931. A royal commission chaired by the Earl of Donoughmore (1875-1948) visited Ceylon, Nov. 1927-Jan. 1928, to consult with

various groups on the functioning of the 1924 constitution. In its reports, submitted to the British government in July and published in Sept. 1928, the commission recommended significant changes, which were incorporated in the 1931 constitution. Elections based on territorial constituencies completely replaced communal representation, on the grounds that the latter only reinforced social stratification. Universal adult suffrage was instituted. The 1931 elections were, however, boycotted by Tamil leaders, with the result that the 4 Northern Province seats were uncontested.

Under the 1931 constitution important social legislation relating to education, public health, and unemployment was passed. In Mar. 1933, to correct the inequality in the civil service, in which out of 123 members in 1928 only 35 were Ceylonese, the State Council passed a resolution restricting entry into the civil service to Ceylonese unless no Ceylonese had the qualifications to fill a particular post. By that time the University College, founded in 1921, was graduating students with a British education. In 1934 the State Mortgage Bank was established so that landowners could borrow money at low interest. In 1938 the Bank of Ceylon was set up.

LANKA SAMU SAMAJA. The Lanka Samu Samaja Party (LSSP) was founded, 18 Dec., 1935, by young socialists—in particular, by Phillip Gunawardena, N. M. Perera, Colvin de Silva, and Leslie Goonewardena—who had been studying in Britain and the U.S.A. at the beginning of the depression. Although during the 1932 Spinning and Weaving Mills Strike they had failed to take over the leadership of the labor movement from H. E. Goonesinha, who organized urban workers in the 1920's and founded the Ceylon Labour Party, 1927, they worked hard in the countryside during the 1934-35 malaria epidemic. The LSSP, which won 2 seats in the State Council in 1936, was the only political party in Ceylon with any semblance of discipline or mass appeal. In 1939 it expelled its Stalinist members, who founded the Communist Party of Ceylon in 1944.

CEYLON IN WORLD WAR II. On 5 Sept., 1939, Gov. Sir Andrew Caldecott announced to the State Council that Ceylon would participate in the British war effort. The Council expressed its loyalty, and in June 1940 voted Rs. 5 m. for war expenses. On 5 Mar., 1942, Adm. Sir Geoffrey Layton (1884-1964) became commander in chief, and exercised all necessary political power.

SOULBURY COMMISSION. On 26 May, 1943, the British government announced that a draft constitution for after the war and leading toward responsible government would be examined by a commission. By Feb. 1944 this draft constitution had been drawn up, and the colonial secretary disclosed, 5 July, 1944, that a commission would go to Ceylon to discuss it with various groups. When the Soulbury Commission arrived, 22 Dec., however, the Board of Ministers boycotted it because its members declined to base their report solely on the Board's draft. In July 1945 the Commission's report was presented to the colonial secretary, who then negotiated for its acceptance with the Ceylonese nationalist leader, D. S. Senanayake. On 31 Oct. a White Paper was published, incorporating both the Soulbury Commission's and Senanayake's constitutional proposals. The main features of the constitution finally promulgated were (1) retention of universal suffrage, (2) representation of constituencies delimited by both territory and population, (3) retention by the governor general of responsibility for defense and foreign affairs, (4) responsible cabinet government, and (5) establishment of a House of Representatives, composed of 95 elected members and 6 representatives of special interests, and of a Senate of 30 members, 15 elected by the House and 15 nominated by the governor general. (*Cont. p. 564.*)

SOUTHEAST ASIA

Netherlands East Indies

1914-27

COMMUNISM VS. SAREKAT ISLAM. In 1914 a Dutchman founded the Indies

Social-Democratic Association, the first Marxist organization in Southeast Asia. Since a European-led party attracted little Indonesian support, it pressed for a common front with the more popular Sarekat Islam (SI). In 1920 the Association changed its name to the Indonesian Communist Union (later PKI), which joined the Comintern the following year. Friction between the PKI and SI became so serious, however, that a split developed. The Communists then created mass organizations to rival those of SI and temporarily emerged as the vanguard of the Indonesian nationalist movement.

OPENING OF THE VOLKSRAAD. The Volksraad (People's Council), reluctantly created by the Dutch, 1918, was not a true representative body; it had a European majority, and its powers were limited to offering advice which the government could ignore. Although more Indonesian delegates were chosen during the 1920's, the Volksraad's powers remained very slight.

ABORTIVE COMMUNIST REVOLUTION. From the time they split with SI, the Communists pursued extremist tactics that culminated in uprisings in Java and Sumatra, 1926-27. Lack of popular support and splits within the Communist leadership assured the defeat of the revolts. The Dutch then outlawed the PKI and deported or imprisoned most of its members. SI was thus left as the main vehicle of the Indonesian nationalist movement.

1928-45

SUKARNO AND THE NATIONALIST PARTY. Sukarno (b. 1902), a Dutch-trained Javanese engineer, founded the Indonesian Nationalist Party, 1929, with the aim of rallying all nationalist groups into a large nonco-operation movement. However, the Dutch quickly arrested Sukarno. Early in the 1930's Sutan Sjahrir (b. 1909) and Mohammed Hatta (b. 1902) sponsored a moderate Socialist Party, but they, too, were imprisoned.

PERIOD OF JAPANESE RULE. Having occupied the Netherlands East Indies, 1942, the Japanese freed Sukarno, Hatta,

and Sjahrir. Sukarno and Hatta opted for co-operation with the Japanese, while Sjahrir's group organized an underground resistance movement. In Sept. 1943, as the tide of war turned against the Japanese, they sought popular support by naming Sukarno to head a Central Advisory Council in Java. In 1944 Japan made further concessions, including a qualified promise of Indonesian independence. An Independence Preparatory Committee was formed, Aug. 1945. (*Cont. p. 568.*)

Malaya

1914-29

CHINESE RADICAL ACTIVITY. By 1920 Chinese immigrants into the Malay States and Straits Settlements had organized branches of the Kuomintang, which adopted an anti-British stance during the period of Kuomintang-Communist co-operation in China. Chinese Communist agents helped to create radically oriented youth and labor organizations in Malaya. After the Kuomintang-Communist split in China in 1927, however, the Kuomintang branches in Malaya could no longer provide cover for Communist activity.

1930-45

ECONOMIC DEPRESSION AND COMMUNIST REVIVAL. A Malayan Communist Party (MCP) was founded in 1930, most of its members being Chinese. During the difficult post-depression years the Communists fomented numerous strikes. In 1937 the MCP, following the new line of its Chinese counterpart, called for a united front of all Malaysians against the Japanese.

ADMINISTRATIVE DECENTRALIZATION. A major step toward governmental decentralization occurred in 1936, when the office of federal secretary was created. The secretary's duties consisted of liaison and co-ordination among the states. Each federated state remained a British protectorate under the high commissioner. Beneath the federal structure were state governments consisting of a sultan or raja, a resident and a State Council with an advisory role.

JAPANESE OCCUPATION. Efforts by Japanese occupation forces, 1942-45, to stir up Malayan hostility against the British proved largely fruitless. Communists formed the backbone of the underground resistance movement. As Japanese military fortunes decayed, the occupation authorities vainly sought popular support by creating a Malayan Consultative Council at Singapore. (*Cont. p. 569.*)

Burma

1914-29

CONSTITUTIONAL CHANGES. In 1923 Burma became a "governor's province" on the Indian pattern. Burmese ministers responsible to the Legislative Council were to handle such issues as education and public health, while the governor of Burma retained veto power over matters of defense policy, law and order, finance, and revenue. The People's Party, headed by U Ba Pe, became the dominant group in the Legislative Council. The party advocated educational preparation of the people for self-government, rapid Burmanization of the public services, and curtailment of foreign economic exploitation. By the mid-1920's most Burmese leaders favored full responsible government and separation from India.

1930-45

THAKIN PARTY. Frustration over inadequate education and job opportunities led a militant group of Burmese students to create the nationalistic Thakin Party, 1930. Five years later this party joined with another organization to form the "We Burmans Association," whose members addressed one another as *thakin* (master) to symbolize their aim of being masters in their own country. Led by Aung San (1914-47), the Thakins staged a successful student strike at the University of Rangoon, 1936.

GOVERNMENT OF BURMA ACT. The Government of India Act, 1935, promised the complete separation of Burma from India on 1 Apr., 1937. A Government of Burma Act, 2 Aug., 1935,

provided for a cabinet led by a prime minister and responsible to a bicameral legislature. The governor remained solely responsible for finance, defense, foreign affairs, and minority groups, but was to act on the advice of his ministers on all other issues. Dr. Ba Maw was chosen prime minister, but by 1939 student strikes, industrial strife, and opposition pressure forced him to resign. His party then joined with the Thakins to form a "Freedom Bloc," which he headed. The Bloc's anti-British and antiwar agitation led to the jailing of Ba Maw and others, 1940.

JAPANESE INVASION. A puppet government headed by Ba Maw was established by the Japanese invaders, 1942, and the following year he became president of an "independent" Burma. By that time, most of the Thakins had joined an underground resistance movement. In 1911 Aung San and his followers secretly organized a nationwide Anti-Fascist People's Freedom League (AFPFL). Ba Maw's escape with the retreating Japanese armies into Thailand left Aung San and the AFPFL as the leading political force in Burma. (*Cont. p. 570.*)

Indochina

1914-40

INDOCHINA IN WORLD WAR I. French wartime policies, particularly unfulfilled promises of democracy for Indochina and the recruitment of Vietnamese youth for military service in Europe, intensified nationalist feelings among the Vietnamese. Ho Chi Minh (b. 1891) traveled to France during the war; there he joined the French Socialist Party and, 1920, became a charter member of the French Communist Party. Meanwhile French opposition to the demands of moderate political parties in Indochina paved the way for extremist groups there.

FOUNDING OF THE COMMUNIST PARTY. In 1930 Ho Chi Minh directed the merger of several Communist factions into an Indochinese Communist Party. Communism was not the only threat to French colonial rule in Indochina, however; the Nationalist Annamite

Party, organized in 1927, pursued a terrorist policy culminating in an ill-prepared mutiny at Yenbay, 9-11 Feb., 1930. Severe French countermeasures annihilated the party, but anti-French activities continued.

1941-45

FOUNDING OF THE VIETMINH. Ho Chi Minh founded the Communist-dominated Vietminh, 1941, as an instrument to drive the French from Indochina. In an effort to rally all anti-imperialist groups around the Vietminh, Ho eschewed Communist propaganda and spoke only of a united, independent Indochina. French intransigence allowed Ho and the Communists to gain control of the Vietnamese nationalist movement.

REPUBLIC OF VIETNAM. Originally an anti-French organization, the Vietminh moved to the allied side after Hitler's invasion of the Soviet Union, 1941. In 1943 the French promised autonomy for Indochina within the French Union, but by this time the Vietnamese nationalists were fully committed to independence. At the end of 1944 a Vietnam Liberation Army was formed to wage guerrilla warfare against the Japanese. When the Japanese ousted the French, Mar. 1945, the emperor of Annam, Bao Dai (ruled 1932-45), declared the country's independence. Ho Chi Minh ignored him. Shortly after the Japanese surrender, Ho convened a congress of the Vietminh and was named head of the Vietnam People's Liberation Committee. On 25 Aug., 1945, Bao Dai abdicated, and on 2 Sept. Ho proclaimed the Republic of Vietnam with a Provisional Government at Hanoi. Although the French reoccupied Saigon, the southern Vietnamese countryside remained largely in the hands of nationalist guerrillas. (*Cont. p. 567.*)

Philippines

1914-45

JONES LAW. Promising independence to the Philippines as soon as stable government could be established, the U.S. government's Jones Law, 29 Aug., 1916,

accorded the islands substantial autonomy. Executive power was vested in a governor general, legislative prerogatives in a bicameral body, and judicial power in a Supreme Court. Despite the retention of some reserved powers by the U.S.A., from this time onward the Filipinos effectively controlled their domestic affairs.

TYDINGS-McDUFFIE ACT. 24 Mar., 1934. Passed by the U.S. Congress, the Tydings-McDuffie Act called for creation of a Commonwealth of the Philippines on 4 July, 1936, to be followed 10 years later by an independent republic. During the decade of the Philippine Commonwealth, U.S. forces would remain in the islands and Washington would control foreign relations and defense. Headed by Manuel Quezon (1878-1944) as president and Sergio Osmeña (1878-1961) as vice-president, the commonwealth was essentially a one-party state, since no opposition parties possessed significant support.

JAPANESE OCCUPATION. When Japanese forces seized Manila, 1942, Quezon's government escaped to Australia. In Oct. 1943 Japan proclaimed an "independent" republic of the Philippines, headed by puppet President José P. Laurel. The Filipinos created a resistance movement, whose backbone in Luzon was the Communist Hukbalahap organization. Quezon's government in exile later moved to Washington, where Quezon died, Aug., 1944, and was succeeded by Osmeña. (*Cont. p. 630.*)

Siam (Thailand)

1914-32

SIAM IN WORLD WAR I. Chulalongkorn's successor, King Vajiravudh (ruled 1910-25), personally sympathized with the allies in World War I. However, popular anti-French sentiment and a pro-German faction in the army prevented him from declaring war on Germany until 1917, when Siamese protests against submarine warfare tactics were rebuffed. Adherence to the winning side gained Siam many diplomatic benefits, the most important being membership in the League of Nations and abolition of extraterritorial

treaties with western powers during the 1920's.

REIGN OF PRAJADHIPOK. King Prajadhipok (ruled 1925-35) faced serious economic problems bred by his predecessor's fiscal mismanagement and aggravated by the depression. A series of austerity measures, particularly the pruning of the civil service and salary cuts among junior Siamese officials, many of whom had returned from European study with an aversion to monarchy, helped to pave the way for the 1932 revolution.

REVOLUTION OF 1932. Pridi Banomyong, a law professor, became the leader of discontented factions in Siam and, with military assistance, seized control of Bangkok in a bloodless coup, 24 June, 1932. The king bowed to a constitution which severely curtailed his powers. Pridi's People's Party took over the government but named P'ya Manopakorn as prime minister to placate conservative groups. A new constitution promulgated in Dec. 1932 reflected the conservative influence in the government and restored some of the powers the king had lost 6 months earlier.

1933-45

RISE OF P'IBUN SONGGRAM. Competition between Pridi and P'ya led the latter to publicize his rival's program for a planned economy as Communistic. Pridi was forced into exile, but returned shortly afterward following a coup by his supporters. Toward the end of 1933 the king's cousin led an abortive military revolt in Bangkok. Although the king himself remained neutral, rumors insisted that he had given moral and financial backing to the rebels. The government became divided between followers of P'ibun Songgram, who had restored order after the abortive military coup, and those of Pridi. P'ibun gained the upper hand and became prime minister, 1938. The hallmark of his regime was intense nationalism marked by restrictive measures against aliens, reservation of certain occupations for Siamese, patriotic propaganda, and, symbolically, a change in the

country's name from Siam to Thailand in 1939.

THAILAND IN WORLD WAR II. P'ibun's government developed close economic ties with Japan and signed a pact with the Japanese, Dec. 1940, in the belief that they would win the war. Thailand declared war against the U.S.A. and Britain, 1942, but P'ibun's pro-Japanese policy proved unpopular and he was forced to resign, 1944, when Japan's defeat became certain. Meanwhile Pridi had organized an underground movement which maintained secret liaison with a Free Thai Movement abroad. Once P'ibun fell, Thailand was free to seek accommodation with the western powers. (*Cont. p. 630.*)

THE MIDDLE EAST

Turkey

1914-23

TURKEY AFTER WORLD WAR I. By the armistice signed on 30 Oct., 1918, the government of the Ottoman Empire, discredited by defeat, placed the lands it had ruled virtually at the mercy of the allies. British and French forces landed in Anatolia and occupied it temporarily, Jan. 1919. With Anglo-French encouragement the Greeks landed at Izmir, 14 May, 1919. Resistance to these incursions led to the formation of Societies for the Defense of Rights which, under the leadership of Kemal Pasha (1881-1938), later known as Atatürk, set themselves up in opposition to the government in Constantinople.

ESTABLISHMENT OF THE TURKISH REPUBLIC. On 23 July, 1919, a congress was held at Erzerum which formulated a program, known as the "National Pact," for an integrated Moslem Turkey and resistance to the partition of its territory. The national legislature adopted this pact, 28 Jan., 1920. The British, disturbed at the political complexion of the new legislature, reoccupied Constantinople, Mar. 1920. On 23 Apr. Kemal organized a Grand National Assembly in Ankara, setting up a provisional government and declaring the sul-

tan a "captive" of the allies. The signing of the Treaty of Sèvres, 10 Aug., 1920, by which Turkey was obliged to give up all non-Turkish provinces of the empire as well as a good deal of territory in Anatolia, increased nationalist resistance to the old regime, and on 1 Nov., 1922, the sultanate was abolished and Turkey declared a republic. A new peace treaty was signed, 24 July, 1923, incorporating Turkish aims as stated in the National Pact and abolishing the Capitulations.

1924-45

REFORMS OF KEMAL. Sweeping changes were made in Turkey under the leadership of Kemal. On 13 Oct., 1923, the capital was moved from Istanbul (name changed from Constantinople, 1930) to Ankara, indicating the new Turkish orientation of the country. On 3 Mar., 1924, the caliphate was abolished and Atatürk elected president of the Republic. A new constitution, 20 Apr., 1924, stated that Turkey was an Islamic state, but this article was expunged in 1928. The drive toward modernization and westernization led to measures such as the banning of the traditional headgear, the fez, 25 Nov., 1925, and the replacement of the Islamic by the Gregorian calendar, 26 Dec., 1925. By 1926 the law of the land had been secularized to a great degree with the adoption of an Italian penal code, a Swiss civil code, and German commercial law. On 3 Nov., 1928, the Latin alphabet was adopted in place of the Arabic one, and an effort was made to eliminate Arabic and Persian words from the vocabulary. Women were ordered to unveil and in Dec. 1934 received the vote. A law of 28 June, 1934, made the adoption of Turkish surnames compulsory by 1 Jan., 1935. The new regime involved itself closely with the economic development of the country by means of a series of 5-year plans, the first of which was issued 9 Jan., 1934. Atatürk died on 10 Nov., 1938, and was succeeded as president by İsmet İnönü (b. 1884), a close associate.

TURKEY IN WORLD WAR II. On 19 Oct., 1939, Turkey signed a treaty of

alliance with Britain and France, but remained officially neutral in World War II until 23 Feb., 1945, when she declared war on Germany. (*Cont. p. 620.*)

Persia (Iran)

1914-45

INTERNATIONAL RELATIONS. British troops occupied parts of Persia during World War I, although the country was nominally neutral. On 9 Aug., 1919, an agreement was signed putting the country under preferential treaty relations with Britain and providing for a British loan of £2 m. The Majlis (legislature), however, refused to ratify the agreement, and it never came into effect. In May 1920 a Soviet republic, Gilan, was set up on the southern shore of the Caspian Sea, but it collapsed after the withdrawal of Red Army troops, Oct. 1921.

On 16 May, 1928, a treaty with Britain was signed, but in 1932 relations between the 2 countries became strained due to the shah's cancellation of the concession granted the Anglo-Persian Oil Co. The case came before the League of Nations and was finally settled by a new agreement, 29 Apr., 1933, which gave a larger share of oil profits to Persia.

RULE OF REZA KHAN. On 21 Feb., 1921, Col. Reza Khan (1877-1944) took over the government, and on 26 Feb. signed an agreement with Russia. Reza Khan remained the foremost power in the country, first as minister of war, then as prime minister. On 31 Oct., 1925, the Majlis deposed the shah and elected Reza Khan in his place, 13 Dec. The new shah was an admirer of Ataturk and attempted, on a somewhat smaller scale, to institute similar reforms. He introduced a French judicial system, 1927, and in 1928 abolished the Capitulations. In Mar. 1935 the name of the country was changed from Persia to Iran.

IRAN IN WORLD WAR II. With the advent of World War II, Iran proclaimed her neutrality, but in 1941 Britain and Russia requested rights of transit through Iranian territory. Permission having been refused, the 2 powers occupied Iran, 25

Aug., and divided it into 2 zones, Russian and British. The shah abdicated in favor of his son, Mohammed Reza Pahlavi (b. 1919), and a tripartite treaty was signed, 29 Jan., 1942, which specified that British and Russian forces would leave Iran within 6 months after the end of the war. On 9 Sept., 1943, Iran declared war on Germany, and on 1 Dec. the Teheran Declaration issued by Roosevelt and Churchill reaffirmed the independence and sovereignty of Iran (*Cont p. 621.*)

Egypt

1914-45

KINGDOM OF EGYPT. The years 1918-22 witnessed a great deal of nationalist agitation in Egypt, resulting in a unilateral abolition of the British protectorate, 28 Feb., 1922. In Mar. 1922 Sultan Fuad proclaimed himself king, and on 19 Apr., 1923, a constitution was inaugurated. The 1st elections, held in Jan. 1924, resulted in a large majority for the Wafd Party, around which the nationalist agitation had taken place. The king, however, wishing to curb the power of the Wafd, engaged in a continuing struggle with it which resulted in his dissolving parliament and revoking the constitution early in 1930. On 22 Oct., 1930, a new constitution and a new electoral law, providing for a system of indirect election, were promulgated, but in 1935 the king first suspended the constitution of 1930 and then, 12 Dec., 1935, restored that of 1923.

RELATIONS WITH BRITAIN.

Negotiations with Britain for a treaty to define the relations between the 2 countries went on until 1930. On 8 May of that year they broke down over the question of the Sudan, and remained suspended for the next 5 years. On 26 Aug., 1936, an Anglo-Egyptian treaty was finally signed. It provided for the termination of the British military occupation, but Britain retained the right to maintain military forces in the Suez Canal Zone for defense of the Canal. The question of the Sudan was left largely unsettled. During World War II Egypt was the principal

allied base in the Middle East, and the Middle East Supply Center was located there. (*Cont. p. 621.*)

Iraq

1914-45

CAMPAIGN FOR IRAQI INDEPENDENCE. At the end of World War I the British were in occupation of Mesopotamia (Iraq), and on 25 Apr., 1920, they received a mandate over the territory from the League of Nations. On 23 Aug., 1921, Faisal, a son of the sherif of Mecca, was crowned king of Iraq. Relations between the new kingdom and Britain were established on the basis of a treaty negotiated on 10 Oct., 1922, and ratified by the Iraq Constituent Assembly, 27 Mar., 1924. The treaty was originally to last for 20 years, but was subsequently limited to 4 by a protocol signed in 1923. On 10 July, 1924, a constitution was promulgated. Further treaties with Iraqi independence and the termination of the mandate as objectives were signed, 13 Jan., 1926, and 14 Dec., 1927, but it was not until 30 June, 1930, that the final treaty was concluded, providing for a 25-year alliance. By the terms of this treaty Iraq became fully independent and entered the League of Nations, 3 Oct., 1932. The British retained rights to 2 air bases and freedom of transit across Iraq for their armed forces.

FOREIGN RELATIONS. On 31 July, 1928, the "Red Line" Agreement, which regulated the interests of the various companies involved in the development of Iraqi oil, was signed. Oil production began in 1930. On 29 Oct., 1936, a coup resulted in the establishment of a military dictatorship, but its leader was assassinated, 11 Aug., 1937, and moderates returned to power. Still another coup, 3 Apr., 1941, in this case with a pro-Axis coloration, led briefly to the exile of the king, crushed by British troops. On 16 Jan., 1943, Iraq declared war on Germany and on 22 Jan. signed the United Nations Declaration, the first Arab state to do so. (*Cont. p. 622.*)

Transjordan

1914-45

ESTABLISHMENT OF THE KINGDOM. The Emirate of Transjordan was, in effect, an accidental creation arising out of the situation in the Middle East at the end of World War I. On 27 May, 1921, Britain recognized Abdullah ('Abd Allah), son of the sherif of Mecca and brother of King Faisal of Iraq, as the ruler of this territory. Britain's chief purpose in doing so was to prevent him from carrying out a threatened attack on the French in Syria. Transjordan formed part of the British mandate over Palestine, and Britain saw the establishment of Abdullah in this area as a way of controlling it indirectly. Transjordan was consequently excluded from the area of Jewish immigration.

RELATIONS WITH BRITAIN. On 25 May, 1923, the provisional agreement of 1921 was made permanent on the condition that a constitutional regime be set up and a treaty concluded with Britain. This treaty was finally signed, 20 Feb., 1928, and left the British with a large measure of control, especially over foreign affairs. The British agreed to contribute, through loans or grants, to the Transjordanian treasury. The agreement was amended, 2 June, 1934, and 19 July, 1941. On 16 Apr., 1928, an Organic Law was promulgated. During World War II the Arab Legion, created in 1921, played a valuable role on the allied side. (*Cont. p. 623.*)

Palestine

1914-45

BALFOUR DECLARATION. The so-called "problem of Palestine" originated with the Balfour Declaration, 2 Nov., 1917, by which the British, responding to pressures of Zionists (founder, Theodor Herzl (1860-1904), committed themselves to support the creation of a Jewish "national home" in the area. The

differing interpretations which could be given to this phrase lay at the heart of the problem. A build-up of tension between Jews and Arabs in the years immediately following World War I came to the surface, Apr. 1920, with violent disturbances in Jerusalem. On 1 July, 1920, Sir Herbert Samuel (1870-1963), himself a Jew, became British high commissioner in Palestine. In Feb. 1922 an Organic Law was enacted, providing for an administration including a partially elected Legislative Council; but due to an Arab refusal to participate in the elections, this provision was never activated. The Arabs wished an end to both Jewish immigration and land sales to Jews, and throughout the period between the wars concentrated their efforts on achieving these ends.

ARAB-JEWISH CONFLICT. The 1st attempt by the British to define the "national home" came in the Churchill White Paper of 1 July, 1922, in which it was taken to mean cultural autonomy without political overtones. Riots in 1929 which were set off by a dispute about rights at the Wailing Wall in Jerusalem led to yet another elaboration of British policy involving stricter limits on immigration and land acquisition. Neither the Arabs nor the Jews were satisfied with the British measures, and the relative calm of the next few years was shattered in 1936 by a new series of riots. On 22 Apr., 1936, the Arabs called a general strike to underline their demands. A British commission, set up to investigate the situation, recommended partition, 7 July, 1937, but on 9 Nov. a report on the projected partition rejected it as unworkable. A conference was held in London, 7 Feb.-17 Mar., 1939, to which Arab and Jewish representatives were invited, and was followed, 17 May, by the issue of another White Paper specifying that Jewish immigration would end after 1944 and envisioning the establishment of an independent state within 10 years with provision for minority rights for Jews. The exigencies of war caused a temporary slowdown of Jewish and Arab efforts to gain their objectives, but this was merely a lull, and beginning in 1943 Jewish terrorist activities com-

menced as a prelude to the postwar struggle. (*Cont. p. 624.*)

Syria and Lebanon

1914-45

ESTABLISHMENT OF THE MANDATES. France had long had an interest in Syria and Lebanon, and this was reflected in her assumption of a mandate over these territories after World War I. King Faisal, who had been placed on the throne of Syria by the Arabs after the war, was expelled from Damascus, 24 July, 1920, by the French. France then took direct control over the whole of what was to become Syria and Lebanon. In 1925 and 1926 there were risings in Syria, but these were put down. In 1928, at the direction of the French high commissioner, a Constituent Assembly was called which drew up a constitution. It did not, however, receive the approval of the French government, and in May 1930 the high commissioner dissolved the Assembly and issued a constitution by decree. This was accepted by the Syrians, and elections were held, Jan. 1932.

Developments in Lebanon followed a similar pattern. In May 1926 a constitution drafted by the Lebanese Representative Council was promulgated and gave Lebanon parliamentary institutions. On 9 May, 1932, the high commissioner suspended this constitution, and on 2 Jan., 1934, a new one was issued.

INDEPENDENCE MOVEMENTS. Negotiations for a treaty to replace the mandates went on for 4 years and led to an agreement, 9 Sept., 1936, under the terms of which Syria was to become independent within 3 years. A similar treaty was signed with Lebanon, 13 Nov., 1936. France did not, however, ratify these agreements, and on 7 July, 1939, the president of Syria resigned. On 10 July the high commissioner suspended the constitution and dissolved the Assembly in Syria and, on the outbreak of war, did the same in Lebanon.

BRITISH CONQUEST. After the fall of France, Syria and Lebanon came

under the Vichy government, and on 8 July, 1941, British troops invaded Syria. On the same day the commander of the Free French issued a proclamation promising an end to the mandate and independence. The British troops were victorious, and on 14 July an armistice was concluded and the British occupation of Syria and Lebanon instituted. On 28 Sept. Gen. Georges Catroux, sent by the Free French to negotiate treaties with the 2 countries, announced the independence of Syria, and on 26 Nov. that of Lebanon. In Mar. 1943 the suspended constitutions were reinstated and elections held, and on 22 Dec. an agreement was signed relating to the transfer of power to the Syrian and Lebanese governments. (*Cont. p. 623.*)

Arabian Peninsula

1914-45

PERSIAN GULF AND YEMEN. In contrast to the other Arab lands, the Arabian Peninsula was under less direct European control in the interwar period. The various sheikdoms along the Persian Gulf and the coasts of southern Arabia continued their long-established quasi-protectorate relations with Great Britain. Yemen claimed its independence, and negotiations with Britain led finally to recognition of this by the treaty of 11 Feb., 1934.

SAUDI ARABIA. The bulk of the peninsula was united under Ibn Saud, originally the ruler of the Najd, who founded the Kingdom of Saudi Arabia. A treaty with the British, 20 May, 1927, confirmed him in his possession of the Hejaz and Najd and its dependencies. The outside world's concern with Ibn Saud's kingdom related mainly to its oil resources. On 29 May, 1933, the Standard Oil Co. of California, obtained a 60-year oil concession. In 1934, with the addition of a 2nd company, the consortium became known as the Arabian-American Oil Co. (Aramco). A new concession was signed, 31 May, 1939. In 1943 an agreement was concluded with the U.S. permitting the latter to construct an air base at Dhahran. (*Cont. p. 624.*)

AFRICA

Morocco

1914-33

PACIFICATION. French military operations in the Rif Mountains, which had been interrupted by World War I, were resumed, 1920, by the resident general, Marshal Louis Lyautey (1854-1934). The resistance led by Abd-el-Krim (1885-1963) was finally overcome in 1926.

BERBER DAHIR. By this decree, 16 May, 1930, the French government transferred Berber tribes from the jurisdiction of Moslem law to tribal custom. Urban Moroccans protested against what they regarded as an attempt to undermine the unity of an Islamic Morocco.

1934-45

FOUNDING OF POLITICAL PARTIES. In May 1934 Sultan Sidi Mohammed (Muhammad) ibn Yusuf (ruled 1927-61) received a tumultuous welcome on a visit to Fez, and riots broke out when the French shortened his stay. In Sept. a group of young Moroccans, calling themselves the Committee for National Action, drew up a plan of reform calling on the French to modify their direct administration and establish a protectorate system. In 1937 the committee formed the National Action Bloc under the Islamic scholar Allal al-Fassi (b. 1906). Amidst popular agitation al-Fassi was exiled to Central Africa, where he remained until the end of World War II. Some other Moroccan leaders escaped to Switzerland, and nationalist activity was much reduced for the next several years.

ISTIQLAL. In Jan. 1943, shortly after the Anglo-American landings in Morocco, President Roosevelt met privately with the sultan in Casablanca. Both Moroccans and French came to the conclusion that the President had assured the sultan of American hopes for Moroccan freedom. In Dec. the Istiqlal (Independence) Party was formed, regrouping most of the old National Action Bloc. In Jan. 1944 Is-

tiqal published a manifesto calling for negotiations to end the protectorate. The sultan allied himself informally with the nationalists by refusing to countersign French decrees. (*Cont. p. 573.*)

Algeria

1914-39

BEGINNINGS OF NATIONALISM.

During World War I thousands of Algerians gained experience of European life as soldiers and as workers in French factories. After the war some 70,000 Algerians remained in France, to be stimulated by the postwar intellectual climate there. In 1919, as a reward for war services, the French government allowed some increase in Moslem representation on local bodies in Algeria and Moslem participation in local elections. Municipal elections in Algiers, 1920, brought victory to the Emir Khaled, who called for equality of rights with Frenchmen for all Moslems. French settlers denounced the elections and the results were invalidated. In 1923 Moslem workers in France formed *L'Étoile Nord-Africaine*, which included Khaled as an honorary president. Beginning as an organization to defend the interests of North African workers in France, the ENA under Messali Hadj evolved into a nationalist movement which demanded Algerian independence. In 1936, after the ENA had been banned, Messali formed the *Parti du Peuple Algérien* (PPA).

Meanwhile a contrasting movement was growing up among intellectuals in Algeria, who called for assimilation of all Moslems to French civilization. The assimilationists formed an association under Ferhat Abbas (b. 1899) in 1927. Reaction to assimilationist ideas took the form of Moslem-Arab nationalism under the leadership of Sheik Abd al-Hamid ben Badis. In 1935 ben Badis founded the Association of Algerian Ulema, which aimed to revive pure Islam and the Arabic language. The conflict became explicit in 1936, when Abbas denied the existence of an Algerian fatherland and

called for emancipation of the Moslems so that they could be worthy of the name of Frenchmen. In return ben Badis declared that Algerian Moslems had their own history and culture distinct from French, and that they were not French and did not want to be.

1940-45

NATIONALIST UNITY. During World War II Algerian Moslems again came into contact with Europe, this time as witnesses to a French defeat. The illiterate mass of Algerians listened to allied broadcasts containing news of the Atlantic Charter and resistance to foreign invasion. In 1943 Abbas turned away from assimilation and presented a "Manifesto to the Algerian People," which asserted the right of Algerians to manage their own affairs under a constitution recognizing the equality of all residents of the country, French and Moslems alike. Gen de Gaulle responded with the Ordinance of 7 Mar., 1944, which granted voting rights to certain categories of Moslems. The PPA and the ulema joined Abbas in rejecting the ordinance as inadequate. (*Cont. p. 573.*)

Tunisia

1914-33

DESTOUR. In 1920, inspired by President Wilson's declarations, the Young Tunisians joined with some of their more traditional countrymen to form a political party, the Destour (Constitution). Under the direction of Sheik Thaalibi, the Destour demanded the emancipation of Tunisia as a nation. The French resident general, Lucien Saint, responded with a blend of repression and minor reforms. The policy succeeded in dividing the nationalists and weakening their movement for several years.

1934-45

NEO-DESTOUR. In Mar. 1934 the young lawyer and writer Habib Bour-

guiba (b. 1904) led a group of his own generation out of the Destour to form a new party, the Neo-Destour. He actively sought mass support, but was deported by the French, Sept. 1935. Returning to Tunisia, 1936, Bourguiba traveled throughout the country, addressing workers and peasants in local dialects and organizing the Neo-Destour into local committees which held discussions on the nation's political and economic problems. The nationalists began a campaign of civil disobedience which included a general strike, 1937, and culminated in riots in Tunis, Apr. 1938. Bourguiba and other Neo-Destour leaders were arrested and brought to a trial which was still pending at the outbreak of war in 1939. The prisoners were held in France and Italy until their return to Tunisia, Mar. 1943. After the arrival of the allies in May, Bourguiba began a series of unsuccessful appeals for Tunisian independence. Unable to achieve his ends, he escaped in disguise to Egypt in 1945, while Salah ben Yusuf (1910-61) took over the organization of the party in Tunisia. (*Cont. p. 573.*)

French Black Africa

1914-45

RESISTANCE TO FRENCH RULE.

Between the wars the French administration was faced with sporadic revolts against conscription, taxation, and forced labor: by the Dogon (French Sudan), 1918; the Tuareg (Niger), 1918-23; the Lobi (Upper Volta), 1919; etc. By 1930, however, all areas of French Black Africa were under civil rule. French policy made African chiefs civil servants. Representational politics were limited to the 4 communes of Senegal, which were represented in the French Assembly in Paris by an African, Blaise Diagne (1872-1934), 1914-34.

French forced labor policies provoked strikes on the Kayes-Thiès railroad, 1925, while the building of the Congo-Ocean railroad, 1922-34, cost the lives of thousands of Africans, provoking a revolt in

1928. In 1938-39 Africans in Ubangi-Shari rebelled against forced labor. In Jan. 1944 Gen. de Gaulle convened a conference at Brazzaville, French Congo, of French administrators in Africa, which foresaw African representation in the metropolitan Assembly. (*Cont. p. 575.*)

British Africa

1914-45

BRITISH WEST AFRICA. In 1917 J. E. Casely Hayford (1867-1930), a Gold Coast lawyer, founded the interterritorial National Congress of British West Africa, which held its 1st meeting at Accra in 1920. The Congress sought ultimate self-determination and an immediate increase in African representation in colonial Legislative Councils. African chiefs and some wealthy non-chiefs gained seats in these Councils: Nigeria, 1922; Sierra Leone, 1924; Gold Coast, 1925. J. E. K. Aggrey (1875-1927) returned from the U.S.A., Oct. 1924, and, preaching racial co-operation, worked successfully with Gov. Gordon Guggisberg (1869-1930) of the Gold Coast to achieve educational reforms. In 1922 Herbert Macaulay (1864-1946), a Nigerian engineer, founded the Nigerian Democratic Party. In London, Ladipo Solanke founded the West African Students' Union, 1925, in which the Gold Coast lawyer, Joseph B. Danquah (1895-1965), was prominent. All these organizations pressed for constitutional evolution.

In 1929 there was a major outbreak of opposition to colonial rule in Southern Nigeria, while in 1931 a tax strike was organized in Sierra Leone. In the Gold Coast an African Cocoa Growers' Association was formed, 1930, to withhold cocoa from a depressed market, an effort which was renewed, 1937-38, against the formation of a buyers' pool. In 1937 B. N. Azikiwe (b. 1904) returned to Nigeria after an American education to found a chain of newspapers, notably the *West African Pilot*, which asserted African values and pressed for more rapid constitutional reform. Azikiwe was active in the

Nigerian Youth Movement, founded in 1936, with Obafemi Awolowo (b. 1909) a leading Yoruba member. In 1944 Azikiwe formed the National Council of Nigeria and the Cameroons.

BRITISH EAST AFRICA. In 1920 Kikuyu chiefs in Kenya founded the Kikuyu Association and the following year Harry Thuku (b. 1895) formed the Young Kikuyu Association, militant in its protests against racial discrimination; Thuku was arrested and deported in 1922. Despite the opposition of white settlers, who looked to eventual self-governing status for Kenya, the British government declared African rights paramount in East Africa (Devonshire Report, 1923). By that date some 2,000 white settlers owned 40% of the land of Kenya. Land acquisition by whites remained a core problem for the British administration, as the African population had to live within ever-decreasing territorial limits. In 1929 the Kikuyu Central Association was formed, with Jomo Kenyatta (b. 1893) as secretary; Kenyatta was sent to London to protest against the policies of the Kenya government.

Uganda was the scene of sporadic violence, 1929-34, following a fall in world cotton prices.

THE RHODESIAS AND NYASALAND. In 1915 John Chilembwe, an African Christian minister, led a rebellion in Nyasaland, which was rapidly crushed. From 1917 the Kitawala (Watchtower) movement in Northern Rhodesia preached an African millennium, and resisted British attempts to crush it. In 1922 white settlers in Southern Rhodesia voted to become a colony and against joining South Africa, and the following year the territory became an internally self-governing colony, with a franchise that excluded virtually all Africans. The Land Apportionment Act of 1930 assigned half the land to whites, while the Industrial Conciliation Act, 1936, explicitly excluded Africans from the collective-bargaining process. Settlers pressed increasingly for federation of the 3 territories and Africans vigorously opposed it. The rapid development of the mining industry of the Copperbelt after 1929

caused an inflow of African workers; in May 1935 and Apr. 1940 they staged strikes, which developed into riots, against low wages, increased taxes, and the settlers' "civilized labor" policy. In 1944 J. P. Sangala (b. 1900) founded the Nyasaland African National Congress.

SUDAN. The working of the Anglo-Egyptian Condominium in the Sudan did not satisfy Egypt, and after the achievement of Egyptian independence, 1922, demands grew for a closer union of Egypt and the Sudan. On 19 Nov., 1924, the British governor general of the Sudan was assassinated in Cairo. The British replied by effectively removing Egyptians from the administration of the Sudan. A growing group of educated Sudanese demanded union with Egypt, and formed the Graduates' General Congress in 1938. Ismail al-Azhari (1900-1969) emerged as leader of the pro-Egyptian wing. (*Cont. p. 574.*)

Ethiopia

1914-45

RULE OF HAILE SELASSIE. In Sept. 1916 a group of chiefs rebelled against Lij Yasu, and seized Addis Ababa. Zauditu was made empress and Ras Tafari (b. 1892) regent. Ras Tafari attempted to institute reforms, e.g., abolition of slavery, 1926, but met conservative opposition. In 1923 Ethiopia joined the League of Nations. In 1928, after putting down a revolt, Ras Tafari took complete control, and on 2 Nov., 1930, became emperor of Ethiopia as Haile Selassie I. Further revolts were crushed in 1931-32.

ITALIAN CONQUEST. In late 1934, Italian troops began to provoke incidents on the Ethiopian-Somaliland border, and in Oct. 1935 invaded Ethiopia. Ethiopian troops resisted fiercely, but after the loss of the Battle of Mai-Tchew, 25 Mar., 1936 Haile Selassie left Addis Ababa, 5 May. Ethiopia was joined to Eritrea and Italian Somaliland to form Italian East Africa, with the king of Italy as emperor of Ethiopia. Ethiopian guerrilla resistance continued. After Italy entered the war, June 1940, allied troops captured Italian

East Africa. Haile Selassie returned to Ethiopia, 5 May, 1941. (*Cont. p. 618.*)

1916, to prevent a possible German take-over.

Belgian Congo and Liberia

1914-45

BELGIAN CONGO. Africans having no political rights in the Belgian Congo, their opposition to colonial rule often took religious form, notably in the movement led by Simon Kimbangu (?1881-1951). There were major risings in Kasai, 1931-32, and Equateur, 1932-33.

LIBERIA. During World War I the Kru people rebelled against the ruling Americo-Liberians. The U.S.A. supplied arms to help put the rising down, and sought internal reforms. Liberia was deeply in debt, and in 1926 accepted a loan, granting a large land concession to the Firestone Rubber Co. in exchange. A League of Nations mission found evidence of forced labor and maladministration. In 1944 William V. S. Tubman (b. 1895) was elected president. (*Cont. p. 577.*)

THE CARIBBEAN ISLANDS

1914-34

ECONOMIC CHANGE. World War I stimulated the economies of the Caribbean islands to some extent, though permanent economic improvements were not yet in sight. Reliance on sugar production was relaxed as some islands began to diversify: Grenada, cocoa and nutmeg; Dominica, citrus products; St. Vincent, arrowroot and cotton; British Guiana, rice. The price of sugar rose rapidly after the war, but when the market crashed in 1923 there were many bankruptcies among the planters. The depression hit the West Indies severely and, in the early 1930's, induced a general apathy and listlessness.

PUERTO RICO AND VIRGIN ISLANDS. In 1917 the U.S. Congress passed the Organic Act, 2 Mar., which made Puerto Ricans U.S. citizens. The Danish Virgin Islands were purchased, 4 Aug.,

1935-45

RISE OF POLITICAL PARTIES. Riots for higher wages and better living conditions began in St. Kitts, 1935, with a strike of sugar workers, and led a few months later to the formation of the St. Vincent Workingmen's Association. Bloodshed occurred in Trinidad, and spread to Barbados. There were disturbances in Guiana and Jamaica, June 1938. Labor unions grew out of these troubles and some of their leaders, Robert Bradshaw in St. Kitts, Vere Bird in Antigua, Grantly Adams in Barbados, and Alexander Bustamente and Norman Manley in Jamaica, were able to transform the labor organizations they controlled into political parties.

FEDERATION. Attempts at federation between the wars among various of the British West Indian islands failed because of lack of popular support, jealousy among political leaders, and the fear of the more economically self-sustaining islands that they would have to support the less developed ones.

MOYNE COMMISSION. The Moyne Commission Report, 1938, recommended (1) the setting up of a West Indian Welfare Fund to disburse £1 m. a year for 20 years, (2) that as many nominated members as possible of the colonial Executive Councils should be replaced by elected members, (3) the granting of universal adult suffrage, and (4) gradual political advance.

FRENCH WEST INDIES. The French followed a policy of centralization in Martinique, Guadeloupe, and French Guiana. The French islands sent soldiers to fight in both world wars, and developed parties and factions corresponding to those in France. The islands were governed by Vichy supporters until 1943, when governors loyal to Charles de Gaulle took over.

DUTCH WEST INDIES. In 1922 a new Netherlands Constitution Act had made Curaçao and Surinam integrated

territories of the Kingdom of the Netherlands. In Dec. 1942 the Dutch Empire was divided into 4 coequal parts, with 3 votes each for Curaçao and Surinam, and 15 each for the Netherlands in Europe and the Netherlands East Indies. Representatives to the States-General, however, were

not chosen by the people in the Caribbean colonies but by the crown. Surinam and Curaçao, as well as the other Dutch possessions—St. Eustatius (Statia), Saba, and the southern half of St. Martin—were ruled paternalistically, though with a slight democratic façade. (*Cont. p. 570.*)

The British Dominions

UNION OF SOUTH AFRICA

1914-25

SOUTH AFRICA IN WORLD WAR I.

When Great Britain declared war on Germany, 4 Aug., 1914, there was no automatic necessity for the self-governing dominions of the British Empire to follow her lead. Canada, Australia, and New Zealand realized that a German victory in Europe would be followed by invasions of other areas, and unhesitatingly joined the war effort. But South Africa demurred, announcing that she would provide only for her own defense. South Africa was the only dominion with German forces on her frontier, yet she was faced with a more truculent domestic opposition to the war than any of the other three. In Apr. 1915 the prime minister, Gen. Louis Botha (1862-1919), suppressed a revolt of intransigent Afrikaners who considered the war another British war of conquest and hoped a German victory would mean independence from Great Britain. Two weeks later the government reversed an earlier decision, and South African forces invaded the neighboring German colony of South-West Africa. The Germans capitulated, 15 July. South African troops were then dispatched to fight in East Africa and France.

LABOR CONTROVERSIES. The South African economy was heavily dependent on gold mining and on the use of cheap African and Asian labor. Botha, who had forged the Union of South Africa in the period after the Boer War, tried to overcome jealousies and hatreds between British and Afrikaners and between Europeans and Africans. A govern-

ment commission, however, advised, 1916, that if whites were to prevent black Africans from competing against them for jobs, the blacks would have to be confined to reserves. In 1918 Africans organized their first mass action, a boycott of public utilities. The following year Klements Kadali (1896-1951) formed the Industrial and Commercial Workers' Union for Africans, which instigated dock and railroad strikes to obtain better conditions.

SMUTS REGIME. In July 1919 Botha and the deputy prime minister, Gen. Jan C. Smuts (1870-1950), signed the Treaty of Versailles as representatives of a separate and independent nation. South Africa received a mandate from the League of Nations to govern South-West Africa. After Botha's death, 28 Aug., Smuts succeeded to the premiership and sought to strengthen South Africa's ties with the British Empire, resolve domestic racial problems, reduce the high cost of living, and deal with disruptive Afrikaner nationalism.

RISE OF THE NATIONALIST PARTY. In Dec. 1921, white mine workers on the Rand began an armed rebellion against a government policy of using Africans in semiskilled positions; it was suppressed at a cost of over 200 lives. In 1923 the Urban Areas Act restricted urban Africans to living in designated "locations." The Nationalist Party and the Labour Party, which took no position on the national question as they wanted to improve the standard of living of white workers, then united against the ruling South African Party of Smuts because of the latter's policy of lowering color re-

strictions. After an unsuccessful attempt, 1922, to have Southern Rhodesia join the Union to help thwart the effect of this alliance, Smuts was subsequently defeated in a general election, 1924. He was succeeded as prime minister by the Nationalist leader, J. B. M. Hertzog (1866-1942), who formed a ministry based on the enforced separation of whites and blacks in employment, habitation, and government, and on the loosening of imperial ties to Britain.

1926-45

IMPERIAL CONFERENCE OF 1926.

The official declaration of the Imperial Conference of 1926, drafted by Lord Balfour (1848-1930), acknowledged that the 4 British dominions had reached a stage of total independence, equal in status to Great Britain and to one another, and in no way inferior to one another in any aspect of their domestic or external affairs. They would remain united under the crown by common allegiance and as "freely associated members of the British Commonwealth of Nations." Because of her peculiar history, geographical position, resources, and population, Britain would continue to bear the greater part of the burden of imperial defense, investment, and trade. Equality in status did not mean equality of function.

STATUTE OF WESTMINSTER. The decisions of the Imperial Conference of 1926 were given statutory force by Britain by the Statute of Westminster, 11 Dec., 1931. The crown renounced its right to legislate for the dominions except at their request and with their consent; but a dominion could still not pass laws repugnant to existing British laws applying to that dominion. These concessions were almost gratuitous, since Britain had not exercised her right of interference for decades.

NATIONALIST POLICIES. A series of laws closed skilled trades to Africans (Mines and Works Act, 1926), extended the pass laws, and instituted a "civilized labor" policy (Industrial Conciliation Act, 1924). A distinctive South African

flag was adopted, 1927, and a Native Administration Act of the same year increased the government's power to restrict the rights and mobility of Africans. In 1929, to affirm her independence in foreign relations, South Africa appointed her own ambassadors to the U.S.A., Italy, and the Netherlands. The franchise was extended, 1931, to all adult white men and women; Bantu and Coloreds could vote only if they satisfied rigid educational and property qualifications.

THE DEPRESSION. The depression was beginning to have serious effects on the South African economy by 1931. The world market for timber and minerals had declined considerably, and widespread unemployment resulted among both whites and Africans, a situation exacerbated in the following year when Britain and other western countries abandoned the gold standard, causing a diminished demand for South African gold. To achieve greater political stability during the period of economic crisis, Smuts joined Hertzog in a coalition government, 1933.

DOMESTIC LEGISLATION. Continuing its policy of loosening Commonwealth ties, the government passed a Status Act, 1934, by which it attained full control over all domestic and foreign policy. The Native Laws Amendment Act, 1937, compelled South African cities to effect the complete separation of their white and nonwhite residents. In passing this law the Hertzog government also recognized the need to provide government funds for the education and housing of nonwhites. Despite this and other attempts to improve the lot of nonwhites, however, the disparity between the relative standards of living of the 2 groups gradually became more and more pronounced.

SOUTH AFRICA IN WORLD WAR

II. When Britain declared war on Germany, 3 Sept., 1939, Hertzog asked the legislature to state that the European war was of no concern to South Africa. Smuts strenuously opposed Hertzog's indifference, and ultimately succeeded in having the House of Assembly declare war, 5 Sept., on the grounds that common ideals

and institutions would otherwise be jeopardized. Smuts then assumed the leadership of a new coalition ministry composed of members of the United, Labour, and Dominion (formerly South African) Parties, and South Africa contributed over 300,000 men, $\frac{1}{3}$ of whom were nonwhite, to serve in various theaters of war. In the general election of 1941 the coalition was returned with a greater majority than it had had before. Smuts helped to draft and, on South Africa's behalf, signed the United Nations Charter, 1945. (*Cont. p. 616*).

CANADA

1914-28

CANADA IN WORLD WAR I. Unlike South Africa, Canada unhesitatingly declared war on Germany, Aug. 1914. In the early years of the war the army filled its quotas with volunteers, but, to maintain a satisfactory rate of replacements, the Conservative government of Prime Minister Robert Borden (1854-1937) found it necessary to adopt military conscription, 1917. Later in the same year the Canadian army, which initially had been under the British, became a separate command under Gen. Sir Arthur Currie (1875-1933).

INDUSTRIAL RELATIONS AND AGRICULTURAL DEPRESSION. In 1919 the violent Winnipeg metal workers' strike was broken only by the arrest of the strike leaders. The strike helped to arouse public sympathy for labor's right to collective bargaining. By the end of 1920 the postwar economic slump, which had seriously affected other major countries, also began to be felt in Canada. The prairie farmers were the hardest hit, with the price of wheat falling from a 1919 high of (Can.) \$2.15 per bushel to \$0.60 in 1920. Since wheat was a major export, the effects of the slump were widespread. Farmers' co-operative organizations, which had been introduced earlier in the century, now became a vehicle for assisting farmers to maintain a minimum income. By 1923 the Liberal ministry of W. L. Mackenzie King (1874-1950) had completed the nationalization

and merger into the Canadian National Railway of the former Canadian Northern and Grand Trunk Railways, which had fallen into bankruptcy. Later in the year the government reduced the high tariffs and internal taxes and subsidies to industry which had been introduced 3 years earlier to combat the postwar depression. In the years following, the rate of business expansion increased sharply, particularly in the textile industry. A government coalition which had come to power in 1921, the nadir of the slump, resigned, Mar. 1926, and in the general elections held some months later the Liberal Party gained a clear majority. Mackenzie King formed a new ministry which lasted until 1930.

FOREIGN POLICY. In foreign affairs Canada, a separate signatory of the Versailles Treaty and an independent member of the League of Nations, continued to pursue its own policy in the interwar period. In 1921, with the concurrence of the U.S.A., Canada influenced Britain to renounce her 19-year old treaty of alliance with Japan. The Canadian Government also declined to sign the Geneva Protocol, 1924, and the Locarno Pact, 1925.

1929-45

THE DEPRESSION. When the stock exchanges of Montreal, 29 Oct., 1929, and Toronto, 13 Nov., crashed, the federal government began an unprecedented program of aid to individual provinces according to their needs. With the worldwide fall in agricultural prices affecting them, the wheat-producing provinces were again the hardest hit. Revaluation by the U.S.A. of the price of gold from \$20 an ounce to \$35 helped the Ontario and Quebec mining industries to endure the depression, and in turn helped the federal government to bear the cost of its provincial-aid programs. The grave economic situation spawned additional political parties: the Co-operative Commonwealth Federation, a farm-labor group, and the Social Credit Party, which advocated monetary reform as a means of ending the depression and, 1935, won a majority of seats in the provincial legislature of Alberta.

CANADA IN WORLD WAR II.

When the European War broke out in 1939, Canada delayed her declaration of war against the Axis powers for one week after the British declaration of 3 Sept. to emphasize the divisibility of the king of England's sovereignty. Canada signed agreements with the U.S.A., 1940, to share military and commercial transport routes across the Atlantic, and U.S.-Canadian relations remained at a high level of amity throughout the war. (*Cont. p. 602.*)

AUSTRALIA

1914-28

AUSTRALIA IN WORLD WAR I. During World War I Australia gave complete control over her land and naval forces, amounting to more than 300,000 men, to Great Britain for deployment against the German Empire. Australian and New Zealand troops fought first in Egypt and then took part in the Gallipoli campaign. They spent the last years of the war in France and Belgium, distinguishing themselves for gallantry at Ypres and Passchendaele. The ruling Labour Party under Prime Minister William M. Hughes (1864-1952) had tried unsuccessfully, 1916, to introduce military conscription to prevent war industries from draining off volunteers for the army.

FALL OF THE LABOUR GOVERNMENT. In 1923 Labour Prime Minister James H. Scullin (1876-1953) claimed and won the right from the crown to name the Commonwealth's governor general. But in the same year Labour lost power to a new coalition of Country and Nationalist Parties representing rural interests which had suffered during the post-war economic recession.

ECONOMIC POLICY UNDER BRUCE. The new prime minister, Stanley M. Bruce (b. 1883), sought to accelerate the development of industry through the use of extensive foreign loans. Bruce also took part in an Imperial Economic Conference held in London, 1925, to study market patterns and promote imperial trade. By 1926 his agricultural policies had raised butter to one of the country's major exports. The following

year a government commission's inquiry into the necessity of protection concluded that high tariffs had been beneficial in raising the standard of living but were now costing certain sectors of the economy too much.*

As the economy expanded, the Labour movement tried to organize more trades, meeting with mixed success. The maritime workers struck in 1925, and in 1929 strike action secured the right to collective bargaining for workers in the timber industry. A significant change in the constitution was effected, 1928, when the Commonwealth government assumed all the debts of the individual states, receiving in turn the prime taxing power.

1929-45

THE DEPRESSION. In Aug. 1929 the world price of wool, Australia's chief export, suddenly fell, and London bankers insisted on prompt payment of outstanding commercial and government debts. The depression soon aggravated the financial instability of the country. As a solution to the problem the Bank of England proposed balanced budgets and a reduction of 50% in wages and salaries. Australian economists had suggested a reduction of 10%, but in any case by 1932 the national income and standard of living were 30% lower than they had been in 1929. It was ultimately only through reducing costs that Australia narrowly avoided bankruptcy.

AUSTRALIA IN WORLD WAR II. On 3 Sept., 1939, when Britain declared war on Germany, Australia followed suit without opposition from either Parliament or the public. The economy was quickly put on a war footing, with a powerful government agency controlling and organizing industry for efficient war production. In Sept. 1940 Robert Menzies (b. 1894), a Liberal, headed a reorganized war cabinet. The Labour Party under Prime Minister John Curtin (1885-1945), whose ministry succeeded that of Menzies in 1941, introduced conscription (though not for overseas service) for the 1st time, 1942, and by the end of the war over 600,000 men and women had served in the armed forces. Unlike the pattern

which followed World War I, the readjustment to postwar conditions was accomplished without inflation and with no substantial unemployment. (*Cont. p. 631.*)

NEW ZEALAND

1914-45

NEW ZEALAND IN WORLD WAR I. New Zealand entered World War I under a coalition government representing the Liberal and Reform Parties and headed by the Liberal leader, W. F. Massey (1856-1925). The nation's wartime military commitment was met by volunteers, although conscription was approved, 1916, as a stand-by measure. The country's chief natural resources, gold and agricultural products, were put at the disposal of Britain. Having signed the Treaty of Versailles and joined the League of Nations, New Zealand received the former German colony of Western Samoa under mandate from the League. The major piece of social legislation passed during the war provided for a triennial referendum on the question of national prohibition of alcoholic beverages, replacing the previous system of local options. Demobilized soldiers received either pensions or land grants from the government.

ECONOMIC POLICIES. The postwar period witnessed excessive speculation in rural land, which was ended only by a sudden fall in land prices, 1921. The Conservative Party victory in the general election of 1925 returned J. G. Coates (1878-1943) as prime minister. Coates's government encouraged the development and expansion of New Zealand's major exports, mutton and dairy products. Because of the success of this program and the nature of the products (which always retain a minimum level of demand), and also because of a sound financial system, New Zealand's economy did not suffer as severely during the depression as did those of the other dominions, whose markets diminished precipitously. New Zealand was not entirely immune from

the world crisis, however, and adopted a series of laws, 1930-35, aimed at counteracting the effects of low prices and unemployment: many taxes were reduced or abolished, interest rates were lowered, subsidies were paid to farmers, and a reduction of 10% was made in wages, salaries, and pensions.

FOREIGN POLICY. Although New Zealand signed the Pact of Paris, 1928, and the London Naval Treaties, 1930 and 1936, and continued with the other dominions to emphasize her independence from Britain, she nonetheless was reluctant to accept too separate a role in foreign affairs, looking to Britain as guide and provider. She joined with Australia and Newfoundland in asking the British Parliament to allow the Statute of Westminster, 1931, to become operative only when ratified by individual dominion legislatures, which did not occur in New Zealand until 1941, 10 years later.

DOMESTIC LEGISLATION. In 1932 New Zealand participated in the general tariff reductions adopted by Commonwealth countries. The Labour Party returned to office in 1932, with M. J. Savage (1872-1940) heading the government. In the following year the Reserve Bank of New Zealand, founded in 1931, was nationalized. Legislation passed in 1933 fixed minimum wages, provided a 40-hour workweek for industrial workers, and began a program of free secondary education. The Social Security Act, 1938, offered health and medical benefits in addition to providing old-age pensions. The electorate expressed its approval of the establishment of the welfare state by returning Savage and a clear Labour majority in the general election of 1938.

NEW ZEALAND IN WORLD WAR II. Like the other dominions, New Zealand declared war on Germany in 1939 without being subjected to aggression herself, but made clear that she was acting as an independent power. In Sept. 1940 Peter Fraser (1884-1950), who had succeeded Savage as prime minister in Mar., formed a war cabinet on the British model, with members of other major parties holding important portfolios. (*Cont. p. 632.*)

East Asia

THE NEW CHINA

1914-18

RULE OF YÜAN SHIH-K'AI. In 1914 Yuan Shih-k'ai (1852-1916) dissolved parliament and had himself elected president of China for life. Aiming to establish a constitutional monarchy with himself at its head, he called a convention of "citizens' representatives" who, surrounded by armed soldiers, voted in favor of monarchy. Yuan, however, underestimated the opposition to such a move, especially from regional military leaders who viewed a strong centralized monarchy as a threat to their power. After Yuan's death, 1916, his republican opponents reconvened parliament, but in the summer of 1917 a group of provincial military governors seized Peking and parliament was again disbanded.

WARLORDISM AND THE ECLIPSE OF SUN YAT-SEN. The next decade in China's history has been called the "warlord period." Since no single military official was strong enough to dominate the rest, the leaders quarreled among themselves while the central government at Peking became a pawn in the hands of regional military forces. Sun Yat-sen and his followers were powerless to combat the military governments. During 1913-16 Sun lived in Japan, seeking financial support for his campaign against Yuan. After Yuan's death Sun returned to China, and became involved in warlord politics when military officials at Canton permitted him to establish a government there. At the end of World War I Sun's party was at the nadir of its influence.

THE 21 DEMANDS. While the western powers were preoccupied with the war in Europe, Japan seized the opportunity to further her expansion in China, particularly Manchuria. The Anglo-Japanese alliance called for Japan's participation in the war, and Japanese troops captured the German-leased territory of

Kiaochow as well as the German-owned Marshall, Mariana, and Caroline Islands in the Pacific. In 1915, when Yuan's government challenged the Japanese occupation of Shantung, the Japanese refused to leave and instead presented China with the "21 Demands."

The Demands were divided into 5 groups, the first 4 dealing with the extension of Japanese rights in Manchuria, Shantung, and Fukien and with the need for increased control over the Han-yehp'ing Ironworks. The 5th group, which set out a scheme for Japanese domination over Chinese police forces and administration, demanded virtual Japanese control of China. Unable to oppose the 21 Demands by force, China revealed them to the world in the hope that the western powers would object. Anglo-American pressure led Tokyo to postpone the 5th and harshest set of demands, but China was compelled to conclude several treaties and exchange notes with Japan which seriously compromised her sovereignty. Most important, China was forced to agree in advance to any arrangements Japan might make in the peace treaty with Germany at the end of the war.

WESTERN FAILURE TO SUPPORT CHINA. The 1915 treaties and notes gave Japan a special position in China far exceeding that held by any of the western imperialist powers. A secret Russo-Japanese treaty of 1916 recognized Japan's new status in China in return for Japanese recognition of Russia's advance into Outer Mongolia. In 1917 Britain, France, and Italy secretly promised Japan that the peace treaty would recognize her new gains on the Asian mainland and in the Pacific. The U.S.A. was the chief opponent of Japanese expansionism, and reiterated American rights and the Open Door policy. When the U.S.A. entered the war in 1917, however, she sought assurance that the Japanese would not take advantage of her preoccupation with Europe to

expand further in Asia. The Lansing-Ishii Agreement, 2 Nov., 1917, exchanged Japanese respect for the Open Door for U.S. recognition of Japan's "special interests" in China. Moreover, the U.S.A. agreed to recognize the gains already made by Japan in China in return for a Japanese pledge not to take any further territory.

CHINESE PARTICIPATION IN WORLD WAR I. In 1917 the Americans, believing that Chinese membership in the wartime alliance would strengthen China's voice at the peace table, and the British, wishing to eliminate German commercial rivalry in Chinese ports, both sought to bring China into the war. Parliamentary groups in China insisted that the western powers implement their promises on tariff revision, suspend demands for payment of the Boxer indemnity, and grant other financial concessions before China became a belligerent. The military government, however, succumbed to foreign pressure and declared war on Germany without securing these conditions.

1919-27

CHINA AT THE PEACE CONFERENCE. China's diplomatic weakness was clearly illustrated at the Paris Peace Conference. The Chinese delegate raised the question of the validity of the Sino-Japanese treaties and notes of 1915, particularly with regard to Shantung. When the Japanese threatened to leave the conference unless the Shantung question was decided in their favor, the other powers yielded. But China refused to sign the Treaty of Versailles.

TRENDS IN THE CHINESE NATIONALIST MOVEMENT. During the war years Chinese nationalism expressed itself in a series of boycotts against Japanese and western goods. China's failure at Versailles to recover her rights in Shantung gave a new impetus to the nationalist movement, whose backbone was the new intellectual elite. In the eyes of this western-educated group the collapse of the Manchu dynasty and China's continuing weakness discredited the traditional

Confucian philosophy. The attack against the Confucian tradition merged with the so-called "literary renaissance." This began as an attempt to eradicate the old written language and replace it with one capable of expressing the concepts gained through western education. Hu Shih (1891-1962), an American-educated philosophy student, became the chief proponent of the new writing, which spread rapidly among educated Chinese and served as the vehicle of the new nationalism. Nationalist activity culminated on 4 May, 1919, when China's failure at Versailles led to a large demonstration by students and professors at Peking University. Intellectuals throughout the country followed suit. In the period after the "May 4th Movement," as it became known, virtually every school of western philosophy penetrated China. John Dewey's lectures at Peking, 1919-20, gained him many adherents, but his emphasis on gradualism and pragmatism displeased many Chinese intellectuals impatient for social change.

ORIGINS OF CHINESE COMMUNISM. A large number of intellectuals became attached to Communism, which promised rapid, "scientific" solutions to social and economic problems and offered a historically determined role of leadership for an intellectual vanguard. Lenin's theory of imperialism supplied a convincing explanation for China's exploitation by rival imperialist powers. The Bolshevik Revolution, too, with its promise to lift Russia out of backwardness, inspired those hoping to steer China toward modernization. Moreover, the new Soviet regime declared its readiness to surrender all czarist rights and privileges in China, denounced the secret treaties of World War I, and proclaimed its support of Chinese efforts to regain full sovereignty and equality. In 1918 Ch'en Tu'hsiu (1879-1942), head of the literature department at Peking University and a leader of the May 4th Movement, established a Society for the Study of Marxism. Two years later the Comintern sent 2 agents to China, where they contacted Ch'en and organized the 1st Communist cells in Chinese cities. In 1921 Ch'en

officially founded the Chinese Communist Party (CCP) in Shanghai.

COMMUNIST-KUOMINTANG UNITED FRONT. Having vainly sought western help in building a Chinese republic, Sun Yat-sen accepted Soviet offers of assistance, 1923. This was the period of Communist-sponsored united fronts between Communists and other left-wing groups. In Jan. 1923 Sun and Comintern representative Adolf Joffe (1883-1927) issued a joint statement in Canton which marked the start of co-operation between the Kuomintang (KMT) and the CCP. The 2 men agreed that conditions in China were not conducive to the creation of a Soviet-type system, and that the chief goal should be attainment of national unification and independence from the imperialist powers. Comintern agent Mikhail Borodin (1884-1953) cemented the KMT-CCP alliance by reorganizing the KMT along the lines of the Russian Communist Party. He also urged Chinese Communists to align themselves with the KMT without, however, merging with it or abandoning the organizational unity of the CCP.

APPLICATION OF THE "3 PEOPLE'S PRINCIPLES." A program based on Sun Yat-sen's "3 People's Principles" was adopted at Borodin's suggestion. The Principles, though vague, appeared to share many of Communism's ideals. Nationalism, Sun's 1st principle, was used chiefly to symbolize China's struggle for freedom from imperialism. The 2nd principle, democracy, was best illustrated by Sun's statement that "on no account must we give more liberty to the individual; let us secure liberty instead for the nation." Sun thus favored an "authoritarian" or "guided democracy," in which a small educated elite governed in the name of the masses. Sun's 3rd principle, livelihood, was primarily concerned with what he called "equalization of land ownership."

KUOMINTANG PROGRAM. In Jan 1924 Borodin wrote the official program of the KMT, which guaranteed freedom of speech, the press, association, and religion, but declared that only those "who are really loyal to anti-imperialism will

enjoy all rights and privileges." In the economic sphere Borodin interpreted Sun's 3d principle as requiring equalization of landholdings but not nationalization without compensation. The program empowered the government to tax the land of private owners and reserved the option to purchase it in the future. Private industries, whether Chinese or foreign-owned, were to be nationalized if they assumed the nature of monopolies or if they were "beyond the capacity of private individuals to develop, such as banking, railroads, and navigation." The program's foreign policy advocated the abolition of "unequal treaties," foreign concessions, extraterritoriality, and foreign control of customs. •

Soviet influence in Canton grew when the KMT created a special military academy at Whampoa. Russian military experts played an important role at Whampoa, as well as serving as advisers for the Nationalist army as a whole. Many KMT leaders were eager to launch a "Northern Expedition" to reunify China by freeing her central and northern regions from the warlords and by seizing arsenals in order to reduce Nationalist dependence on Soviet arms. Borodin worked to delay the expedition until he had completed the reorganization of the KMT along Communist lines and had ensured Soviet control over the Chinese revolution.

RISE OF CHIANG KAI-SHEK. Communist penetration of the KMT led to a split between its right and left wings. The schism widened after Sun's death in 1925, since the KMT possessed no leader of comparable prestige to succeed him. In Mar. 1926 Borodin left Canton temporarily, leaving a triumvirate which included Chiang Kai-shek (b. 1886), commander of the Whampoa Academy, in control. Chiang took advantage of Borodin's absence to stage an anti-Communist coup and arrested the Russian military advisers. After Borodin's return, however, a compromise was reached which reflected the desire of each side to maintain co-operation until it was strong enough to eliminate the other. Borodin now shifted his attitude to one of favoring the North-

ern Expedition, which he saw as an opportunity for the Communists to gather recruits among the proletariat and poor peasantry in the Yangtze provinces.

NORTHERN EXPEDITION. The Northern Expedition began, mid-1926, under Chiang's command. Communist agitators had arranged strikes and peasant revolts behind enemy lines and had even infiltrated the northern armies. Chiang's forces were received by the civilian population as an army of liberation, and deserters from warlord armies swelled his ranks. As the expedition continued, Chiang led 1 column to Nanking, while the other column, including Borodin, the Communists, and the Left KMT, took Hankow. The expedition halted while each group tried to force the other to come to its headquarters. On 10 Mar. 1927, the Hankow group called a meeting which deprived Chiang of his chairmanship of the standing committee of the KMT's Central Executive Committee as well as his military command.

KMT-COMMUNIST SPLIT. In the ensuing power struggle Chiang emerged as victor. He had the support of non-Communist labor leaders, Chinese businessmen and bankers, and the foreign community in Shanghai, all of whom were disturbed by the anti-imperialist attitudes adopted by the KMT under Borodin and were relieved by the Right KMT's break with the Communists. In Apr. 1927 Chiang's troops arrested and executed large numbers of Communists in Shanghai. In July the Left KMT at Hankow repudiated its alliance with the Communists because of CCP attempts to implement radical land reforms and encourage peasant uprisings. The Left KMT expelled the Chinese Communists from Hankow and deported the Russian advisers. Moscow then purged Ch'en Tu'hsiu, making him the scapegoat for the failure of the KMT-CCP alliance, and ordered the CCP to shift to a policy of fomenting strikes in urban areas. China's small proletariat, however, displayed more interest in negotiating for economic benefits than in revolution.

EARLY YEARS OF MAO TSE-TUNG. Born in 1893 of a fairly well-to-do peasant family in Hunan province,

Mao Tse-tung was working in the library of Peking University at the time of the May 4th Movement. There he met Ch'en Tu'hsiu, and later became a charter member of the CCP. After the collapse of the KMT-CCP alliance he was sent to his native Hunan to foment peasant insurrections. His "Autumn Harvest Uprisings," named for the season when collection of rents and taxes by landlords aroused peasant hostility, failed miserably, and he was dismissed from the Politburo of the CCP. But Mao was so impressed by the possibilities of peasant revolts against landlords that he decided: "Without the poor peasants there will be no revolution." The Comintern, however, condemned the "excesses" of the peasant movement while the KMT-CCP alliance remained in force.

CANTON COMMUNE. In Dec. 1927 Communist forces, assisted by a local warlord, seized key installations in Canton and created a Soviet of Workers', Soldiers', and Peasants' Deputies. This regime, known as the Canton Commune, lasted only a few days. By the end of 1927, Communist influence in China was at a low ebb, and Chiang Kai-shek was preparing to set up a unified Nationalist government at Nanking.

1928-35

CONSOLIDATION OF THE NATIONALIST GOVERNMENT. In 1928 Chiang resumed the Northern Expedition and brought Peking and Manchuria under at least nominal control. He then established a KMT 1-party regime, for which he invoked the political philosophy of Sun Yat-sen, still revered as the hero of the revolution. Sun's political program had envisaged 3 steps: military unification of China; a period of "tutelage," in which the KMT monopolized power and educated the people in public affairs; and democracy, as defined by Sun.

Chiang's unification of the country was followed by the promulgation, Oct. 1928, of the Organic Law of the Nationalist government. The Political Council of the KMT's Central Executive Committee became the chief policy-making body of the new government which also consisted of

5 *Yüan*, or branches—Executive, Legislative, Judicial, Examination, and Control—to implement the Council's directives. A president, who also held the posts of head of state in foreign relations and commander in chief of the military forces, headed the government.

RULE OF CHIANG KAI-SHEK.

Since, as president, the limits of Chiang's power were undefined, he became a virtual dictator. In 1931 the Organic Law was replaced by a constitution, which retained the same government apparatus but added a bill of rights and weakened the president's power. Chiang resigned the presidency in favor of Lin Sen, who died in 1943, at which time Chiang again became president.

Although Chiang held many party and government posts after resigning the presidency, his real base of power remained the national army, which, in turn, was the instrument by which the Nationalist government exerted authority over military leaders who retained private armies after joining the KMT. Chiang created the Central Military Academy, whose graduates, as well as those from Whampoa, remained personally loyal to him. After the KMT's Russian advisers were expelled, Chiang invited German military experts to help him build a professional army, but he continued to promote officers on the basis of personal loyalty rather than ability. Next to the army the most important pillar of Chiang's power was his relationship, cemented by marriage to Soong Mei-ling (b. 1898), with China's major financial corporations.

Under Chiang the Nationalist government instituted such major reforms as the establishment of a sound currency system, a national budget, and modern economic accounting procedures, improvements in transportation and communications, the introduction of western-style law codes, and the spread of education. The government's critical weakness was its neglect of agrarian problems, particularly widespread tenancy and absentee landlordism. The Communists skillfully exploited agrarian discontent.

NEW LIFE MOVEMENT. Chiang sought to strengthen his rule by an

ideological program of his own, the "New Life Movement," inaugurated in 1934. Emphasizing the Confucian virtues of propriety, righteousness, and sense of shame, the movement sought to reform daily living habits, strengthen Chinese moral character, and instill respect for the government's authority. It collapsed largely because of its incompatibility with the new western-inspired values of young Chinese, who rejected Confucianism.

OPPOSITION TO THE CHIANG REGIME. Chiang faced considerable opposition from political rivals within the KMT. The two Ch'en brothers, members of the party's right wing, were Chiang's chief supporters in the intraparty struggle. Known along with their adherents as the "C.C. Clique," the Ch'ens controlled the "Blue Shirts," a secret group charged with maintaining party discipline and weeding out opponents.

Outside the party Chiang's main enemies were the warlords, Communists, and Japanese. Since the Nationalist government firmly dominated only the lower Yangtze Valley, it was vulnerable to challenge by warlord regimes in the rest of China. The Japanese invasion of Manchuria, 1931, forged a temporary unity among rival forces in China. The Tangku armistice, 25 May, 1933, ended the fighting over Manchuria, which came under firm Japanese control.

CHINESE SOVIET REPUBLIC. In addition to fighting the warlords and the Japanese, Chiang's army staged several "extermination campaigns" against the Communists, who in the winter of 1927 retreated, under Mao's leadership, into the Chingkan Mountains in southeastern China. The regular CCP leaders remained in Shanghai, where they continued to obey the Comintern policy of armed insurrection in the cities. The CCP finally admitted the failure of this policy, and accepted Mao's theory of a rural base and peasant support, Nov. 1931, when the Chinese Soviet Republic was created at Juichin, in Kiangsi Province, under Mao's chairmanship. This regime issued a constitution and a land law providing for redistribution of land to the poorest peasants. Mao did not wish to break

openly with the Comintern, however, until he had consolidated his power and could present Stalin with a *fait accompli*.

THE LONG MARCH. Thanks to the Japanese invasion of Manchuria and the resulting concentration of Nationalist energies against the threat this posed, the Communists won time to strengthen their republic. The Tangku armistice, however, left Nationalist forces free to attack the Communists again. In late 1933 Nationalist troops surrounded Communist-held territory, setting up a blockade which prevented the Communists from obtaining supplies. By Oct. 1934 the latter's position had become untenable. The result was the famous "Long March," in which the Communists broke free of their enemy's stranglehold and marched over 6,000 miles from southeast to northwest China. In Jan. 1935, in the middle of the Long March, the CCP held a conference at Tsun-yi at which Mao was elected party chairman. Mao thus became the first Communist to reach a top leadership position without formal investiture from Moscow. In Oct. 1935 the Communists established new headquarters at Yen-an in Shensi Province. Although this was not far from the Sino-Soviet border, Stalin offered the CCP little assistance.

1936-45

FORMATION OF THE UNITED FRONT. Alarmed by Nazism in Germany and militarism in Japan, the Soviet Union ordered the Comintern to adopt a united-front policy, 1935. The CCP independently followed the same line: a party conference issued a resolution, 1 Aug., 1935, urging united resistance against Japan. Chiang and many CCP members remained wary of co-operation, but Japanese incursions near Yen-an, 1936, led the Communists to reiterate the need for a united front. Chiang continued to resist the idea. In Dec. 1936 he ordered the troops under Chang Hsieh-liang, warlord of Manchuria, to attack the Communists. These troops, however, had been driven out of Manchuria by Japanese forces and were garrisoned at Sian, not far from Yen-an. They were thus susceptible to Communist propaganda advocating

an anti-Japanese alliance and disobeyed Chiang's order. When Chiang personally flew to Sian to enforce his wishes, he was kidnapped by Chang's troops. Communist mediation was instrumental in Chiang's release; although he was their chief opponent, the Communists believed his leadership indispensable to a successful united-front policy. On 21 Aug., 1937, a Sino-Soviet treaty of nonaggression was signed at Nanking, and supplementary accords provided for substantial aid to China.

A month later the CCP issued a manifesto proclaiming a CCP-KMT alliance against Japan. The manifesto pledged a number of concessions, the most important of which was reorganization of the Red Army under Nationalist supervision, but Mao insisted on CCP independence within its own territory and autonomy within the united front to a degree still consistent with anti-Japanese unity. On 23 Sept. Chiang issued a statement welcoming the Communist proclamation and promising to cease military suppression of the CCP in favor of joint efforts against the Japanese.

In the 1st year of its existence the united front functioned smoothly. By mid-1938, however, cracks in its structure were apparent. From then on each side accused the other of violations of the 1937 agreements, and clashes between Communist and Nationalist forces increased. A serious military confrontation between the 2 sides in Jan. 1941 led the Nationalists to reimpose a blockade of Communist-held territory.

SUCCESS OF COMMUNIST POLICIES. The years 1941-42 were difficult ones for the Communists, but in mid-1943 a period of rapid Communist territorial expansion began. Japanese puppets ruled most of north China's cities, but the poorly garrisoned small towns and the vast countryside were a military and political vacuum which the Communists filled. The people of north China at first accepted Japanese rule willingly, but Japan's brutal occupation tactics alienated the villagers in time and paved the way for Communist-sponsored rural mobilization on the basis of peasant nationalism and hatred of the Japanese.

The theoretical basis of the Communist

program was Mao's *On the New Democracy*, 1940. It envisaged a "joint dictatorship of all revolutionary classes" under Communist leadership to lead China through the "bourgeois democratic" and later the "socialist" stages of the revolution. In order to allay the fears of non-Communist groups, Mao suggested that the bourgeois-democratic stage, which was directed against imperialism and feudalism, would be prolonged and would permit private enterprise and expansion of capitalism. Whenever the Communists entered a village, they attracted peasants to their cause by persuading landlords to reduce rents. This policy also induced landlords to co-operate with the CCP in order to avoid confiscation of their land. The Communists distributed to the peasants land belonging to absentee or collaborationist landlords. One of the CCP's most successful policies during this period was the "Production Movement," which began as a reaction to the KMT blockade of Communist-held areas and aimed to make every such area self-sufficient in agriculture and industry. As the Sino-Japanese war progressed, people in Communist-administered regions came to enjoy a higher standard of living than their counterparts in Kuomintang areas. The Communists built people's militia units so that villagers could participate directly in the fight against the Japanese. These units, whose greatest contribution was gathering military intelligence, complemented the Communists' own regular and guerrilla troops.

COMMUNIST METHODS OF GOVERNMENT. The CCP introduced democracy in the form of elective village and town councils. Although all anti-Japanese political parties, including the KMT, were legalized, the Communists' position of leadership was not jeopardized but rather exercised through "mass organizations" of women's, farmers', youth, and other groups. The Communists also initiated a veritable social revolution in the "liberated areas," including introduction of free and compulsory education, enforcement of monogamy, reform of the legal code, and publication of vast quantities of newspapers and magazines as media for the spread of propaganda,

which, however, never mentioned the word "Communist." Communist-held areas expanded from c. 35,000 sq. mi. containing about 1½ m. people in 1937 to c. 300,000 sq. mi. and 95 m. people in 1945. Similarly, the number of Communist troops increased from approximately 100,000 regulars in 1937 to 900,000 plus 2 m. in the people's militia by 1945.

In order to maintain party discipline in the midst of a vast influx of new members, Mao conducted *cheng feng*, or ideological remodeling campaigns. He also emphasized the need to "Sinify" Marxism-Leninism, i.e., adapt it to Chinese conditions. This policy, moreover, did not entail repudiation of the Soviet line; when Stalin dissolved the Comintern in 1913, he urged each Communist Party to attune itself to local conditions. On international issues Mao continued to obey Stalinist dictates. In the spring of 1945 the CCP held its 7th Congress, the 1st since 1928. Its highlight was Mao's speech "On Coalition Government." He called for a "provisional, democratic coalition government—including representatives of all parties and groups" to initiate democratic reforms and mobilize all anti-Japanese elements. He made clear, however, that his ultimate goal was a Communist China.

DECLINE OF THE KUOMINTANG.

In sharp contrast to the increased popularity and influence of the CCP, the KMT wallowed in stagnation and corruption. The KMT was never a mass organization, but rather an elite party enjoying passive acceptance, not active support, from the Chinese people. As war gripped China, the KMT abandoned whatever reform programs it may have harbored and, under the leadership of Chiang and the right wing, became increasingly autocratic. It alienated more and more social groups and then resorted to repression to ensure loyalty. repressive measures resulted, in turn, in further disaffection.

Before the war the KMT depended for political and financial support on western-oriented businessmen, industrialists, and financiers in the coastal cities. When the Japanese captured the coastal provinces, this support, as well as the important revenue from maritime customs, was lost.

The war also generated spiraling inflation, which turned many middle-class and wealthy elements against the government. As the Japanese penetrated inland, the Nationalists had to evacuate Nanking and move the capital to Chungking, where conservative landowners provided a basis of support and land tax became the chief item of government revenue. Since the KMT could not afford to alienate the large landlords by promulgating land reforms, the Communists attracted millions of propertyless peasants to their cause.

Chiang's answer to Mao's *On the New Democracy* was *China's Destiny*, 1943. In contrast to Mao's promise of a bright revolutionary future, Chiang envisaged a paternalistic regime. Whereas Mao offered all classes an opportunity to co-operate in China's reconstruction, Chiang scolded western-oriented intellectuals for disloyalty to China, condemned businessmen for profit-seeking, and alienated the youth with his emphasis on frugality and obedience. He disregarded completely the widespread popular support for the CCP, and argued that a military defeat of its forces would dispose of the Communist menace. This attitude led him to scorn the idea of basic reforms and to commit his best troops against the Communists rather than against the Japanese. Despite Chiang's intransigence, negotiations between the CCP and the KMT were held in Chungking in the autumn of 1942. In 1944 talks were resumed, but at the war's end the 2 sides were no closer to agreement. Neither was willing to abandon the 1-party control each enjoyed in its own territory. The surrender of Japan, Aug. 1945, freed both Communist and Nationalist troops for exclusive use against each other and for full-scale civil war. (*Cont. p. 545.*)

and Vladivostok, which sought Soviet arms and aid. On 1 Mar., 1919, the nationalist Samil movement was founded, and held a peaceful nationwide demonstration to indicate nationalist sentiment. The demonstration was brutally suppressed by the Japanese; 6,670 Koreans were killed, 14,611 wounded, and 52,770 arrested. Between 1919 and 1921, An Ch'ang-ho tried to set up a Provisional Government of the Korean Republic, and meetings in support of the attempt were held in Shanghai and Seoul, but no lasting interest was aroused. On 1 Mar., 1919, a Declaration of Independence was signed by 33 patriots and the Mansei movement, nationalist in tone, was formed (and soon suppressed by the Japanese). Anti-Japanese sentiment increased as the Japanese government expropriated the property of Korean farmers. Between 1910 and 1920, 400,000 Japanese moved to Korea.

KOREAN COMMUNISM. In 1925 the Korean Communist Party was inaugurated in Seoul. Between 1927 and 1931 a coalition of Communists and Nationalists formed the Shinganhoe (New Korea Society), but all subversive activities were put down by the Japanese. The year 1929 was marked by a general strike of factory workers in Wonsan and by the Kwangzu student revolt. During the 1920's Communism was a major focus for Korean anti-Japanese activities, in part because only the Soviet Union seemed willing to support such activities. The same period, however, was also marked by efforts on the part of the Japanese in the direction of liberalism, conciliation, and reform, under the leadership of Adm. Saito Minoru. These efforts had small result, but many Koreans were persuaded to collaborate with the Japanese.

1930-45

KOREA

1914-29

GROWTH OF KOREAN NATIONALISM. During 1918-19 Gen. Yi Tong-hwi organized an embryonic expatriate Korean Communist Party in Khabarovsk

JAPANESE ECONOMIC EXPLOITATION. During the 1930's half the rice crop of Korea was exported to feed Japan, while the per capita consumption of rice by the Koreans themselves fell by 45%. Japanese liberal policies withered as militarism in the homeland gained sway.

The occupying power installed an excellent network of railways and roads as well as postal services, telecommunications, hydroelectric plants, mines, and some modern industries, but Korean living conditions remained poor, and Japanese large-scale landlordism increased greatly. By 1936, 3% of the government bureaucrats in Korea were Japanese, and the use of the Korean language was proscribed.

KOREA IN WORLD WAR II. In 1912 Korea became an integral part of Japan, though Koreans did not automatically acquire Japanese citizenship. Korean youths were conscripted into the Japanese army. On 1 Dec., 1943, at the Cairo Conference, Roosevelt, Churchill, and Chiang Kai-shek issued a statement proclaiming that "in due course Korea shall become free and independent." In Feb. 1945 at the Yalta Conference the Soviet Union agreed to declare war on Japan in return, *inter alia*, for the right to occupy the northern half of Korea pending the establishment of Korean independence. On 26 July at the Potsdam Conference the allies again pledged Korean independence. On 9 Aug. the Russians occupied North Korea, and U.S. troops soon afterward moved into South Korea. The 38th parallel was accepted as the boundary between the 2 occupation zones. (*Cont. p.* 587.)

JAPAN IN AN AGE OF MILITARISM

1914-20

JAPAN IN WORLD WAR I. Japan saw the war in Europe as a chance to improve her position in China. On 23 Aug., 1914, when the Germans ignored a Japanese ultimatum to withdraw their military and naval forces from China and yield up their leased territories, Japan declared war. By 1915 the Japanese had occupied all German-leased territory and the German-owned islands in the Pacific. They then presented to China the 21 Demands, and enforced acceptance of most of them, May 1915. During 1916-17 they consolidated their gains in China by means of a

series of secret treaties with the European powers. Japan still lacked U.S. acquiescence in her China position, but the Lansing-Ishii Agreement, 2 Nov., 1917, recognized that "territorial propinquity" gave her a special interest in China. She therefore felt that her position was assured at the coming peace conference. Meanwhile she quietly pushed her economic penetration of China by means of the "Nishihara loans," 1917-18.

SIBERIAN EXPEDITION. When the success of the Bolshevik Revolution raised the possibility of allied intervention in Russia, Japan saw an opportunity to further her interests in Siberia and northern Manchuria. It happened that in June 1918 the Czech army, which had rebelled while returning home via the Trans-Siberian Railroad, captured Vladivostok. The U.S.A. wanted to support the Czechs, and requested Japan's help. The Japanese government favored modest action and adherence to the principle of self-defense. It was in this spirit that Japan assented to the American request. The Japanese army, however, followed its own plan and soon occupied Siberia from Lake Baikal to Vladivostok. Japan gained nothing from the venture, though her troops remained in Siberia until 1922.

PREMIERSHIP OF HARA TAKASHI. The economic boom caused by the war dramatically reversed Japan's unfavorable balance of payments and brought over-all prosperity. But it also caused a very sharp rise in prices. Widespread unrest resulted. The nearly nationwide rice riots of Aug. 1918 caused Premier Teruchi Masatake (1852-1919), a moderate general, to resign. He was followed by Japan's 1st "commoner" premier, Hara Takashi (1856-1921). Hara was not from Satsuma or Choshu, and had refused an appointment to the peerage. He was the president of the Seiyukai, the majority party in the Diet, and his cabinet was composed almost entirely of party men. But Hara was either unwilling or unable to promote strong party rule, and preferred to conciliate the military, the bureaucracy, business interests, and the Genro (Elder Statesmen). It was his party

that defeated in the Diet a bill to introduce universal male suffrage. In 1921 he was assassinated by a rightist.

PARIS PEACE CONFERENCE. At Versailles, where she sat on the Council of 10, Japan obtained recognition of her rights in Shantung over bitter Chinese protests. She also received as mandates the former German islands north of the Equator. She failed, however, to obtain in the Covenant of the League of Nations a statement upholding racial equality. Considerable disillusionment in Japan was the result.

1921-31

WASHINGTON DISARMAMENT CONFERENCE. The U.S.A. called the Washington Disarmament Conference, 12 Nov., 1921-6 Feb., 1922, to discuss naval disarmament and the complexities of the China issue. Japan consented to a warship ratio in the proportion of 5 each for the U.S.A. and Britain to 3 for herself. However, she retained effective control over the Western Pacific. Japan also committed herself to returning Shantung to China. The latter concession, honored in 1922, was a signal example of the conciliatory China policy which became identified with Shidehara Kijuro (1872-1951), the foreign minister during much of the 1920's.

PREMIERSHIP OF KATO TAKAKI. An earthquake destroyed vast areas of Tokyo in 1923. In 1924 Matsukata Masayoshi, the last of the senior Genro, died, the only Genro left was Saionji Kimochi. Between 1921 and 1924, 3 brief nonparty cabinets succeeded one another. Then in June 1924 Kato Takaaki (1860-1926), president of the Kenseikai Party, was named premier. In May 1925 Kato succeeded in having the Diet pass the Universal Manhood Suffrage Act. However, the Diet also passed a stringently anti-subversive Peace Preservation Law. Kato died in 1926 and was succeeded by Wakatsuki Reijiro (1866-1950). In Apr. 1927 Gen. Tanaka Giichi (1863-1929) took office as premier. Wakatsuki lost influence following the bank panic of early 1927

and Tanaka was selected as president of the Seiyukai, evtn though it was the minority party at that time.

INTERVENTION IN MANCHURIA. In June 1928, elements of the Kwangtung Army (the Japanese army in Manchuria) murdered the Manchurian warlord Chang Tso-lin (b. 1876) because he would not co-operate with Japan. As premier, Tanaka could not condone this act. But he was powerless to punish it, and eventually had to resign. His successor was Hamaguchi Osachi (1870-1931), the leader of the Minseito, the successor party to Kato's Kenseikai. Hamaguchi renamed Shidehara foreign minister and worked to cut expenditures and extend the real power of the legislative branch. Over stiff military opposition he obtained Privy Council approval of the further limitations imposed upon Japan by the London Naval Treaty, 1929. In Nov. 1930 he was shot and critically wounded by an assassin. Wakatsuki, who followed him, was unable to resist military pressure. The ultranationalist views of men like Kita Ikki (1883-1937) were inspiring a rash of assassination plots among young officers and rightists. Then on 18 Sept., 1931, the Kwangtung Army engineered a minor explosion on a Japanese-controlled railway line in Manchuria, thus providing the pretext for an instant take-over.

1931-41

INCREASE IN EXPANSIONIST PRESURES. In Feb. 1932 Manchukuo, the Japanese puppet state in Manchuria, declared itself independent.

On 15 May, 1932, Inukai Tsuyoshi (b. 1855), Wakatsuki's successor as premier, was assassinated. He was the last party premier prior to the American occupation. Under his successor, Adm. Saito Makoto (1858-1936), the military pressed harder still for expansion on the Asian mainland and for greater control at home. On the continent the army did indeed expand, causing international protests which provoked Japan to walk out of the League of Nations, Mar. 1933.

At home factional struggles within the

army were approaching a climax. The contenders were the Kodo-ha (Imperial Way Faction), representing young officers and such senior extremists as War Minister Araki Sadao and Mazaki Jinzaburo, and the Control Faction, representing in general higher-ranking officers who were more moderate as to means, if not to ends. On 26 Feb., 1936, Imperial Way adherents tried to seize control of Tokyo and assassinate key members of the government. The coup was swiftly crushed. Its effects were to strengthen the Control Faction and allow it to pose as the savior of the nation.

1ST KONOYE CABINET. The expansionist mood of Japan's leaders was not shaken by the Diet election returns of Apr. 1937, which overwhelmingly favored moderates. Prince Konoye (Konoe) Fumimaro (1891-1945), inaugurated as premier in June, took the 1st positive steps toward a decisive effort on the continent. A Cabinet Planning Board was created to coordinate and direct the activities of the various branches of government. This board was an important example of several advisory bodies established in the late 1930's. They were meant to allow the government complete control over economic, political, and military activity, but none was entirely successful.

SINO-JAPANESE WAR. The Sino-Japanese war began with a clash at the Marco Polo Bridge near Peking, 7 July, 1937. In Dec. the Japanese took Nanking, whereupon Chiang Kai-shek removed his government inland instead of surrendering. Japan's stated objective had been only to obtain Chiang's recognition of her tutelary position vis-à-vis China. Now the Japanese army was to become bogged down in China's vast interior until 1945.

NATIONAL MOBILIZATION. A National General Mobilization Bill, drafted by the Cabinet Planning Board, was passed by the Diet in Mar. 1938. The bill provided for all measures necessary in the event of a national emergency. For the time being, however, it was not to be fully implemented. A new 5-Minister Conference (premier, war, navy, foreign affairs, finance), entrusted with the most

urgent matters of state, was dominated by the military. But the most powerful civilians shared the goals of the army, and navy.

THE NEW ORDER. On 3 Nov., 1938, Konoye issued a statement on "A New Order in East Asia." The statement looked to the integration of Japan, China, and Manchukuo under Japanese leadership, and to the eventual expulsion of western influence from the area. It had been drafted by a highly distinguished group of civilian intellectuals, not by outright militarists.

MAINLAND EXPANSION. Through the cabinet's Manchurian Affairs Board and the General Affairs Board controlled by the Kwangtung Army, the economies of Japan and Manchukuo were virtually integrated. For China a China Affairs Board in Tokyo and a series of Japanese-owned regional development corporations attempted to achieve the same results. Japan also exerted military pressure to reduce the western presence in China, occupying Hainan Island (French), Feb. 1939, and blockading the British concession in Tientsin, June. But damaging clashes with Soviet troops on the Korean border, July 1938, and on the Mongolian-Manchukuo border, Aug. 1939, alarmed the Japanese government. On the outbreak of war in Europe, Sept. 1939, Japan declared that she would not become involved, but would concentrate on settling the war in China. Negotiations stayed off war with the USSR. In Mar. 1940 the Japanese-sponsored Wang Ching-wei government was established in Nanking, and in June Japan forced Britain to close the Burma Road.

DOMESTIC POLITICAL CONSOLIDATION. Konoye's 1st cabinet lasted until Jan. 1939. In July 1940 he was once more the only premier acceptable to all groups. This time his war minister was Gen. Tojo Hideki (1884-1948), Japan's principal wartime leader. Konoye's 4-point program included alliance with the Axis and a planned national economy. The Axis alliance was signed, Sept. 1940, but national economic planning was a vastly more complex problem. The natu-

ral and industrial resources available to Japan were widespread geographically and under very different types of control, from full Japanese sovereignty (Korea) to a sovereignty that was officially nominal (Manchukuo). Moreover, the huge family combines (*zaibatsu*) still resisted full state control. By Oct. 1941 the political parties had been dissolved and the Imperial Rule Assistance Association was established under the premier.

1941-45

PEARL HARBOR. Japan realized that among the western powers only the U.S.A. and the USSR could take action against her, although the Netherlands East Indies had done their best, Sept. 1940, by refusing Japan's demands for oil. In Mar. 1941 Japan obtained a nonaggression treaty from the USSR. From Apr. to Dec. 1941, Ambassador Nomura and Secretary of State Cordell Hull negotiated in Washington, but without result. Japan would not withdraw her troops from China, as Hull demanded, nor give up her alliance with the Axis powers. In June Germany invaded the USSR, prompting the summoning of a Japanese Imperial Conference, 2 July, 1941. At this conference Japan's leaders decided to move into Siam and Indochina even at the risk of war with the U.S.A. In mid-July Konoye removed Foreign Minister Matsuoka Yosuke, believing that Matsuoka was an obstacle preventing smooth negotiations between Japan and the U.S. On 29 July Japanese troops entered Indochina. The U.S.A. immediately froze Japanese assets. On 18 Oct. Tojo became premier. It was soon decided that Japan would make war on the United States and Britain if negotiations broke down. They did break down, and Japan attacked Pearl Harbor, Hawaii, 7 Dec., 1941.

PACIFIC WAR. By May 1942 Japan controlled East Asia from Burma and the Netherlands East Indies to Manchuria, and the islands of the Pacific from the Gilberts to the Aleutians. Her most immediate interest in this vast area was

economic exploitation. Politically she hoped to set up "independent" friendly regimes. In Nov. 1942 the Greater East Asia Ministry was created to co-ordinate the exploitation of conquered areas. In Nov. 1943, allied victories like Guadalcanal forced creation of a Munitions Ministry, which finally achieved total economic control over Japan. By Feb. 1944 Tojo was premier, war minister, and chief of the general staff. But the capture of Saipan, July 1944, forced him to resign. He was replaced by Gen. Koiso Kuniaki (1880-1950). Aug. 1944 saw the formation of a Supreme Council for the Direction of the War, a final effort to co-ordinate all vital government functions. Its chairman was the emperor. In Apr. 1945 Okinawa fell, and Koiso was replaced by Suzuki Kuntaro (1867-1948), who favored, in private, termination of the war. By July Japan had asked the USSR to secure a peace short of unconditional surrender.

POTSDAM DECLARATION AND SURRENDER OF JAPAN. On 26 July, 1945, the allies issued the Potsdam Declaration, which called for the unconditional surrender of Japan, to be followed by her occupation, demilitarization, and democratization. Japan did not reply. On 6 Aug. Hiroshima was destroyed by an atomic bomb. On 8 Aug. the USSR declared war on Japan, in accordance with the Yalta Agreement of Feb. 1945. It was the latter that Japan felt as the more crushing blow. On 9 Aug. the Supreme Council met and became deadlocked between those who favored immediate acceptance of the Declaration and those who insisted that Japan should not be occupied and that the emperor's status should not be changed. The atom bombing of Nagasaki on the same day did not break the deadlock. At last, the emperor himself voted for surrender. When the allies rejected a reservation about preserving the emperor's position, the emperor had again to order capitulation. President Truman accepted Japan's surrender on 14 Aug., 1945. The formal surrender was signed aboard U.S.S. *Missouri*, 2 Sept. (Cont. p. 560.)

The War of 1939-1945

AXIS-SOVIET PARTITION OF EASTERN EUROPE

1939-41

GERMAN INVASION OF POLAND.

After the failure of Nazi efforts (begun 24 Oct., 1938) to gain Polish agreement to the return of the Free State of Danzig to the Reich and the construction of a German extraterritorial road and railway across the Polish Corridor to connect with East Prussia, Hitler secured his eastern flank through the Nazi-Soviet Non-Aggression Pact, 24 Aug., 1939. The German invasion of Poland began on 1 Sept., 1939. The German Luftwaffe gained complete air superiority by destroying the bulk of the Polish Air Force on the ground, and then disrupted lines of communication, thereby crippling Polish mobilization and deployment. Simultaneously the German Army Group North (630,000 men) struck from Pomerania and East Prussia and Army Group South (890,000 men) attacked from Silesia and Slovakia to encircle the hard-fighting but poorly equipped Polish Army (1 m. of its 1.7 m. men mobilized). On 3 Sept. Great Britain and France declared war on Germany, but sent no troops to Poland.

DEFEAT OF POLISH ARMIES.

Aided by Poland's decision to make a stand near the frontier so as to protect Polish industry, the Germans quickly broke through everywhere, and by 7 Sept. were 25 miles from Warsaw. An attempted breakthrough, 9 Sept., to Warsaw by the by-passed Poznań Army (100,000 men) forced some German divisions to about-face, but finally the Poznań Army surrendered, 19 Sept. The rapid Polish withdrawal to the southeast compounded German fuel shortages, but on 17 Sept. the pincers of the envelopment closed at Włodowa. Lvov fell on 21 Sept., Warsaw on the 28th, and the surrender of Kock, 6 Oct., ended organized resistance. The campaign proved the correctness of the

German offensive concept of employing large armored striking forces with good close air support, rather than parceling armor out for infantry support. Against Germany the Poles lost 700,000 captured and 66,000 killed. The Germans suffered 44,000 casualties, including 14,000 killed.

NAZI-SOVIET PARTITION OF POLAND. Despite German prodding, the Soviet Union was so unprepared for the rapidity of the German advance that she was unable to invade Poland until 17 Sept. Thereafter the Russians met little resistance, and were mainly concerned with shunting the Germans out of the Soviet sphere guaranteed by the Nazi-Soviet Pact. The Russians captured 220,000 Polish troops, many of whom were to fight the Nazis again, but 4,000 Polish officers were slaughtered in the Katyn forest near Smolensk.

In dividing the spoils the Germans agreed to Stalin's request that no Polish rump state be created (which Stalin feared the Nazis might use against him), and that Lithuania be transferred to the Soviet sphere of control. In return territorial compensations gave Germany almost all ethnically Polish territory, and while the Russians refused to yield any of Poland's oil they did promise to supply Germany with the equivalent of the annual Polish output (300,000 tons of crude oil). Germany now possessed 22 m. and Russia 13 m. of Poland's prewar population. Some ethnically disputed Polish territory was given to Lithuania (including Vilna) and to Slovakia. On 28 Sept., 1939, a new treaty was signed and a joint statement issued calling for an end to the war between Germany and the western powers.

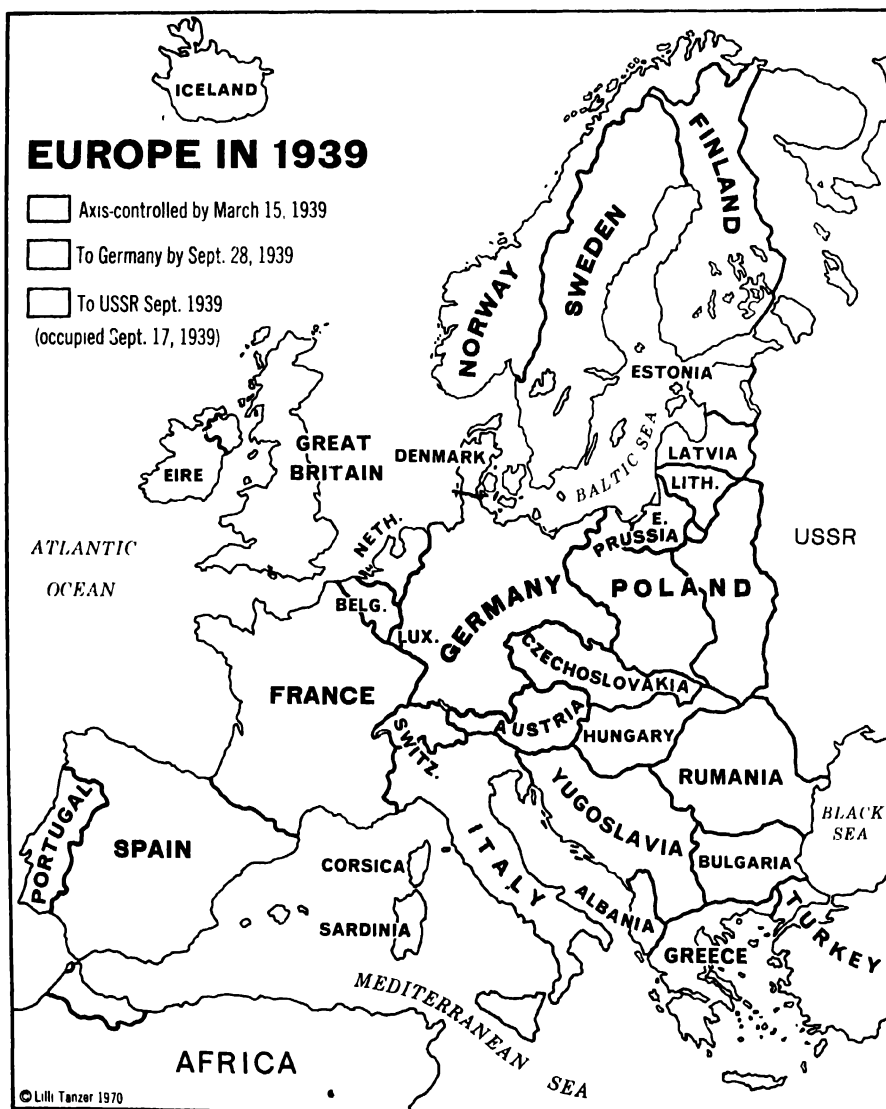

The USSR signed "mutual assistance" pacts, providing for military bases in the Baltic states (with Estonia, 28 Sept.; Latvia, 5 Oct.; and Lithuania, 10 Oct.).

RUSO-FINNISH WAR. On 22 Oct., 1939, the Soviet Union opened negotia-

tions with Finland, demanding a mutual assistance pact, a 30-year lease on a naval base at Hangö, and cession of most of the Karelian Isthmus, islands in the Gulf of Finland, and the western half of the Rybachi Peninsula. The Finns balked over Hangö and the Karelian Isthmus, and after voiding the Russo-Finnish Non-Aggression Treaty, 28 Nov., the Soviet Union opened the Russo-Finnish War, 30 Nov., with ground attacks all along the border and the bombing of Helsinki. The

Russian proclamation of a puppet People's Democratic Republic of Finland failed to take sufficiently into account the determination of the Finns, who had completed mobilization (begun 14 Oct.) and built the "Mannerheim Line" (not nearly as formidable as Russian propaganda later claimed) across the Karelian Isthmus.

Finland initially mobilized 9 divisions and never had more than 210,000 men, including 11,000 foreign volunteers, while

the USSR attacked with 30 divisions (1 m. men). To the world's surprise, Soviet efforts to sweep north of Lake Ladoga met with disaster as Finnish *motti* tactics isolated and literally chopped the Russian forces to pieces in the dense forests. The Soviet offensive in the Isthmus also stalled. Meanwhile, 14 Dec., the USSR was expelled from the League of Nations for her aggression. In Feb. 1940 the Russians began a massive battering offensive in the Karelian Isthmus which ground slowly forward. Finally, 4 Mar., Soviet armor began to cross the frozen Viipuri Bay, and the Finns, faced with a hopeless situation, sued for peace, 6 Mar. Increased Russian demands now included Finland's 2nd largest city, Viipuri (Viborg).

By the Treaty of Moscow, 12 Mar., 1940, Finland ceded 12% of her territory, from which 420,000 refugees had to be absorbed into the badly shaken Finnish economy. The Finns had lost 23,150 killed and 43,500 wounded and the Soviet forces lost 200,000 men killed.

Stalin rounded out his Baltic holdings when he ordered his troops to engineer Communist coups in Lithuania, Latvia, and Estonia, which were then absorbed into the USSR (15 June-16 Aug., 1940). Following the Nazi conquest of Norway, Apr.-June 1940, the Finns agreed, 12 Sept., to permit German troops, as a counterbalance to Soviet influence, to cross into Norway via Finland (which had been assigned to the Soviet sphere by the Nazi-Soviet Pact).

PARTITION OF THE BALKANS.

Alarmed at the rapidity of Hitler's victory in the West, Stalin turned to Rumania, and informed the Germans, 23 June, 1940, that the USSR would demand not only Bessarabia (assigned to Russia by the Aug. 1939 pact) but also Bukovina. Both of these regions had large Ukrainian populations. To cool Hitler's displeasure Stalin agreed, 26 June, to limit his Bukovina claim to the northern part, and on 27 June demanded the cession of this area from Rumania, effective 28 June. It was Hitler's turn to be dismayed, and he decided to block further Soviet advances in the Balkans. Outstanding ethnic claims

against Rumania were settled when Bulgaria received the southern Dobruja (lost in the 2nd Balkan War, 1913) by the Treaty of Craiova, 23 Aug., 1940, and Hungary obtained northern Transylvania (predominantly Magyar, but with a million Rumanians) by the Vienna Award, 30 Aug. In return Hitler guaranteed Rumania's borders, obviously against further Russian claims. In 2 months Rumania had lost $\frac{1}{3}$ of her territory and population. On 20 Nov. Hungary joined the Tripartite Pact (concluded originally between Germany, Italy, and Japan, 27 Sept.), and Rumania and Slovakia followed suit, 22 Nov. While Hitler had ordered plans to be made for a possible invasion of the USSR, 21 July, he made one last attempt, in a meeting with the Russian Foreign Minister Molotov, 12-13 Nov., to direct Soviet interest away from the Balkans and south toward the Indian Ocean. But the Russians were adamant, and reaffirmed their interest in Bulgaria and the Dardanelles, while demanding withdrawal of German troops from Finland and revocation of the guarantee of Rumania's borders. Hitler now definitely decided on war, and approved Operation Barbarossa, 18 Dec., which provided for an invasion of Russia on 15 May, 1941.

INVASION OF GREECE AND

YUGOSLAVIA. Meanwhile Mussolini, jealous of Hitler's successes, attacked Greece, 28 Oct., 1940, without warning the Germans. To the Duce's chagrin the defiant Greeks soon routed the Italians and mounted a counterinvasion of Albania which was not halted until 1 Mar., 1941. Hitler now had to cover his southern flank, and despite Soviet objections moved German troops into Bulgaria (following Bulgaria's adherence to the Tripartite Pact on 1 Mar.). Yugoslavia was also cowed into signing the pact, 25 Mar., but Serb patriots overthrew the regency of Prince Paul and proclaimed young King Peter of age, 26-27 Mar. Although the new Yugoslav government signed a friendship pact with the USSR, 4 Apr., and Molotov informed the Germans that Russia expected Germany to remain at peace with Yugoslavia, the German Balkan campaign began, 6 Apr., with a

simultaneous invasion of Yugoslavia and Greece. Belgrade was devastated, 6 Apr., by German bombers and, aided in the north by widespread mutiny by Croat units whose members resented past Serb domination, the Nazis overran Yugoslavia by 17 Apr., on which date the Yugoslav army surrendered.

YUGOSLAV PARTISAN ACTIVITIES. Yugoslavia was now partitioned, with Croatia independent under the Fascist Ustaši regime of Ante Pavelić, and Germany, Italy (and her puppet, Albania), Hungary, and Bulgaria annexing all but a German-occupied Serbian rump state roughly the size of Serbia before the Balkan Wars of 1912–13. Large-scale Croat, Hungarian, Albanian, and German atrocities against the Serbs followed, partly as retaliation for the 1st serious guerrilla uprisings in Europe by Serbian Chetniks under Col. Draža Mihailović (1893–1946). A Yugoslav Communist Partisan movement led by Tito (Josip Brož, b. 1892) next arose, and a 3-cornered struggle ensued in which Mihailović sometimes received Axis aid against the Partisans. Though staunchly anti-Axis, Mihailović distrusted the Communists and feared further genocidal reprisals against the Serbs. The ensuing fall-off in Chetnik activity, contrasted with unabated Partisan operations, caused a complete switch of western support to Tito by late 1943.

GERMAN CONQUEST OF GREECE. The Germans also overran Greece, taking Athens, 27 Apr., 1941, and a hastily contrived British expedition, which arrived on 5 Mar., suffered heavy casualties when forced to withdraw, 17 Apr.–1 May. A German airborne invasion took Crete, 20–31 May, suffering 6,600 casualties as against 18,000 British, but Hitler believed his losses were too high and that the surprise factor had been lost, so that he decided against paratroop operations for the rest of the war. Italy annexed the Ionian Islands, and Bulgaria that part of Macedonia and Thrace lost to Greece in 1913. While the Barbarossa Plan allowed for the Greek invasion, the Yugoslav campaign forced a critical postponement of the invasion of Russia to 22 June,

1941. The partition of Eastern Europe was complete.

NAZI SWEEP THROUGH WESTERN EUROPE

1940

INVASION OF DENMARK AND NORWAY. Hitler's expansionist ambitions were directed toward the east, and he hoped that the British and French would recognize his conquest of Poland as a *fait accompli*. In a Reichstag address of 6 Oct., 1939, he stated that the return of Germany's pre-World War I colonies was his only remaining claim, and called for a peace conference, but such pleas were ignored. During the Russo-Finnish War the British and French made an unsuccessful diplomatic attempt to establish a presence in Norway and Sweden, which would not only have aided the Finns but would also have cut the Nazis off from Sweden's high-quality iron ore being shipped from the Norwegian port of Narvik. Allied efforts to block such shipments culminated in the British mining of Norwegian coastal waters, 8 Apr., 1940.

Hitler responded with the simultaneous invasion of Denmark and Norway, 9 Apr. Faced with a hopeless situation, the Danish government agreed to the German occupation of Denmark a few hours after the invasion. Hitler hoped for an equally quick victory in Norway by landing 27,000 troops in the 1st week, and 40,000 soon afterward by warship. The Germans ran into difficulty at Oslo, where the Oscarsborg fort held off the invaders for a day, sinking several warships and allowing the government to escape. But half the 15,000-man Norwegian army was stationed in the Arctic because of the Russo-Finnish War. On 9 Apr. the Germans captured much military equipment and all key communication centers, and soon only 1 Norwegian division remained under central control to block the German advance north from Oslo.

TRONDHEIM AND NARVIK. Between 16 and 23 Apr. Anglo-French forces numbering 12,000 landed at Andalsnes to the south and Namsos to the north of

Trondheim. But following the defeat of a British brigade south of Andalsnes, the allies evacuated the Trondheim area, 3 May. The Germans faced their greatest difficulty at Narvik, which could be reached by land only from Sweden and was at the maximum air-support range. Here the German navy suffered heavy losses (10 destroyers), but the 2,000 German mountain troops landed were thereby reinforced by 2,600 sailors. Allied landings began on 14 Apr. and by the end of May built up the Anglo-French-Norwegian force to 25,000 men who finally drove the Germans from Narvik. The allied collapse in France, however, forced the evacuation of Norway, 4-8 June, and on 9 June the Norwegian army surrendered. Although Britain occupied the formerly Danish Iceland, 10 May, Greenland, and the Faroe Islands, the conquest of Norway gave Hitler naval bases on the North Atlantic and a secure monopoly of Swedish iron ore.

GERMAN INVASION PLANS FOR WESTERN EUROPE. After the failure of his Oct. 1939 peace overtures, Hitler ordered planning for an invasion of the west, *Fall Gelb* (Case Yellow—twice postponed, Nov. 1939 and Jan. 1940, due to bad weather). Army Group B of Belgium (variously 37-43 divisions, including 8 armored) was to swing through Belgium north of Liège, while Army Group A or Ardennes (22-27 divisions, no armor) moved through the heavily forested Ardennes region of Belgium and Luxembourg. The allies also believed the Liège route the more logical and therefore probable, since the formidable Maginot Line and the Ardennes obstructed a direct invasion of France, while northern France was unfortified because the allies planned to defend forward in Belgium. Aided by the barriers of the Ardennes, Meuse River, Liège forts, the supposedly impregnable Fort Eben-Emael, and the Albert Canal, the Belgians were expected to delay the Germans until the British and French reached the Schelde River (Plan E). German delay later led to the shifting of this forward position to the Dyle River (Plan D). Meanwhile the suggestions of Gens. Karl von Rundstedt

(1875-1953) and Erich von Manstein (b. 1887), commander and chief of staff respectively of Army Group A, that the main attack be through the Ardennes were accepted by Hitler. Army Group B was reduced to 28 divisions (3 armored), while Army Group A now had 44 divisions (7 armored) with which to drive to the English Channel. In May 1940, 136 German divisions opposed 94 French, 10 British, 22 Belgian, and 9 Dutch divisions. The Germans had 2,440 tanks to the allies' 2,690, but German armor was faster and as in the East concentrated for rapid offensive breakthroughs.

CONQUEST OF THE NETHERLANDS. The opening of Hitler's offensive in the West, 10 May, toppled Neville Chamberlain, who was replaced by Winston Churchill (1874-1965) as British prime minister on the same day. The Netherlands were quickly overrun. On 10 May paratroops captured key bridges and airfields near Rotterdam and The Hague, while the German 18th Army broke through the Maas (Meuse) River defenses in the southern Netherlands. French reinforcements arrived at Breda, 11 May, to stiffen the retreating Dutch, but were forced to fall back toward Antwerp, 13 May. Meanwhile the German army linked up with the paratroop forces, the Dutch government fled to England, and the remnants of the Dutch army withdrew into their final defensive line, the Fortress of Holland. On 14 May the Luftwaffe leveled the business district of Rotterdam as a warning to cease resistance, and the Dutch surrendered the same day.

SURRENDER OF BELGIUM AND THE BRITISH EVACUATION. In Belgium the German 6th Army drove across the Meuse and the Albert Canal north of Liège, 10 May, and then swung southwest. Meanwhile German parachute and glider troops captured Fort Eben-Emael, 11 May. Liège was occupied, 12 May, and by 15 May the 6th Army had concentrated against the Dyle Line, while the 18th Army moved against the Belgian left flank near Antwerp. In the meantime Army Group A required the entire 10th of May to cross the difficult Ardennes in northern Luxembourg. Hard fighting en-

sued before the Meuse could be crossed near Sedan, 14 May, but the shallow French defenses permitted a deep German penetration which threatened to outflank the allies in Belgium. Allied forces fell back to the Schelde while the Germans raced for the English Channel, which they reached near Abbeville, 20 May. Meanwhile Antwerp fell, 18 May, and hesitant allied efforts to break out south from Belgium, 21-23 May, failed, leaving 40 divisions trapped. A thrust to cut the allies off from the sea seemed likely when the German armor was suddenly halted, 23 May, due to Hitler's desire to husband his depleted tank strength for a drive southward to prevent the French from stabilizing their front as in 1914. King Leopold surrendered Belgian forces on 28 May, and the British Expeditionary Force completed its withdrawal via the port of Dunkirk on 4 June, evacuating 355,000 men (2/3 British).

CAPITULATION OF FRANCE. Having already lost half their armed forces and several bridgeheads across the Somme River portion of their new defense line, the French were unable to prevent a decisive breakthrough by Army Group B, 8 June, northwest of Paris. Meanwhile Mussolini had decided to share in the spoils, and declared war on France and Britain, 10 June. The French fell back behind the Marne, 11 June, and on 14 June the Germans entered the open city of Paris while in the east Army Group C quickly breached the demoralized Maginot defenses. Although Premier Paul Reynaud (b. 1878) considered continuing the fight from North Africa and Churchill offered, 16 June, a union with Britain, a new French government under Marshal Henri Pétain (1856-1951) sued for peace, 17 June. The armistice was signed, 21 June, at the same place, the forest of Compiègne, and in the same railway dining car in which the German capitulation had occurred in 1918. The French suffered 100,000 killed and 1½ m. captured (mostly in the mop-up stage of the campaign), while the British had 70,000 casualties and lost the bulk of their weapons and equipment. Germany lost 27,000 dead, 18,000 missing, and 110,000 wounded. Peace terms provided for Ger-

man occupation of northern and western France, with the remainder under a government at Vichy headed by Pétain, and for the demobilization of the French fleet.

BATTLES OF BRITAIN AND THE ATLANTIC

1940-45

ANGLO-GERMAN STRUGGLE FOR AIR SUPREMACY. When the British did not come to terms, Hitler ordered, 2 July, 1940, planning for an invasion of Britain (Operation Sea Lion). Aerial supremacy was necessary for such an invasion, and the battle for command of the air began, 13 Aug., ending a preliminary phase which had concentrated on Channel shipping and nuisance targets. Until 6 Sept. the Luftwaffe struck against British airfields, aircraft factories, and communications, but the British Fighter Command refused to accept decisive battle against German fighter sweeps. Instead the RAF (Royal Air Force) concentrated against the bomber formations, inflicting heavy losses. Moreover, the British Spitfire fighter had better armament and maneuverability than the German Messerschmitt 109, and the Germans also faced British radar and anti-aircraft artillery. In a further attempt to force a decision the Germans began to attack London, 7 Sept., and inflicted severe damage, but as before German losses exceeded those of the British. On 17 Sept. Operation Sea Lion was postponed indefinitely.

By mid-Nov. the Germans had switched entirely to less costly night raids, which continued until mid-May 1941, when the Luftwaffe began to move the bulk of its forces east for the Russian campaign. Despite heavy RAF losses, those of the Germans had been greater (5-3 ratio), and the survival of Fighter Command made the Battle of Britain a British victory. German air raids, including those by V-1 (subsonic) and V-2 (supersonic) rockets later in the war, killed 60,000 British civilians, but as elsewhere conventional bombing demonstrated nowhere near the knockout capability claimed by aerial enthusiasts before 1939.

BATTLE OF THE ATLANTIC.

When the war broke out, the British and French together possessed overwhelming naval superiority over Germany (battleships and cruisers, 103 to 9; aircraft carriers, 9 to 0; submarines, 131 to 57). Only 22 of the German submarines were equipped for Atlantic operations. The German surface fleet proved no match for the allies, as the pocket battleship *Graf Spee* had to be scuttled in Montevideo Harbor, Uruguay, 17 Dec., 1939, and the battleship *Bismarck* was sunk on 26-27 May, 1941, on her maiden voyage.

Soon after the beginning of hostilities the British revived the convoy system, and the Germans responded, late 1940, with submarine wolf packs. In July 1941 the U.S. Navy began convoying merchant vessels bound for Britain part way across the Atlantic, and on 11 Sept. American escorts were ordered no longer to await hostile action but to "shoot first." Allied shipping suffered its heaviest losses in 1 month in Nov. 1942, but stringent anti-submarine measures (escort carriers, destroyer groups, radar, sonar, radio direction finding) turned the tide decisively by mid-1943. The invention of the snorkel and increased U-boat production in 1944 were unable to effect a reversal. Allied and neutral shipping losses amounted to 23 m. tons ($\frac{2}{3}$ to submarines) during the war, but the German U-boat campaign never came close to winning the Battle of the Atlantic.

INCREASING U.S. WAR INVOLVEMENT AND LEND-LEASE. On 20 July, 1940, President Roosevelt signed a bill providing for a 2-ocean navy and 200 new warships. Increased American war preparedness was further demonstrated when U.S. aircraft production reached 900 per month in Aug. On 3 Sept., 1940, Roosevelt, by executive order, agreed to provide Britain with 50 overage destroyers in return for a 99-year rent-free lease of naval and air bases in Newfoundland, Bermuda, the Bahamas, Jamaica, St. Lucia, Trinidad, Antigua, and British Guiana. On 16 Sept. the U.S. instituted her first peacetime draft, under the Selective Service Act.

By the Lend-Lease Act, 11 Mar., 1941, the President obtained complete freedom

to provide the allies with war matériel, including the power to waive repayment (initial appropriation, \$7 billion). On 9 Apr., to forestall any German take-over, the U.S. occupied Greenland, and on 7 July took over from Britain the defense of Iceland. Meanwhile, 14 June, all German and Italian assets in the U.S.A. were frozen. Hitler's attack on the Soviet Union soon brought U.S. ships to Soviet ports carrying war matériel.

On 12 Aug., off the coast of Newfoundland, Roosevelt and Churchill signed the Atlantic Charter as a gesture of solidarity and outline of the world peace to be established "after the final destruction of the Nazi tyranny."

INVASION OF RUSSIA

1941-43

OPERATION BARBAROSSA. As originally conceived by the Germans, Barbarossa had 2 phases: to destroy as much of the Russian army as possible close to the border to prevent any delaying withdrawal into Russia's vast interior, and then to drive rapidly to a line running from Arkhangelsk in the north to the Volga. The Germans assigned 152 divisions, including 19 Panzer divisions (3 m. men), to the invasion, opposing a Soviet force in western Russia of 118 infantry and 20 cavalry divisions, and 40 mechanized and armored brigades (2.3 m. men). German allies furnished 16 Finnish (the only immediately significant allied force), 15 Rumanian (initially to pin down Russian forces), and, after the invasion began, several Hungarian, Italian, and Slovak divisions. Armored striking power was even further concentrated by creating Panzer groups (the largest armored force up to this time having been the Panzer corps). German tanks numbered 3,350 compared to 10,000 Russian, most of which were equal to the German, while 2,000 Luftwaffe aircraft faced 6,000 Soviet planes, most of which were obsolete. The Russians had made a better showing since Finland by thwarting a Japanese incursion into Outer Mongolia during an undeclared war, May-Sept. 1939. While Stalin's annexations in Eastern Europe

provided a buffer, they also led his army to fight forward of the Stalin Line (fortifications built behind the pre-1939 Soviet border).

1ST GERMAN OFFENSIVE: SUMMER 1941. To placate Hitler with a show of good will, Stalin kept promised raw materials rolling into Germany until the very eve of the Nazi attack. Finally, on the night of 21 June, the USSR got wind of the planned invasion, but it was too late to take any real countermeasures before the Nazis struck early on 22 June. The German Army Group North advanced from East Prussia toward Leningrad, and by the end of June had destroyed 14 Soviet divisions. On 10 July it reached Pskov; while the Finns advanced into the Karelian Isthmus on the same day. Army Group Center attacked toward Moscow via Smolensk (as had Napoleon), and by early July had encircled large numbers of Soviet troops at Bialystok and Minsk. Army Group South, though meeting stiff resistance, advanced steadily toward Kiev. These easy initial victories convinced Hitler and his generals that the campaign had been won. Certainly Stalin's rigid tactics, which equated withdrawal with treason, helped yield a huge bag of prisoners for the Germans.

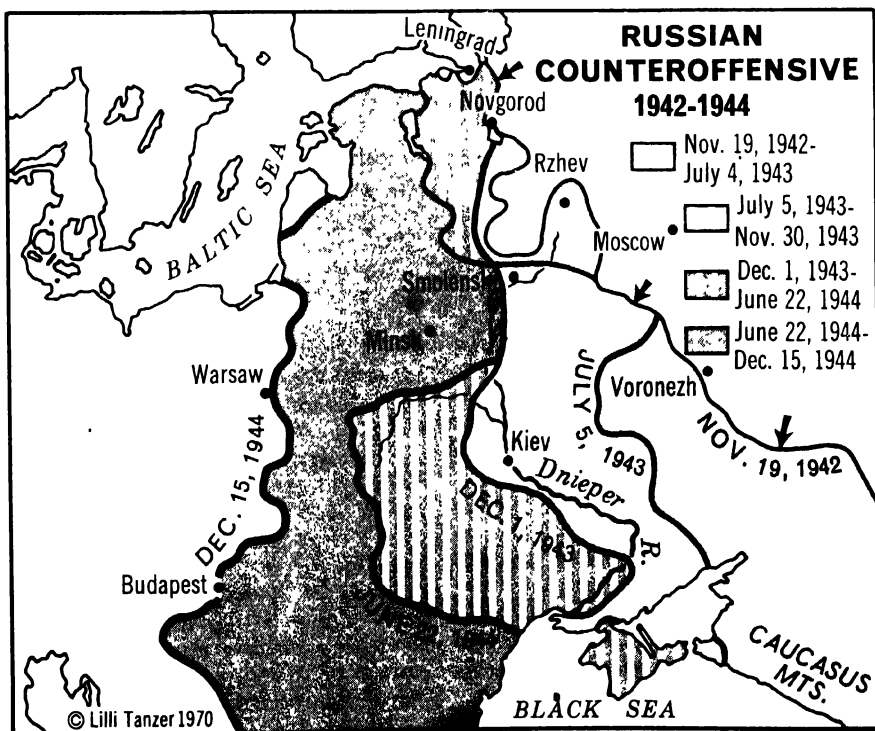

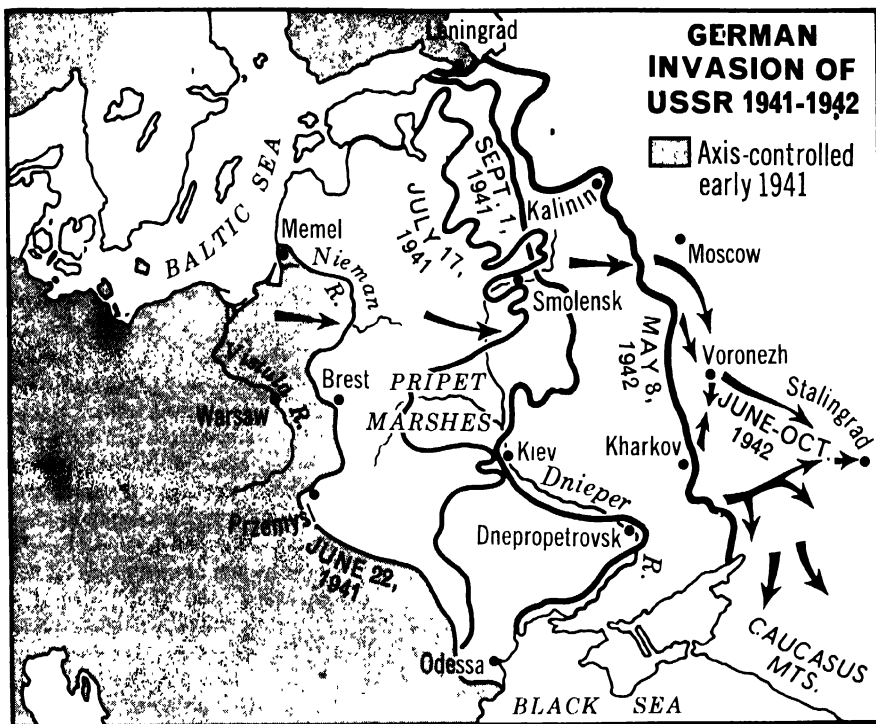

Stalin made a radio appeal, 3 July, for allied aid, proclaimed a "scorched earth" policy to deny sustenance to the invader, and appealed to Russian nationalism. But the Germans continued to advance. By 5 Aug., Army Group Center had captured 100,000 prisoners near Smolensk while Army Group South destroyed 20 trapped Russian divisions near Uman. By mid-Aug. the 1st phase of the Barbarossa Plan had been accomplished, but, contrary to an initial total estimate of 200 Soviet divisions, the Germans had already identified 360.

At this point, instead of advancing on Moscow, where his generals believed the Russian army would fight the decisive battle, Hitler diverted forces from Army Group Center to help seize Leningrad, the Donets Basin industrial area, and the Crimea. On 19 Sept. Army Group South captured Kiev, and on 24 Sept. completed the disarming of no less than 660,000

trapped Soviet troops. Meanwhile to the north the Finns took Viipuri, 29 Aug., and on 31 Aug. reached their pre-1940 border. On 8 Sept. Army Group North cut Leningrad off from any land connection with the rest of Russia. Leningrad would probably have fallen had Hitler not ordered that the city be surrounded rather than attacked directly, and had the Finns not decided to remain on their old borders (so as to refute past Soviet arguments that Finland's boundaries threatened Leningrad).

ASSAULT ON MOSCOW. Hitler now decided to concentrate against Moscow, 6 Sept. Confident of victory, he also cut back German war production, which did not again reach its maximum until mid-1942. But valuable time had been lost. (Napoleon had reached Moscow on 14 Sept.) On 2 Oct. Army Group Center renewed the offensive after having refitted its armor, and on 19 Oct. completed the capture of 670,000 Soviet soldiers. The Soviet government moved east to Kuibyshev on the Volga, 19 Oct., but Stalin remained in Moscow to stiffen the defense. Then the fall rains turned the Russian roads into seas of mud and Army Group Center slowed to a crawl. The advance of Army Group South had meanwhile taken Kharkov, and on 20 Nov. seized Rostov, only to be driven out of the city, 28 Nov., by the first successful Soviet counteroffensive. Army Group North struck across the Volkhov River, 16 Oct., but rain falling on already marshy terrain slowed the advance so that Tikhvin was reached only on 8 Nov. By mid-Dec. the Russians had forced the Germans back to the Volkhov.

Freezing weather now set in, and while no one wanted to fight in the Russian winter there was disagreement within the German military as to whether Moscow could be taken in time. Hitler gave the go-ahead, and in clear weather Army Group Center began a double envelopment of the city, 15 Nov. But although only 20 mi. from Moscow, snow, fog, and extreme cold brought the German offensive to a halt on 5 Dec., 1941. The Germans had overrun most of the Soviet Union's coal and iron resources and 35 m. people. The

USSR had thus far suffered losses of 5 m. men including 3 m. prisoners, while German casualties totaled 740,000. But the strength of the Soviet government's power had been grossly underestimated by the Germans. Only in the Ukraine, where dissidence had always been widespread, had there been a Soviet collapse. At least 280 infantry and cavalry divisions and 44 armored and mechanized brigades still faced the Germans. The Luftwaffe had failed to strike hard enough to prevent the Soviet evacuation of war plants by rail to the east. Moreover, the Russian war effort received a \$1-billion lend-lease credit from the U.S.A., 6 Nov. Confident of a rapid victory, the Germans had neither winterized their vehicles nor provided adequate winter clothing for their troops.

SOVIET COUNTEROFFENSIVE: WINTER 1941-42. On 6 Dec., 1941, the Soviet West Front struck a devastating blow against Army Group Center, which had spent its reserves in the drive on Moscow and, lacking previously prepared positions, could not entrench in the frozen terrain. Hitler rejected military advice to retreat, fearing a repetition of Napoleon's disastrous rout. On 18 Dec. German forces were ordered to stand fast, no matter what. Hitler now took real and direct command of the war when he himself replaced Gen. Heinrich von Brauchitsch (1881-1948) as army commander in chief, 19 Dec. Meanwhile, after the Japanese attack on Pearl Harbor, Hitler, followed by Mussolini, though neither was obligated by the Tripartite Pact to do so, declared war on the U.S.A. His object was to show solidarity with the Japanese and to vent his ire on America for intervening more and more in the European struggle. In turn the U.S.A. declared war on Germany and Italy on the same day, 11 Dec. Thus Hitler recklessly brought the world's strongest industrial power directly into the European war at a time when the Nazi forward march was faltering.

Russian efforts to encircle Army Group Center finally forced Hitler to order a major German withdrawal, 15 Jan., 1942, to a line some 80 mi. west of Moscow. But

the situation worsened for the Germans as Russian troops ripped a huge gap between Army Groups North and Center and encircled 100,000 men south of Lake Ilmen. The Germans, however, employed "hedgehog" tactics successfully (withdrawing into communication centers as strong points which, if cut off, could be supplied by air). By mid-Feb. the Soviet offensive had run down, but Russian military prestige was greatly increased. On the other hand, Hitler had demonstrated a seeming ability to overcome overwhelming odds.

GERMAN SUMMER OFFENSIVE: 1942. By spring 1942 Hitler was issuing orders directly to units at the front, and Stalin maintained a similarly tight control. Hitler now planned to strike in the south toward Stalingrad (Volgograd) and the Caucasus oil fields, thereby drawing in and destroying the Soviet man-power reserves. Although the Germans had suffered 1.2 m. casualties, replacements and allied forces (including 27 Rumanian and 13 Hungarian divisions) had made up the losses. Stalin also planned a major offensive, and a preliminary attack to take Kharkov, 12 May, by the Southwest Front ran straight into the jaws of the German build-up. Stalin refused to countenance retreat, and a German counterattack, 17 May, trapped 240,000 Soviet troops, 25 May. Stalin now increased pressure on the western powers for a 2nd front in Europe, which was finally publicly promised, 11 June, to take place before the year's end. The planned German offensive got under way on 28 June, and by 6 July had taken Voronezh. But by mid-July only 100,000 prisoners had been netted, for new elastic Soviet tactics enabled the bulk of their forces to escape across the Don.

Hitler now ordered Army Group A and the 4th Panzer Army to turn south and cut off Rostov (captured 23 July). He then, 23 July, transferred a Panzer corps from 4th Panzer Army to 6th Army and ordered the latter to take Stalingrad. Army Group A was ordered to cover tremendous distances and clear the Caucasus. Finally, Hitler decided that Stalin would fight a decisive battle for Stalin-

grad, and ordered 4th Panzer Army to reverse direction and move on the city from the south, 31 July. August brought the Germans empty victories and few prisoners. The oil fields at Maikop were found destroyed, 9 Aug., and although the swastika was planted on Mount Elbrus the Caucasus passes remained in Soviet hands. The armored drive on Grozny was halted by gasoline shortages. The 6th and 4th Panzer Armies lost momentum as they neared Stalingrad. It also became increasingly necessary to fill the expanding front with allied troops. On 19 Aug. 6th Army began its attack on Stalingrad in the teeth of fanatical Russian resistance, and by mid-Oct. the German offensive had ceased everywhere except in this decisive area.

STALINGRAD. The Soviet Union was now copying the Germans and building armored armies, while at the same time it fomented a large-scale guerrilla movement behind German lines, mostly in the north and center. By now the Germans were losing the battle of numbers, even with the use of *Osttruppen* from captured Soviet territory (reaching a maximum of 1 m. troops), some of whom, mostly Cossacks and Moslems, even served in the front line. But early Nazi racist policies had destroyed any chance of enthusiastic support from the Slav population of Russia. By the beginning of the Soviet Stalingrad offensive, 19 Nov., Russian forces in the vicinity amounted to 12 armies. The Soviet 5th Tank Army broke through the Rumanian 3rd Army north of the city in a few hours, and a Rumanian corps south of Stalingrad suffered a similar fate, 20 Nov. The Russians closed the pincers at Kalach, 22 Nov., trapping 6th Army and half of 4th Panzer Army (20 German and 2 Rumanian divisions, some 270,000 men in all). Employing the same policy as during the previous winter, Hitler refused to let 6th Army break out to the west. On 19 Dec. a German relief column drove to 30 miles of its beleaguered comrades, but was soon forced back. To the north of Stalingrad the Russians first destroyed the Italian 8th Army, mid-Dec., and the Hungarian 2nd Army, mid-Jan. 1943, and by 28

Jan. had surrounded 2 corps of the German 2nd Army, opening an enormous gap in the Axis lines. To the south a Russian drive cut off most of Army Group A (400,000 men) in the Caucasus. Hitler promoted Gen. Friedrich von Paulus (1890-1957), 6th Army commander, to field marshal, 30 Jan., in the hope that he would fight to the last man. But Paulus surrendered, 31 Jan., with 90,000 of his men still alive, only 5,000 of whom would survive their march east into the cruel Russian winter and captivity. The Soviet advance continued until a German counterattack, the last German victory in the East, retook Kharkov, 11 Mar., and Belgorod, 18 Mar., stabilizing the front, except for a Russian salient around Kursk, near where the Germans had started in May 1942.

JAPANESE ADVANCE IN THE EAST

1940-42

SINO-JAPANESE WAR. After seizing Manchuria, 1931, and setting up the puppet state of Manchukuo, 1932, the Japanese invaded much of northern China, 1937, and destroyed most of Generalissimo Chiang Kai-shek's German-trained forces. Although by 1939 Japan had struck the Chinese Nationalist regime a crippling economic blow by seizing all the key coastal ports, Chiang stubbornly fought on from his inland capital of Chungking and brought in supplies via Burma, Indochina, and Russia. Meanwhile the Japanese lived off the land and the Chinese Communists under Mao Tse-tung steadily increased their domains in the north.

DETERIORATION OF WESTERN-JAPANESE RELATIONS. Hitler's victories of spring 1940 in Western Europe gave Japan a seemingly wide-open opportunity to expand into Southeast Asia. On 20 June the Vichy French government accepted Japanese demands that trade with Nationalist China be halted and that Japanese military observers be permitted to ensure this provision. The British signed an agreement with Japan, 17 July, halting for 3 months the ship-

ment of war matériel, including oil and trucks, via the Burma Road and Hong Kong to China. U.S. opposition to Japanese policies was soon obvious when, after the signing of the 2-ocean-navy bill on 20 July (aimed at enabling the U.S.A. to deal with both a Japanese and a German naval threat simultaneously), President Roosevelt placed an embargo on 1 type of scrap iron and on aviation fuel and lubricants, 26 July. After an ultimatum the Japanese invaded Tongking Province in Indochina, 23 Sept., and the U.S.A. retaliated with a further loan to China, 25 Sept., and a total embargo on scrap iron, 26 Sept. In turn Japan signed the Tripartite Pact with Germany and Italy, 27 Sept. *

DIPLOMATIC PRELUDE TO PEARL HARBOR. Japan had meanwhile encouraged Thailand to demand disputed provinces from Indochina and had forced Vichy to accept Japanese mediation, 11 Mar., 1941. On 13 Apr. Japan secured her northern flank by means of a 5-year nonaggression treaty with Russia. Finally, 24 July, Japan began to occupy the remainder of Indochina. The United States now froze Japanese funds, 25 July, and Britain and the Netherlands followed suit. The Dutch also embargoed oil shipments and the U.S.A. and Britain restricted the issue of export licenses to achieve the same result unofficially. The Japanese government soon decided that its dependence on foreign imports obliged it to try to work out some easing of the American ban. If such attempts failed, expansion to the southeast and war with the U.S.A. was the only acceptable alternative. On 20 Nov., 1941, the Japanese offered to cease expansion in Southeast Asia and the South Pacific and to withdraw from southern Indochina on the signing of a treaty, and from Annam when the war with China was over. In return they asked for a free hand in China and the end of the embargoes (including that of the Dutch in the East Indies). On 26 Nov. the U.S.A. rejected this offer, and suggested instead that, in return for the requested concessions from the American side, Japan evacuate China (except Manchuria) and

Indochina immediately, and recognize the Chinese Nationalists as the legal government of all China. On 1 Dec. a Japanese Imperial Conference decided on war with the U.S.A.

ATTACK ON PEARL HARBOR.

The Japanese planned to fight a limited war for the economic resources of the Southern Region of their planned "Greater East Asia Co-Prosperity Sphere." They intended first to knock out Pearl Harbor, the base of the potentially dangerous U.S. Pacific Fleet, and seize the Southern Region. A defensive perimeter would then be extended and strengthened so that the U.S.A. would see the futility of attacking such a bastion and make peace on the basis of the *status quo*. The Japanese Combined Fleet included 6 aircraft carriers, 2 battleships, 2 cruisers, and several destroyers. The U.S. Pacific Fleet had, on 7 Dec., 1941, 8 battleships, 9 cruisers, 29 destroyers, and 5 submarines, but its 3 carriers were on detached duty. The Japanese struck in 2 waves, at 7:59 and 8:40 A.M. respectively. Surprise was complete, since the 1st planes sighted were believed friendly. Only 4 U.S. aircraft got off the ground and were quickly shot down, while the remainder were strafed on the field. Of 360 Japanese planes only 29 were lost. The Americans lost 3 battleships sunk, 1 capsized, 1 severely damaged, and 3 able to return to the U.S.A. for repairs. In addition 3 cruisers were damaged, 2 destroyers badly damaged, and 2,400 men killed. The Japanese unwisely failed to destroy Pearl Harbor's nearly 5 m. barrels of oil, so as to force the U.S. fleet back to the American coast. Instead the U.S.A. had been humiliated by a "sneak attack" from which she could fairly soon recover.

CONQUEST OF SOUTHEAST ASIA.

Also on 7 Dec., 1941, Japanese destroyers heavily damaged the U.S. air base on Midway Island. On 8 Dec. Japan exchanged declarations of war with the U.S.A. and Great Britain, and bombed unfortified Wake Island. Wake's defenders beat off 1 invasion attempt, 11 Dec., but were overwhelmed on 23 Dec. Guam fell quickly, 10 Dec., and the Japanese also took Tarawa and Makin in

the Gilbert Islands. The invasion of Hong Kong began on 8 Dec., with the garrison finally surrendering, 25 Dec.

Meanwhile the Japanese 25th Army had seized control of Thailand, occupying Bangkok on 8 Dec. and making landings on the Kra Isthmus the same day. The meager British air forces in the Malaya-Singapore area were quickly destroyed, but a shock went through Britain when the only British capital ships in the Pacific and Indian Oceans, the battleship *Prince of Wales* and the cruiser *Repulse*, were destroyed by Japanese aircraft, 10 Dec. Weak British and Commonwealth forces were quickly pushed into Singapore, 31 Jan., 1942, and Japanese landings from Malaya, 8 Feb., forced the British to surrender, 15 Feb. Dutch forces in the East Indies numbered 40,000 Dutch and 100,000 badly equipped Indonesians. The Japanese landed on Borneo and Celebes, 11 Jan., and on 9 Mar. the Dutch had to surrender. Japan rounded out the southern boundaries of her defensive perimeter, 23 Jan.-mid-Mar., by seizing New Britain and New Ireland in the Bismarck Archipelago (Australian mandate) and Bougainville in the Solomon Islands (British), and by making landings in northeast New Guinea (Australian mandate).

Burma had meanwhile been invaded, 16 Dec., 1941, and the Japanese 15th Army took Moulmein, 31 Jan., 1942, and then advanced to the Sittang River, 24 Feb. Concerned with the threat posed to the Burma Road, Chiang Kai-shek sent the Chinese 5th and 6th Armies under U.S. Gen. Joseph Stilwell (1883-1946), but to little avail. Rangoon fell, 7 Mar., and on 29 Apr. the Japanese cut the Burma Road at Lashio. By the end of May Japan had taken its western objectives with the conquest of Burma and the Andaman and Nicobar Islands, and now threatened India.

CONQUEST OF THE PHILIPPINES. The Philippines were defended by 13,500 American soldiers, 12,000 reliable Philippine Scouts and 3,000 Constabulary, and 100,000 ill-prepared Philippine Army troops all commanded by Gen. Douglas MacArthur (1880-1964). His command

also had 140 combat-ready aircraft and a small naval force. MacArthur planned to defend Luzon, the largest and most important of the Philippine Islands. Bad weather delayed the Japanese air attack, 8 Dec., 1941, which proved a stroke of luck, for American planes which had been searching for the enemy since dawn were caught on the ground refueling. Soon U.S. air power was destroyed. Japanese diversionary landings, 10-12 Dec., at each tip of Luzon failed to deceive the Americans. The main landings of the 100,000-man invasion force came with a division set ashore at Lingayen Gulf, 22 Dec., and another at Lamon Bay, 24 Dec. The Japanese began to converge on Manila, and by 7 Jan., 1942, 15,000 American (including aviation personnel) and 65,000 Philippine troops had withdrawn into the Bataan Peninsula (plus 25,000 unexpected refugees). Stubborn resistance held off the Japanese, but starvation began to take its toll as rations were reduced to $\frac{1}{2}$ and then to $\frac{1}{3}$, 11 Mar.

Pursuant to orders from President Roosevelt, MacArthur arrived in Australia 17 Mar. to assume command of allied Southwest Pacific forces, and Gen. Jonathan Wainwright (1883-1953) took command. On 9 Apr. the Bataan force surrendered, with 45,000 Philippine and 9,300 American soldiers completing the famous death march, the rest having died in the Bataan fighting or on the march. The Japanese now turned on Corregidor Island, which dominated Manila Bay, and, after a fierce artillery bombardment, gained a beachhead, 5-6 May, forcing the surrender of all Philippine forces, 6 May.

WESTERN COUNTERATTACK IN THE MEDITERRANEAN

1940-45

AFRICA AND THE MIDDLE EAST.

After the fall of France the British sank part of the French fleet at Oran, 3 July, 1940, to prevent it from falling into German hands. But an attempt by British and Free French forces to land at Dakar in West Africa, 23-25 Sept., failed. Meanwhile the Italians advanced 60 miles into

Egypt, 13–18 Sept. On 11 Nov. British planes severely damaged half the Italian fleet at Taranto. In Egypt the British finally counterattacked, 9 Dec., and achieved spectacular success, taking Bedaommeh deep in Libya, 7 Feb., 1941; 130,000 prisoners were captured at a cost of only 555 British killed. Britain now halted the advance to aid Greece. Meanwhile British forces moved into Iraq, 17 Apr., to oust pro-Axis political leaders and reinstate a pro-western government, 31 May. To prevent any German take-over the British also defeated Vichy forces and occupied Syria, 8–14 June. In Eastern Africa the Italians had early success, capturing British Somaliland by 19 Aug., 1940. But in Feb. 1941 the British counterattacked, and by 6 Apr. had taken Addis Ababa. Italian resistance ended in the Horn of Africa, 27 Nov., with the fall of Gondar in Ethiopia.

CYRENAICAN CAMPAIGNS. Meanwhile Hitler had decided to form the Afrika Korps under Lt. Gen. Erwin Rommel (1891–1944), who arrived in Tripoli on 12 Feb., 1941. The speed of Rommel's 1st offensive caught the British flatfooted, and by 3 Apr. Benghazi had been retaken. Nevertheless the successful defense of outflanked Tobruk and the Egyptian border enabled the British to counterattack, 15 June. But the offensive failed almost immediately with the lopsided loss of 90 British tanks compared to 12 German. During the ensuing lull Britain and Russia, in order to forestall possible Axis intrigue and gain a Persian Gulf supply route to Russia, occupied Iran, mid-Sept. Finally the British again attacked, 18 Nov., and in fierce fighting pushed the Axis forces back to El Agheila by mid-Jan. 1942, but with a heavy loss of armor (750 British to 340 German tanks). At almost the same time, 1 Jan., 26 nations, including the U.S.A., Soviet Union, Britain, Free France, and China, signed the Declaration of the United Nations in Washington, promising an all-out effort against Germany, Italy, and Japan, and no separate peace.

EL ALAMEIN AND ALLIED NORTH AFRICAN LANDINGS. Rommel now drove the British back to the El

Gazala–Bir Hacheim, line, 21–28 Jan., where another pause followed. On 27 May his forces renewed the attack, meeting stubborn resistance. A German attack on Alam el Halfa, 31 Aug., was turned back. Eleven British divisions (3 armored) now opposed 13 Axis (4 German) divisions, 4 of which were armored (2 German). The British, under Lt. Gen. Bernard Montgomery (b. 1887), attacked, 23 Oct., and began to force Rommel back from El Alamein.

Far to the west an allied landing, 8 Nov., commanded by U.S. Gen. Dwight D. Eisenhower (1890–1969), soon seized Algiers, Oran, and Casablanca. On 10 Nov. Adm. Jean Darlan (1881–1942) ordered the end of French resistance in North Africa and called on the French fleet in Toulon to defect to the allies. But by the end of Nov. the Germans had occupied all of France and the fleet at Toulon had been scuttled by its crews. On 11 Dec. the Axis forces halted the allied advance at Medjez-el-Bab in Tunisia.

TUNISIAN CAMPAIGN. Churchill and Roosevelt met at the Casablanca Conference, 14–24 Jan., 1943, and decided to invade Sicily but delay the invasion of France, and to force unconditional surrender on the Axis powers. By now Hitler realized the gravity of his situation and rapidly built up his forces, as did the allies. On 14 Feb. Rommel attacked U.S. forces in Tunisia and seized the vital Kasserine Pass, 20 Feb., but soon, 22 Feb., was driven back through the Pass. To the east the British had continued to advance, seizing Benghazi, 20 Nov., and Tripoli, 23 Jan., 1943. On 7 Apr., 1943, allied troops, converging from east and west, linked up northeast of Gabès, and soon a final offensive, 4–13 May, captured 250,000 Axis troops, half of them German, trapped in Tunisia.

INVASION OF ITALY AND SOUTHERN FRANCE. At the Trident Conference (Washington, 12–25 May), Churchill and Roosevelt agreed to invade the Italian peninsula after Sicily, postponing the invasion of France to 1 May, 1944. The 350,000 Axis troops in Sicily included 75,000 Germans. The 1st major

allied paratroop operation of the war was marred as the troop-carrying aircraft were fired on as they overflew the invasion fleet without prior clearance, but the resulting random landings confused the defenders. The 140,000-man seaborne landing had little difficulty, however, and by 17 Aug. had eliminated resistance. Allied casualties totaled 20,000, while Axis losses, including prisoners, numbered 165,000 (32,000 German).

On 25 July, 1943, Mussolini had been replaced by Marshal Pietro Badoglio (1871-1955) as premier of Italy, and on 3 Sept. a secret armistice was signed by Italy with the allies (announced 8 Sept.). The British 8th Army crossed the Strait of Messina, 3 Sept., and quickly moved north up the peninsula. On 9 Sept. the Taranto naval base fell, and on 11 Sept. the Italian fleet surrendered itself at Malta. The U.S. 5th Army landed at Salerno, 9 Sept., and by 1 Oct. had taken Naples. Meanwhile Sardinia, 19 Sept., and Corsica, 4 Oct., fell. On 13 Oct. Italy declared war on Germany, and by 8 Nov. the allies had reached the German Gustav Line defenses. A landing at Anzio, 22 Jan., 1944, to outflank the Germans proved abortive when the invaders delayed too long in consolidation, thus permitting the Germans to pen up the beachhead. The Gustav Line was not cracked until Monte Cassino fell, 18 May, when the advance again picked up momentum. Rome, declared an open city by the Germans, fell unscathed, 4 June. The allies reached the Gothic Line north of Florence, 11 Aug.

At the Teheran Conference, 8 Nov.-1 Dec., 1943, Roosevelt, Churchill, and Stalin agreed to follow up the Normandy invasion with a landing in southern France. Landings began, 15 Aug., 1944. Toulon and Marseilles were soon captured, and the allies moved up the Rhone to the Belfort Gap. Meanwhile the Gothic Line had been forced, 24 Aug.-28 Sept., though with heavy casualties. In Greece, after the German withdrawal, the British landed, 3 Oct., took Athens, 14 Oct., and put down a Communist-backed uprising. Back in Italy progress was slow until 9 Apr., 1945, when the allies launched an

offensive which broke into the north Italian plain. The Germans began to collapse, and on 28 Apr. Mussolini and his mistress were killed and mutilated by partisans. On 2 May, 1945, the German commander in Italy unconditionally surrendered his 1 m. men, ending the war in the Mediterranean.

THE SECOND FRONT

1944

NORMANDY LANDINGS. The German Commander in Chief West, Field Marshal Karl von Rundstedt, possessed 58 divisions of varying quality. His 7th Army occupied Brittany and most of Normandy, and the 15th Army the Pas de Calais. Both armies formed Army Group B under Field Marshal Rommel. While Rundstedt preferred a mobile defense, Rommel believed that overwhelming allied air superiority would block reinforcements, and therefore built strong coastal defenses to stop the invaders on the beaches. The allies duped the Nazis into believing that the main invasion would come in the Pas de Calais and would be commanded by Gen. George S. Patton (1885-1945). The German 15th Army therefore waited vainly while the decisive battle was fought in Normandy.

Gen. Eisenhower's 45 divisions (2.9 m. men) were originally to land on 5 June, 1944, but bad weather led him, 4 June, to postpone the invasion to 6 June. At 6:30 A.M. American troops landed at Omaha Beach, where they met the toughest opposition encountered by any of the landings, and at Utah Beach, where resistance was the lightest. British and Canadian landings at Gold, Juno, and Sword beaches linked up with the American ones by the end of the day. By 27 June the Americans had taken Cherbourg and the British Bayeux, but the British were stalled before Caen. The U.S. 1st Army fought across the defensively ideal hedgerows, suffering heavy casualties, but took St.-Lô on 18 July. Assisted by heavy bombing, the British took half of Caen, 8 July, but an attack toward Falaise gained only 6 mi., 18 July. By this time well over a

million allied troops had been landed, against no serious counterattack (because of the Calais ruse and complete allied air superiority).

BOMB PLOT OF JULY 20. Rommel had meanwhile been seriously injured by a strafing attack, 17 July, and remained unaware of a conspiracy which attempted to overthrow Hitler, 20 July. Col. Claus von Stauffenberg had placed a bomb in Hitler's conference room in the Wolfsschanze at Rastenburg, East Prussia. But a heavy wooden table beam saved Hitler from the full force of the explosion, and he retaliated with the execution of those involved and many merely suspected. Rommel was forced to take poison, and others were garroted on meat hooks.

THE BREAKOUT. Aided by a massive carpet (4,000 tons) of bombs, 25 July, U.S. forces drove a huge gap, 27 July, in the German lines near St.-Lô and seized Avranches, 31 July. A drive into Brittany captured St.-Malo, 17 Aug., and Brest, 18 Sept., but both ports had been very badly damaged by the retreating Germans. Meanwhile to the east Le Mans had been taken, 8 Aug., and in a desperate attack designed to cut off the allied advance the Germans struck at Mortain, 7 Aug., toward Avranches. The U.S. 3rd Army under Gen. Patton now turned north from Le Mans and neared Argentan, 13 Aug.

From the north the Canadian 1st Army reached Falaise, 17 Aug., leaving only the gap to Argentan through which the Germans trapped in the Falaise pocket could escape. The gap closed, 20 Aug., netting 50,000 prisoners. Gen. Eisenhower, desiring to concentrate on purely military objectives, favored bypassing Paris, which Hitler ordered defended to its destruction. But Gen. Charles de Gaulle (b. 1890), leader of the Free French, wanted Paris for its prestige value and to establish his government there. Faced with a spontaneous uprising, the German commander in Paris, Gen. Dietrich von Choltitz (1894-1966), refused to destroy the city and made a truce with the rebels. Franco-American forces liberated Paris finally on 25 Aug., 1944, and allied troops reached the line of the

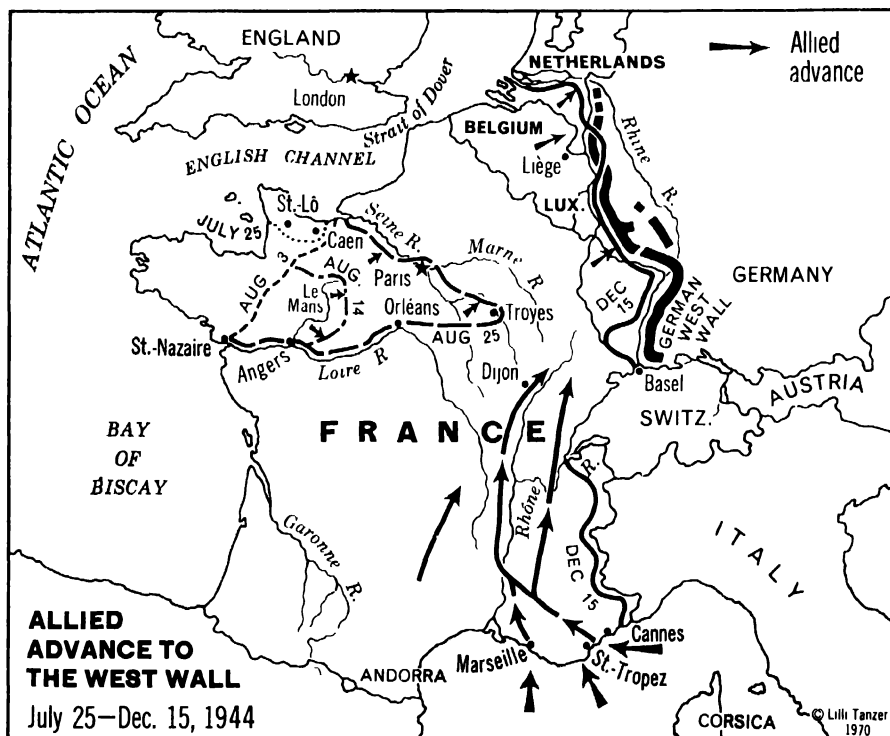

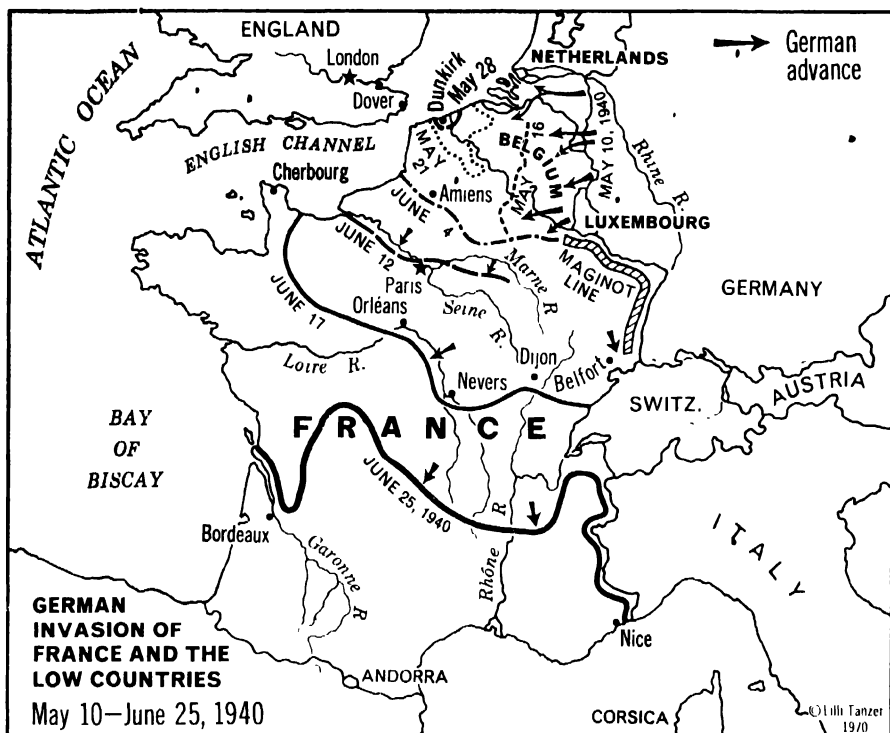

Scine. The drive north up the Rhone Valley seized Lyons, 3 Sept., but the Germans succeeded in stabilizing this front at the Vosges Mountains. However, most of France was again in allied hands.

EAST ASIA AND THE PACIFIC

1942-45

THE BURMA ROAD. American naval victories in mid-1942 in the Pacific lessened the Japanese threat to India, but the U.S.A. and Britain were still faced with the problem of reopening the Burma Road to supply China. Work began, Dec. 1942, on a new road from Ledo in India across northern Burma to intersect with the old Burma Road near the Chinese border. Until the completion of the Ledo Road the only supply route to the Chinese was by air over the 500-mile Himalayan Hump between Assam Province in India and Kunming in China, a most dangerous and costly route. Meanwhile the British in Oct. 1942 launched an offensive in Burma which captured Maungdaw, 17 Dec., but failed to reach Akyab. In Feb. 1943 a specially trained British brigade, the Chindits, struck deep into the Burmese jungles, but were surrounded and lost a quarter of their 3,000 men before infiltrating back. The Japanese also counterattacked from Akyab, Mar., and retook the British gains around Maungdaw, May.

ALLIED POSTWAR PLANS FOR ASIA. At the Cairo Conference, 22-26 Nov., 1943, Roosevelt and Churchill met with Chiang Kai-shek and recognized China as one of the great allies, promising also to send more supplies across the Hump. The Cairo Declaration, 1 Dec., announced U.S., British, and Chinese resolve to strip Japan of all former Chinese territory—including Manchuria, Taiwan, and the Pescadores—and of all Pacific islands acquired since 1914, and to set up an independent Korea. During the Moscow Foreign Minister's Conference, Oct. 1943, Stalin had promised to enter the war against Japan once Germany had been beaten, and at the Teheran Conference, 28 Nov.-1 Dec., he confirmed this

agreement. He also expressed hope for the cession to Russia of southern Sakhalin Island and the Kurile Islands, and for the use of the Manchurian railways and Dairen.

ALLIED ADVANCE IN BURMA. In late Jan. 1944 the Japanese attacked British forces moving down the coast toward Akyab, but, despite early successes, the Japanese effort collapsed, and by Apr. the British were within 30 mi. of Akyab. Another Japanese offensive cut the Imphal road, 29 Mar., but by the end of June the Japanese, short of food and supplies, were in retreat. Meanwhile the allies pushed forward and the American version of the Chindits, Merrill's Marauders (5307th Composite Unit), took the vital Myitkyina airfield, but could not seize the town itself until 3 Aug.

The relatively inactive Chinese front flared up when the Japanese moved to eliminate a series of airfields established by U.S. Gen. Claire Chennault (1890-1958) to support the Chinese. Between Apr. and mid-Dec. all but 2 of the bases were taken and Japan had captured Chinese territory linking up with Indochina. U.S. efforts, mid-1944, to promote Chinese Nationalist-Communist military co-operation failed, and Gen Stilwell was recalled from the Chinese front at Chiang's request.

The allied advance in Burma continued, taking Akyab, 3 Jan., 1945, and clearing the road from Ledo to Kunming, 20 Jan. Mandalay fell, 20 Mar., and Rangoon was taken, 3 May. Plans were now made to send all U.S. and Chinese forces in Southern Asia to China for an offensive designed to capture a Chinese port.

THE STRUGGLE FOR NAVAL SUPREMACY IN THE PACIFIC. The Japanese began expanding the defensive perimeter they had established by Mar. 1942 with the capture of the main Solomon Islands, May-June. Having broken the Japanese communications code before the outbreak of the war, the U.S.A. was forewarned of a projected landing at Port Moresby, Papua. The Battle of the Coral Sea, 8 May, was a draw, but the Japanese gave up the attempted landing. On 3-7

June the Japanese attacked Dutch Harbor and seized Kiska and Attu in the Aleutians. But intercepted messages prepared the U.S. for Japanese plans to invade Midway. The first wave of Japanese aircraft hit the island at 6:30 A.M. on 4 June, but before the second wave could attack U.S. torpedo planes struck. They were driven off, suffering heavy losses. But the defending Japanese fighters could not regain height, and between 10:20 and 10:25 A.M. U.S. dive bombers turned 3 Japanese heavy carriers into flaming hulks. A 4th Japanese carrier and the U.S.S. *Yorktown* were eliminated that afternoon. Due to Japanese overconfidence, and to U.S. possession of the code and some luck, the Japanese abruptly lost their naval superiority in the Pacific and never regained it.

PACIFIC ISLAND CAMPAIGNS. An American invasion of Guadalcanal and Florida islands, 8 Aug., led to Japanese alarm and the futile reinforcement of Guadalcanal. Japanese efforts to reassert their naval predominance failed, and during late Sept. and early Oct. the "Tokyo Express" of destroyers and cruisers moving at night built up Japanese forces. But the Japanese counterattack failed, 23-26 Oct., and by 9 Feb., 1943, Guadalcanal was entirely in U.S. hands. Meanwhile the Japanese had seized Buna in Papua, 22 July, 1942, and drove to almost 30 mi. of Port Moresby. But despite fanatical resistance Buna was retaken by Australian forces, 22 Jan., 1943. During the rest of 1943 the allies moved up the Solomons and along the north coast of New Guinea.

In the Central Pacific the U.S.A. invaded the Gilbert Islands, 21 Nov., 1943, and were met on Tarawa with suicide attacks that cost 1,000 Marine lives. The eastern Marshalls were by-passed and Kwajalein was seized, 1-8 Feb., 1944, as was Eniwetok, the largest of the western Marshalls, 18-23 Feb. When the U.S.A. invaded Saipan, 15 June, the Japanese sent out carrier planes, 227 of which were lost in the "Marianas Turkey Shoot." Moreover, this Battle of the Philippine Sea cost the Japanese 2 carriers to submarine attack and 1 to aircraft, perma-

nently neutralizing the Japanese carrier force. Fanatical resistance on Saipan cost the U.S.A. 3,000 dead as opposed to 30,000 Japanese. Nearby Tinian was quickly taken, 24 July-1 Aug., and Guam also fell, 21 July-10 Aug.

RECAPTURE OF THE PHILIPPINES. The U.S.A. began her reinvansion of the Philippines with landings on Leyte, 20 Oct., but the naval Battle of Leyte Gulf almost turned the invasion into a disaster. While the U.S. fleet was decoyed away, the Japanese 1st Attack Force steamed through San Bernardino Strait and suddenly came upon a weak U.S. naval force. But instead of pressing the attack and destroying unprotected shipping in Leyte Gulf, the Japanese reversed direction. Despite heavy losses the Japanese reinforced Leyte, but to no avail, and by the end of 1944 the Leyte campaign was over. Japanese casualties numbered 70,000 to 16,000 American. Luzon was invaded at Lingayen Gulf, 9 Jan. 1945, and, despite bitter resistance, Clark Field and Fort Stotsenburg had been captured by 31 Jan. Manila was reached, 2 Feb., but the Japanese fought on in the capital for another month, and resistance continued in the interior until the end of the war. The result of Japanese suicide tactics was reflected in the relative casualties: 170,000 Japanese killed as against 8,000 Americans.

DEFEAT OF NAZI GERMANY

1943-45

GERMAN OFFENSIVE IN THE EAST: SPRING 1943. As usual, Hitler ordered planning for a spring offensive (Operation Citadel). Meanwhile the starving Polish Jews, crowded into Warsaw's ghetto preliminary to extermination, rose up in a desperate frenzy of the doomed, 6 May, 1943. Despite fierce resistance the 50,000 remaining inhabitants were wiped out by SS troops. Earlier, 13 Apr., the Germans had discovered the mass graves of the Poles executed by the Russians at Katyn, and when the Polish government in exile called for an investigation Stalin broke off relations. Hitler's offensive to-

ward Kursk, 5-15 July, soon proved abortive.

SOVIET COUNTERATTACK. The Russians launched a counterattack, using a by now typical strategy of following a tremendous artillery barrage with a steamroller attack on a broad front. On 5 Aug. Soviet forces captured Orel and Byelgorod. Soon a broad gap opened in the German lines on this front, but Hitler maintained his policy of obstructing the timely withdrawal of German forces. When he did permit retreats, either it was too late or his troops were too exhausted to hold the planned line. By the end of Oct. the Russians had crossed the Dnieper and had cut off the German 17th Army in the Crimea. On 6 Nov. Kiev fell. By this time 5.6 m. Russians faced 4 m. Axis troops in the eastern theater. The Russians were far superior in quantity of tanks and artillery, and were more mobile, with wider-tracked tanks and U.S. 4-wheel-drive trucks. On 4 Jan., 1944, they crossed the 1939 border, at Sarny. An attack begun on 4 Mar. soon had them across the Bug, Dniester, and Prut rivers. When they halted in mid-Apr., they had reached the Carpathians.

ADVANCE INTO POLAND. To the north the previously static front near Leningrad was attacked, 15 Nov., 1943, and on 20 Nov. Novgorod was captured by the Russians. The Moscow-Leningrad railroad was cleared, and by 1 Mar. the Germans had been forced back to the Panther Line centered on Pskov, where they held. The next major Russian offensive surprised the Germans by striking Army Group Center, 22 June, 1944, which had sent most of its armor south. The German front disintegrated, and by 3 July Army Group Center had lost $\frac{3}{4}$ of its divisions. On 29 July the Russians reached the Baltic Sea south of Riga and cut off Army Group North. Meanwhile a deep thrust, begun 13 July, took Lublin, 24 July, and then drove along the Vistula toward Warsaw. With the Russians on the outskirts and the Soviet "Kosciuszko" radio station calling for an uprising, the Polish underground took up arms to seize Warsaw, 1 Aug. But Stalin now saw an opportunity to let the German SS destroy

a pro-western resistance movement, and made no further move to advance on the Polish capital. Not only did he refuse any support but he also banned western overflights (intended to drop supplies to the rebels) from landing in Soviet territory. After extremely bloody fighting which destroyed most of Warsaw, the Polish Home Army surrendered, 2 Oct.

Meanwhile Army Group Center had opened a corridor, mid-Aug., which permitted Army Group North to escape before the Russians counterattacked, 14 Sept. But when the Russians reached the Baltic north of Memel, 10 Oct., Army Group North was again cut off.

ADVANCE INTO THE BALKANS.

In late Aug. a Russian offensive forced the collapse of the Axis southern front, and Rumania surrendered, 23 Aug., and declared war on Germany, 25 Aug. The Russians captured the Ploesti oil fields, 30 Aug.; Bucharest, 31 Aug.; and then invaded Bulgaria, 8 Sept., which also sued for peace and declared war on Germany. Outflanked, the Germans were forced to abandon Crete, Greece, and Albania. Belgrade fell, 20 Oct. The Horthy regime in Hungary had attempted, 15 Oct., to take Hungary out of the war, but the Nazis quickly installed a puppet regime. A Soviet-supported Hungarian government declared war on Germany, 29 Dec., but, although surrounded, the Germans fought on in Budapest.

To the north the Finns had been driven back to the 1940 frontier by mid-July 1944, and on 2 Sept. sued for peace (signed 19 Sept.). The German 20th Mountain Army now had to retreat into northern Norway. After several armed clashes the Finns gave up trying to disarm the Germans in accord with the Soviet armistice, and Finland declared war on Germany, 3 Mar., 1945.

ALLIED PURSUIT IN THE WEST.

Gen. Eisenhower planned to advance on a broad front rather than try a daring breakthrough. His main effort was to be by Gen. Montgomery's 21st Army Group through Belgium into the Ruhr. In light of the apparent German collapse Eisenhower tried to satisfy Montgomery's demands for a strengthening of his forces by

also sending the U.S. 1st Army north of the Ardennes. 21st Army Group captured Brussels, 3 Sept., 1944, and Antwerp, 4 Sept. Meanwhile the U.S. 1st Army took Mons, 3 Sept.; Liège, 7 Sept.; Luxembourg, 10 Sept.; and then crossed the German frontier, 11 Sept. South of the Ardennes, Gen. Patton's U.S. 3rd Army seized Rheims, 29 Aug.; Verdun, 31 Aug.; and crossed the Moselle south of Metz, 7 Sept.

Despite these reverses the Germans, through the use of 8 m. foreign laborers, were able to maintain an army of 10 m. men. German war production was still high, and Hitler looked for some miracle weapon like the jet plane (which he had earlier neglected) to save the Reich. On 25 Sept., 1944, he ordered the raising of a *Volkssturm* by calling up all able-bodied males between 16 and 60, thus mobilizing Germany's last manpower reserves.

The rapid allied advance now began to outrun its supplies, which could not be moved forward fast enough even by the one-way "Red Ball Express" truck route. Both Montgomery and Patton thought that their forces should receive the bulk of the available supplies to strike Germany a death blow. Eisenhower now authorized an airborne assault to leap the formidable Dutch river net along the lower Rhine (Operation Market) for 17 Sept. But the linking ground attack by the British 2nd Army (Operation Garden) was slowed by heavy resistance, so that the 1st Allied Airborne Army was badly mauled by enemy armor before it could be rescued. Meanwhile the Scheldt Estuary was finally cleared and the port of Antwerp opened, 28 Nov.

GERMAN ARDENNES OFFENSIVE.

With the allied offensive bogged down, Hitler decided to attempt a last desperate counteroffensive through the Ardennes to Antwerp. Maintaining the greatest secrecy, and aided by fog, snow, and English-speaking infiltrators in allied uniforms, the German armored attack, 16 Dec., gained complete surprise. But although the Nazis surrounded the U.S. 101st Airborne Division at Bastogne and drove almost to Dinant, clearing weather, which permitted allied air strikes, and

German fuel shortages helped bring the offensive to a halt. The last phase of the Battle of the Bulge consisted of allied elimination of German garrisons, completed by the end of Jan. 1945. A lesser German attack in Alsace had little success, Jan. 1945, and the allies countered by reducing the German pocket around Colmar, 20 Jan.-9 Feb.

SLOWING OF THE GERMAN WAR MACHINE. With Germany's reserves spent, collapse was imminent. From Western European bases allied bombing was turning Germany into rubble. German oil production was down to a trickle, with tanks being hauled into action on the Eastern Front by oxen in order to save fuel. Chemical production was crippled, and artillery shells were $\frac{3}{4}$ filled with rock salt. Dwarving the earlier fire bomb raid on Hamburg, 24 July-3 Aug., 1943, in which 50,000 were killed, a British incendiary raid on Dresden, 13-14 Feb., 1945, packed with refugees from the East, left 135,000 dead.

YALTA CONFERENCE. Meanwhile Roosevelt, Stalin, and Churchill met at Yalta in the Crimea, 4-11 Feb., 1945. Earlier, at the Quebec Conference, 12-16 Sept., 1944, Roosevelt and Churchill had accepted the proposal of U.S. Secretary of the Treasury Henry Morgenthau, Jr., that Germany be converted into "a country primarily agricultural and pastoral," but quickly abandoned this scheme as unrealistic. At Yalta Stalin suggested that Germany pay \$20 billion in reparations through the dismantling of heavy industry, half the proceeds of which would go to war-ravaged Russia. There had never been any doubt among the Big 3 that Germany would be occupied after the war. The British Attlee Committee had, in 1943, devised a partition of Germany into 3 occupation zones and, during preliminary negotiations in 1944, the Soviets had adopted this plan as their own. At Yalta the same plan, except for the addition of a French zone created out of U.S. and British territory, was formally adopted. Berlin was also to be divided into sectors.

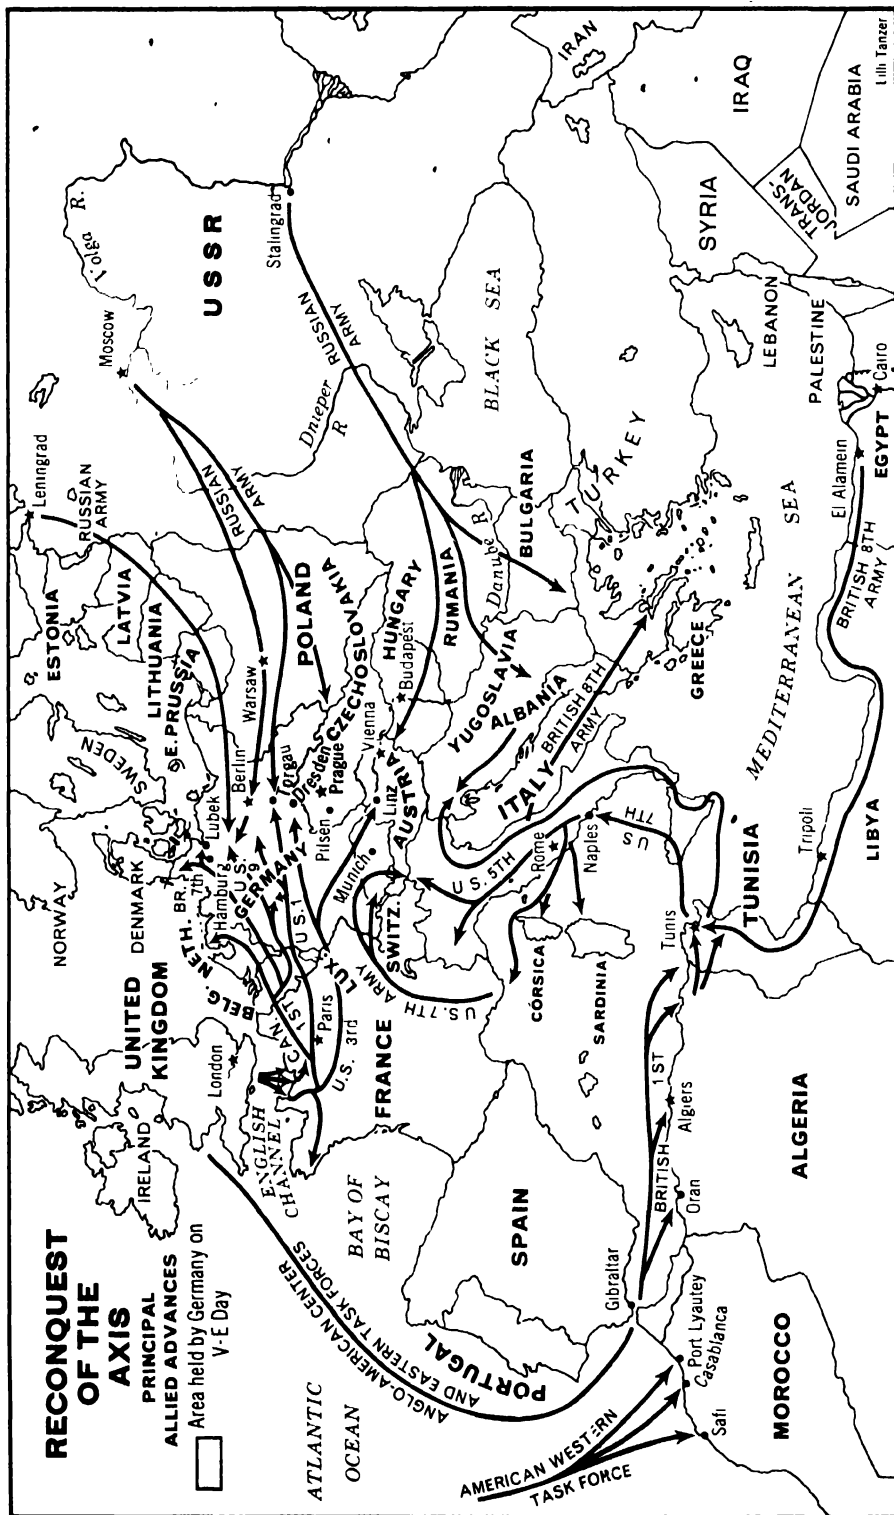

THE DRIVE FOR BERLIN. In the west the allies advanced toward the

Rhine. Trier fell, 2 Mar., and Cologne, 7 Mar. To the south the Ludendorff railroad bridge at Remagen, which due to an error had not been blown up on time, was captured intact, 7 Mar. In the east Warsaw fell, 17 Jan., and a decisive breakthrough by the Russians reached to the Oder by the end of the month. By mid-Mar. Silesia and the right bank of the Oder had been cleared. Budapest was finally taken, 13 Feb., and the Russians continued into Austria, capturing Vienna, 13 Apr.

The western allies had meanwhile, by 25 Mar., cleared the Saar and Palatinate. Crossings were effected with increasing frequency all along the Rhine. The Ruhr was enveloped, 1 Apr., trapping 325,000 Germans. The advance was now extremely rapid and resistance light, except in a few diehard areas like the Harz Mountains, Kassel, and Heilbronn. In the Netherlands the Germans stubbornly held on and, to prevent the imminent starvation of the Dutch, an agreement, 22 Apr., was made halting the fighting and promising allied food for the inhabitants in return for German agreement not to flood the country. False rumors of a Nazi "National Redoubt" in the Alps led to a drive south. On 22 Apr. Stuttgart fell, on 30 Apr. Munich, and on 4 May Salzburg and Pilsen. No effort was made to seize the Czech capital of Prague, although, unlike Germany, no agreement on zones of occupation had been made.

GÖTTERDÄMMERUNG. The final Soviet offensive encircled Berlin by 24 Apr. Hitler ordered a desperate last-ditch stand, seeing in the death of Roosevelt, 12 Apr., 1945, the counterpart of the demise of Czarina Elizabeth, which disrupted the coalition facing Frederick the Great in the 7 Years' War. Hitler's scorched-earth orders were generally disregarded. But when Marshal Göring radioed a suggestion that he take charge of the government in place of the trapped Führer, Hitler had him arrested for treason. Adm. Dönitz was then designated by Hitler in his will as his successor. Blaming defeat on an unworthy German people, Hitler committed suicide, 30 Apr. Berlin fell, 2 May. Mean-

ALLIED ADVANCES
Area held by Germany on
V-E Day

while the world was exposed to a series of shocks by the uncovering of Hitler's extermination camps. Dönitz, concerned to prevent German troops from falling into Russian hands, encouraged local surrenders such as those in Italy, Denmark, and the Netherlands, 4 May, and in Bavaria by Army Group G, 5 May. But Eisenhower demanded simultaneous surrender on both fronts of the remainder, threatening to halt any further westward flow of refugees and soldiers. The Germans signed an unconditional surrender on 7 May. Victory in Europe (V-E) Day was proclaimed, 8 May, and a 2nd surrender ceremony took place in Berlin with the Russians present on 9 May, 1945. All Western Europe was now free of Axis control.

CASUALTIES. Greater than the enormous material losses of the European war was the human loss. Soviet dead amounted to some 20 m. (7 m. military). Including *Volksdeutschen*, the Germans lost 6.5 m. lives (3.5 m. military). 4.5 to 6 m. Jews were exterminated at Hitler's order. In Nazi-occupied Europe, Poland, with its large Jewish population, and Yugoslavia, where heavy guerrilla fighting and atrocities against the Serbs took place, suffered the highest casualties. The U.S. lost 405,000, Britain 330,000, and France 270,000 total military dead, primarily in the European theater.

THE DEFEAT OF JAPAN

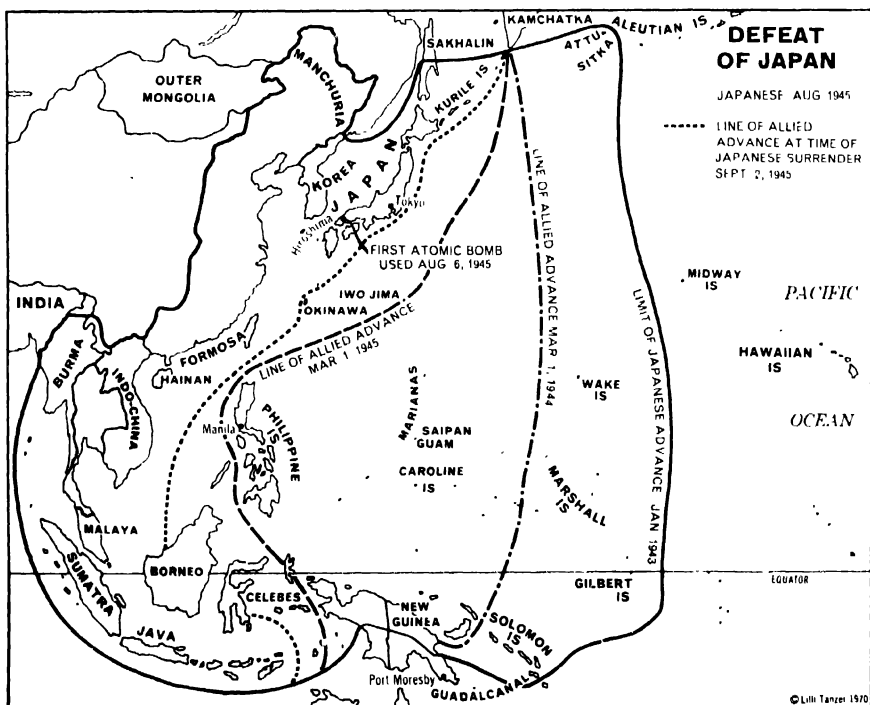

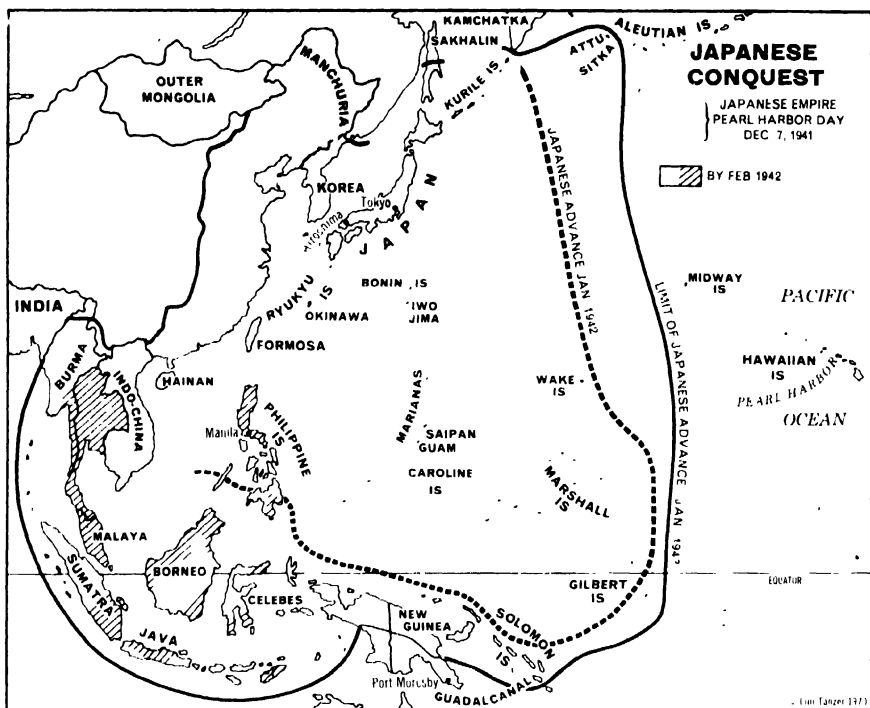

1945

DRIVE ON THE JAPANESE HOMELAND. The captured Mariana Islands (Guam, Tinian, and Saipan) furnished bases for increasingly heavy air raids on Japan. The next step was to invade Iwo Jima, 19 Feb., 1945, to provide an intermediate base for emergency bomber landings and fighter cover. Marines raised the U.S. flag on Mount Suribachi, 23 Feb., and organized resistance on Iwo (the most strongly fortified island subdued by U.S. forces during the war) ended on 16 Mar. Practically the entire 22,000-man Japanese force fought to the death, while

6,800 Americans were killed. Okinawa, the largest island in the Ryukyus, on the edge of the Japanese homeland, was the next U.S. target. The assault began, 1 Apr., with the Japanese defending at inland positions rather than on the beaches. *Kamikaze* (divine wind) aircraft raids against supporting U.S. naval forces caused some losses but never seriously threatened the invasion. On 7 Apr. the Japanese Imperial Navy committed *hara-kiri* when, with the last 2,500 tons of fuel available to it, a suicide attack was mounted off Okinawa. The battleship *Yamato* and 4 destroyers were sunk at a cost of only 10 U.S. planes.

BOMBING OF JAPAN. Mass B-29 (range: 1,600 miles) high-altitude precision air raids on Japan, begun in Nov. 1944 from the Marianas, had poor results. But 21st Bomber Command switched to low-level attacks, and then turned to incendiary raids on Japanese cities with their numerous wooden structures. The 1st night fire bombing raid, 9 Mar., 1945, on Tokyo scared nearly 16 sq. mi. of the city and killed 83,793 persons. Similar attacks spread all over Japan, and Japanese air defense was so poor that soon the Americans were dropping warning leaflets in advance.

POTSDAM CONFERENCE. Meanwhile at the Yalta Conference, 4-11 Feb., 1945, in return for Soviet entry into the Japanese war after Germany's defeat, the USSR had been promised southern Sakhalin, the Kuriles, a lease of Port Arthur, pre-eminence in an internationalized Dairen, and the use of the Manchurian railways. After the fall of Okinawa the Japanese government began to seek a way out of the war, and secretly asked the Soviet Union to mediate. But the Russians stalled, and at the Potsdam Conference, 17 July-2 Aug., 1945, President Harry S. Truman (b. 1884) only learned of these feelers second hand from Churchill. (Churchill's Conservative Party was defeated in a British election, 26 July, and Clement Attlee [1883-1967] became prime minister, leaving Stalin the last of the Big 3 war leaders.) The Potsdam Declaration, published on 26 July, called

for immediate Japanese capitulation and spelled out the terms of unconditional surrender.

JAPANESE SURRENDER. Since 1942 the U.S. "Manhattan Project" had been working to develop an atomic bomb, and the 1st was exploded at Alamogordo, N.M., on 16 July, 1945. When the Japanese balked at surrendering with the emperor's status unclear, the Hiroshima bomb was dropped, 6 Aug., 1945, killing 71,379 people. On 8 Aug. Stalin declared war, and Russian forces invaded Manchuria, Korea, and southern Sakhalin. The Japanese had, since Okinawa, been withdrawing to the Chinese coast in order to free troops for the defense of the home

islands so the Russians met little resistance. On 9 Aug. another atomic bomb was dropped, this time on Nagasaki. The Japanese now sued for peace. But the atom bombs were only the final blow, for the vulnerable Japanese economy was reduced to a shambles, due not only to air attack but even more to the destruction by submarines of Japan's merchant marine. The formal surrender of the Japanese Empire took place, 2 Sept., 1945, aboard the U.S. battleship *Missouri*, and the 5-m.-strong Japanese army was quickly disarmed. Total military casualties in the Asian war were much lighter than in Europe, with 2.2 m. Chinese dead, 1.5 m. Japanese, and 55,000 Americans.

THE POSTWAR WORLD,

1945–1968

The New Europe

RECONSTRUCTION AND CHANGE IN THE WEST

France

1945–58

FOUNDING OF THE 4TH REPUBLIC. Following the nationalization of the coal mines, 14 Dec., 1944, the provisional government of Charles de Gaulle created the *Comités d'Entreprises*, 22 Feb., 1945, and Air France, 26 June, and passed social security legislation, 11 Oct. It also purged Vichy collaborators: Pétain was sentenced to death, 14 Aug. (sentence later commuted to detention for life), and Pierre Laval (b. 1883) was executed, 16 Oct. Elections were held for an assembly, 21 Oct.; the Communists and the United Movement of the French Resistance won 152 seats; the Socialists 152; the new Popular Republican Movement (MRP), founded by Georges Bidault (b. 1899), 141; and other groups 110. De Gaulle was elected head of the provisional government, 13 Nov., with Bidault as foreign minister, René Pleven (b. 1901) finance minister, and the Communist leader Maurice Thorez (1900–1964) minister of state.

ECONOMIC LEGISLATION. On 21 Dec. plans were announced for the establishment of a Planning Commission; Jean Monnet (b. 1888) was named to head it, and the 1st plan was published, 3 Jan., 1946. On 25 Dec., 1945, the franc was devalued, the new rate being frs. 119.1 to (U.S.) \$1. On 1 Jan., 1946, the Bank of France was nationalized. On 20 Jan. de

Gaulle abruptly resigned, protesting against the weakness of the executive in the proposed constitution, and a new Socialist, MRP, and Communist coalition was formed. On 8 Apr. the gas and electricity industries were nationalized, followed by insurance, 25 Apr., and credit, 17 May.

THE SEARCH FOR STABILITY.

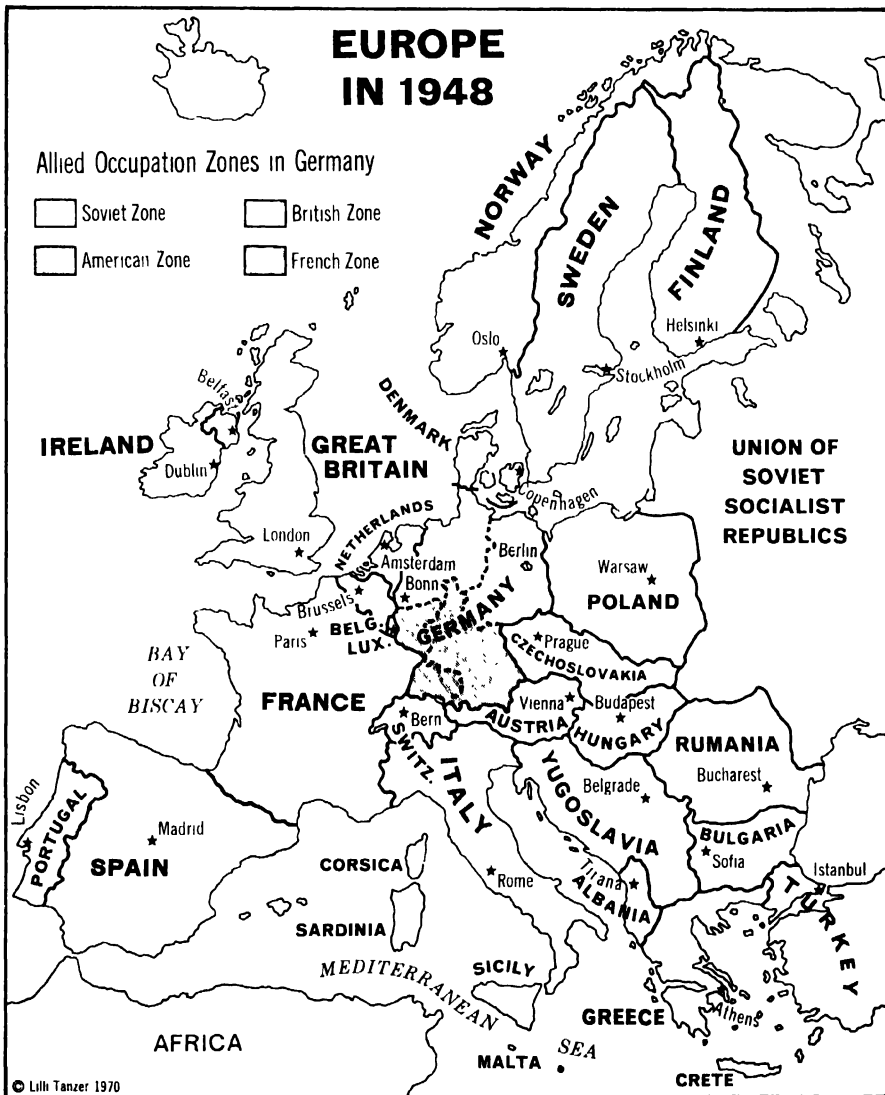

The new constitution, providing for an all-powerful National Assembly, was rejected by referendum, 5 May, and on 2 June a new Constituent Assembly was elected, with the MRP as the largest bloc. Bidault formed a new coalition. On 16 June, de Gaulle made a speech at Bayeux, in which he decried party factionalism and called for a presidential type of government. A new constitution with a weak executive was, however, adopted by referendum, 13 Oct. After elections in Oct., from which the Communists emerged as the largest party, Vincent Auriol (1884–1966) was elected president of the Republic, 16 Jan., 1947. On 14 Apr., 1947, de Gaulle formed the Rally of the French People (RPF). Failing to hold down prices—by Jan. 1948 the price level was 13 times that of 1939—the government was faced with frequent strikes for higher wages, which it resisted. Finally, the Communists supported a strike of Renault auto workers, Apr., and joined a no-confidence vote against the government, 4 May. On 9 May Communist cabinet ministers were dismissed. A new liberal statute for Algeria was voted, Aug., but was not implemented. In municipal elections held in Oct. the RPF

emerged as the main party, and de Gaulle called for new general elections. The center parties replied by creating a "Third Force" of parties hostile to both Communists and RPF. On 26 Jan., 1948, the franc was again devalued, to frs. 214.4 to \$1. In new elections, 17 June, 1951, the Third Force parties gained 404 out of 625 seats.

DECLINE OF THE 4TH REPUBLIC.

The MRP proposed a law designed to give financial aid to Catholic schools, Sept. 1951, but Radicals and Socialists

opposed it. The law (Loi Barangé) was eventually passed with MRP and RPF votes. Antoine Pinay (b. 1891) formed a new cabinet, May 1952, preaching financial austerity, and the "Pinay Miracle" (the achievement of national economic health) followed. Divisions of opinion on the conduct of the Indochinese war and on the proposed European Defense Community (EDC) provoked frequent ministerial crises, until on 18 June, 1954, Pierre Mendès-France (b. 1907) became premier on a pledge to end the war. This he

succeeded in doing, but on 1 Nov. rebellion broke out in Algeria. Mendès-France's government fell, 5 Feb., 1955. In elections held on 2 Jan., 1956, Pierre Poujade (b. 1920), leading a new party of small businessmen, won 13% of the votes. The Socialist Guy Mollet (b. 1905) formed a new cabinet. He at once visited Algiers, but his conciliatory statements provoked settler opposition. Reversing himself, he adopted a hard line, dispatching military reinforcements to Algeria. On 30 Oct., 1956, Mollet joined British Prime Minister Eden in sending an ultimatum to Egypt (the Suez Crisis). Facing increasing financial problems and with no success in Algeria, Mollet's government fell, 21 May, 1957. Succeeding governments were no more successful in dealing with the problem. On 13 May, 1958, settlers in Algeria, suspecting that the government was preparing to make a deal with the nationalists, rebelled, and were soon calling for the return of de Gaulle.

RECALL TO POWER OF DE GAULLE. As revolt spread throughout Algeria and to Corsica, de Gaulle was invested as prime minister, 1 June, with power to rule by decree for 6 months and to draw up a new constitution. He visited Algiers, but spoke in generalities. A commission under Gaullist Michel Debré (b. 1912) was set up to draft the new constitution. The draft of this document, providing for a strong presidency, was adopted by referendum, 28 Sept., in France and in all French overseas possessions except Guinée, it replaced the French Union with the French Community. A new National Assembly was elected, Nov., the new Gaullist "Union for the New Republic" (UNR) winning 189 out of 465 seats and the Communists only 10. De Gaulle was elected president, 21 Dec.

1959-68

THE 5TH REPUBLIC. Finance Minister Pinay devalued the franc, 27 Dec., to frs. 493 to \$1. Debré was appointed prime minister, 8 Jan., 1959. On 16 Sept. de Gaulle recognized the right of the Algerians to self-determination, and

launched the Constantine Plan. On 24 Dec. a new law vastly increased state aid to Catholic schools. In Jan. 1960 discontented army officers staged a revolt in sympathy with the settlers in Algeria, but it was soon put down. A referendum, 8 Jan., 1961, endorsed the principle of Algerian self-determination. In Apr. there was another army revolt, which also collapsed, and de Gaulle invoked emergency powers. The war in Algeria and the increasing violence led to widespread protests in France. In the fall of 1961 the settler Secret Army Organization (OAS) began a campaign of terror in France and Algeria. A referendum, 8 Apr., 1962, endorsed agreements reached at Évian, and Algeria became independent, 3 July.

THE GAULLIST REGIME. On 14 Apr., 1962, Georges Pompidou (b. 1911) replaced Debré as prime minister. The opposition, protesting a planned referendum for the direct election of the president, defeated the government, which resigned, 6 Oct. In the referendum on 28 Oct., however, the voters endorsed direct presidential elections. In national elections in Nov. Gaullists gained an overall majority. During Mar.-Apr. 1963 there was a wave of strikes calling for higher wages, and on 21 Apr. the government announced a price freeze, followed by a stabilization plan, Sept., to counter inflation.

In June 1965 proposals for a federation of non-Communist left-wing parties proposed by Socialist presidential candidate Gaston Defferre (b. 1910) failed, and Defferre withdrew. In the presidential elections, Dec. 1965, de Gaulle only beat François Mitterand (b. 1916) in a runoff. In Dec. 1966, Socialists and Communists agreed to co-operate in national elections. In the elections held in Mar. 1967 the Gaullists won a slim majority. The government acquired power to make certain economic and social changes by decree for 6 months.

MAY 1968 RIOTS. In May 1968 student rioting, beginning 2 May at the new Faculty of Letters at Nanterre and spreading to the Sorbonne and to provincial universities, touched off a month-long social and economic crisis. The students,

led by Daniel Cohn-Bendit (b. 1945), protested against police brutality and called for a radical transformation of French society and for educational reforms. They rioted repeatedly, setting up barricades in the Latin Quarter and fighting with police. They occupied the Sorbonne from 14 May to 16 June. Workers went on strike for one day, 13 May, in sympathy with the students, then more extensively, demanding fewer working hours and higher minimum wages. By 20 May, 7-10 m. workers ($\frac{1}{3}$ of France's labor force) were on strike and transportation, communications, and production were at a standstill. On 24 May, de Gaulle proposed a referendum to decide upon his continuance in office. The "general strike" began to break, 31 May, as workers began making wage settlements with their employers. Normalcy was re-achieved only on 6 June.

RETENTION OF POWER BY DE GAULLE. Parliamentary elections were held 23 and 30 June instead of the proposed referendum. De Gaulle's Union for the Defense of the Republic won an absolute majority for the 1st time, taking votes away from the Communists and from Mitterand's Federation of the Democratic and Socialist Left. On 10 July Maurice Couve de Murville (b. 1907) replaced Pompidou as premier. On 11 Oct a sweeping educational reform bill was passed, decentralizing the university system and providing for student participation in academic administration. A monetary crisis developed, caused by the "events of May" and the ensuing flight of capital. On 24 Nov., de Gaulle refused to devalue the franc, but announced instead a program of austerity: a wage and price freeze, budgetary cuts, and better administration of the tax laws.

Great Britain and Ireland

1945-63

LABOUR ELECTION WIN. In the elections of 5 July, 1945, the Labour Party won a landslide victory on a platform of full employment, social reform, and nationalization of key industries.

Clement Attlee (1883-1967) became prime minister, Ernest Bevin (1881-1951) foreign secretary, Hugh Dalton (1887-1962) chancellor of the exchequer, Herbert Morrison (1888-1965) leader of the House of Commons, and Aneurin Bevan (1897-1960) minister of health. The sudden ending of lend-lease, announced by the U.S.A. on 24 Aug., made rapid demobilization essential. Faced with a massive housing shortage, the government took compulsory purchase powers. The U.S.A. granted Britain a loan of \$3,750 m., 6 Dec.

NATIONALIZATION LEGISLATION. The nationalization of the Bank of England became effective 14 Feb., 1946, and that of civil aviation 1 Aug. The harsh winter of 1946-47 provoked a severe fuel crisis. The Transport Act of 1947 nationalized railroads, canals, and the trucking industry. On 1 Jan., 1948, the coal industry was nationalized. On 5 July, 1948, the National Health Service began, providing free medical care for all. In response to continuing adverse trade balances the government devalued the pound sterling by $\frac{1}{3}$, 18 Sept., 1949. In elections held on 23 Feb., 1950, Labour retained a bare majority. The steel industry was nationalized, 15 Feb., 1951. On 16 Apr. Bevan and Harold Wilson (b. 1916) resigned in protest against the rearmament program.

CONSERVATIVE RETURN TO POWER. Elections held on 25 Oct., 1951, were won by the Conservatives. Churchill returned to power as prime minister with Eden as foreign secretary and R. A. Butler (b. 1902) as chancellor of the exchequer. Faced with a new balance of payments problem, the government imposed higher taxes and cut construction programs. On 6 May, 1953, road transport was denationalized, and iron and steel followed suit, 13 July. Food rationing ended, 4 July, 1954. After improving during 1953-54, the payments position worsened in 1955 as speculation began on a return to sterling convertibility. On 5 Apr., 1955, Churchill retired and was replaced by Eden, with Harold Macmillan (b. 1894) as foreign secretary. The Conservatives increased their majority in

elections held on 26 May. On 7 Dec. Attlee resigned and was succeeded by Hugh Gaitskell (1906–63) as Labour Party leader. The discount rate had again to be raised, 1956. Eden resigned, 9 Jan., 1957, following the Suez war, and Macmillan succeeded him. On 4 Apr. new defense plans were announced ending the draft and reducing the armed forces to 375,000 men. During 1958 there emerged a Campaign for Nuclear Disarmament, led by Bertrand Russell (b. 1872) and seeking British renunciation of atomic weapons. The issue figured in the elections of 8 Oct., 1959, which the Conservatives won, but not until Oct. 1961 did Labour finally reject nuclear disarmament as a party policy.

ECONOMIC POLICY. In Apr. 1960 the government instituted a credit squeeze, and in July 1961 called for a wage pause, simultaneously again raising the discount rate. On 20 Dec., 1960, plans for a drastic reorganization of the railways were announced. A rapidly growing rate of Commonwealth immigration led the government to impose controls, 27 Feb., 1962. In July 1962, in the wake of by-election losses, Macmillan shuffled his cabinet, making Reginald Maudling (b. 1917) chancellor of the exchequer. In Jan. 1963 Harold Wilson was elected leader of the Labour Party. During the spring of 1963 the government was badly shaken by a series of spy leaks and associated scandals, notably the "Profumo Affair." On 10 Oct. Macmillan resigned and Sir Alec Douglas-Home (b. 1903) replaced him.

REPUBLIC OF IRELAND. With the coming of peace, normal relations between Ireland and Britain were gradually restored. On 31 May, 1948, prewar trade links were re-established. In elections held on 4 Feb., 1948, de Valera's Fianna Fáil emerged as the largest party, but de Valera rejected a coalition, and Fine Gael leader John Costello (b. 1891) became premier. On 21 Dec., 1948, a law was passed withdrawing Ireland from the Commonwealth, and the Republic of Ireland was proclaimed, 17 Apr., 1949. Following new elections, May 1951, de Valera became premier, but was replaced by Costello in 1954. Costello's coalition was divided over economic policy and

what attitude to adopt toward the I.R.A. (Irish Republican Army), which used terrorism to advance the reunion of Northern Ireland and the south. De Valera returned to power, Mar. 1957, and was elected president, 17 June, 1959. Sean Lemass (b. 1899) became premier and James Dillon (b. 1902) leader of the opposition. Slow moves began toward normalizing relations with Northern Ireland.

1964–68

2ND POSTWAR LABOUR GOVERNMENT. In elections held on 15 Oct., 1964, Labour won a narrow victory, and Wilson became prime minister with George Brown (b. 1914) as his deputy. The new government was faced with a massive sterling crisis, halted for the time being by large borrowings from the International Monetary Fund. On 26 Oct. a 15% surcharge was imposed on imports. In Sept. 1965 a national development plan was published. On 2 Nov. the Race Relations Act went into effect, outlawing racial discrimination in public. New elections, Mar. 1966, increased Labour's majority. Following yet another run on sterling, the government imposed a freeze on all wage increases, July, and cut expenditure heavily. Unemployment figures began to rise.

The steel industry was renationalized, 28 July, 1967. Both in 1963 and in 1967 de Gaulle vetoed British entry into the EEC, ECSC, and Euratom. The sterling crisis worsened and the pound was devalued, 18 Nov., 1967, to £1=\$2.40. The Bank of England's discount rate was raised to 8% and government spending was reduced in order to restore confidence in the pound.

Germany

1945–49

DIVISION OF GERMANY. On 5 June, 1945, the allied powers occupying the 4 zones into which Germany had been divided constituted themselves the supreme authority in Germany. A 3-power conference at Potsdam, 17 July–2 Aug.,

decreed the extirpation of Nazism, the abolition of Nazi organizations and laws, the disbandment of German armed forces, the trial of war criminals, and allied control of education, democratization, and decentralization of government.

POLICIES IN THE ZONES. The borders between the occupation zones tended rapidly to become frontiers and each zone self-sufficient, as each occupying power carried out the Potsdam agreements in its own way. The French sought the separation of the Ruhr and the Rhineland from Germany. In Nov. 1945 the British took over the Ruhr mines and Krupp factories. In the Russian zone the Communist Party flourished under Wilhelm Pieck (1876-1960) and Walter Ulbricht (b. 1893). On 20 Dec. the Communists and Socialists in the Russian zone merged to form the Workers' Party, but Socialists in other zones refused to be associated with it. The Russians confiscated all landholdings over 100 hectares in size, dissolved the big trusts, and removed goods and machinery to the Soviet Union as reparations. The British and Americans united their zones economically to form the "bizonie," 1 Jan., 1947. The U.S.A. made Bavaria the first German-controlled area, June 1947; it was soon followed by the united state of Baden-Württemberg and an enlarged Hesse. By the end of 1947 each zone had an elected government. Faced with severe shortages of food and housing, unemployment, and an influx of refugees from the east (c. 10 m. by 1947), the U.S.A. and Britain steadily modified limitations on German industry. On 7 June, 1948, the western powers announced their intention to create a federal state in their zones and to institute a currency reform. The latter came into effect, 20 June, but the Russians rejected it and instituted a land blockade of Berlin.

1949-63

CREATION OF THE FEDERAL REPUBLIC. In the west a parliamentary council drafted a new constitution which, at allied insistence, was to be federal. The task was completed in May 1949, and the constitution promulgated, 23 May. It cre-

ated a federal system, with a ceremonial president, a powerful chancellor elected by the lower house (itself proportionally elected), and an upper house representing the constituent states.

Elections were held, 14 Aug. Of 402 seats the Christian Democratic Union (CDU), founded by Konrad Adenauer (1876-1967), won 139 and the Socialists, led by Kurt Schumacher (1895-1952), won 131. Theodor Heuss (1884-1963) was elected president of the republic, 12 Sept., and Adenauer formed a CDU-Free Democrat coalition, with Ludwig Erhard (b. 1897) as economics minister.

ADENAUER REGIME. Adenauer's policy called for friendship with France and the U.S.A., an end to the occupation, and German reunification, while Erhard sought economic growth through liberal capitalism. In July 1951 the western powers ended the state of war with Germany. Agreements to terminate the occupation were signed, 26 May, 1952, and Germany entered the EDC, 27 May. In general elections, 6 Sept., 1953, the CDU gained an over-all majority. By the beginning of 1955 industrial production was double that of 1936. On 5 May the Paris Agreements became effective and Germany regained her sovereignty. In the 1957 elections the CDU increased its majority. At their Bad Godesberg convention, 1959, the Socialists reversed their policy on nationalization, accepting the principle of private ownership. Willy Brandt (b. 1913) was elected the Socialists' leader. Adenauer announced his intention to seek the presidency, but later withdrew. In 1961 the CDU lost its majority, and Adenauer formed a coalition with the Free Democrats. In Oct. 1962 the government was shaken by the *Spiegel* affair, and Defense Minister F. J. Strauss (b. 1915) had to resign. Adenauer resigned, 11 Oct., 1963, and Erhard succeeded him.

1964-68

ACCESSION OF KIESINGER. On 27 Oct., 1966, the 4 Free Democrat cabinet ministers resigned over a budgetary dispute, and Erhard refused to seek a vote of confidence. The CDU replaced him as

chancellor by Kurt Kiesinger (b. 1904), who formed a coalition with the Social Democrats, Brandt becoming vice-chancellor and minister of foreign affairs, Strauss finance minister, and Gerhard Schröder (b. 1921) defense minister.

GROWTH OF RIGHT AND LEFT RADICALISM. The National Democratic Party (NPD), a rightist, "neo-Nazi" organization founded in 1964 by Adolf von Thadden, became an active force in German politics, capturing 6 to 10% of the vote in elections for various provincial parliaments, 1966-68. The Sozialistischer Deutscher Studentenbund (SDS), led by Rudi Dutschke (b. 1940), demonstrated repeatedly in major cities, calling for educational reforms and diplomatic recognition of East Germany, and opposing the influence on public opinion of conservative publisher Axel Springer. On 14 June, 1968, the much-opposed Emergency Powers Bill was passed, providing for the suspension of civil liberties in time of national danger. With the bill's passage, the western allies relinquished their occupation rights in West Germany to the German government.

Italy

1945-63

CREATION OF POLITICAL PARTIES. Following the capitulation of German troops, 2 May, 1945, large areas of Italy remained outside government control, and there was widespread settling of accounts by Resistance groups. New parties emerged, notably the Christian Democrats, led by Alcide de Gasperi (1881-1954); the Social Democrats, led by Giuseppe Saragat (b. 1898) and Pietro Nenni (b. 1891); and the Communist Party, led by Palmiro Togliatti (1893-1964). An all-party government was formed, June 1945, but Liberals and Labor Democrats resigned, Nov., and de Gasperi formed a new coalition, with Nenni as vice-premier and Togliatti as justice minister.

THE REPUBLIC. In a referendum held on 2 June, 1946, the voters opted for a republic. A Constituent Assembly was

elected, with 207 Christian Democrats, 115 Socialists, and 104 Communists out of a total membership of 556. A new constitution created a decentralized political system under a figurehead president and a premier who had to obtain investiture by both a senate elected for 6 years and a chamber elected for 5. Roman Catholicism remained the state religion, and the 1929 Concordat with the Vatican was retained. From the Fascists the republic inherited the Institute for Industrial Reconstruction (IRI), whose head, Enrico Mattei (1909-62), originally appointed to liquidate it, made the IRI a powerful instrument of industrial progress.

POLITICAL INSTABILITY AND ECONOMIC ADVANCE. On 13 Jan., 1947, the Socialists split apart. Refusing to work with the Communists, the right wing under Saragat formed a new Social Democratic Party. In May Communist ministers resigned, and de Gasperi formed a new coalition. Severe inflation led to a general strike, Dec. 1947. In elections held on 18 Apr., 1948, the Christian Democrats won 307 out of 574 seats. In 1949 there was unrest in Calabria, and on 1 July, 1950, the Cassa per il Mezzogiorno was set up to promote investment in southern Italy.

Deflation proved a successful stimulant of production, and the economic situation improved during 1950-51, sparked by oil discoveries and an upturn in tourism. In elections held in June 1953 the governing parties lost votes and a period of government instability followed the resignation of de Gasperi, July 1953, with the Christian Democrats allied sometimes with the Monarchists and sometimes with the Social Democrats. The Christian Democrats split into factions, a conservative group being led by Giuseppe Pella (b. 1902) and a reformist one by Amintore Fanfani (b. 1908), who was party secretary general. On 5 Oct., 1954, the Trieste dispute with Yugoslavia was finally settled. In Feb. 1955 oil was discovered in the Abruzzi, and Mattei arranged for IRI to exploit it.

Following the Russian denunciation of Stalin, the 2 Italian socialist parties began to move closer together. On 26 Jan., 1959,

Fanfani resigned as premier, and on 31 Jan. as secretary general of the Christian Democrats. A number of short-lived cabinets then held office. In Jan. 1962 the Christian Democrat party congress approved a Fanfani plan to negotiate with the Nenni Socialists, and Nenni agreed to support a left-of-center government, 19 Feb. In Dec. 1962 the government nationalized the electricity industry. The right wing gained strength, however, in the elections of Apr. 1963, and Fanfani resigned, 16 May. In June a government of administrators was formed, provoking left-wing protests.

1963-68

ECONOMIC AUSTERITY. In Sept. 1963 an austerity program was launched to check inflation. On 4 Dec. a new coalition took office, with Aldo Moro (b. 1916) as premier and Nenni as vice-premier. New austerity measures were introduced, 22 Feb., 1964, and on 14 Mar. an international loan was floated. In June Moro was defeated over a plan to aid Catholic schools. On 29 Jan., 1965, a 5-year development plan was adopted, based on a projected 5% annual growth rate. Fanfani again became premier, 5 Mar., resigning on 28 Dec. In July 1966 the two socialist parties, Nenni's Socialist Party and Saragat's Democratic Socialist Party, agreed to reunite.

The parliamentary elections held on 19-20 May, 1968, resulted in small gains for the Communists and Christian Democrats and losses for the Socialists and Liberals. A lengthy political crisis developed when the Unified Socialist Party pulled out of the coalition, opposing the unwillingness of the Christian Democrats to reform the pension, tax, and educational systems and to speed economic development in the south. Moro resigned, 5 June, and a minority Christian Democratic government under Giovanni Leone (b. 1908) was named until a coalition could be formed. Leone's government fell, 19 Nov., and it was not until mid-Dec. that a new coalition of Christian Democrats and Socialists took office under Mariano Rumor (b. 1915).

The Low Countries, Scandinavia, and Finland

1945-68

BELGIUM. A Catholic-Socialist-Liberal-Communist coalition under Achille van Acker (b. 1898) was formed, 11 Feb., 1945, with Paul-Henri Spaak (b. 1899) as foreign minister. Following the elections of 7 Apr., 1946, the Catholic Christian Socialists emerged as the largest party. The Communists left the cabinet, Mar. 1947, and Spaak formed an all-Socialist ministry.

The country was divided on the "royal question," which also heightened Flemish-Walloon differences, the largely Christian Socialist Flemings supporting the unconditional return of Leopold III and the largely Socialist Walloons wanting to make his return conditional. This provoked ministerial crises and street violence. Finally a plebiscite was held, 12 Mar., 1950, which resulted in a vote of 57% for the king's return and 42% against it. The king was restored to the throne, 22 July, and delegated his powers to his son, 31 July, who became Baudouin I on 7 Sept., 1951.

In elections held on 11 Apr., 1954, the Christian Socialists lost the majority they had acquired in 1950, and a Socialist-Liberal Coalition was formed. In the spring of 1955, Catholics demonstrated against a proposal to lower subsidies to private schools, but the bill passed, 13 June. On 3 Feb., 1958, Belgium signed an economic union treaty with the Netherlands and Luxembourg, but the resulting "Benelux" never became fully effective.

Following riots in the Belgian Congo, Jan. 1959, African problems began to dominate government activity, a situation which continued through 1960. In Feb. 1959, strikes broke out in the Belgian coal mines, and in Jan. 1960 there was a general strike in favor of economic and social reforms. In Dec. 1960 the Loi Unique was proposed, reducing state expenditure, increasing taxes, allowing greater investment, and seeking to promote financial stability. The law pro-

voked widespread strikes, but was voted, 13 Jan., 1961.

Walloon demands for constitutional reform provoked another government crisis, and the Christian Socialists lost votes in the elections of 26 Mar. Theo Lefevre (b. 1914) formed a Christian Socialist-Socialist coalition. In Oct. 1961, Flemish and Walloon demonstrators clashed in Brussels. On 15 Feb., 1962, Parliament passed a bill defining the linguistic boundaries of Belgium and making Brussels bilingual, but Flemish-Walloon disputes continued, especially at the University of Louvain. In Apr. 1964, doctors went on strike to protest against a new government medical-care program. At a round-table conference, Jan. 1965, the parties agreed on constitutional reforms designed to prevent one language group from dominating the other, but in elections held on 23 May the governing parties lost votes to the "linguistic extremists." In Feb. 1966, Socialist ministers resigned, and in Mar. a new cabinet was formed of Christian Socialists and members of the Party for Liberty and Progress. Paul van den Boeynants' cabinet fell, 7 Feb., 1968, over linguistic disputes and student riots at the University of Louvain. The king dissolved Parliament in preparation for elections, 1 Apr., in which the Flemish Nationalist Party gained votes. A new coalition of Social Christians and Socialists was formed under Gaston Eyskens (b. 1905).

NETHERLANDS. The Netherlands suffered greatly in the last months of the war. Wide areas were flooded, and many people starved. Queen Wilhelmina returned, 3 May, 1945. From elections held on 17 May, 1946, the Catholic People's Party and a new Labor Party emerged as the strongest groups, forming a coalition, 2 July, which lasted until 1958. Following widespread flooding, 31 Jan.-2 Feb., 1953, a Delta Plan was launched to seal off several estuaries from the North Sea.

Gradually government reconstruction plans led to higher wages and, as the country industrialized, to a decline in unemployment. On 11 Dec., 1958, Premier Willem Drees (b. 1886) resigned. Following elections, 12 Mar., 1959, a

Catholic-Protestant coalition was formed under Jan de Quay (b. 1901). On 15 Aug., 1960, natural gas was discovered in Groningen. On 7 Mar., 1961, the florin was revalued to fl.3.80 to (U.S.) \$1. In the elections of 15 May, 1963, left-wing neutralists took votes from the Labor Party, and Victor Marijnen (b. 1917) formed a new coalition, 24 July. On 29 Feb., 1964, labor and management agreed on a 10% wage raise. The 1966 budget proposed a similar increase in government expenditures and on 23 May, in the face of balance-of-payments deficits, a 2-month wage freeze was imposed. In June 1966 there were riots in Amsterdam, originally of workers, and later of "provos." The government fell, 14 Oct., as Parliament refused to increase government spending. In the elections of 15 Feb., 1967, the Catholic and Labor Parties lost votes. Piet de Jong (b. 1915) formed a new coalition government, 3 Apr., 1967.

NORWAY. The Labor Party gained an absolute majority in the elections of 7 Oct., 1945, and retained it in the 1949 and 1953 elections. Vidkun Quisling (b. 1887) was executed, 24 Oct., 1945. By autumn 1946, production surpassed prewar figures. On 22 Jan., 1955, Finar Gørhardsen (b. 1897) returned to office as premier, and on 23 Mar., 1956, the government froze prices. In July 1957 there were strikes for higher wages in the forestry, paper, and construction industries. On 1 Mar., 1959, the workweek was fixed at not more than 45 hours.

On 15 Apr., 1961, a neutralist Socialist Party was formed of dissident Labor members, and Labor lost its majority, 11 Sept., 1961. A 4-year plan issued in 1962 foresaw a 17% increase in production. On 5 Jan., 1962, price controls were reimposed. Gørhardsen resigned, 24 Aug., 1963, but the conservative government that replaced him was short-lived, and he returned to power, 25 Sept. On 23 Apr., 1964, Parliament adopted a law authorizing compulsory wage arbitration by the National Wages Board.

SWEDEN. On 6 Oct., 1946, Tage Erlander (b. 1901) became premier. His government faced pressure to raise wages and had to introduce austerity measures

to limit imports. On 1 June, 1955, compulsory health insurance was introduced. The Socialists lost their majority in the elections of June 1958, and Erlander formed a minority government. On 15 Dec., 1965, a law was adopted providing for state subsidies to political parties.

DENMARK. After the elections of 30 Oct., 1945, the Social Democrats remained the largest party. On 23 Mar., 1948, the Faroe Islands were granted internal autonomy. A new constitution with a single chamber came into force, 5 June, 1953. On 30 Sept., 1953, an all-Socialist cabinet under Hans Hedtoft (1903-55) was formed. On Hedtoft's death, H. C. Hansen (1906-60) succeeded him.

In Mar. 1956 a major series of strikes erupted, but were settled by wage increases, 12 Apr. On 20 Feb., 1959, Denmark became a member of the European Free Trade Association (EFTA), though much of her trade was with the EEC. Viggo Kampmann (b. 1910) replaced Hansen as premier, 19 Feb., 1960. On 31 July, 1962, Jens Otto Krag (b. 1914) became premier. On 12 Mar., 1963, Parliament voted to extend existing wage contracts for 2 years and freeze both prices and wages. The Socialists lost votes in the elections of Nov. 1966. On 2 May, 1967, the government announced that Denmark remained a candidate for membership in the EEC.

FINLAND. The Social Democrats and the Communists emerged as the main parties from the elections of Mar. 1945. J. K. Paasikivi (1870-1956) formed an all-party cabinet. A purge was instituted of individuals responsible for the anti-Soviet policy of 1939-40. On 19 May, 1948, Parliament censured a Communist minister and, following losses by them in the elections of July, the Communists were not included in the new cabinet. A nonaggression pact with the Soviet Union, 6 Apr., 1948, was complemented by a trade agreement, 13 June, 1950. The USSR became Finland's best customer.

In Mar. 1950 Urho Kekkonen (b. 1900) formed a new coalition, and was elected president, 15 Feb., 1951. In Mar. 1956 a general strike protested against repeal of the Emergency Powers Act, which tied

wages to the cost-of-living index. In the elections of July 1958 the Communists emerged as the strongest party, but were unable to form a coalition, and minority governments continued to rule. On 27 Mar., 1961, Finland became an associate member of EFTA. Kekkonen was re-elected president, Feb. 1962, following Soviet indications that his re-election would be welcomed by the USSR. In Jan. 1964 a wage freeze was imposed for 6 months. After the elections of Mar. 1966 a coalition was formed which included Communists for the 1st time since 1948.

Spain and Portugal

1945-68 •

SPAIN. On 19 July, 1945, Gen. Franco reorganized his cabinet to include a Catholic Action leader. United Nations attempts to isolate Spain proved abortive, but Spain did not become a member of the UN. On 31 Mar., 1947, a new constitution was promulgated, making Spain a monarchy and giving the Caudillo power to nominate his successor. The constitution was denounced by the pretender to the Spanish throne, Don Juan, but was adopted by a referendum, 6 July.

In the spring of 1951, strikes erupted in Catalonia and the Basque country in protest against low wages and lack of political liberty. The strike leaders were jailed. A new concordat, 26 Sept., 1954, ensured state control of the church.

Prices continued to rise, and riots broke out in Madrid, Feb. 1956. In July 1959 the peseta was devalued, the new rate being 60 to (U.S.) \$1, and Spain joined the Organization for European Economic Cooperation (OEEC). The steady growth of tourism (1 m. visitors in 1953, 8 m. in 1961) improved the country's balance of payments. In Sept. 1960, strikes and sabotage increased, and many intellectuals were arrested. On 23 Apr., 1962, the Asturias miners ceased work and their strike movement spread, as liberal church organizations supported the strikers. Arrests were made, and a state of emergency declared, 4 May, but

on 24 May miners' wages were raised and the strikes ended early in June. On 14 Dec., 1966, a referendum endorsed a new Organic Law providing for the appointment of a premier and guaranteeing religious freedom for non-Catholics.

PORTUGAL. After the war the Portuguese government under Antonio de Oliveira Salazar (b. 1889) held elections on 18 Nov., 1945, and eased censorship. Left-wing parties formed a "Movement of Democratic Unity" to oppose the government, and censorship was re-established. In Oct. 1946 a group of army officers failed in an attempt to seize control of the state. Arrests for what the government regarded as "subversion" were frequent. The opposition boycotted the elections of 1949 as it had those of 1945.

In elections held on 8 June, 1958, however, Umberto Delgado (1906-65) did not withdraw, but stood on a platform of free elections in Portugal. Popular demonstrations in his favor led to police action and casualties. He won 23.5% of the vote, and his popularity grew. Fearing arrest by the government, he fled the country.

In Mar. 1959 an uprising was attempted in Lisbon, but it failed. On 23 Jan., 1961, a group of Portuguese hostile to Salazar seized control of the ship *Santa Maria* in an attempt to arouse support for Delgado. In the Portuguese African territories rebellion broke out in Angola, Mar. 1961. The Portuguese government sent troops to Angola, and to Mozambique and Portuguese Guinea in 1963. In Aug. 1963 the Social Democratic Action Movement was founded in opposition to the regime. It called for the easing of repression, democratization of the republic, and self-determination for the overseas territories. The dead body of Delgado was found, Apr. 1965, in Spain, where he was presumed to have come to contact members of the Portuguese opposition. The Action Movement took part in the campaign for the general elections of 7 Nov., 1965, but withdrew from the ballots, leaving Salazar's National Union in control of all 130 seats. In Sept. 1968 Salazar had a brain hemorrhage and was replaced as premier by Marcelo Caetano (b. 1906).

Austria and Switzerland

1945-68

AUSTRIA. On 29 Apr., 1945, the Russians installed a Populist-Social Democrat-Communist provisional government headed by Social Democrat Karl Renner (1870-1950), which Britain and the U.S.A. recognized. On 25 June Austria was partitioned into 4 occupation zones. In all zones, especially the Russian, intensive anti-Nazi measures were taken. Elections were held, 25 Nov., giving the People's Party 85 seats, the Socialists 76, and the Communists 4. Leopold Figl (1904-65) became chancellor of a 3-party cabinet, and Renner was elected president, 20 Dec.

The government outlined a program of de-Nazification, the nationalization of key industries, and the return to Austria of the South Tyrol. The U.S.A., Britain, the United Nations Relief and Rehabilitation Administration (UNRRA), and the European Recovery Program (ERP) aided Austria, which had also to cope with over 600,000 displaced persons.

Austrian sovereignty was restored, June 1946, though a final peace treaty waited on allied agreement. The Communists left the government, Nov. 1947. In Mar. 1955 the new chancellor, Julius Raab (1891-1964), visited Moscow, and the Russians subsequently agreed to make a treaty with Austria. A State Treaty between the allies and the Austrian Republic was signed on 15 May, 1955, and provided for Austrian neutrality and the withdrawal of foreign troops (completed Oct. 1955).

Raab resigned, 11 Apr., 1961, and was succeeded by Alfons Gorbach (b. 1898). On 15 Dec., 1961, Austria asked for negotiations to enable her to become associated with the EEC. On 31 May, 1963, the Supreme Court ruled that Otto von Hapsburg could return, but the Socialists rejected its decision. On 2 Feb., 1964, Gorbach resigned, and was replaced by Josef Klaus (b. 1910). In elections held on 6 Mar., 1966, Klaus's People's Party won absolute control of Parliament—the

1st time a single party had had a majority since 1945. On 17 Dec., 1966, Austria and the EEC agreed to a tariff cut on industrial products; but on 29 June, 1967, Italy opposed Austrian entry into the EEC and ECSC because of terrorist attacks against the Italian South Tyrol which were thought to have been perpetrated by Austrians.

SWITZERLAND. After the war Switzerland declined to join the UN, but kept in a high state of military readiness and actively contributed to peaceful international activities. On 11 July, 1958, the government announced that it favored the acquisition by Switzerland of nuclear weapons. On 1 Apr. 1962, a Socialist-sponsored referendum to prohibit all nuclear weapons in Switzerland was defeated. The government restricted the admission of foreign workers, 1 Mar., 1963. By Aug. of the previous year the number of these had risen to 645,000.

Greece

1945-49

CIVIL WAR. After the evacuation of German troops, Sept.-Nov. 1944, most of Greece was controlled by guerrilla forces, especially by the largely Communist ELAS. On 18 Oct., 1944, George Papandreou (b. 1888), a centrist, was made head of a national unity cabinet, but its ELAS members soon resigned. Civil war began as ELAS members attacked right-wing and British occupation forces. Negotiations led to the Varkizoi Agreement, 14 Jan., 1945: the government promised free elections, the basic freedoms, and an end to martial law; and dissidents promised to surrender their arms.

During 1945 there were 6 cabinets. In May 1945, workers in Athens struck in protest against low wages and high prices. Elections, 31 Mar., 1946, were won by the right-wing Populist Party, and a plebiscite, 1 Sept., voted to recall King George II.

In the fall of 1946, charging nonimplementation of the Varkizoi accords, the Communists renewed the civil war. With British, and later American, assistance the

revolt was crushed by 1949. Between 1945 and 1949, 45,000 people were killed.

1950-68

POLITICAL INSTABILITY. In elections held on 16 Nov., 1952, the right-wing Greek Rally of Alexander Papagos (1883-1955) won 239 out of 300 seats, and Papagos became prime minister. He was succeeded, Oct. 1955, by Constantine Karamanlis (b. 1907). By 1951 the drachma was at 84,000 to the pound sterling (as against 600 in 1945). Karamanlis' National Radical Union won the elections of 19 Feb., 1956. From 1956 to 1958 the problem of Cyprus dominated Greek politics. In Feb. 1961 Papandreou formed the Center Union, which won 100 seats to the NRU's 176 in the elections of the following 29 Oct. The opposition claimed the elections were fraudulent, and accused the king of meddling in politics. Karamanlis resigned, 11 June, 1963, and the Center Union won most seats at the next election, 3 Nov. Papandreou was named prime minister but, refusing Communist support, resigned, 24 Dec. He won a landslide victory, however, at the elections of 16 Feb., 1964, and became prime minister. On 27 Apr. he amnestied 450 political prisoners, and on 14 July dissolved several right-wing organizations.

The NRU now began to accuse the Papandreou regime of preparing a Communist coup. In May 1965 the "Aspida Aftari" broke, in which the right wing accused a number of officers of preparing to take over the army. In July Papandreou proposed the dismissal of the minister of defense. The king refused, and formed a new government which excluded Papandreou. On 14 Apr., 1967, Parliament was dissolved and new elections called, but on 21 Apr. a military coup was staged. The constitution was suspended and numerous arrests made. On 29 Apr. the government, led by Col. George Papadopoulos (b. 1919), abolished the pro-Communist United Democratic Left; on 4 May, 280 liberal and leftist organizations were banned. A law of 3 Nov. abolished jury trials for all common

and political crimes and for press offenses. King Constantine XIII appealed, 13 Dec., to his countrymen to join him against the military junta. The counter-coup failed and Constantine fled to Rome, 14 Dec. The government named Lt. Gen. George Zoitakis regent with the full powers of the king.

The junta promised to return Greece to civilian rule as soon as the aims of the revolution (to prevent Communist uprisings) should be achieved, and the draft of a new constitution was presented, 11 July, 1968. It provided for a reduction in the king's powers, a strengthened executive, press censorship, and a Constitutional Court which could deprive individuals of their rights and ban political parties. The constitution was overwhelmingly approved in a referendum, 29 Sept.

EAST CENTRAL EUROPE AND THE BALKANS

1945-68

EASTERN EUROPE AFTER 1945. With the exception of Greece, Yugoslavia, and Albania, the destinies of the states of Eastern Europe after World War II were largely determined by the fact that they had been liberated from German domination by the forces of the Soviet Union. Greece, which alone among the countries of Eastern Europe had been occupied by British forces in the wake of the retreating German army, continued to remain under the influence of the western powers. Although both Yugoslavia and Albania had freed themselves from Axis domination through their own partisan forces, they could not extricate themselves from the influence of the USSR until 1948 in the case of Yugoslavia, and until 1960 in the case of Albania. Both countries, however, remained under Communist, albeit dissimilar, rule throughout the 1950's and 1960's under the leadership of Josip Broz Tito (b. 1892) of Yugoslavia and Enver Hoxha of Albania. The rest of the countries—Czechoslovakia, Hungary, Poland, Rumania, and Bulgaria—were required by the Soviet Union for both strategic and ideological reasons to act as a cordon sanitaire to prevent the area

from becoming the staging ground for another invasion attempt from the West.

Changes in the monolithic structure binding the satellite countries to the USSR did not occur until after 1953, the year Stalin died. After 1953 the process of de-Stalinization, and the concomitant relative ideological uncertainty set against a background of continuous power struggle, produced a number of ideological and foreign policy shifts. In addition to the factors which were rooted in tradition and national character, it was the process of Soviet-led de-Stalinization which produced, Oct.-Nov. 1956, a political upheaval in Poland and outright revolt in Hungary. Following the control of the Polish ferment and the bloody suppression by Soviet tanks of the Hungarian uprising, a relative stability ensued in Eastern Europe. By the early 1960's, it became increasingly evident, however, that the idea of "several roads leading to Communism," 1st enunciated by N. S. Khrushchev, would remain a permanent feature of East European political developments.

In Czechoslovakia the process of de-Stalinization, controlled tightly under the leadership, 1958-68, of Antonin Novotný, led to Novotný's ouster and subsequently to the implementation of a bold "liberalization" program under the new and reformist leadership of Alexander Dubček in early 1968. The far-reaching ferment of Czechoslovak life culminated in a Soviet-led invasion of the country by 5 of its Warsaw Pact allies, Aug. 1968.

WARSAW TREATY ORGANIZATION (WARSAW PACT). Signed in Warsaw, 14 May, 1955, a military pact created a mutual defense alliance between Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Rumania, and the USSR. The treaty, binding for 20 years, was to lapse in the event of the conclusion of a collective European security system; it provided for the reorganization of the armed forces of the member nations under a unified military command, with headquarters in Moscow. The pact also formally legalized the presence and future stationing of Soviet troops in some of the member states. (The signing ceremony took place just 1 day prior to the signing of the Austrian peace

treaty, which voided the legality of the presence of Soviet troops in Hungary and Rumania.)

According to the Soviet Union, the treaty was made necessary by the creation of the North Atlantic Treaty Organization (NATO); it was a direct response to the inclusion in NATO of a remilitarized West Germany under the Paris Pacts of 1954.

In 1962 Albania became a nonactive member of the alliance, partly because it sided with Communist China in the Sino-Soviet dispute. As a result of the Soviet-led invasion of Czechoslovakia, Aug. 1968, Albania formally withdrew from the organization the same month.

COUNCIL FOR MUTUAL ECONOMIC AID (COMECON). Known as COMECON, the council was founded, Jan. 1949, to act as an instrument of greater economic integration between the USSR and the satellite states of Eastern Europe. Largely neglected till 1954-56, its role thereafter was gradually expanded until, in 1959, it adopted a new charter which elevated it to a status similar to that of the Common Market. The charter claimed to be the answer to the West's Marshall Plan, and provided for increased economic, commercial, and industrial collaboration not only between the USSR and the member states but also among the member states as well.

The added goal of industrial specialization, envisaged as being based on the availability of natural resources within each state, soon led to opposition, especially from Rumania after 1962. Albania, apparently because of the support extended to Communist China in the latter's polemics against the USSR, was excluded from council sessions beginning 1961. The Mongolian People's Republic was admitted into COMECON in 1962.

Albania

1945-68

VICTORY OF THE NATIONAL LIBERATION FRONT. The major Albanian partisan group, the National Liberation Front, was dominated by Communists under the leadership of

Enver Hoxha. Supported by Tito of Yugoslavia, the front shortly after the departure of the German forces, Nov. 1944, took control of the country. The Communists, working under cover of the front, which was renamed, 1945, the Albanian Democratic Front, polled 93% of the votes cast in the elections on 2 Dec., 1945, on 11 Jan., 1946, the Communist-dominated legislature proclaimed the country a People's Democratic Republic with Hoxha as premier and Koçe Xoxe as vice-premier and interior minister.

Following the mining of 2 British warships near Corfu Island in the Adriatic, Britain and the U.S. broke off relations with Albania.

SPLIT WITH YUGOSLAVIA. Since attaining its independence in 1912, Albania had been dominated by one protector after another. Yugoslavia, which replaced Italian domination late in World War II, showed increasing interest in the country's affairs. For one thing Yugoslavia opposed U.S.-Albanian diplomatic ties; Yugoslavia also hoped to control Soviet-Albanian relations in the postwar period. As a result, Albania looked to the USSR for the protection of her independence; consequently, the rift between Tito and Stalin in the summer of 1948 was seized upon as an opportunity vigorously to denounce the former.

INTERNAL DEVELOPMENTS. Using police terror and political purges as a means to maintain control, the Albanian government after 1945 followed the example set by the other satellite states of Eastern Europe. Interior Minister Xoxe, who had been one of the leaders of the liberation movement during the war, was tried and executed for "Trotskyite and Titoist activity," May 1949. Later in 1961, Liri Belishova, a member of the Central Committee, and Teme Sejko, a Soviet-trained admiral, were executed for "treasonable activities." A constitution on the Soviet model was adopted in 1950.

FOREIGN AFFAIRS. Albania joined COMECON, Feb. 1949, and became a founding member of the Warsaw Pact in 1955. The same year Albania was admitted to the UN.

From the period following Tito's excommunication from the Cominform in

1948 until shortly after the suppression of the Hungarian Revolution in 1956, Albania was one of the most loyal of Soviet satellites. Although Albanian-Yugoslav relations improved, at least superficially, as a result of the 1955 *rapprochement* between Yugoslavia and the Soviet Union, the Tirana government did not cease to fear Tito's influence. Thus during 1956-58, when relations between Khrushchev and Tito deteriorated, Hoxha renewed his attack on Tito.

ALBANIAN-SOVIET SPLIT. Already deteriorating in 1959, Albania's relations with the USSR became progressively worse during the 1960's. The main cause of tension was the renewal of Khrushchev's *rapprochement* with Tito. In Nov. 1960, at a meeting in Moscow of representatives of 81 Communist parties, both Hoxha and Premier Mehmet Shehu openly charged Khrushchev with treason and "revisionism." At the 4th Congress of the Albanian Communist Party, Feb. 1961, Albania openly supported Communist China in her clash with the Soviet representative; in June, Adriatic-based Soviet submarines left Albania, and this was followed by the withdrawal of all economic assistance to Albania by the Soviet Union and other East European satellites. Following Khrushchev's open attack on the Albanian party at the 22nd Soviet Party Congress, Oct. 1961, as "dogmatist," Albania openly counter-attacked, charging the Soviet leader with yielding to Yugoslav "revisionism" and collaborating with U.S. imperialism. In Dec. 1961, the USSR severed diplomatic relations with Albania. Thereafter, Albania became Communist China's mouthpiece in the latter's polemics against the USSR, and represented the Communist Chinese viewpoint at the UN General Assembly.

Bulgaria

1945-68

DOMESTIC ISSUES. After World War II Bulgaria went through a period of coalition government during which non-Communist representation was gradually

eroded with Red Army assistance. First the monarchy was abolished in favor of a People's Republic, Oct. 1946, with power in the hands of a Communist-dominated Fatherland Front. The years 1944-47 were marked by a series of violent purges in which opposition parties and factions were destroyed. Nikola Petkov, leader of the opposition Agrarian Party in the Fatherland Front, was tried and hanged, Sept. 1947, shortly after a U.S.-Bulgarian peace treaty had been ratified. Other trials followed, and in Dec. 1947 the Sobranie (Parliament) adopted a new constitution modeled on the Soviet Constitution of 1936. By early 1948 Bulgaria was under a 1-party system ruled by the Communists led by Georgi M. Dimitrov, a former Comintern leader.

POST-STALIN ERA. After 1953 Bulgaria permitted only a limited degree of relaxation of political terror, despite promises made in response to pressure from the intellectuals and despite the resentment of the collectivized peasantry. In the party leadership, the Stalmist Vlko Chervenkov, successor to Dimitrov in 1949, was forced to give up his posts as general secretary of the Party in 1954 and as prime minister in 1956; finally, 1962, he fell victim to the 2nd de-Stalinization purge and was expelled from the Party. The political vacuum created by Chervenkov's fall was filled by a younger and native Communist, Todor Zhivkov. As a protégé of Chervenkov, Zhivkov succeeded him as party 1st secretary in 1954 and, in 1962, he also assumed the post of premier; thereafter Zhivkov remained the undisputed leader of Bulgaria, even weathering the fall of Khrushchev, who had been his mainstay till 1964.

Despite the emphasis on heavy industry, Bulgaria economically remained largely an agricultural country confronted with serious problems: in Sept. 1961 food rationing was introduced and on 1 Jan., 1962 the currency had to be revalued. In the late 1960's Bulgaria's rate of economic growth showed marked improvement.

FOREIGN RELATIONS. The Paris Peace Treaty of June 1947 allowed Bulgaria to keep South Dobruja but forced

her to yield Thrace and Yugoslav Macedonia. During the period after 1944 and before the ouster of Tito from the Cominform in June 1948, a South Slav federation, which would have comprised Bulgaria, Yugoslavia, and, possibly, Greece, was contemplated by both Tito and Dimitrov. The 2 leaders agreed on a customs union and the abolition of their borders at Bled (Bled Agreement) in Aug. 1947. Stalin's opposition to a larger political unit in the Balkans and Tito's defiance of the Comintern, June 1948, scuttled the plan. Although the federation issue was buried, the Macedonian problem continued to plague Yugoslav-Bulgarian relations; during 1967-68 Bulgaria appeared to be renewing her old claim to Yugoslav Macedonia.

After Stalin's death Bulgarian relations with Greece and Turkey improved somewhat, despite a threat to expel all Turkish nationals, 1950-51. In 1955 Bulgaria joined the Warsaw Pact and was admitted to the UN; she had been a member of COMECON since Jan. 1949. As a member of the Warsaw Pact, she participated in the Soviet-led invasion of Czechoslovakia, Aug. 1968. In general, Bulgaria dutifully followed Soviet foreign policy shifts.

Czechoslovakia

1945-53

RESTORATION OF CZECHOSLOVAKIA. With the exception of Ukrainian-speaking Ruthenia—which was ceded to the USSR to create a common Soviet-Hungarian border—Czechoslovakia's pre-1938 borders were restored at the 1945 Potsdam Conference of the "Big 4"; Britain had already recognized the country's prewar borders, 5 Aug., 1942, when she repudiated the 1938 Munich agreement which dismembered Czechoslovakia. At Potsdam, Czechoslovakia was also authorized to expel some 2.5 m. Sudeten Germans—her main liability during the interwar years—and to enforce on Hungary an exchange of Hungarians in return for Slovaks; the latter move led to considerable friction between the 2 govern-

ments during the immediate postwar years. Left with a reduced minority of some 500,000 Germans and some 1/2 m. Hungarians (in Slovakia), Czechoslovakia became a near-homogeneous state after World War II.

Following the occupation of post-Munich Czechoslovakia by Germany, a government in exile under Eduard Beneš (1884-1948) was set up in London which, unlike that of Poland, was recognized by Moscow as well as the other allies. Though subjected to Nazi terrorism, Czechoslovakia suffered no major disruption of her economy during the war. Czechoslovak units fought with the allies under Gen. Ludvík Svoboda.

Early in Apr. 1944, a coalition government headed by Beneš accompanied the Soviet forces which entered the country through eastern Slovakia. American forces entered Bohemia from the west and Prague was liberated, 12 May, 1945. Both the U.S. and the Soviet forces left Czechoslovakia in Dec. of the same year.

COUP OF FEB. 1948. Already a legally functioning political party before the war, the Czechoslovak Communist Party in a free and secret election became the strongest party in the country when, 26 May, 1946, it polled 38% of the votes cast. Beneš, who became president of the republic, called upon Klement Gottwald, a pro-Moscow Communist, to form a coalition government; the Communists gained control of key portfolios, including the interior ministry under Václav Nosek.

Although the coalition worked well initially, the slow penetration by the Communists into all branches of the state apparatus led to increasing friction between them and the other parties in the coalition. By early 1948 Communist popularity was on the wane. Fearing the loss of its parliamentary strength at the approaching general elections, the Communist Party decided to seize power through a *coup d'état*. The decisive issue was the control of the police forces, especially those of Prague. After the resignation, 21 Feb., 1948, of 12 non-Communist ministers to protest a police purge, Premier Gottwald formed another cabinet, 25

Feb., rather than dismiss Interior Minister Nosek—responsible for the purge of the police—or advance the date of the election, as had been expected by the non-Communist faction. In anticipation of resistance by supporters of the “bourgeois” parties, the Communist Party, using armed Workers’ Militia, staged repeated demonstrations in major cities. President Beneš, hoping to avoid civil war, approved the new government, thereby making the transfer of power constitutional.

GOTTWALD-ZÁPOTOCKÝ REGIME. After the Communist takeover, the National Assembly adopted a new constitution—a replica of the 1936 Soviet constitution—on 9 Mar., 1948. The Slovaks obtained greater autonomy. The next day, Foreign Minister Jan Masaryk (b. 1886), son of the founder-president of Czechoslovakia, Tomas G. Masaryk, was found dead at his office. In the elections, which followed on 30 May, only a single slate of National Front candidates was allowed to run. The new government was headed by the Communist Antonín Zápotocký, a former trade union leader. Gottwald succeeded President Beneš, who had resigned on 6 June.

The opposition silenced, the new regime enacted a program of rapid industrialization (at the expense of consumer industry) and proceeded to nationalize all industrial plants employing more than 50 workers; land collectivization was also pressed, but not as forcefully as in other satellite countries, such as Bulgaria and Hungary. The new regime closely aligned its foreign policy to that of the Soviet Union.

In order to rid the party of its dissenters, as well as in response to Tito’s defiance of Stalin, 1948, a series of show trials was held between Mar. 1950 and Jan. 1954. The purges culminated in the arrest of Foreign Minister Vladimír Clementis (Slovak) and Communist Party Secretary General Rudolf Slánský (Czech Jew); both were executed, 3 Dec., 1952.

1953–68

NOVOTNÝ REGIME. Antonín Novotný became party 1st secretary, Mar. 1953, and

president in 1957. Partly responsible for the purge of Slánský and Clementis, he ruled with an iron hand and paid only lip service to the Soviet-inspired policy of de-Stalinization in the late 1950’s. To camouflage his own complicity in the purges, he purged as scapegoats 1st Deputy Premier Rudolf Barák, Feb. 1962, and then Premier Viliam Široký, Sept. 1963, both on false charges. These purges greatly strengthened Novotný’s hand in his fight against the pressures for liberalization, resurgent Slovak nationalism, and demands for a drastic overhaul of the deteriorating economy.

A new constitution adopted in 1960 declared the state a Socialist Republic. Slovak autonomy, provided for under the 1948 constitution, was curbed in the new one, the Slovak National Council in Bratislava was made subservient to the National Assembly in Prague. This action, among others, led during the late 1960’s to a renewal of the prewar antagonism between Czechs and Slovaks.

From 1963 onward, Czechoslovakia underwent a protracted process of cultural thaw, illustrated especially in the field of education and the revival of the once-famed Czechoslovak film industry. In 1965 an increasing demand for economic reform led to the adoption of a plan giving greater autonomy to local managers and making profitability a criterion of economic efficiency. At the same time foreign trade with nations other than Czechoslovakia’s COMECON partners and the encouragement of tourism were stepped up.

The growing freedom of speech and the press, however, gave rise to ever bolder criticism of the Novotný regime. At the Congress of the Czechoslovak Writers’ Union, July 1967, a coalition of anti-Novotný forces accused him of anti-Slovak sentiments and charged him with blocking the implementation of the 1965 economic reforms. During a stormy meeting of the Central Committee, Dec. 1967, his ouster was prevented only through the intervention of Leonid I. Brezhnev, the Soviet party leader. In Jan. 1968, however, Novotný was deposed as 1st secretary and was succeeded by the Slovak party leader, Alexander Dubček, who had

previously attacked Novotný for relegating Slovakia to the status of a 2nd-class province.

LIBERALIZATION AND SOVIET OCCUPATION. Under Dubček's leadership, Czechoslovakia embarked upon a bold liberalization program—known as the "Action Program"—setting as its goal "to give Communism a human face." As part of the "Action Program," the reformist Dubček leadership released all political prisoners, allowed broad criticism of the party, and proceeded with the long-postponed rehabilitation of the victims of the previous political trials. In foreign policy, Czechoslovakia contemplated the resumption of diplomatic relations with West Germany and closer ties with non-Communist nations, especially with those of Western Europe.

Preceded by veiled and open criticism and warning, especially from the Soviet Union and East Germany, 5 Warsaw Pact allies of Czechoslovakia invaded the country on the night of 20–21 Aug., 1968. The invasion precipitated one of the broadest international condemnations of the Soviet Union and its more loyal allies—East Germany, Poland, Bulgaria, and Hungary. The occupation initially failed in its alleged objective of unseating the Dubček leadership (many members of which had 1st been abducted to the Soviet Union and then returned). Although Czechoslovakia was forced to legalize the Soviet troops' presence, some of the reforms, among them press freedom, survived until the liquidation of the Dubček regime by the spring of 1969. Rumania, a Warsaw Pact partner of Czechoslovakia, refused a Soviet demand to participate in the invasion; Yugoslavia also denounced the invasion.

Hungary

1944–49

DEFEAT IN WORLD WAR II. As a reluctant ally, Hungary joined Germany in the attacks on Yugoslavia and the USSR in 1941. After severe losses on the Russian front, however, the regime of Miklós Horthy (1868–1957) tried to take

the country out of the war, 15 Oct., 1944; the ill-prepared attempt failed and he was 1st arrested and then deported, to Germany. Unlike Czechoslovakia, Hungary became the scene of a devastating campaign waged by the retreating German forces against the Red Army, Oct. 1944–Apr. 1945. A provisional government, formed of 4 coalition parties, Dec. 1944, signed an armistice with the Soviet Union in Moscow, Jan. 1945.

The peace treaty, signed in Paris in 1947, forced Hungary to give up territories regained during the war; the treaty also called for \$500 m. reparation payments to the USSR, Czechoslovakia, and Yugoslavia.

GOVERNMENT BY COALITION. For 3 years after the war, Hungary was ruled by a series of coalition governments which came increasingly under the domination of the minority Communist Party. Formed after free and secret elections, 4 Nov., 1945—which had returned the non-Communist Smallholder Party with a 59% majority against 17% polled by the Communists—the new coalition regime proceeded to implement wide-ranging social and land reforms. In addition, it passed other important measures aimed at the reconstruction of the economic, cultural, and social life of the war-torn country. In Jan. 1946 Hungary adopted a republican constitution.

COMMUNIST ASSUMPTION OF POWER. Although a minority party (but backed by the occupying Soviet army), the Communists, led by Mátyás Rákosi, were able to eliminate their coalition partners through the application of the famous "salami tactics." One by one, they 1st broke the Smallholder Party, 1948, through terror and blackmail, and then proceeded to absorb the Social Democrats, Jan. 1948. In Feb. 1949 the Communists merged all other opposition parties into the People's Independence Front, and on 15 May they held an election where Communist-approved candidates, without opposition, polled 95.6% of the votes. In Aug. 1949, a new constitution, patterned after the 1936 Soviet model, proclaimed Hungary a "People's Democracy."

1950-56

THE STALINIST PHASE. The opposition eliminated and the population intimidated, the country came under the virtual dictatorship of Rákosi, secretary general of the Hungarian Workers' (Communist) Party, 1944-56. He carried out drastic purges of the rank and file and eliminated all real and potential rivals and opponents.

All private industrial firms with more than 10 employees were nationalized; freedom of religion, the press, and assembly were greatly curtailed. At the same time, discontent grew among the industrial workers because of the imposition of high work norms and wage and price controls, among the peasantry because of the forced collectivization of land just distributed. The chronic economic difficulties stemming from forced industrialization, and compounded by growing peasant resentment, led to a crisis situation by 1953.

THE "NEW COURSE." Imre Nagy, who had been minister of the interior and of agriculture in the early postwar coalition government, replaced Rákosi as premier on Soviet demand on 4 July, 1953, just 4 months after Stalin's death. Nagy, whose rise- and fall—closely paralleled that of Georgi Malenkov in the USSR, quickly embarked on the implementation of the so-called "new course," which, in effect, was the repudiation of most of the policies pursued by Rákosi. Nagy reversed the previous economic policy by emphasizing consumer-goods production as against the previously stressed heavy industry; the forced collective farms were dissolved and thousands of political prisoners were released.

Utilizing the brief power vacuum which existed in the USSR between Malenkov's fall, Feb. 1955, and Khrushchev's denunciation of Stalin, Feb. 1956, Rákosi began a counteroffensive against Nagy. The latter's "new course" policy was condemned as "right-wing deviationism"; in Apr. 1955 Nagy was removed as premier and, Nov., expelled from the Party. Most of the laws promoting collectivization were restored.

Following Khrushchev's denunciation of Stalin and his methods at the 20th Congress of the Soviet Communist Party, Feb. 1956, Hungarian intellectuals—many of them Communists—called for a similar investigation into Rákosi's own misdeeds and demanded the rehabilitation of victims sentenced on fabricated charges. Rákosi's attempt to arrest Nagy and some 400 intellectuals and thus to consolidate his position was blocked by the USSR; he was replaced as 1st secretary, July 18, by one of his most hated collaborators, Ernő Gero.

1956-68

REVOLT OF 1956. Although Gero tried to contain the growing cultural and political ferment which followed Rákosi's ouster, a peaceful mass demonstration, staged in support of Poland's confrontation with the USSR, erupted into a massive popular uprising, 23 Oct., 1956. The involvement in the street fighting of Soviet forces, whom Gero had called upon to restore order, further exacerbated the antagonism between rebellious students and workers on the one hand and the pro-regime secret police on the other. Fighting did not abate until after Nagy had returned to the government and Soviet forces had withdrawn from Budapest, both demanded by the rebels. The Communist Party had disintegrated in the process and Gero, who had been replaced by János Kádár, fled to the USSR.

Pressed by a progressively radicalized public opinion, Nagy formed a new coalition government, including Kádár, and withdrew from the Warsaw Pact, declared Hungary's neutrality, and appealed to the UN for help and a guarantee of independence. In the meantime, international tension rose as a result of a split between the U.S. and her European allies over the Suez crisis.

Meanwhile Kádár, who had secretly quit Nagy's cabinet to form a counter-government, asked the USSR for armed support. On 4 Nov., 1956, the Soviet Union launched a 2nd, more massive military attack on Hungary. A short-lived armed resistance and the general strike

which followed brought great economic hardship; nearly 200,000 refugees fled the country, leaving it faced with a severe skilled man-power shortage.

Nagy and some of his aides, who had been abducted by Soviet secret police despite Kádár's promise of safe conduct, were interned in Rumania and, after secret trial, executed in June 1958.

KÁDÁR REGIME. After the uprising, Hungary continued under the regime established by Kádár, whose prime goal for several years was to restore the country's economic and social life (aided by the infusion of massive Soviet-bloc financial help), and to bring about a reconciliation between his regime and the population, especially the intellectuals. In these tasks he was aided by the presence of the Soviet troops stationed in Hungary since World War II. Kádár also reorganized the Communist Party (renamed the Hungarian Socialist Workers' Party after Nov. 1956) along new lines: he purged the party of many diehard Stalinists (among them Rákosi and Gero), whom he had accused of harsh practices, and made them quasi responsible for the uprising. Kádár carried out severe reprisals against thousands of alleged participants in the revolt, many of whom were executed and imprisoned despite his promises to the contrary. Compulsory collectivization, which had been stopped in 1956, was resumed again in 1958-59.

By 1962, however, a general shift in party policy ("he who is not against us is with us"), a general amnesty (including pardon for political prisoners), the curbing of the secret police, and the encouragement of a liberalized cultural and economic life combined to help overcome the post-1956 antagonism of the population toward Kádár and his regime. In 1964, an accord giving more religious liberty to both the Catholic laity and the clergy was concluded between the regime and the Vatican.

In 1965, Kádár gave up his post as premier, though he retained the more important 1st secretaryship; he was succeeded by Gyula Kállai and then by Jeno Fock.

Broad economic reforms, introduced as the "New Economic Model," 1 Jan., 1968,

provided for far-reaching decentralization of the hitherto bureaucratically planned economy by upgrading the role of management and introducing the profit motive in a limited way.

Hungary's foreign policy after 1956 remained closely aligned to that of the rest of the Soviet bloc, but diplomatic and trade relations with Yugoslavia and western countries—including the U.S.—steadily improved. As a member of the Warsaw Pact, Hungary reluctantly provided token forces for the Soviet-led occupation of Czechoslovakia, Aug. 1968.

Poland

1945-56 .

VICTORY OF THE LUBLIN GOVERNMENT. In accordance with an agreement reached at Yalta, Feb. 1945, the western powers awaited the creation of a coalition government based on the 2 governments in exile: 1 in London and the other, dominated by Communists, in Lublin. The USSR withheld recognition from the London government until July, when Stanislaw Mikolajczyk, leader of the main opposition Peasant Party, was included in the Lublin government. Although the Lublin government was nominally led by a Polish Communist, Wladislaw Gomulka, as secretary general of the Communist Party, 1943-48, the real power lay with the Russian, Boleslaw Bierut, as head of state, 1944-47. Tension within the coalition came to a head in Jan. 1947, when, on Communist insistence, a single electoral list was proposed for the upcoming elections. Postponed by the Communists for tactical reasons for nearly 2 years, the elections and the preceding campaign were held under the most unfavorable conditions for the non-Communist parties, which had been required to give advance support to the Communists in return for being allowed to participate. Mikolajczyk refused the single list and was forced to flee the country in Oct. the same year. Despite terror tactics, the government coalition gained only 394 seats out of a total of 444. In Dec. next year, the Socialist Party was forced to fuse officially with the Commu-

nists (renamed thereafter the Polish United Workers Party): Josef Cyrankiewicz, the pro-Communist leader of the Socialist Party, was given the post of prime minister, 1947-52, in the new government.

THE NEW POLAND. Before the end of the war, Poland had lost to the USSR some of her eastern provinces (c. 70,000 sq. mi.) in return for former German (Prussian) territories (c. 39,000 sq. mi.) lying east of the rivers Oder (Odra) and Neisse (Nysa), including the former Free City of Danzig. A new border settlement, reached at the Potsdam Conference, Aug. 1945, also authorized Poland to expel some 8 m. Germans from the acquired areas. Although the USSR recognized as permanent Poland's new western frontier, the Potsdam agreement merely placed the newly acquired territories under Polish administration pending a German peace treaty.

STALINIST PERIOD. In the late 1940's and early 1950's, the Communist-dominated government carried out a land reform and nationalized all large enterprises. No longer hampered by opposition, the government liquidated the last elements of the wartime "underground." The Catholic Church, with a following among 95% of the population, was subjected to persecution and its leader, Stefan Cardinal Wyszyński, the primate of Poland, was arrested just after Stalin's death (26 Sept., 1953), despite the 1950 accord with the government guaranteeing freedom of religion. As a result of rapid but irrational industrialization, living standards suffered. A new constitution adopted in 1952 made Poland into a "People's Republic." In 1949, Poland joined COMECON. In Nov. of the same year Soviet (though Polish-born) Marshal Konstantin Rokossovsky was made minister of defense and commander in chief of the Polish army.

PURGE OF GOMULKA. A Communist who had opposed the indiscriminate copying of Soviet economic planning, as well as the denunciation of Tito's defiance of Stalin as necessarily bad, Gomulka found himself at odds with the pro-

Moscow faction of the Polish Communist Party. Denounced on charges of having committed a "nationalist deviation," Gomulka was stripped of his posts: in Sept. 1948 as general secretary, and in Jan. 1949 as vice-premier. Finally, July 1951, he was imprisoned.

POST-STALIN REACTION. Reflecting the unsettled power struggle in the Kremlin that followed Stalin's death in 1953, the political situation in Poland remained confused. Unlike Hungary, Poland did not embark upon the implementation of a "new course." Only in Mar. 1954 did Bierut give up his position as premier (while retaining the more important post of leader of the Party). Though freed from prison in Dec. of the same year, Gomulka's release was not made public until Apr. 1956, the year of crisis. Uncertainty was added to the already confused situation created by the denunciation of Stalin's personality cult by Khrushchev, Feb. 1956, when Bierut died suddenly, 14 Mar. He was succeeded by Edward Ochab as party 1st secretary (till Oct. 1956).

1956-68

RETURN OF GOMULKA. An already volatile situation, created by growing criticism of the Stalinist era by numerous political clubs throughout Poland, was further exacerbated, June 1956, when riots broke out in Poznań and had to be put down by the army. First demonstrating against low living standards and then for more freedom, Poznań students and workers were initially denounced by the government as having been incited by foreign influences. As discontent became increasingly vocal and widespread, the government reconsidered its position, which in turn resulted in open division among the leadership. The situation was resolved, without bloodshed, when, after Stalinists had been ousted from the Politburo, Gomulka accepted the post of Communist Party 1st secretary.

SOVIET INTERVENTION. In the meantime, the Soviet leadership, alarmed by the growing anti-Soviet sentiment

throughout the country, suddenly appeared in Warsaw to forestall Poland's defection, and the city, surrounded by Soviet contingents which had been stationed in the country since World War II, became tense. Receiving promises that Poland would remain within the bloc, the Soviet leaders—Khrushchev, Mikoyan, Kaganovich, and Molotov—departed. Following elections to the Politburo, 19 Oct., Rokossovsky was ousted and had to leave Poland.

NEW POLICY FOR POLAND. The main features of the new policy that was implemented in Poland after Oct. 1956 included (1) the disappearance of police terror, (2) relative freedom of cultural and creative activity, (3) a *modus vivendi* between church and state, and (4) a guarantee of private ownership in agriculture. In foreign policy, too, Poland was given freer rein in dealing with the West, including the U.S. At the same time she retained close relations with the USSR.

GOMULKA REGIME. During the late 1950's and 1960's Gomulka came under increasing attacks from both liberals and diehard neo-Stalinists, between whom he continued to attempt to strike a middle course. Although he had received important support from the Catholic Church at the critical moment in Oct. 1956, relations with the church during the 1966 millenary celebrations of Poland as a Christian nation became strained. The most liberal Communist state of Eastern Europe in the early 1960's, Poland after 1963 appeared to have lost much of the freedom she had gained in Oct. 1956. During early 1968, after weeks of student rioting in major Polish cities, the Polish government embarked upon an increasingly anti-Zionist campaign; thousands of persons, of Jewish origin were purged from their positions. As Czechoslovakia in early 1968 embarked upon a bold liberalization program, Poland became alarmed. A member of the Warsaw Pact, Poland participated in the Soviet-led invasion of Czechoslovakia on 20-21 Aug., 1968. Despite renewed attacks from younger nationalist-minded Communists demanding more freedom of action from the USSR, Gomulka's position, backed by the Soviet

Union, was confirmed at the Communist Party's 5th Congress, Nov. 1968.

Rumania

1944-68

POSTWAR RUMANIA. To avoid an anticipated Soviet occupation of his country, Rumania's King Michael, 23 Aug., 1944, overthrew the Fascist Antonescu government in a *coup d'état* and, 2 days later, declared war on Germany and opened the country to the Red Army. The king's move in switching sides before liberation by the Soviet Union proved to be the decisive factor in Rumania's re-acquisition of all of Transylvania from Hungary. The Paris Peace Treaty of 1947 restored prewar Rumania except for northern Bukovina and Bessarabia, which were transferred to the USSR, and south Dobruja, which was retained by Bulgaria. The treaty also required Rumania to pay the USSR large sums in war reparations.

COMMUNIST TAKEOVER OF 1948. Following a brief rule by a coalition government named by King Michael, the Communist Party, backed by the Red Army, pressured him into the appointment, 6 Mar., 1945, of a Communist-dominated cabinet, 1945-52, under the pro-Communist Petru Groza. Despite repeated western protests at Yalta and Potsdam against the composition and methods of the Groza cabinet, the Communist Party had liquidated most opposition by Mar. 1948. After a sham election, 19 Nov., 1946, to confirm the Groza cabinet, the Communists, under the pro-Moscow leadership of Ana Pauker, staged in early 1947 a wave of mass arrests and forced the abdication of Michael, 30 Dec. Following the proclamation of a republic, the already purged Socialist Party was absorbed by the numerically much smaller Communist Party, Feb. 1948. A "People's Republican" constitution was adopted by the National Assembly, Apr. 1948, which had been elected in the absence of opposition, 28 Mar. This constitution was replaced by one more closely in line with the constitution of the USSR of 1936; adopted in Sept. 1952, it

gave considerable regional autonomy to the large Hungarian minority in Transylvania.

GHEORGHIU-DEJ REGIME. Although already head of the small Communist Party in 1945, Gheorghiu-Dej's power became more real with the liquidation of a number of pro-Moscow party leaders in 1952, 1 year before the Soviet leadership launched its "new course" following Stalin's death. The ouster of Foreign Minister Ana Pauker (a Jew) and Justice Minister Vasile Luca (a Hungarian) was claimed by Gheorghiu-Dej during the 1st de-Stalinization period in 1956 as having been made in anticipation of that policy 4 years before it was launched. With the exception of a show of discontent among the Transylvanian Magyars, the Hungarian uprising of 1956 was weathered by the Rumanian leadership without any significant upheaval. During the uprising, Rumania fully supported the Soviet position of intervention. In recognition of Rumanian loyalty the USSR withdrew the Soviet garrisons in 1958. In 1961, the year Khrushchev launched his second de-Stalinization drive, Gheorghiu-Dej became president of the newly created state council and until his death, Mar. 1965, he ruled Rumania unchallenged. During his regime, but especially after the withdrawal of Soviet forces in 1958, Rumania showed signs of independence both in economic and foreign affairs while maintaining close affinity with the USSR in matters of ideology.

INCREASE IN INDEPENDENCE FROM THE USSR. Long considered 1 of the most docile of the Soviet satellites, Rumania in the 1960's began to oppose the USSR on a variety of issues involving the Soviet bloc and also relations with Communist China. Among these were her role within COMECON, the Warsaw Pact, cultural and economic ties with the West, and her apparently neutral stance in the deteriorating Sino-Soviet ideological dispute.

Beginning in 1963, and increasingly so thereafter, Rumania came to regard the inferior role assigned to her by the Soviet Union within COMECON as inhibiting

her desire to industrialize. Envisaged by COMECON as a producer of raw materials and a manufacturer of oil-drilling and refinery equipment, Rumania refused to co-operate and instead looked to the West for capital to develop her heavy industry based on the untapped resources of Transylvania. Gaining much-needed concessions, Rumania signed trade agreements with the U.S., Britain, and West Germany; in 1967, she established diplomatic relations with the latter, the only East European country beside the USSR and Yugoslavia to do so. Championing the cause of national sovereignty, she refused to participate in the Sino-Soviet dispute and, instead, attempted to assume the role of umpire; China, in return, openly supported Rumania's aspirations. In foreign policy matters, Rumania twice defected from the common Soviet-bloc stand: during the 1967 Arab-Israeli war, she refused to condemn Israel and withheld support from Soviet sponsored resolutions in the UN debate on the war; in 1968 she supported unconditionally the Czechoslovak liberalization drive and, when asked to participate in the invasion of that country, Aug. 1968, refused.

Rumania remained far behind such countries as Czechoslovakia, Hungary, and Poland in relaxing the Communist Party's hold on the population until 1965, when the death of Gheorghiu-Dej catapulted into prominence Nicolae Ceaușescu. A protégé of Gheorghiu-Dej, Ceaușescu began a partial rehabilitation of some of the purged leaders and even denounced his mentor for Stalinist practices. During the 2nd half of the 1960's, he abolished some of the most Stalinist features of his government, curbed the secret police, launched a cautious program of de-Russification of Rumanian cultural life, and called for the abolition of all military blocs, including the Warsaw Pact. Maintaining a strict observance of orthodox Marxist principles with regard to building Communism—a new constitution proclaiming a "Socialist Republic" was adopted in 1965—Rumania during the late 1960's appeared to be on the way to independence.

Yugoslavia

1945-68

VICTORY OF THE PARTISANS. At the conclusion of World War II Yugoslavia along with Greece and Albania were the only countries of Eastern Europe that were under the control of their own resistance movements dominated by Communists. Yugoslavia's postwar political development was largely determined by the fact that both the Soviet Union and the western allies granted recognition and support to the apparently more popular leftist partisan movement led by Josip Broz Tito as against the rightist Chetniks under Draža Mihajlović (1893?-1946).

ACCESSION OF TITO. Having made himself premier, Mar. 1945, of a government in which there was token representation of the rightist government in exile, Tito took control of the country, Jan. 1946, without Soviet assistance. In 1946 a constitution drafted on the 1936 Soviet model declared Yugoslavia a Federal Republic composed of 6 republics with nominal autonomy; actual power was vested in the Communist Party controlled by Tito.

WAR GAINS. The peace treaty of 1947 gave Yugoslavia the eastern part of Venezia Giulia, though Trieste, the area's most coveted portion, was made into a free territory. A subsequent agreement, 1954, divided the port city between Yugoslavia and Italy.

POSTWAR RECONSTRUCTION. After the war, Tito proceeded to implement Communist policies. A vigorous drive was undertaken toward socialization and industrialization under the dictatorship of the proletariat. With extensive aid from the western allies, and as a founding member of the UN in 1945, Yugoslavia received substantial financial aid for postwar reconstruction of her war-torn economy. Internally, the government eliminated opposition; the Roman Catholic Church was curbed by the imprisonment of Archbishop Stepinac of Zagreb,

1946 (released in 1951), and the execution of Mihajlović, 1946.

BREAK WITH THE USSR. The allegiance of Yugoslavia to the USSR was broken in 1948, when Tito's refusal to accept the unconditional supremacy of Stalin and the Soviet Union precipitated his country's expulsion from the Cominform. The rift with the Soviet Union, which with minor variations lasted throughout the post-Stalin era as well, freed Tito to build "national" Communism and enabled him to establish closer ties with the West and receive financial and political assistance when needed.

POST-STALIN PERIOD. Shortly after Stalin's death, May 1953, the Soviet Union resumed diplomatic relations with Yugoslavia. Especially after his assumption of full power in 1954, Khrushchev made serious efforts to heal the ideological breach created by his predecessor. Despite the drastic change in Soviet orientation in Feb. 1956, when Stalinist policies and methods—including those affecting Yugoslavia—were repudiated, Tito did not return to the Soviet led bloc of nations as a full member. Although Yugoslav-Soviet relations deteriorated after the suppression of the 1956 Hungarian Revolution, they never again hit the low point of the Stalinist era. During the late 1950's and in the 1960's, Yugoslavia formed with such countries as the United Arab Republic and India the so-called nonaligned bloc, while relations with Czechoslovakia, Hungary, and especially Rumania were continuously improving.

Supporting the Soviet concept of peaceful coexistence between states with different systems, Yugoslavia in the 1960's sided with the Soviet Union in the Sino-Soviet dispute. In a show of token support of the USSR, Milovan Djilas, one of the severest critics of Soviet Communism, was rearrested in 1962. In 1964 Yugoslavia, in another token gesture of good relations, became an affiliate member of COMECON.

PURGE OF THE SECRET POLICE. The disclosure in 1966 of an extensive eavesdropping system by the secret police,

headed by Alexander Ranković, led to a broad reorganization of the Communist Party and to a series of political purges of members closely connected with the police. Ranković, who had been considered Tito's heir apparent, was removed from his post in 1966; the same year Djilas was released from jail as a gesture to appease the party's liberal faction.

DENUNCIATION OF THE INVASION OF CZECHOSLOVAKIA. The Soviet-led invasion of Czechoslovakia, 20–21 Aug., 1968, seriously strained Yugoslavia's relations not only with the Soviet Union but with the other participants in the invasion as well. Shortly before it began, Tito had personally given his support to Alexander Dubček and the Czech liberalization policies during a visit to Prague, 9–11 Aug. Following the enunciation of the so-called "Brezhnev doctrine," Sept. 1968, which attempted to justify the right of the Soviet Union to invade any member of the "Socialist Commonwealth" in defense of socialism, Tito declared his determination to fight with force any unsolicited assistance from any source. As a Warsaw Pact member but not party to the invasion, Rumania drew closer to Yugoslavia by also denouncing as unjustified the invasion of Czechoslovakia.

THE SOVIET UNION

1945–50

THE USSR AFTER WORLD WAR II. The conclusion of the European war, 7 May, 1945, seemingly signaled the emergence of a new era in the lives of the Soviet people. Capped by Stalin's toast to the Russian people at a meeting of the senior Soviet military, 24 May, this triumph made the Japanese surrender of 2 Sept. an anticlimactic event. The deprivations of the anti-Nazi war, which left 25 m. homeless and some 20 m. civilian and military dead in its wake, were balanced by national pride in the USSR's world-power status and the expectancy that a better life was in the offing. The Communist Party, through expansion of its total membership from some 3,900,000 to

5,700,000 in the war years, had taken a step in the direction of becoming more and more representative. The Patriarchate of the Russian Orthodox Church had been restored, Sept. 1943, after 18 years in official limbo. Other signs of normalcy were the elections to the Supreme Soviet (legislature), 10 Mar., 1946, the 1st held since 1937. In the same month, the Council of People's Commissars was renamed, more universally, the Council of Ministers, with Joseph Stalin appointed its chairman (prime minister) and Vyacheslav M. Molotov, the foreign minister, his deputy.

RESTORATION OF AUTHORITARIAN RULE. Events, however, soon muted these widespread expectations among the populace. The 4th 5-Year Plan, launched in Mar. 1946, called for complete industrial recovery from the effects of the war and, in some capital sectors, for a surpassing of the 1941 economic developmental levels, all to the detriment of the long-neglected consumer sector. Agricultural recovery was set back by the drought of 1946, which resulted in continued grain rationing throughout 1947 and led to food riots in Kharkov over the winter of 1946–47. Further adverse indicators were the "anticosmopolitan" chauvinistic pronouncements, Sept. 1946, of Stalin's literary and cultural affairs chief, Central Committee Secretary Andrei A. Zhdanov (1896–1948). The commander in chief of the Soviet armed forces and military hero, Marshal Georgi Zhukov, was dismissed, Nov. 1946, and relegated to a minor post. The draconian labor law of 1940, freezing all workers in their positions and raising the workweek from 40 to 48 hours, remained in force. In agriculture, the Council on Kolkhoz Affairs, established 8 Oct., 1946, initiated measures to reduce the acreage of private peasant plots, which had swollen beyond control during the war, and within a year some 14 m. privately tilled acres had been brought back into the state sector. Taxes on farmers' non-Kolkhoz earnings rose to confiscatory levels through increases instituted in 1948, 1950, and 1951. Religious convictions soon became incompatible with advancement through the Komsomol (Party Youth Organization) and the

Party. Grandiose power and irrigation projects were projected in the Volga and Dnieper regions, spearheading Stalin's "nature transformation" program.

REJECTION OF WESTERN INFLUENCES. In the later 1940's conformity to conservative, xenophobic dictates became the rule. Dimitri Shostakovich (b. 1906) and other prominent Soviet musicians were called to heel for cosmopolitanism in their music and forced to recant, Feb. 1948. At an academic assembly on biological science, Aug-Sept 1948, Trofim D. Lysenko's (b. 1898) genetic theories (the outdated Michurin school), sponsored by Stalin, as applied to agrobiolgy, triumphed in a clash with Soviet "Mendelists"; Mendel's theses did not conform to the Stalinist manipulative concept of nature. Nikolai A. Voznesensky (1903-50), chairman of the State Planning Commission, went into sudden eclipse for his allegedly voluntarist approach to economics and was later shot, Sept 1950, his advocacy of rational planning had failed to coincide with Stalin's turn to a deterministic emphasis on the dominant substructure (productive forces) in society 1950 was also marked by the reinstatement, Jan., of the death penalty (abolished in 1947) for broadly interpreted subversive activities.

1950-53

AGRICULTURAL POLICY. A decree of the Council of Ministers on agriculture, 7 June, 1950, heralded a drive, sponsored by Nikita S. Khrushchev (b. 1894), to amalgamate Kolkhoz holdings, this was by 1953 to reduce the number of 1950 Kolkhoz units from 252,000 to 92,000 with a rise in average acreage from 2,800 to 20,000. The 5th 5-Year Plan, approved in 1952, called for completion of the Dnieper and Volga projects by the mid-1950's.

STALIN'S "LAST TESTAMENT." The long-range portents of the above became clearer with the publication of Stalin's "last testament" just prior to the 19th Party Congress of 5-14 Oct., 1952. His "Economic Problems of Socialism in the USSR" in essence called for a concerted drive to complete the socialist

phase and defend the USSR as socialism's motherland from a hostile capitalist world—i.e., to perfect the garrison state on its road to communism.

• **19TH PARTY CONGRESS.** The 19th Congress formalized Stalin's moves to assure the implementation of his directives for the future. The older guard, original Bolsheviks and the careerists of the 1930's alike, such as Molotov and Beria, had been stripped of their state posts and limited to Politburo posts close to Stalin's elbow. The Congress created a new, expanded Party Politburo, renamed Presidium, in which the older lieutenants were outnumbered by more pliable newcomers. Organizational and ideological educational reforms portended the further indoctrination of holders of important Party and state posts in the reasserted orthodox tenets of Stalin. The Doctors' Plot accusations of 13 Jan., 1952, implicating 10 Jewish Kremlin physicians in the deaths of Zhdanov, Aug 1948, and high military figures, seemingly augured a thoroughgoing repurging of the Party and state structures. Then, on 5 Mar., 1953, Stalin died at 74.

1953-57

POST-STALIN RELAXATION. Soon after announcing Stalin's death, the new Party Presidium's reduced membership (representing again only the older leaders) implemented relaxation measures in quick succession, a wide political amnesty, 29 Mar., a drop in basic food prices, amounting to 50% for some vegetables, 1 Apr., and a denunciation of the Doctors' Plot accusations, 4 Apr., ensued. With lightning speed Beria, reappointed head of the reconstituted Ministry of Internal Affairs (secret police), was purged by a Central Committee announcement of 10 July as an "enemy of the [Communist] Party and the Soviet people," seemingly because he had made a move for sole power at a hypersensitive time. Georgi M. Malenkov (b. 1902), Stalin's apparent chosen successor, had abandoned his dual Party-state leadership status in mid-Mar., retaining only the premiership. As 1953 progressed, Khrushchev, the senior Party

secretary and main counterweight to Malenkov's political preeminence, gradually became his major rival.

MALENKOV-KHRUSHCHEV RIVALRY. Malenkov had moved to secure his position by (1) presiding, as prime minister, over a centralized Council of All-Union "superministries" in Moscow, which had been reduced from 51 to 25 ministries at Stalin's death; (2) inaugurating, 8 Aug., 1953, a "new course" aimed at increased development of consumer industries, while holding capital industrial development constant; (3) increasing investment in agriculture.

Khrushchev eventually undermined these bids through 1953 and 1954. At the 3-7 Sept., 1953, Central Committee Plenum, which officially appointed him 1st party secretary, he sketched a devastating picture of Soviet agriculture, revealing that in the areas of grain and livestock production the USSR was lagging behind pre-1917 levels. This directly refuted Malenkov's situation report at the 19th Congress. Organizationally, he undercut Malenkov by increasing the presence of the Party's local secretaries at the rural grass roots, in violation of the 19th Congress rules. He further counter-attacked, 24 Feb., 1954, by unveiling a grandiose Stalinlike "Virgin Lands" project, which called for the expansion of (mainly grain) cultivated areas by 31 m. acres into marginal, hitherto unutilized sections in the eastern and southern USSR. Malenkov had advocated more intensive rational use of the land under cultivation. High yields in 1954 seemingly bore out Khrushchev's optimistic long-range agricultural prognostications.

FALL OF MALENKOV. On 21 Dec., 1954, *Pravda* and *Izvestia* (the Party and state dailies, respectively) carried contradictory editorials on the priorities to be assigned to heavy and consumer industry, reflecting personal policy differences in the leadership. Soon Khrushchev had gained support from the heavy industrial and military leaderships; at the 8 Feb. Supreme Soviet session, Malenkov resigned as premier and was succeeded by Nikolai A. Bulganin (b. 1895), a member of the Presidium; Marshal Zhukov, who replaced him as defense minister, headed

the military elements in the coalition which brought Malenkov down.

Over the years 1955-57 there occurred a series of policy initiatives and modifications, reflecting struggles in the leadership, which reached a *dénouement* in the Anti-Party Group affair of mid-June, 1957, when Khrushchev, through skillful politicking, assembled a coalition to beat back his opposition.

20TH PARTY CONGRESS. The most dramatic moment in this sequence of events was the Secret Speech delivered by Khrushchev at the 20th Party congress, 14-25 Feb., 1956, during the final 2 days. In it he made a violent break with the Stalinist past, calling attention particularly to the excesses of the mass purges of the 1930's. The speech precluded any future attempts at internecine struggle at the leadership level, as well as indiscriminate use of mass terror. The Congress also created a Central Committee Bureau for the RSFSR, to become a preserve for Khrushchev appointees, and co-opted Leonid I. Brezhnev (b. 1906) and Zhukov (in candidate status) to the Presidium and the former to the Secretariat as well. On 5 June, Molotov was succeeded as foreign minister by Dimitri N. Shepilov (b. 1905), a Party secretary since July 1955.

GROWTH OF KHRUSHCHEV'S POWER. Early 1957 marked the announcement of sweeping economic organizational reforms: the Supreme Soviet's resolution of 10 May abolished 140 All-Union, Union-Republic, and Republic industrial ministries and established 105 Regional Economic Councils (*sovnarkhozy*), operating on regional economic principles. This move, coupled with Khrushchev's appeal to the consumer instincts of the populace and his liberalization of Soviet-bloc and East-West relations, crystallized against him a variegated Presidium majority, led by Molotov, Malenkov, and Lazar M. Kaganovich, which eventually mustered 7 of the 11 votes in that body. Khrushchev thwarted their move by throwing the conflict into the wider Central Committee arena for discussion; in this counter-coup, he was abetted by the military faction. Zhukov rose to full membership in the Presidium

and Aleksei N. Kosygin (b. 1904) to candidate status in the wake of the expulsion of the opposition's leadership from their high posts. Other key events during 1957 were the launching of Sputnik I, and the sudden eclipse of Zhukov, 31 Oct.

1958-64

THE KHRUSHCHEV ERA. Khrushchev became premier in late Jan. 1958, succeeding Bulganin, who was later identified as an "anti-Partyite." Until his own departure from politics in Oct. 1964, he followed a policy of constant reform in all areas of national life, designed to keep his opposition in the leadership off balance and to preserve his own position at the summit of power. Economic efficiency and Party involvement in economics were emphasized. The abolition of the Machine Tractor Stations (MTS's), Feb. 1958, made the Party more responsible for agricultural production, from May 1958 on, with indifferent success, greater investments were diverted into the chemical fertilizer industry. A main objective of the reform of Nov. 1962, the splitting of both Party and state into separate industrial and agricultural hierarchies, was to solve the chronic ills of Soviet agriculture. However, the highly touted Virgin Lands program proved undependable, with the harvests of 1955 and 1957 plummeting below half of those of 1954. The USSR was forced to import grain in the summer of 1963.

The *sounarkhoz* decentralization move of 1957 was countered by a reassertion of economic centralization in Mar. 1963 through creation of a new superplanning agency, the Supreme Council of National Economy, which in part redressed the losses of the heavy industry interests and authoritarian centralizers who had earlier been undercut.

RESISTANCE TO KHRUSHCHEV'S POLICIES. Within the Party itself, Khrushchev failed to achieve 2 primary goals after 1957—the total discrediting of the anti-Partyites and identifying himself as the great "de-Stalinizer" of Soviet life. The Extraordinary 21st Congress of Jan.–Feb. 1959, intended to read the 1957 opposition out of the Party, resulted in

desultory denunciations and ambiguous criticisms. Only in Apr. 1964 was it announced that "Molotov and others" had been expelled from the Party. Likewise, a renewal in Oct. 1962 of the anti-Stalin campaign, sparked by a Khrushchev-approved poem, *Stalin's Heirs*, by Evgeni Evtushenko (b. 1933), was climaxed by Khrushchev's forced turnabout in mid-stream and his denunciation of liberal intellectuals and artists, 8 Mar., 1964. The Party-state reform of 1962, moreover, served to alienate the politically oriented Party bureaucrats at lower levels by its emphasis on economic production.

ANTAGONISM OF THE MILITARY. Khrushchev progressively disenchanted another important group, the conservative military, by his calls both early in 1960 and again in 1964 for a reduction in the size of the standing army. As with other reforms, he was forced to backtrack on these demands as cyclical tensions in international relations, such as Berlin (1958 and 1961), the U-2 and Paris Summit crises (1960), and Cuban crisis (1962), seemingly justified the "military preparedness" line of the traditional military.

FAIL OF KHRUSHCHEV. Moves, only partly achieved, to enlist popular support by raising the Soviet system's status as a democratic and economic world power ultimately left the citizenry indifferent. These started with Khrushchev's promises at the 20th Congress on overtaking the U.S. by 1970 and ended with his famous "goulash communism" statement in Hungary, Apr. 1964. At the 22nd Congress, Oct. 1961, Stalin's class-struggle concept (dictatorship of the proletariat) was replaced with that of "the state of the whole people." There was increased public participation in government, e.g., the legal reinstatement, 1961, of the Comrades' Courts (these had atrophied in the 1930's), which provided for trial by 1 judge and 2 lay assessors. Official support was given to voluntary "vigilante" groups (*druzhiniki*) intended to preserve public order. These innovations implicitly called for the withering away of the state on the road to Communism. In Jan. 1960 a Commission for Constitutional Reform was instructed to

draw up a new constitution to replace that of 1936 with its discredited Stalinist associations.

Khrushchev's fall was directly triggered by his summoning, Sept. 1964, of a mixed Party-state consultative assembly, with many outside "experts," to discuss increased investment allocations to the consumer sector. An alliance of alienated key groups voted him out of his leading Party and state positions, 14 Oct., 1964.

1964-68

ACCESSION OF BREZHNEV AND KOSYGIN. Brezhnev, as new Party first secretary, and Kosygin, as premier, led the institution of a wave of measures aimed at restoring stability in place of the administrative chaos created by Khrushchev's organizational reforms. In Dec. 1964, the functional division of the Party was abolished. A decree of Sept. 1965 completely dismantled the *sovnarkhoz* structure, which in Nov. 1962 had been reduced to some 40 territorial councils. Throughout 1964-65 the slogan of "the state of all the people" and the goals set by the 22nd Congress' program became progressively muted. Members of the Khrushchev "clique," such as Aleksei Adzhubei (b. 1924), his son-in-law and editor of *Izvestia*, and Leonid F. Ilichev (b. 1906), Party secretary, were demoted and replaced soon after Khrushchev's fall. A reassertion of the demand for ideological conformity underlay the Sinyavsky-Daniel trial of Feb. 1965, the 2 writers being sentenced to terms in corrective labor camps.

23RD PARTY CONGRESS. These calls for political and ideological uniformity were re-echoed by the Party at the 23rd Party Congress, 29 Mar.-8 Apr., 1966, which signaled the major themes of the post-Khrushchev style of leadership. Frequent references underlined the Party-state consensus on continued, but less erratic and inconsistent, change. The renewal of membership in the Central Committee touched only 20% of its 1961 members—a low turnover for the post-Stalin period (cf. 50% in 1961). Speeches emphasized a businesslike approach in contrast to Khrushchev's proposals for

dramatic 1-shot panaceas. On the perennial economic allocations problem, continued stress was laid on heavy industry's investment priority, while consumer industries, though slated to grow, were to do so more gradually. Kosygin emphasized more the application of rational methods to stimulate industrial growth than increased investments to expand production. Notably missing were denunciations of the Stalinist era's excesses, a sign of tacit consent to shelve the anti-Stalin campaign. Although Khrushchev was not mentioned by name, it was unmistakably he at whose doorstep blame was laid for the shortcomings of the recent past. In failing to be re-elected to the new Central Committee, he lost his last important Party post.

ECONOMIC POLICIES. That the problems of the early 1960's had not vanished with the appearance of a new leadership was soon evident. Though the draft of the 5-Year Plan for 1966-70 had been approved by the Party in Mar. 1966, Kosygin announced, Sept., a delay in its implementation, and the Supreme Soviet ratified, Dec., only a truncated version for 1967.

The industrial reform announced in Jan. 1966, emphasizing greater profitability, material incentive, and autonomy for plant managers, had by Oct. 1967 been extended to some 5,500 industrial enterprises, or 1/4 of the total Industrial growth, 1960-67, by official admission had slowed to a rate of 6%, as against 8.2% in 1956-60. In Soviet industry, the output of the average worker remained at only 1/3 of his U.S. counterpart. The minimum monthly wage was fixed by the Sept. 1967 Party Plenum for most white- and blue-collar workers at 60 rubles (U.S. \$66), with the national nonagricultural average 100 rubles (\$110). In the same month the legislature approved a higher growth rate for consumer industries than for heavy industry (8.6% vs. 7.9%) for 1968-69. In Jan. 1968, the country went on a 5-day, 41-hour week.

AGRICULTURAL POLICIES. In agriculture, efforts were made to draw the farmers into the productive process via the introduction of a minimum wage and pension plans. The relative share of state

farms (*soukhozy*—the preferred, more "advanced" socialist farms) in production had dramatically increased from 1940 to 1966 (e.g., from 3 to 42% of eggs, 10 to 54% of grain, 16 to 51% of vegetables produced) and their acreage climbed from 13% to 25% of total cultivated area between 1953 and 1958. However, private peasant plots, comprising only 3% of the cultivated land, contributed 13% of all marketed and 33% of total produce output.

INTELLECTUAL DISSENT. In Jan. 1968 the trial of 4 writers on charges of anti-Soviet activities sparked a new wave of intellectual dissent within the Soviet Union. Petitions and letters of protest against the trial led Communist Party

General Secretary Brezhnev to call for "iron discipline" within the Party. Soon after Brezhnev's 29 Mar. warning, a number of Soviet scholars and writers were expelled from the Party.

DOCTRINE OF THE "COMMUNIST COMMONWEALTH." In an attempt to justify the Aug. 1968 invasion of Czechoslovakia, a new doctrine of intervention was advanced in *Pravda*, 26 Sept., 1968. It asserted that the sovereignty of individual countries in the world socialist community must be subordinated to the common welfare of that community, and that the community had the right to intervene when, in a fraternal socialist country, socialism was threatened.

Revolution in East Asia

THE PEOPLE'S REPUBLIC OF CHINA (MAINLAND)

1945-49

CHINA AFTER WORLD WAR II.

After Japan was defeated in 1945, the civil war in China which had been temporarily and partially suspended broke out again, despite U.S. efforts to mediate. Mismanagement and corruption resulted in widespread popular discontent with the Nationalist regime and allowed the Communists to extend their influence in the country. By the end of 1948 they controlled Manchuria and were poised for the conquest of the rest of the mainland.

COMMUNIST MILITARY VICTORY. In Jan. 1949 Peking, which under the Communists again became the capital of China, was surrendered. During the next 10 months Communist armies moved south and southwest, taking the cities of Hankow, Wuchang, Shanghai, Canton, and Chungking. Finally, the Nationalist government was forced to flee to Taiwan, 7 Dec.

ESTABLISHMENT OF COMMUNIST GOVERNMENT. While the military conquest proceeded, the Communists prepared to set up a new government.

Years of civil war and foreign invasion had made the people unused to functioning as one political unit. To help integrate them into a single polity and tie them as individuals to the regime, "mass organizations" were instituted for labor, peasants, women, youth, literary and art circles, etc.

The form of government was also designed to integrate the people. In July its principles were articulated in a speech by Mao Tse-tung, head of the Chinese Communist Party (CCP), entitled "On People's Democratic Dictatorship." The "people" (workers, peasants, petty bourgeoisie, and national bourgeoisie) would run the democratic government, but would impose a dictatorship on "enemies of the people" (landlords and counterrevolutionaries).

In late Sept. a national representative conference of the "people" was convened at which the form of government pending the promulgation of a constitution was adopted. On 1 Oct., 1949, The People's Republic of China (PRC) was inaugurated. Mao Tse-tung headed the new government with Chou En-lai (b. 1898) as his premier. The façade of democratic coalition was maintained by giving non-Communists prestigious government

posts, but in reality the whole government structure acted as the administrative arm of the CCP and CCP members held all key posts.

INTERNATIONAL RELATIONS.

Although a new government had been formed, the regime still faced severe economic problems, especially inflation, and still had to complete the conquest of Hainan Island, Taiwan, and Tibet and "mop up" Nationalist troops in west China and Sinkiang.

Mao had defined the PRC's international position in his July speech when he announced that the new state would "lean to one side," i.e., toward the Communist bloc. The USSR recognized the PRC, 2 Oct., 1949, and in Dec. Mao left for negotiations in Moscow. In addition to the Communist bloc, Burma, India, Indonesia, Switzerland, Sweden, Denmark, Pakistan, Ceylon, Afghanistan, Norway, Finland, the U.K., the Netherlands, and Israel also recognized the new government during 1949 and 1950.

1950-52

SINO-SOVIET TREATY. 14 Feb., 1950. Mao returned to China from Moscow soon after signing a 30-year Sino-Soviet Treaty of Friendship, Alliance, and Mutual Assistance. The negotiations had formalized the "lean to one side" policy and had guaranteed the infant Communist state a degree of security which would otherwise have been impossible in the largely non-Communist world. Agreements providing for Soviet economic and technical aid were also concluded.

KOREAN WAR. Meanwhile, the Communist armies took new territory. Hainan Island was captured, Apr. 1950, and preparations for the invasion of Taiwan were then begun. Success seemed assured because the Nationalists were defeated and disorganized and in Jan. the U.S. had denied a commitment to Taiwan's defense. The start of the Korean War, June, changed the situation radically. President Truman's 27 June statement that American security would be endangered by an attack on Taiwan and

the subsequent presence of the U.S. 7th Fleet in the Taiwan Straits precluded any Communist action there. By fall UN victories in Korea threatened Chinese security and in early Oct. Chou En-lai asserted that China would intervene if UN troops crossed the 38th parallel. On 7 Oct. the troops did cross it and on 25 Oct. China announced that "Chinese People's Volunteers" were being sent to aid North Korea. By 1953 up to 1 m. Chinese troops had gone to Korea. In Oct. Tibet's "liberation" was also begun.

AGRARIAN REFORM LAW. 30 June, 1950. This measure aimed at eliminating the power of the landlord-gentry class. The program involved confiscation and redistribution of land and physical elimination of the landlords. The "rich peasants" were exempt to avoid disrupting the economy too severely. Class conflict, with the lower classes judging and punishing the upper ones, was an integral part of the drive. This had the dual advantage of encouraging peasant activism and committing the peasants to the reforms by making them responsible. Inflation had been curbed by the end of 1950.

CONQUEST OF TIBET. By Apr. 1951 the conquest of Tibet had been completed. Representatives of the Dalai Lama, Tibet's traditional ruler, signed an agreement in Peking incorporating Tibet into China as an autonomous region. (The PRC was to be responsible for Tibetan foreign affairs, but there was an independent local government.)

CONSOLIDATION OF CCP CONTROL. During 1951 several campaigns in addition to land reform were mounted, all aimed at consolidating the Communists' economic and political control. In Mar. a Party rectification campaign which lasted 2 years and involved a reinvestigation and reregistration of all members was begun. The "Resist-America, Aid-Korea" campaign and the campaign against counterrevolutionaries were conducted in conjunction with the Korean War. The former, stressing a presumed U.S. design to invade China, served both to arouse nationalism and eliminate "bourgeois" pro-western attitudes. The

campaign against counterrevolutionaries, imposing a reign of terror on the urban population, resulted in mass executions of those accused of actively opposing the regime. The "3-Anti Campaign" (against corruption, waste, and bureaucratism) was begun experimentally, Aug., in Manchuria to increase discipline in Party and government organizations. In Dec. it was expanded into a nationwide drive and, in addition to its original purposes, became a tool to fight "bourgeois" and "rightist" thought. The campaign lasted through the following spring. Chou En-lai initiated the Ideological Reform Campaign, Sept., at a mass meeting of teachers and professors. It was originally planned as a 4-month drive to force intellectuals, through the use of criticism and self-criticism, to accept Marxism-Leninism and CCP rule. Because considerable passive opposition remained, this movement was combined with the 3-Anti Campaign late in the year.

5-ANTI CAMPAIGN. By 1952 most sectors of the economy had reached or surpassed pre-1949 levels and, although consumer goods were still in short supply, communications had been considerably improved and the economy had been centralized. However, despite the 3-Anti Campaign there continued to be some corruption, especially in economic circles. To combat this a nationwide "5-Anti Campaign" (against bribery, tax evasion, theft of state assets, cheating in labor or materials, and stealing state economic intelligence) was conducted among the bourgeoisie, especially the urban merchants and manufacturers, Jan.-Mar. The campaign was similar to the one against counterrevolutionaries in that it encouraged class warfare, public denunciations, and abject confessions, but it was carefully controlled by the Party and there were no mass executions. When it had run its course the influence of the old business class had been destroyed and what remained of the private sector was firmly under Party and government control. By this time most foreign investors had left China because of extremely strict government policies.

LAND POLICY. On 30 June the regime announced that land reform had been largely completed. By Aug. the 2nd step toward developing socialist agriculture was begun; the Ministry of Agriculture announced that 40% of the peasants in China belonged either to mutual-aid teams or agricultural producers' co-operatives. In the former, several families co-operated on a year-round basis, but each family retained its own land and received the produce raised on it. The latter included more families. In addition to a small private plot, each family owned shares in the rest of the land, which was farmed collectively. The income from the crop was divided according to the shares held and wages were paid according to work performed. Under both systems participation was voluntary but strongly urged.

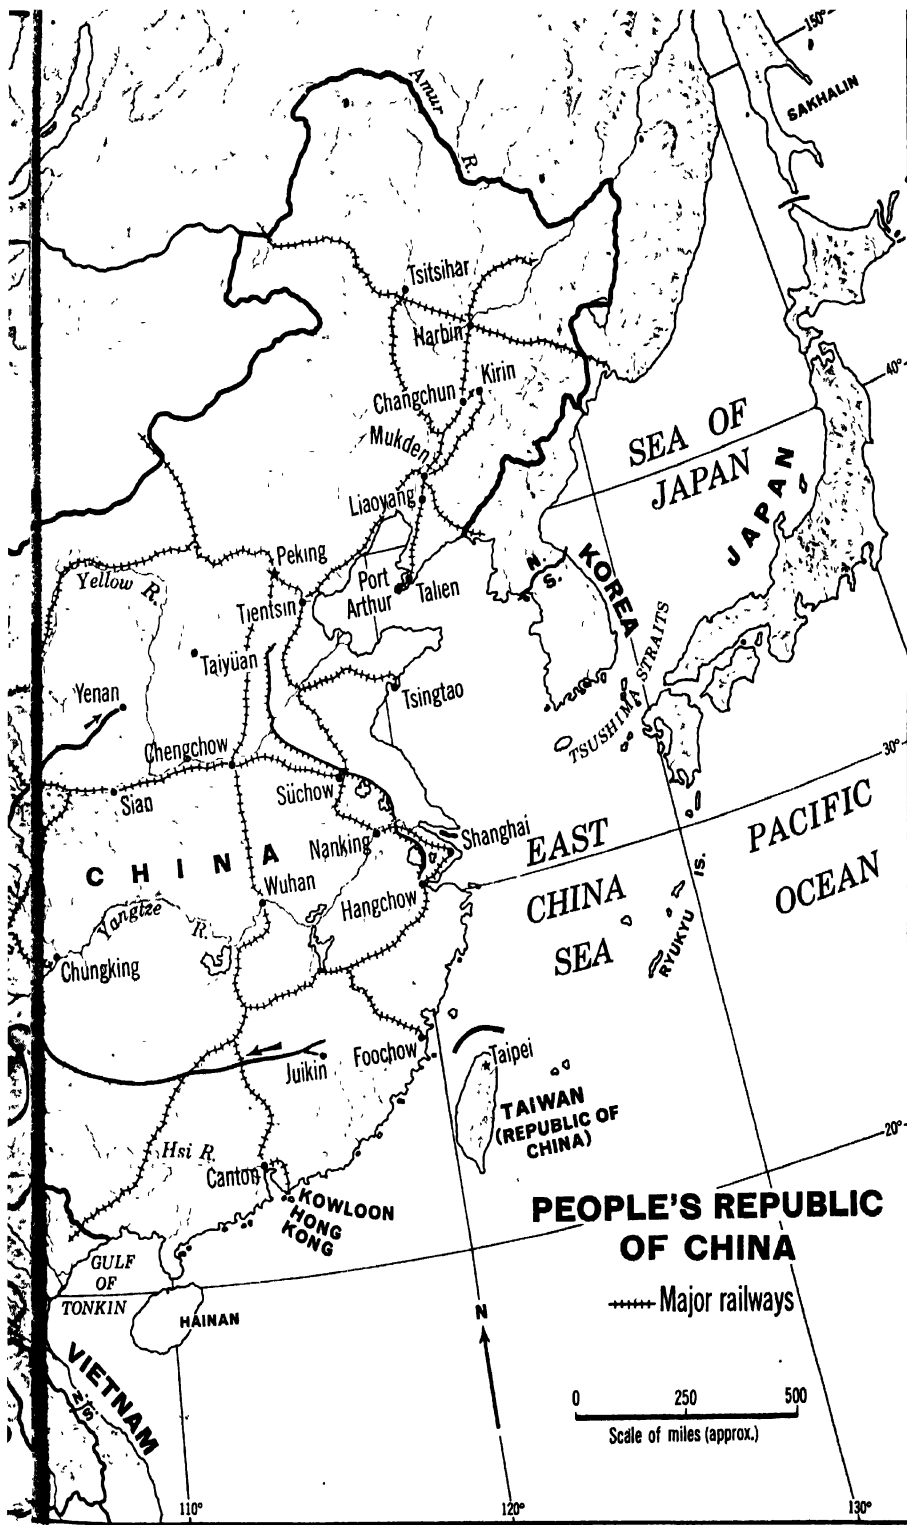

1953-57

INCREASE IN SOVIET AID. The period of reconstruction which had begun with the Communist conquest in 1949 was basically complete by 1953. In Mar. of that year Stalin died, after which Soviet aid to China was substantially increased. A Soviet commitment to finance 91 new industrial and other projects was made in Sept. The Korean truce, July, gave the economy a further boost.

INDUSTRIAL POLICY. During the 1st part of the year industrial development was emphasized. However, by June 1953 management problems were evident and that month a national labor discipline campaign was launched. Cadres were widely criticized for poor management and organization. In mid-July the *People's Daily*, the regime's semiofficial newspaper, cited cadre mistakes as the main cause of serious target underfulfillment in state-operated factories. In Sept. a campaign to increase production and practice economy was begun.

AGRICULTURAL POLICY. Problems were also apparent in the agriculture sector. On 15 Feb., 1953, a Party decision ordered moderation in establishing new co-operatives. The cadres had

apparently been pushing the program very hard and their zeal was resented by peasants who, having finally gained their own land, were not anxious to give it up. Disliking regimentation by the cadres, many were migrating to the cities. Measures to relieve the situation were taken in Apr. The peasants were ordered to remain in rural areas and a campaign to educate cadres in the Russian experience of industrialization and co-operativization was begun. As late as mid-Sept. the theme that co-operatives had been set up too rapidly was reiterated. However, on 1 Oct. a *People's Daily* editorial on the "general line of the state during the period of transition" explained that China had entered the transition to socialism and that nonsocialist sectors of the economy (including agriculture and industry) would be reformed. A nationwide movement to study the general line was launched and co-operatives were again encouraged. In mid-Dec. the Party called for the number of co-operatives to be increased from 15,000 to 35,000 in 1954. Preparations for a constitutional government were begun in mid-Jan., when a Committee to Draft the Constitution was set up. In July a national census was ordered.

INTERNATIONAL RELATIONS. In 1954 there was a general relaxation of tension between the Communist bloc and the rest of the world. The idea of a 3rd, neutral bloc subject to growing Communist influence began to gain acceptance in China. One of the earliest indications of the new policy was the Chinese role in the Geneva Conference which met to seek a settlement of the Indochina and Korean issues, Apr.-July. Agreement on Korea was not reached, but Chou En-lai played a key role in formulating the cease-fire agreement for Indochina. In Apr. China also negotiated an agreement with India in which Chinese sovereignty over Tibet was acknowledged and the 5 principles of "peaceful coexistence" on which Chinese foreign policy was based in following years were 1st outlined.

POLICY TOWARD TAIWAN. Shortly after returning from Geneva, Chou called for the "liberation" of Tai-

wan and attacked plans for the formation of SEATO. Chou's speech initiated the 1st Taiwan Straits crisis, which lasted into 1955. On his arrival in Peking, late Sept., Khrushchev lent his verbal support to the campaign. China condemned the mutual-defense treaty signed by the Nationalists and the U.S. late in the year as aggression.

PARTY PURGES. The only important Party purges between 1949 and the mid-1960's occurred at a Party conference in early Feb. 1954. Although it was not announced until a year later, at this time Kao Kang and Jao Shu-shih, the Party leaders in Manchuria and east China, were ousted for violating Party discipline and trying to create "independent kingdoms." Their removal was followed by a campaign for Party unity and collective leadership which lasted until summer.

ADOPTION OF THE CONSTITUTION. In Mar., Mao Tse-tung presented a draft constitution to the Committee for Drafting the Constitution. It was accepted by the temporary government, mid-June 1954, and shortly thereafter the completion of the basic-level elections and the national census was announced. The population of mainland China (excluding Taiwan and the overseas Chinese) was said to be 583 m. The 1st National People's Congress was held, 15-28 Sept., and formally adopted the constitution. A government reorganization followed. Mao Tse-tung, Liu Shao-ch'i (b. 1898), and Chou En-lai were elected to the top posts.

PEASANT CO-OPERATIVES. The co-operative movement grew rapidly in 1954. In late Mar. there were 91,000 co-operatives, 4 times the goal set for the whole year. Although in Aug. most of them were called failures, by late Dec. the figure was about 400,000.

BANDUNG CONFERENCE. In the early months of 1955 the Taiwan Straits crisis continued with Chou En-lai condemning UN efforts for a cease-fire as interference in China's internal affairs. The tension was finally relaxed when the Asian-African Conference was held in Bandung, Indonesia, 18-24 Apr. Like the 1954 Geneva Conference, the Bandung

Conference demonstrated China's new foreign policy of wooing the "3rd bloc." During the conference Chou En-lai said China was willing to discuss the Far East situation with the U.S., although he maintained a few days later that the Taiwan Straits problem was an internal one. A treaty concerning nationality was signed with Indonesia.

In late Apr. China's prestige was further enhanced by a nuclear-aid agreement with the USSR and in late July it was announced that ambassadorial-level talks between the PRC and the U.S. would be held in Geneva. As a symbol of the new diplomatic approach, a Chinese embassy was opened in Afghanistan, July, and diplomatic relations were established with Nepal, Aug.

POLICY TOWARD INTELLECTUALS. In early Feb. 1955 another campaign to reform intellectuals was undertaken. It centered around writer Hu Feng, who was accused of ignoring Marxist-Leninist principles. By May it had expanded into a general movement against "counterrevolutionaries."

5-YEAR PLAN. After a Party Conference in Mar. 1955, the 1st 5-Year Plan was finally announced. The plan covered the period 1953-57 and emphasized industrial development. During the year merchants and peddlers in rural areas were urged to join the co-operative movement. Between mid-Feb. and mid-Nov. the number of co-operatives jumped from about 600,000 to almost double that number. A Party conference in early Oct. hailed the approaching "high tide of socialization in rural areas." In 1956, however, it was revealed that the 1st 5-Yr. Plan was suffering severe maladjustments, at least some of which were due to a lack of enthusiasm on the part of the peasants, workers, and intellectuals. A Party conference held in Jan. 1956 considered how to increase Party control over the intellectuals and enlist their support for national construction and socialism.

"HUNDRED FLOWERS" SPEECH. On 2 May, 1956, Mao gave his famous address entitled "Let a Hundred Flowers Blossom. Let a Hundred Schools of Thought Contend" which outlined a new

policy of encouraging free expression and creative thinking in order to deal with the country's problems. In spite of repeated urging throughout the year, the intellectuals did not take advantage of their new freedom, apparently preferring the safety of silence.
